MR. JOHN GREENEWALD JR.
SUITE 1203
27305 WEST LIVE OAK ROAD
CASTAIC, CA 91384

FOIPA Request No.: 1417678-000
Subject: 080-HQ-805

Dear Mr. Greenwald:

The enclosed documents were reviewed under the Freedom of Information/Privacy Acts (FOIPA), Title 5, United States Code, Section 552/552a. Below you will find check boxes under the appropriate statute headings which indicate the types of exemptions asserted to protect information which is exempt from disclosure. The appropriate exemptions are noted on the enclosed pages next to redacted information. In addition, a deleted page information sheet was inserted to indicate where pages were withheld entirely and identify which exemptions were applied. The checked exemptions used to withhold information are further explained in the enclosed Explanation of Exemptions:

- | Section 552 | | Section 552a |
|--|---|---------------------------------|
| <input type="checkbox"/> (b)(1) | <input type="checkbox"/> (b)(7)(A) | <input type="checkbox"/> (d)(5) |

| <input checked="" type="checkbox"/> (b)(6) | | <input type="checkbox"/> (k)(7) |

2,675 preprocessed pages are enclosed. To expedite requests, preprocessed packages are released the same way they were originally processed. Documents or information originating with other Government agencies that were originally referred to that agency were not referred as part of this release. This material is being provided to you at no charge.

Please refer to the enclosed FBI FOIPA Addendum for additional standard responses applicable to your request. The **“Standard Responses to Requests”** section of the Addendum applies to all requests. If the subject of your request is a person, the **“Standard Responses to Requests for Individuals”** section also applies. The **“General Information”** section includes useful information about FBI records. Also enclosed is our Explanation of Exemptions.

For questions regarding our determinations, visit the www.fbi.gov/foia website under “Contact Us.” The FOIPA Request Number listed above has been assigned to your request. Please use this number in all correspondence concerning your request.

You may file an appeal by writing to the Director, Office of Information Policy (OIP), United States Department of Justice, Suite 11050, 1425 New York Avenue, NW, Washington, D.C. 20530-0001, or you may submit an appeal through OIP's FOIA online portal by creating an account on the following web site: <https://www.foiaonline.gov/foiaonline/action/public/home>. Your appeal must be postmarked or electronically transmitted within ninety (90) days from the date of this letter in order to be considered timely. If you submit your appeal by mail, both the letter and the envelope should be clearly marked "Freedom of Information Act Appeal." Please cite the FOIPA Request Number assigned to your request so it may be easily identified.

You may seek dispute resolution services by contacting the Office of Government Information Services (OGIS) at 877-684-6448, or by emailing ogis@nara.gov. Alternatively, you may contact the FBI's FOIA Public Liaison by emailing foipaquestions@fbi.gov. If you submit your dispute resolution correspondence by email, the subject heading should clearly state "Dispute Resolution Services." Please also cite the FOIPA Request Number assigned to your request so it may be easily identified.

Sincerely,

A handwritten signature in black ink, appearing to read "D. Hardy", with a stylized flourish at the end.

David M. Hardy
Section Chief
Record/Information
Dissemination Section
Information Management Division

Enclosure(s)

FBI FOIPA Addendum

As referenced in our letter, the FBI FOIPA Addendum includes information applicable to your request. Part 1 of the Addendum includes standard responses that apply to all requests. If you submitted a request regarding yourself or another person, Part 2 includes additional standard responses that apply to requests for individuals. If you have questions regarding the standard responses in Parts 1 or 2, visit the www.fbi.gov/foia website under “Contact Us.” Previously mentioned appeal and dispute resolution services are also available. Part 3 includes general information about FBI records that you may find useful.

Part 1: Standard Responses to All Requests: See Below for all Requests

- (i) **5 U.S.C. § 552(c).** Congress excluded three categories of law enforcement and national security records from the requirements of the Freedom of Information Act (FOIA). See 5 U.S.C. § 552(c) (2006 & Supp. IV (2010)). FBI responses are limited to those records subject to the requirements of the FOIA. Additional information about the FBI and the FOIPA can be found on the fbi.gov website.
- (ii) **National Security/Intelligence Records.** The FBI can neither confirm nor deny the existence of national security and foreign intelligence records pursuant to FOIA exemptions (b)(1) and (b)(3) and PA exemption (j)(2) as applicable to requests for records about individuals [5 U.S.C. §§ 552/552a (b)(1), (b)(3), and (j)(2); 50 U.S.C. § 3024(i)(1)]. The mere acknowledgment of the existence or nonexistence of such records is itself a classified fact protected by FOIA exemption (b)(1) and/or would reveal intelligence sources, methods, or activities protected by exemption (b)(3); 50 USC § 3024(i)(1). This is a standard response and should not be read to indicate that national security or foreign intelligence records do or do not exist.

Part 2: Standard Responses to Requests for Individuals: See Below for all Requests for Individuals

- (i) **Requests for Records about any Individual—Watch Lists.** The FBI can neither confirm nor deny the existence of any individual’s name on a watch list pursuant to FOIA exemption (b)(7)(E) and PA exemption (j)(2) [5 U.S.C. §§ 552/552a (b)(7)(E), (j)(2)]. This is a standard response and should not be read to indicate that watch list records do or do not exist.
- (ii) **Requests for Records for Incarcerated Individuals.** The FBI can neither confirm nor deny the existence of records which could reasonably be expected to endanger the life or physical safety of any incarcerated individual pursuant to FOIA exemptions (b)(7)(E) and (b)(7)(F) and PA exemption (j)(2) [5 U.S.C. §§ 552/552a (b)(7)(E), (b)(7)(F), and (j)(2)]. This is a standard response and should not be read to indicate that such records do or do not exist.

Part 3: General Information:

- (i) **Record Searches.** The Record/Information Dissemination Section (RIDS) searches for reasonably described records by searching those systems or locations where responsive records would reasonably be found. Most requests are satisfied by searching the Central Record System (CRS), an extensive system of records consisting of applicant, investigative, intelligence, personnel, administrative, and general files compiled and maintained by the FBI in the course of fulfilling its dual law enforcement and intelligence mission as well as the performance of agency administrative and personnel functions. The CRS spans the entire FBI organization and encompasses the records of FBI Headquarters (“FBIHQ”), FBI Field Offices, and FBI Legal Attaché Offices (“Legats”) worldwide. A CRS search includes Electronic Surveillance (ELSUR) records.
- (ii) **FBI Records**
Founded in 1908, the FBI carries out a dual law enforcement and national security mission. As part of this dual mission, the FBI creates and maintains records on various subjects; however, the FBI does not maintain records on every person, subject, or entity.
- (iii) **Requests for Criminal History Records or “Rap Sheets.”** The Criminal Justice Information Services (CJIS) Division provides Identity History Summary Checks –often referred to as a criminal history record or “rap sheets.” These criminal history records are not the same as material in an investigative “FBI file.” An Identity History Summary Check is a listing of information taken from fingerprint cards and documents submitted to the FBI in connection with arrests, federal employment, naturalization, or military service. For a fee, individuals can request a copy of their Identity History Summary Check. Forms and directions can be accessed at www.fbi.gov/about-us/cjis/identity-history-summary-checks. Additionally, requests can be submitted electronically at www.edo.cjis.gov. For additional information, please contact CJIS directly at (304) 625-5590.
- (iv) **The National Name Check Program (NNCP).** The mission of NNCP is to analyze and report information in response to name check requests received from federal agencies, for the purpose of protecting the United States from foreign and domestic threats to national security. Please be advised that this is a service provided to other federal agencies. Private citizens cannot request a name check.

EXPLANATION OF EXEMPTIONS

SUBSECTIONS OF TITLE 5, UNITED STATES CODE, SECTION 552

- (b)(1) (A) specifically authorized under criteria established by an Executive order to be kept secret in the interest of national defense or foreign policy and (B) are in fact properly classified to such Executive order;
- (b)(2) related solely to the internal personnel rules and practices of an agency;
- (b)(3) specifically exempted from disclosure by statute (other than section 552b of this title), provided that such statute (A) requires that the matters be withheld from the public in such a manner as to leave no discretion on issue, or (B) establishes particular criteria for withholding or refers to particular types of matters to be withheld;
- (b)(4) trade secrets and commercial or financial information obtained from a person and privileged or confidential;
- (b)(5) inter-agency or intra-agency memorandums or letters which would not be available by law to a party other than an agency in litigation with the agency;
- (b)(6) personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy;
- (b)(7) records or information compiled for law enforcement purposes, but only to the extent that the production of such law enforcement records or information (A) could reasonably be expected to interfere with enforcement proceedings, (B) would deprive a person of a right to a fair trial or an impartial adjudication, (C) could reasonably be expected to constitute an unwarranted invasion of personal privacy, (D) could reasonably be expected to disclose the identity of confidential source, including a State, local, or foreign agency or authority or any private institution which furnished information on a confidential basis, and, in the case of record or information compiled by a criminal law enforcement authority in the course of a criminal investigation, or by an agency conducting a lawful national security intelligence investigation, information furnished by a confidential source, (E) would disclose techniques and procedures for law enforcement investigations or prosecutions, or would disclose guidelines for law enforcement investigations or prosecutions if such disclosure could reasonably be expected to risk circumvention of the law, or (F) could reasonably be expected to endanger the life or physical safety of any individual;
- (b)(8) contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions; or
- (b)(9) geological and geophysical information and data, including maps, concerning wells.

SUBSECTIONS OF TITLE 5, UNITED STATES CODE, SECTION 552a

- (d)(5) information compiled in reasonable anticipation of a civil action proceeding;
- (j)(2) material reporting investigative efforts pertaining to the enforcement of criminal law including efforts to prevent, control, or reduce crime or apprehend criminals;
- (k)(1) information which is currently and properly classified pursuant to an Executive order in the interest of the national defense or foreign policy, for example, information involving intelligence sources or methods;
- (k)(2) investigatory material compiled for law enforcement purposes, other than criminal, which did not result in loss of a right, benefit or privilege under Federal programs, or which would identify a source who furnished information pursuant to a promise that his/her identity would be held in confidence;
- (k)(3) material maintained in connection with providing protective services to the President of the United States or any other individual pursuant to the authority of Title 18, United States Code, Section 3056;
- (k)(4) required by statute to be maintained and used solely as statistical records;
- (k)(5) investigatory material compiled solely for the purpose of determining suitability, eligibility, or qualifications for Federal civilian employment or for access to classified information, the disclosure of which would reveal the identity of the person who furnished information pursuant to a promise that his/her identity would be held in confidence;
- (k)(6) testing or examination material used to determine individual qualifications for appointment or promotion in Federal Government service the release of which would compromise the testing or examination process;
- (k)(7) material used to determine potential for promotion in the armed services, the disclosure of which would reveal the identity of the person who furnished the material pursuant to a promise that his/her identity would be held in confidence.

Material concerning this subject matter was formerly kept in the file on Ultrasonic Listening Devices. In the interest of ease of locating and filing material, it is felt that a separate file should be opened for Countermeasures.

Since the new file will contain Secret information, it should be retained in its entirety in the Domestic Intelligence Mail Room.

RECOMMENDATION:

That a new file be opened entitled, Countermeasure Devices, aka, Countermeasure Switches, Countermeasures, CM'S.

On 5/12/59, Albert D. Stern, vice-president of Devenco, Inc., New York City, demonstrated to Laboratory engineers a new telephone countermeasure device developed by his company.

This unit is an external attachment to the phone which has a lever that extends under the handpiece. When the handpiece is at rest on the cradle, the lever causes a three-contact switch to "open" and disconnect the instrument from the line. When the handpiece is lifted the lever is released and in turn causes the switch to "make" and reconnect the instrument to the line. Because the line is actually broken when the instrument is not in use, a separate ringer must be installed ahead of the countermeasure device to signal an incoming call.

Stern developed the unit primarily for [redacted]

[redacted] the State

Department and the White House Secret Service Branch. While intended primarily for use outside the United States, it will be marketed to Federal agencies in this country if the demand arises. The unit is made of clear lucite so that it can quickly be examined to determine if it has been tampered with.

The Laboratory will follow the development of this unit closely.

RECOMMENDATION:

None. For information only.

SUBJECT: COUNTERMEASURES, aka, COUNTERMEASURE DEVICES, COUNTERMEASURE SWITCHES

In the interest of limiting the volume and subject matter of mail placed in the file, Ultrasonic Listening Devices (80-760), a new file has been opened, entitled Countermeasures (80-805). Previously, correspondence concerning countermeasure devices was filed in 80-760.

It is now intended that there be placed in the 80-760 file only that material concerning the application of radio or ultrasonic frequencies to both microphone-telephone surveillances (RFMT) and straight technical surveillances. The latter surveillances pick up only telephone conversation while the RFMT also picks up room conversation when the phone is not in use.

To be filed in 80-805 from now on is that material relating to devices designed to prevent the phone from picking up room conversation. Several of these devices have been developed and are generally referred to as "Countermeasures" (CM's). The Bureau's CM is effective against not only the RFMT, but also against other techniques of altering a telephone to pick up room conversation. Therefore, there will be material in 80-805 concerning more than just the countermeasure against the RFMT.

RECOMMENDATION:

For information only.

DeLoach

On 6/10/59, while discussing new electronic security and investigative products with SA J. M. Matter, Albert D. Stern, Vice President of ~~Devenco~~, Inc., (a New York City research and development concern) revealed the following. 114

Devenco has developed and is going to initiate patent application in the near future on a ~~telephone countermeasure switch~~. This device is applied externally to the instrument and breaks the two or more wires of the telephone line when the hand piece is hung up on the phone cradle.

You will recall that the Bureau has been installing telephone countermeasure devices since 1950 and made application for a patent on a "Telephone Countermeasure Device and Method" (Serial #335, 617) on 1/14/53 in the name of John M. Matter. This action was taken to protect the Government's interest after it was learned that Kenneth H. Schmidt, Vice President of Mosler Research Products, Inc., of Panbury, Connecticut, had made application on 5/3/51 for a patent covering a "Telephone Protective Switch (Serial #224, 307). Secrecy provisions concerning the Bureau's patent application were invoked on 2/6/53. This was reportedly applied to Schmidt's application shortly thereafter.

Stern also indicated that Devenco had very recently developed a highly successful "power-line microphone" which picks up room conversation clearly and utilizes a principle of "FM carrier." The company is looking into the possibility of patent application on this device. For your information, the Bureau made application on 10/7/53 for a patent on a "microphone on a 110-volt power line under the name of "Communications System" (Serial #384, 800) in the name of Ivan W. Conrad. The secrecy provision was invoked 10/30/53.

RECOMMENDATION:

55 SEP 4 1959 You may wish to have these matters discussed with Mr. T. Hayward Brown, Chief of the Justice Department Patent Section, to determine whether the present Bureau patent applications are broad enough to protect the Government's interests.

Very good

PROPOSE in

On 11/30/59, the Electronics Section's highly placed contact in [redacted] advised he had in his possession a countermeasure (CM) device [redacted]

The device was removed from [redacted] by [redacted] dispatched to the office on a trouble call.

The telephone instrument with attached CM was removed from the office by the employee after he determined that the device was introducing trouble on the telephone line.

Examination of this device disclosed that it was the "Detector for Telephone Surreptitious Listening Techniques" patented 2/24/57, by Earle D. Hightower for the AEC, Patent No. 2 875 285, with which the Laboratory is familiar. The unit was well constructed but workmanship in connecting it to the telephone instrument was so poor that short circuits developed in the telephone instrument as a result of connections made. At time of removal, the countermeasure device was inoperative due to a "dead" battery and a defective transistor.

Contact advised that the [redacted] [redacted] is making an official protest to [redacted] concerning use of this countermeasure device on basis that (1) it is a foreign attachment making unauthorized use of telephone equipment, (2) it is a potential source of trouble complaints to the telephone company, and (3) it is subject to malfunctioning and thus creating a false sense of telephone security.

b7D

It is noted that Bureau CM techniques and equipment developed by the Laboratory have not met with such objection by the telephone company, and that since the inception of the Bureau's countermeasure program no complaints of trouble have been made to the telephone company as a result of Bureau CM operations.

ACTION:

For information.

SUBJECT: COUNTERMEASURE DEVICES FOR TELEPHONE INSTRUMENTS

Since 1950, as a result of presidential instructions to the Attorney General, the Bureau has been charged with the responsibility of installing countermeasure devices in telephone instruments at the White House and in the offices and homes of cabinet members and other high governmental officials. These Bureau-developed countermeasures prevent using the phone as a microphone to pick up room conversation when the instrument is hung up. The Laboratory's b7D

has provided invaluable assistance to Electronics Section engineers which has enabled them to discharge the Bureau's responsibility in this field in a most efficient manner. No other organization, private or governmental, has been permitted by him to modify telephones for countermeasure purposes. He has not even permitted this on the part of telephone company employees.

Recently, unknown to b7D
 submitted to the a request that all instruments in the now under construction be equipped with countermeasures. submitted a wiring diagram of the new 500-type set with a special switch to provide countermeasure protection. Without clearing with (who also handles all security matters for the company), prepared and submitted to a company drawing incorporating a special countermeasure switch and advising there would be an initial service charge of \$5.50 per instrument and a continuing 25-cent monthly charge. Four hundred instruments are involved.

On 1/11/60, advised that he has no intention of making the countermeasure-protected set a regular company service for any subscriber. He does not want the company to get started in the business of countermeasure installations. To that end, all of the countermeasure drawings in the telephone company have been collected by for destruction. He is going to ask to return the company drawing submitted to them. However, because of erroneous commitment, he feels that he is obligated to permit to alter their own telephones after the company has installed them. There will be no extra

b7D

In my memorandum to you, 1/13/60, regarding the above subject, I reported that [redacted] had inadvertently supplied [redacted] with a drawing and a schedule of charges for a countermeasure (CM) switch to be used in the 500-type telephones in the new [redacted] when it is completed. The Laboratory's telephone contact, [redacted] advised that he was going to recall all drawings and try to limit the CM use to [redacted].

Handwritten: Wash DC

On 1/29/60, [redacted] reported he had asked [redacted] for the return of all drawings. In addition, he notified [redacted] he was cancelling [redacted] offer of CM installation. He explained to them that the company's policy prohibited supplying a special type instrument or service to any one subscriber as compared to another. [redacted] here are reporting the matter to their [redacted] superiors.

[redacted] as indicated in my 1/13/60 memorandum, originally contemplated allowing [redacted] to do their own CM installations due to the proposal made by [redacted]. However, he decided that the policy which could be most easily defended and carried out was one of "no exceptions." [redacted] does not want the company or any organization other than the Bureau to become involved in CM installations.

REC-70 80-805-14

ACTION: Laboratory engineers will continue to make Bureau-approved CM installations.

SUBJECT: COUNTERMEASURE DEVICES FOR TELEPHONES

As you know, the Bureau developed the countermeasure (CM) device in 1951 to prevent a telephone from being used to pick up room conversation when the instrument is not in normal use. As a result of Presidential instruction through the Attorney General, CM's have been installed since then on a selective basis by Bureau engineers in instruments at the White House and the offices and residences of cabinet members and other high Government officials.

Since 1958, [redacted] have attempted to secure the use of CM's for telephones to be installed in [redacted] now under construction in Washington, D. C. They first sought to obtain use of a CM in August, 1958, by having the State Department request its use for them from the [redacted] The Laboratory's company contact, [redacted] refused to comply with the request. Later [redacted] contacted [redacted] directly and were again refused.

Unknown to [redacted] in March, 1959, [redacted] approached the [redacted] the telephone company on the CM problem without mentioning previous refusal by [redacted]. In July, 1959 [redacted] erroneously issued to [redacted] an offer to install an instrument with a special CM switch in [redacted] for a service charge of \$3.50 and an annual charge of \$2.08 for each instrument. This would amount to approximately \$2100 initially and \$1248 annually for the 600 instruments involved. Due to extended absence from Washington during the latter part of 1959, this offer did not come to [redacted] attention until January, 1960, as reflected in my 1-13-60, memorandum to you. In my subsequent 2-1-60, memorandum to you, I reported [redacted] had informed [redacted] he was withdrawing the offer of [redacted]. He explained to [redacted] that, as a public utility, the company could not extend to any one subscriber a special type of service not afforded to any other subscriber, and that the company was in the business of supplying phone service and not security service.

REC-32 **12 MAR 15 1960**

SEVEN

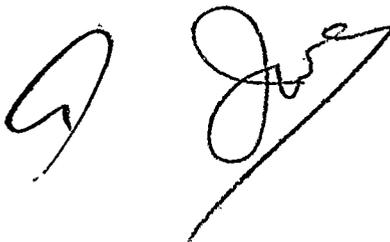

Memorandum to Mr. Tamm
RE: COUNTERMEASURE DEVICES FOR TELEPHONES
80-805 .

On 3-2-60, [redacted] advised he had received formal notice of acceptance by [redacted] of withdrawal of [redacted] offer. At the same time they requested that only standard instruments be installed in their [redacted] stated that this left the CM situation where he wanted it; namely, that the Bureau is the only agency engaged in CM installations and that such installations shall be on a restricted basis.

This is brought to your attention to indicate that [redacted] has successfully resisted pressure by [redacted] and officials of his own company to initiate installation of a "secure" instrument. There is little question that the use of such an instrument would spread in time, and ultimately render technical penetration by the telephone-microphone technique extremely difficult.

ACTION:

Laboratory engineers will continue to make Bureau approved CM installations.

FROM : R. L. Millen *RLM*

SUBJECT: COUNTERMEASURE DEVICES FOR TELEPHONES

Albert D. Stern, Vice-President of Devenco, Incorporated (a New York City research and development concern), supplied the following information to Electronics Section personnel on 3-16-60:

According to Robert I. Bouck, Special Agent in Charge, Protective Research Section, Secret Service, the White House is planning to take a few "secure" instruments of its own for use by the President during his forthcoming trip to Russia. The instruments are to be equipped with a "line disconnect" device made by Devenco. In my 5-14-59, memorandum to Mr. Parsons on this subject, I reported that the Devenco unit is an external attachment to the phone that mechanically disconnects the instrument from the telephone wires serving it when the handpiece is hung up on the cradle. This is designed to prevent pickup of room conversation by the phone when it is not in use.

The contemplated use of "secure" instruments may be of interest to the Special Agent handling White House liaison matters.

JUNE

SUBJECT: COUNTERMEASURES

It is noted that present technical developments make it possible for a telephone instrument to be used as a microphone for picking up conversations when the instrument is hung up. The Laboratory has developed a countermeasure device which will prevent a telephone instrument from being used in this fashion. This device consists of a modification of the switch inside the telephone instrument.

In connection with the use of countermeasure devices on telephone instruments, it must be remembered that these devices afford protection only against the use of a telephone instrument as a microphone for clandestine listening to room conversations and that they afford no protection against tapping of telephone lines for the purpose of monitoring telephone conversations. There is no known device which will protect a telephone against such tapping, since tapping can be carried out at the calling end, at the receiving end, or at intermediate points, including at the telephone company premises. The possibility of such tapping can be minimized by the selection of direct cables, which is done in the case of Bureau officials, but the possibility cannot be completely eliminated.

Dear Bob:

I believe that you will find the attached summary of information on telephone countermeasures of interest to you.

These countermeasures have been developed by the FBI to protect telephones of the President, Cabinet members and other select high Government officials from being used as microphones to overhear room conversations. You may recall that during your service as Chief Counsel of the Senate Select Committee on Improper Activities in Labor and Management Fields, the telephones in both your office and your residence were so protected.

Sincerely,

FORWARDED TO

TELEPHONE COUNTERMEASURES

Introduction

The past two decades have seen the development of several techniques by which a telephone instrument may be made to operate as a microphone for clandestine listening to room conversations. Application of proper techniques enables room conversations in the vicinity of a telephone instrument to be overheard at a remote point from the instrument at times when the instrument is not in normal use for telephonic communication. Countermeasure devices have been developed by the Federal Bureau of Investigation to prevent utilization of telephone instruments as microphones for clandestine listening.

Countermeasure Development

Earlier techniques utilized in converting a telephone instrument for use as a microphone necessitated alteration of the telephone instrument and its associated wiring. Electronic developments subsequently made possible more sophisticated means of utilizing a telephone instrument as a microphone through use of ultrasonic frequencies. The use of ultrasonic frequency equipment eliminates the need for access to an instrument to make wiring alterations and has therefore increased substantially the threat to security of telephone instruments.

To combat this security problem, the Bureau has developed countermeasure devices designed to eliminate from telephone instruments the possibility of their use as devices for eavesdropping.

Development of countermeasure devices is a continuing program necessitated by continued development of new type telephone instruments for which adequate countermeasure devices must be designed.

~~TOP SECRET~~

80-805-19

ENCLOSURE

~~TOP SECRET~~

Countermeasure Installation Program

Existence of the ultrasonic listening equipment and the development of countermeasure devices for rendering it ineffective as an eavesdropping device were brought to the attention of the Attorney General in 1950. The Attorney General thereafter advised that the President and members of his Cabinet were desirous of having their telephone instruments protected by countermeasure devices.

Since that time, telephone instruments in the White House and in the offices and residences of Cabinet members and other select Government officials in high, sensitive positions have been protected by countermeasure devices installed by Laboratory Engineers of the Federal Bureau of Investigation.

Countermeasure Policy

Use of countermeasure devices has been limited to highly placed officials occupying sensitive positions in the Government.

Widespread installation of countermeasure devices is not desired since general knowledge of the use of these devices will result in the loss of their effectiveness. Close supervision is afforded this program to insure that there is no abuse in the use of these devices.

Nature of Countermeasure Devices

All devices are installed completely within a telephone instrument. They are not conspicuous and their presence can be detected only by careful scrutiny by trained technicians.

~~TOP SECRET~~

~~TOP SECRET~~

Countermeasure devices eliminate only the use of the telephone instrument as a microphone for clandestine listening to room conversations. They do not render a telephone instrument or line secure from tapping (unauthorized interception of telephone conversations).

Classification

By Presidential Directive, the ultrasonic frequency listening device by which room conversation near a telephone instrument can be heard at a remote point without alteration of the telephone instrument is classified ~~TOP SECRET~~.

The countermeasure devices, in order to protect their usefulness, are classified ~~SECRET~~.

~~TOP SECRET~~

~~SECRET~~

The Attorney General

February 1, 1961

Director, FBI

TELEPHONE COUNTERMEASURES

Under the date of January 17, 1961, I sent you a summary of information regarding countermeasure devices which are designed to prevent a telephone from being used to overhear room conversation when the instrument is hung up and not being used. You understand, of course, that these countermeasure devices do not prevent tapping a line to eavesdrop on conversation when the telephone is in normal use. You will recall that in the past we have provided this service for the White House, for cabinet members and other high officials.

If you desire, we can arrange through our liaison with other Government agencies to provide for the installation of these countermeasures where considered essential. Since alteration of the telephone instruments is involved, any such work will necessarily be scheduled at times when no inconvenience will be caused to the various officials.

NOTE: See memo Millen to Conrad dated 1-31-61, re "TELEPHONE COUNTERMEASURES," JMM:pcc.

NOTE: Classified ~~SECRET~~ because CM's are so classified.

James Thomas
Director

SUBJECT: REMOVAL OF TELEPHONE COUNTERMEASURES FROM RESIDENCES AND OFFICES OF OUTGOING CABINET MEMBERS

JUNE

W.C. Sullivan
L. L. ...

Since 1950, as a result of Presidential instructions issued through the Attorney General, the Bureau has had the responsibility of protecting the telephone instruments in the White House and in the offices and residences of cabinet members and other high government officials with a countermeasure (CM) device. The purpose of the CM is to prevent the telephone from being used as a microphone to pick up room conversation when the instrument is hung up and not in normal use. The CM is classified ~~SECRET~~ and its installation involves alteration of the standard telephone circuit.

In order to prevent the Bureau's CM devices from becoming widely known and getting into general use in the telephone system, every effort is made to remove CM's and restore the telephones to normal when an official leaves the government service. This was done January, 1953, when the change from the Truman to the Eisenhower Administration occurred. Experience has shown that removal of CM's from the offices may be delayed until after the Administration change, if the Security Officer or other person continuing in employment at the particular agency has good control over the removal of the telephone instruments. No removal is necessary if the telephones are not changed. In the past, since some officials have left Washington, D. C., shortly after Inauguration Day, CM removal at the residences should be effected shortly before or after that day (1-20-61).

Attached is a list of officials, by Department, from whose office and/or residence telephones CM's should be removed before the telephone company is called upon to remove or change the instruments.

MEMORANDUM FOR MR. TOLSON
MR. PARSONS
MR. CONRAD

I returned an earlier call of [redacted] and he stated he had been told that there was a phone attachment which would prevent recording of the conversation on the other end and if that is so, he would like to have it.

b7E

I stated this device, which we have installed on some of the Cabinet officials' phones, will prevent recording of conversations within his office, but will not prevent tapping of his phone. I stated I did know that in the previous administration, almost all of the Cabinet officials had this and we have put it on at least four or five already. [redacted] stated he would like to have this put on his phone, and I told him I would take care of it right away.

Mr. Parsons and Mr. Conrad have been instructed to take care of this right away.

Very truly yours,

/s/ J. E. H.

John Edgar Hoover

Memorandum for Mr. Parsons

and Cabinet officers. He said that he would bring this up at the next Cabinet meeting. In the meantime, however, the Attorney General desired that immediate action be taken to secure the telephones utilized by the President. In addition, the Attorney General asked that we also handle at once the necessary checks with regard to his telephones at his home. The Attorney General understood that the telephones in his office had already been checked.

Action Being Taken

Arrangements will be made with Kenneth O'Donnell, Special Assistant to the President, to have our Laboratory handle the necessary work at the White House and arrangements will also be made to handle the necessary check at the Attorney General's residence.

(3) SPECIAL INQUIRIES ON PRESIDENTIAL APPOINTMENTS

The Attorney General mentioned that he understood the President was not going to permit any appointees to be sworn into office until after FBI investigations were completed and the report received at the White House. We have previously pointed out to Presidential Assistants, Larry O'Brien and Kenneth O'Donnell, inherent danger in announcing appointments before the investigation is requested. It would seem that the White House has compromised with this principle and is in some instances yielding to pressures in announcing appointments before investigation is completed.

Action Being Taken

We are already handling the special inquiry investigations on a most short deadline basis and will continue to do so in order that there will be no delay properly attributable to the Bureau in getting these cases completed.

(4) INVESTIGATIONS OF NOTORIOUS HOODLUMS AND RACKETEERS

The Attorney General mentioned that he had had a very fine discussion with the Director with reference to Departmental action in the prosecution of notorious hoodlums and racketeers. He stated that it was strong feeling of cooperation and he wanted this to extend on down the line in the Department. He asked that if there were any indications on the part of any Departmental

Memorandum for Mr. Parsons

personnel of a lack of cooperation or understanding, he, the Attorney General, wanted to be immediately advised so that he could straighten the matter out.

Action is being taken as indicated above and developments in this regard will be brought to your attention promptly.

TELEPHONE COUNTERMEASURE DEVICES

As you have been previously informed by memorandum dated February 1, 1961, this Bureau has been conducting a program of installing countermeasure devices on selected telephone instruments for the purpose of thwarting their use as a microphone listening device.

For your information, the protection of your residence telephone instruments with countermeasure devices was completed on February 21, 1961. Since your office telephones were protected at an earlier date, this action completes the security work on the telephones both at your office and at your residence.

On 3-6-61, WFO reported to the Laboratory that a telephone call had been received from [redacted] Personal Secretary to [redacted] to the effect that there was some difficulty with the telephone service at [redacted] residence and that she had been instructed to advise the FBI rather than the telephone company. It was ascertained through [redacted] Secretary, that the trouble was with the signal lights on the telephones and that neither the lines themselves nor the Bureau-installed countermeasures were involved. This information was discussed with Assistant Director Evans and in accordance with his instructions, [redacted] was advised that [redacted] should go ahead and call in the telephone company to make the necessary repairs.

ACTION:

This matter will be followed and after the telephone company has completed the work, a resurvey will be made by the Laboratory to make sure that the security of the instruments has not been impaired.

COUNTERMEASURES

SECURITY OF TELEPHONE LINES

As you know, in accordance with the request of the Attorney General, we have been conducting security checks of the office and residence telephone lines of various Cabinet officers.

We have now completed a check of six office and one residence telephone lines of [redacted] No evidence of tampering was found at any point where access could be had to the lines.

We had installed countermeasure devices on [redacted] office telephones at an earlier date. He did not request any countermeasures for his residence telephones.

No one has been advised of the results of this check.

RECOMMENDATION:

A letter advising [redacted] is attached.

BY LIAISON

Honorable Luther Hodges
The Secretary of Commerce
Washington 25, D.C.

COUNTERMEASURES

My dear Mr. Hodges:

Pursuant to your request, a security survey of your residence telephone lines was completed by Federal Bureau of Investigation personnel on June 22, 1961. Also completed on that date was a security check of the residence telephone line of your personal secretary, Mrs. Margaret L. Tyler.

I am glad to report that no evidence of tampering was found at any point where access could be had to these lines.

Inasmuch as work is being done by the telephone company on your office lines, no check will be conducted at this time. You will be advised when a security check of your office lines has been completed.

Sincerely yours,

2 - Mr. Sullivan (1 - Mr. L'Allier; 1 - Mr. Haynes)

SECURITY OF TELEPHONE LINES

Countermeasures

Reference is made to my memorandum to you dated 4/27/61, recommending (as a result of the Attorney General's request) that Liaison Section personnel determine whether individual Cabinet officers were desirous of having a security check made of their office and/or residence telephone lines and arrange a suitable time for the work. The Director approved.

On June 1, 12, 13, 14 and 22, 1961, as a result of Liaison Section arrangements, Electronics Section personnel made a security check of two residence telephone lines of Secretary of Commerce Luther Hodges. At the request of Secretary Hodges, the residence telephone line of his personal secretary, Mrs. Margaret L. Tyler, was also checked since she handles many of his calls after regular working hours. No evidence of tampering was found at any point where access could be had to the lines.

At the request of Secretary Hodges, no countermeasures were installed in his or Mrs. Tyler's residence telephone instruments.

Secretary Hodges' office telephone lines are to be changed in the very near future. At the request of Security Officer John Phillips, the security check of the office telephone lines is not being made until the completion of the telephone work.

No one has been advised of the results of this check.

RECOMMENDATION:

A letter advising Secretary Hodges is attached.

SECURITY OF TELEPHONE LINES

Reference is made to my memorandum to you dated 4-27-61, recommending (as a result of the Attorney General's request) that the Bureau's Liaison personnel determine whether individual Cabinet officers desire a security check of their office and residence telephone lines and that a suitable time be arranged for the work. The Director approved.

On 5-19-61, and 5-22-61, as a result of arrangements made by the Liaison Section, Electronics Section personnel made a security check of four office telephone lines of [redacted]. No evidence of tampering was found at any point where access could be had to the lines. [redacted] will advise the Bureau if he desires a check of his residence telephone lines.

At the request of [redacted] countermeasures were installed in four office telephone instruments. His personal secretary, [redacted] has been advised of the necessity of keeping the Bureau informed as to any changes in these particular telephone instruments.

No one in [redacted] office has been advised of the results of the security check.

RECOMMENDATION:

Letter advising [redacted] is attached.

You will recall that in February, this year, the Director suggested to the Attorney General that the Bureau could install telephone countermeasures for the White House and Cabinet members if the Attorney General so desired. Subsequently, several countermeasures were installed in the office telephones of the President's office and several members of his staff in the west wing of the White House through arrangements made with Mr. O'Donnell of the White House staff. No countermeasures were installed in the telephone instruments in the President's living quarters since the living quarters were under renovation and most of the telephones were going to be replaced. Mr. O'Donnell stated that he would advise Assistant Director Courtney Evans when the time was appropriate for the installation.

Assistant Director Evans has repeatedly contacted Mr. O'Donnell since then on this matter. No arrangements have been made by Mr. O'Donnell to make the living quarters available for installation of countermeasures. It is not believed that it is desirable to have further contacts with Mr. O'Donnell on this matter inasmuch as he is aware of the fact that the countermeasures have not been installed and that he has stated he will notify Assistant Director Evans when he desires the installation to be made.

Dir's D completely

Right L

As a result of the Director's 2-1-61, letter to the Attorney General, requests for countermeasure installations in the offices of the Secretary of Commerce Hodges and Deputy Secretary of Defense Gilpatric were made. Repeated contacts have been made by SA J. M. Matter with Mr. John Phillips, Commerce Department Security Officer, and Mr. George Gould, Security Officer of the Office of the Secretary of Defense, as to these installations. To date no arrangements have been made which would permit the installations to be completed. It is not believed that the Bureau should make additional contacts inasmuch as Phillips and Gould are aware of the above facts.

**NATIONAL SECURITY COUNCIL
SPECIAL COMMITTEE (SC) ON TECHNICAL
SURVEILLANCE COUNTERMEASURES**

Don

On 4/5/62 SAs R. W. Swartz and J. M. Matter, in the company of [redacted] the Technical Subcommittee (SC) and [redacted] of ONI visited the Naval Research Laboratory (NRL), Washington, D. C., and talked to Mr. [redacted] and Mr. [redacted] concerning the progress being made by NRL on the study of RF saturation of telephones. As a matter of fact, NRL has not made too much progress within the last period since its report to the SC. They have run tests on four additional telephones but even these tests are not complete. They do not have working telephone lines in the working area for this research so none of the tests have been conducted on a regular working telephone line. They have been accumulating the necessary equipment and devising the procedures required to make an over-all check of these instruments so that one may be compared against the other and its off-line characteristics compared to its on-line characteristics.

b6
b7C

[redacted] were most cordial and expressed the desire that the members of the SC feel free to visit the Laboratory at any time and discuss the subject of this research project with them.

January 30, 1962

R. L. Millen

**NATIONAL SECURITY COUNCIL SPECIAL COMMITTEE (SC)
ON TECHNICAL SURVEILLANCE COUNTERMEASURES**

Second (Phase 2) report of U. S. Naval Research Laboratory (NRL) on security threat arising from radio-frequency (RF) saturation of telephones (transmitted with minutes of January 5, 1962, meeting of the SC) reviewed. Off-line tests (set not connected to any line) of Western Electric (WE) 500 C/D (single line), 510 (2-line) 564H (6-button multi-line) indicate these sets are least susceptible of any to RF saturation. Tests of 13 available sets on an 1800-foot dry line (line not connected to any telephone system) in regular telephone cable indicate only American Automatic Electric 80, Roumanian RS 7340 and English Standard P81418 sets could be made to act as a microphone under most favorable Laboratory conditions. Off-line tests on WE 510 set indicate that use of coiled handset cord (instead of straight one) reduces amount of RF saturation. Placement of station cord (connects set to line) and handset cord found to make results unpredictable when frequencies above 10 megacycles were used.

It is significant to note that when the telephones were put on an 1800-foot dry line, compromise due to RF saturation was eliminated for all sets but three. None of NRL tests should be considered conclusive until they are run with sets on live lines (lines actually connected to a working telephone system).

ACTION:

Will continue to follow NRL tests on RF saturation of telephones.

Countermeasure Devices

Mr. Paul J. McNichol, Director of Security, USIA, advised Liaison on March 13, 1962, that he would like to arrange for Richard C. Bond of his office to confer with representatives of the FBI Laboratory regarding countermeasures in the field of physical security.

According to McNichol, Mr. Bond has the responsibility for technical aspects of physical security for his agency. McNichol indicated that Bond is very knowledgeable in this field but he is concerned that there have been developments which Bond has not been able to keep in touch with because of the limited resources of USIA in the security field.

He suggested that it would be most beneficial for USIA to be up to date on the latest techniques so that Mr. Bond could apply them to the space occupied by that agency to guard against the intrusion of listening devices, particularly in the most sensitive areas.

We have no derogatory information in our files concerning Mr. Bond. He has Top Secret clearance. In view of our excellent relations with the USIA Security Office the FBI Laboratory may wish to give some consideration to consulting with him along the lines suggested.

ACTION:

It is recommended that Liaison be authorized to advise McNichol that conferences will be set up for Bond in line with his request.

COUNTER MEASURE DEVICES

SUBJECT: RICHARD C. BOND
 U. S. INFORMATION AGENCY (USIA)
 REQUEST FOR TECHNICAL CONFERENCES
 WITH FBI LABORATORY

Reference is made to Mr. Brennan's 3/16/62 memorandum to Mr. Sullivan in which it was recommended that Mr. Bond, a USIA security officer, be afforded an opportunity to consult with the Laboratory on technical security matters. Assistant Director Conrad recommended that on the preliminary contact discussion be confined to commercially available equipment and nonclassified techniques. The Director approved.

