# PREFAȚĂ

*În etapa actuală de dezvoltare a științei, metodele perfecționate de cercetare și explorare a sistemului nervos central au adus numeroase achiziții noi, cu implicații largi în medicina practică și biologia omului.*

*Studiul sistemului nervos central, mai mult decît al altor capitole de anatomie, nu poate fi conceput fără o iconografie amplă, care să redea adecvat structurile nervoase, atît ca unități individuale, cît și în relațiile lor spațiale și funcționale. Acest fapt este cu atît mai imperios necesar, cu cît înalta specializare a creierului uman prezintă particularitatea că, în volume restrînse ca mărime, sînt cuprinse formațiuni anatomice multiple.*

*Sîntem de opinia că valoarea unui* Atlas de anatomia omului *crește calitativ și practic, atunci cînd el este realizat direct după preparate anatomice, cu imagini obținute prin fotografiere și nu atît prin desene, care pot fi mai mult sau mai puțin idealizate în raport cu aspectul normal al formațiunilor anatomice. Deși tehnica prin fotografiere este mai dificilă, imaginea astfel obținută se apropie mai mult de realitate, înlăturînd de la început diferențele dintre culoarea convențională a desenului și culoarea reală a preparatului. Ea facilitează totodată mecanismul de asimilare a noțiunilor exprimate și permite stabilirea adecvată a relațiilor de proporționalitate, precum și raporturile dintre structurile anatomice redate în forma lor naturală. În acest volum am recurs la diagrame în capitolul final de* „Hodologia sistemului nervos central", *care nu poate fi exprimată în alt mod.*

*După cum este bine cunoscut, în ultimele două decenii s-au realizat progrese mari în* neuroanatomie, neurofiziologie *și în cunoașterea arhitecturii chimice a sistemului nervos central – în mod deosebit în domeniul neurotransmițătorilor. Aceste date întregesc cunoștințele clasice despre căile nervoase și conexiunile principalelor formațiuni ale nevraxului, fapt pentru care, pe baza consultării la zi a unui bogat material din literatura de specialitate, ele au fost introduse unitar în capitolul de* „Hodologia sistemului nervos central"

*Întrucît în Școala românească de anatomie se folosește Nomenclatura Anatomică Internațională (Nomina Anatomica), în lucrare s-a utilizat terminologia internațională prezentată în Nomina Anatomica Histologica et Embryologica, editată de Excerpta Medica, Amsterdam, 1977, 1983. În acest sens toate denumirile formațiunilor anatomice din legende sînt exprimate în limba latină, lucrarea putînd fi folosită pretutindeni în lume.*

*Avem speranța că, prin conținutul său științific, cu un bogat material original și inedit, volumul de* „Anatomia sistemului nervos central" *va folosi nu numai celor care se inițiază în tainele cunoașterii creierului, ci și specialiștilor care lucrează în domenii de vîrf ale științelor medicale și biologiei omului. Totodată, exprimăm gratitudine tuturor celor care ne vor prezenta observații judicioase și sugestii de îmbunătățire a lucrării în viitor.*

*Lucrarea s-a realizat în timp de 4 ani și jumătate și ținem să aducem mulțumirile noastre colectivului Catedrei de Anatomie de la Facultatea de Medicină din București, pentru sprijinul acordat. Mulțumim prof. dr. Ion Cincă – șeful Clinicii de Neurologie Colentina, prof. dr. Constantin Popa și dr. Sorin Login, pentru permisiunea de reproducere a pneumoencefalografiilor, arteriografiilor cerebrale și unor preparate de trunchi cerebral din colecția clinicii, realizate de tehnicianul Mihai Gheorghiu. De asemenea, aducem mulțumirile noastre prof. dr. Constantin Arseni – șeful Clinicii de Neurochirurgie din București și dr. Nicolae Simionescu pentru tomografiile computerizate cranioencefalice normale, efectuate la tomograful clinicii și reproduse în lucrare. Mulțumim pentru ajutorul dat colaboratorilor: Șerban Cadariu, Ștefan Stănescu, Nicolae Jitea, Dragoș Albieru, Adrian Alexandrescu – pentru desenele efectuate, Jenica Feyer și Mariana Ghinea – pentru dactilografierea materialului.*

*Exprimăm totodată călduroase mulțumiri Editurii Didactice și Pedagogice din București și Întreprinderii Poligrafice din Sibiu pentru eforturile depuse în editarea atlasului la un nivel tehnic de foarte bună calitate.*

Prof. dr. VIOREL RANGA
București, 1993

# 前　言

在当今科学不断发展的时代里，日趋完善的方法，已经为中枢神经系统的探索和研究带来了许多新的成就，这些成就已在医学实践和人类生物学得到了广泛的应用。

中枢神经系统的研究，在这一点上更甚于解剖学中的其他章节，那就是，如果没有一个精细的图谱便会使之变得不可理喻。这种图谱就是需要对神经结构给予充分的解释，不仅要说明作为单独部分的神经组织结构，而且也要表现其在空间和功能上的关系。鉴于人类大脑的高级专化的特殊性体现于人脑有限的体积里包容了多种复杂的解剖学的组织，因此，完成上述图谱则显得更为迫切需要。

我们认为，用根据解剖学标本直接拍摄的的照片，汇编一部人体解剖学图谱，其质量和实践价值均高于根据绘画编制的图谱，因为绘

制的图片总是或多或少偏离解剖组织的正常面貌。虽然照相技术更困难，但照片中的形象更接近实际，从而一开始就能够消除绘图用的约定俗成的颜色和标本自然颜色之间的差别。同时，便利对所表达概念的领会机理，并使比例关系得以恰如其分的确定，也对以其自然形态再现的人体解剖组织的相互联系一目了然。作者在本书最后一章《中枢神经系统的传播途径》中借助于曲线图，只因为其他方式无法表达。

众所周知，近二十年来，在**神经解剖学**和**神经生理学**以及在对中枢神经系统的化学结构的认识方面，特别在**神经传感**领域取得了令人瞩目的进步。这些成就补充了神经通道和中枢神经系统主要组织的连接等领域的传统认识。为此，以目前丰富的文献资料为基础，在《中枢神经系统的传播途径》一章里对以上认识进行了详细的阐述和概括。

鉴于罗马尼亚解剖学家在理论著作中使用国际通用解剖学术语，所以本书使用的术语都出自阿姆斯特丹医学文献出版社于1977年出版的《解剖学、组织学、胚胎学专业词汇编》(Nomina Anatomica, Histologica et Embryologica; Excerpta Medica; Amsterdam, 1977)。本着这一精神，对解剖组织的名称一律用拉丁语加以说明，从而本书能在世界各地通用。

我们希望这本《中枢神经系统解剖学》以其科学的内容，及丰富、独特和新颖的资料，不仅会有益于那些渴求认识人类大脑奥秘的人们，也会有益于在医学科学和人类生物学尖端领域里从事研究工作的专家学者们。同时，我们望读者给予恰如其分的评价，并对本书今后进一步完善提出建议并指教。