Mr. Bond was interviewed by SA J. M. Matter, Electronics Section, on April 3, 1962. He stated that he had very close liaison with Mr. Stanley Holden of the Office of Security, Department of State. He also indicated complete familiarity with the matters handled by the Technical Subcommittee (TS) of the National Security Council Special Committee (SC) on technical surveillance countermeasures. He was concerned about the adequacy of his equipment (all commercially available) for security survey purposes and inquired as to what the Bureau relied on primarily in its surveys. He was told that the Bureau feels that close physical security of space and equipment is most important and that the Bureau used its technical search equipment as an important supplement to a very painstaking and thorough physical search.

Evidently, as a result of his liaison with Mr. Holden, he was thoroughly familiar with the techniques involved in security surveys. It was not necessary to discuss with him anything other than commercial equipment and the standard techniques used by most agencies in making their surveys. He was most appreciative of the time afforded him by the Bureau and expressed complete agreement with the idea of tight physical security and the use of a thorough physical search on the surveys.

SUBJECT: SECURITY OF THE WHITE HOUSE

On 4/12/62 [redacted]

Laboratory's contact at the [redacted] advised SA J. M. Matter of the following concerning conversation he had had recently with Robert I. Bouck of the Secret Service Protective Research Section at the White House.

Bouck lectured [redacted] that the telephone company had the responsibility of informing him of any knowledge the telephone company had of telephones in the White House being altered in any manner. [redacted] advised Bouck that he could not accept such responsibility because he had no control over whom the White House permitted to work on its telephone instruments. He denied any knowledge of having permitted any Government agency to alter any phones at the White House. He reminded Bouck that due to Bouck's position, it was the latter's responsibility for the security of the telephones and it was an administrative matter for Bouck to set up his own procedures to keep informed as to whom was working on the White House telephones. Bouck was most unhappy and tried to impress upon [redacted] that it was the duty of the telephone company to render the White House maximum security in connection with the telephone service. [redacted] advised that as far as the telephone service was concerned, he had always tried to furnish maximum security at the White House.

He has agreed to install cables that are under pressure so that if the pressure is released indicating that someone may be tampering with the cable, an alarm will sound. Bouck is not satisfied with this and has requested that the telephone company install an alarm circuit that will have no current flow involved whatsoever so that it cannot be detected by unauthorized individuals. Bouck has claimed that he has been advised by at least two outside agencies that such is possible and has requested [redacted] to cooperate with the outsiders at no cost to the White House. [redacted] has refused because company rules prevent this and has asked Bouck to submit details of the proposed circuit to the company for

Memorandum R. L. Millen to Mr. Conrad
RE: SECURITY OF THE WHITE HOUSE

study. Bouck has been unable to produce these circuits and has requested [redacted] to get the Bell Laboratories to work on this problem. [redacted] has refused this since, in related work for the Defense Department over the past two years, he has found that in order to meet all of Bouck's objections, a continuous path through the entire set for alarm purposes would create a situation whereby the set could be compromised. Bouck has insisted that the alarm circuit be complete through the mouthpiece microphone and [redacted] has told him that any such circuit opens the way for use of the telephone as a microphone when the instrument is hung up.

b6
b7C
b7D

The information which has been furnished to the Laboratory by the telephone company contact indicates that the proposed alarm system, which Mr. Bouck is insisting upon, is not a feasible approach and in addition, it would introduce certain factors which would tend to make the telephone instrument susceptible to being compromised.

Laboratory personnel, at the request of Kenneth O'Donnell of the White House staff early in 1961 protected certain designated telephone instruments with countermeasure devices to prevent these instruments from being used to overhear room conversation. It is not known whether O'Donnell made this information available to Bouck. We have considered whether we should go back to O'Donnell; however, we feel this is undesirable since basically it is a White House security problem and the information was given to us in confidence by [redacted]. It is felt that any such contact with O'Donnell relative to the countermeasures would have adverse repercussions against [redacted]

b6
b7C
b7D

ACTION:

For information.

Dincey Bouck seems to be the master mind. I think we should no longer have any thing to do with the White House phones in any way.

Counter Measures

The above device was developed by the Laboratory in November, 1950, to prevent a telephone being used as a microphone to pick up room conversation. It is effective not only against the ultrasonic listening device but also against other techniques of using the telephone as a microphone when it is not in normal use. To protect Government interests, a patent was applied for on the switch and the patent was placed under the Invention Secrecy Act. Mr. Parsons' July 2, 1953, memorandum to Mr. Harbo on the ultrasonic listening device reflects that while the latter was classified as "~~Top Secret~~," the CM switch is classified by the Bureau as "~~Secret~~" because it does not disclose the ultrasonic device.

After the passage of several years, the ultrasonic listening device, with Bureau concurrence, was recently reclassified as "~~Secret~~" by Presidential order so that greater use could be made of the equipment. Sufficient time has elapsed to indicate that the reclassification has not created any security problems as to the ultrasonic device.

The review of classified items is done on a regular basis to determine the need for continuing the classification on each item. Since the CM switch does not disclose the ultrasonic device and is certainly not as sensitive in nature, it appears that the CM switch should no longer be classified the same as the ultrasonic device, but should be reclassified to "~~Confidential~~." It should be noted that State Department has now started using a countermeasure switch of its own in Western Electric telephones being installed in sensitive areas in the U. S. Embassy in Moscow, Russia. The classification of "~~Confidential~~" would appear to be more in line with domestic and foreign use of the CM switch.

ACTION:

Unless advised to the contrary, the Bureau will bring to the attention of the Commissioner of Patents, the reclassification of the CM switch from "~~Secret~~" to "~~Confidential~~."

TO : Mr. Conrad

DATE: October 4, 1962

FROM : R. L. Millen *RLM*

SUBJECT: SECURITY OF THE WHITE HOUSE

On 10-4-62. [redacted]

[redacted] advised SA J. M. Matter in strict confidence of the following interchange of information that has occurred between him and Robert L. Bouck, Secret Service Protective Research Section at the White House:

Bouck has for some time been after [redacted] and representatives of the American Telephone and Telegraph Company (ATT) and Western Electric Bell Laboratories for special security work in connection with telephones at the White House. After suggesting special telephone instruments, the design and application of which would have been most impractical, he has now changed his request to a special alarm system to be incorporated in telephone instruments. He has gone over [redacted] head to representatives of the ATT and [redacted] is now in a position where he must make some gesture of providing special equipment although it may be impractical and actually not solve the security problem.

Bouck wants an extra pair of wires extended from each of approximately 100 White House instruments to his office so that he may use this for alarm purposes. This pair of wires would extend from the handpiece down to the instrument and then into a special cable. The telephone instrument is to be modified so that any person removing the cap on the mouthpiece or earpiece of the handset, or removing the cover from the base of the instrument would automatically set off an alarm on the master control panel in Bouck's office. Bouck first requested just a pair of wires with no control feature on the pair itself. [redacted] had to point out to him that, if this extra pair were not balanced properly to give an indication of tampering, there would be no control over the pair and the instrument could be compromised without causing an alarm.

[redacted] also pointed out that the introduction of this extra pair of wires into the telephone instrument and the handpiece where the microphones are located is poor security practice, since maximum security is obtained by the use

Memorandum to Mr. Conrad
Re: SECURITY OF THE WHITE HOUSE
80-805

of a minimum number of wires. [] suggested that Bouck discuss this with other Government agencies or a central security committee and was informed by Bouck that he was doing this on his own and he did not care what other agencies were doing. (Bouck has the privilege of discussing telephone countermeasure problems with the National Security Special Committee on Technical Surveillance Countermeasures, but has never done so.)

b6
b7C
b7D

[] has done everything in the past for Bouck without charge at considerable expense to the company. He is not only going to have the required circuit developed by the telephone company and Bell Laboratory engineers, but is also going to submit the costs to the Accounting Department so that a monthly charge may be made against each instrument for this special circuit.

b6
b7C
b7D

Nowhere in the discussion did Bouck indicate to [] that the telephone terminal appearances of the White House lines were to be protected with an alarm system, nor is the area of the central control panel to be so protected even though it will not be occupied 24 hours a day. Failure to protect these locations defeats the entire purpose of the installation. Bouck claims that such an installation is necessary because he is afraid that radio, television and newspaper people may tamper with White House telephones in the course of their visits. This is an admission that the activities of these people cannot be controlled and that Bouck cannot provide adequate physical security over sensitive areas in the White House to guarantee that no one could tamper with the telephone instruments unobserved.

b6
b7C
b7D

[] has no indication that Bouck has the support of James Rowley, Chief of U.S. Secret Service, or any other responsible official at the White House in developing this special telephone instrument and alarm circuit.

DATE: January 22, 1963

FROM : R. L. Miller *RLM*

SUBJECT: TELEPHONE ALARM SYSTEM

Counter-measures

This memorandum contains technical information and is for record purposes only.

[redacted] displayed to Laboratory personnel a breadboard model of the telephone alarm system being devised by [redacted] at the request of Robert I. Bouck (SAC of Protective Research Section, Secret Service). [redacted] was being forced into designing and supplying this equipment by pressure from American Telephone and Telegraph superiors.

b6
b7C
b7D

The alarm system is based on an extra pair of wires running from the handset of each protected telephone to a central alarm station (Bouck's office). There are 3 extra switches in series in each instrument, one each in the handset mouthpiece, handset earpiece and instrument base. Any loosening of the caps on the mouthpiece or earpiece or of the cover on the instrument will cause one of the switches to open and cause an audible and visual alarm. Two relays, located at the central station, are wired so that one is always normally operated by the 6 mil current constantly flowing in the 48-volt circuit and the other will operate by any surge of current caused by added voltage. Shorting or grounding of the alarm pair also will cause one of the two relays to indicate an alarm. Only one small current-limiting resistor has to be installed in the set in addition to the switches which occupy very little space.

[redacted] recognizes that the alarm system is only as good as the security afforded the alarm pair. He will supply a working unit to the Laboratory (for whatever tests we wish to conduct) when production sets become available. He still considers the addition of an extra pair of wires right into the handset as being a departure from good security practice.

TO : Mr. Conrad *July*

DATE: May 8, 1963

FROM : R. L. Miller *RLM*

SUBJECT: SECURITY OF THE WHITE HOUSE
TELEPHONE ALARM SYSTEM

The purpose of this memorandum is to keep you informed relative to activities of Secret Service in attempting to provide an alarm system on White House telephones.

My 4/12/62, memo to you concerning above subject indicated that Robert I. Bouck, Special Agent in Charge, Secret Service Protective Research Section at the White House, was putting pressure on [redacted] to

have a special alarm circuit installed on White House telephones. [redacted] had certain special security work done on the White House phone system for Bouck but resisted pressure for a special alarm circuit since he felt it would make the telephone less secure because it required running an extra pair of wires through the telephone handset. Reference memo also pointed out that in early 1961, at the request of Kenneth O'Donnell of the White House staff, Bureau personnel protected certain White House telephones with countermeasure devices to prevent the telephones from being used to overhear room conversation. The Director noted, "Since Bouck seems to be the master mind, I think we should no longer have anything to do with the White House phones in any way."

Purely as a matter of courtesy and informal information only, [redacted] has let us know that Bouck went over [redacted] head to American Telephone and Telegraph Company officials who ordered [redacted] to provide Bouck with a special alarm-type telephone. [redacted] has shown the first one to Electronics Section personnel before delivering it to Bouck for tests and approval. The telephone is standard except for the addition of three small switches (one each in the mouthpiece, the earpiece and inside the base) which are a part of an electrical alarm network. If the mouthpiece or earpiece caps are unscrewed or the cover is removed from the base, the switches cause an alarm to sound at a remote alarm-monitoring point. [redacted] feels that the extra pair of wires introduced by the alarm makes the telephone more susceptible to compromise. No comment was made by the Laboratory.

ACTION:

For your information.

SUBJECT: TELEPHONE COUNTERMEASURE DEVICES
BY CARLTON S. MOOREFIELD

Information in this memo is of a technical nature and is for record purposes only.

Carlton S. Moorefield, Scope Inc., Fairfax, Virginia, furnished the following information:

Moorefield has applied for a patent on a telephone countermeasure device and is seeking to raise \$30,000 to do the research and development necessary to produce a production prototype. The device used a light-sensitive semiconductor photoswitch in each side of the line on the instrument side of the ringer and ringer condenser. The photoswitch has practically no resistance when illuminated and over 250,000 ohms resistance when in the dark. Moorefield would also place across the line a transistorized voltage switch incorporating a diode bridge so as to be unaffected by line polarity changes. This switch would light a neon bulb when the handset was lifted on the telephone, thus illuminating the photoswitches and causing them to conduct.

Also incorporated in the unit would be a small transistorized sawtooth noise generator designed to operate on a minimum of DC or rectified RF current. Its purpose is to start up and put noise on the line by using the power that someone might, by some presently unknown means, succeed in getting past the photoswitches to try to activate the handset microphones.

It is believed Moorefield may contact Fort Holabird of the Army for the purpose of obtaining funds with which to conduct the research necessary to proceed with the possible development of this device.

WJA/c

FROM : SAC, LOS ANGELES (66-275)

SUBJECT: MICROPHONE DETECTOR

Countermeasures

[redacted] of "Y-Lab," Post Office Box 27, Huntington Beach, California, demonstrated a device called a "D-Bug" to [redacted] August 16, 1963.

b6
b7c

The device is a broad band insensitive battery operated radio receiver with a tunable range of approximately 28 to 100 mc. It is designed to assist in detecting radio transmitted "bug" information. The present model comes with a loud speaker for listening to the audio hum signal which is about a 1000 cycle tone. This tone signal is heard as the transmitter is tuned in and it increases in intensity as you come closer to the transmitter. He also has the device so wired that it can be switched to get acoustic feed-back when held very close to the transmitter. The device is housed in a small box, 2" X 3 3/4". The price quoted is approximately \$200.00 each.

28-100 mc range makes D-Bug unit very limited since both lower & higher frequencies are used for radio "bugs." Bureau uses search equipment that covers D-Bug and lower & higher frequencies.

SUBJECT: TECHNICAL EQUIPMENT
SAFETY INTER-COM SYSTEM
MODEL 8-SC

Matter gmm
Counter measures b7E

Enclosed for the Bureau is a one-page leaflet entitled SAFETY INTER-COM SYSTEM, MODEL 8-SC."

Enclosed for Washington Field is one autostat copy of this above-mentioned leaflet.

[Redacted]
[Redacted] Cleveland, Ohio (source - protect by request; furnished reliable information in the past), advised that this inter-com system is a communication system that the [Redacted] invented for the United States Air Force about four years ago. It has now been declassified. [Redacted] stated that this inter-com system weighs less than 20 pounds and can be carried in an attache case, which is furnished with this system. This inter-com system uses one wire which connects all of the individuals on this inter-com system. This system of eight sets and attache case sells for \$800.

The above is being sent to the FBI Laboratory for information purposes.

On August 20, 1963, [Redacted] advised that a firm named Uni-Merc, Inc., 1007 Wisconsin Avenue, Washington, D.C., which the Washington, D. C., City Directory lists as a brokerage firm, ordered this system. [Redacted] stated he was bringing this to the attention of the FBI as it seemed odd to him that a business firm would have use for such a system.

The above is being sent to Washington Field for information.

Re: **TECHNICAL, MICROPHONE DETECTOR**

Dear Sir:

The following concerns the technical equipment of your office:

Reurlet 8/19/63 concerning above unit called a "D-Bug."

Your interest in bringing this to the attention of the Bureau is appreciated. As you can recognize, the frequencies below 28 MC/s and above 100 MC/s are not covered by the "D-Bug" although these frequencies are known to be used for concealed radio transmitters.

If technical literature and a circuit are available on the "D-Bug," obtain such and forward to the FBI Laboratory, attention Electronics Section. If no literature is available on this equipment, the Electronics Section should be so advised.

SUBJECT: COUNTERMEASURE DEVICES IN
RESIDENCE TELEPHONES OF FORMER
[Redacted]

matter

J. J. [unclear]
JMM

b7E

Since 1950, as a result of Presidential instructions to the Attorney General, the Bureau has had the responsibility of installing countermeasure (CM) devices in telephone instruments in the offices and homes of cabinet members and other high Government officials. These devices prevent the telephones from being used as microphones to pick up room conversation, and are classified "CONFIDENTIAL" by the Bureau and the National Security Council Special Committee on Technical Surveillance Countermeasures. By 2/1/61 memorandum, the Director suggested to [Redacted] that the latter might wish to have CM devices installed in his telephones. This was done by Laboratory personnel on 2/21/61 at [Redacted] residence at McLean, Virginia, where sixteen instruments are now protected with these devices.

It is a strict policy of the [Redacted] not to let anyone other than company employees work on telephone instruments. Due to the Bureau's excellent reputation for technical competence, the Laboratory's company contact has permitted an exception to this rule to facilitate the Bureau's carrying out its CM responsibilities for high Government officials. In order to protect himself from having to answer questions as to how off-standard sets are getting into circulation, the contact has asked that the Bureau restore CM-altered sets to normal whenever an official leaves the Government or when the altered set might be picked up by a company repairman working on a normal order to disconnect, exchange or clear trouble on the telephone. Moreover, it would be to the Bureau's advantage if knowledge of these Bureau-developed CM's is restricted to as few responsible individuals as possible.

b7D

In the case of [Redacted] the White House will call for the disconnection and removal of the three White House instruments at [Redacted] residence in the regular course of business. These instruments will go into a

SUBJECT: SECURITY OF TELEPHONE INSTRUMENTS
gn [Redacted] OFFICE Countermeasures

The Electronics Section's confidential telephone contact has advised [Redacted] is having the telephone system in his suite of offices completely revamped, and work is being done on this now to finish at an early date.

As a result of this Section's close liaison with the telephone company, it has been possible to obtain the telephone instruments as they were removed from the offices of [Redacted] and recover the countermeasure devices installed by this Section at an earlier date.

As you know this device prevents the telephone from being used as a microphone to pick up room conversation when the telephone is not in normal use.

Accordingly, this raises the question of installing countermeasure devices in the new telephone instruments now being installed in the [Redacted] Office.

ACTION:

If the Director so desires, [Redacted] Office will be contacted and arrangements will be made for reinstallation of countermeasures on the new telephone instruments now being installed.

The May 3, 1965, issue of "Electronics" carried an article regarding the above unit. It is described by "Steven W. Netolicky, President of Dectron," as a 3 3/8" x 1 1/2" x 5/8," battery-operated transmitter designed to jam signals emanating from miniature eavesdropping radio transmitters. It reportedly has a 200 Mc/s bandwidth and operates for 10 hours on a 4-volt nickel-cadmium battery. The article states that Dectron originally developed the "olive" transmitter. A Dectron employee recently testified about the unit before a Senate investigating committee.

2 watt 140 mc. walkie talkie within a few feet of the Mark II. He also learned that severe interference is experienced in the operation of any type radio or TV receiver in the vicinity of the Mark II.

[redacted] commented further that he feels the Mark II would provide adequate security from transmitter type microphones operating in a moderate sized conference room or business office. He expressed surprise that [redacted] did not display production models of the Mark II and Mark III and concluded that Dectron Industries is probably a "shoestring operation". He said that omni-frequency emissions of this type is not a new idea and doubts that these devices can be operated without complaint from the public in that it causes a great deal of interference in the broadcast band.

b6
b7C
b7D

[redacted] had no opportunity to examine the circuitry of the device and [redacted] was unable to give him detailed technical information.

b6
b7C
b7D

generator, of course, is under the control of the room occupant and could be turned off for utilization of the telephone line. Ringing voltage by the telephone company to ring the bell obviously would announce the incoming calls and then the generator could be disconnected or turned off and the telephone line be made serviceable.

As indicated earlier, the White Noise Generator can be combined with an electro-magnetic amplifier transmitter, adapted and balanced to a particular antenna field, to protect an area with white noise (or electro-magnetic noise signal.) The antenna may be installed in a rug, the ceiling or a loop around the room, thus flooding the conference area with an electro-magnetic signal which, in turn, creates random noise on any type of electronic device. Experiments of Stoelting Company have indicated that only noise is recorded on tape and wire recorders within the area covered by the electro-magnetic noise signal. It was said that even previously recorded tapes being utilized by persons on the perimeter of the room were not suitable for listening inasmuch as the electronic gadget used for a playback was thoroughly "jammed" by the electro-magnetic field created within the area.

In discussing the properties of this field of electro-magnetic force, it was noted that the field was definitely limited by the size of the wire used and by the output of the generator amplifier transmitter used. The electro-magnetic amplifier is merely amplifying the signal emitted by the White Noise Generator and causing the inaudible hash as a security measure against electronic eavesdropping.

SA [redacted] of the Chicago Office has seen one of the small electro-magnetic amplifiers which would be suitable for covering an area of approximately one cubic yard. The Stoelting Company contemplates preparing for demonstration purposes a chair with the electro-magnetic amplifier installed below the seat area and fed white noise from the generator. This will then flood the entire area of the chair and its occupant so that this person could not do more than take notes or remember a particular interview or conversation. Such would eliminate the possibility of any individual seated in that special chair utilizing a small pocket tape recorder or any type of electronic device to transmit a signal from the chair.

b6
b7c

The White Noise Generator has a current list price of \$51.00. It is to be noted this unit is strictly for the generation of the random noise signal which can be used on the telephone line as a protective device. The electro-magnetic amplifier transmitter is not in production as yet but models and prototypes are being prepared. Stoelting has no idea what the cost of the electro-magnetic amplifier transmitter will be.

UACB, The Chicago Office contemplates that it will purchase for experimentation and future research purposes one of the White Noise Generators currently available at the C. H. Stoelting Company. It is thought that this unit, even in its present state of development, offers a great potential as a counter-measure in protection of the security of special telephone lines and installations wherein it would be impossible to conduct immediate and extensive surveys of equipment to obviate the possibility of electronic listening devices being used.

Should the Laboratory desire one of these units for testing purposes, please advise the Chicago Office and purchase will be made and the equipment forwarded as soon as possible. The Laboratory will be advised of further developments and/or production of units in the category of electro-magnetic amplifier transmitter and data in regard to its handling and effectiveness.

1 - Mr. Matter
1 - Mr. Swartz
1 - Mr. Miller

Reurlet 7/9/65 concerning above subject. You advise that unless advised to the contrary Chicago will purchase for \$51 one Stoelting Model 17438 White Noise Generator "for experimentation and future research" on the protection and security of special telephone lines.

Bureau authorizes this purchase. Bureau desires that unit should be sent to the Bureau (to the attention of the Electronics Section). The use of reliable and effective noise generators of this and other types on telephone lines to nullify any intelligence being gathered by transducers (either foreign to or a part of telephone equipment) has been closely studied by the Bureau and other Federal agencies for a number of years. Considerable money has been expended for development and testing of similar units. To date none have been found reliable to the extent that they do not malfunction and as a result (1) interfere with normal telephone use, or (2) fail completely or partially without any indication of such and, thus, not only fail to protect the line but actually provide a sense of false security in belief that the line is protected.

After test and evaluation, you will be advised of the results by the Bureau.

NOTE ON YELLOW:

Coordinated with Mr. Newman. No derogatory information in files regarding Stoelting Co.

TECHNICAL SECURITY SUPPORT AND COUNTERMEASURE SYSTEMS

Clandestine eavesdropping — the heart of industrial espionage — is decreasing industrial and governmental development LEAD TIME. The industrial spy and foreign agent are a greater threat than ever before to both industrial and governmental operations.

Modern electronic technology has intensified this threat through the development of new and clever types of secret listening devices. The eavesdropper has, at his disposal, many instruments and methods to compromise the physical structure and personnel having the information he seeks. A sound countermeasure program is a necessity.

No countermeasure program can be sound, if that program is not continually updated in equipment. Also, your security personnel must be well informed, both on current techniques in the use of covert listening devices, and how to most effectively use available countermeasure equipment.

SABER LABORATORIES, INC. are manufacturers of COUNTERMEASURE EQUIPMENT, and consultants in TECHNICAL SECURITY SUPPORT SYSTEMS. Saber Laboratories, Inc. has developed an extensive system for conducting effective countermeasure operations in suspect cases or as a precautionary measure. This system includes methods for "sweeping" classified areas, both electronically and physically, to determine if they have been penetrated. The system's effectiveness comes through the use of an electronic countermeasure kit, a training and operational manual, which are continually updated, keeping current with the existing state of the art. ZELEX'S

Wiretap Trap

Space-age electronics has enabled wiretappers to tap business and private telephone conversations at will. Major publication articles have shown just how many corporations have been at the mercy of these wiretappers. Now, the surveillance industry has, in turn, developed an effective method of combating wiretapping. Zelex Marketing Corporation in cooperation with a team of telephone engineers has developed an exclusive new product to safeguard your telephone privacy.

With the new "Wiretap Trap" installed, monitoring a telephone conversation by wireless transmitters or direct tape recorder connection is impossible. The monitoring receiver or recorder will play back nothing but static. The conversation will, however remain completely normal and undistorted to the people speaking on the phone.

BEFORE NOW PRODUCTS OF THIS TYPE WERE ONLY AVAILABLE TO THE GOVERNMENT.

NOW THIS PRODUCT IS AVAILABLE TO THE GENERAL PUBLIC.

UNITED STATES GOVERNMENT

Memorandum

TO : DIRECTOR, FBI
(ATT: FBI LAB-ELECTRONICS SECTION)

FROM : SAC, NEW YORK (66-2423)

SUBJECT: COUNTERMEASURE DEVICES

DATE: 7/14/66

Re Bulet 7/5/66.

In accordance with Bureau instructions SA VAN DERVEER and EMT [redacted] called at the offices of NEW YORK, N.Y. Zelex Marketing Corporation, 866 United Nations Plaza and were afforded a look at the Zelex Wiretap Trap. It is contained in a metal box approximately 3" x 4" x 6", probably made by Budd. The box is physically sealed with a metal seal painted red so that it cannot be readily opened or tampered with without it being evident. The externals are a four prong female plug mounted at the end of the box, an on-off switch, fuse, indicator lamp. An AC power cord and a four pronged make jack are led from the box on leads about 3 feet long. In operation the AC plug is connected to a convenient outlet, the male plug connected to the phone line and the subscribers phone connected to the female connection provided on the equipment.

The equipment can either be purchased or rented. The rates are as follows

\$17.50	per month single line
4.00	per month 2nd line
3.00	per month 3rd line
2.00	per month 4th line
1.00	per month 5th line

Purchase price per single unit is \$750.00.

With either rental or purchase service charge and installation is handled by their technician. A charge of \$50.00 is made for this initial service.

REC-26

80-805-61

JUL 15 1966

ENCLOSURE

50 JUL 1966

Buy U.S. Savings Bonds Regularly on the Payroll Savings Plan

NY 66-2423

By interview the following information was obtained from [redacted]. The unit is claimed to provide complete protection from recording equipment, including their own tape recorder if the recording equipment is placed between subscribers phone and central office. It offers no protection on the other side of telephone company central office. An extension phone or a linemans test set across the line will be able to monitor the protected phone above the noise. For this reason they recommend to their subscribers that they use a special security button provided by the telephone company to be installed in their customers phone to be used with this unit. They are also placing on the market a meter to be placed across the customers line which will give a visual indication if an extension phone is picked up in the course of a protected conversation. This meter will be available in about a week. The customer, of course, by using the 'on-off' switch can either have the protection offered by this device or dispense with it. He can leave the unit on continuously or forget to turn it on.

b6
b7c

From the conversation with [redacted] it is the considered opinion of the interviewing personnel that this unit probably consists of a power supply and an electronic signal generator which places a high level, low frequency tone on their customer's line. The customer necessarily talks above this signal level so that he could be heard on an extension phone or on a telephone test set. The signal would probably be dissipated by the telephone company repeater coils and lose its effectiveness on the other side of the central office equipment. This low frequency high level signal would probably effectively defeat a recording device as it would drive the recording amplifier into a saturated condition. So much of the signal as passes the amplifier would probably drive the magnetic record head beyond its operating B.H. hysteresis curve.

b6
b7c

The company claims that this device defeats wireless telephone taps. That it burns out the cheaper transmitters and blocks the better ones. The high level signal would possibly cause failure in cheap transmitting equipment installed as a wireless tap by causing the transistor to burn out at the base junction.

NY 66-2423

The foregoing is necessarily conjecture as this company is extremely circumspect with respect to divulging detailed information about this equipment. They obviously do not intend to permit detailed visual inspection or to furnish any form of schematic diagram of this unit.

Additional information with respect to the complete line of surveillance and security equipment is to be found in the enclosed brochure.

Counter measures

In order that every effort possible can be made to safeguard this Bureau's operations in Mexico, it is requested that two masking noise generators operating from a magnetic tape cartridge, be furnished this office. One masking noise generator should be power operated (50 - 60 cycle 110 volts) for within the Mexico City Office during conferences. The other masking noise generator should be battery operated for use in such situations where informants are met in hotel rooms.

This technique is not a 100% guarantee of security of conversation. When properly used with voice kept low it affords conversation to noise ratio that makes eavesdropping extremely difficult

TECHNICAL EQUIPMENT

Reurlet 9/11/68.

Suggestion was made in referenced letter that consideration be given to inevitable need for equipment to record numbers dialed from Touch-Tone telephone instruments. The FBI Laboratory has followed the development of the Touch-Tone telephone instrument and related central office equipment for a number of years and has equipment with which to translate tones into numbers. Equipment for use on Touch-Tone telephone lines is being packaged in suitable form for field use and the field will be advised of its availability.

For several years the Bureau has been closely following the commercial and governmental development of radio receivers and RF detectors which could be used to more rapidly locate wiretapping and microphone transmitters in certain instances. A reliable unit has been developed as a result of interdepartmental governmental efforts and prototype units are presently under test. When production units become available in the future, one of them will be furnished your office. Your present search equipment will do an effective job in locating radio transmitter carriers in the immediate vicinity when used in consideration of possible locations for such transmitters.

NOTE:

Bureau presently has five portable Mason A3 receivers (developed as result of Countermeasure Committee efforts) on order as part of a joint governmental purchase. One of these was earmarked for each of New York, Los Angeles and Miami.

Re: TECHNICAL EQUIPMENT

Dear Sir:

Reurlet 10/24/68, regarding seven items excess to your needs.

- Equipment listed below has been received. After repairs have been made it will be returned to your office.
- Equipment listed below has been repaired and is being returned to your office.
- Equipment listed below is being shipped to your office for permanent temporary assignment. Appropriate inventory changes should be made.

Return items 2 and 5 to the Radio Engineering Section at the Bureau, "Attention SA J. M. Matter." Dispose of locally, in a manner which cannot be traced to the Bureau, items 1, 3, 4, and 6. Retain item 7 so that you will have two lineman's test sets in your office (two are needed for communication between two points and were supplied your office by the Bureau for security checks and authorized technical installations.) In addition, retain all items, named in the last paragraph of your letter, so that this equipment will be on hand for authorized uses.

COUNTER MEASURES

The San Antonio Division has in its possession the following technical equipment which is considered excess to the needs of this office:

Bureau instructions are requested as to whether this equipment should be returned to the FBI Laboratory for use there or should be disposed of or destroyed locally:

- Inv* 1. One volt ohm milliammeter No. 754 - *Destroy locally*
- Inv* 2. One line voltage regulator - *Send to Bor*
- Inv* 3. One isolation transformer - *Destroy*
- NI* 4. One WE terminal box - *Dispose of locally*
- Inv* 5. Six telephone sets - *Send to Bor*
- NI* 6. Miscellaneous connecting blocks and backboards - *Destroy*
- NI* 7. One WE linemans test set - *Not excess. Should be kept as and unit for Security Checks & Authorized TESURS.*

Retain to go with

San Antonio will retain, pending Bureau authority, one linemans test set together with the two security kits, the two package transmitter, two Magnecord Binaural PT6 amplifiers and transports, Roberts recorder, and two minitronics receivers.

SECURITY SURVEY AND COUNTERMEASURE INSTALLATION
OFFICE TELEPHONES OF [REDACTED]

b7E

By letter to the Director dated June 13, 1968, Mr. Frederick H. Schmidt (former SA), [REDACTED] inquired whether the Bureau would make [REDACTED]

b7E

[REDACTED] and (2) install countermeasure devices (to prevent the instruments from being used as microphones to pick up room conversation). The countermeasure device was developed by the FBI and the installation of these countermeasures on Cabinet Officer telephones has been a continuing integral part of a White House communications security program in which the White House initially requested the installation of these devices on Cabinet Officer phones.

With the Director's approval, the Bureau has previously made both telephone security surveys and countermeasure installations for various Secretaries of the Department of Health, Education and Welfare, dating back to the Eisenhower Administration in 1953. Mr. Schmidt has been most cooperative with the Bureau as its principal liaison contact for personnel information in his agency. Liaison advised also that it was through the personal intervention of the [REDACTED]

b7E

[REDACTED] that the Bureau has been able to continue receiving Social Security information which has been denied other investigative agencies.

As a byproduct of the countermeasure installations and related security checks by the FBI has contributed very substantially to the excellent relations enjoyed by the FBI with our high-level telephone company contact through whom the Bureau secures the necessary cooperation from the telephone company in connection with the Bureau's investigative activities in the internal security area.

Accordingly, in view of the above circumstances, it is suggested the Bureau may wish to comply with the current request. Estimated time: 2 men for 1 1/2 days.

RECOMMENDATION:

That Mr. Schmidt be advised that the FBI will perform the requested countermeasures installation and related security check.

Mr. J. Edgar Hoover
Federal Bureau of Investigation
9th and Pennsylvania Avenue
Washington, D. C.

My dear Mr. Hoover:

Countermeasures

It is with great pleasure that I forward the enclosed proposal to your Bureau for consideration. It was inspired by analyses and discussions with intelligence personnel who perceived the desirability of a simple, straightforward, and inexpensive portable system to attain greater security for conversations conducted in transient rooms.

As indicated in the proposal, we stand ready to demonstrate a two-unit system to the Bureau at no cost or obligation to the Bureau, and we can deliver a prototype working six unit model in less than thirty days.

Very truly yours,

Joseph K. Taussig, Jr.
Dr. Joseph K. Taussig, Jr.
President

CORRESPONDENCE

PROPOSAL TO PROVIDE. . . .

A PORTABLE TRANSIENT ROOM DE-BUGGING KIT

SUBMITTED BY:

Group Enterprises, Inc.
#922-923, 1625 Eye Street, N.W.
Washington, D. C. 20006

ENCLOSURE

80-805-67

INTRODUCTION

1. State-of-the-art. This proposal utilizes straight-forward, state of the art commercial components which are relatively unsophisticated, inexpensive, and require minimal maintenance.

2. The Requirement. In many intelligence functions, it is often necessary for the agents involved to hold conferences in commercial or private rooms on a transient basis. A need exists for a simple, portable method to "de-bug" these rooms to insure against eavesdropping by counter-agents who might utilize through wall or exterior wall mounted devices capable of picking up and amplifying the voices in the room.

The "System"

The system proposed herein utilizes a standard 120 volt electrical receptacle; a small cassette tape recorder (or any other portable source of acoustical noise); an amplifier capable of providing up to 150 watts; and six small "sound capsules" manufactured by the Electroponics Corporation.

The effectiveness of the system is basically related to the capabilities of the sound capsule.

The "Sound Capsule"

The sound capsule is a relatively simple electronic/

electro-mechanical device, which can be driven by electrical powers ranging from $1\frac{1}{2}$ watts through 25 watts, and responds to frequencies between 40 Hz. and 20,000 Hz.

The mechanical analog of this device is a piston driven at varying frequencies against a solid surface. Thus, when music is fed to the sound capsule, it reproduces the varying frequencies of this music by itself vibrating, and, in turn, imparting this vibration to a solid surface.

The efficiency of the device is extremely high. A single device, weighing two and one half pounds, can cause up to 2,000 square feet of wall surface to vibrate.

In commercial practice, this sound capsule is used to replace conventional loud speakers. In so doing, it is simply placed against the surface to be vibrated, and this surface, in turn, becomes the sounding board. Thus, a sound capsule placed inside a window will cause the window to vibrate, and the music can be heard outside the building.

It is this capability which will defeat bugs that have been placed in or against a wall, since the mechanical force of the capsule directly against the wall is orders of magnitude greater than the force imparted by a human voice against the wall.

Thus, the vibrations of the human voice become lost in the "noise" generated by the capsule, and only very sophis-

ticated electronic systems can demodulate the major signal and decode the voices which are far below the basic noise threshold.

In the basic assumption underlying this proposal, it is assumed that the casual occupancy of the room will not be of sufficient notice for the counter-agent to obtain and install this equipment.

Physically, the sound capsule is a small transducer, 4½" in diameter and 1½" in depth at the deepest point of its oval cross section. It weighs 2½ pounds. To debug a room six of these transducers (for the four walls, the ceiling and floor). The entire system can be packaged in an attache case.

PROPOSAL

Step 1. Group Enterprises, Inc. will at their own expense, demonstrate a two-transducer system which is currently available. The Bureau can choose the type of room they wish the demonstration to be conducted in; and provide the listening devices which they believe should be defeated.

The purpose of this demonstration is to establish the overall feasibility of the entire scheme, and to ascertain whether there are any special problems which should be considered in providing a prototype system.

Step 2. Group Enterprises, Inc. will then develop and

provide, to good commercial practices, a six transducer demonstration kit, housed in a conventional attache case no more than 13" x 18" x 4" for such field test purposes as the Bureau desires.

This kit shall be delivered under the following options:

A. If Group Enterprises retains its proprietary position in the rights, data, and engineering, this kit will be delivered for the fixed sum of \$1,500.00.

B. If Group Enterprises is to assign its proprietary position, rights, and data to the Government, said delivery shall include sketches and diagrams sufficient to allow competitive procurements for the item, and such data package, plus the necessary engineering back-up to develop it, will be delivered for the fixed sum of \$5,000.00.

Step 3. In the event Step 2A is followed, Group Enterprises will then enter into negotiated procurements under the contracting and accountability standards set forth in the Federal Procurement Regulations, for such quantities and deliveries desired by the Government.

DELIVERY

Delivery of the first prototype model will be made within thirty days of the issuance of the contract.

GROUP ENTERPRISES, INC.

Group Enterprises, Inc. is a Washington, D. C. Corporation, affiliated with Consultants Group, Inc., another Washington Corporation. Group Enterprises, Inc. generally handles all of the franchise and licensing work for Consultants Group, Inc. and as such, holds a general sales franchise for the sound capsules discussed in this proposal.

Personnel of Consultants Group, Inc. are all interchangeable among the various affiliated companies (see attached roster), and include no fewer than twelve graduate electrical engineers, and a number of individuals with intelligence training and backgrounds.

The affiliated group, Taussig Associates, currently holds a SECRET Clearance with the Department of Defense.

The Program Manager on this effort will be Joseph K. Taussig, Jr., President of all three "involved" entities of Consultants Group, Inc.

Engineering will be done by Joseph K. Taussig, Jr. (BS-EE) and Aubrey D. Engle (BS-EE), backed by Philip Nesbitt, the developer and designer of the sound capsule discussed herein.

It is estimated that the initial design will entail the expenditure of approximately \$275.00 for hardware, and ten engineering man-days.

**SECURITY SURVEY AND COUNTERMEASURES FOR
RESIDENCE TELEPHONES OF [Redacted]**

[Redacted]

By letter to the Director dated 1/25/71, Nathaniel E. Kossack, Inspector General of the Department of Agriculture (former Special Agent) advised that [Redacted] expects to move from his present residence in Sumner, Maryland, to his new residence in Kenwood, Maryland, during the first week in February. Kossack stated that it would be helpful if Bureau personnel could (1) make a security check of the telephone facilities at the new residence and also (2) install counter-measure devices in the telephones (to prevent their being used as microphones to pick up room conversation).

With the Director's approval, in February 1969, we previously made a residence telephone security survey and countermeasure installation for Secretary Hardin. Inspector General Kossack has been most cooperative on investigative matters with the Bureau.

ACTION:

If approved, FBI Laboratory personnel will contact the Inspector General's office and make the necessary arrangements to do the telephone security work at [Redacted] new residence.

R. F. DETECTION EQUIPMENT

Reurlet dated 7/31/75 and Bulet dated 6/25/75, concerning a pocket "Bug" detector to be examined by the Laboratory for information and evaluation.

The detector has been examined and its characteristics noted. While strong radio frequency signals will trigger the alert light at close range, the device is relatively insensitive at distances in excess of three feet from a low powered "Bug." Measurements were made with the device in its most sensitive position. Laboratory tests indicate the device is not reliable for detecting low-powered transmitters.

The Laboratory appreciates your making this device available for evaluation.

The "Bug" detector is being returned under separate cover via registered mail.

SUBJECT: TECHNICAL EQUIPMENT
MEMPHIS DIVISION

Count measures
Re Memphis telcall to SA 4/15/80.

For the past 2 years, the Memphis Division has been running specials or undercover operations that necessitate the use of T-4 Transmitters. During part of that time equipment has been on loan from other divisions but on several occasions situations have occurred in either the Memphis or Nashville areas where a T-4 could have aided an investigation but was not immediately available.

The Technical Services Division is requested to permanently assign two additional T-4's and accessories to the Memphis Division. The transmitters should be on Memphis Ch. 3 and Ch. 4. One transmitter would be permanently assigned to the Nashville RA area which is approximately 200 miles from Memphis and has 20 people assigned there.

Re Bureau telephone call to Miami 10/5/77.

There is being forwarded to the Bureau by registered mail one Model TT 300 "Tic Tracer" manufactured by TIF Instruments, Inc., 3661 Northwest 74th Street, Miami. This instrument was purchased by the Miami Division with funds from the Imprest Fund.

The Tic Tracer is an instrument designed primarily for the detection of AC voltage, continuity, and as a capacitor checker. Included with the instrument in the box is an instruction sheet for the use of the instrument.

For the information of the Bureau, TIF Instruments, Inc., is an established, legitimate firm located in Miami. They manufacture and sell various types of electrical instruments, a good many of which are related to the air conditioning industry.

The Tic Tracer was tested by the Miami Agents with a Bureau T 2 transmitter, and it was observed that the instrument would detect the radiation of the transmitter when in very close proximity to the antenna or the transmitter. TIF Instruments, Inc., manufactures other models of the Tic Tracer, however, all models have the same sensitivity. The retail price for the Tic Tracer, including sales tax, in Miami is \$26.99.

It is the opinion of the Miami Agents that there are other firms located in Miami who have the capability and

(ATTN: SECTION CHIEF, ENGINEERING SECTION, TSD)

~~SECRET~~

FROM: ADIC, NEW YORK (CES-H)

SUBJECT: ~~TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) - SWEEPS~~

This communication is classified "~~Secret~~" in its entirety and requires special handling and should be routed in a sealed envelope.

The Technical Section of the New York Office has been performing a limited number of countermeasure sweeps and security checks within this and other nearby Divisions. It should be noted that due to certain limitations, primarily the availability of appropriate and necessary technical countermeasures equipment, these sweeps and security checks have been conducted with a minimum degree of reliability.

Devices

At this time the Technical Section of the New York Division has three Agents who have received formal and specialized training at the Interagency Training Center (ITC) at Silesia, Maryland. While they were fortunate to receive this training, they have been unable to perform at the maximum level commensurate with their capabilities.

NY CES-H

Among some of the 70-80 locations in this Division, which would and may be a prime target for a penetration or compromise, [redacted]

b3
b7E

[redacted] In addition to our own office space, we frequently receive requests to perform sweeps for USDC Judges, United States Attorneys and others. [redacted]

We will continue to perform this type of sweep in as many areas as possible, [redacted]

b7E

[redacted]

The other alternative would be to have Headquarters personnel travel to New York and perform these sweeps with the technical equipment maintained in the Engineering Section at FBIHQ. This work could probably be performed within a two or three week period.

At present the New York Office has the following countermeasures equipment on hand:

b7E

In addition to the above-listed equipment, the following items should be on hand in the NYO:

b7E

~~SECRET~~

~~SECRET~~

NY CES-H

While this equipment has been made available to the NYO on two separate occasions in the last year, we have recently been advised that it will be sometime before most of it will again be made available.

The Bureau is requested to consider this request for additional countermeasures equipment and by analyzing the needs and availability of such equipment, advise the NYO of its determination concerning this matter.

Should additional equipment be made available, the NYO would be most capable of performing countermeasures surveys in other Divisions in the Northeast, such as Albany, Buffalo, Boston, New Haven, etc.

For any information or questions regarding this communication, please contact SA at the NYO.

Letter to ADIC, New York (CES-H)
RE: TECHNICAL SURVEILLANCE
COUNTERMEASURES (TSCM) SWEEPS (U)

For your information, there is available at FBIHQ an []
[] which could be deployed to your office as a replace-
ment for the [] currently assigned. The
[] has increased spectrum coverage (10MHz - 1000MHz) and
provides a visual, spectral display. (C) (U)

b7E

Should the New York Office determine that the above training and/or
exchange of technical equipment would be beneficial, advise FBIHQ, atten-
tion Engineering Section so that appropriate arrangements can be made. (U)

DEKTOR COUNTERMEASURES TRAINING ANNOUNCEMENT

Enclosed please find a copy of the program of instruction for our Defense Against Sound Equipment (countermeasures) Course. The cost of the course is \$500.00 per student. This five-day course of instruction is being offered on the following dates:

October 6 - 10, 1980

July 20 - 24, 1981

January 19 - 23, 1981

October 19 - 23, 1981

April 6 - 10, 1981

[Handwritten initials in a circle]

Upon completion of this course of instruction, the student will have a working knowledge of various types of microphones and their utilization, various types of transmitters, modulation techniques, telephones and telephone systems. The student will be taught the capabilities, limitations and use of electronic search equipment. He will receive in-depth instruction in audio countermeasures survey procedures, as well as the philosophy and concept of audio surveillance operations, and will be able to evaluate an area as to its security from a technical standpoint.

[Stamp]

DE-88 *80-805-71*

If you desire to attend one of these courses, please complete the attached form and return it with payment to Dektor Counterintelligence and Security, Inc., 515 Barnard Street, Savannah, Georgia 31401. Please enroll soon. These courses are limited to 20 students and registration is on a first come first serve basis.

Sincerely,

DEKTOR COUNTERINTELLIGENCE AND SECURITY, INC.

COUNTERINTELLIGENCE AND SECURITY, INC.

515 Barnard Street, Savannah, Georgia 31401

912 238-0075

May 27, 1980

Dear Dektor Customer:

On June 16, 1980 Dektor will move its offices to Savannah, Georgia. Our new address and telephone number will be:

515 Barnard Street
Savannah, Georgia 31401
912-238-0075

During the week of June 16 - 20, our current telephone number of (703) 321-9333 will be in operation. Beginning June 23rd the number, (912) 238-0075 should be used.

REPAIR OF EQUIPMENT

The following Dektor equipment will be serviced at the Dektor Repair Department in Maryland:

The Dek Cassette Recorder
PSE-101
* The Cloak
Spectrum Monitor, SM-401

This equipment should be sent to:

Dektor Repair Department
c/o Sting Security Inc.
4518 Beech Road
Marlow Heights, Maryland 20031

Prior to sending equipment in for repair a return authorization number must be obtained. This can be received by calling:

Robert J. Boltralik
(703) 759-4386

Delivery of packages without an authorization number cannot be accepted. All other Dektor equipment will be serviced at our Savannah facility and that office should be contacted prior to shipment.

80-805-71
ENCLOSURE

TRAINING

Dektor PSE training will continue to be conducted by Michael P. Kradz, Director of PSE Training for Dektor, but will be held at our new training facility in Maryland. The new address is:

Dektor Training Facility
c/o Sting Security, Inc.
4518 Beech Road
Marlow Heights, Maryland 20031

Class enrollments will be made at our Savannah, Georgia offices; please contact us at that location. All financial arrangements must be made through the Savannah, Georgia offices.

Sincerely,

DEKTOR COUNTERINTELLIGENCE AND SECURITY, INC.

Re Detroit telephone call to Bureau, 6/13/80.

As explained in referenced call to Bureau, Detroit is going to utilize a Special Agent in an undercover capacity to cover an important meeting in a sensitive matter under investigation within the Detroit Division.

So as to provide a maximum degree of security for the Agent involved, Detroit requests that a hand-held metal detector be furnished by the Bureau. Use of the unit will be in an overt manner in that the Agent will check persons he meets with for weapons as well as transmitting and recording devices.

Detroit anticipates utilizing the unit for approximately two weeks. The unit should be sent to the attention of SA RICHARD V. EGELSTON, Technical Coordinator.

MP LETTER TO BUREAU DATED 10/9/80

MARTIN L. KAISER, INC.

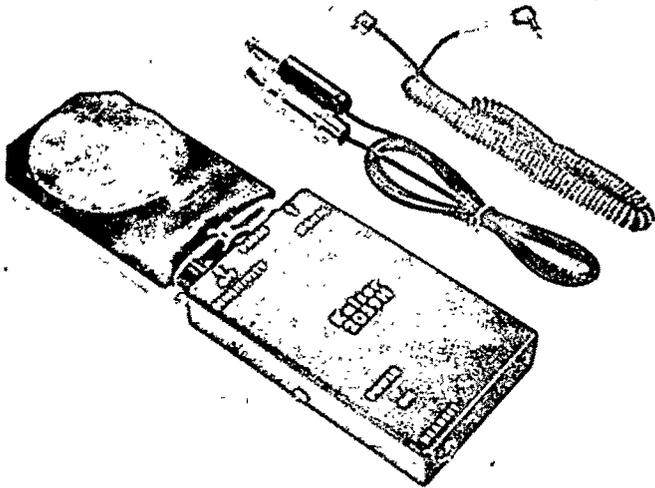

P. O. BOX 171
COCKEYSVILLE, MD. 21030

ELECTRONIC COUNTERMEASURE EQUIPMENT

TAPE RECORDER DETECTORS

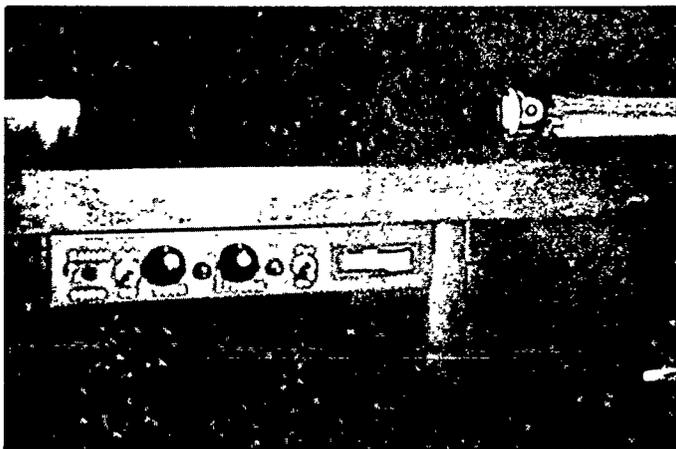

2059H HAND HELD DETECTOR

Hand held unit detects many types of operating tape recorders either worn or carried by an individual. Gives both visual and aural warning. Powered by two standard 9 volt batteries. With probe installed, unit measures 1 x 3 x 11". Probe is detachable and extendable for concealed operation. Complete with probe, extender cable, detection unit and instructions.

2059D DESK MOUNTED DETECTOR

Detects many types of operating tape recorders either worn or carried by an individual. This unit is designed for permanent under desk mounting and measures 1 x 5 x 8". Two detection loops give optimum coverage. Has both visual and aural alarms. Supplied complete with loop material, detector assembly, power supply (specify 110 or 220 VAC) and instructions. Installation requires moderate technical capability.

OTHER ACCESSORIES FOR DETECTION TAPE RECORDER.

2045IP Induction Probe - Designed for use with 2045A amplifier. Detects recorders by inductive feedback system.

1059IP Induction Probe - Designed for use with 1059 amplifier. Detects presence of tape recorders by inductive pickup of record head and motor noise.

TECHNICAL MATTERS/
SCANLOCK COUNTERMEASURES EQUIPMENT

TO: DIRECTOR, FBI
(ATTN: TECHNICAL SERVICES DIVISION,
ET AL)

b6
b7C

Re Detroit letter to Bureau, 9/30/80, and Detroit telephone call to Bureau, 11/24/80.

Enclosed under separate cover for the Bureau is one (1) Scanlock bearing serial number 78/125, which has begun to malfunction once again. The unit will not charge or maintain a charge in the batteries. Also, the unit will not function on AC. Enclosed also is one battery pack which will not accept a charge.

The Bureau is requested to make appropriate repairs and return the unit to Detroit expeditiously. It should be sent to the attention of SA Technical Coordinator, Detroit Division.

TECHNICAL EQUIPMENT

Countermeasures

Re San Juan letter to the Bureau, September 31, 1980.

The Interad, model 7312 receiver submitted to the Bureau by relet has been repaired and is being returned to San Juan separately.

Regarding your requests for an AC adapter and modification "C" to this equipment, the Bureau is currently in contact with Interad representatives to determine availability of these items and cost. You will be advised regarding the availability of modification "C." Engineering Section, Technical Services Division will procure the AC adapter, if available, and forward same to San Juan.

Subject : BASIC COUNTERMEASURES
TRAINING COURSE
January 26, 1981 - February 6, 1981
Quantico Training Facility

PURPOSE: To identify candidates for captioned training.

DETAILS: A two week training course on "BASIC COUNTERMEASURES" will be held at the Quantico Training Facility from January 26, 1981, to February 6, 1981.

Based on the need of their respective offices for personnel trained in countermeasures, the following personnel have been selected to attend captioned course:

<u>Name</u>	<u>Office of Assignment</u>
SA [Redacted]	San Francisco
SA [Redacted]	San Francisco
SA [Redacted]	Chicago
SA [Redacted]	Chicago
SA Richard V. Egelston	Detroit
SA [Redacted]	Houston
ET [Redacted]	FBIHQ

(Handwritten initials)

b6
b7C

In addition, four Special Agents from the Washington Field Office will be attending the course; however, no lodging will be required. Quantico will be advised of the names of these candidates as they are selected.

**BASIC COUNTERMEASURES
TRAINING COURSE
January 26, 1981 - February 6, 1981
Quantico Training Facility**

The Bureau is conducting the above captioned training course to supplement technical training provided to personnel in those offices where an increase in countermeasures activity is anticipated. The course will also serve as a basis on which attendees may be evaluated prior to their consideration for attendance at the Interagency Training Center where in-depth countermeasures training is provided.

The following personnel in your office have been selected to attend this training:

- SA [redacted]
- SA [redacted]

Attendees should plan to arrive at FBIHQ prior to 7:30 p.m., January 25, 1981, at which time transportation to Quantico will be provided. The course will begin at 8:00 a.m., January 26, 1981, and will continue until noon, February 6, 1981. Transportation from Quantico to National Airport will depart Quantico at approximately 12:30 p.m.

In addition, since the course extends over a two week period, one day of firearms training will be afforded attendees. Therefore, attendees should bring their Bureau approved weapons with them. The services of the gunsmiths will also be available during the course.

COUNTER MEASURES

Being forwarded to the Bureau under separate cover is one package containing the following items:

1. One Multi-Line Telephone Checker, Zero Case SN 2003
2. One Interad AC power supply, Model ACP-1 SN 106, PN 347320

Being taken to the Bureau for repair by [redacted] [redacted] Electronic Analysis Unit, Technical Services Division (TSD), is one Scanlock Mark V Receiver, SN 78-103.

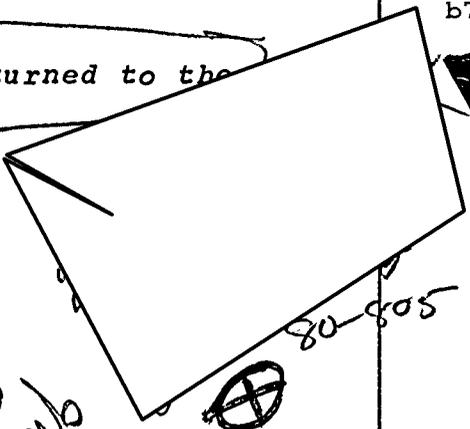

The Multi-Line Telephone Checker and the Interad power supply are being forwarded to the Bureau for permanent assignment and will be removed from Chicago's inventory. These items should be delivered directly to [redacted] Electronic Analysis Unit, TSD, Room 1B053.

The Scanlock Receiver should be returned to the Chicago Division upon completion of repair.

OFFICE SECURITY
COUNTERMEASURES/ SWEEP

Recently the Detroit Division has relocated their Off-Premise Surveillance Squad to a new location within the Metropolitan area. Installation of all telephones, electronic equipment, furniture, and other permanent fixtures has been completed.

In view of the highly sensitive work conducted at the above location, the Detroit Division recommends that a complete audio countermeasures sweep be conducted within this space. (D)

The Bureau is requested to supply, on a priority basis, a trained Technician and sufficient equipment to assist Detroit technically-trained Agents on the above sweep.

TO: DIRECTOR, FBI
ATTENTION: TECHNICAL SERVICES DIVISION (TSD)

FROM: SAC, KANSAS CITY (66-1749)

SUBJECT: OFFICE SECURITY
KANSAS CITY FIELD OFFICE
HEADQUARTERS CITY

COUNTER MEASURES

During the past three years, Kansas City Division has been involved in significant investigations, including "STRAWMAN," "PENDORF," and most recently in "WOODMUR." In each of these investigations, court-ordered wiretaps and microphone installations have been utilized. Because these cases are considered priority and they are to some extent particularly sensitive, Kansas City is requesting that the Bureau provide special assistance in the form of countermeasure specialists to conduct a comprehensive survey of the Kansas City Field Office Headquarters to insure that our security has not been compromised.

During both the "STRAWMAN" and "WOODMUR" investigations,

[Redacted]

extremely cooperative, in that they provided access [Redacted] facilities in order that the Title III installations could be made. Recently, [Redacted] advised he has reason to believe an illegal listening device may be operating in his office and/or on his telephone. He requested that FBI Agents conduct a "sweep" of his office to determine if in fact it is bugged.

80-805-87

22 FEB 18 1981

Kansas City will coordinate with TSD for reservations for individual(s) travelling to Kansas City Division.

COUNTERMEASURES MATTERS

Reference urairtel dated February 11, 1981.

On February 25, 1981, personnel from the Technical Services Division, FBIHQ, conducted a countermeasures sweep of your off-premise location, the SAC, ASAC, and Squad Supervisor Offices of the Detroit Field office. The sweep included a radio frequency spectrum, telephone and a non-destructive search. No evidence of tampering with the telephone lines or the installation of clandestine listening devices was found.

NOTE: The above countermeasures sweep was conducted by ET

COUNTERMEASURES MATTERS

Reference unairtel dated February 5, 1981.

On February 23, 1981, [redacted] from the Technical Services Division, FBIHQ, with the assistance of SA [redacted] of the Indianapolis Field office, conducted a countermeasures survey of SAC, ASAC, and Squad Supervisors' telephones and office spaces. The survey included a radio frequency spectrum, telephone and a physical search. No evidence of tampering with the telephone lines or the installation of clandestine listening devices was found.

On February 24, 1981, [redacted] countermeasures survey of the [redacted] [redacted] No evidence of tampering with the telephone lines or the installation of clandestine listening devices was found in [redacted] However [redacted] advised that he suspected [redacted]

[redacted] stated that he became suspicious when he noticed that wires by a radio, that provided background music, had a "plug" on them and the [redacted]

The next day [redacted] electrician asked [redacted] if he could install the speaker for him. [redacted] said no and from that time on [redacted] did not appear to have any advanced warning on things planned or discussed in his office.

Technical Services personnel demonstrated to the [redacted] how speakers can be used as [redacted] microphones.

COUNTERMEASURES MATTERS

Reference Miami teletype to Bureau dated February 20, 1981.

On March 9 and 10, 1981, SA [redacted] and [redacted] from the Technical Services Division, conducted a countermeasures sweep of your off-premise location and of the townhouse. The countermeasures sweep included a radio frequency scan and an electronic check of the telephones and telephone lines in both locations. No evidence of tampering with the telephones, telephone lines, or the installation of clandestine listening devices was found. However, it was noted that the off-premise location where all the electronic equipment is located lacks adequate physical security.

b6
 b7C

As discussed with undercover agents, it is recommended that an alarm be installed in that closet where all the technical equipment is kept.

NOTE: Above sweep was conducted by SA [redacted] and [redacted]

TO: DIRECTOR, FBI
(ATTN: TECHNICAL SERVICES DIVISION
SECTION CHIEF RONALD W. WITZEL)

FROM: SAC, CHICAGO (66-699) (SQ #10)

COUNTERMEASURES/EQUIPMENT

Re conversation of Section Chief Witzel and
Chicago Supervisor [redacted] on 2/4/81.

b6
b7C
b6
b7C

Chicago agents, Supervisor [redacted]
and SA [redacted] just completed a two-week In-
Service at Quantico on Countermeasures.

18

The only countermeasures equipment Chicago
presently has on board is a Kaiser Unit and a Scan-Lock
Receiver.

Chicago feels that its countermeasures equipment
should be updated and complete; that is, to include a
Scan-Lock Receiver, a non-linear detector, a PR-700
Micro-Tel Receiver and a Dektor Phone Analyzer.

Chicago bases this request on the facts that
it is centrally located, with trained agents, able to
serve surrounding Divisions.

As the Bureau is aware, the Director's daughter lives in the Chicago area, and as a consequence, he frequently visits this Division. He makes a number of speeches here, as do many Bureau officials, on FCI, White Collar and OC matters. They all request to have hotel rooms, meeting rooms and areas swept for listening devices.

At the present time Chicago cannot do a countermeasure sweep adequately with the equipment on hand.

Chicago requests that the above equipment be furnished Chicago as soon as possible.

COUNTERMEASURES MATTERS

Reurairtel dated February 11, 1981.

For the information of Chicago, equipment listed on referenced communication has been placed on order with the exception of the telephone analyzer. The telephone analyzer will be ordered when funds become available.

Upon receipt of the equipment requested, it will be shipped and assigned to your division. The assignment of this countermeasures equipment to your division does not constitute authority for Chicago to conduct countermeasures sweeps in other FBI divisions or Federal agencies. All requests for countermeasures sweeps from other FBI divisions or Federal agencies to your division should be directed to the Bureau. The Bureau will make the determination on all requests as to the personnel that is to conduct countermeasures sweeps.

REQUEST FOR TECHNICAL ASSISTANCE
IN COUNTERMEASURES SWEEP

The Chicago Division's South RA established and moved into new office space on 3/13/81. This is a large RA, a consolidation of two, and is located in a commercial building.

Chicago has a limited amount of countermeasures equipment. The Bureau has equipment on order and Chicago is awaiting its delivery.

Chicago requests that Bureau personnel and equipment be sent to Chicago during the week of March 30 to assist Chicago's sound personnel in sweeping this RA.

Date 3/24/81

From SAC, ALEXANDRIA (66-149)

Subject TELEPHONE SECURITY CHECKS AT RESIDENCES OF SAC, ASAC, AND SECURITY SUPERVISOR

COUNTERMEASURES

Past instructions indicated that telephone security checks were to be made by the Technical Support Agent at residences of the SAC, ASAC, and Security Supervisor every six months. When the Manual of Investigative Operations and Guidelines superseded the Manual of Instructions, there were no instructions that the above-mentioned checks were to be conducted.

It is requested the Bureau advise whether or not telephone security checks and sweeps are to be made by the Technical Support Agent at the homes of the SAC, ASAC, and Security Supervisor.

COUNTERMEASURES MATTERS

Reference urairtel dated March 17, 1981.

On March 31, 1981, SA [redacted] Technical Services Division (TSD), and SA [redacted] Chicago Division conducted a countermeasures sweep at the newly established Resident Agency (RA) located at Orland Park, Illinois. The countermeasures sweep included a radio frequency spectrum scan, an electronic check of the telephones and telephone lines, and a nondestructive physical search. No evidence of tampering with the telephones, telephone lines or the installation of a clandestine listening device was found.

b6
b7C
b7E

A physical check of the telephone main frame located in the basement of the building revealed that the RA's telephone numbers were tagged and that the remaining wires of a 25 pair cable that leads to FBI space on the second floor were strapped together and tagged "FBI." All tags were removed.

Handwritten circled mark

TSD appreciates the assistance provided to SA [redacted] by the Chicago technical squad.

COUNTERMEASURES MATTERS

Reference urlet dated March 24, 1981.

Reference communication requests advice as to whether or not telephone security checks and countermeasures sweeps should be conducted at the homes of the SAC, ASAC, and Security Supervisor by the Technical Support Agent.

In general, most residences are not physically secure or alarmed; therefore, countermeasures sweeps should not be conducted unless there is a specific allegation, or if it is suspected that a telephone or residence has been compromised.

SECURITY OF THE YOUNGSTOWN, OHIO, RESIDENT AGENCY, CLEVELAND DIVISION.

RE CLEVELAND TELEPHONE CALL TO THE BUREAU, APRIL 27, 1981.

INFORMATION HAS BEEN RECEIVED FROM TWO HIGHLY RELIABLE INDEPENDENT SOURCES OVER THE PAST SIX MONTHS INDICATING THAT ORGANIZED CRIME ELEMENTS IN YOUNGSTOWN, OHIO, HAVE INTERCEPTED TELEPHONE COMMUNICATIONS OF THE YOUNGSTOWN RA. DISCOVERY OF EQUIPMENT CAPABLE OF MONITORING AT THE FTS TERMINAL IN THE OLD POST OFFICE, YOUNGSTOWN, BY RA PERSONNEL HAS RESULTED IN THE RELOCATION OF THE FTS TERMINAL TO AKRON, OHIO, AND THE REDUCTION OF ONE OF THE RA FTS LINES. INVESTIGATION CONDUCTED IN CLEVELAND FILE 183A-406 (BUREAU FILE 183A-3647) INDICATES THAT ONE

COUNTERMEASURES MATTERS

Reference Washington Field Office airtel dated April 9, 1981, Bureau airtel dated February 23, 1981, and Bureau telcall to Washington Field Office SA [redacted] May 13, 1981. (U)

b6
b7C

On May 8, 1981, personnel from Technical Services Division (TSD), Engineering Section, accompanied by SA [redacted] of Technical Support Squad, Washington Field Office, conducted a countermeasures check of an off-premise location. The countermeasures check consisted of a physical and electronic check of several telephones, a physical check of the electronic controls of all window air conditioning units and a check of the radio frequency spectrum. No evidence of tampering with the telephones, air conditioner electronic controls or the installation of a clandestine listening device was found. (S) (U)

b6
b7C

A re-evaluation of the hazards noted by TSD personnel during the countermeasures check on February 17, 1981, revealed that no modification should be made to the intercom speaker located in the ceiling of the hallway of the off-premise location. The intended purpose of this intercom system is to notify occupants of this office building of any emergency that may exist. As explained to SA [redacted] on May 13, 1981, the current procedure of covering the intercom speaker appears to be adequate. However, it is recommended that [redacted]

SAC, Cleveland
Attention: SA

5/28/81

Director, FBI (80-805)

COUNTERMEASURES MATTERS

Reference your teletype dated April 28, 1981, and Butelcall to Cleveland ASAC Philip M. Urick, May 19, 1981.

On May 11 and 12, 1981, from the Technical Services Division, Electronic Analysis Unit, FBIHQ, with the assistance of Cleveland's SA conducted an audio countermeasures check at the Youngstown, Ohio, Resident Agency (YRA). The countermeasures check consisted of a thorough physical check of the YRA's office space, telephones, telephone lines and a check of the radio frequency spectrum. No evidence of tampering with the telephones, telephone lines or the installation of a clandestine listening device was found.

As Cleveland is aware, the telephone lines from the YRA to the telephone company's central office, including all line appearances in the central office, were checked by the Chief of Security Akron, Ohio, and no evidence of tampering with the telephone lines was found.

A Voice Privacy (VPII) system has been shipped to Cleveland under separate cover. This system is to be installed and tested within two weeks of its receipt and FBIHQ, attention: Technical Services Division, Engineering Section, SA

should be advised by teletype immediately after installation of this system.

Cleveland is cautioned that the VPII system is not an encrypted system but rather provides what is considered to be a high level of voice privacy. The VPII should provide effective countermeasures against the criminal elements' attempt to intercept FBI telephone communications, if such attempts are occurring. However, under no circumstances should National Security information be discussed over this system.

COUNTERMEASURES MATTERS

In order for the Technical Services Division (TSD), Engineering Section, to provide field offices with better equipment to conduct audio countermeasures surveys, it is necessary that each office provide the Bureau by COB August 24, 1981, an airtel listing all countermeasures equipment, including receivers, tone generators, telephone and/or spectrum analyzers and Scanlock receivers.

The list should be countermeasures equipment that has been physically located in your Division and which is specifically intended for countermeasures surveys. This information should not be derived from the field office master inventory computer printout. Provide information as to type of equipment, model, serial and property numbers. Also advise as to any problems with respect to equipment operation or maintenance and requirements for additional equipment.

Any questions regarding this communication or requests for countermeasures equipment should be directed to the attention of SA [Redacted] extension 2700 at FBIHQ.

SUBJECT: COUNTERMEASURES MATTERS
TECHNICAL EQUIPMENT
MOBILE DIVISION

Re Buairtel, 6/16/81.

The Mobile Division has the following Countermeasures equipment that is physically located within the Division.

The above equipment countermeasures checks with any level of being certain that space and/or telephone lines are clear of any overhear problems.

The Mobile Division including technical support agents, who have the knowledge or experience in countermeasures to know what equipment is needed to insure proper countermeasures checks. It is felt with additional training of technical support agents by FBIHQ in Countermeasures, an intelligent appraisal of requirements can be made. Mobile is requesting by separate communication the training of two Technical Support Agents in Countermeasures.

 TECHNICAL SERVICES DIVISION

FROM: SAC, PHOENIX (66-58)

SUBJECT: COUNTERMEASURES MATTERS

Re Bureau airtel captioned as above and dated 6/16/81.

Listed below are all countermeasures equipment assigned to the Phoenix Division:

1. [Redacted]
2. [Redacted]

The above two pieces of equipment are the only items totally dedicated to countermeasures. Both are considered to be in good condition, however, they are not considered adequate or reliable for detection of low power transmitters particularly in a high radio frequency environment.

It would be desirable to have assigned to Phoenix [Redacted] and some type of telephone analyzer. Phoenix would, however, like to discuss that matter with FBIHQ prior to any equipment being designed for Phoenix.

 SA

FROM: SAC, MEMPHIS (1-123)

SUBJECT: COUNTERMEASURES MATTERS

Memphis Division is requesting that SA's Harold L. Hays and attend the 8 workday Countermeasures In-Service at Quantico.

The Memphis Division needs the above two SA's trained in the latest countermeasures techniques and equipment available from the Bureau to service the Field Office and six RA's (one of which has 16 SA's and 3 support personnel).

SA Harold L. Hays is Technical Support Coordinator for the Memphis Division. SA Hays attended Technical Security In-Service in 2/76; Technical Training - CCTV Seminar in 10/76; and Technical Security In-Service in 10/77.

SA is a Resident Agent in the Nashville RA. SA attended Technical Security In-Service in 1971. SA was assigned to Engineering Section, Frequency Management Unit, FBIHQ, for 3 years, beginning 6/73.

b6
b7C

FROM: SAC, Little Rock (80-594)

RE: COUNTERMEASURES MATTERS

ReBuairtel to all offices dated 6/16/81.

In response to referenced airtel, the management of the Little Rock Office does not feel that we can justify sending an agent to the advanced Countermeasures course. In the event we should have a need for an agent with that degree of expertise, we can always seek the assistance of a larger neighboring field office.

However, we do want to send an agent to the 8-day In-Service being scheduled at Quantico. Inasmuch as our primary sound man, SA [redacted] is eligible for retirement on 1/28/82, we are recommending SA Joe H. Hardage to attend this In-Service.

b6
b7C

SA Hardage has a strong technical background in that he graduated from college with a math major and had a physics minor, and subsequently, served in the Army as a Capt. in the Engineers. Upon completion of this type of training, he will be utilized by our office in Countermeasures Security, especially in view of the fact that SA [redacted] tentatively plans to retire when he becomes eligible in January 1982.

ATTN: SA [redacted] TSD,
Engineering Section, FBIHQ

FROM: SAC, JACKSON

COUNTERMEASURES MATTER

Re Bureau airtel to Jackson dated 6/16/81, captioned as above.

Jackson Division currently has two Technical Support Agents (SA [redacted] and SA [redacted]). SA [redacted] is Technical Coordinator for the Jackson Division, and SA [redacted] is in the Columbus, Ms., Resident Agency.

Jackson's current requirements would not necessarily justify either of the above TSAs attending the advanced six-week course in Countermeasures mentioned in referenced airtel; however, due to an increased activity in quality organized crime matters in the Jackson Division, it is felt that both of the above TSAs should be familiar with the operation and capability of the latest countermeasures equipment available to the field offices.

Both SAs [redacted] have completed the Bureau's Technical In-Service (Sound School) and SA [redacted] was involved in continuous countermeasures activity while stationed at WFO (1976 - 1981). SAs [redacted] have indicated a desire to attend any school available concerning captioned matter, and it is recommended that both be considered for this training.

It will be noted that both above TSAs have responsibilities in insuring the security of Jackson Division's headquarters and resident agencies.

FROM: SAC, NEW ORLEANS (66-1068).

COUNTERMEASURES-MATTERS

Re Bureau airtel to all SACs dated 6/16/81.

Technical security surveys and related matters are being handled within the New Orleans Division by the Technical Coordinator, SA and Technical Support Agent (TSA) has worked as TSA since January, 1977 and SA since May of 1979. It is requested SA attend the first scheduled eight-day Countermeasures In-service and SA a subsequent Countermeasures In-service. New Orleans has no requirement at this time for the Advanced Countermeasures Course.

For further information of the Bureau, SA is currently involved on a full-time basis with presentation of taped evidence in the Brillab trial which is ongoing in New Orleans. SA performs all other technical duties within New Orleans and with this in mind, neither would be available for in-service if the Brillab trial and in-service dates should conflict.

Director, FBI (80-805)

COUNTERMEASURES MATTERS

The Technical Services Division (TSD), Engineering Section, has shipped to your office under separate cover a Triplet Model 3400 Volt-Ohm-Meter (V-O-M) for permanent assignment. A high gain audio amplifier has been incorporated into the V-O-M. This device is to be used in conducting countermeasures sweeps. Operating instructions and specifications for this instrument were enclosed with each shipment.

Due to the sensitivity of the high gain amplifier, users are cautioned to set the gain volume low on the amplifier when monitoring telephone lines. Telephone line audio is normally at a very high level and very careful volume control adjustment is required to prevent distortion and excessively high headset audio levels.

Your office is to field test this V-O-M/amplifier and advise the Bureau by December 1, 1981, of your evaluation of this instrument as a countermeasures tool.

If there are any questions regarding this communication, contact SA [redacted] extension 2700, FBIHQ.

Operating instructions and specifications for this instrument were enclosed with each shipment.

Due to the sensitivity of the high gain amplifier, users are cautioned to set the gain volume low on the amplifier when monitoring telephone lines. Telephone line audio is normally at a very high level and very careful volume control adjustment is required to prevent distortion and excessively high headset audio levels.

Your office is to field test this V-O-M/amplifier and advise the Bureau by December 1, 1981, of your evaluation of this instrument as a countermeasures tool.

If there are any questions regarding this communication, contact SA [Redacted] extension 2700, FBIHQ.

TO: DIRECTOR, FBI (80-805)

ATTN: [redacted]

FROM: SAC, PHOENIX (66-58)

COUNTERMEASURES MATTERS

ReBuAirtel dated 6/16/81.

At present, Phoenix has two agents assigned to technical support for the division. The Technical Coordinator is SA [redacted] and he presently handles the majority of countermeasure checks for the division. SA [redacted] has been handling technical matters since 1972.

Assisting SA [redacted] when necessary is SA [redacted]. SA [redacted] has been working technical matters for two years.

Both SA [redacted] and SA [redacted] desire to attend the countermeasure in-service if possible. Should only one opening be designated for Phoenix, the Technical Coordinator, with the SAC's concurrence, will designate which agent will attend.

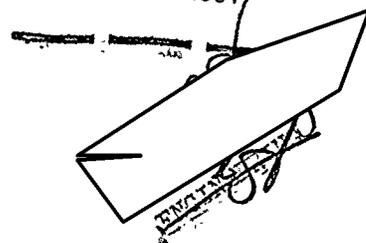

Both SA's are also interested in the advanced countermeasures school; however, it is felt by both that the countermeasures in-service would be more desirable as it would probably provide a good basic knowledge of countermeasures. That basic knowledge would probably make the six-week course more fruitful.

TO: DIRECTOR, FBI (80-805)
 FROM: SAC, TAMPA (~~66-74~~) (1-6)

COUNTERMEASURES MATTERS

Re Bureau airtel to all SACs dated 6/16/81.

The only Countermeasures work currently being done by the Tampa Technical Support Agents is the technical security checks of Headquarters, RAs, U. S. Attorney's Office, and the offices of the U. S. District Judges, on request. Since the Countermeasure work of the Tampa Division is limited to technical security checks, it is believed that the 8-day Countermeasures In-Service would be sufficient for the needs of Tampa. Due to the nature of the work being handled by the Tampa Division, it is not felt that a need exists at this time for an Agent to attend the 6-week course which is to be offered by the Bureau.

It is requested that both Special Agent [redacted] Technical Coordinator, and SA [redacted] be considered for the 8-day Countermeasures In-Service. SA [redacted] has been sound-trained since 3/12/73, and SA [redacted] was sound-trained in 3/75. Both Agents have extensive experience in technical matters and are experienced in most phases of Bureau technical operations.

 ENGINEERING SECTION
 TECHNICAL SERVICE DIVISION

FROM: SAC, LOUISVILLE (66-62)

SUBJECT: COUNTERMEASURES MATTERS

Re Bureau airtel to all SACs, 6/16/81.

The Louisville Division has two active sound trained agents either of which should be afforded an opportunity to attend the specialized Countermeasures In-Service at Quantico.

The Louisville Division currently has eleven Resident Agencies which require security sweeps on an annual basis. In addition, U.S. District Court officials have made increasingly frequent requests to have their space "swept", which are honored. Also, the Louisville Division has a special task force investigating allegations of political corruption within the state government. There are eight Special Agent personnel and like numbers of IRS Agents and Departmental Attorneys on three different floors of an office building in Lexington, Kentucky. Because of the sensitive nature of this investigation, frequent inspections are needed.

The Bureau is requested to allocate at least one slot to the Louisville Division for Countermeasures In-Services for either SA LARRY C. BOND, Technical Coordinator, with eleven years of sound work or SA [redacted] with six years of sound work.

COUNTERMEASURES MATTERS

Re Bureau airtel to All SACS dated 6/16/81.

The countermeasures equipment in the Kansas City Division is: [redacted]

The technically trained agents in the Kansas City Division received approximately two hours training in operating the above kit. This training was given as a part of the agents initial basic electronics training course. It is believed that this kit is not capable of providing the technically trained agents the ability to "sweep" Bureau space and Bureau equipment in the Kansas City Division and insure with any measure of reliability that there has not been a compromise of our security.

The Kansas City Division is in need of training in the countermeasures area. In addition, we need equipment including [redacted]

[redacted] other appropriate electronic equipment which will help insure with some degree of certainty that the security of the Kansas City Division has not been compromised. It should be noted that during the past three years investigations in Kansas City have included organized crime related - Strawman, Kansas City 183A-180 and Pendorf, Kansas City 183-334; drug related - WOODMUR, Kansas City 89B-319. In view of the fact that substantial parts

SA [redacted]

b6
b7C

Re Buairtel to all offices 6/16/81.

Philadelphia currently has no Technical Support Agents trained in countermeasures techniques.

The following sound agents are interested in attending one and/or both of the schools mentioned in re airtel:

SA [redacted] Technical Coordinator, who has been doing sound work for ten years and has been the Technical Coordinator (TC) in Philadelphia for the past six years.

b6
b7C

SA [redacted] who has done sound work both in Boston and Philadelphia for the last nine years and is currently assigned to the Newtown Square RA.

b6
b7C

SA [redacted] doing sound work for the past three years and currently assigned to the upstate surveillance squad in the Wilkes-Barre/Scranton area.

b6
b7C

SA [redacted] one and one-half week school. SA [redacted] recently completed sound training.

b6
b7C

In addition to doing the normal office security checks, Philadelphia has been called on upon several occasions to do sweeps of the USA's office, Strike Force, USA's and AUSA's homes, Judges chambers, etc, and it is felt that several agents from this division should be trained in countermeasure techniques.