本书的完成共用了四年半的时间。在此，我们谨向布加勒斯特医学院医学系解剖学教研全体人员给予我们的大力支持表示感谢。我还感谢科连蒂那医院神经科主任医生扬·秦教授博士，以及康斯坦丁·波帕教授博士和林·罗金博士等，在他们的协助下，我们得复制神经科收藏的气脑造影照片、脑动脉造照片和脑干标本，具体工作是由技术员米依·乔治乌完成的。我们还要感谢布加勒斯神经外科医院院长康斯坦丁·阿尔塞尼教授士和尼古拉·希米奥内斯库博士，他们提供在该医院装备电子计算机的X线断层照相机摄的正常颅脑断层照片并为本书复制采用。

感谢施尔班·卡达留．斯特凡·斯特内库、尼古拉·日特阿、德拉郭什·阿尔别卢、德里安·阿列克桑德雷斯库，他们完成了绘图案的工作，并对热妮卡·菲耶尔和玛丽娜·吉内娅在本书手稿打字过程中给予的协致以谢意。

同时，向布加勒斯特教育和教学出版社以崇高的谢意，并向以高超的技术和精美的量印刷本图谱所作努力的锡比乌印刷厂致以衷的感谢。

**教授博士维奥雷·兰加**
**一九八九年于布加勒斯特**

## FOREWORD

*In step with the present-day scientific progress, the improved methods of research and exploration of the central nervous system have resulted, in their turn, in new gains, highly consequential for practical medicine and human biology.*

*The study of the central nervous system, more than any other chapter in anatomy, is unconceivable without an extensive iconography, able to adequately feature the nervous structures, considered both as individual units and in their spatial and functional relationships. The high relevance of this matter is also dictated by the particular trait of the human brain, which, in spite of its small size, stores multiple anatomical formations.*

*In our opinion, the value of an Atlas of human anatomy qualitatively and practically enhanced by an illustrative mate based on photographs of anatomical structures rather than drawings, which are liable to idealize to some extent the nor aspect of anatomical functions. For all the difficulties of photographic process, the images thus obtained are close reality, eliminating from the very beginning the differences tween the conventional colours of drawings and those of a tomical structures. Besides, it helps the reader to be understand the notions defined, to form a correct mental ima of proportions and of relationships between anatomical st*

tures in their natural form. In the present volume, diagrams have been used exclusively in the final chapter on the "Hodology of the Central Nervous System", which cannot be otherwise expressed.

The last two decades have, as everybody knows, witnessed great progress in neuroanatomy, neurophysiology and in the knowledge of the chemical architecture of the central nervous system, especially in the field of neurotransmitters. These data come to complete the classical knowledge of the nervous tract and the connections of the principal formations of the neuraxis; therefore, after having consulted a rich and updated documentary material we have brought these data together in the chapter on the "Hodology of the Central Nervous System".

As the Romanian School of Anatomy makes current use of the International Anatomic Nomenclature (Nomina Ana-tomica), the present Atlas is based on the international terminology as mentioned in Nomina Anatomica, Histologica et Embryologica, published by Excerpta Medica, Amsterdam, 1977, 1983. Therefore, all terms in the captions are rendered in Latin to broaden the worldwide use of the work.

We hope that through its scientific content and original material, the present volume, The Anatomy of the Central Nervous System, will be instrumental not only to readers wishing to unravel the secrets of the human brain, but also to experts in peak branches of medical sciences and human biology. We hereby express our gratitude to all those who would kindly make judicious observations and suggestions aimed at improving this work.

For the completion of this Atlas – the fruit of our four-and-a-half-year work – we should like to express our gratitude for their kind assistance to the members of the Anatomy Chair of the Bucharest School of Medicine. We also address our special thanks to Prof. Dr. Ion Cincă (Head of the Colentina Neorology Clinic), Professor Dr. Constantin Popa and Dr. Sorin Login for their permission to reproduce the pneomoencephalographies, cerebral arteriographies and several brainstem preparations, belonging to the clinic and prepared by technician Mihai Gheorghiu. Likewise, we extend our gratitude to Prof. Dr. Constantin Arseni (Head of the Bucharest Neurosurgery Clinic), and Dr. Nicolae Simionescu for his computer-assisted normal encephalic tomographies, originally made in the clinic and reproduced in the present work. We are also most thankful to our contributors – Şerban Cadariu, Ştefan Stănescu, Nicolae Jitea, Dragoş Albieru, Adrian Alexandrescu – for their drawings as well as to Jenica Feyer and Mariana Ghinea for having typed the manuscript.

We extend our heart-felt thanks to the Bucharest Didactic and Pedagogic Publishing House and the Sibiu Presses for their efforts to have this worked published at exquisite high-tech standards.

Prof. Dr. VIOREL RANGA
Bucharest, 1993

# AVANT – PROPOS

Dans l'actuelle étape de développement de la science, les méthodes perfectionnées de recherche et d'exploration du système nerveux central ont apporté de nouveaux acquis, aux importantes conséquences dans la médecine pratique et dans la biologie humaine.

Plus que d'autres chapitres d'anatomie, l'étude du système nerveux central ne peut être conçue sans une ample iconographie qui rende, d'une manière adéquate, les structures nerveuses, en tant qu'unités individuelles, ainsi que dans leurs relations spatiales et fonctionnelles.

Ce fait est d'autant plus impérieusement nécessaire que la haute spécialisation du cerveau humain presénte la particularité que des multiples formations anatomiques peuvent être comprises dans des volumes restreints.

Notre opinion est que la valeur d'un Atlas de l'anatomie de l'homme s'accroît point de vue qualité et pratique s'il est réalisé d'après des préparés anatomiques avec des images photographiques et non pas par des dessins, qui peuvent être plus ou moins idéalises, par rapport à l'aspect normal des formations anatomiques. Quoique la technique de la prise des photos soit plus individuelle, l'image obtenue s'en rapproche beaucoup de la réalité, en ecartant dès le début les différences entre la couleur conventionnelle du dessin et la couleur réelle des préparations. Elle facilite à la fois le mécanisme d'assimilation des notions exprimées et permet l'établissement adéquat des relations de proportionnalité, ainsi que les rapports entre les structures anatomiques rendues dans leur forme naturelle.

Dans cet ouvrage nous avons fait recours à des diagrammes dans le chapitre final de «Hodologie du système nerveux central», qui ne peut être exprimée autrement.

Comme on le sait bien, les deux dernières décénnies, on a réalisé de grands progrès dans la neuroanatomie, la neurophysiologie et dans la connaissance de l'architecture chimique du système nerveux central – particulierement dans le domaine des neurotransmetteurs. Ces données complètent les connaissances classiques sur les voies nerveuses et sur les connexions des principales formations du neuraxe, fait pour lequel elles ont été introduites d'une manière unitaire dans le chapitre «Hodologie du système nerveux central», en se basant sur la consultation à jour d'un riche matériel de la littérature de spécialité.

Comme l'École roumaine d'anatomie utilise la Nomenclature Anatomique Internationale (Nomina Anatomica), on a utilisé dans l'ouvrage la terminologie internationale presentée dans «Nomina Anatomica, Histologica et Embriologica», éditée par Excerpta medica, Amsterdam, 1977, 1983. En ce sens, toutes les dénominations des formations anatomiques des légendes sont exprimées en latin, l'ouvrage pouvant être utilisé partout dans le monde.

Nous espérons que, grâce à son contenu scientifique, avec un riche matériel, original et inédit, le volume de «l'Anatomie du système nerveux central» sera utilisé aussi bien par ceux qui s'initient aux secrets de la connaissance du cerveau, que par les spécialistes qui travaillent dans des hauts domaines des sciences médicales et de la biologie humaine.

Nous exprimons, à la fois, notre gratitude à tous ceux qui nous apporterons des observations judicieuses et des suggestions pour amender l'ouvrage pour la prochaine édition.

L'ouvrage a été élaboré pendant 4 années et demie, et nous remercions chaleureusement au collectif de la Chaire d'Anatomie de la Faculté de Médecine de Bucarest, pour le concours accordé.

Nous remercions au prof. dr. Ion Cincă – chef de la Clinique de Neurologie Colentina, au prof. dr. Constantin Popa et au dr. Sorin Login, pour la permission de reproduire des pnéumoencéphalo-

graphies, des artériographies cérébrales et de quelques préparations de tronc cérébral appartenant à la collection de la clinique, réalisés par le technicien Mihai Gheorghiu.

Nous remercions, aussi, au prof. dr. Constantin Arseni – le chef de la Clinique de Neurochirurgie de Bucarest et au dr. Nicolae Simionescu pour les tomographies computérisés cranioencéphaliques normales, faites au tomographe assisté par ordinateur de la clinique et reproduites dans l'ouvrage.

Nous remercions toujours, pour leur concurs, aux collabor teurs: Şerban Cadariu, Ştefan Stănescu, Nicolae Jidea, Drago Albieru, Adrian Alexandrescu – pour les dessins exécutés, Jenic Feyer et Mariana Ghinea – pour la dactylographie du matériel.

Nous adressons, toutefois, une chaleureuse gratitude à la Ma son d'Edition Didactique et Pédagogique de Bucarest et à l'Entr prise Polygraphique de Sibiu pour la peine qu'ils se sont donne pour éditer l'atlas à un niveau technique de haute qualité.

Prof. dr. VIOREL RANG
Bucarest, 19

## VORWORT

In der heutigen Entwicklungsphase der Wissenschaft haben die vervollkommneten Methoden zur Erforschung des zentralen Nervensystems neue Erkenntnisse erzielt, die zur Erweiterung der praktischen Medizin und der Biologie des Menschen führen.

Die Untersuchung des zentralen Nervensystems kann, mehr als in anderen Kapiteln der Anatomie, nicht ausgeführt werden ohne eine umfassende Ikonographie, die einen adäquaten Überblick über die Nervenstrukturen sowohl als individuelle Einheit als auch in ihren räumlichen und funktionellen Beziehungen bietet. Dieser Vorgang ist umso wichtiger, als die hohe Spezialisierung des menschlichen Gehirns die Eigenart besitzt, in kleinem Volumen vielfache anatomische Einheiten zu umfassen.

Wir sind der Meinung, daß der Wert eines Atlasses der menschlichen Anatomie qualitativ und praktisch zunimmt, wenn die Abbildungen Fotografien von anatomischen Präparaten sind, und nicht Zeichnungen, die im Verhältnis zum normalen Aspekt der anatomischen Einheiten mehr oder weniger idealisiert werden. Obwohl die fotografische Technik schwieriger ist, kommt das dadurch entstandene Bild der Realität näher, da der Kontrast zwischen der konventionellen Farbe der Zeichnung und der realen Farbe des Präparates von Anfang an ausgeschaltet wird. Sie erleichtert gleichzeitig den Mechanismus zur Aneignung der dargestellten Begriffe und gestattet die adäquate Feststellung der Proportionalitätsbeziehungen wie auch des Verhältnisses zwischen den in ihrer natürlichen Form dargestellten anatomischen Strukturen. Im letzten Kapitel dieses Bandes über „Die Hodologie des zentralen Nervenystems" haben wir auch Diagramme herangezogen, weil dieser Aspekt in keiner anderen Weise gezeigt werden kann.

Bekanntlich wurden in den letzten zwei Jahrzehnten auf dem Gebiet der Neuroanatomie und Neurophysiologie sowie in der Erkenntnis des chemischen Aufbaus des zentralen Nervensystems große Fortschritte gemacht, besonders im Bereich der Neurotransmittoren. Die neuen Daten bereichern die hergebrachten Kenntnisse über die Nervenübertragung und die Konnexion der Hauptformationen des Nevrax, weshalb sie nach Einsicht in ein reiches Quellenmaterial aus der Fachliteratur neuesten Standes in einem einheitlichen Kapitel über „Die Hodologie des zentralen Nervensystems" hinzugefügt wurden.

Da die rumänische Anatomieschule sich an die internationa anatomische Nomenklatur hält, wird in diesem Werk die internati nale Terminologie, festgesetzt in „Nomina Anatomica, Histologic et Embryologica", gedruckt von Excerpta Medica 1977, 1983, Ar sterdam, verwendet. Demzufolge sind alle Namen von anatom schen Formationen aus der Legende in lateinischer Sprach gegeben und der Atlas kann überall in der Welt benutzt werden.

Wir hoffen, daß durch seinen wissenschaftlichen Inhalt m einem reichen neuen, noch unbekannten Stoff dieser Band „Anat mie des zentralen Nervensystems" nicht nur den Studenten hilft, d erst in die Geheimnisse des meschlichen Hirns eindringen, so dern auch den Fachleuten, die auf Spitzengebieten der medizin schen Wissenschaft arbeiten, und denjenigen, die sich mit d Biologie des Menschen befassen. Gleichzeitig sind wir allen dan bar, die uns einschlägige Bemerkungen und Anregungen für ein zukünftige Auflage zukommen lassen.

Die Arbeit an diesem Atlas hat sich über eine Zeitspanne vo viereinhalb Jahren erstreckt. Hiermit sprechen wir dem Kollektiv de Lehrstuhls für Anatomie an der Medizinischen Fakultät Bukarest f den geleisteten Beistand unseren Dank aus. Wir danken Prof. D Ion Cincă – Leiter der Klinik für Neurologie Colentina, Prof. D Constantin Popa und Dr. Sorin Login für die Erlaubnis zur Repr duktion der Pneumoenzephalographien, der zerebralen Arteri graphien und einiger vom Techniker Mihai Gheorghiu hergestellte Präparate vom zerebralen Stamm aus der Sammlung der Klin Ebenso gilt unser Dank Prof. Dr. Constantin Arseni – Leiter der Klin für Neurochirurgie in Bukarest, und Dr. Nicolae Simionescu für d computergesteuerten normalen kranioenzephalischen Tom graphien, die mit Hilfe des Tomographen der Klinik hergete wurden und in dem Werk reproduziert sind. Wir danken den Mita beitern Şerban Cadariu, Ştefan Stănescu, Nicolae Jitea, Drago Albieru, Adrian Alexandrescu für die hergestellten Zeichnunge Jenica Feyer und Mariana Ghinea für die Daktylographie des M terials.