COUNTERMEASURES MATTERS.

Reference Bureau airtel to all SAC's dated 6/16/81, captioned as above.

The Kansas City Division Technical Support Agents are in need of countermeasures training, including training covering techniques for conducting technical security surveys and the use of countermeasures receivers, radio frequency, spectrum, and telephone analyzers. This training is needed in order to provide the TSAs with the ability and equipment to conduct countermeasures surveys in the Kansas City Field Division without the need of requesting assistance from FBI Headquarters each time a survey is needed in the Division.

SA [redacted] is the Technical Coordinator in the Kansas City Division. SA [redacted] received his initial technical training in 1972, at FBI Headquarters, while he was assigned to the San Francisco Division. Since coming to the Kansas City Division in September, 1977, SA [redacted] has been involved in virtually all the technical installations made by the Kansas City Division. The installations involved in the [redacted] cases have provided considerable challenge to the resourcefulness of those Agents involved in the installations, including SA [redacted]

FROM : SAC, BUTTE (66-2172)

SUBJECT: COUNTERMEASURES MATTERS

Re Bureau airtel to All SACs, 6/16/81.

The Butte Division currently has three sound trained Agents: SA [redacted] SA [redacted] and SA [redacted]. SA [redacted] has been designated Technical Coordinator, inasmuch as he is assigned in the Butte Division Headquarters.

SA [redacted] recently completed sound training during the period 2/23/81 through 4/3/81. SA [redacted] has a B.S. Degree in Petroleum Engineering and worked as a Petroleum Engineer during the period 1960 to 1967, prior to his entering on duty into the Bureau in March, 1967.

It is noted that the Butte Division has had very little need for utilization of countermeasures equipment and the outlook would be for very little utilization in the future. It is not felt necessary that Butte be considered for a space in the proposed six-week course in countermeasures techniques; however, if a vacancy is available for the proposed eight-day in-service, it is requested that SA [redacted] be considered for attendance from the Butte Division.

Re: COUNTERMEASURES MATTERS

Re Little Rock airtel to the Bureau 6/24/81.

In referenced communication I advised that our primary sound man, SA , tentatively plans to retire in January, 1982. SA has now advised that he definitely does not plan to retire at that time, and inasmuch as he has 5½ years before he will be forced to retire, that he is very much interested in attending the 8-day In-Service.

Inasmuch as SA has been an outstanding sound man in this division for many years, I personally recommend him as our top choice for this 8-day In-Service.

If it is possible to send SA JOE H. HARDAGE, also, to this 8-day In-Service, I feel that it would be most beneficial to this division.

COUNTERMEASURES MATTERS

Re Buairtel to all SACs dated 6/16/81.

Knoxville requests that SA [redacted],
 Technical Coordinator, Knoxville Division, be designated to
 attend one of the three specialized countermeasures in-services
 to be held at Quantico this year.

Currently, Special Agent [redacted] conducts and oversees
 required countermeasure sweeps of Knoxville headquarters and
 Resident Agencies. It is anticipated that as foreign parti-
 cipants in the World's Fair to be held in Knoxville arrive on
 site, additional countermeasure sweeps will be required of law
 enforcement operations situated on the fair site, as well as
 off-site locations connected with FCI investigative matters.

For information of TSD, as of June, 1981, 16 foreign
 nations are participating in the Fair. It is anticipated that
 personnel from these countries could possibly begin to arrive
 in Knoxville as early as October, 1981. The Fair is scheduled
 to open to the public, 5/1/82, and will run for a period of
 six months.

COUNTERMEASURES MATTERS

The Technical Services Division (TSD), Engineering Section, is in the process of organizing three specialized countermeasures in-services at Quantico. Although the exact dates of each in-service have not been finalized, it is anticipated that each in-service will be 8 workdays duration (Monday through Wednesday of the following week). These in-services will provide attendees with an intensive course covering techniques for conducting technical security surveys and use of countermeasures receivers, radio frequency spectrum and telephone analyzers. Attendees will become completely familiar with the Bureau's latest countermeasures equipment.

In addition, an advanced countermeasures course is offered at a facility operated by another Government agency in the Washington area. This facility provides excellent countermeasures training to selected candidates throughout the Intelligence Community. It is a 6-week course in countermeasures techniques which instructs attendees in the methods used by an adversary to accomplish clandestine audio surveillance systems and also the theories and practices employed in executing a technical security countermeasures survey. It further familiarizes attendees with telephone systems and with most telephone associated equipment. The next countermeasures course is scheduled for mid-October, 1981.

SACs are requested to advise of their requirements for countermeasures training and provide names of Technical Support Agents (TSAs) or any agent with a strong technical background who should attend either countermeasures course and who will be utilized by that office in countermeasures security. Submit requirements to the attention of TSD, Engineering Section, SA [Redacted], stating length of time agent has worked as a TSA and/or technical background.

Attention: Technical Supervisor/Coordinator

Re: COUNTERMEASURES MATTERS

Selection of agents to attend the in-services and the countermeasures course at the above mentioned training facility will be based on the needs of the particular field office, technical background, and qualifications of candidates and slot availability.

If there are any questions regarding the details of the above courses, contact SA [redacted] extension 2700 at FBIHQ.

FROM: SAC, NORFOLK (66-65)

COUNTERMEASURES MATTERS

RE Buairtels to all offices, 6/16/81.

Norfolk recommends that TSA attend one of specialized countermeasures in-services at Quantico. SA is the technical coordinator for the Norfolk Division and has been a TSA since 1972.

Norfolk should have at least one TSA trained in one of the two countermeasures courses being offered at this time. This training is imperative to insure the security of all Bureau space within this division and to provide the expertise necessary when required for investigative matters. The Norfolk Division is frequently called upon by other investigative agencies; Naval Investigative Service; Office of Special Investigation; and Criminal Investigative Detachment, to provide countermeasures security since these agencies do not have the expertise available to them locally.

Norfolk has on hand the following equipment:

80-805-141

In the event such operations are established in the future, early and positive detection would be imperative.

It is highly desirable that SA Brewer attend the Advanced Countermeasures Course. However, at the present time he is actively involved in a major case which is reaching a critical phase and is not anticipated to conclude until late this year. In the event the advanced course is offered at a later date, it is requested SA Brewer be given consideration for such training. In the meantime Savannah requests SA Brewer be afforded the training to be offered in one of the anticipated In-Service Sessions, as yet unscheduled.

Re Bureau airtel to all Offices, 6/16/81.

After analyzing the needs of the Buffalo Office, it is felt that the technically trained Agents are sufficiently trained in Countermeasures to handle any requests for countermeasure activity made to this Office. The Buffalo Division feels that due to the limited scope and requirements for countermeasures activities, additional training for any of the technically trained Agents at this time is not necessary.

Buffalo feels that should a major problem arise which will require sophisticated use of modern countermeasure equipment, the matter would be handled in accordance with available Bureau equipment and Bureau personnel working with Buffalo trained personnel to successfully resolve the problem.

COUNTERMEASURES MATTERS

The Oklahoma City Division has experienced a continuing need for expertise in the Countermeasures Matters. This division has been increasingly involved in cases where Agents and/or sources have felt that they were the target of electronic surveillance by persons under investigation. It is further noted Oklahoma City has the continuing Bureau requirements in the Countermeasures area for Bureau space in the RAs and Headquarters City. Oklahoma City has further been experiencing numerous requests from judges and USAs for assistance in the Countermeasures area.

Oklahoma City has two Technical Support Agents:

SA [redacted]
 SA [redacted]

SA [redacted] Technical Coordinator, attended Bureau Sound School in 1972 and has been continuously involved in Technical Matters since that time. SA [redacted] attended Bureau Sound School in 1978 and has been continuously involved in Technical Matters since that time.

MEMORANDUM

DATE: 8/11/81

Emc

TO : DIRECTOR, FBI (80-805)
ATTENTION: TECHNICAL SERVICES DIVISION
ENGINEERING SECTION
SA [redacted]

b6
b7C

FROM : SAC, RICHMOND (1-335)

SUBJECT: COUNTERMEASURES / MATTERS

Re Richmond letter to the Bureau, 2/8/79 entitled
"COUNTERMEASURES TRAINING - SA [redacted] and Bureau
airtel to All SACs, 6/16/81.

(B)

b6
b7C

In referenced Richmond letter of 2/8/79, it was
recommended that SA [redacted] of the Richmond Division be
afforded sophisticated countermeasures training at the
inter-agency six-week school. Budget limitations and other
considerations prevented scheduling of SA [redacted] at that time.

b6
b7C

SA [redacted] the Richmond Division Technical Coordinator,
indicates a continued interest in the aforementioned training as
well as any FBI in-service instruction which may also be
available in the near future. SA [redacted] is a competent,
experienced, technically trained Agent who has counseled Bureau
schools in the technical field and is familiar with teletype
systems, NCIC equipment and to some extent the use of data
circuits and computers on telephone lines. He possesses a keen
interest in all phases of the Bureau's work and, in particular,
its technical aspects in which he has practical knowledge of
telephony, electronics and radio technology. SA [redacted] has had
a total of eight years experience as a TSA, four years of which
were during assignment in the Newark Division, handling all
phases of TESUR and MISUR installations.

TO: DIRECTOR, FBI (80-805)
 ATTENTION: TSD, ENGINEERING SECTION
 (SA [redacted])

FROM: SAC, CINCINNATI (1-897)

SUBJECT: COUNTERMEASURES MATTERS

ReBuAirtel, 6/16/81.

Technical Support Agents currently assigned to the Cincinnati Division are in order of priority:

- SA [redacted]
- SA [redacted]
- SA [redacted]

SA [redacted] is engaged full time in the technical support function within the Cincinnati Division. He has been acting in this capacity for two years and has two years additional related experience while assigned to Newark Division. He is supported by SA [redacted] and SA [redacted] who are assigned to the Columbus and Dayton Resident Agencies, respectively.

SAC, Cincinnati, views countermeasures capabilities needs of the Cincinnati Division as impacting in the areas of FBI facility sweeps and occasional handling of requests primarily from the courts. Consistent with overall Bureau needs and space available, there is no objection to SA [redacted] attending the Advanced Countermeasures Course. It would, however, be more beneficial in fulfillment of the Division's needs that he attend the 8-day In-Service, which SAC feels would completely fill necessary requirements for the Division.

Re BuAirtel dated 6/16/81.

It is felt that SA [redacted] the Albany Technical Coordinator, would benefit from the training described in the referenced letter being offered in the 8 workdays session under Bureau direction.

SA [redacted] is utilized by the Albany Division in countermeasures security and has been active in technical work approximately 10 years.

It is requested SA [redacted] be considered for the proposed in-service and that he be scheduled after 1/1/82, due to present work commitments in the Albany Division.

audio countermeasure sweeps of Headquarters City and Resident Agencies and in use in Interception of Communication type matters. Thus far, no inordinate problems have been encountered in performing this type work. However, should a more sophisticated survey requiring more advanced equipment necessary for a complex electronic testing and monitoring be required, Charlotte Division anticipates Bureau assistance would be required.

It is noted that the current Technical Coordinator, Charlotte Division, SA [redacted] has previously been afforded advanced countermeasures training via the inter agency training center, Washington, D.C., and as such, is qualified to evaluate matters requiring more extensive and sophisticated techniques.

Director, FBI (80-805)

COUNTERMEASURES MATTERS

Reference your teletype dated August 14, 1981, and Butelcall, August 20, 1981.

One each Cooke telephone analyzer SN 2003 and one each Scanlock receiver SN 79/048 have been sent to your office under separate cover on temporary assignment. This equipment is to be returned to FBIHQ upon completion of its use.

Due to budgetary constraints, the Technical Services Division, Engineering Section, has been unable to purchase sufficient countermeasures (cm) equipment to satisfy the cm equipment requirements of major field offices at this time; however, as funds become available for purchase of cm equipment, your office has been considered as one of the major field offices to receive this equipment.

It is re-emphasized that although there is no cm equipment available for permanent assignment to your office at this time, TSD can provide your office with cm equipment on a temporary basis.

Should the need arise for any technical assistance, that assistance can be provided by TSD or a field office by contacting TSD, SA extension 2700.

R. Witzel

Reference Kansas City teletype dated September 24, 1981.

PURPOSE: To request authorization for ET [redacted] and SA [redacted] to travel to Kansas City to conduct a countermeasures sweep at the [redacted] Attorney's Office.

b6
b7C
b7E

DETAILS: [redacted] Attorney, has requested that the FBI conduct a countermeasures sweep to establish that their office has not been compromised.

b6
b7C
b7E

It should be noted that the [redacted] Attorney's Office is anticipating several indictments to be returned on the "STRAWMAN" case which has been an ongoing investigation for about three years. The [redacted] Attorney's Office is located in the same building with offices of [redacted]

b6
b7C
b7E

The [redacted] Attorney's Offices are alarmed and it is expected that the integrity of the results of the countermeasures sweep can reasonably be maintained because of the alarm system and other security measures already taken. Kansas City has neither trained countermeasures personnel nor appropriate equipment to conduct a thorough countermeasures survey. The number of offices to be covered (6) requires travel by two trained countermeasures personnel. This will also be used as an opportunity to provide some practical countermeasures training to Kansas City technical agents who will assist on the sweep.

SUBJECT: IMPROPER/INCOMPLETE PREPARATION OF MESSAGE FORM 0-93

In order to effect accurate message transmission, the attached 0-93 Message Form is being returned for:

INFORMATION/REVIEW

Attached message was transmitted. However, error(s) indicated below were noted. Request typist/steno review Section 17, Correspondence Guide - FBIHQ, for proper preparation of 0-93 Form.

RETYPING

Attached message was NOT transmitted. Error(s) in preparation are indicated below:

- Needs to be initialed by approving authority (see Section 17-1.8 (1), Correspondence Guide - FBIHQ).
- Message requires a declassification statement (see Section 1.4.3 (2) and page 281, Correspondence Guide - FBIHQ).
- Retype using one-time carbon or carbon film ribbon (see Section 17-2.1 (2), Correspondence Guide - FBIHQ).
- Double space all lines within bordered area (see section 17-3 (2), Correspondence Guide - FBIHQ).
- Insert letters FM/T0, where applicable, in heading (see page 278 and example page 276, Correspondence Guide - FBIHQ).
- Insert letters FBI, where applicable, in heading (see page 276 and example page 276, Correspondence Guide - FBIHQ).
- Indent ATTN: line(s) 5 spaces (see page 278, Correspondence Guide - FBIHQ).
- Place precedence designation next to listed field office(s)/legal attache(s) in heading (see page 278 and example page 276, Correspondence Guide - FBIHQ).
- Insert appropriate Y (slingshot) number for listed Government agency(s) in heading (see pages 290-292, Correspondence Guide - FBIHQ).
- Message must be sectioned (exceeds 6 pages) (see Section 17.4.1, Correspondence Guide - FBIHQ).
- Insert letters BT below last addressee in heading (see page 278 and example page 276, Correspondence Guide - FBIHQ).
- Reposition left margin under point of blue arrow (see example page 276, Correspondence Guide - FBIHQ).
- Insert Y15/ before name of FBI field office(s)/legal attache(s) listed in heading (see page 299 and example page 297, Correspondence Guide - FBIHQ).
- Insert classification designator below BT in heading (see page 277 and example page 276, Correspondence Guide - FBIHQ).

Insert \$T and \$E when using tabulated text.

TO: DIRECTOR, FBI (80-805)
 ATTN: TECHNICAL SERVICES DIVISION
 ENGINEERING SECTION
 SA

FROM: SAC, ALBUQUERQUE (66F-1686)

SUBJECT: COUNTERMEASURES MATTERS

ReBuairtel, 6/16/81; Albuquerque airtel, 7/6/81, both captioned as above; and Albuquerque telcal, 8/12/81.

Since referenced Albuquerque airtel was sent suggesting attendance at a Countermeasures In-Service, sponsored by the Engineering Section, Albuquerque has noted an increase in requests for countermeasures surveys. This would include a pending request on the part of the as well as the desire to have his home swept. This, combined with the routine scheduled countermeasures sweeps of the Resident Agencies (7) in Albuquerque, would seem to necessitate the further training of SA Gerald B. Brown in countermeasures. Another instance of a need of this type is felt to be significant in that the Albuquerque Division is involved in an extremely sensitive espionage case which involves an undercover situation. It is felt that in the interest of security, an appropriate countermeasures survey should be conducted at the residence of this individual when security can be guaranteed.

There appears to be a growing number of requests from outside agencies which, if they are to be honored, should be carried out in the most professional manner possible. This would indicate further training and equipment be on hand in Albuquerque. For this reason, Albuquerque requests information as to the next scheduled Countermeasures School and consideration that SA Brown be included on the roster of this school if at all possible.

SAC, Kansas City
Attention: SA [redacted]

11/6/81

Director, FBI (80-805)

COUNTERMEASURES MATTERS

Reference Kansas City teletype dated September 24, 1981, and Bureau teletype dated October 2, 1981.

On October 6, 1981, ET [redacted] and SA [redacted] [redacted] Technical Services Division (TSD), FBIHQ, conducted a countermeasures sweep of the [redacted] Attorney's Offices in Kansas City, Missouri. The countermeasures sweep consisted of a check of the radio frequency spectrum, the telephones, telephone lines, and a nondestructive physical search.

b6
b7C
b7E

No evidence of electronic eavesdropping or tampering with the telephones or telephone lines was detected at the time of the sweep.

As Kansas City is aware, the alarm system was set off while conducting a nondestructive physical search. Although the alarm system was restored to its original state, it is recommended that the [redacted] Attorney's Office contact the alarm or security company serving their office and have that company conduct a check of the alarm system to insure its proper operation. This recommendation was made orally to Kansas City personnel at the completion of the sweep.

SAC, Seattle
Attention: SA [redacted]

Director, FBI (80-805)

COUNTERMEASURES MATTERS

Reference Bureau teletype dated November 6, 1981.

On November 9 and 10, 1981, personnel from the Technical Services Division (TSD), Engineering Section, conducted a countermeasures sweep of the office space of [redacted] Washington, in accordance with the request of the Assistant United States Attorney, Yakima, Washington.

b7E

The countermeasures sweep consisted of a check of the radio frequency spectrum, a check of the telephones, telephone lines, all telephone line appearances within the Federal Building and a nondestructive physical check. During the nondestructive physical check, all ceiling tiles around the perimeter of the office space were lifted in search of microphones or other listening devices and all power line junction boxes were examined.

A similar countermeasures sweep was conducted of the Resident Agency (RA) office space, Federal Building, Richland, Washington. A loudspeaker which was connected to the building's intercommunication system was found above the ceiling tiles. The loudspeaker system was determined to represent a potential security hazard since it could be modified to serve as a surreptitious listening device. The loudspeaker was disconnected and left in the RA's office space.

No evidence of electronic eavesdropping or tampering with the telephones was noted at the time of the sweeps at either the [redacted] or RA's office space.

b7E

[redacted] Seattle SA [redacted] were verbally notified of the outcome of the countermeasures sweeps.

DEC 8 1981

9 DEC 18 1981

Letter to Seattle
RE: COUNTERMEASURES MATTERS

As Seattle is aware [redacted] advised that the countermeasures sweep indicated the technical status of the office space inspected at the time of conclusion of the sweep. The countermeasures sweep does not insure that the technical security status of the area will not subsequently change. Uncontrolled access by unauthorized persons to the office space or to the telephone main frame could subsequently result in the emplacement of clandestine listening devices which would compromise any security that may have existed.

b7E

Seattle should maintain a record of all telephone appearances for the telephones in the Richland RA for use in future countermeasures sweeps by Seattle technical agents. If not already done, Seattle should advise the AUSA, Yakima, Washington, of the results of the countermeasures survey.

NOTE: Sweep was conducted by ET [redacted] and SA [redacted]

Subject : COUNTERMEASURES MATTERS

Reference Seattle airtel dated September 28, 1981, and Seattle teletype dated October 14, 1981.

PURPOSE: To request authorization for ET [redacted] and SA [redacted] to travel to Richland, Washington, (Seattle Division) to conduct a countermeasures sweep in the offices of [redacted]

b6
b7C
b7E

DETAILS: In referenced communications, the Assistant United States Attorney, Yakima, Washington, requested that the FBI conduct a countermeasures sweep of the office space of [redacted] at Richland, Washington. It should be noted that the Seattle Division has neither the appropriate countermeasures equipment nor trained countermeasures personnel to conduct a thorough countermeasures sweep.

b7E

In early 1981, the Office of the [redacted] Richland, Washington, received allegations of fraud and abuse involving approximately 38 subjects, mostly current or former [redacted] Richland employees, concerning approximately fifty million dollars in questionable expenditures.

b7E

On November 4, 1981, Unit Chief [redacted] and SA [redacted] met with [redacted] Washington, D. C. [redacted] confirmed the importance of their investigation and seriousness of the allegations which have been made at that facility. He also advised that he was aware that discussions held between the two [redacted] at Richland and between an Investigator

RE: COUNTERMEASURES MATTERS

at Richland and the [redacted] Washington, D. C., have become almost immediately known to other individuals who should not have had access to that information. He further advised that from the inception of the investigation, officials at that facility have not cooperated with [redacted] and have attempted to obstruct the investigation. [redacted] at Richland suspect there is a real possibility the Richland office which is located within the facility is being monitored in some manner.

b6
b7C
b7E

It is estimated that the total cost for ET [redacted] and SA [redacted] travel will be \$350 per diem and \$1000 for transportation. b6 b7C

RECOMMENDATION: 1) That the trip to Richland, Washington, be approved and the attached teletype be sent.

FROM: SAC, SEATTLE (66F-1975)

SUBJECT: COUNTERMEASURES

For information of Bureau, the following information was provided by [redacted] Resident Investigator, Office [redacted] Richland, Washington.

b7E

During the past year, [redacted] became aware of information leaking from his office of a sensitive investigative nature. There are only two (2) employees in the [redacted]

b6
b7C
b7E

Approximately six months ago, [redacted] discussed a sensitive investigative matter in their office, details of which were completely unknown on the project area. Before [redacted] initiated the investigation, the subjects learned of [redacted] interest and certain documents documents incriminating them mysteriously disappeared.

b6
b7C

[redacted] thinking his office space had been bugged, inspected the space above the false ceiling and discovered a number of wires running above the space, as well as a speaker-type device connected by wire. [redacted] was unable to trace the wires to their source.

b7E

[REDACTED] office, was given a Radio Frequency (RF) sweep with a scanlock Mark V Receiver, but no listening devices were found.

b6
b7C
b7E

A complete physical search of the office which included inspecting the complete ceiling area, heater, and ventilation system, electrical outlets and switches, as well as furniture in the room, did not disclose the presence of any eavesdropping devices.

Telephone wiring was found which was connected to an electrical switch, however, it was determined that it was connected to a buzzer located near the front door, which when opened activates the buzzer.

The room contains a ceiling speaker system which appeared to be operating in a normal manner.

~~CONFIDENTIAL~~

NY 66-8931

~~CONFIDENTIAL~~

[redacted] was swept in the same fashion and found to be free of any eavesdropping devices. It is noted that the entire office space, though patrolled at approximately 6 p.m. by General Services Administration Guards is not secure. Once entry is gained during daylight hours, an eavesdropping attack could be accomplished in a brief period of time. This type of attack can be effected either by defeating the door locks or breaching the ceiling space. Telephone attacks can be effected anywhere in the building at any time.

b7E

Recommendation: That security with regard to this floor be tightened, and alarms installed which can, at least, be responded to by GSA Guards.

Room 42, Hanger II
Kennedy International Airport
Telephone # 665-4193, 4195, and 2062

Telephone checks both on-line and off line did not disclose any unauthorized eavesdropping activity. Line tests on five (5) telephones in the 564-HD and 565-HKM series showed that these instruments were operating within normal telephone ranges.

Voltages (on hook)	48-50 Volts*
Voltages (off hook)	5-8 Volts*
MA (on hook)	0
MA (off hook)	50-65 MA *
	Maximum Acceptance
	Level 70 MA

~~CONFIDENTIAL~~

NY 66-8831

~~CONFIDENTIAL~~

Infinity Transmitter	
Tone Test (ITTT)	Negative
Amplifier Test	Negative
Spare Line Tests	All negative- (no audio, voltage or current draw detected)

A physical search was conducted on the telephones, telephone cables, and various line connectors around the office, however, no listening devices were found.

Inspection of the interior walls disclosed that conversations could be intercepted with ease from another agency occupying space along an adjacent wall. Louvered air vents also allow for the passage of room audio.

The overall structure which for the most part is unoccupied contains numerous communication and electrical system wire runs which were used in the past by the [redacted] and the [redacted]. These runs can be accessed and used, as needed, and as such present a countermeasures hazard.

b7E

Regarding building security there is virtually none after 6 p.m., at which time all personnel have departed. The location, where the structure lies, is dark throughout the night and not patrolled on a regular basis.

The main doors leading to [redacted] are glass entrance way doors which are secured with a hasp and an inexpensive padlock that can be easily defeated.

b7E

In essence [redacted] offers no security, whatsoever, and as such presents a serious countermeasure hazard. With no protection against entry, one must assume that the hazard exist.

b7E

*-Denotes constantly varying on Digital Multimeter

~~CONFIDENTIAL~~

NY 66-8831

~~CONFIDENTIAL~~

Recommendation: That this agency's operations be moved to a more secure building which is protected by a burglar alarm and patrolled regularly by guards.

b7E

In that no location can be assumed to be free from the various eavesdropping hazards which are known to exist, caution should be exercised at all times when discussing matters of a sensitive nature.

b7E

Dear Mr. Henson:

countermeasures

Reference is made to your letter dated September 29, 1981.

In response to your request, on October 9, 1981, FBI personnel from the Technical Services Division conducted a countermeasures sweep of room

b7E

The sweep consisted of a check of the radio frequency spectrum, a check of the telephones and telephone lines and a nondestructive physical search.

No evidence of electronic eavesdropping or tampering of the telephones was detected at the time of the sweep.

Sincerely yours,

WAB
William A. Bayse
Assistant Director FBI
Technical Services Division

FEDERAL GOVERNMENT

Mr. D. Jerry Rubino, Director
 Security Programs Staff
 Justice Management Division (DOJ)
 William A. Bayse
 Assistant Director FBI
 Technical Services Division
COUNTERMEASURES/MATTERS

In response to a verbal request by [redacted] of your office, on November 4, 1981, FBI personnel conducted an electronic countermeasures security survey of a Lanier Model 103 "No Problem Typewriter" word processor, serial number 352361, located in [redacted]. The survey consisted of a radio frequency spectrum sweep and a physical examination of the internal components of the equipment. No evidence of any electronic eavesdropping or tampering with the equipment was detected at the time of the survey. (S)

b6
b7C
b7E

It was determined prior to the survey, through [redacted] laboratory tests conducted by Honeywell, Incorporated, Annapolis, Maryland, that the Lanier Model 103 "No Problem Typewriter" is a [redacted] hazard with a required perimeter control zone (PCZ) of 200 feet. (S)

b7E

Upon completion of the survey it was verified that the Lanier Model 103 "No Problem Typewriter" did in fact parallel the [redacted] performed by Honeywell, Inc. There was no indication that any of the compromising emanations detected were enhanced to any degree. Our examination of the internal circuitry of the equipment did not reveal any visual abnormalities, however, a complete examination would require a component-by-component analysis by a factory engineer. (S)

80-805-176X

b7E

It is recommended that if the Lanier Model 103 "No Problem Typewriter" is to be used to process National Security Information that it be provided a PCZ of 200 feet. This could be accomplished by relocating the equipment internal to the building. If relocation is not feasible, then the procurement of [redacted] approved word processor for National Security applications is recommended. (S)

FROM: SAC, SAN JUAN (66-20)

SUBJECT: COUNTERMEASURES

Bull/SJA

MD

RE: San Juan airtel to the Bureau, dated 6/24/81, captioned "Countermeasures Matters;" and San Juan telephone call to Technical Services Division, Engineering Section, Signal Analysis Unit, 12/14/81.

Referenced airtel and current inspection have demonstrated the need for countermeasure training to be afforded San Juan Technical Agents. Limited countermeasure and security measures are being provided by SA [redacted] (Technical Coordinator) to headquarters and all RAS semiannually. Because of the political climate and terrorist activity in Puerto Rico semiannual inspections are felt to be the minimal acceptable with quarterly inspections advisable. At the present, no one within the San Juan Division has received countermeasures training. Countermeasures equipment assigned to San Juan consist of one Interad 7312, 10-500 MHz receiver. It is requested that the Bureau consider securing a slot for SA [redacted] in the six week advanced countermeasures course and/or provide similar training at the Bureau and/or send headquarters personnel to Puerto Rico to provide the training. Upon completion of training, it is requested that the best available countermeasures equipment be assigned to the San Juan Division. The Bureau is requested to advise San Juan of its decision in this matter.

COUNTERMEASURES MATTERS

REFERENCE: San Juan Airtel dated 12/14/81 and BuTelcall 12/22/81.

As was discussed during referenced telephone call, the Technical Services Division (TSD), Engineering Section (ES), recognizes the need for training of field technically-trained Agent personnel in countermeasures and in providing the field with appropriate countermeasures equipment. This Fiscal Year the ES has had two training in-services on Basic Countermeasures Techniques and in the use of the latest countermeasures equipment which is being added to the FBI inventories. Due to the lack of funds, the ES will be unable to sponsor any additional formal training in countermeasures this Fiscal Year; however, per your telephonic request, ES personnel can provide informal countermeasures training to your technically-trained Agents at San Juan in conjunction with conducting countermeasures sweeps in your division. Informal countermeasures training can also be provided by ES personnel at FBIHQ. The selection of location for countermeasures training is left to the discretion of San Juan. Upon the course of action elected by San Juan for the training, San Juan should direct a communication to FBIHQ for approval.

The selection of attendees to the previous Basic Countermeasures In-Service Training was made based on the perceived needs of those field offices and FBIHQ efforts to implement regional countermeasures capabilities.

Regarding your request for advanced countermeasures training which is provided by another government agency in the Washington, D. C., metropolitan area, the ES has been advised that there are no funds available at the present time for this type of training. For your information, the

Letter to SAC, San Juan
RE: COUNTERMEASURES MATTERS

advanced countermeasures training is six weeks in duration and the agency providing the training does not have lodging facilities or public transportation to and from their facility. This requires attendees to be on per diem and arrange for their own transportation at an approximate cost of \$3,900. Selection of Special Agents to attend this advanced training is made based on the Special Agent's formal training in electronic fundamentals, or experience as an electronic technician, and on the needs of a particular field office.

The ES's survey of field countermeasures equipment conducted in June, 1981, confirmed the need to supplement and update countermeasures equipment available to the field. Every effort possible is being made to procure countermeasures equipment with the resources available and to make the equipment available to the field on a permanent basis. Presently, the ES has countermeasures equipment that can be made available to the field on a temporary basis provided the field office has personnel trained in the use of this equipment.

Questions regarding this communication or relating to countermeasures matters should be directed to the TSD, attention SA FBIHQ, or by contacting him on extension 2700.

TL

Reference Bureau letter to San Juan, dated January 5, 1982, and San Juan teletype dated January 12, 1982.

PURPOSE: To request authorization for ET [redacted] and SA [redacted] to travel to San Juan, Puerto Rico, to conduct countermeasures sweeps and provide countermeasures training to San Juan technically-trained agents.

b6
b7C

DETAILS: Referenced letter was in response to San Juan's request for countermeasures training by Engineering Section (ES) personnel for their technically-trained agents. San Juan requested the training in view of Puerto Rico's political climate and recent and continuing terrorist activities. Providing FBIHQ's approval, it was left at the discretion of San Juan for location of training. Referenced San Juan teletype requests that ES personnel travel to San Juan to provide countermeasures training and to conduct countermeasures sweeps at several locations.

SK

To minimize the possibility of adversaries or unauthorized personnel from obtaining information as to the plans for countermeasures sweeps, all plans will be made upon arrival at San Juan.

San Juan has been telephonically advised to obtain all FBI telephone lines appearances information.

Director, FBI (80-805)

COUNTERMEASURES MATTERS

REFERENCE: San Juan Airtel dated 12/14/81 and BuTelcall 12/22/81.

As was discussed during referenced telephone call, the Technical Services Division (TSD), Engineering Section (ES), recognizes the need for training of field technically-trained Agent personnel in countermeasures and in providing the field with appropriate countermeasures equipment. This Fiscal Year the ES has had two training in-services on Basic Countermeasures Techniques and in the use of the latest countermeasures equipment which is being added to the FBI inventories. Due to the lack of funds, the ES will be unable to sponsor any additional formal training in countermeasures this Fiscal Year; however, per your telephonic request, ES personnel can provide informal countermeasures training to your technically-trained Agents at San Juan in conjunction with conducting countermeasures sweeps in your division. Informal countermeasures training can also be provided by ES personnel at FBIHQ. The selection of location for countermeasures training is left to the discretion of San Juan. Upon the course of action elected by San Juan for the training, San Juan should direct a communication to FBIHQ for approval.

The selection of attendees to the previous Basic Countermeasures In-Service Training was made based on the perceived needs of those field offices and FBIHQ efforts to implement regional countermeasures capabilities.

Regarding your request for advanced countermeasures training which is provided by another government agency in the Washington, D. C., metropolitan area, the ES has been advised that there are no funds available at the present time for this type of training. For your information, the

ENCLOSURE

RE: COUNTERMEASURES MATTERS

advanced countermeasures training is six weeks in duration and the agency providing the training does not have lodging facilities or public transportation to and from their facility. This requires attendees to be on per diem and arrange for their own transportation at an approximate cost of \$3,900. Selection of Special Agents to attend this advanced training is made based on the Special Agent's formal training in electronic fundamentals, or experience as an electronic technician, and on the needs of a particular field office.

The ES's survey of field countermeasures equipment conducted in June, 1981, confirmed the need to supplement and update countermeasures equipment available to the field. Every effort possible is being made to procure countermeasures equipment with the resources available and to make the equipment available to the field on a permanent basis. Presently, the ES has countermeasures equipment that can be made available to the field on a temporary basis provided the field office has personnel trained in the use of this equipment.

Questions regarding this communication or relating to countermeasures matters should be directed to the TSD, attention SA [REDACTED] FBIHQ, or by contacting him on extension 2700.

FROM: [handwritten initials] ADIC, NEW YORK (66-8831-SUB H) SPECIAL OPERATIONS-1

SUBJECT: COUNTERMEASURES MATTERS

ReButel to New York, dated January 7, 1982.

On 1/14/82, New York Countermeasures team met with FBIHQ Assistant Section Chief RONALD WETHERINGTON to discuss areas to be examined.

On same date, seven (7) offices were examined for Radio Frequency (RF) transmissions emanating from within, and telephone line devices, and in addition, physical searches were conducted. Specific details re this matter are maintained on file in New York under Countermeasures Matters.

Nothing was found indicating any eavesdropping devices either having been installed in the past, or presently installed.

In closing, though nothing was found to indicate a Countermeasures attack at any of the seven (7) locations, all parties concerned were advised to exercise extreme caution when discussing matters of a sensitive nature for no location or vehicle can ever be assumed free from the various Countermeasures hazards which are known to exist. It is also noted that those individuals, concerned with this ever present problem, were further advised, in terms of additional security, to select randomly, when possible, conference rooms or offices other than those examined, and preferably, making those selections only minutes before a meeting was scheduled to occur.

FROM : SAC, RICHMOND (66-135)

ABW
Counter measures

SUBJECT: SECURITY OF TELEPHONE LINES
RICHMOND DIVISION

Richmond Division will be conducting sweep of all Headquarters and Resident Agency telephone circuits in the near future. In conjunction with same, Richmond is aware that a Triplet Model 3400 hand-held meter is available in a modified configuration which will allow enhanced testing capability of telephone circuits.

(Signature)

REQUEST OF THE BUREAU:

Richmond requests that the TSD make available one of the aforementioned Triplet 3400 meters as soon as possible.

COUNTERMEASURES MATTER

Reference Richmond airtel dated February 18, 1982; and Bureau telephone call to Richmond SA [redacted] on March 1, 1982.

b6
b7C

The Technical Services Division (TSD) is in the process of modifying several Triplet Model 3400 volt-ohm-meters (V-O-M) by incorporating an audio amplifier. At the present, the modification of these meters has been delayed due to the unavailability of some components for the amplifier. It is anticipated that these components will be available in the near future, at which time the meters will be modified and deployed to selected field offices.

This modified V-O-M is used in measuring telephone pair parameters while at the same time it monitors the lines for the presence of any audio during a countermeasures sweep. The monitoring of telephone lines for audio can be accomplished by using the audio amplifier of the Kaiser Kit Model 1040.

COUNTERMEASURES MATTERS

Reference Louisville teletype dated December 23, 1981; and Bureau teletype dated January 15, 1982.

In accordance with your request, on January 25, 1982; Technical Services Division (TSD), Electronics Technician [redacted] traveled to Louisville, Kentucky, to provide countermeasures training to Louisville Technically-Trained Agents (TTAs) and to conduct countermeasures sweeps at several locations in the Louisville Division. As was stated in referenced Bureau teletype, the training provided to your TTAs was in lieu of any other training in countermeasures that TSD normally provides at the FBI Academy, Quantico, Virginia. Louisville TTAs received the type of countermeasures training that is afforded attendees at FBI Academy, Quantico. SA [redacted] received training in countermeasures techniques as well as in the proper use of the current countermeasures equipment used by the Bureau, which includes radio frequency receivers, non-linear junction detectors, telephone analyzers and a modified volt-ohm-meter/amplifier.

COUNTERMEASURES MATTERS

Reference Bureau teletype dated January 22, 1982;
and San Juan airtel dated March 6, 1975. (U)

On February 1, 1982, personnel from the Technical Services Division (TSD), Engineering Section (ES), arrived in San Juan in response to your request for countermeasures training of San Juan's Technically-Trained Agents and to provide technical assistance and equipment to conduct countermeasures surveys at several locations in your division. (U)

pe

On February 2 and 3, 1982, San Juan SA [redacted] was provided training on the use of the Bureau's countermeasures equipment. SA [redacted] assisted on all countermeasures surveys conducted in the San Juan Division. San Juan SA [redacted] advised he was not to receive any training per orders of San Juan [redacted]. (U)

b6
b7c

On February 4, 1982, a countermeasures (cm) survey was conducted of the Roosevelt Roads Resident Agency (RA). No evidence of any electronic eavesdropping was detected at the time of the survey. During the initial phase of the survey, it was noted that the door to the inner office, equipped with an alarm system, was open, unalarmed, and the key was left in the lock cylinder. The SRA was on vacation at the time the survey was being conducted. Although this was not a physical security inspection of the RA, it is good countermeasures practice to secure all office space to prevent easy access to unauthorized personnel. It is incumbent upon the SRA to provide the maximum security possible to the RA office space. (U)

Letter to SAC, San Juan
RE: COUNTERMEASURES MATTERS

A cm survey was conducted at the San Juan Field Office on February 4, 5, and 10, 1982. No evidence of any electronic eavesdropping or of any tampering with the telephones or telephone lines was detected at the time of the survey. (S) (U)

In referenced March 6, 1975 airtel, your office proposed to have two cables with 200 pairs total brought directly from the Telephone Company central office to the FBI space with no other multiple appearances. However, in tracing all telephone lines leaving the FBI space, it was noted that most of the FBI telephone lines appeared in three wire closets located throughout the 5th floor and in the basement of the Federal Building. Despite the fact that all telephone wire closets and the door to the basement were found to be locked, this safeguard measure provides minimum security to these areas and to FBI telephone lines. (S) (U)

On February 3, 1982, a cm survey was conducted at the St. Thomas, Virgin Islands, Resident Agency. While conducting a physical trace of all wires in the ceiling of the RA's office space, it was found that the alarm system had been disconnected. TSD personnel were advised that the alarm unit was disconnected in February, 1981, and sent to the San Juan Field Office for repairs. SA [redacted] of the St. Thomas RA advised that the alarm system was disconnected prior to her assignment to the RA and that she was unaware as to the status of the alarm unit. The countermeasures survey determined no evidence of clandestine listening devices or telephone tampering and nothing additional of a security-related nature other than the matter described above was noted. (S) (U)

On February 9, 1982, a cm survey was conducted at the Mayaguez Resident Agency. The office space was not alarmed. This office has a wall which is common with a law office. The wall construction of one room is of "2 x 4" lumber and sheetrock. The acoustics between the offices is such that conversations in the law offices can easily be overheard and it is, therefore, likely that conversations in the RA space can be overheard in the law office. The RA's two telephone lines were traced to a point in the wall where it appeared that the telephone lines went through the wall and into the law office space. No determination could be made of the appearances of the two telephone lines without having access to the adjoining office space. (S) (U)

- 2 -

~~CONFIDENTIAL~~

CONTINUED - OVER

b6
b7c

~~CONFIDENTIAL~~

Letter to SAC, San Juan
RE: COUNTERMEASURES MATTERS

Also, upon your request, on February 10, 1982, [redacted]

[redacted] Four type 564 telephones using Northern Telcom speakers were found to be passing audio on-hook when the telephone line pickup keys were depressed. [redacted] was advised of this find and on the corrective measures to this problem. (S) (U)

b6
b7C
b7E

All countermeasures surveys conducted consisted of a radio frequency spectrum check, a check of the telephones and telephone lines and a nondestructive physical search. (U)

TSD personnel were unable to check all appearances of the telephones as the line appearance information, which was requested prior to the surveys, was not available for any of the telephone lines checked in the San Juan Division. (U)

The following recommendations are being made:

1. Obtain ~~all~~ line appearance information for all telephone numbers subscribed to by San Juan Office, RAs included, and maintain in a file; updating them as appropriate. (U)
2. Conduct a physical tracing of all wires from all telephone instruments in the San Juan Office and Resident Agencies (RAs) to the last appearance before the Telephone Company central office, recording and correcting any abnormalities. (U)
3. Obtain a cost estimate from the Telephone Company for dedicated telephone service for the San Juan Office as was proposed on referenced airtel. Submit for approval to FBIHQ, Attention: Technical Services Division, Operations Management Section, Unit Chief [redacted] (U)
4. Obtain and install necessary alarm equipment for the Mayaguez RA. (S) (U)
5. Repair and install the alarm system in the St. Thomas RA. (S) (U)

b6
b7C

~~CONFIDENTIAL~~

CONTINUED - OVER

~~CONFIDENTIAL~~

Letter to SAC, San Juan
RE: COUNTERMEASURES MATTERS

6. That San Juan submit the name of a Special Agent to be trained in audio countermeasures by FBIHQ, Technical Services Division. It is desirable that the Agent is fluent in the local dialect of the Spanish language. Audio countermeasures depend upon being able to correlate demodulated audio with room activity; therefore, language ability is a requirement. (U)

San Juan is requested to advise FBIHQ, Attention: Technical Services Division, Engineering Section, SA [redacted] [redacted] by June 1, 1982, of the course of action taken concerning the above recommendations. (U)

Date : 4/9/82

From : R. W. Witzel

Subject : COUNTERMEASURES/MATTERS

80-805

PURPOSE: To report the results of a contemporaneous monitoring of the radio frequency spectrum in the JEH Building, Room 7145, on March 23, 1982.

DETAILS: At your request, a contemporaneous monitoring of the radio frequency spectrum from 3 KHZ to 2 GHZ was conducted in Room 7145 of the JEH Building. No evidence of any electronic eavesdropping was detected during the search. However, a relatively high-level local oscillator radiation from a radio tuned to 99.5 MHz was discovered.

As you may recall, you and [redacted] were advised of this condition. No attempt was made on this date to determine the location of the radio(s) radiating the high-level signals. b6
b7C

On April 1, 1982, a follow-up examination of the RF spectrum was conducted in an attempt to locate the source of the above-mentioned radiation.

The source of the radiation was determined to be a Panasonic portable radio located in Room 7159, JEH Building. A similar radio located in Room 7145 was also determined to be radiating at approximately the same level. Both radios were checked in an effort to determine if room audio was detectable using a Micro-Tel PR 700 countermeasures receiver. No room audio was detected using above countermeasures receiver.

*taken on 4/1/82
4/3/82*

A third source of high-level local oscillator radiation discovered was a Panasonic table radio, Model Number RKU151B, GPN 412679, which is located in your office behind your desk. As was demonstrated to you on 4/1/82, the signal from this radio was found to contain intelligible room audio, i.e. the radio was determined to be microphonic.

80-805-195X

23 SEP 28 1982

No other source of high-level radiation was found besides the above-described signals.

RECOMMENDATION: That the radio in your office be subjected to additional examination in an effort to further identify the local oscillator radiation problem.

COUNTERMEASURES MATTERS

Reference Bureau letter dated March 8, 1982.

In response to your request, Technical Services Division (TSD) personnel conducted a countermeasures survey of the conference room on Sunday, March 14, 1982; and a contemporaneous monitoring of the radio frequency spectrum during the SAC's Annual Conference at Williamsburg, Virginia, March 14-17, 1982. The monitoring was conducted from 8:00 a.m. to 5:00 p.m., March 15 and 16; and from 8:00 a.m. until 12:00 noon on March 17, 1982.

No evidence of any electronic eavesdropping was detected at the time of the countermeasures survey or during the contemporaneous monitoring.

TSD is grateful for the assistance and cooperation extended to TSD personnel by Norfolk's SA [redacted] during the SAC's Conference.

NOTE: The above cm survey and contemporaneous monitoring was conducted by ET [redacted] and SA [redacted]

COUNTERMEASURES MATTERS

RE BUREAU TELETYPE, MAY 5, 1982 AND TELEPHONE CALL FROM ASAC HOWARD TO UNIT CHIEF [redacted] MAY 7, 1982.

IT IS STRONGLY URGED THAT SA RICHARD BRAMLEY OF THE HONOLULU DIVISION BE SCHEDULED TO ATTEND CAPTIONED IN-SERVICE JUNE 7 - 18, 1982.

NORMAL EXAMINATIONS HAVE NOT BEEN CONDUCTED SINCE PRIOR TO THE RETIREMENT OF SA [redacted] IN AUGUST, 1981.

SAC, HONOLULU FEELS IT TO BE IMPERATIVE THAT THE SECURITY OF THIS DIVISION'S COMMUNICATION SYSTEM BE EXAMINED AT THE EARLIEST POSSIBLE DATE, ESPECIALLY IN LIGHT OF THE

IMMINENT ESTABLISHMENT OF THE PRC CONSULATE IN HONOLULU.

. THIS OFFICE HAS RECEIVED REQUESTS FROM THE STRIKE FORCE, THE USA'S OFFICE, AND THE OFFICES OF THE UNITED STATES DISTRICT COURT JUDGES, ALL IN HONOLULU, FOR THE SAME TYPE EXAMINATION.

ADDITIONALLY, THE GUAM RESIDENT AGENCY AT AGANA, GUAM HAS NOT BEEN EXAMINED SINCE THE MOVE FROM ONE SPACE TO ANOTHER, AND IT IS NOW A THREE PERSON RA AND MAY EXPAND TO FOUR IN THE NEAR FUTURE.

WHILE IN GUAM IN APRIL, ASAC HOWARD WAS PERSONALLY APPROACHED BY AUSA VERNIER, AGANA, GUAM, WHO REQUESTED THE SAME TYPE EXAMINATION, AND IN FACT, INDICATED HIS RELUCTANCE TO DISCUSS CASES IN HIS OFFICE AND INVITED ASAC HOWARD OFF-PREMISES DUE TO FEAR OF BEING OVERHEARD WHILE IN AUSA VERNIER'S OFFICE.

SAC, HONOLULU IS AWARE OF THE EMPHASIS ON THE REGIONAL CONCEPT OF SUPPORT BETWEEN OFFICES FOR THIS TYPE EXAMINATION, HOWEVER, FOR AN OFFICE AS FAR SEPARATED FROM ANY OTHER FIELD OFFICE AS IS HONOLULU, THE TIME AND TRAVEL EXPENSE INVOLVED CAUSE REGIONAL SUPPORT TO REACH A POINT OF DIMINISHING RETURN.

IF SA BRAMLEY IS SCHEDULED AND TRAINED, HONOLULU INTENDS TO

DETERMINE THE AVAILABILITY OF ACCEPTABLE EQUIPMENT THROUGH THE VARIOUS MILITARY ESTABLISHMENTS IN HAWAII, AND IF AVAILABLE, WOULD NOT HAVE TO CALL UPON THE BUREAU'S LIMITED RESOURCES IN THIS FIELD TO CONDUCT THESE TYPE EXAMINATIONS. AGAIN, SAC, HONOLULU STRONGLY RECOMMENDS SCHEDULING OF SA BRAMLEY FOR THE JUNE IN-SERVICE, AS THE TRAINING IS DESPERATELY NEEDED AND SA BRAMLEY WILL NEED TO BE IN HONOLULU FOR A TRIAL WHICH WILL TAKE PLACE DURING THE PERIOD OF THE SECOND IN-SERVICE.

TO: DIRECTOR, FBI 80-805
 Attention: Technical Services Division
Countermeasures Section

FROM: SAC, SPRINGFIELD (66-29)

SUBJECT: TECHNICAL MATTERS / COUNTERMEASURES (SCANLOCK)

The Springfield Division is in the process of conducting routine security checks of Bureau space located in the Resident Agency in the southern area of the Division, as requested by the Bureau. As to allow a more adequate survey, the Bureau is requested to forward one Scanlock unit to Springfield for temporary use to allow completion of the surveys.

The unit should be forwarded to the attention of Technical Agent [redacted] Carbondale Resident Agency, Carbondale, Illinois 62902. Upon completion of usage, the unit will be returned to the Bureau.

COUNTERMEASURES IN-SERVICE
FISCAL YEAR 1982

Re Bureau teletype to all Field Offices, dated
 May 5, 1982; Detroit telephone call of SA to
 instant date.

The Detroit Division submits the name of SA
 to receive the two week basic Audio Countermeasures
 (ACM) In-Service for the class beginning June 7, and terminating
 June 18, 1982.

In view of the fact that there are scheduling
 difficulties for a number of technically trained Agents during
 the latter part of August, Detroit respectfully requests that
 SA be given the opportunity to attend during the above
 listed dates.

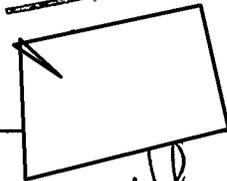

Any communications regarding this matter should be
 directed to the attention of SA

IN CONNECTION WITH THAT IT IS NOTED THAT SA [REDACTED] IS COMMITTED FROM MAY 26, TO MAY 29, IN CONNECTION WITH A COURT AUTHORIZED INTERCEPT. ON MAY 31, 1982, HE WILL DEPART PHOENIX FOR BULLHEAD CITY, ARIZONA, IN CONNECTION WITH A VIDEO INSTALLATION ON A CONSENSUAL MONITORING MATTER WHICH IS EXPECTED TO LAST THROUGH JUNE 1, 1982. PRIOR ARRANGEMENTS HAVE BEEN MADE TO HAVE SA [REDACTED] ASSIST THE ALBUQUERQUE DIVISION ON A COURT AUTHORIZED INTERCEPT INSTALLATION WHICH WAS TO BE DONE ON JUNE 2 AND JUNE 3, 1982. HE IS EXPECTED TO BE ON SICK LEAVE DURING THE AFTERNOON OF JUNE 3, 1982, BECAUSE OF SOME MINOR SURGERY. BECAUSE OF THESE COMMITMENTS HE WOULD, THEREFORE NOT BE AVAILABLE TO COMPLY WITH THE REQUEST FOR THE SURVEY UNTIL FRIDAY, JUNE 4, 1982. BECAUSE OF THE COMMITMENT OF THE EQUIPMENT TO THE TRAINING IT WOULD NOT BE AVAILABLE TO BE SHIPPED TO PHOENIX UNTIL JUNE 18, 1982. BECAUSE OF THE ABOVE IT WOULD NOT BE POSSIBLE TO CONDUCT THE SURVEY REQUESTED OF PHOENIX UNTIL JUNE 21, 1982.

b6
b7c

PAGE FOUR PX 66-897 UNCLAS E F T O

INASMUCH AS SOME CONCERN HAS BEEN SHOWN BY THE [REDACTED] [REDACTED] WITH RESPECT TO THE DELAY IN THIS MATTER IT IS REQUESTED THAT HEADQUARTERS CONSIDER PROVIDING PHOENIX APPROPRIATE PERSONNEL AND EQUIPMENT TO CONDUCT THIS SURVEY AS SOON AS POSSIBLE.

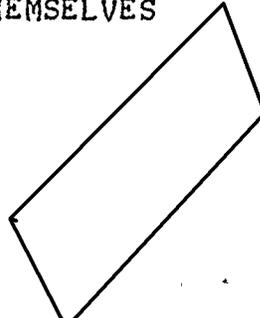

b7E

INQUIRY HAS DETERMINED THAT [REDACTED] PHOENIX, ARIZONA, DID IN FACT PREVIOUSLY CONDUCT A CHECK OF THE TELEPHONE FACILITIES OF THE [REDACTED] IT WAS DETERMINED THAT THE TELEPHONE EQUIPMENT CONSISTS OF FOURTEEN - TEN BUTTON TELEPHONE INSTRUMENTS AND FOURTEEN SEPARATE LINES. THE [REDACTED] IS LOCATED IN A HIGH-RISE WHICH IS AT [REDACTED] PHOENIX, ARIZONA, TELEPHONE NUMBER [REDACTED] THE OFFICE MANAGER IS [REDACTED] FURTHER INFORMATION REGARDING THE APPEARANCES OF TELEPHONE LINES CAN BE OBTAINED BY CONTACTING [REDACTED]

b6
b7C
b7D
b7E

[REDACTED] PHOENIX TELEPHONE NUMBER [REDACTED] SHOULD HEADQUARTERS AUTHORIZE PERSONNEL TO TRAVEL TO PHOENIX TO CONDUCT THIS SURVEY IT IS SUGGESTED THAT THEY CONTACT [REDACTED] PRIOR TO TRAVELING TO PHOENIX TO ASSURE THEMSELVES THAT THE OFFICE WILL BE AVAILABLE FOR SUCH INSPECTION.

b6

TO: DIRECTOR, FBI *WRR*
 Attn: SA [redacted]
 Technical Services Div.
 Toom 1B0153

FROM: SAC, SALT LAKE CITY (66-162)

SUBJECT: COUNTERMEASURES MATTERS

Re Bureau teletype to all SACs dated 5/5/82, and Salt Lake City telcal to Supervisor [redacted] 5/25/82.

Per discussion in referenced telcal, Salt Lake City is making no nomination for upcoming Audio Countermeasures Inservice because this Division currently has no technically-trained Agent assigned to Headquarters City. Technical support has been furnished by SA [redacted] Denver Division, who will continue to furnish such technical support. It is understood that SA [redacted] has already received the training offered in referenced teletype.

This issue highlights Salt Lake City's continuing need for a technically-trained Agent in Headquarters City. On the Preferred Training Survey for the past two fiscal years, a spot in sound school has been the number one inservice training priority of the Salt Lake City Division. This need has also been brought to the Bureau's attention previously by communications such as airtel from Salt Lake City to FBIHQ captioned "Special Agent Personnel Needs" dated 11/18/80.

Director FBI (80-805) & (66-19226)

COUNTERMEASURES AND [redacted]

Reference WFO airtel dated December 10, 1981, and
Butelcall to Supervisor [redacted] on April 16, 1982. (U)

In response to your request, over a period of several days from January 5, 1982, through January 22, 1982, personnel from the Technical Services Division (TSD), Engineering Section (ES), conducted audio countermeasures (ACM) surveys of all apartments requested with the exception of apartment number 302. TSD personnel were advised that this apartment's lock was on the building master key. As per telephone call, an ACM survey will be conducted of apartment number 302 when it is secured properly. (S) (U)

UNRECORDED COPY FILED IN 80-19226-1

b6
b7C

In conjunction with the ACM survey a [redacted] was also conducted of a CCTV System located in Room 858. (S) (U)

b7E

The results of a [redacted] performed on a CCTV System consisting of an RCA Time Lapse VCR, Model TC 3350, an RCA Camera Assembly, Model TC 1030/H10 and a Panasonic Video Monitor, Model WV-760, determined that the [redacted] of the CCTV System necessitates judicious selection concerning its location, installation and use. (S) (U)

b7E

Spatially radiated compromising emanations (CE) were detected at a distance of 25 meters from the VCR, and were of sufficient levels to couple onto any equipment and/or lines within a 25 meter radius. These broadband emanations were detectable throughout the frequency spectrum from 12 to 305 MHz. AC Powerline CE were detected on the line cords servicing the equipment and have the potential of being impressed on the power cords of other equipment plugged into the common outlet. (S)

80-805-238 JUN 1 1982

~~SECRET~~

Letter to SAC, Washington Field

The CE contained the Date/Time Function (DTF) and video picture information, which is impressed on the Date/Time Readout. This condition exists only in the stop and record modes with video present at the input port of the VCR. When the DTF is blanked, the video picture information in the DTF field is still present at the same signal levels. ~~(C)~~ (U)

Reduction of the spatially radiated emanations can be accomplished by placing the VCR in a radio frequency interference enclosure, or by establishing a 25 meter control zone around the system in which no other processors or cables, which may act as fortuitous conductors, are installed. However, based on the results of this test and the current location of the lookout at a distance considerably greater than 25 meters from the target, the security hazard presented by this CCTV system is considered to be minimal. ~~(C)~~ (U)

Date 5/27/82

TO: DIRECTOR, FBI (80-805)
 FROM: SAC, KANSAS CITY (66-470)
 COUNTERMEASURES MATTERS

Re Bureau teletype to Oklahoma City and Kansas City, dated 4/23/82.

On 4/26/82, Special Agents of the Kansas City Division and the Oklahoma City Division conducted search of the [redacted] Tulsa, Oklahoma. The appearances of [redacted] telephone lines were also checked in [redacted]. Listed below are some areas which should be discussed with [redacted]

b7E

Background music (stereo FM, etc.) could be utilized [redacted] particularly during confidential conferences.

b7E

All conventional phone systems are unsecure. Extreme caution should be exercised when confidential matters are the subject of telephone conversations. If it becomes necessary to discuss confidential matters telephonically, a telephone should be selected randomly for use. If a private office with a single line phone is available, this should be considered. A pay phone (coin phone) could be used if the area offers some privacy.

A reasonable degree of assurance may be given that at the time [redacted] were examined, the integrity of the space was not compromised. In order to retain some degree of

KC 66-470

assurance of the continued integrity of the space, limited access to the space by known individuals is recommended. An alarm system would be required with systematic activation of the system when personnel are not in the office.

On 4/27 and 4/28/82, the offices of [redacted] [redacted], as well as an Administrative Office [redacted] [redacted] Oklahoma, were each checked for security leaks.

b7E

No devices were located and there was no evidence of current breach of security. Electronic equipment which had been located in [redacted] work area was made available for the agents' inspection.

b7E

The following are suggested for consideration by [redacted] [redacted] for minimizing problems related to security of intelligence:

Telephones are not secure for discussing confidential matters.

The telephone equipment room must have restricted access. [redacted] should be in the area.

b7E

Access to telephone terminal boxes should be limited to [redacted].

b7E

Access to crawl space under Administration Building should be limited [redacted]

b7E

Public address system speakers and intercoms are potential microphones.

Electronics maintenance employees should be alert for any possible modification made on intercoms or speakers.

Return air vents and louvers in doors are possible avenues for intelligence leaks.

Access must be limited to the areas where security of conversations is important. (Cleaning of office should be done in presence of [redacted])

b7E

KC 66-470

Background music may be beneficial in instances where confidential matters are discussed in areas where there may be a break in security.

It is suggested that a technically trained agent and any other Special Agents designated by the SAC discuss the above with

COUNTERMEASURES

ReSJtelcal to Technical Services Division, 6/6/82.

As discussed in referenced telcal, San Juan is requesting the use of a Scanlock Receiver for approximately one week at the conclusion of the technical training class at Quantico now in session.

The receiver will be used to conduct countermeasure surveys as set forth in the MIOG and to keep countermeasure trained agents current in its use.

Re SI airtel to Bureau, 4/26/82.

Enclosed for the Bureau under separate cover is one Scanlock kit bearing SN 79/057, which was recently loaned to the SI Division in order to conduct appropriate counter measures survey as required by the Bureau in RA space. The unit is being returned to the Bureau, inasmuch as this need is no longer warranted at this time within the SI Division.

COUNTERMEASURES MATTERS

b6
b7C
b3
b7E

All parts of this communication are confidential except where otherwise noted.

Reference Bureau teletype to San Diego, et al, dated 5/27/82. (U)

Audio countermeasures (ACM) survey was performed in the [redacted] Phoenix, Arizona, between June 2, 1982 and June 4, 1982. No evidence of a telephone interception device or a clandestine microphone was located within the office space occupied by the senator and staff.

b7E

80-805-249

76 JUL 12 1982

SD [redacted]

b3
b7E

Tests performed during the survey included the utilization of a Dektor Telephone Analyser (DTA) to definitively test a 636A Call Director, 12 565 HKM telephone instruments, and one 500 instrument. The frame located within the office space was inspected including a key telephone unit (KTU) and corresponding power supply. Physical inspection was also performed on any instruments listed above.

A micro-tel PR-700A receiver was utilized for a radio frequency (RF) search within the office environment. No signal was identified as being a threat to the security of [redacted]

b7E

A physical search was conducted and logical locations within the space for clandestine microphones, wire runs, and other conditions which might provide opportunistic audio interception.

[redacted]
[redacted] A dedicated cable runs between the central office and the seventh floor of the [redacted] in which the [redacted] is located. The central office is located one block away. The house cable then appears on the 28th floor of the building and is cut at that point.

b7D
b7E

Inspection of the individual binding posts for the 14 lines revealed no double straps or other unusual conditions. It is noted that the [redacted] checked each and every circuit individually appearing at the seventh floor as well as the twenty-eighth floor for evidence of tampering.

b7D

A short seminar was held with responsible representatives [redacted] Suggestions were made so as to improve the overall security [redacted] Advice was also given in methods of handling confidential matters with a minimal of exposure to outside interests.

b7E

An auspicious intercept occurred while monitoring the radio frequency spectrum with the PR-700A in the range of 177.470 megahertz (MHZ). Audio was heard obviously coming from a courtroom setting. Continued monitoring of the audio determined that it was a murder trial being held in an Arizona State Courtroom. During the trial proceedings, privileged conversations between the client and his attorney could be readily overheard. During recess several personal type discussions among attorneys could be monitored with ease.

~~CONFIDENTIAL~~

SD

b3
b7E

Liaison was established with the State Attorney General's Office regarding the interception. It was confirmed that a murder trial was in session in Phoenix, Arizona, at the State Courthouse. Authorization had been granted by the judge for television-audio coverage of the proceedings. The court was not aware that the sensitivity of the microphone as well as its placement within the courtroom environment might inadvertently pick up privileged communications. In addition the presiding judge had ordered that no recordings be made of specific witnesses who were furnishing sensitive testimony regarding their involvement in the case. The Arizona Attorney General's representatives resolved the matter.

SUBJECT: GENERAL SERVICES ADMINISTRATION
 INSTALLATION OF EMERGENCY WARNING SPEAKER SYSTEM
 PITTSBURGH DIVISION

Re Pittsburgh airtel 5/14/82; Bureau airtel 6/9/82.

On 6/14/82, Supervisory Special Agent [redacted] met with [redacted] Pittsburgh, Pa., 15222, regarding installation of the emergency warning speaker system within the FBI space. Recommendations as set forth in referenced Bureau communication were presented to [redacted] and a mutual understanding with respect to this installation was achieved.

[redacted] has requested that an unclassified letter be prepared at our headquarters level similar to the sample copy enclosed and directed to him which would in general terms set forth Bureau security considerations and assurances that the limited recommendations, with respect to the emergency warning speaker system in conjunction with our internal communication system, would provide adequate fire warning protection.

REQUEST OF BUREAU

Please direct a letter to [redacted] as outlined above.

Dear Sir:

As per your discussion with Supervisory Special Agent [redacted] on June 14, 1982, you are hereby authorized to install the emergency warning fire alarm speaker system limited to three speakers; one in the elevator hall area, one in the outer reception room area, and one in the 24 hour night weekend duty station area of the thirteenth floor FBI space.

I am certain that this installation will satisfy physical security considerations as expressed by our headquarters in their letter of June 9, 1982, and that through our internal communications system required fire warning protection will be provided for all persons within the FBI space.

Very truly yours,

S A M P L E

Re Bureau teletype to Detroit, dated 6/17/82.

On 6/22/82, an audio countermeasures sweep was conducted of [redacted] Michigan, with negative results.

b7E

This sweep was conducted with the use of RF spread spectrum equipment, non-linear junction detector equipment, and telephone analyzer equipment.

Additionally, voltage readings, miliamp readings, and line amplification checks were made on all telephone lines in these offices.

Director, FBI (80-305)

SAC, Pittsburgh (66-2712)

GSA INSTALLATION OF EMERGENCY
WARNING SPEAKER SYSTEM
PITTSBURGH DIVISION

Counter Measures

Reference Pittsburgh airtel 5/14/82.

The proposed GSA Emergency Warning Fire Alarm Speaker System is seen to pose two potential security hazards to Pittsburgh office space. Speaker systems like that proposed usually also exhibit microphonic characteristics which allow them to be exploited to achieve audio penetration of sensitive areas from outside FBI space. In addition, wire runs to these speakers offer potential hard-wire egress for sensitive data inductively coupled from FBI word and data processors. (S) (U)

If, as is indicated by Pittsburgh in referenced communication, it will be necessary to install at least part of the system in FBI space, the following suggestions are made to improve the security of the system:

- 1) Keep to an absolute minimum the number of speakers necessary to achieve the required fire warning protection. No speaker should be installed in an area where sensitive discussions occur.
- 2) Ensure that wires running to the speakers are kept as far as practicable from any other wires carrying sensitive information. It is also wise to keep the alarm wires away from word processors that may be used for typing sensitive documents.
- 3) At the point that the alarm system enters FBI space

Airtel to Pittsburgh
RE: GSA INSTALLATION OF EMERGENCY
WARNING SPEAKER SYSTEM
PITTSBURGH DIVISION

cut the wire and install a separate amplifier which has good isolation characteristics; that is, one which does not allow electrical signals generated by the speaker or wire system to pass back down the wire to the central control area. GSA may be able to suggest an amplifier which possesses the appropriate isolation characteristics. If not, these amplifiers should be available locally from electronics stores. Ensure that the amplifier installation is supported by the building emergency power or has backup battery capability so that loss of building power does not also cripple the emergency fire alarm system. (S) (U)

If there are any questions regarding the above suggested procedures, contact the Engineering Section, Electronic Analysis Unit at extension 5823. (U)

COUNTERMEASURES MATTERS

Re Miami airtel to Director dated 6/18/82 and Butel to Miami dated 6/25/82.

Pursuant to FBIHQ approval of a request for an audio countermeasures survey made by the [redacted]

[redacted] office space and telephone system

was subjected to a countermeasures sweep on 6/29/82 by SA [redacted]

[redacted] Miami Division; SA [redacted] Jacksonville

Division; and [redacted] Miami

Division. [redacted] request was made inasmuch as people working in his office believed certain information discussed there and over the telephone was leaking out of the office.

Nine (9) telephone instruments, together with eight (8) separate telephone lines were checked and no irregularities were found. [redacted] advised

that the cable which services [redacted] office is a dedicated cable which runs between the [redacted]

Office and the main frame room [redacted] in

Fort Lauderdale, Florida, where [redacted] office space

is located. All appearances between the main frame room and [redacted]

[redacted] office space were identified and checked thoroughly.

Assistance was rendered by [redacted]

Supervisor and by Rolm Industries, the company which installed the original telephone system and all the cables in this building.

[redacted] advised further that anyone entering a telephone frame room anywhere in the building has to be escorted to the appropriate location and signed in prior to admittance.

COUNTER MEASURES

Subject: GUIDELINES FOR CONDUCTING TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEYS

PURPOSE: To request information from the Legal Counsel Division (LCD) concerning reporting requirements, if any, of unauthorized electronic surveillance devices discovered by members of the Intelligence Community (IC) within the United States, or territories in which the FBI has investigative responsibility.

Also, to request from the Intelligence Division (INTD) current Delimitation Agreements between the FBI and members of the IC which outlines investigative responsibilities.

DETAILS: The Audio Countermeasures Working Group (ACWG) of the Technical Surveillance Countermeasures Subcommittee (TSCS) has rewritten Procedural Guidelines 1-2-3 (draft copy attached) which are used by the IC. These guidelines set forth standardized logical survey procedures to assist countermeasures personnel in detecting, preventing audio penetrations and reporting of any discoveries. Members of the ACWG and TSCS are representatives from various agencies of the IC including the military. The guidelines are being rewritten in general terms to allow for the guidelines to be classified from "~~SECRET~~" to "~~For Official Use Only~~," which allows some countermeasures teams of the IC the flexibility of carrying these guides with them for quick reference. Agencies implementing detailed instructions may classify their own guidelines as deemed necessary.

Of interest to the FBI is Procedural Guide Number 2 captioned "Requirements for Reporting and Testing of Technical Surveillance Penetrations and Exploitable Technical Hazards." Chapter II, Paragraph C, states, in vague terms, that the finding Agency "should give careful consideration to the desirability of reporting the discovery....."

Memorandum to Mr. Bayse
 RE: GUIDELINES FOR CONDUCTING TECHNICAL
 SURVEILLANCE COUNTERMEASURES SURVEYS

It is this portion of the guidelines which is of concern to the FBI if there exists any legal mechanism which requires all members of the IC to report finding of unauthorized electronic surveillance devices within the United States or its territories. Current Procedural Guidelines state "In the event that the discovery was made within the United States or Puerto Rico, the finder will immediately notify the FBI member so that appropriate action can be taken. Such discoveries will be handled in accordance with the responsibilities fixed in the Delimitation Agreement to which the FBI and military services are subscribers, U. S. statutes and applicable Executive Orders."

The ACWG chairman has provided a draft copy of the Procedural Guidelines and requested each member agency to review and submit, in writing, to the chairman by July 21, 1982, any desired changes to these guidelines.

RECOMMENDATIONS: 1. It is recommended that a copy of this memorandum and attachment be forwarded to the LCD and the INTD for their review and assistance to the Technical Services Division (TSD).

FBI/DOJ

76 AUG 31 1982

PAGE TWO DE HQ 0160 ~~SECRET~~

HOUSTON ADVISED THE TECHNICAL SERVICES DIVISION {TSD} TELEPHONICALLY THAT [REDACTED] TELEPHONE IS A CORDLESS TELEPHONE. INFORMATION AVAILABLE TO TSD AT THIS TIME IS THAT MOST CORDLESS TELEPHONES OPERATE IN THE FREQUENCIES BETWEEN 1.6 TO 2.0 MEGAHERTZ AND 49.8 TO 49.9 MEGAHERTZ WHICH ARE FAR BELOW THE ONE GIGAHERTZ FREQUENCY MENTIONED IN REFERENCED TELETYPE.

ON INSTANT DATE TSD CONTACTED THE CRIMINAL INVESTIGATIVE DIVISION {CID} AND THE INTELLIGENCE DIVISION {INTD} CONCERNING THIS MATTER. CID IS OF THE OPINION THAT INFORMATION PROVIDED TO DATE IS NOT SUFFICIENT TO INDICATE AN INTERCEPTION OF COMMUNICATION VIOLATION HAS OCCURRED. INTD ADVISED TSD THAT THERE IS NO INDICATION AT THIS TIME THAT ANY FOREIGN OR HOSTILE INTELLIGENCE AGENCIES ARE INVOLVED. IF HOUSTON WISHES TO PURSUE THIS MATTER FURTHER, HOUSTON IS REQUESTED TO RE-INTERVIEW [REDACTED]

[REDACTED] AND OBTAIN THE FOLLOWING INFORMATION:

1. WHICH PARABOLIC DISC ANTENNA EMITS DIRECT LINE-OF-SIGHT ELECTROMAGNETIC RADIATION AND WHAT ARE THE POWER LEVELS

b6
b7C

b6
b7C

b6
b7C
b7E

PAGE THREE DE HQ 0160 ~~SECRET~~
MERELY POINTING IN THAT DIRECTION.

4. HOW DID HE DETERMINE THAT THE ANTENNA IS OPERATING IN THE FREQUENCY OF ONE GIGAHERTZ.

5. WHAT PART OF THE DIMENSION TELEPHONE SYSTEM IS OPERATING IN THE FREQUENCY OF ONE GIGAHERTZ THAT HE MENTIONS.

6. WHAT TESTS HAS HE CONDUCTED TO DETERMINE THAT THE FREQUENCY OF ONE GIGAHERTZ CAUSES THE TELEPHONE SYSTEM TO REACT ADVERSELY.

7. OBTAIN COMPLETE DETAILS AS TO THE STUDY, {IF ANY}, CONDUCTED BY [REDACTED] OR ANY OTHER PERSON AT [REDACTED] OFFICE.

b6
b7C

8. OBTAIN COMPLETE DETAILS OF THE EQUIPMENT USED IN HIS STUDY, INCLUDING ALL MEASUREMENTS CONDUCTED.

9. OBTAIN COMPLETE DETAILS ON ANY OTHER COMMENTS, OR FACTUAL STATEMENTS MADE BY [REDACTED]

b6
b7C

ALTHOUGH THE HARMFUL EFFECTS OF RADIATION IS NOT RELEVANT TO THE INTERCEPTION OF COMMUNICATIONS ALLEGATION, IT IS OF INTEREST TO KNOW HOW MANY PERSONS, IF ANY, ARE EXPERIENCING SEVERE HEADACHES AND NAUSEA IN [REDACTED] OFFICE.

b6
b7C

THE TELEPHONE COMPANY SHOULD BE CONTACTED AND OBTAIN

PAGE FOUR DE HQ 0160 ~~SECRET~~
 THE FOLLOWING INFORMATION:

1. MODEL NUMBER OF THE DIMENSION SYSTEM AND A LIST OF ALL FEATURES ASSOCIATED WITH [REDACTED] TELEPHONE SYSTEM.

b6
b7C

2. IF THE TELEPHONE COMPANY INSTALLED MR. LOVE'S TELEPHONE SYSTEM, OBTAIN ALL THE INFORMATION REGARDING IT.

3. DETERMINE WHAT PROBLEMS THE TELEPHONE COMPANY HAS EXPERIENCED WITH CORDLESS TELEPHONE SYSTEMS, IF ANY.

4. DETERMINE IF [REDACTED] CORDLESS TELEPHONE HAS AN FCC RULES, PART 15 TYPE ACCEPTED STAMP.

b6
b7C

5. IF IT DOES, WHAT EXACTLY DOES THE STAMP STATE?

6. OBTAIN NAME OF MANUFACTURER, AND MODEL NUMBER OF

[REDACTED] CORDLESS TELEPHONE.

b6
b7C

HOUSTON IS TO DETERMINE IF ANY DISCUSSIONS INVOLVING NATIONAL SECURITY MATTERS TAKE PLACE IN [REDACTED] OFFICE.

TSD WILL HOLD IN ABEYANCE ANY ACTION UNTIL A RESPONSE IS RECEIVED FROM HOUSTON.

~~CLASSIFIED~~ AND EXTENDED BY 8, REASON FOR EXTENSION, FCIM, 11, 1.2 4.2 {2 & 3}, DATE OF REVIEW FOR DECLASSIFICATION AUGUST 11, 2002.

BT]

NOTE: HOUSTON SUPERVISOR [REDACTED] WAS TELEPHONICALLY CONTACTED ON AUGUST 10, 1982 AND ADVISED THAT BASED ON THE INFORMATION PROVIDED TSD COULD NOT JUSTIFY CONDUCTING AN AUDIO COUNTERMEASURES SURVEY OF [REDACTED] OFFICE. HE WAS ADVISED MORE INFORMATION WOULD BE REQUIRED. INFORMATION IS REQUESTED OF HOUSTON IN THIS COMMUNICATION.

b6
b7C

CID AND INTD WERE CONTACTED BY SA [REDACTED] CID ADVISED THAT THERE IS NO INDICATION OF AN IOC VIOLATION. INTD ADVISED THERE WAS NO INDICATION OF A FOREIGN OR HOSTILE INTELLIGENCE AGENCY INVOLVED.

EQUIPMENT WERE RECEIVED FROM PERSONS OCCUPYING OFFICE SPACE IN AND ADJACENT TO [REDACTED] OFFICE ON THE 61ST FLOOR. [REDACTED]

BEGAN LOGGING COMPLAINTS AND CHECKING EQUIPMENT CONCERNING THIS INTERFERENCE. COINCIDENTALLY, AND IN MID JULY, 1982, HE BEGAN RECEIVING REPORTS OF INTERFERENCE ON THE TELEPHONE INSTRUMENTS USED BY [REDACTED] DESK AND

TELEPHONE INSTRUMENT ARE LOCATED IN THE SAME OFFICE SPACE AS [REDACTED] DESK AND TELEPHONE. [REDACTED] CLAIMED PERIODICALLY THAT THE LIGHTED BUTTONS ON HER MULTI-LINE CONSOLE WOULD FLICKER ON AND OFF AND CAUSE DISCONNECTS OF CALLS IN PROGRESS. [REDACTED]

ENLISTED THE AID OF [REDACTED]

[REDACTED] EXAMINED THE PROBLEM, BUT WERE UNABLE TO DETERMINE THE CAUSE OF THE PHENOMENON OR ELIMINATE IT. [REDACTED] THEN REQUESTED THE [REDACTED]

ENGAGE THE SERVICES OF [REDACTED] LABORATORY TECHNICIANS SINCE THE PROBLEM HAD OUTREACHED THE LOCAL [REDACTED] ABILITIES TO RESOLVE. [REDACTED] APPROVED THE REQUEST, AND HAS ALSO RETAINED THE [REDACTED]

[REDACTED] OF SAN ANTONIO, TEXAS, HEADED BY [REDACTED]

b6
b7C

b6
b7C
b7D

[] HAS CONDUCTED TESTS TO DETERMINE WHAT TYPE OF SIGNALS OR RADIATION IS PRESENT IN [] OFFICE. [] WILL REPORT THE RESULTS OF THEIR FINDINGS ON PROPER FCC FORMAT. AS OF THIS DATE, THESE REPORTS HAVE NOT BEEN RECEIVED BY []

b6
b7C
b7E

[] ALSO ADVISED THAT AS A RESULT OF COMPLAINTS OF ANOTHER TENANT ON [] FM INTERFERENCE, THE BUILDING MANAGER INSTRUCTED TRIDENT COMMUNICATIONS, 100 EAST NASA ROAD 1, SUITE 403, TELEPHONE NUMBER (713)-332-2822, []

[] TO CONDUCT AN FM RADIATION STUDY. THIS SURVEY WAS CONDUCTED ON JULY 27, 1982.

[] REPORT, RELYING ON THE U.S. STANDARD RECOMMENDED MAXIMUM ENERGY DENSITY FOR FREQUENCIES BETWEEN TEN MEGAHERTZ (MHZ) AND 100 GEGAHERTZ (GHZ) IS TEN MILLIWATTS (MW) PER CENTIMETER SQUARED FOR BOTH PARTIAL AND WHOLE BODY RADIATION, DETERMINED THAT OF THE EIGHT FM BROADCAST STATIONS BEING RECEIVED AT THE 61ST FLOOR, THE HIGHEST LEVEL RECEIVED WAS A MINUS 10 DBM AT 99.1 AND 104.1 MHZ. CONVERTING THE MEASURED SIGNAL LEVEL AT 104.1 MHZ TO POWER DENSITY, [] REPORTS THAT THE POWER DENSITY WOULD ONLY BE .00001 MW/CENTIMETER SQUARED.

b6
b7C

[] FURTHER INDICATES IN HIS REPORT THAT IF A PERSON WAS

EXPOSED TO THE RADIATION OF ALL EIGHT FM STATIONS FOR A 24 HOUR DAY, THE EXPOSURE WOULD ONLY BE .00192 MWH PER CENTIMETER SQUARED, OR APPROXIMATELY 100 TIMES LESS THAN THAT DETERMINED TO BE A HEALTH HAZARD AS NOTED IN THE ELECTRONIC ENGINEERS' HANDBOOK, SECOND EDITION.