Unseren herzlichen Dank dem Didaktischen und Pädagog schen Verlag aus Bukarest und dem Polygraphischen Unternehm aus Hermannstadt für die Bemühungen um die Herausgabe d Atlasses auf sehr hohem technischem Niveau.

Professor VIOREL RANGA, M.
Bukarest, 19

# ПРЕДИСЛОВИЕ

*На современном этапе развития науки, усовершенствованные методы исследования и разведывания центральной нервной системы внесли много нового в медицинскую практику и в изучение биологии человека.*

*При изучении центральной нервной системы, более чем в других разделах анатомии, нельзя обойтись без обширной иконографии, которая бы ясно воспроизводила нервные структуры, как каждую в отдельности так и в их пространственном и функциональном взаимоотношении. Это особенно необходимо, поскольку высокая специализация человеческого мозга характерна тем, что в его ограниченном об ъёме содержатся многообразные анатомические формации.*

*Мы считаем, что качественное и практическое значение «Атласа анатомии человека» увеличивается тогда, когда он выполнен непосредственно по анатомическим препаратам с изображениями, полученными главным образом при помощи фотографий, а не рисунков, которые могут быть более или менее идеализированы по сравнению с нормальным видом анатомических формаций. Несмотря на то, что техника фотографирования намного труднее, полученное таким образом изображение ближе к реальности, устраняется с самого начала разницу между обусловленным цветом рисунка и реальным препаратом. Одновременно она способствует процессу ассимиляции выраженных понятий и позволяет правильно установить пропорциональность взаимоотношений, а также взаимоотношения между анатомическими структурами, васпроизведенными в их естественной форме. В этом же томе, в заключительной главе «Ходология центральной нервной системы» были использованы диаграммы, т.к. в другом виде она не может быть выражена.*

*Как известно, за последние двадцать лет достигнуты большие успехи в* нейроанатомии, нейрофизиологии *и в изучении химической структуры центральной нервной системы, и особенно, в области* передаточных пейронов. *Эти данные дополняют классические знания о нервных путях и о взаимосвязи главных формаций* невракса, *исходя из чего, на основе богатого материаоа анатомической литературы, они все были включены в главу «Ходология центральной нервной системы».»*

*Поскольку Румынская анатомическая школа использует международную анатомическую терминологию (Nomina Anatomica), в работе используется международная терминология, представленная в* Nomina Anasomica Histologica es Embryologica , *опубликованная в* Excerpt Medica, *Амстердам, 1977, 1983 год. В этом смысле все анатомические названия в объяснениях к иллюстрациям даны на латинском языке и Атлас может быть использован в любой стране мира.*

*Надеемся, что своим научным содержанием, богатым и оригинальным материалом «натомия центральной нервной системы» поможет не только тем кто изучает тайны мозга, но и специалистам, работающим в основных областях медицинской науки биологии человека. Одновременно, выражаем нашу благодарность всем тем, кто представит нам свои обоснованные замечания и предложения для улучшения нашей работы в будущем.*

*Работа над Атласом продолжалась четыре с половиной года. Выражаем нашу благодарность коллективу кафедры Анатомии Бухарестского медицинского факультета за оказанную нам помощь. Также благодарим профессора, доктора Иона Чинкэ, заведующего Клиникой неврологии при больнице «Колентина»; профессора, доктора Константина Попа и доктора Сорина Лоджина которые разрешили опубликовать в нашей работе репродукции пневмоэнцефалографий, артериографий мозга, а также некоторых препаратов церебральных строений из коллекции клиники, обработанных техником Михаем Георгиу. Также благодарим профессора доктора Константина Арсени, заведующего Бухарестской клиникой нейрохирургии, и доктора Николае Симионеску за изготовление в клинике нормальных краниоэнцефалических компьютерных томографий, воспроизведенных в нашей работе. Благодарим за оказанную нам помощь сотрудников: Шербана Кадариу, Штефана Стэнеску, Николая Житя, Драгоша Албиеру, Адриана Александреску за рисунки в Атласе, а также благодарим Женику Фейер и Мариану Гиня за машинопись.*

*Одновременно выражаем нашу благодарность Педагогическому Издательству города Бухареста и Полиграфическому предприятию города Сибиу за издание Атласа на высоком техническом уровне.*

Профессор, доктор ВИОРЕЛ РАНГА

*Бухарест, 1989 год.*

# *PRÓLOGO*

*En la etapa actual de desorrollo de la ciencia, los métodos perfeccionados de investigación y exploración del sistema nervioso central han traído numerosas nuevas adquisiciones, con amplias implicaciones en la medicina práctica y la biología humana.*

*El estudio del sistema nervioso central, más que de otros capítulos de anatomía, no puede ser concebido sin una amplia iconografía, la cual describa adecuadamente las estructuras nerviosas, tanto como unidades individuales, como también en sus relaciones espaciales y funcionales. Este hecho es tanto más imperiosamente necesario, cuanto la alta especialización del cerebro humano presenta la particularidad que, en volúmenes restringidos como tamaño, son contenidas formaciones anatómicas múltiples.*

*Tenemos la opinión de que el valor de un Atlas de anatomía humana crece cualitativa y prácticamente, cuando está realizado directamente, utilizando imágenes obtenidas fotografiando preparados anatómicos y no tanto por dibujos, que pueden ser más o menos idealizados respecto al aspecto normal de las formaciones anatómicas. Aunque la técnica mediante fotografías es más difícil, la imagen obtenida de esta manera se acerca más a la realidad, evitando desde el comienzo las diferencias entre el color convencional del dibujo y el color real del preparado. Ella facilita también el mecanismo de asimilación de las nociones expuestas y permite establecer adecuadamente las relaciones de proporcionalidad, y asimismo las razones entre las estructuras anatómicas presentadas en su forma natural. En este libro hemos utilizado diagramas en el capítulo final de "Hodología del sistema nervioso central", la cual no puede ser representada de otra manera.*

*Tal como es bien conocido, en los últimos dos decenios se han realizado grandes progresos en neuroanatomía, neurofisiología y en el conocimiento de la arquitectura química del sistema nervioso central – sobre todo en el dominio de los* neurotransmisores. *Estos datos completan los conocimientos clásicos respecto a las vías nerviosas y las conexiones de las principales formaciones del neuroeje, hecho por el cual, a base del chequeo (examen) al día de un rico material de la documentación de especialidad, han sido introducidos unitariamente en el capítulo "Hodología del sistema nervioso central".*

*Teniendo en cuenta que la Escuela rumana de anatomía utiliza la Nomenclatura Anatómica Internacional (Nomina Anatomica), en el trabajo se ha empleado la terminología internacional presentada en "Nomina Anatomica, Histologica et Embryologica", edición Excerpta Medica, Amsterdam 1977, 1983. En este sentido todas las denominaciones de las formaciones anatómicas en las figuras son presentadas en latin, el trabajo pudiendo ser utilizado don quiera en el mundo.*

*Esperamos que, por su contenido científico, presentando t bién un amplio material original, el volumen „La anatomía sistema nervioso central" va a ser útil no sólo a los que se inic en los misterios del conocimiento del cerebro, sino también a especialistas que trabajan en dominios avanzados de las cienc medicales y de la biología humana. Al mismo tiempo, presentan la gratitud a todos los que nos van a enviar observaciones p tinentes y sugerencias para el mejoramiento del trabajo en el futu*