[REDACTED] TESTS WERE LIMITED TO MOVING THE MULTI-LINE CONSOLE TELEPHONE INSTRUMENT LOCATED ON [REDACTED] DESK TO EITHER SIDE A FEW FEET. IMMEDIATELY THE PROBLEMS WOULD CEASE WHEN THE INSTRUMENT WAS NOT IN LINE WITH THE ANTENNAS LOCATED ON [REDACTED] ALSO, ADJACENT OFFICES HAVING IDENTICAL TELEPHONE INSTRUMENTS DID NOT, REPEAT, NOT, EXPERIENCE THE AFOREMENTIONED DIFFICULTIES.

[REDACTED] DID NOT CONDUCT ANY TESTS INSIDE [REDACTED] OFFICE. THEIR CONCLUSIONS WERE BASED UPON INPUT FROM [REDACTED] ENGINEERS, THE RESULTS OF TRIDENT COMMUNICATIONS FINDINGS, AND [REDACTED] PHYSICAL TESTS.

ON INSTANT DATE, [REDACTED] ADVISED THE TELEPHONE INSTRUMENTS IN [REDACTED] WERE INSTALLED BY THE MANUFACTURER, WESTERN ELECTRIC. THE MODEL NUMBER IS

b6
b7C
b7E

b6
b7C

b6
b7C

PAGE FIVE HO 139-517 ~~SECRET~~

2990, A 20 POSITION, TOUCH-TONE, CONSOLE. THE SYSTEM IS A MODEL 2000 ELECTRONIC DIMENSION SYSTEM WITH FEATURES INCLUDING, ATTENDANT CONFERENCE, AUTO CALL BACK, CALL FORWARDING (CF), CF BUSY, CF NO ANSWER, CALL HOLD, CALL PARK, CALL PICK-UP, CALL WAITING, CALL WAITING SIGNAL, PAGING, PAGING REPLY, THREE WAY CONVERSATION, TRANSFER, TRUNK ANSWER, TRUNK QUEUING, STATION MESSAGE DETAILED RECORDING, CUSTOM INTERCOM, AND SPEED CALLING.

[] STATED THAT THE PHONES ARE CABLE INSTALLED AND NO CORDLESS PHONES ARE UTILIZED IN [] OFFICE SPACE. [] WAS UNFAMILIAR WITH FCC RULES, TYPE 15 STAMP.

b6
b7C

IN VIEW OF THE ABOVE, IT IS APPARENT A PROBLEM DOES EXIST WITH TELEPHONE LINES LOCATED IN THE OFFICE OF [] HOUSTON AT THIS TIME DOES NOT HAVE THE CAPABILITY TO CONDUCT APPROPRIATE TECHNICAL TESTING IN THE OFFICE OF [] TO MAKE AN ADEQUATE DETERMINATION AS TO THE PRESENCE OR SOURCE OF THE PROBLEM REGARDING AN IOC VIOLATION. [] INDICATED ON AUGUST 6, 1982, THAT HE DOES NOT BELIEVE HE HAS DISCUSSED ANY MATTERS THAT PERTAIN TO NATIONAL SECURITY AND COULD ONLY STATE HE IS IN FREQUENT CONTACT WITH WHITE HOUSE OFFICIALS, INCLUDING VICE PRESIDENT GEORGE BUSH AND JAMES BAKER, WHITE HOUSE STAFF, BOTH

b6
b7C

PAGE SIX HO 139-517 ~~SECRET~~

FELLOW HOUSTONIANS. HE STATED HE IS A MEMBER OF THE PRESIDENT'S PRIVATE SECTOR SURVEY CUTTING COSTS IN GOVERNMENT, AS STATED IN REFERENCED HOUSTON TELETYPE, AND AS SUCH, IS IN CONTACT WITH OFFICIALS OF ADMINISTRATION AND WHITE HOUSE STAFF TO DISCUSS NATIONAL ISSUES AND PERTINENT MATTERS. ALSO, HE STATED THAT FORMER PRESIDENT GERALD FORD HAS UTILIZED HIS TELEPHONE AND [REDACTED] HAS NO IDEA WHAT FORMER PRESIDENT FORD DISCUSSED ON HIS TELEPHONE OR WITH WHOM. ADDITIONALLY, INDICATIONS ARE THAT A ^{Board meeting} ~~BOARD MEETING~~ IS SCHEDULED WITHIN SIXTY DAYS FROM *the last* BOARD MEETING OF JULY 20, 1982, AND BOTH FORMER FIRST LADY MRS. LYNDON B. JOHNSON AND FORMER PRESIDENT GERALD FORD, AS MEMBERS OF THE BOARD OF DIRECTORS, TEXAS COMMERCE BANK, ARE EXPECTED TO ATTEND, AS THEY HAVE IN THE PAST. HOUSTON IS NOT IN A POSITION AT THIS TIME TO DISCOUNT THE STATEMENT OF [REDACTED] CONCERNING THE HARMFUL EFFECTS OF RADIATION, AS STATED IN REFERENCED HOUSTON TELETYPE, OTHER THAN TO REFER TO TESTING CONDUCTED BY TRIDENT COMMUNICATIONS REFERRED TO ABOVE AND CONDUCTED ON THE 69TH FLOOR [REDACTED] ON JULY 27, 1982. ADDITIONALLY, [REDACTED]

DETERMINE THAT THEY CONFORMED TO SPECIFICATIONS. ALL CHECKS CONDUCTED ON THE TELEPHONE INSTRUMENTS AND TELEPHONE LINES REVEALED NO ROOM AUDIO OR ANY EVIDENCE OF AN UNAUTHORIZED CLANDESTINE LISTENING DEVICE. THE EXAMINATIONS REVEALED, HOWEVER, COMMERCIAL RADIO BROADCAST SIGNALS OF UNUSUALLY HIGH INTENSITY PRESENT ON THE TELEPHONE LINES AND INSTRUMENTS. BROADCAST PROGRAMS WERE DETECTED WITH EQUIPMENT NORMALLY NOT SUSCEPTIBLE TO SUCH RADIO FREQUENCY INTERFERENCE. ~~TOP~~ (U)

ALTHOUGH TECHNICAL SERVICES DIVISION PERSONNEL DID NOT OBSERVE ANY SITUATION OF CALLS TO OR FROM [REDACTED] TELEPHONE BEING INTERRUPTED IN MID-CONVERSATION, THE PHENOMENON OF FLASHING LAMPS AT HIS SECRETARY'S TELEPHONE WAS SEEN ON SEVERAL OCCASIONS. THE FLASHING OF THE LAMPS EXISTED WHEN THE VENETIAN BLINDS WERE ADJUSTED AND THE HANDSET WAS REMOVED FROM THE TELEPHONE. (U)

b6
b7C

A THOROUGH EXAMINATION WAS CONDUCTED OF THE RADIO ELECTROMAGNETIC RADIATION PRESENT IN [REDACTED] OFFICE. THIS EXAMINATION REVEALED NO EVIDENCE THAT [REDACTED] OFFICE IS THE SUBJECT OF AN INTERCEPTION OF COMMUNICATIONS ATTACK. ~~TOP~~ (U)

b6
b7C

SYSTEMATIC SEARCHES WERE PERFORMED OF THE RADIO FREQUENCY

3

PAGE THREE DE HQ 0099 ~~C O N F I D E N T I A L~~

SPECTRUM OF CONCERN. ALL SIGNALS ENCOUNTERED WERE EXAMINED TO ASCERTAIN THEIR IDENTITY AND TO DETERMINE SPECIFICALLY IF THEY POSSESSED ANY MODULATION CHARACTERISTICS RELATED TO ROOM AUDIO. ~~LES~~ (U)

AS HOUSTON IS AWARE, [REDACTED] OFFICE IS CLOSE TO AND FACES WITHOUT ANY OBSTRUCTION THE COMMERCIAL BROADCAST ANTENNAS LOCATED ON TOP OF [REDACTED] DUE TO THE LOCATION OF THESE ANTENNAS WITH RESPECT TO [REDACTED] OFFICE, VERY STRONG BROADCAST SIGNALS WERE PRESENT IN HIS OFFICE. {U}

b6
b7C
b7E

THE STRENGTH OF THE FM BROADCAST SIGNALS IN [REDACTED] OFFICE WAS ATTENUATED BY LOWERING THE METAL VENETIAN BLINDS. {U}

b6
b7C

A NON-DESTRUCTIVE PHYSICAL SEARCH WAS CONDUCTED WHICH INCLUDED THE AID OF AN ELECTRONIC DEVICE FOR THE DETECTION OF ELECTRONIC COMPONENTS. ALL FIXTURES, PAINTINGS AND FURNITURE IN HIS OFFICE WERE CHECKED FOR UNAUTHORIZED LISTENING DEVICES. ~~LES~~ (U)

DURING THE COURSE OF THE ACM SURVEY NO EVIDENCE OF ANY UNAUTHORIZED LISTENING DEVICES WAS FOUND. {U}

THE PERFORMANCE OF THE ACM SURVEY WAS FOR THE SOLE PURPOSE OF DETERMINING IF ANY ROOM AUDIO WAS LEAVING [REDACTED] OFFICE IN ANY FORM. THE SURVEY DID NOT ADDRESS THE POSSIBLE

b6
b7C

PAGE FOUR DE HQ 0099 ~~C O N F I D E N T I A L~~

BIOLOGICAL EFFECTS OF THE STRONG BROADCAST SIGNAL FOUND IN THE AREA CHECKED NOR DID IT ATTEMPT TO DETERMINE THE PRECISE ELECTRICAL COMPONENTS WHICH WERE CAUSING PROBLEMS IN THE TELEPHONE SYSTEM. ~~FCI~~ (U)

ALSO, FOR THE INFORMATION OF HOUSTON, ON AUGUST 16, 1982, [REDACTED] INFORMED TECHNICAL SERVICES DIVISION PERSONNEL THAT [REDACTED] PERSONNEL HAD ATTEMPTED TO INSTALL AN ELECTRONIC TELEPHONE SYSTEM [REDACTED] [REDACTED] BUT WERE UNABLE TO INSTALL A WORKING SYSTEM DUE TO THE STRONG FM BROADCAST SIGNALS PRESENT IN THAT AREA. {U}

b6
b7C
b7E

TECHNICAL SERVICES DIVISION PERSONNEL ARE APPRECIATIVE OF THE ASSISTANCE PROVIDED BY THE HOUSTON FBI OFFICE. PLEASE ALSO CONVEY TO [REDACTED] TEXAS COMMERCE BANKSHARES, INC., OUR APPRECIATION FOR THEIR ASSISTANCE. {U}

COUNTERMEASURES MATTERS

Reference telephone call, Alexandria Field Office, SA [redacted] August 27, 1982.

b6
b7C

On August 27 and 31, 1982, personnel from Technical Services Division conducted a low frequency carrier current check of Electro Space, Inc., room 501, Crystal City Towers Building. This survey was based upon an in-place power line Monitor, Model "Linelock CCR-2," having indicated the presence of a signal on the power line. Utilizing a low frequency receiver, the signal was at 120, 240 and 360 KHZ. Isolating the power line at the power panel, it was demonstrated to [redacted] Electro Space, Inc., that the signal was not of a clandestine nature but was fed into the 5th floor on the Phase "B" power feed. No further effort was made to locate the source of the signal.

b6
b7C

If Electro Space, Inc., is to use their power line monitor effectively, they must do one of two things. One is to locate the source of the signal and repair the faulty equipment or secondly, place a power line filter at the circuit breaker panel.

[Handwritten scribble]

Inquiries concerning this communication should be directed to Director, FBI, Attention: Technical Services Division, Engineering Section, SA [redacted]

COUNTERMEASURES MATTERS

Reference your teletype dated February 8, 1982, requesting assistance by the Technical Services Division for the purpose of conducting audio countermeasures (ACM) surveys of your office and several other government offices.

Personnel from the Technical Services Division (TSD) conducted audio countermeasures surveys of the Honolulu Field Office (HFO) on July 13, 1982; offices of [redacted]

b6
b7C
b7E

[redacted] on July 14, 1982; the offices of [redacted] on July 15, 1982; [redacted] Honolulu, on July 16, 1982; the [redacted] on July 21, 1982.

During the ACM survey of the Honolulu Field Office it was noted that the Federal Building alarm system which at one time had speakers in the field office space were disconnected and all wiring associated with the alarm system was rerouted to the hallway.

SW

This left the Field Office space without alarm speakers and is dependent on the alarm speaker located in the hallway outside the office space for emergency information.

In the event that your office is required to have alarm speakers within your space connected to the Federal Building alarm system, it is recommended that non-feedback isolation amplifiers be installed with every alarm speaker installed within your office space.

Letter to SAC, Honolulu from Director, FBI (80-805)
RE: COUNTERMEASURES MATTERS

In addition to the ACM survey conducted at the Guam Resident Agency (RA) a physical check of the RA revealed that the door shunt lock was not connected to the Resident Agency Burglar Alarm System (RABAS). It was also noted that the RABAS telephone line to the local police department was not connected. TSD personnel were unable to determine if the RABAS system was programmed to ring the RA's agent personnel telephone numbers when alarmed. The RABAS dialer-programmer was not available for reprogramming the proper telephone numbers to the alarm system.

The surveys included a radio frequency spectrum check, a check of all telephones, telephone lines and a nondestructive physical search. No evidence of clandestine listening devices or tampering with the telephones or telephone lines was found at the time of the survey. Following each countermeasures survey, the appropriate personnel in each office were orally advised of the results.

Any inquiries concerning this letter should be directed to Director FBI. Attention: TSD, Engineering Section, SA

NOV 5 1982

244

~~SECRET~~

[redacted] contacts with the White House staff and notable politicians, including friends, Vice President George Bush and James Baker, indicated the possibility that he could be the target of an electronic intrusion. Secondly, victim's consultation with

b6
b7C
b7E

[redacted] gave some indication that harmful biological effects such as headaches and nausea can be caused by strong electro magnetic radiation of the type generated by a device capable of electronic intrusion.

[redacted] identified strong FM (Frequency Modulated) broadcasts causing interference on the telephone and recording and dictating equipment in the surrounding offices as well as victim's offices. [redacted] suspected that the strong FM signals were being generated by the numerous FM antenna located [redacted]. The plaza is located directly across from and in line of sight of victim's offices. [redacted]

b6
b7C
b7E

[redacted] engineers were unable to determine the cause of the difficulties on the telephone system, and subsequently, the Technical Services Division (TSD) provided a team of Audio Countermeasures (AC) experts to conduct an AC survey on August 16, 1982. The survey consisted of a search of the radio frequency spectrum, a check of the telephones in victim's offices including his secretary's office, and a non-destructive physical search. The survey revealed commercial radio broadcasts signals of unusually high intensity present on telephone lines and instruments. Examination of the electro magnetic radiation present in victim's offices revealed no evidence that [redacted] is the target of an Interception of Communications (IOC) attack. The physical search was negative for unauthorized listening devices. The AC survey did not address the possible harmful biological effects of the electro magnetic radiation present.

On September 1, 1982, U.S. Secret Service Special Agent [redacted] was apprised of the possible harmful effects from strong electro magnetic radiation in [redacted] offices and of the FBI investigation for an IOC violation which proved negative. The information was furnished [redacted] for appropriate action by the U.S. Secret Service in view of [redacted] association with Federal

b6
b7C
b7E~~SECRET~~

HO 139-517

~~SECRET~~

protectees including Vice President George Bush, former President Gerald Ford, and Mrs. Lyndon B. Johnson.

Since the TSD, AC survey team has determined no IOC violation exists, the Houston Division is considering this case closed.

SYNOPSIS AND DETAILS: The above-referenced 7/12/82-80-805 memorandum requested information from Legal Counsel Division (LCD) regarding the reporting requirements concerning unauthorized electronic surveillance devices discovered by members of the Intelligence Community (IC).

The use of unauthorized electronic surveillance devices is likely to be violative of three statutes: (1) the Communications Act of 1934 (Title 47, United States Code (USC), Section 605), (2) Title III of the Omnibus Crime Control and Safe Streets Act of 1968 (Title 18, USC, Sections 2510 -2513), and (3) the Foreign Intelligence Surveillance Act of 1978 (Title 50, USC, Section 1809). The FBI has primary investigative jurisdiction over these statutes. U.S. Attorneys' Manual (USAM), Volume 7, Title 9, Sections 9-1.218, 9-1.247 (1981). Most reported instances of unauthorized electronic surveillance would fall within the investigative purview of the FBI under the character of "Interception of Communications" (Manual of Investigative Operations and Guidelines (MIOG), Section 139).

Memorandum Legal Counsel to Assistant Director,
Technical Services Division
RE: GUIDELINES FOR CONDUCTING TECHNICAL
SURVEILLANCE COUNTERMEASURES SURVEYS

Executive Order (EO) 12333 discusses the duties of the members of the IC to report violations of Federal criminal laws. Section 1.7(a) of EO 12333 creates a general duty upon members of the IC to report violations of Federal criminal laws. This general duty extends to violations by "employees" and "any other person." The reporting is to be effected as provided in procedures agreed upon by the Attorney General and the head of the department or agency concerned. The reporting is also to be done in a manner consistent with the protection of intelligence sources and methods, as outlined in the procedures agreed to by the Attorney General.

The actual reporting of the crimes should be done in accordance with the procedures alluded to above. Normally this process will involve an analysis of the facts or circumstances by the General Counsel's office of the IC agency. Since classified information may often be involved, it is important that the General Counsel's office review the incidents to insure reporting and dissemination is appropriately limited and is also in the correct format.

LCD has discussed this matter with Special Staff, Intelligence Division (INTD). INTD indicated they will provide TSD the most recent agreements of the IC community with the Attorney General with respect to the reporting of crimes.

Section 1.7(b) of EO 12333 addresses cases involving serious or continuing breaches of security. An IC department or agency head is obliged under Section 1.7(b) to recommend to the Attorney General that any case involving a serious or continuing breach of security be referred to the FBI for further investigation.

The obligations embodied in EO 12333 exist independent of any procedural provisions in Procedural Guide No. 2. Obviously, the guidelines cannot diminish or override the duties the President has set out in EO 12333. Since Procedural Guide No. 2 speaks in terms of "technical surveillance penetrations" and EO 12333 is

Memorandum Legal Counsel to Assistant Director,
Technical Services Division

RE: GUIDELINES FOR CONDUCTING TECHNICAL
SURVEILLANCE COUNTERMEASURES SURVEYS

drafted in terms of Federal criminal violations, LCD does not believe Procedural Guide No. 2 was necessarily intended to be inconsistent with EO 12333. To avoid any possible confusion, TSD may wish to consider proposing a specific reference to EO 12333 in the guidelines. This would insure that the guidelines are read in a light consistent with the duties of IC agencies to report crimes or serious breaches of security.

To conclude, all IC agencies are under a duty to comply with EO 12333. Reporting of crimes pursuant to Section 1.7(a) of EO 12333 should be conducted in accordance with procedures agreed upon by the Attorney General. Any procedural guidelines prepared by the Technical Surveillance Countermeasures Subcommittee should be drafted and applied in a fashion congruous with these basic responsibilities of IC agencies.

JUDGE:

COUNTERMEASURES

The issue of improving security on Capitol Hill has several aspects. As you know, [redacted] testified earlier this year before the Senate Select Committee on Intelligence about contacts by hostile intelligence officers with Capitol Hill personnel and the need to establish a reporting mechanism. Both the House and Senate Intelligence Committees are concerned not only with the contacts, but with how classified material is handled and stored, and whether the Hill is vulnerable to technical penetration. Senator Goldwater has sent a letter to Majority Leader Baker suggesting some steps for improving security.

b6
b7C

At your recent breakfast with Chairman Boland, [redacted] raised concern about technical vulnerabilities. The Hill through the Sergeant's-at-arms offices have tasked the Capitol Hill Police with having some technical security surveys conducted.

b6
b7C

The DCI's Security Committee has been tasked to conduct the surveys, but [redacted] is very concerned about this being perceived as a CIA domestic or internal security function. He recognizes that the DCI's Security Committee is an Intelligence Community group, but the distinction between the CIA and the DCI's community responsibilities is not well understood publicly and he has spoken to me about his concerns and last week during my absence raised his concerns again to [redacted]. He would like very much for the FBI to take the lead role.

b6
b7C

8

The FBI can do this, but we will need the assistance of other elements of the Intelligence Community to provide technical countermeasures training to the Capitol Hill Police and to conduct technical surveys of so large a facility.

80-805-271X

[redacted] sits as a member of the DCI's Security Committee. With your concurrence, I will make the following recommendations to [redacted]

b6
b7C

- (1) That the FBI will take the lead agency role.
- (2) That this can be accomplished by establishing an ad-hoc group of the Security Committee under FBI chairmanship.

MAR 15 1983

- 1 - [redacted]
- 1 - Mr. O'Malley
- 1 - [redacted]
- 1 - Mr. Bayse

b6
b7C

file 5
80-805

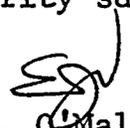

105

71 MAR 29 1983

(3) That the Interagency Training Center provide the technical training to Capitol Hill Police.

(4) That [redacted] serve as the point of contact with Capitol Hill on this matter and with his group determine which elements of the community should contribute to each aspect of the security surveys.

[Handwritten initials]

Honorable John N. McMahon
Deputy Director of Central Intelligence
Central Intelligence Agency
Washington, D. C.

DELIVERED BY LIAISON
DATE 11/15/82 *[Handwritten signature]*

Dear John: COUNTERMEASURES

I have been asked by Bob Leidenheimer to document the FBI's agreement regarding Capitol Hill security. The following is the FBI agreement which has been approved by Judge Webster:

- (1) The FBI will take the lead agency role.
- (2) This can be accomplished by establishing an Ad Hoc Group of the DCI's Security Committee under FBI chairmanship.
- (3) The Interagency Training Center will provide the technical training to the Capitol Police. *[Handwritten circle around (3)]*
- (4) The FBI's Security Officer as Chairman of the Ad Hoc Group will serve as the point of contact with Capitol Hill on this matter and with his Group will determine which elements of the Community should contribute to each aspect of the security service.

The FBI views this program as an Intelligence Community effort, though we are quite willing to take the lead in a coordinating posture, in terms of the chairmanship of the Ad Hoc Group which we see as the real focal point for this Community effort.

Sincerely,

80-805-272X1

COUNTERMEASURES MATTERS

ReBulet to San Juan, 4/2/82, and SJtels to HO. 5/6/82
and 6/10/82, and Butelcal from [redacted] to ASAC [redacted]
10/19/82.

b6
b7C

The entire contents of this communication are classified
~~CONFIDENTIAL~~ except where otherwise noted.

For information of FBIHQ, Engineering Section, the
prior SAC and ASAC departed San Juan on 7/23/82 and 10/15/82,
respectively. The present SAC and ASAC arrived in San Juan
on 9/7/82 and 10/12/82. The former Technical Coordinator (TC)
was transferred to Alexandria and departed on 6/20/82. (U)

Handwritten signature in a circle

Shortly after his arrival, the present SAC instituted
a survey to evaluate all communication needs of the San Juan
Office, which included the five (5) areas of concern as set
forth in Bulet of 4/2/82.

SJ 66-20

For information, SA [redacted] since the departure of his predecessor, is now the TC and was so designated in July, 1982. He is assisted by SA [redacted] SA [redacted] does not have extensive countermeasures matters (CM) training. SA [redacted] attended basic technical training in-service for three weeks in April, 1982 followed by one week of CM training at FBIHQ.

b6
b7c

With regard to FBIHQ's recommendations in the 4/2/82 Bulet, the following is submitted:

1. The obtaining of all line appearance information for all telephone numbers subscribed to by the San Juan Office, including our three RAs will be completed by 1/1/83, for HQ city and our three RAs. This information will be recorded in newly established San Juan CM file for this purpose and updated as appropriate. (U)
2. The conducting of a physical tracing of all wires from all telephone instruments in the San Juan Office and all RAs to the last appearance before the telephone company central office will be completed by 2/11/83, in the following order:
 - A. San Juan HQ city by 1/1/83
 - B. Roosevelt Roads RA by 1/14/83
 - C. Mayaguez RA by 1/28/83
 - D. St. Thomas RA by 2/11/83

The results of this will be recorded in the new San Juan CM file and any abnormalities detected will be corrected. (U)

3. The cost estimate for dedicated telephone service for the San Juan Office as proposed in San Juan request to the Bureau on 3/6/75 will be obtained by 12/1/82 for submission to FBIHQ. (U)

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

SJ 66-20

4. The alarm equipment for the Mayaguez RA has arrived at San Juan and was installed on 11/18/82.
5. The St. Thomas RA moved into new space on 11/16/82 (down the hall from our prior space). The alarm equipment for this new space will be installed in December, 1982. This equipment will include appropriate battery back-up due to the frequent power outages there.

Henceforth, San Juan will conduct appropriate CM checks at HQ city on a quarterly basis and annually for the RAs. (U)

SAC, San Juan very much appreciates the patience that the Engineering Section (ES) has shown regarding your earlier recommendations. San Juan will insure our CM and other technical obligations are met in the future and the ES advised on a timely basis. (U)

COUNTERMEASURES EQUIPMENT
SCANLOCK RECEIVER
DETROIT DIVISION

Re Detroit telcal to Bureau, December 8, 1982.

Enclosed for the Bureau under separate cover is a Scanlock Mark V Receiver, serial number 78-125.

The Bureau is requested to repair the above described receiver. It malfunctions in that when routinely tested by a Technically Trained Agent in the Detroit Division, it failed to detect an FM transmitter operating in the same room.

Additionally, the Bureau is requested to replace the antenna wand for the Scanlock receiver.

Any questions or communications regarding this matter should be directed to SA Detroit Division.

FROM: SAC, ATLANTA (66-1604)

TELEPHONE FACILITIES
ATLANTA DIVISION

Center in cases

Due to budgetary restraints and shortage of personnel, Atlanta has limited personnel assigned to odd hour shifts. In fact, only one support employee is assigned to the midnight to 8:00 a.m. shift.

When the support employee is in the vault area operating the teletype equipment, this employee is unable to hear the office telephone ringing. It should be noted that the Atlanta switchboard is located in the center of the office space, while the teletype room is located at the end of a long corridor. Once the telephone is heard this employee still must travel the entire length of the corridor in order to answer the telephone.

To solve this problem, and also to allow for a safe haven for employees on odd hour shifts in the event of a possible hostage situation, it is requested that a telephone be installed in the Atlanta teletype room, hooked to the switchboard, to enable these employees to hear and respond to telephone calls while operating the teletype equipment.

It has been suggested that a telephone instrument with an optical isolator might fill our needs.

Bureau requested to give favorable consideration to the installation of such a telephone in Atlanta's teletype room.

IN-SERVICE REQUESTS
AUDIO COUNTERMEASURES

Reference your letter to the Bureau dated December 7, 1982.

The Technical Services Division (TSD), Engineering Section, has scheduled one In-Service on Audio Countermeasures (ACM) for Fiscal Year 1983, which will run from February 22 through March 4, 1983. Eight Technically Trained Agents have already been selected to attend this In-Service.

TSD does not anticipate having more ACM In-Services during FY 83. However, your office will be advised in the event additional ACM In-Services are scheduled.

Any inquiries concerning ACM training should be directed to FBIHQ Attention: TSD, Engineering Section, SA [redacted] or call extension 2700.

MICHAEL S. DUKAKIS
Governor

CHARLES V. BARRY
Secretary

January 13, 1983

Mr. James Greenleaf
Special Agent-in-Charge
Federal Bureau of Investigation
John F. Kennedy Federal Building
Government Center
Boston, MA

Dear Mr. Greenleaf:

I first want to welcome you to your new assignment and tell you that I am looking forward to working closely with you in any matters of mutual concern.

I have been on board for about a week, but intend to get together with you as soon as possible.

As you are aware, with the change in Administration, the incoming Governor and his staff were confronted with shredded and probable missing official documents. Additionally, we are presently involved in some very sensitive investigations. In view of this and other concerns, I am requesting your assistance in having three very critical areas, including the Governor's Office, checked to insure the integrity of the spaces.

Thank you for your cooperation in this matter and best wishes in your tenure as Special Agent in Charge of the Boston Office. I am looking forward to a close working relationship during your tenure.

Sincerely,

Charles V. Barry
Secretary of Public Safety

Dear Mr. Kundahl:

Countermeasures

Reference is made to your letter dated December 10, 1982,
 requesting a technical survey of [redacted]

b7E

On December 21, 1982, personnel from the Technical
 Services Division conducted an audio countermeasures survey of
 [redacted] The survey
 consisted of a radio frequency spectrum check, a physical and an
 electronic check of the telephone instrument, a non-destructive
 physical check and a physical tracing of the telephone line from
 [redacted] to the telephone wire room on the 6th floor
 and to the final appearance in the building's basement.

b6
b7C
b7E

No evidence of tampering with the telephone instrument
 or of clandestine listening devices was found at the time of the
 survey.

As you are aware, Technical Services Division personnel
 conducted an audio countermeasures survey of [redacted]
 [redacted] on September 16, 1982.

b6

Memorandum

To : Director, FBI (80-805)
(Attn: Engineering Section, TSD)

Date 2/3/83

From : SAC, New Orleans (66-1068)

Subject : AUDIO COUNTERMEASURES
TRAINING IN-SERVICE

ReButel 12/10/82 and New Orleans telcall 2/1/83.

Referenced teletype indicated SA [redacted] had been selected to attend captioned in-service. New Orleans' telephone call to SA [redacted] from ASAC Thomas F. Jones related that because of two upcoming trial commitments requiring SA [redacted] participation and because of a second 30-day Title III extension including one misur installed by SA [redacted] it is imperative he remain in the division for the next 30 days. As discussed over the phone, UACB, SA [redacted] will not attend this in-service.

NR 66-8831 SUB H

selectively checked for voltage, current, and the unimpeded passage of room audio. All were found to be operating in a normal manner.

Spot Checks of on and off hook voltages and current indicated normal ranges. Physical searches of the instruments and their lines did not disclose any evidence of tampering, nor did there appear to be any damage to the switch hook, or additions of any suspect devices. There were no split pairs or connections to any wires such as (common) lamp grounds.

Searches of the plant layout telephone panels did not disclose the presence of any devices, abnormal doublestraps, or commercial power switching devices such as the BSR System.

Voltage readings were conducted on all commercial power outlets, and were found normal. Lamps, radios, and furniture were examined and found not tampered with or damaged. Nothing was found indicating hardwire, battery source, or commercial power (piggyback) switching or rectified power connections, such as a BSR System.

Physical security at the main entrance levels for all sweep locations is above average, yet, from a countermeasures viewpoint the floor areas which were swept were below average. This is because penetration once achieved at the main level allows undetected movement to any floor level, above or below. This fact is based, in part, on observations made during escorted entry and on unescorted movement on the floors where the sweeps were conducted as well as, random physical checks of halls, all rest rooms, and wire closets, within the immediate sweep area.

The highest physical security appeared to be at the [redacted] with the least being at the [redacted] and

b7E

NR 66-8831 SUB H

[REDACTED]

b7E

Unfortunately, none of the actual floor space of concern is under (manned) twenty-four (24) hour protection, and as such must be termed potential countermeasures hazards at all times.

Ceiling space and walls are of standard structural composition typically found in commercial and government buildings in the northeast region and of the same era. In short, unobstructed air space exists above the room walls (interior and exterior) in the ceiling area, and there are unbaffled air ducts, electrical conduits, and light fixture boxes, all of which allow the passage of intelligible room audio.

Few if any spare commercial power, fire alarm, telephone, or thermostat lines were located in either the ceilings or floor conduits. Floor duct covers and rugs did not show signs of tampering nor were any abnormal wires located. Some ceiling speakers, such as in the [REDACTED] [REDACTED] were not connected to any device.

In closing, though nothing was found to indicate a past or present countermeasures penetration, those individuals concerned with such potential problems were advised of the hazards existing in their situations and how possibly they might thwart such penetrations. They were further advised that once a sweep of this nature is conducted that no guarantee exists that any of areas is absolutely safe from the various countermeasures hazards which are known to exist. Finally, it was emphasized that extreme caution be exercised in all these areas whenever matters of a sensitive nature are to be discussed. This also implied limiting sensitive conversations to secured areas, not automobiles, cafeterias, restaurants and so on.

To : Mr. Bayse *WAB/200*

Date 3/15/83

From : R. W. Witzel

Subject : COUNTERMEASURES SURVEY OF THE FUTABA TRANSMITTER AND ASSOCIATED RECEIVER SERVOS

PURPOSE: To advise of the results of a countermeasures survey performed on the Futaba transmitter/receiver and associated servos for the purpose of exploiting the possible vulnerabilities inherent in the Futaba Hobby System.

DETAILS: The Futaba radio control (RC) transmitter/receiver servo system was recently the subject of considerable interest in connection with the bomb threat to the Washington Monument on December 8, 1982. A question has been raised as to the possibility of detecting the presence of an active Futaba receiver servo mechanism which would have been used to initiate a bomb had the threat in fact been real. This is to be distinguished from the Futaba RC transmitter about which we have considerable information. Recently, [redacted] from the Electronic Analysis Unit, Engineering Section, conducted an evaluation of the Futaba receiver servos.

Using a log-periodic antenna and a spectrum analyzer, it was observed that a weak RF signature was detected whenever power was applied to the receiver servos. The frequencies from the receiver servos were observed at 214 MHz and 250 MHz, however, they were so weak that detection beyond a distance of seven (7) to ten (10) feet was not possible. Activation of the transmitter (pushing the joy-stick) did not alter the characteristics or intensity of the 214 MHz and 250 MHz signals. In a heavy RF environment it is entirely possible that interference would prevent these signals from being detected.

Also during the test, it was noted that the Futaba transmitter fundamental frequency of 72 MHz was very rich in harmonics. These harmonics are indicated on the attached list.

RECOMMENDATION: For information only.

Director, FBI (80-805)

SAC, Atlanta (66-1604)

TELEPHONE FACILITIES
ATLANTA DIVISION

Continued on next page

Reference Atlanta airtel dated 1/4/83.

For the information of Atlanta, certain protective measures must be employed if a telephone instrument is to be introduced into a teletype room. Attention must be paid to appropriate cable/wire control, ringer selection and telephone isolation through either manual (plug and jack) or automatic disconnects.

The Engineering Section, TSD is presently constructing telephone isolation hardware suitable to meet Atlanta's requirements. This equipment and installation instructions which will be provided to Atlanta will provide for appropriate telephone security as well as provide certain physical security for the telephone line.

From: William A. Bayse
Assistant Director FBI
Technical Services Division

Subject: AUDIO COUNTERMEASURES MATTER

Reference is made to your letter dated February 23, 1983, requesting a microphone and telephone security check.

On February 28, 1983, personnel from the Technical Services Division conducted an audio countermeasures survey of

[Redacted]

b6
b7C
b7E

All of the telephones within [Redacted] were examined physically and electronically for any evidence of an eavesdropping device or a tap on the telephone lines. In addition to this, a thorough physical search was conducted in both offices. A contemporaneous monitoring of the radio frequency spectrum was conducted for three hours from the [Redacted]. A radio frequency spectrum check was also conducted in both [Redacted].

b6
b7C
b7E

No evidence of eavesdropping or tampering with the telephones or telephone lines was noted during the survey.

[Redacted] was advised of the outcome at the conclusion of the security survey.

b6
b7C

NOTE: Above ACM was conducted by ETs [Redacted] and SSAs [Redacted]

 ROOM 1B053, TL 253

FROM: SAC, ALBUQUERQUE (66F-44)

SUBJECT: TECHNICAL MATTERS
 ALBUQUERQUE DIVISION

Countermeasures

The Albuquerque Division has been selected to host a Regional FCI Conference to be held 5/11-12/83. Arrangements are being made to obtain rooms for the conference, both for sleeping and for the conference to be held at the Marriott Hotel, 2101 Louisiana Boulevard, NE, Albuquerque, NM. An assessment of the room to be held for conference purposes reveals that the equipment which is in possession of Albuquerque, namely the Scanlock, is not adequate for the type configuration of this room. Because of the limited range of the Scanlock, it will not be possible to conduct a countermeasures survey of this room adequately as it relates to searching for radio frequency devices. Hence, Bureau assistance is required and it is requested that equipment and possibly Bureau personnel be authorized to travel to Albuquerque to conduct the countermeasures survey prior to the conference meetings on both days, 5/11/83 and 5/12/83. If Bureau personnel are not available, it is requested the equipment be sent to Albuquerque for this purpose. It is felt that the survey of the telephones is not as important as the RF sweep in this instance; however, noting the extremely sensitive material to be discussed, it is felt that surveys should be conducted both mornings.

TECHNICAL EQUIPMENT
AUDIO COUNTERMEASURES
SAN ANTONIO DIVISION

b6
b7C

This communication is ~~classified Secret~~ in its entirety.

TSD is requested to furnish San Antonio, on a permanent basis, the following equipment to be utilized in audio countermeasures surveys:

- a. One wide band audio receiver capable of multi-carrier modulation;
- b. One scan lock receiver;
- ✓ c. One each spectrum analyzer and oscilloscope for carrier analyzation;
- d. One telephone analyzer capable of single line/multi-line use;
- e. One Triplet 3400 digital VOM modified for audio analysis.

SA 66-269 SUB 1

~~SECRET~~

In view of increasing FCI investigation within the San Antonio Division and the increasing potential for FCI as well as criminal compromise, sufficient audio countermeasure equipment is required.

San Antonio Technical Coordinator SA has received six weeks countermeasure training through interagency school, plus additional Bureau countermeasure training, and is familiar and capable of operating the requested equipment.

b6
b7c

Provided some of the above equipment is not currently available, TSD is requested to provide San Antonio that equipment at the earliest possible convenience.

COUNTERMEASURES

Being returned to the Bureau under separate cover
 are the following items:

- 1 Micro-tel PR 700A, SN 243
- 1 Scanlock MKV, SN 78/176
- 1 - Telephone analyzer, SN 5199
- 1 - Non-linear Junction Det., SN 483
- 1 - Line Extender, SN 5199

It should be noted that the Micro-tel PR700A is not in
 working order. While being used it suddenly ceased working and
 it is suspected that because the fan was not working the unit
 overheated. This unit should be repaired before being sent out
 to another division.

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS

Reference your airtel dated March 14, 1983. (U)

This is in response to your request for Bureau technical assistance to perform a technical surveillance countermeasures (TSCM) survey during a Regional FCI Conference on May 11-12, 1983, in your division. (S) (U)

Due to conflicts, TSCM personnel, Technical Services Division (TSD), will be unable to assist your division in conducting the TSCM survey during the above-mentioned dates. However, TSD will ensure that you receive technical assistance from an adjacent division. TSCM equipment will be shipped to your office during the first week of May. (S) (U)

Bureau SA [redacted] will be coordinating with SA [redacted] of your office regarding the equipment and technical assistance. (U)

b6
b7C

Inquiries concerning this communication should be directed to TSD, Engineering Section, SA [redacted] or call Extension 2700. (U)

COUNTER MEASURES

ReSJairtel to the Bureau 6-8-82.

The San Juan Office has not yet completed its counter measures survey of the office space because of SA [redacted] temporary hardship assignment to Charlotte, North Carolina.

SA [redacted] is scheduled to arrive at San Juan during the first week of May, 1983, and will complete the counter measures survey.

80-805 -

The Bureau is requested to forward to San Juan the following equipment in order to complete the survey:

- 1 Scanlock MKV
- 1 DTA Telephone Analyzer
- 1 Extender
- 1 C-1 Superscout

FROM: SAC, CHICAGO (66-699 SUB D) (SQUAD 11) (P)

COUNTERMEASURES MATTERS - MILWAUKEE DIVISION

Re Milwaukee teletype to Chicago, 4/11/83.

On 4/12/83, Special Agents (SAs) [redacted] [redacted] conducted a countermeasures sweep of the [redacted] Milwaukee, Wisconsin. Chicago Agents were assisted in this matter by Milwaukee SA [redacted]

Equipment utilized was the non-linear junction detector, Scanlock, Cook telephone analyzer, VOM meters and other related countermeasures equipment.

No hazards or evidence of microphone and/or telephone taps were evident. All telephone lines for the telephones and alarm line were physically traced from the main telephone feeder frame to telephone house closets to terminating connections. Telephone line tracing was conducted by Wisconsin Telephone Security and assisted by FBI Agents.

ASAC [redacted] was advised of the results of the above sweep.