*El trabajo se ha realizado durante 4 años y medio y quere agradecer al colectivo de la Cátedra de Anatomía de la Facultad Medicina de Bucarest el apoyo recibido. Agradecemos al Prof. Ion Cincă – el jefe de la Clínica de Neurología Colentina, Prof. Constantin Popa y Dr. Sorin Login, la permisión de reproducir pneumoencefalografías, las arteriografías cerebrales y algu preparados del tronco cerebral perteneciendo a la colección d clínica, realizados por el técnico Mihai Gheorghiu. Asimis traemos nuestros agradecimientos al Prof. Dr. Constantin Arse el jefe de la Clínica de Neuroquirurgía de Bucarest y al Dr. Nico Simionescu, por las tomografías computerizadas craneo-en fálicas normales, realizadas con el tomógrafo de la clínica y rep ducidas en el trabajo. Expresamos gratitud, por el apoyo brinda a los colaboradores: Şerban Cadariu, Ştefan Stănescu, Nico Jitea, Dragoş Albieru, Adrian Alexandrescu; damos las gracias, los dibujos realizados, a Jenica Feyer y a Mariana Ghinea – po mecanografía del material.*

*Dirigimos, también, calurosos agradecimientos a la Edito Didáctica y Pedagógica de Bucarest y a la Empresa Poligráfica Sibiu por sus esfuerzos para la edición del atlas a un nivel técn de muy buena cualidad.*

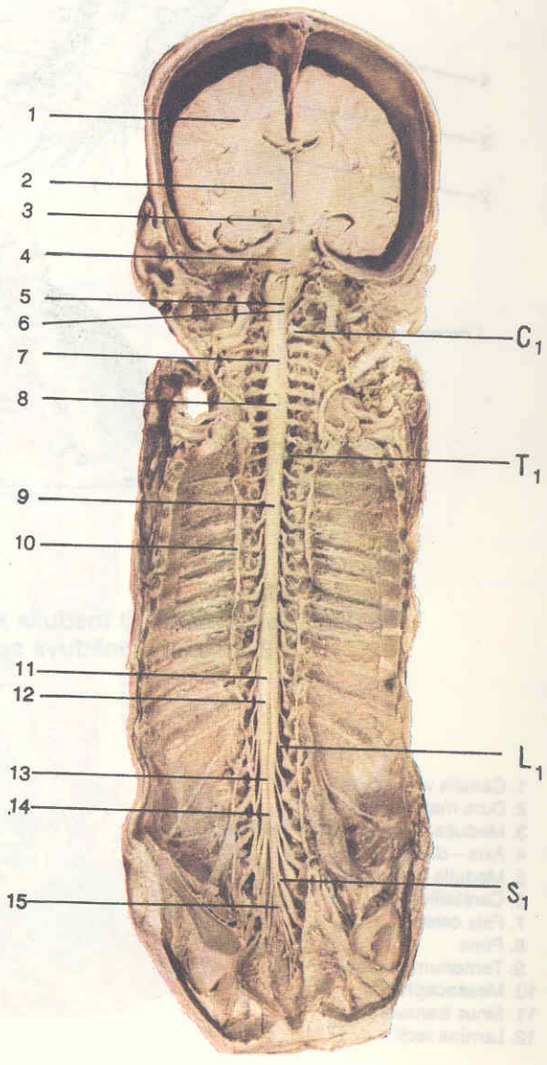
# SYSTEMA NERVOSUM CENTRALE (ALCĂTUIREA SISTEMULUI NERVOS CENTRAL)

SYSTEMA NERVOSUM CENTRALE
- MEDULA SPINALIS
- ENCEPHALON:

*TRUNCUS ENCEPHALICUS* — RHOMBENCEPHALON
- Medulla oblongata (bulbus; myelencephalon)
- Pons } metencephalon
- Cerebellum }
- Mesencephalon — MESENCEPHALON

*DIENCEPHALON* — PROSENCEPHALON
- Epithalamus
- Thalamus dorsalis
- Metathalamus
- Thalamus ventralis
- Hypothalamus
  Neurohypophysis

*CEREBRUM* (telencephalon) — PROSENCEPHALON
- Hemispherium cerebralis



1. Telencephalon – hemispherium cerebralis
2. Diencephalon
3. Mesencephalon
4. Metencephalon (pons)
5. Myelencephalon (medulla oblongata, bulbus)
6. Medulla spinalis
7. Pars cervicalis
8. Intumescentia cervicalis
9. Pars thoracica
10. Truncus sympathicus
11. Intumescentia lumbosacralis
12. Pars sacralis
13. Pars coccygea
14. Cauda equina
15. Filum terminale

Nervi spinales: $C_1$, $T_1$, $L_1$, $S_1$

**Fig. 41.**
**Systema nervosum centrale, nervi spinales et truncus sympathicus; neo-natus)**
**(Sistemul nervos central, nervii spinali şi trunchiul simpatic laterovertebral la nou-născut)**

# MEDULLA SPINALIS (MĂDUVA SPINĂRII)

## TOPOGRAPHIA MEDULLAE SPINALIS (TOPOGRAFIA MĂDUVEI SPINĂRII)

*Medulla spinalis:*

Pars cervicalis (C)
(segmenta cervicalia 1 – 8)

Pars thoracica (T)
(segmenta thoracica 1 – 12)

Pars lumbalis (L)
(segmenta lumbalia 1 – 5)

Pars sacralis (S)
(segmenta sacralia 1 – 5)

Pars coccygea (1 – 3)
(segmenta coccygea 1 – 3)

Filum terminale
(meningeum; meningeale)
Intumescentia cervicalis = $C_5 - T_1$
Intumescentia lumbosacralis = $L_2 - S_3$
Conus medullaris

*I. Plexus cervicalis:*
$C_1$ – ramus ventralis (anterior)
N. occipitalis minor
N. auricularis magnus
N. transversus colli
Nn. supraclaviculares
N. phrenicus

*II. Plexus brachialis:*
Truncus superior
Truncus medius
Truncus inferior
Fasciculus lateralis
Fasciculus medialis
Fasciculus posterior
N. medianus
N. radialis
N. axillaris
N. ulnaris
N. cutaneus brachii medialis
N. cutaneus antebrachii medialis
Nervi thoracici ($T_1 - T_{12}$)

*III. Plexus lumbalis:*
N. iliohypogastricus
N. ilio-inguinalis
N. genitofemoralis
N. cutaneus femoris lateralis
N. femoralis
N. obturatorius

*IV. Plexus sacralis:*
N. gluteus superior
N. gluteus inferior
N. peroneus (fibularis) communis
N. tibialis
N. cutaneus femoris posterior
N. pudentus

*V. N. coccygeus:*
Plexus coccygeus
Nervi coccygei

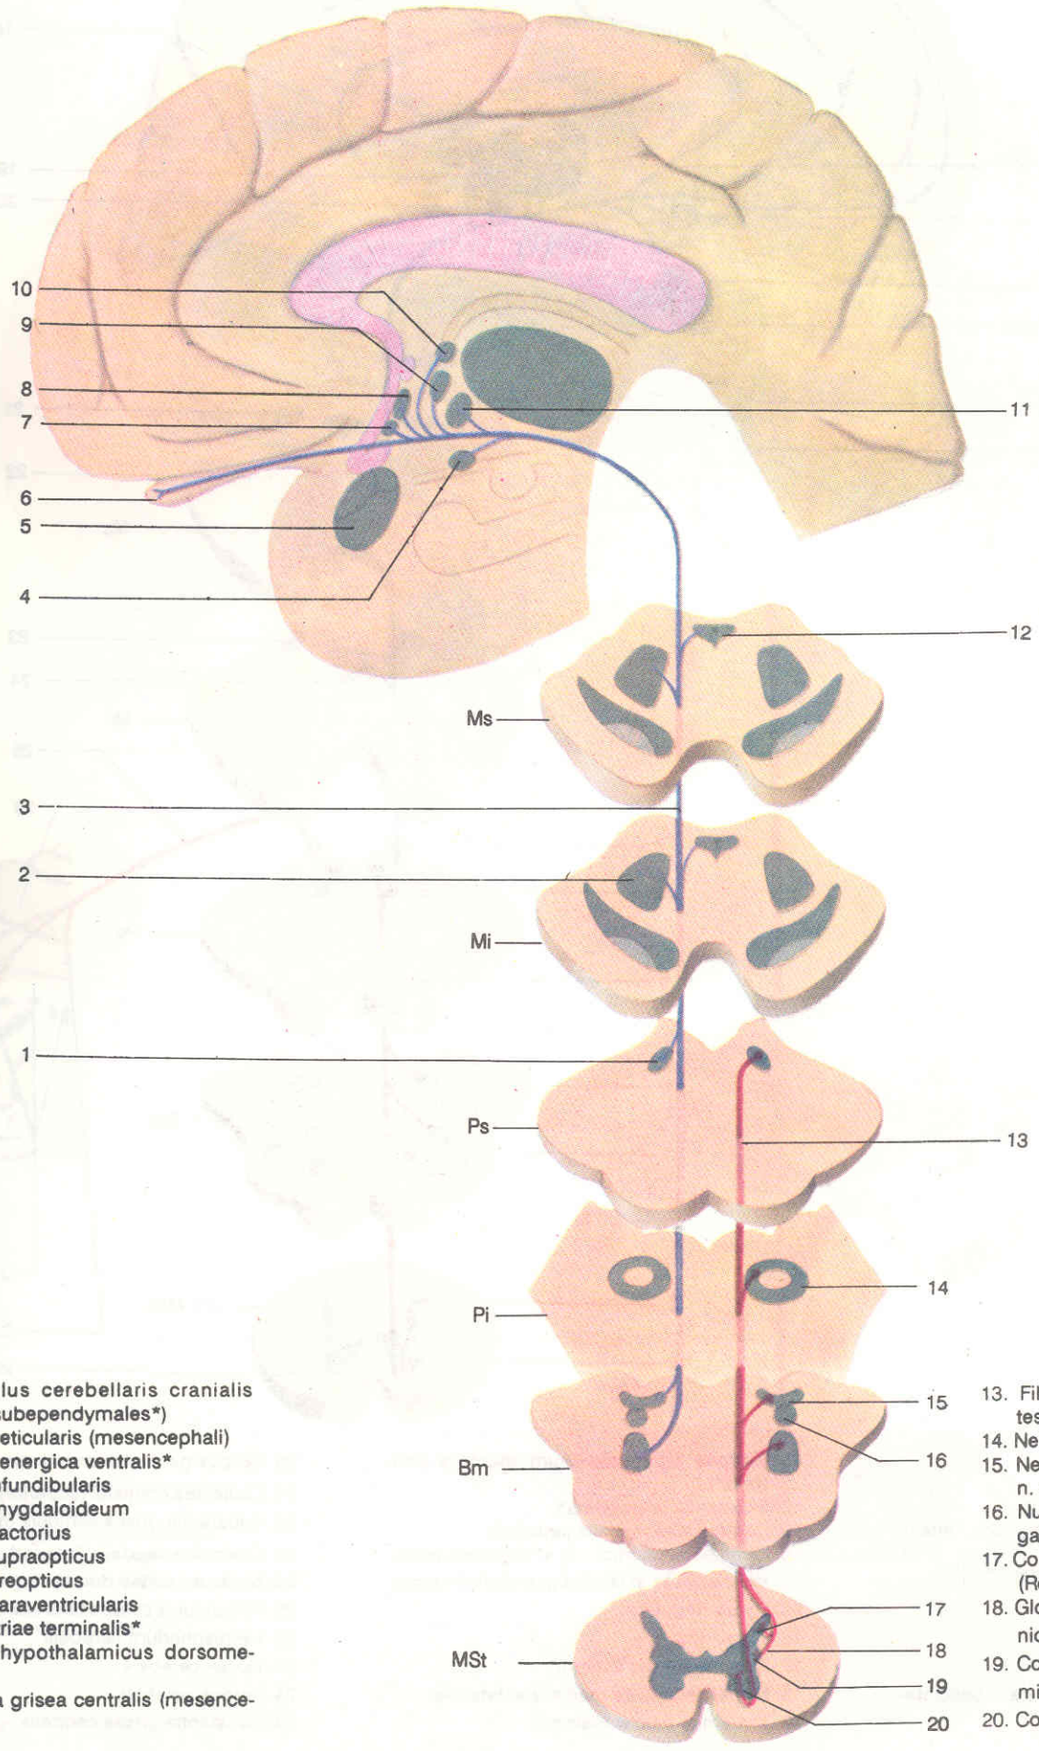
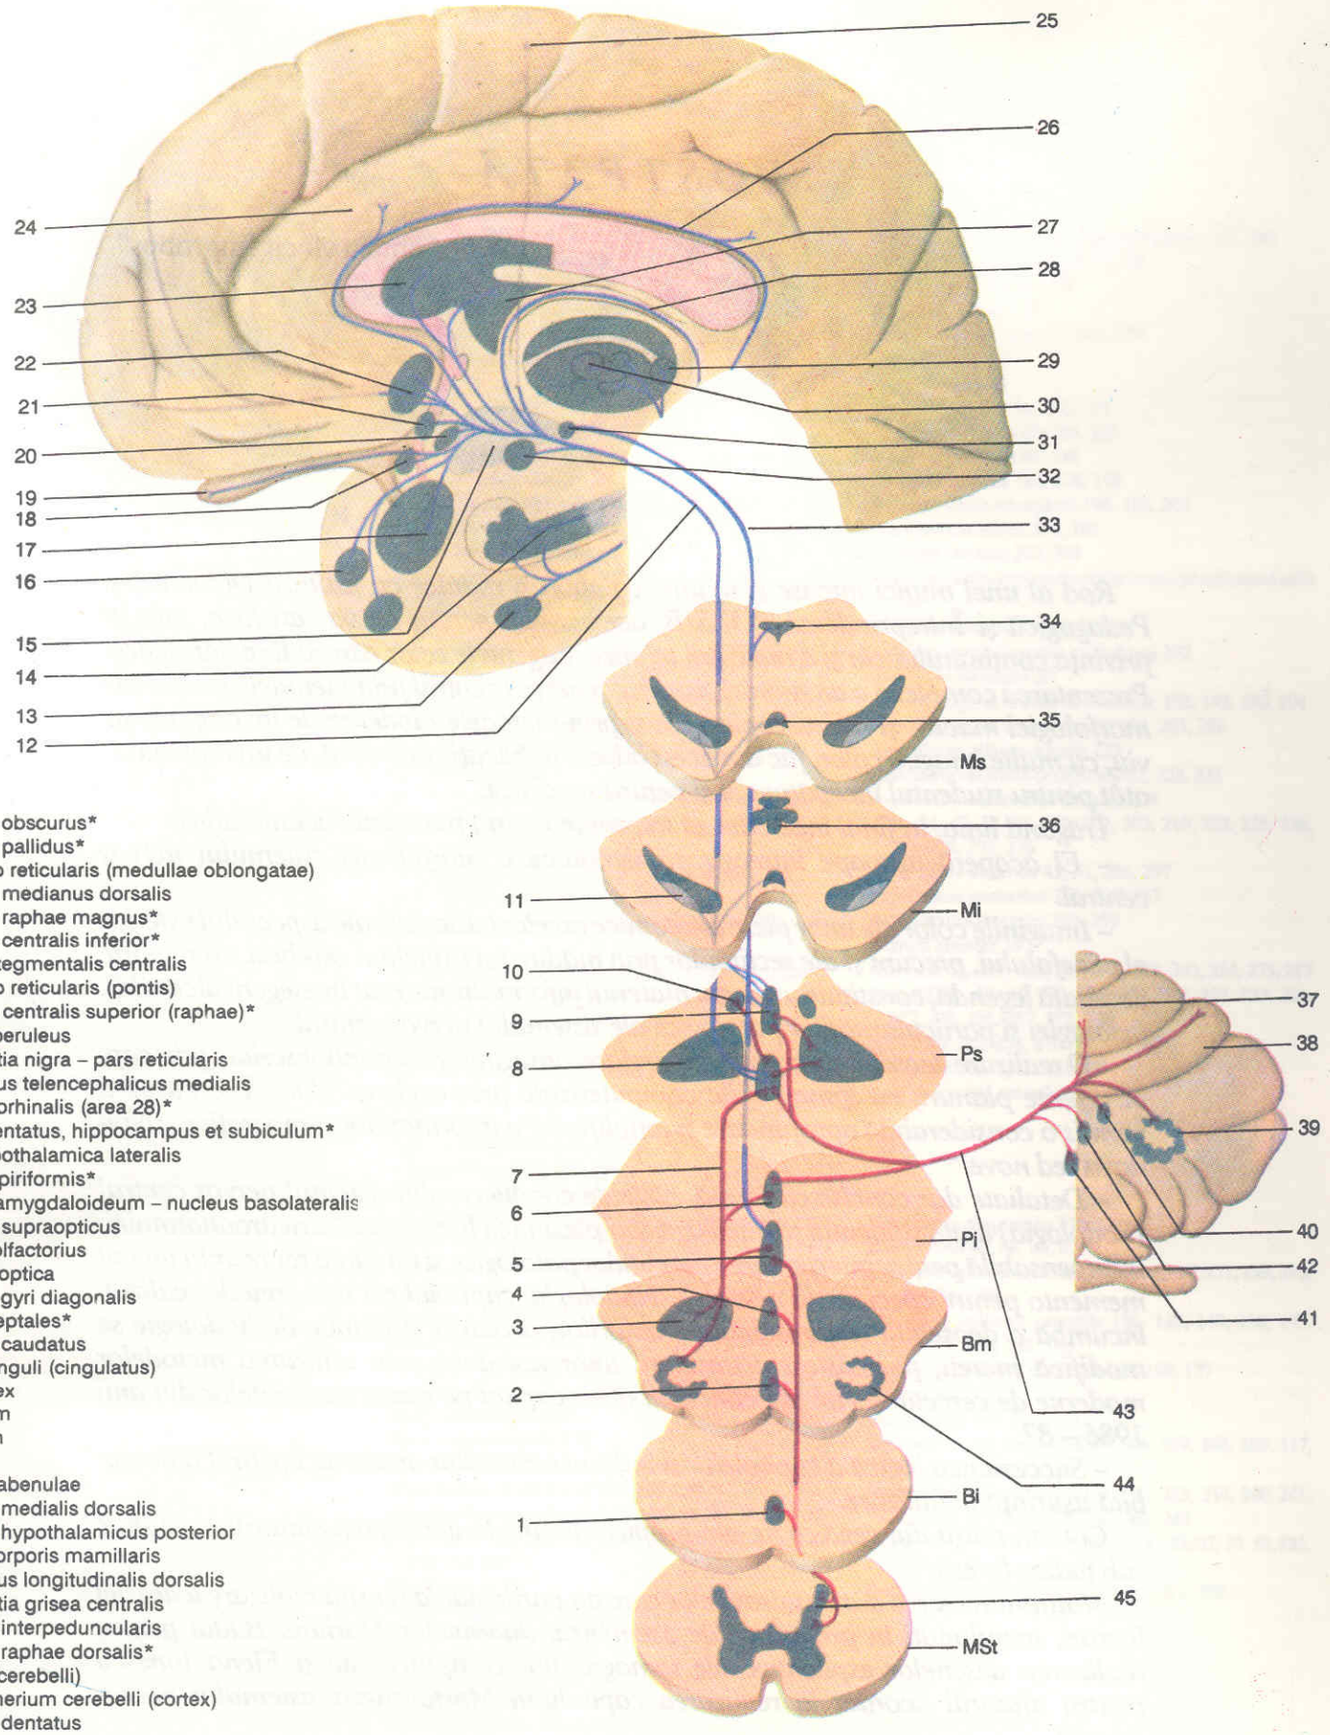
11. Corpus amygdaloideum (nucleus centralis*)
12. Substantia innominata*
13. Commissura rostralis (anterior)
14. Laminae neocortici – 3, 4* (lamina pyramidalis externa et lamina granularis interna)
15. Gyrus cinguli
16. Cingulum
17. Stria medullaris thalami
18. Nuclei habenulae medialis et lateralis
19. Thalamus (nuclei thalami)
20. Corpus geniculatum laterale
21. Colliculus cranialis (superior)
22. Substantia grisea centralis (mesencephali)
23. Colliculus caudalis (inferior)
24. Nucleus raphae dorsalis*
25. Pedunculus cerebellaris cranialis (superior)
26. Hemispherium cerebelli
27. Nuclei cerebelli
28. Vermis cerebelli
29. Substantia grisea centralis