FEDERAL GOVERNMENT

Date: May 23, 1983 BY LIAISON

To: Mr. James M. Powell
Chief of Police
U.S. Capitol Police
Washington, D.C.

FEDERAL GOVERNMENT

From: Lloyd E. Dean
Security Programs Manager
Federal Bureau of Investigation

Subject: ~~SECURE HEARING/MEETING ROOM COMPLEX~~

COUNTERTERRORISM

At the May 19, 1983, meeting of the Technical Advisory Group, Director of Central Intelligence Security Committee, the National Security Agency member advised that he had been requested by [redacted] of the Capitol Hill Police to provide the requirements for a secure hearing/meeting room complex which could be incorporated into the new construction at [redacted]

b6
b7C
b7E

(DC)

In response to that request, the following discussion is provided concerning the establishment of a Sensitive Compartment Information-certified complex of rooms to accommodate technical security for meetings and testimony which include compartmented information:

Rationale

DE-81. 80-805-302

Preliminary statistics reveal that Executive Agencies and Departments appear before six or more House of Representatives Committees and Subcommittees on a regular basis in excess of 200 times a year (excluding the HPSCI which has a secure facility). None of these is provided an adequate degree of protection against technical penetration. This situation is especially severe in view of the routine presence of foreign intelligence agents whose identities and actions are difficult to monitor. These concerns, together with the fundamentally public nature of Capitol Hill activities, dictated the need for major technical security improvements. One step in this direction is the ongoing effort to upgrade the U.S. Capitol Hill Police capability to conduct technical inspections and procure a permanent technical security monitoring system. However, these actions alone cannot ensure protection against covert eavesdropping activity and should be complemented by continuously controlled and properly equipped discussion areas which provide a significant assurance that clandestine listening devices are not installed or, if carried in unwittingly, would be ineffective.

Mr. James M. Powell

Concept

A security hearing/meeting room complex designed to meet these requirements and accommodate the numbers of hearings noted above is difficult to determine without further study, but may be estimated at four to six rooms, one large enough to seat at least 60 persons (for the Armed Services Committee), the others to handle 20-25 individuals each. The central security feature of the complex would be a shielded enclosure, either individual units or one large enclosure subdivided as required. Essentially a metal room, it would provide extensive protection against listening devices by blocking signals and facilitating inspection for wires and other clandestine components. The enclosure(s) would be installed with a Parent Room which would also contain a reception area and necessary utilities. A complete security plan would also include alarms, guards, continuous technical security monitoring devices, and other appropriate measures. The Parent Room and enclosure would be architecturally designed to be transparent to users and cause little or no inconvenience. Costs cannot be reliably determined at this time since these architectural requirements would govern the size, style, and installation parameters of the shielded enclosure, the largest cost element.

There are significant overall security advantages if a new facility incorporating security features is constructed rather than renovations of an existing area.

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS

[redacted]
LEESBURG, VIRGINIA ~~(S)~~ (U)

REFERENCE: Memorandum of S. Klein to Mr. O. B. Revell, dated February 25, 1983. (U)

PURPOSE: To report outcome of TSCM survey at the [redacted] ~~(S)~~ (U)

DETAILS: As requested by referenced communication, a TSCM survey was conducted at the [redacted] All the telephones in the rooms identified as those areas to be used during the In-Service were checked physically and electronically for any evidence of tampering with the instruments or telephone lines. The areas in question were also checked for radio frequency transmitters. A physical examination was conducted of all areas of concern. ~~(S)~~ (U)

It was noted that most areas to be used during this In-Service, were equipped with closed circuit televisions, cable television, microphones located in the middle of the rooms, wired intercoms, possible radio frequency intercoms, rear projection rooms and electronic consoles which control the electronic teaching/instructing aids. That is to say the conference area was a maze of wires and electronics which ran throughout the Complex. It was not possible to identify and trace each and every wire or other possible egress path out of the areas of concern. To the extent possible, microphones and

Memorandum to Mr. Boyd

RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS

[redacted]
LEESBURG, VIRGINIA (S) (U)

b7E

other obvious sensors were disconnected, however, it should be noted that the electronic devices mentioned above have features which can be easily exploited for technical surveillance purposes by an adversary or a merely curious employee. Careful analysis of the characteristics of each item would be necessary to discover the more sophisticated penetrations. It was also noted that the [redacted] is an International Center for training and as such, employs foreign instructors whose backgrounds are unknown. (S) (U)

b7E

The Engineering Section believes that the uncontrolled environment represented by the [redacted] represents an unacceptable security risk, unless major modifications (removal or complete control of wires; electronics, microphones, speakers, etc.) can be assured. The TSCM was conducted by Alexandria SA [redacted] and Engineering Section ET [redacted]. (S) (U)

b6

b7C

b7E

RECOMMENDATION: That future In-Services, which if by the nature of the subjects discussed, are matters of National Security or are highly sensitive and which, if compromised, would cause serious damage to the Government's interests, should not be held at the [redacted]. (S) (U)

COUNTER MEASURES

The entire contents of this communication is classified "~~SECRET~~" unless otherwise noted. (U)

Reference your airtel dated February 15, 1983. (U)

The Technical Services Division (TSD), with the assistance of three of your office Technical Trained Agents (TTAs), conducted technical surveillance countermeasures (TSCM) surveys of [redacted] as requested. The TSCM surveys were conducted on April 25, 26 and 27, 1983. No evidence of any eavesdropping devices or tampering with the telephones was noted during the surveys.

b7E

For your information, your office now has three TSCM trained TTAs and the required TSCM equipment to conduct these surveys. ~~(S)~~ (U)

Future requests for all TSCM surveys should be directed to the Technical Squad in your office. The TSD, however, will continue to support your office with any additional technical equipment and personnel as needed. ~~(S)~~

DATE: MAY 27 1983

A
KTS
TO : DIRECTOR, FBI (80-805)
(ATTN: SSA [redacted]
TECHNICAL SERVICES DIVISION)
FROM: [redacted] ADIC, NEW YORK (66-8831 Sub H)
SUBJECT: COUNTERMEASURES MATTERS

b6
b7C

ReButel to New York, entitled: "TECHNICAL SURVEILLANCE
COUNTERMEASURES MATTERS, dated 3/21/83."

On 3/26/83, a countermeasures sweep/search was conducted
in the [redacted] New York, at request of
the Albany Division. For information Albany had received this
request from the [redacted] for the Syracuse area.

b7E

On 3/27/83, [redacted] SSRA, Syracuse RA was verbally
advised results of countermeasures sweep.

b7E

The following information is a result of that effort:

A radio frequency (rf) search was instituted upon entry,
however, extensive checking did not disclose the presence of any
unauthorized listening devices.

A brief examination of the area disclosed the presence
of only one (1) telephone company quad wire connected to what is
commonly referred as a, "42 A block." Voltage, current, and
audio amplifier checks did not reveal any abnormalities. The
green/red pair had tip and ring characteristics of a normal
operational telephone line. The yellow/black pair was open,
clear, and not showing any radio frequency (rf) antenna effect.

12 JUN 1 1983

b6
b7C

PSD:rd
(6)

ENCLOSURE

6 MAR 1 1984

Alternating current (ac) lines were checked and found to be operating in a normal manner, however, one switch was located which had normal (ac power) meter readings, but did not have a device connected at the load side. This was apparently a switch and power run for a prior lighting fixture. A physical search of the entire office space, to include walls, windows, and ceilings, did not disclose any unauthorized wiring or listening devices in the immediate area of concern. There were two (2) white noise generators functioning properly, with an additional pair of wires for the installation of a third, if necessary.

A wider search by visual observation over the ceiling areas of adjacent space disclosed the presence of old speaker wire possibly pulled back from above the [redacted] when it was formerly a [redacted]

b7E

As noted in the attached diagram there are seven (7) windows to the west, seven (7) to the north, a solid wall to the east, and solid walls and a corridor with a main door to the south. The center of the [redacted] has two (2) center walls of about the same construction as the outer walls, two doors, and a bathroom which contains a sink, toilet, and one (1) entry door.

b7E

Audio passage from one room to any other is minimal or about average for buildings of similar construction. Pipes and heat cowl, near windows, appeared to have been adequately muffled to reduce the passage of room audio.

Furniture in the room area was examined and found not to have been opened and resealed.

Building security was observed and determined to be below average, in that anyone could enter the building at street level, and proceed to the roof undetected via the stairs. The roof door was checked and found unlocked.

In closing, though nothing was found, in this situation, indicating the presence of any type of eavesdropping devices, it still remains essential that caution be exercised when matters of a sensitive nature are to be discussed. This is particularly important in this situation because the area is not under guard or alarmed continuously.

Better physical control of this area, coupled with exercising extreme caution, whenever discussing or handling written communications of a sensitive nature, will thwart the objectives of any eavesdropper, no matter how sophisticated. This security precaution is, in itself, the best procedure for offsetting any countermeasures hazards which are not only known to exist but be suited for this situation.

ADIC, New York

MEMORANDUM

DATE: 5/31/83

TO : DIRECTOR, FBI
(ATTN: TECHNICAL SERVICES DIVISION,
SA [redacted])

80-805

FROM : ADIC, NEW YORK

SUBJECT: SA [redacted]
COUNTER-MEASURES SWEEP/SEARCH
TRAINING MATTERS (CMM)

A request is made to afford above-named individual additional training in CMM.

SA [redacted] is currently assigned to the Special Operations Branch (SO) of the NYO as a Technically Trained Agent (TTA). SA [redacted] entered on duty 11/20/72 with the Bureau and arrived in the NYO on 7/6/74. After assignments in Albany, New York and Detroit, Michigan, his current assignment as TTA began on 1/1/80 and has included all phases of Bureau technical operations.

SA [redacted] has educational, military, Bureau and non-Bureau work experience relating to his current assignment.

SA [redacted] received early engineering training at the United States Merchant Marine Academy (USMMA) where he entered in 1964 as a Marine Engineering Student. Although SA [redacted] did not complete his training at the USMMA, he did receive two years of extensive exposure to the engineering field. This exposure included physics, chemistry, calculus, analytic geometry, engineering sciences, basic Marine engineering, graphics and various nautical sciences.

FEDERAL BUREAU OF INVESTIGATION
UNITED STATES DEPARTMENT OF JUSTICE

After leaving the USMMA, SA [] was employed by various electrical contractors as an apprentice electrician and was required to attend classes run by Local Number 3, International Brotherhood of Electrical Workers in New York City. This work and classes encompassed all phases of electrical construction. This included laying of new conduit, identifying and pulling new circuitry wires, installing switches, receptacles, lighting fixtures and power panel boxes. In addition, SA [] is familiar with many applications of 110/220 volt, 277/440 volt, single phase and 3-phase electrical wiring. Also, SA [] has three brothers who are journeymen electricians with vast experience in the electrical construction field.

b6
b7C

SA [] served in the United States Army from 1966 to 1968 where he was called upon from time to time to handle various electrical problems.

b6
b7C

SA [] has utilized this electrical experience extensively in his current assignment and has three and one half years of electronics experience handling installation and removals of TESUR's, MISUR's, security systems, RF transmitters, recorders, CCTV's, and other Bureau electronic equipment.

b6
b7C

For the past year, SA [] has assisted the NYO CM Coordinator (SA []) with many of his assignments both inside and outside the New York Division. This assistance has included the detailed examination of the physical layouts of

b6
b7C

these locations, searching for deviations in electrical circuiting of wiring; tampering with switches, receptacles, junction boxes or power feeder panels. SA [] requests that he be given more intensive CM training so he can better complement the CM Coordinator in the NYO. SA [] is of the opinion that a professional CM search/sweep should include two SAS; one responsible for RF and telephone analysis and the second, responsible for the physical examination of the premises with emphasis on electrical circuiting, wiring and devices.

~~SECRET~~

SJ 66-20

All of the aforementioned CM surveys consisted of a radio frequency spectrum check; electronic check of telephones and telephone lines; and a non-destructive physical search of premises and instruments.

With regard to the list of recommendations contained in the referenced communication of 4/2/82, San Juan submits the following:

1. All appearance information for all telephone numbers subscribed to by the San Juan office and its RAs has been obtained and is maintained in SJfile 66-20 Sub 11.

2. Physical tracings were made of all lines from all telephone instruments in the San Juan office and RAs to their last appearance before the respective central offices without detection of any abnormalities.

3. As stated in referenced San Juan airtel of 5/10/83, the 50 pair cable that the San Juan office has now (as of 3/6/77, since a change in office location) is the dedicated telephone service provided by the Puerto Rico Telephone Company.

4. The alarm system has been installed in the St. Thomas RA and is connected to the Virgin Islands Police Department. We are experiencing delays from the telephone company there in providing a commercial unlisted telephone line to provide telephone dialer service to the Virgin Islands Police Department (Department of Public Safety) and the two RA residences. This will be completed on or before 6/22/83.

5. The alarm system at the Mayaguez RA was previously installed but it is still not functioning. Numerous delays have been experienced with the telephone company which services that geographic area. A prior dry line installation by the telephone company was somehow connected improperly causing the loss of regular telephone service at this RA. This service was not restored until this dedicated line was disconnected.

The RA is attempting to get the telephone company to get another dedicated line installed so that the alarm dialer can be connected to the local police department and the Agent's home. The Bureau will be advised of completion which is expected around 7/1/83.

A NO-NOTICE OPERATIONAL SECURITY TEST AT AEDC.

THE PURPOSE OF THE OPERATION IS TO ASSESS CURRENT SECURITY PROCEDURES IN EFFECT AT AEDC. THE COLLECTION EFFORTS AND SECURITY PROCEDURES ASSESSMENT WILL BE DEVELOPED THROUGH A BROAD RANGE ATTACK ON A CLASSIFIED PROJECT CURRENTLY UNDERGOING TESTING AT AEDC. THE EXERCISE WILL CONSIST OF, BUT NOT BE LIMITED TO, ASSESSMENT OF TELEPHONE TRANSMISSIONS, COMPUTER TRANSMISSIONS, TRASH COVERS, HUMAN INTELLIGENCE (HUMINT) COLLECTIONS, AND COMSEC RADIO MONITORING.

AFOSI, DISTRICT 8, MONTGOMERY, ALABAMA, HAS EXTENDED AN INVITATION TO THE FBI TO SEND OBSERVERS. IN VIEW OF THE POTENTIAL VALUE OF THE INFORMATION TO BE GAINED CONCERNING COMPUTER SECURITY AND COMSEC SECURITY, DIVISION EIGHT IS REQUESTED TO SEND REPRESENTATIVES TO THE EXERCISE. IT IS FURTHER REQUESTED THAT FBIHQ TELEPHONICALLY ADVISE KNOXVILLE IF OBSERVERS WILL BE SENT SO ARRANGEMENTS CAN BE MADE FOR LODGING AT AFOSI'S SECURE LOCATION.

AFOSI REQUESTED THAT DISSEMINATION OF THIS INFORMATION BE KEPT AT A MINIMUM SINCE, FOR SECURITY REASONS, KNOWLEDGE OF THIS EXERCISE HAS BEEN LIMITED WITHIN AFOSI.

NARCOTICS (A)

COUNTERMEASURES MATTER

Countermeasures

Reference San Francisco Airtel dated May 10, 1983, and Bureau telephone calls to San Francisco on June 6, and 7, 1983.

In accordance with above-referenced telephone calls to San Francisco, SA [redacted] no effort will be made to obtain an example of the Security TEK Corporation "Evaluator" for approximately two to three weeks until San Francisco is able to borrow the version containing the latest modifications. It is understood that San Francisco will only be able to obtain the device for approximately one day at which time it will be given an initial examination by San Francisco technically trained agents.

Depending upon the outcome of the initial examination, a decision will be made by FBIHQ regarding whether the device represents a sufficient threat to warrant purchase for more intensive inspection and testing. San Francisco should, therefore, immediately apprise FBIHQ, Engineering Section, Electronic Analysis Unit, regarding the results of its analysis.

FROM: SAC, SAN ANTONIO (66-269-SUB 1-H)

TECHNICAL EQUIPMENT - COUNTERMEASURES
SAN ANTONIO DIVISION

Reference Technical Equipment - Update letter to All SACs, dated 4/16/82.

In referenced Bureau letter, the Electronics Analysis Unit (TSD) requested all available information regarding commercially available countermeasure equipment for testing.

Accordingly, San Antonio has enclosed numerous advertisements for the Bureau's perusal. These ads (which are identified as to source) were found in the following publications:

Security World, published by the Chicago Division, Cahner Publishing Co., 5 S. Wabash Avenue, Chicago, Illinois, (312)372-6880

Security Management, published by American Society for Industrial Security, 200 K Street, NW, Suite 651, Washington, D.C., 20006, (202)331-7887

Also enclosed is an article entitled "Safeguard Your Conversations" by Arnold M. Zais, from the February, 1982, edition of Security Management magazine (supra).

San Antonio will remain alert for other ads, brochures, etc. re countermeasure equipment.

Subject : COUNTERMEASURES TRAINING
UNITED STATES CAPITOL POLICE

PURPOSE: To request that the attached memorandum from the Chairman, Technical Advisory Group (SA [redacted]), to the Chairman of the Technical Surveillance Countermeasures Subcommittee, be approved and forwarded. (S) (U)

DETAILS: The attached advises the TSCS, which has oversight responsibilities for the Interagency Training Center (ITC), that the FBI has completed its phase of training of the United States Capitol Police. It also provides a ranking of the twelve U. S. Capitol Police Officers in the event not all twelve officers will be able to attend the ITC course. Section Chief Lloyd E. Dean, as FBI SECOM member, should approve the enclosure prior to its transmittal to the TSCS. (S) (U)

RECOMMENDATION: That the attached be approved and forwarded to the TSCS. (S) (U)

Subject : ~~TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY~~

REFERENCE: memorandum dated 8/11/83.

PURPOSE: To report on TSCM surveys conducted at the United States Supreme Court Building.

DETAILS On August 18, 1983, personnel from the Engineering Section, conducted TSCM surveys of

The TSCM surveys consisted of radio frequency checks, checks of the telephones and electronic and physical searches.

No evidence of eavesdropping or tampering with the telephones was noted at the time of the survey.

The TSCM surveys were conducted by ET and SSA

RECOMMENDATIONS: None. For information only.

COUNTERMEASURES

~~SECRET~~

RE:

COUNTERMEASURES ORGANIZATIONAL STUDY

THE FOLLOWING IS CLASSIFIED ~~SECRET~~ IN ITS ENTIRETY AND SHOULD BE IMMEDIATELY DELIVERED TO THE DIRECTOR.

YOUR SCHEDULE SHOWS THAT YOU WERE TO APPEAR AT A SIG-I MEETING ON WEDNESDAY, AUGUST 3, 1983, REGARDING THE "COUNTER-MEASURES ORGANIZATIONAL STUDY." THIS IS THE STUDY PREPARED BY THE INTERAGENCY GROUP - COUNTERMEASURES (IG-CM) WHICH IS CHAIRED BY GENERAL STILWELL AND IT IS THE COUNTERPART TO THE "COUNTER-INTELLIGENCE ORGANIZATIONAL STUDY" WHICH WAS SUBMITTED BY THE IG-CI TO THE NSC.

THE MEETING HAS BEEN RESCHEDULED TO THIS AFTERNOON, AUGUST 1, 1983, BUT THE TOPIC REMAINS THE SAME--COUNTERMEASURES

PAGERME***PAGE TWO DE HQ 0021 ~~SECRET~~

ORGANIZATIONAL STUDY. ASSISTANT DIRECTOR {AD} O'MALLEY HAS READ THROUGH THE STUDY AND THERE ARE NO FBI/COUNTERINTELLIGENCE ISSUES DISCUSSED AT ALL. THE STUDY DOES NOT RECOMMEND ANY ORGANIZATIONAL CHANGES OF THE MANY GROUPS IN THE UNITED STATES RESPONSIBLE FOR SECURITY. THE REPORT DISCUSSES, IN MUCH THE SAME WAY AS THE CI ORGANIZATIONAL STUDY DOES, THINGS THAT CAN BE DONE TO IMPROVE, FROM STRICTLY A SECURITY STANDPOINT, COUNTER-MEASURES DEALING WITH PHOTINT, SIGINT, AND ELINT. IT ALSO DISCUSSES COMMUNICATIONS SECURITY, EMANATIONS {TEMPEST} SECURITY, COMPUTER SECURITY, AND PHYSICAL DOCUMENT AND PERSONNEL SECURITY. IT ALSO RECOMMENDS ENHANCED RESOURCES AND TRAINING FOR THOSE INVOLVED IN THESE COUNTERMEASURES.

SINCE YOU ARE OUT OF TOWN, AD O'MALLEY RECOMMENDS THAT HE ATTEND AS YOUR REPRESENTATIVE. AD O'MALLEY HAS NO PROBLEM WITH THE REPORT; IT DOES NOT TOUCH ON ANY FBI COUNTERINTELLIGENCE ISSUES OR OPERATIONS, AND IS ESSENTIALLY A BLUEPRINT FOR THINGS THAT CAN BE DONE IN THE FUTURE TO ENHANCE CAPABILITIES OF THOSE INVOLVED IN PURELY SECURITY COUNTERMEASURES.

{SIGNED: E. J. O'MALLEY}

To : Mr. Revell *BR*

Date 8/26/83

From : K. T. Boyd *BR*

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS

REFERENCE: Memorandum of Mr. J.D. Glover to Mr. Boyd dated March 8, 1983.

PURPOSE: To advise of TSCM surveys conducted at [redacted] b7E

DETAILS: Referenced memorandum requested that a TSCM be conducted of the office space of [redacted] b7E
[redacted] Shortly after the initial request, [redacted] contacted the Engineering Section requesting that TSCM surveys be conducted of the office space of the Administrator, Deputy Administrator and of the Deputy for Administration. He also advised that [redacted]

[redacted] the Acting IG requested that TSCM surveys be delayed until a later date. On July 7, 1983, the office space of the [redacted] were checked. On August 17, 1983, a TSCM survey was conducted of [redacted] b7E

The TSCM surveys consisted of physical and electronic checks of all telephones and telephone lines, a search of the radio frequency spectrum and a physical search of each office space. No evidence of any eavesdropping or tampering with the telephones or telephone lines was detected during the TSCM surveys.

SUBJECT: EQUIPMENT REPAIR

Being shipped to the Bureau for repair is one (1) Dektor CI/S Sequencing Unit, Telephone Analyzer Ser# 5209, PN 533087 which is unoperable due to a faulty voltmeter/Ammeter.

Upon repair, equipment is to be returned to the New York Office, to the attention of [redacted] SO-1.

Also being shipped to your office for permanent assignment, is one (1) Scanlock Mark I, Ser# 78/129.

TO: DIRECTOR, FBI
(ATTN: TSD, ENGINEERING SECTION,
SA [redacted])

FROM: SAC, PITTSBURGH (66-257)(P)

SUBJECT: TECHNICAL SURVEILLANCE
COUNTERMEASURES SURVEYS (TSCM)

Re 8/15/83 telephone conversation between SA [redacted]
[redacted] of TSD and SA [redacted] of Pittsburgh/

Pittsburgh is in receipt of SAC letter 31-83, dated 8/2/83, concerning captioned matter. As discussed in referenced conversation, Pittsburgh has no one trained to conduct a competent TSCM as outlined in the SAC letter.

Pittsburgh recommends that a representative of TSD come to Pittsburgh and conduct a course of instruction in the specifics of conducting a thorough TSCM. Pittsburgh has six technically trained agents and two agents currently on Bureau approved on-the-job training who should attend this instruction.

As an alternative, Pittsburgh would request two slots in a TSCM in-service at Quantico. The agents who would attend are SA [redacted] and SA [redacted]

b7E

PURPOSE: To set forth information regarding responsibility for technical surveys at [redacted] (S) (U)

DETAILS: Following a technical threat survey of the [redacted] facility in New York, it was agreed that SSA [redacted] would contact [redacted] to coordinate future studies and surveys at that facility. Upon contact with [redacted] who is responsible for TSCM surveys of [redacted] it was learned that there apparently exists an agreement between [redacted] supervisor of FBI facilities at [redacted] would be responsible for technical security of [redacted] as they are presently responsible for the off-premises locations in New York from which their operations are conducted. [redacted] stated that he would be pleased to work with the FBI on FBI [redacted] but desired that the nature of this agreement be resolved. (S) (U)

b6
b7C
b7E

DE-105 80-805-327X3

Conversations with [redacted] resulted in an agreement that the FBI would have overall responsibility for all space (first floor and up) occupied by FBI personnel [redacted] and technical surveys would be coordinated by the FBI. It was agreed that [redacted] would provide any support required and, in fact [redacted] is anxious to provide this support. For the purpose of continued cooperation and an even more effective survey, it appears reasonable that this support would be requested. [redacted] also indicated that reports of previous surveys at the [redacted] facility conducted by [redacted] organization would be made available to Engineering Section personnel upon request. Memorandum to Mr. Boyd
RE: TECHNICAL THREAT SURVEYS -

[redacted]

b7E

With resolution of the responsibility for technical security of [redacted] now at hand, we now appear to be in a position to examine this facility for technical vulnerabilities and recommend solutions. Among the potential TEMPEST vulnerabilities noted during the initial survey were the audio recorders and line interface equipment, the video monitors used for internal physical security and typewriters. In addition to the above equipment, periodic general surveys of the ambient RF spectrum would be advisable. Under consideration by both [redacted] and FBI personnel is an in-place monitoring system. [redacted] indicated that he has made a recommendation that such a system be installed. (S) (U)

b6
b7C
b7E

RECOMMENDATION: That the Electronic Analysis Unit coordinate [redacted] TSCM survey matters directly with [redacted] assuring that the New York Office TSCM personnel (who have assisted [redacted] in the past) be included in any surveys at [redacted]. Further, TEMPEST-related surveys should be coordinated with the TSCM surveys when required. (S) (U)

TO: DIRECTOR, FBI (80-805)
 (ATTN: SUPERVISOR [redacted] ENGINEERING SECTION, TECHNICAL SERVICES DIVISION)

FROM: SAC, CHICAGO (66-4418) (SQUAD 11)

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) CHICAGO DIVISION

Re Chicago airtel to Director, 7/27/83; Jackson teletype to Director, 7/25/83; and Director teletype to Chicago, 5/9/83.

Pursuant to referenced communications, on 8/14/83, SA [redacted] and SA [redacted] (Technically Trained Countermeasures Agents) traveled to the Jackson Division to assist SA [redacted] (Technical Coordinator) in a countermeasures-security survey of the Jackson [redacted] and the Gulfport, Mississippi Resident Agency.

These surveys utilized the following equipment:

- PR 700B
- Scanlock MK V
- Dektor Telephone Analyzer and SU401 Sequencing Unit
- Non-Linear Junction Detector

On 8/15/83 and 8/16/83 a countermeasures sweep was conducted in [redacted] located in the [redacted] Jackson, Mississippi. This sweep entailed the physical and electronic examination of twenty-one (21) separate rooms. These examinations revealed no evidence of tampering or possible electronic eavesdropping.

b6
b7C

b6
b7C
b7E

b7E

CG 66-4418

During these examinations, the Jackson [redacted] advised he was not completely satisfied with the physical security of his office space as it relates to the cleaning crews and the accessibility of individuals not authorized in his spaces. It was suggested he confer with Jackson [redacted] and attempt to develop solutions to his problems.

b6
b7C
b7E

The telephone within the [redacted] is a Model 2630 call director with a Model 108 speaker phone. The following telephone numbers appeared at [redacted] call director: 960-4480 through 960-4490. The on-line instrument checks were conducted from this location with the Dektor Telephone Analyzer. All on-hook voltages were 53 vdc and the off-hook voltages varied from 10.9 vdc to 12 vdc. No current flow was noticed during on-hook conditions and off-hook current flow ranged from 69.2 MA to 70 MA. At the conclusion of the on-line checks, the above instrument was physically checked for evidence of tampering and then examined both with the DTA and Sequencing Unit. The following telephones were also physically examined and checked with the DTA and Sequencing Unit:

b7E

Two (2) Model 2631 call directors

Two (2) Model 565 HKM six-button instruments

Seventeen (17) Model 2564 HLM six-button instruments

During this examination, the telephone of Secretary [redacted] exhibited a discrepancy during one of the sequencing tests. Further examination revealed the hook switch was not functioning properly and utilization of the amplifier in the Triplet meter would allow audio to pass while receiver was on hook.

b6
b7C

The above telephones operate in conjunction with a 400 D KTU system and a 79 B 5 power unit. These units are located within a frame room located within the U.S. Attorney's office space accessible only by authorized personnel.

During this examination, SA [redacted] advised that all of the telephone lines for [redacted] appear in an unlocked broom closet in the basement [redacted] Jackson, Mississippi, as well

b6
b7C
b7E

CG 66-4418

as in a [redacted]
SA [redacted] and he had initiated
action to have dedicated cable run from the telephone company
Central Office to the frame within the [redacted]
As a precautionary measure, the telephone lines were toned
from the [redacted] frame room to the bank and the
circuit fuses were removed to prevent accidental overhears
until the dedicated cable is installed.

b6
b7C
b7E

As a result of the survey, the countermeasures team
recommended the telephone instrument of [redacted]
be exchanged for a different instrument to eliminate the hook
switch hazard. The team concurs with the proposal of dedicated
cable from the telephone company Central Office to [redacted]
[redacted] and recommended this course be pursued by
[redacted] Additionally, it was recommended employees
be given a security briefing regarding telephone usage to
discuss sensitive matters.

b6
b7C
b7E

On 8/17/83, the team traveled to the Gulfport FBI
Resident Agency and conducted a physical and electronic counter-
measures survey of eight offices and seven Model 2830 CM
ten-button telephone instruments. This RA space is housed
in a new office building operated by the Mississippi Power
Company. There is 24-hour video and audio security on this
building by an independent security company. The audio
security system has intercom boxes on the first floor of
the building which offers a possible overhear situation should
Agents not be aware of their location. SA [redacted] advised he
has informed all RA Agents of this possibility.

b6
b7C

The telephone numbers for the RA lines are 864-6131,
864-6132, 864-6135. These lines were checked on-line with
the DTA and drew no current on-hook and 52.12 MA - 53.8 MA
off-hook. The on-hook voltages were 51.74 VDC and the off-hook
voltages were 6.85 vdc. The FTS line, number 499-2665,
on-hook voltage was 75.96 vdc and off-hook was 6.63 vdc.
On-hook current was 0 MA and off-hook current was 52.12 MA.

During the course of the physical survey, it was
determined the Master Radio Controller shorts to transmit with
vibration and jars. SA [redacted] advised the Jackson RMTs would
resolve this problem. No additional problems or discrepancies
were encountered.

b6
b7C

CG 66-4418

During this survey period, SA [] advised he has severe questions regarding the honesty of several dismissed telephone company employees. In view of the fact the threat exists for compromise by these knowledgeable former telephone company employees, Chicago feels SA [] should be afforded formal countermeasures training as soon as possible. SA [] is very knowledgeable of the countermeasures equipment utilized during these surveys and would be extremely proficient with additional training in their use.

369-6105		21	320
431-1333 Ext. 366		22	321

The WRA was found to have a Horizon Communication System (See Attachment #2 for specifications on telephone system utilized), housed inside the RA under their control. The following are numbers and types of telephone instruments utilized by the WRA:

- 9 - Model 2500 DMG-82084 Bell System telephone sets
- 1 - Model Z2500 MMGA/83109 Western Electric set
- 1 - Model 500 DZM Bell System rotary set
- 1 - Model 2500 DM/79141 Bell System set
- 1 - Model 2500 MM/79003 Western Electric set
- 1 - Model 2500 MM/79243 Western Electric set

~~CONFIDENTIAL~~

- 1 - Model 2500 MM/83052 Western Electric set
- 1 - DSS Console (Horizon)
- 1 - 30-button console for Horizon - Model 9A3-82DR5-
5D69937-01-ISS.1

It was found that the Dektor Telephone Analyzer cannot be used when making off-line telephone checks on the main telephone console. The console cannot be unplugged for it will lose its program. If the power for the Horizon Unit is unplugged, it also will lose its program. Also, when doing various checks, the Dektor unit puts 115 VAC on the telephone lines which will cause damage to the IC circuits inside of the telephone unit.

It is not known whether the Horizon unit itself has remote maintenance capability. The WRA does have and securely maintains a portable computer attachment for reprogramming the Horizon unit if a problem develops.

Another problem encountered was that all telephone wiring from the outside telephone house closet on the second floor to the storage supply room inside the RA was exposed. This storage supply room houses the Horizon unit. From this room, all individual wires to telephone sets run through the floor and across a drop ceiling of space directly below the RA. This space is unoccupied but is locked. To defeat the WRA telephone system, someone knowledgeable could cut into any exposed wire and tap into the talk path of another telephone in the RA.

The above information was brought to the attention of the WRA Senior Resident Agent and to Chicago Office Services Manager (OSM):

The Bureau is requested to review the above stated potential telephone wiring hazard and advise Chicago if changes should be made. If so, appropriate funding for needed changes should be made.

COUNTERMEASURES

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING

REFERENCE: SAC Memorandum number 31-83 dated August 2, 1983.

PURPOSE: To request authorization for ETs [redacted] and SSA [redacted] to travel to Oak Ridge, Tennessee, and Pensacola, Florida, to conduct three (3) TSCM training sessions, each having ten (10) Technically Trained Agents (TTAs) attending. Two will be held in Oak Ridge and the third in Pensacola.

b6
b7c

DETAILS: As a result of referenced memorandum, which states TSCM Policy and the frequency of conducting TSCM surveys, the Engineering Section has received telephonic and written requests for regional TSCM training from various field offices. The policy requires that only TTAs trained in TSCM perform the TSCM survey.

During the entire Fiscal Year (FY) 83 only eight (8) TTAs received TSCM training. An attempt was made to obtain sixteen (16) additional slots for training at FBI Academy, Quantico, with negative results. In FY 83 procurements of TSCM equipment in excess of \$400,000 were made. All of this equipment has been assigned to several field offices; however, some of these field offices do not have TTAs trained in TSCM.

[Handwritten initials]

This training will be held in military and other government facilities to afford good physical security to the TSCM equipment and to sensitive discussions. In addition, regions were selected which have good accessibility to TTAs traveling from other Divisions, yet which have low per diem rates.

74 OCT 17 1983

Memorandum to Mr. Boyd
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING

In view of the dire need for TSCM training to field TTAs and the fact that in FY 84 no TSCM training is being scheduled to be held at the FBI Academy, Quantico; the above regional training sessions are proposed.

The scheduled dates are as follows:

1. October 24 through November 4, 1983, at Oak Ridge, Tennessee;
2. November 28 through December 9, 1983, at Oak Ridge, Tennessee;
3. January 23 through February 3, 1984, at Pensacola, Florida.

Arrangements have already been made at above locations pending approval for the training. Both locations have good, physically secured, classrooms.

The estimated cost for all three (3) training sessions will be \$3,600 per diem and \$3,000 for transportation; totaling \$6,600 for all three Engineering Section personnel.

RECOMMENDATIONS: (1) That the above-proposed training be approved.

Subject : ~~COUNTERMEASURES SURVEY OF THE NEW TACTICOM II FREQUENCY-HOPPING RADIO~~ (S) (U)

PURPOSE: To advise of the results of a Countermeasures Survey performed on the New Tacticom II Frequency-Hopping Radio for the purpose of determining the vulnerabilities of this system. (S) (U)

DETAILS: On August 11, 1983, members from the Radio Engineering Unit, [redacted] and [redacted] SA [redacted] Operational Support Unit and [redacted] Electronic Analysis Unit, Engineering Section conducted an operational evaluation of the Tacticom II Frequency-Hopping Radio System. These test were conducted at Miketronic Facility and in the surrounding Rockville, Maryland area. (S) (U)

Using a whip antenna with a spectrum analyzer and a scanlock scanning receiver, it was observed that a definite RF signature; both audibly and visually was detected whenever power was applied to the Tacticom II Transceiver. The Tacticom II operates in a frequency range of 135-175 MHz, but during this demonstration, the two units were programmed to operate at a transmission frequency of 143.5 MHz and changed at a rate of 80 milliseconds within a 3.2 MHz band from the home frequency. CONTINUATION SHEET

PAGE TWO DE HQ 0147 ~~C O N F I D * D E N T I A L~~

REFERENCE MEMORANDUM TO ALL SACS DATED AUGUST 2, 1983.

20 CAPTIONED "TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
18 SURVEYS AND POLICY".

16 REFERENCED MEMORANDUM STATES A CHANGE IN THE FREQUENCY
FOR CONDUCTING TSCM SURVEYS AT HEADQUARTERS CITY (FROM FOUR
14 TIMES A YEAR TO TWICE A YEAR) AND AT RESIDENT AGENCIES (FROM
ONLY ONCE A YEAR TO TWICE A YEAR). IN ADDITION TO THIS, THE
12 NEW TSCM POLICY REQUIRES THAT TSCM SURVEYS BE CONDUCTED BY
TECHNICALLY TRAINED AGENTS (TTAS) WHO HAVE RECEIVED TSCM
TRAINING.

10 IN VIEW OF THIS AND IN RESPONSE TO SEVERAL REQUESTS FROM
FIELD OFFICES FOR TSCM TRAINING, PERSONNEL FROM THE TECHNICAL
8 SERVICES DIVISION, ENGINEERING SECTION, WILL CONDUCT A TWO-WEEK
IN-SERVICE IN THE FBI KNOXVILLE DIVISION, DEPARTMENT OF ENERGY
6 (DOE), FIELD OFFICE, OAKRIDGE OPERATIONS FACILITY, OAKRIDGE,
TENNESSEE, STARTING OCTOBER 24, 1983, THROUGH NOVEMBER 4, 1983.

4 THE FOLLOWING TTAS HAVE BEEN SELECTED TO ATTEND THE TSCM
TRAINING IN-SERVICE:

- 2 1. SA [REDACTED] - BUFFALO
- 2 2. SA [REDACTED] - CHICAGO

CONFIDENTIAL

6. SA [REDACTED] - NEWARK

7. SA [REDACTED] - PITTSBURGH

8. SA [REDACTED] - SACRAMENTO

9. SA [REDACTED] - SAN ANTONIO

10. SA [REDACTED] - SEATTLE

SINCE THIS TRAINING IS BEING HELD AT DOE'S OAKRIDGE SECURED FACILITY, THEIR SECURITY OFFICE REQUIRES THAT THE NAME, SOCIAL SECURITY ACCOUNT NUMBER, DATE/PLACE OF BIRTH AND SECURITY CLEARANCE LEVEL OF ALL TTAS AND INSTRUCTORS ATTENDING BE PROVIDED TO THEIR OFFICE PROMPTLY SO THAT APPROPRIATE BADGES CAN BE ISSUED TO ATTENDEES FOR ACCESS TO THEIR FACILITY. THEREFORE, IT IS EXTREMELY IMPORTANT THAT ALL ABOVE-MENTIONED TTAS ATTEND THIS IN-SERVICE SO THAT NO SUBSTITUTIONS HAVE TO BE MADE. IN THE EVENT THAT EXTENUATING CIRCUMSTANCES PREVENT ANY SA FROM ATTENDING, FBIHQ WILL BE TELEPHONICALLY ADVISED IMMEDIATELY, FOLLOWED BY A WRITTEN COMMUNICATION, STATING REASON(S) FOR NOT ATTENDING. SUBSTITUTIONS, IF ANY, WILL BE MADE BY FBIHQ

ONLY.

THIS COURSE, WHICH IS TWO WEEKS IN DURATION, PROVIDES ATTENDEES WITH THE TECHNIQUES FOR CONDUCTING TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEYS AND A THOROUGH UNDERSTANDING AND KNOWLEDGE IN THE USE OF THE BUREAU'S TSCM EQUIPMENT INCLUDING RADIO FREQUENCY RECEIVERS, TELEPHONE ANALYZERS, SPECTRUM ANALYZERS, OSCILLOSCOPES, NON-LINEAR JUNCTION DETECTORS AND OTHER EQUIPMENT USED IN TSCM SURVEYS.

IT IS IMPORTANT THAT EACH ATTENDEE RECEIVE THE ENTIRE COURSE OF INSTRUCTIONS WITHOUT INTERRUPTION. SACS SHOULD MAKE EVERY EFFORT TO ENSURE THAT ATTENDEES ARE ABLE TO STAY THE DURATION OF THE IN-SERVICE. PENDING TECHNICAL MATTERS REQUIRING THE ATTENTION OF THE ATTENDEE SHOULD BE APPROPRIATELY REASSIGNED WITHIN YOUR DIVISION OR ADDITIONAL ASSISTANCE SHOULD BE OBTAINED FROM ADJACENT DIVISIONS.