**Fig. 322.**
**Systemata noradrenergica**
**(Circuite noradrenergice)**



1. Pedunculus cerebellaris cranialis (neuroni subependymales*)
2. Formatio reticularis (mesencephali)
3. Via noradrenergica ventralis*
4. Nucleus infundibularis
5. Corpus amygdaloideum
6. Bulbus olfactorius
7. Nucleus supraopticus
8. Nucleus preopticus
9. Nucleus paraventricularis
10. Nucleus striae terminalis*
11. Nucleus hypothalamicus dorsomedialis
12. Substantia grisea centralis (mesencephali)
13. Fibrae noradrenergicae descendentes*
14. Neurona circum nuc. facialis*
15. Neurona locata dorsalis nuc. dorsalis n. vagi*
16. Nucleus dorsalis nervi vagi (nuc. gelatinosus dorsalis)
17. Cornu dorsale – substantia gelatinosa (Rolando)
18. Glomeratio neuronalis ex vicinitate funiculi lateralis*
19. Columna intermediolateralis (autonomica)
20. Cornu ventrale (anterius)



1. Nucleus obscurus*
2. Nucleus pallidus*
3. Formatio reticularis (medullae oblongatae)
4. Nucleus medianus dorsalis
5. Nucleus raphae magnus*
6. Nucleus centralis inferior*
7. Tractus tegmentalis centralis
8. Formatio reticularis (pontis)
9. Nucleus centralis superior (raphae)*
10. Locus coeruleus
11. Substantia nigra – pars reticularis
12. Fasciculus telencephalicus medialis
13. Area entorhinalis (area 28)*
14. Gyrus dentatus, hippocampus et subiculum*
15. Area hypothalamica lateralis
16. Area prepiriformis*
17. Corpus amygdaloideum – nucleus basolateralis
18. Nucleus supraopticus
19. Bulbus olfactorius
20. Area preoptica
21. Nucleus gyri diagonalis
22. Nuclei septales*
23. Nucleus caudatus
24. Gyrus cinguli (cingulatus)
25. Neocortex
26. Cingulum
27. Putamen
28. Fornix
29. Nuclei habenulae
30. Nucleus medialis dorsalis
31. Nucleus hypothalamicus posterior
32. Nuclei corporis mamillaris
33. Fasciculus longitudinalis dorsalis
34. Substantia grisea centralis
35. Nucleus interpeduncularis
36. Nucleus raphae dorsalis*
37. Vermis (cerebelli)
38. Hemispherium cerebelli (cortex)
39. Nucleus dentatus
40. Nucleus emboliformis
41. Nucleus globosus
42. Nucleus fastigii (fastigiatus)
43. Pedunculus cerebellaris medius (pontinus)
44. Nucleus olivaris caudalis
45. Cornu dorsale (laminae I – VI*)

# *POSTFAŢĂ*

„Labor omnia vincit Improbus"

*Rod al unei munci intense şi al unei colaborări rodnice cu Editura Didactică şi Pedagogică şi Întreprinderea POLSIB, acest atlas sperăm că va satisface, atât în privinţa conţinutului cât şi a realizării tehnice, exigenţele celor cărora li se adresează. Prezentarea complexă a anatomiei sistemului nervos central prin metodele clasice ale morfologiei macro- şi microscopice, cât şi prin metodele moderne de investigaţie pe viu, cu multe imagini color, fac din acest atlas o publicaţie atractivă, de un real ajutor atât pentru studentul începător cât şi pentru specialist.*

*Trăgând linia, în final încercăm să trecem în revistă realizările acestui atlas.*

*– El acoperă aproape întreaga problematică a morfologiei sistemului nervos central.*

*– Imaginile color ale unor piese anatomice excelent disecate, ale aspectului exterior al encefalului, precum şi ale secţiunilor prin măduvă şi trunchiul cerebral, cu o foarte detaliată legendă, constituie un bogat material informativ necesar înţelegerii alcătuirii, fiziologiei şi particularităţilor patologice ale sistemului nervos central.*

*– O realizare deosebită o constituie corelarea imaginilor secţiunilor seriate prin cap, în diferite planuri, cu tomografiile computerizate prin aceleaşi planuri, ceea ce a permis o considerabilă aprofundare şi amplificare a informaţiilor tomografice. „Non nova sed nove!"*

*– Detaliate dar concise ca formă, căile de conducere din sistemul nervos central (hodologia) ajută studentul să înţeleagă complexitatea funcţională a neuroanatomiei, indispensabilă pentru interpretarea condiţiilor patologice şi totodată reprezintă un util memento pentru specialistul neurolog. Hodologia, capitolul cel mai greu de realizat, incumbă o deosebită responsabilitate autorilor, deoarece noţiunile de hodologie se modifică mereu, pe măsura acumulării unor noi date, prin utilizarea metodelor moderne de cercetare. Noi am conceput acest capitol pe baza cunoştinţelor din anii 1986–87.*

*– Succesiunea logică a capitolelor şi indexul termenilor anatomici permit o deosebită uşurinţă în utilizare.*

*Cât am reuşit din ceea ce ne-am propus rămâne la aprecierea cititorilor. „Adhuc sub judice lis este".*

*Mulţumim încă o dată tuturor celor care au participat la reuşita realizare a acestei lucrări, menţionaţi în prefaţă şi, de asemenea, doamnelor Mariana Budai pentru realizarea desenelor explicative ale tomografiilor computerizate şi Elena Ionescu pentru ajutorul acordat la realizarea capitolului Morfogeneza sistemului nervos central.*

*În speranţa că Atlasul de anatomia sistemului nervos central va întruni aprecierile majorităţii, încheiem prin cuvintele lui Horaţiu „HOC ERAT IN VOTIS".*

*Profesor dr. RADU JUSTIN DIMITRIU*

## ATLAS DE ANATOMIA OMULUI
## SISTEMUL NERVOS CENTRAL
## – SYSTEMA NERVOSUM CENTRALE –

Autori: prof. dr. VIOREL RANGA, prof. dr. RADU J. DIMITRIU
Din partea Editurii Didactice şi Pedagogice, R. A.
Director: dr. CONSTANTIN FLORICEL
Redactor şef: dr. CORNELIU ŢURCAŞIU
Şef birou Producţie: ing. MICAELA GRIGORAŞ

La realizarea acestei ediţii au luat parte:
Redactor de carte: farm. RODICA MIHĂILESCU
Proiectare grafică: OTTO PARASCHIV NECŞOIU
Tehnoredactor: LUMINIŢA MARINESCU
Coperta: DUMITRU ŞMALENIC
Desene: ADRIAN ALEXANDRESCU
a colaborat arh. IOAN POROJAN
Corectură: GABRIELA MANGU, MAGDA ACXENTESCU, GHEORGHIŢA ILIOIU, DAN DUMITRU, MANUELA DUMITRAŞCU, ANA IONESCU, EVA KOVATS, DIANA STOICA.
Dactilografiere: VIOLETA BUDINARU, RODICA MURARIU, TEODORA SAVASTRU
Tehnician producţie: VICTOR UŢĂ
Pentru termenii în limba latină au fost consultaţi redactorii ELENA PÂRVU şi MARIANA DIACONESCU

Realizarea acestui atlas aparţine Societăţii Comerciale „POLSIB" S. A. Sibiu

Difuzarea lucrării se realizează de către Editura Didactică şi Pedagogică, R. A., prin serviciul Desfacere – şef serviciu ec. MIOARA CHIVULESCU