ALL ATTENDEES ARE REQUESTED TO ARRIVE AT THE KNOXVILLE AIRPORT PRIOR TO 5:00 P.M. ON OCTOBER 23, 1983, SO THAT TRANSPORTATION CAN BE PROVIDED FROM AIRPORT TO THE LODGING FACILITY IN KNOXVILLE. ANY SA UNABLE TO MAKE ARRANGEMENTS TO ARRIVE AT THE REQUESTED TIME OR ANYBODY HAVING "RELATIVES"

5

To : Mr. Mintz *JM*

Date 9/15/83

From : K. T. Boyd *KB*

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS

REFERENCE: Your memorandum dated August 11, 1983.

PURPOSE: To report the outcome of a TSCM survey conducted of the office space of Department of Justice (DOJ),

[Redacted]

b7E

DETAILS: At your request, on August 22, 1983, a TSCM survey was conducted of the office space

[Redacted]

b7E

whose office was adjacent to [Redacted] office space. A thorough physical search was conducted within the area of concern. The telephones in [Redacted] office and [Redacted] were electronically and physically checked. An examination of the radio frequency spectrum was also conducted. No evidence of any electronic eavesdropping or tampering with the telephones was noted at the time of the TSCM survey.

The door which gives access to his office area from the hallway has the air return grille (approximately 15" by 24") detached from the door. This door and the door to [Redacted] inner office are both constructed with a hollow core and the air return grille can easily be taken off by removing several screws from the hallway side.

[Redacted] advised he has already requested that the hallway door be replaced with a solid door having double cylinder locks.

It was recommended to [Redacted] that the door to his office be replaced with a solid one..

From : K. T. Boyd *CM*

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS

The entire contents of this memorandum are classified "CONFIDENTIAL".

PURPOSE: To request that Records Management Division provide to the Knoxville Division, Attention: ASAC [redacted] the official Bureau names, SSANs, D/POB and security clearance level of the below-listed Special Agents and support personnel so that this information can be hand-carried to the Security Office, Department of Energy's Oakridge Facility, Oakridge, Tennessee.

b6
b7c

DETAILS: Personnel from the Engineering Section, Technical Services Division, will be conducting TSCM training at a Department of Energy Field Office, Oakridge Facility, Oakridge, Tennessee.

Their Security Office requires that the name, SSAN, P/DOB and security clearance level of all FBI personnel attending be submitted to their office so that appropriate access badges can be provided to all attendees.

The following Bureau personnel will be attending this training exercise:

- SA [redacted] - Buffalo
- SA [redacted] - Chicago
- SA [redacted] - Columbia
- SA Richard A. Bramley - Honolulu
- SA [redacted] - Knoxville

RE BULET OCTOBER 14, 1983, ADVISING REQUEST BY [redacted]

[redacted] FOR SWEEP OF OFFICES AT [redacted] WDC.

PRELIMINARY SURVEY CONDUCTED OCTOBER 25, 1983, TO DETERMINE
MANPOWER AND EQUIPMENT NEEDED FOR SWEEP. [redacted]

[redacted] ADVISED PRIMARY CONCERN IS WITH INTEGRITY OF
TELEPHONES AND RELATIVELY LITTLE CONCERN ABOUT TRANSMITTERS,
MICROPHONES OR RECORDING DEVICES.

SWEEP WILL INCLUDE [redacted] OFFICE SUITE AND SUITE OF
OFFICES OCCUPIED BY [redacted] TELEPHONE GEAR

Vertical stamp with illegible text and a signature.

PAGE TWO DE WF 0003 ~~C O N F I D E N T I A L~~

IN THESE OFFICES INCLUDE TWO (2) WECO 2630 CALL DIRECTORS WITH 108AA SPEAKER SETS; FOUR (4) WECO 2830 CM SETS AND FIVE (5) WECO 2565 HKM MULTI BUTTON SETS. AT LEAST TWENTY-ONE (21) INCOMING TRUNKS ARE INVOLVED.

WASHINGTON FIELD'S SWEEP SHOULD INCLUDE RF CHECK AND PHYSICAL SEARCH IN ADDITION TO TELEPHONE ANALYSIS. IN VIEW OF NUMBER OF TELEPHONE SETS AND LARGE OFFICE AREA TO BE COVERED, WASHINGTON FIELD ESTIMATES TWO (2) DAYS NEEDED FOR COMPLETION. SWEEP TENTATIVELY SCHEDULED NOVEMBER 15 AND 16, 1983, PENDING MANPOWER AVAILABILITY. ONE TSCM QUALIFIED TTA UNABLE TO PARTICIPATE BECAUSE OF INVOLVEMENT WITH WASHINGTON FIELD'S IMPENDING MOVE.

REQUEST OF THE BUREAU: IN VIEW OF LARGE NUMBER AND COMPLEXITY OF TELEPHONE SETS AND LINES TO BE ANALYZED, WASHINGTON FIELD REQUESTS ASSISTANCE WITH TELEPHONE SWEEP NOVEMBER 15, 1983.

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS (TSCM)

Re: SAC memo dated 8/2/83, captioned "Technical Surveillance Countermeasures (TSCM) Survey and Policy".

It is requested that SA [redacted] of the Newark Division be considered for the two-week In-Service for TSCM training. SA [redacted] is presently and has been a full time Technically Trained Agent (TTA) in the Newark Division for the past four (4) years.

b6
b7C

In view of the change in the frequency of conducting TSCM surveys as outlined in referenced SAC memo, referring to the increase of surveys at our resident agencies, and since Newark has seven (7) resident agencies, it is recommended that SA [redacted] be considered for TSCM training.

PAGE TWO DE HQ 0022 ~~C O N F I D E N T I A L~~

REFERENCE MEMORANDUM TO ALL SACS DATED AUGUST 2, 1983,
CAPTIONED "TECHNICAL SURVEILLANCE COUNTERMEASURES {TSCM}
SURVEYS AND POLICY".

AN INFORMATION COPY OF THIS COMMUNICATION IS BEING SENT TO
THE JACKSONVILLE DIVISION IN VIEW OF THE TRAINING BEING HELD
WITHIN YOUR DIVISION. IT IS REQUESTED THAT JACKSONVILLE
FORWARD A COPY OF THIS COMMUNICATION TO SA TERRENCE WARE,
PENSACOLA RESIDENT AGENCY.

REFERENCED MEMORANDUM STATES A CHANGE IN THE FREQUENCY
FOR CONDUCTING TSCM SURVEYS AT HEADQUARTERS CITY {FROM FOUR
TIMES A YEAR TO TWICE A YEAR} AND AT RESIDENT AGENCIES {FROM
ONLY ONCE A YEAR TO TWICE A YEAR}. IN ADDITION TO THIS, THE
NEW TSCM POLICY REQUIRES THAT TSCM SURVEYS BE CONDUCTED BY
TECHNICALLY TRAINED AGENTS {TTAS} WHO HAVE RECEIVED TSCM
TRAINING.

IN VIEW OF THIS AND IN RESPONSE TO SEVERAL REQUESTS FROM
FIELD OFFICES FOR TSCM TRAINING, PERSONNEL FROM THE TECHNICAL
SERVICES DIVISION, ENGINEERING SECTION, WILL CONDUCT A TWO-
WEEK IN-SERVICE AT THE NAVY TRAINING TECHNICAL CENTER, CORY
FIELD NAVAL AIR STATION, PENSACOLA, FLORIDA, COMMENCING AT

CONFIDENTIAL

IN THE EVENT THAT CIRCUMSTANCES PREVENT ANY SA FROM
ATTENDING, FBIHQ WILL BE TELEPHONICALLY ADVISED IMMEDIATELY,
FOLLOWED BY A WRITTEN COMMUNICATION, STATING REASONS FOR NOT
ATTENDING. SUBSTITUTIONS, IF ANY, WILL BE MADE BY FBIHQ ONLY.

THIS COURSE, WHICH IS TWO WEEKS IN DURATION, PROVIDES

PAGE FOUR DE HQ 0022 ~~C O N F I D E N T I A L~~

ATTENDEES WITH THE TECHNIQUES FOR CONDUCTING TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEYS AND A THOROUGH UNDERSTANDING AND KNOWLEDGE IN THE USE OF THE BUREAU'S TSCM EQUIPMENT INCLUDING RADIO FREQUENCY RECEIVERS, TELEPHONE ANALYZERS, SPECTRUM ANALYZERS, OSCILLOSCOPES, NON-LINEAR JUNCTION DETECTORS AND OTHER EQUIPMENT USED IN TSCM SURVEYS.

IT IS IMPORTANT THAT EACH ATTENDEE RECEIVE THE ENTIRE COURSE OF INSTRUCTION WITHOUT INTERRUPTION. SACS SHOULD MAKE EVERY EFFORT TO ENSURE THAT ATTENDEES ARE ABLE TO STAY THE DURATION OF THE IN-SERVICE. PENDING TECHNICAL MATTERS REQUIRING THE ATTENTION OF THE ATTENDEE SHOULD BE APPROPRIATELY REASSIGNED WITHIN YOUR DIVISION OR ADDITIONAL ASSISTANCE SHOULD BE OBTAINED FROM ADJACENT DIVISIONS.

TRANSPORTATION REQUIREMENTS AT PENSACOLA WILL BE ARRANGED BY FBIHQ SSA

LODGING RESERVATIONS WILL BE MADE AT THE HOLIDAY INN, HIGHWAY U.S. 98, GULF BREEZE, FLORIDA.

ALL ATTENDEES ARE REQUESTED TO MEET IN THE MOTEL LOBBY AT 7:30 A.M., ON MONDAY, JANUARY 23, 1984.

CASUAL CLOTHING MAY BE WORN DURING THE TRAINING PERIOD.

TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEY (TSCM)

[Redacted]
[Redacted]
INDIANA

Enclosed for the Bureau is a copy of letter [Redacted] requesting TSCM of [Redacted] space.

Request based on information that two unauthorized and unidentified persons were seen in office space during time when offices were closed and unoccupied.

[Redacted] utilizes office space when in [Redacted] and has access to highly sensitive Government information.

If approved, survey will be conducted by Technical Agent in conjunction with next road trip to [Redacted]

P.O. Box 1186
Indianapolis, Indiana 46206

b6
b7C

Dear Special Agent [Redacted]

This letter is to request an F.B.I. security check of [Redacted]
[Redacted]

b7E

The reason for this request is a telephone call received recently by my [Redacted] from a friend who wanted to know why she was working at an early hour on a Saturday morning. The caller had passed the office noticing two men standing in the office with the lights on. The office was not open at the time of the incident:

b6
b7C

Since I do use the [Redacted] many times when I am in the District and do have access to highly sensitive government information, I feel that a security check should be performed.

b7E

The office, located at [Redacted] consists of two (2) offices and a large walk-in storeroom. There are four (4) rotary telephones with three (3) commercial lines and two (2) F.T.S. lines on each phone.

b7E

If you have any questions, please contact [Redacted] in [Redacted]

b6
b7C
b7E

Thank you for your attention to this request.

"SURVEYS AND POLICY".

20 REFERENCED MEMORANDUM STATES A CHANGE IN THE FREQUENCY
 18 FOR CONDUCTING TSCM SURVEYS AT HEADQUARTERS CITY {FROM FOUR
 TIMES A YEAR TO TWICE A YEAR} AND AT RESIDENT AGENCIES {FROM
 16 ONLY ONCE A YEAR TO TWICE A YEAR}. IN ADDITION TO THIS, THE
 NEW TSCM POLICY REQUIRES THAT TSCM SURVEYS BE CONDUCTED BY
 14 TECHNICALLY TRAINED AGENTS {TTAS} WHO HAVE RECEIVED TSCM
 TRAINING.

12 IN VIEW OF THIS AND IN RESPONSE TO SEVERAL REQUESTS FROM
 FIELD OFFICES FOR TSCM TRAINING, PERSONNEL FROM THE TECHNICAL
 10 SERVICES DIVISION, ENGINEERING SECTION, WILL CONDUCT A TWO-
 WEEK IN-SERVICE AT THE FBI ACADEMY, QUANTICO.

8 HOWEVER, DUE TO THE UNAVAILABILITY OF LODGING SPACE AT
 THE FBI ACADEMY, THE TWO-WEEK IN-SERVICE WILL BE CONDUCTED IN
 6 TWO PHASES, ONE WEEK EACH.

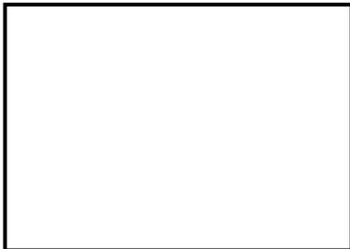

THE FIRST PHASE WILL COMMENCE AT 8:00 A.M., MONDAY,
 4 FEBRUARY 27, 1984, THROUGH 12:00 NOON, FRIDAY, MARCH 2, 1984.
 THE SECOND PHASE STARTS AT 8:00 A.M., MONDAY, APRIL 9, 1984,
 2 THROUGH 12:00 NOON, FRIDAY, APRIL 13, 1984.

THE FOLLOWING TTAS HAVE BEEN SELECTED TO ATTEND THE TSCM

JUNCTION DETECTORS, OTHER EQUIPMENT USED IN TSCM SURVEYS AND ONE WEEK IN TELEPHONY.

IT IS IMPORTANT THAT EACH ATTENDEE RECEIVE THE ENTIRE COURSE OF INSTRUCTION WITHOUT INTERRUPTION. SACS SHOULD MAKE EVERY EFFORT TO ENSURE THAT ATTENDEES ARE ABLE TO STAY THE DURATION OF THE IN-SERVICE. PENDING TECHNICAL MATTERS REQUIRING THE ATTENTION OF THE ATTENDEE SHOULD BE APPROPRIATELY REASSIGNED WITHIN YOUR DIVISION OR ADDITIONAL ASSISTANCE SHOULD BE OBTAINED FROM ADJACENT DIVISIONS.

RECEIVING OFFICES ARE TO CONFIRM SA'S ATTENDANCE BY SUBMITTING AN FD-313, ONE EACH, TO FBIHQ, ATTENTION: TRAINING DIVISION AND TECHNICAL SERVICES DIVISION, ENGINEERING SECTION, ELECTRONIC ANALYSIS UNIT.

TRANSPORTATION WILL DEPART FOR THE FBI ACADEMY AT 7:30 P.M., ON FEBRUARY 26, 1984, FOR THE FIRST SESSION AND AT 7:30 P.M., ON APRIL 8, 1984, FOR THE SECOND SESSION, FROM THE 10TH STREET AND PENNSYLVANIA AVENUE ENTRANCE, J. EDGAR HOOVER FBI BUILDING, WASHINGTON, D.C. ATTENDEES SHOULD REPORT TO THE 10TH STREET ENTRANCE WITH THEIR LUGGAGE AND PERSONAL EFFECTS PRIOR TO THE 7:30 P.M. DEPARTURE TIME. LIMOUSINE AND TAXICAB

MF

Director, FBI (80-805)

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
WEST RESIDENT AGENCY - CHICAGO DIVISION

Reference Chicago airtel dated September 2, 1983. (U)

Response from Technical Services Division (TSD),
Engineering Section, Electronic Analysis Unit:

In regard to the problems noted in making off-line telephone checks on the main telephone console, no attempt should be made to conduct these checks on main consoles; on-line checks should be made on all telephone lines connected to the console. (C)

Any telephone having active components should not be subjected to off-line high voltage tests. (C) (U)

Response from TSD, Operations Management Section,
Telecommunications Services Unit:

In regard to the uncertainty as to whether or not the Horizon System has remote maintenance capability, this matter should be resolved by Chicago Technically Trained Agents. If it is determined that the system has remote maintenance, the capability should be removed immediately. (C) (U)

With respect to the portable computer capability (for re-programming the Horizon), the specific capability of this unit should be identified, along with the reason for its being maintained at the West RA (i.e., is it there for use by the telephone company personnel [and FBI in the case of an emergency] or is it routinely utilized by the FBI to alter features and/or line assignments?) If the

Horizon is being modified (features or assignments) by FBI personnel, this procedure should be terminated. Only telephone company personnel are to alter the system. (C) (U)

With respect to the wiring from the Horizon to its associated instruments being exposed in the space below the West RA, Chicago Technically Trained Agents should, through contact with the telephone company, determine the costs which would be incurred to rectify this situation (i.e., to have all distribution wiring contained inside the RA's space). An attempt should also be made to determine the future tenant of the space below the RA. (C) (U)

With respect to multiple appearances of the service cable in the basement of the building, this situation represents a presently unavoidable vulnerability. However, as these are trunk lines, internal telephone conversations within the RA space should not be accessible for interception. (C) (U)

FROM: SAC, SPRINGFIELD (66F-189)

SUBJECT: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
SURVEYS; OFFICES OF [redacted]
[redacted]

Re Bureau teletype to Indianapolis, 1/13/84.

Being forwarded to Indianapolis, via Federal Express,
is the Chicago TSCM equipment as requested in retel:

- One PR 700B Receiver, SN 215, PN 00466122;
- One Non Linear Junction Detector, SN 402, NPN;
- One Scanlock MKV, SN 191210, PN 00532879;
- One Dektor Telephone Analyzer, SN 5204, NPN
(functioning but partially inoperative) (S) (U)

Springfield has completed five out of 12 TSCM surveys
but because of trial commitments of SA [redacted]
remainder cannot be completed until the latter part of February.
Equipment request will be submitted at that time. (S) (U)

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEYS
OFFICE OF [redacted]

The entire contents of this communication are classified confidential.

Re SI airtel to Bureau, 1/27/84.

Being returned to the Bureau for repairs are the following:

- 1 - PR 700 B Receiver, SN 215, PN 466122, Case PN 162739
- 1 - Dektor TA, SN 5204, PN 533086

For information of the Bureau, the PR 700 does not power up in that neither the scope nor frequency meter lights up. Additionally, several of the control knobs are broken. The on-line side of the Dektor TA malfunctions in that it gives incorrect meter readings.

80-805-375

Being returned to Chicago are the following items:

- 1 - Non Linear Junction Detector, SN 402, NPN
- 1 - Scan Lock MKV, SN 191210, PN 532879

For information of Chicago, Scan Lock not used at Indianapolis. Junction detector operated within normal limits.

Countermeasures

The entire contents of this communication are ~~classified~~ "CONFIDENTIAL".

PURPOSE: To identify field Technically Trained Agents (TTAs) for captioned training.

DETAILS: A two-week course in TSCM will be held at the FBI Academy.

Initially, the training dates were scheduled for two Technical Coordinators (TC) In-Services, one week long each, starting February 27 and April 9, 1984. However, both TCs In-Services have been cancelled. The Electronic Analysis Unit (EAU) has been offered ten slots in each of the above dates.

In view of this, the EAU will conduct the normal two-week TSCM training in two phases. The first phase will be one week in Telephony, commencing February 27, 1984, and the second phase will be on telephone analyzers, receivers, non-linear junction detectors and other TSCM equipment, starting April 9, 1984.

The following TTAs have been selected to attend captioned training course:

b7E

Dear Sir:

Reference your letter dated December 22, 1983.

On February 2 and 3, 1984, your

Indiana, was provided with a technical surveillance countermeasures survey by Special Agents of the Indianapolis Office of the Federal Bureau of Investigation.

b7E

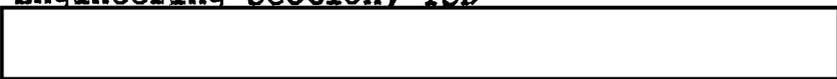

At the time of the survey, the space was free of any devices as it pertains to the telephone system and the audio spectrum. Additionally, a physical search of the space was made.

It is noted, however, that in view of the fact that a key to the space is in the possession of a person or persons outside of your employment, that a certain security risk does exist.

Please be assured of our continued cooperation in matters of our mutual concern.

Very truly yours,

John C. McGinley
Special Agent in Charge

COUNTERMEASURES

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY: DIRECTOR'S OFFICE, FBIHQ, FEBRUARY 27, 1984.

PURPOSE: To report results of TSCM survey conducted of Director's Office, FBIHQ.

DETAILS: On 2/27/84, personnel from the Electronic Analysis Unit conducted a TSCM survey of the Director's Office and adjacent conference room, FBIHQ.

The survey consisted of a nondestructive physical and electronic search, physical and electronic examination of the telephone instruments and lines serving the area and a search of the radio frequency spectrum.

No discrepancies were noted in the technical performance of the telephone system nor was there any indication of clandestine listening devices or radio frequency transmitters. Nothing was noted which would indicate any type of technical attack directed against this area.

The TSCM survey was conducted by SSA [redacted] and ET [redacted]

 (ATTENTION: ENGINEERING SECTION, TECHNICAL SERVICES DIVISION, SSA [redacted])

FROM: SAC, MILWAUKEE (66-882)

dy
 COUNTERMEASURES MATTER
 MADISON, WISCONSIN,
 RESIDENT AGENCY

This is to advise FBIHQ that a countermeasures sweep was conducted by SA [redacted] at the Madison Resident Agency. Equipment utilized was a Scanlock with Compuscan, VOM meter, and a complete physical search, as well as a complete inspection of all office telephone line appearances was conducted.

b6
b7C

No eavesdropping device or tap of a telephone was discovered.

For information of the Bureau, the following facts precipitated the immediate need for the countermeasures sweep:

SA [redacted] was advised on 3/12/84 by SRA [redacted] that there appeared to have been an entry made into the office space located directly below the Resident Agency. The office which appeared to have been entered was the BANKERS LIFE COMPANY at 6417 Odana Road, Madison, Wisconsin. SRA [redacted] advised that a [redacted] BANKERS LIFE, advised him the morning of 3/12/84 that during the evening of 3/9/84, that he had completely vacuumed the carpet in one of the rooms of this office space, which will be referred to as a conference-

46 MAY 9 1984

type room. Upon leaving the office that evening after the vacuuming was completed, [redacted] advised that as he usually does, he locked the office door and assured that all windows and doors were secure. [redacted] advised that on the morning of 3/10/84, Saturday, he again entered the office to do some work and had occasion to go into this conference room and noticed nothing unusual.

b6
b7C

[redacted] advised he then left the office but was aware that the [redacted] had also come to the office later during the morning on Saturday and when he left, he noticed nothing unusual in the conference room and secured the main office door. [redacted] further advised SRA [redacted] that the last known person to enter the office on Saturday was the [redacted] who had been later interviewed and stated that when she left the office that the main office door was locked and secured and also that she had occasion to be in the conference room and noticed nothing unusual.

b6
b7C

SRA [redacted] advised that on the morning of 3/12/84, [redacted] upon entering the office, had occasion to go into this conference room and noticed some debris, which appeared to be from the textured-typed ceiling tiles, was all over the carpet and that upon a closer look at the ceiling tiles, observed a couple of the tiles to have been moved. Because this space is directly below the Resident Agency, the Madison Resident Agency of the FBI was contacted. All individuals from this office advised that no items appeared to have been taken; however, when [redacted] entered the conference room, after noticing the debris on the floor, she also discovered that a window was open and the room was quite cold.

b6
b7C

[redacted] from the Madison Police Department, along with Special Agents [redacted] and SRA [redacted] examined this conference room and upon close inspection of the doors and windows could not determine any evidence of forcible-type entry. The window in question is of the type that has a screen and a crank out, mechanical-type window. This would make it virtually impossible to either have entered or left through the window by an individual, and a review of the sliding glass door revealed that it is secured both by a mechanical lock and a pin, which protrudes through both portions of the

b6
b7C

MI 66-882

sliding door, which was still intact. A logical conclusion was made that entry had to have occurred through the main office door, either by picking the lock, which consists of a key and knob lock and a separate deadbolt. No evidence was found of forcible entry or tampering with these locks.

SA [] observed numerous paper streamers which were in place on the ceiling as decorations for an office party and that a couple of the paper streamers had gotten wedged through the suspended supports of the ceiling and on top of the tiles which could have only occurred from the tile having been removed and later put in place, thereby trapping the paper streamers on top of the ceiling tile. The tiles that were affected in this fashion were in the far extreme southwest corner ceiling tile of the room and another tile along the western-most row of ceiling tiles in the room. [] advised that when the decorations were put up that in no way were any of the paper streamers trapped above the ceiling tiles in this fashion.

b6
b7C

It was then suspected that perhaps building management services had entered the office for a mechanical problem and as a result, the building manager, [] was interviewed by SRA [] and discovered that no personnel had been called or entered this office for any problem.

b6
b7C

While conducting a physical search, SA [] discovered a household AC electrical current junction box, which did not have a protective cover plate attached to it, and two red wire nuts for securing household wires were located on top of a ceiling tile directly below this junction box. A logical conclusion was formed that this type of situation could have easily provided electrical power to a DC transformer for a wireless microphone to be powered for an indefinite period of time.

b6
b7C

Based on the above facts, the following recommendations are being made and should be implemented as soon as possible in addition to the Resident Agency alarm system and should be made in the following fashion: Additional infrared sensors are recommended to be placed in the space above the ceiling tiles in the office directly below the Resident Agency in an

MI 66-882

attempt to detect any further attempt for entry into the ceiling space. In addition to this, a magnetic contact switch should be added to a trap door, which is in a common hallway which allows access to the attic space which is directly above the Resident Agency, as well as a magnetic contact in the basement on the door which allows access to the telephone frame room.

Because of the limited amount of countermeasures equipment available, it is recommended that a complete additional countermeasures sweep be performed as soon as equipment is available, which should include a Dektor telephone analyzer, a non-linear junction detector, a PR700 RF spectrum analyzer, as well as the Scanlock with Compuscan. A request will be made to the Chicago Division when this equipment is available and also assistance from one technical trained Agent to assist SA with the sweep.

b6
b7c

For information of the Bureau, as of 3/20/84, equipment has already been received for the additional alarm components and will be installed as soon as possible.

SUBJECT: TECHNICAL EQUIPMENT

Re: Phoenix airtel to San Francisco dated 4/17/84.

For information of the Bureau, San Francisco acquired, on a loan basis, from Phoenix, a Scanlock with Zero Case, model MKVB, S/N 191216, GPN 533183; and a compuscan, Model IA, SN 016, GNP 533183. However, the compuscan was damaged in transit. Its frequency counter will not display any change of frequencies.

Bureau is requested to repair above equipment and return to Phoenix upon completion.

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS

COUNTERMEASURES

REFERENCE: Memorandum of Section Chief Patrick L. Murray to [redacted] dated May 4, 1984.

b6
b7C

PURPOSE: To report the results of a physical and electronic search conducted in Room 9959B.

DETAILS: In response to referenced memorandum, which set forth details of an electronic device found in the office of Support Supervisor [redacted] a physical and an electronic search was conducted in Room 9959B, JEH Building on Friday, May 4, 1984. All the furniture in that office was checked thoroughly. No evidence of any electronic eavesdropping devices was found.

b6
b7C

The device found in that room appears to be a speaker from a headset. A comparison was made with the device in question and a speaker from a Radio Shack headset. Both speakers are of the same physical size and almost identical in appearance.

In addition, the device was x-rayed to determine if any electronic components were in it. The x-ray results were negative in this respect.

RECOMMENDATION: None. For information only.

Subject : COUNTERMEASURES MATTERS

ROUTE IN ENVELOPE

PURPOSE: To report on a technical inspection of a telephone for Capitol Police. (U)

DETAILS: On May 7, 1984, ET [redacted] Electronic Analysis Unit, conducted a technical inspection, [redacted] on a Western Electric Model 2500DM telephone, phone number listed on the instrument, 362-2666. The telephone was removed from [redacted]. It was reported by Capitol Police that room conversations were heard while in the on-hook position. It was found with the use of the modified Triplett 3400 meter amplifier that percussive sounds were present on the tip and ring lines. After it was disassemble, the sound was determined to be coming from the ringer assembly and no room audio could be heard. Percussive sounds are common in the ringer circuit. The telephone was returned to the Capitol Police on May 7, 1984. (U)

To : Mr. Bayse *was*

Date 7/5/84

From : R. W. Witzel

Subject : COUNTERMEASURES MATTERS

PURPOSE: To report the results of a technical surveillance countermeasures inspection (TSCM).

DETAILS: On June 25, 1984, ET [redacted] conducted a TSCM at the [redacted]

b6
b7C
b7E

The TSCM included a radio frequency spectrum check and a nondestructive physical search. During the physical search, the telephone was disconnected and all wires were removed and checked for room audio. The Medeco lock cylinder was installed [redacted]

b7E

No evidence of clandestine listening devices was found. At the end of the TSCM survey, the door was locked and only FBI personnel had keys to the room.

b7E

[redacted] attend training sessions at various times. It is being emphasized that the frequency of using this facility for training and/or conferences should be kept to a minimum as the technical integrity of the spaces used cannot be maintained or controlled.

RECOMMENDATION: That conference and/or training of a highly sensitive nature not be conducted at the [redacted]

FROM: SAC, COLUMBIA (66-74)

TECHNICAL SURVEILLANCE COUNTERMEASURES EQUIPMENT

Forwarded under separate cover, to the FBI Headquarters Electronic Analysis Unit, is one triplatt digital meter, Government property number 00438778.

For information, Electronic Analysis Unit, the above described digital meter had been modified to include an audio amplifier. The meter and amplifier functioned properly for a short period of time, after its receipt at Columbia, however, neither the meter nor amplifier currently function properly.

(168)

In addition, the Columbia Division has a need for a Dektor telephone analyzer to be utilized by the Columbia Division in technical surveillance countermeasure checks.

REQUEST OF THE BUREAU

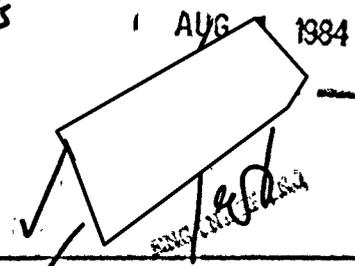

The Electronic Analysis Unit is requested to repair or replace the above described triplatt meter.

80-805-390

The Electronic Analysis Unit is requested to furnish Columbia with one Dektor telephone analyzer, which will be utilized to conduct security checks at the Columbia Division and promptly return to the Signal Analysis Unit.

ATTN OF

SAC CHICAGO (66-4418)

SUBJECT

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
WEST RESIDENT AGENCY - CHICAGO DIVISION

320

TO: DIRECTOR, FBI (80-805)
Attention: Technical Services Division
Engineering Section, Electronic
Analysis Unit

Re Bulet 1/25/84.

Contact was made with [redacted] Security Department, ILLINOIS BELL TELEPHONE COMPANY, Chicago, Illinois, regarding the Horizon Telephone System at the West Resident Agency (WRA). [redacted] advised that this system does not have remote maintenance capability. He stated that this system, if it malfunctions (i.e. power failures, voltage spikes or increased power usage) would cause a "trouble" indication at their central office. If this occurred, a repairman would then be sent to the WRA to correct the problem. [redacted] stated that remote maintenance to this system is not possible.

[redacted] stated that so far as Bureau personnel being able to re-program the Horizon System, this is also not possible. He stated for the system to be re-programmed, an ILLINOIS BELL TELEPHONE repairman with the necessary programming equipment would need to be called. [redacted] stated that the capabilities of the Horizon System were programmed at the time of installation and that any attempt to alter the program would probably damage its current program and would cause an indication of "trouble" at their central office.

80-805-390X

With respect to wiring from the Horizon being exposed in the space below the WRA, [redacted] stated that the telephone cable run was done in their normal procedure. He stated that if we wished to have it placed inside of conduit, that would be possible if we would run the conduit.

23 OCT 23 1984

Contact was made with the management of the building housing the WRA at Lisle, Illinois, regarding the installation of conduit to enclose the RA telephone lines. They advised JERDAN ELECTRIC COMPANY, 10S466 Windjammer Lane, Naperville, Illinois, 60565, handles all this type work in the building and direct contact should be made with them.

b6
b7C

b6
b7C

b6
b7C

CG 66-4418

JERDAN ELECTRIC COMPANY furnished estimates for installation of 3/4 inch EMT as follows:

Installation of 3/4 inch EMT from telephone line entry point into the building to entry point into the RA space to house 25 pair telephone cable - \$600.00.

After entry into the RA space, individual telephone lines are again rerouted under the floor to the 13 separate telephone stations. JERDAN ELECTRIC furnished an estimate of \$1375 to install conduit to each of these 13 locations, which includes the installation of the conduit from the entry point in the building to the RA space.

ILLINOIS BELL TELEPHONE COMPANY provided an estimate of \$328.00 to rerun all telephone lines in the conduit once installed.

Bureau is requested to advise if it is necessary to install conduit to each separate telephone station or if it is sufficient to install conduit for the 25 pair cable from where it enters the building to the entry point in the RA space.

It is noted in the event conduit is installed to each telephone station every time a telephone is relocated or a new telephone installed, the conduit will have to be moved or new conduit installed.

ADDENDUM: OPERATIONS MANAGEMENT SECTION (OMS), 9/21/84, WEP:pac

Chicago's request to provide direction concerning the installation of telephone conduit at the West Resident Agency has been reviewed by OMS personnel responsible for telecommunications. OMS concurs that funds be approved to have telephone cable enclosed in conduit from the building entry point to Resident Agency space (to house the 25 pair telephone cable) and continuing under the floor to each of the station instrument locations.

b6
b7C
b7E

Dear [redacted]

Reference is made of your verbal request through U. S. Capitol Police, Inspector [redacted] to conduct a technical assessment of the [redacted] and your letter dated July 23, 1984, confirming your request.

(Jed)

Acting on your request, on July 16, 1984, the FBI, with the assistance of other members of the Intelligence Community and U. S. Capitol Police officers, conducted a technical assessment of [redacted]

b7E

This survey was conducted to determine the feasibility of securing [redacted] for briefings of National Security issues, evaluating the vulnerability of this space to a technical penetration by hostile intelligence agencies.

80-805-392X

The tests were conducted by using a very low power radio frequency transmitter, placing it at various locations [redacted]

b7E

These tests indicated that [redacted] is susceptible to a technical attack by an adversary placing a low power radio frequency transmitter [redacted]

AUG 29 1984

A physical inspection of [redacted] revealed that the floor is raised approximately four feet towards the rear of the room away from the speaker's platform. The space underneath is hollow which provides an easy access for placing a clandestine listening device and which can be connected [redacted] electrical power. This inspection also revealed that there are two places which provide access to the hollow space underneath the main floor through two openings with ladders that lead up from the first floor. All this makes it very difficult to secure the area on a temporary basis and on short notice.

b7E

[redacted] also has a public address system with the amplifiers located in the attic [redacted] This provides an adversary with the capability of monitoring briefings [redacted] by using the speakers as surveillance devices.

b7E

~~SECRET~~

[redacted]

b6
b7C
b7E

A physical inspection was also conducted in the attic [redacted]. Although it was found that the doors leading to the space directly above [redacted] were locked, the locks can be bypassed with very little effort, allowing an individual to enter and hear whatever briefings are being held in [redacted]. There is also an opening in the attic that leads down to offices occupied by members of the Press. This opening should be sealed at the earliest time possible.

In addition, the physical inspection determined that offices of the Press [redacted] providing members of the Press easy means to monitor any closed sessions [redacted].

b6
b7C

Based on the observations noted, [redacted] cannot be secured on a short notice. However, if sensitive issues or discussions on sensitive compartmented information are to be held in [redacted] the following recommendations are being made which will provide a limited degree of security:

b7E

1. Post U. S. Capitol Police officers in the attic by the doors leading to the area directly above [redacted].

b7E

2. Re-key all doors to [redacted] providing keys to a limited number of personnel.

3. Permanently relocate all Press services to an area not [redacted] for physical inspection prior to and during briefings.

b7E

4. Post U. S. Capitol Police officers on all doors leading to [redacted].

5. Disconnect the public address system.

6. Trace all wires, telephone and public address system, to ensure they are not being used with clandestine listening devices. Also, disconnect all telephones within [redacted].

b7E

7. Conduct a very thorough physical inspection prior to each briefing.

8. Provide, at a minimum, a 24-hour notice prior to holding any sensitive briefings to allow time to conduct a thorough physical check.

9. Provide a radio frequency coverage of [redacted] during briefings, using the proposed in-place radio frequency monitoring system. This would require the installation of an antenna within this space.

b7E

- 2 -

~~SECRET~~

~~SECRET~~

[Redacted]

b6
b7C

Taking the above steps prior to discussing sensitive material will not guarantee a fully secured area, but will provide a limited amount of security on a temporary basis.

To fully secure [Redacted] there are required steps which have to be taken to bring the area in compliance with the U. S. Intelligence Community Physical Security Standards for Sensitive Compartmented Information Facilities.

b7E

We will be happy to discuss the required standards, if you so desire.

If we can be of further assistance, please call on us.

Sincerely yours,

[Redacted Signature]

WEST RESIDENT AGENCY - CHICAGO DIVISION

MF

The entire contents of this communication are classified "~~CONFIDENTIAL.~~"

Reference your letter dated August 10, 1984, titled as caption.

Referenced letter requested direction on installing conduit for each separate telephone station in the West Resident Agency (RA).

Your request was reviewed by the Engineering and Operations Management Sections, Technical Services Division who concur that all exposed telephone lines not inside FBI space should be run in conduit. Operations Management Section has approved funds to have telephone cable enclosed in conduit from the building entry point to the RA space and continuing under the floor to each of the station instrument locations.

To : Mr. Bayse *wab*

From : R. W. Witzel *RWW/wab*

Date 10/10/84

Subject : TSCM MATTERS

COUNTER MEASURES

PURPOSE: To report the results of a TSCM check at the Attorney General's residence.

DETAILS: On October 2, 1984, ET [redacted] and Special Agents [redacted] from the Washington Field Office, conducted a TSCM [redacted]

b6
b7C
b7E

The TSCM included a radio frequency search, a check of all telephones, telephone lines and a non-destructive physical search. No evidence of clandestine listening devices or tampering with the telephones or telephone lines was found at the time of the TSCM.

RECOMMENDATION: None. For information only.

TECHNICAL SURVEILLANCE
COUNTERMEASURES (TSCM) IN-SERVICE

Re telephone conversation between SA [redacted]
and SA [redacted] 11/9/84.

As discussed in referenced conversation, Pittsburgh
requests that SA [redacted] (EOD: 6/21/71) be considered
for the next TSCM in-service. SA [redacted] has been a technical
support Agent since May, 1980, and is involved with "sound"
work from 50% to 75% of the time.

b7E

Dear [redacted]

Pursuant to your request for a security screen, on November 5, 1984, representatives from this organization conducted an audio countermeasures sweep of the office space and telephone instruments [redacted]

b7E

The sweep included on-line and off-line tests of all trunk lines and telephone instruments in the office, a frequency spectrum search for radio transmitters and a physical search. No devices were found.

I must emphasize, however, that the sweep is not a guarantee of absolute security and that caution must still be exercised when discussing sensitive matters, especially when the telephone system is used.

If we may be of any further assistance to you, please do not hesitate to contact me.

Sincerely,

Norman A. Ziggrossi
Special Agent in Charge

[redacted] 80-801
 TECHNICAL SURVEILLANCE COUNTERMEASURE SURVEY (TSCM)
 ROCKFORD, ILLINOIS

For the information of FBIHQ, on December 11, 1984, Special Agent (SA) [redacted] and SA [redacted] Technically Trained Agents (TTA) of the Chicago Division were in the Rockford RA conducting a countermeasure survey. The SRA requested the TTA's [redacted]

[redacted] agents on matters of extreme sensitivity. The manual requirements were explained to the S.R.A. however, the TTA's agreed to conduct a basic sweep of the three (3) small offices utilizing the scanlock and conducted a complete examination of the telephones (1 model 2500 DM and 2 model 1500 MM's).

[redacted] No problems or discrepancies were encountered while performing the TSCM survey however, it was determined that the building maintenance employees have access to [redacted]

The security benefits of a T.S.C.M. were explained to [redacted] at the conclusion of the sweep. No recommendations were made to [redacted]

The entire contents of this memorandum are classified

~~"SECRET"~~

det. & handled separately

REFERENCE: Attached letter from Southwest Research Institute (SWRI) dated January 17, 1985.

WJ/A
ST
[redacted]

PURPOSE: To request authorization for Unit Chief [redacted] and SSA [redacted] to travel to San Antonio, Texas on February 11, 1985.

b6
b7C

DETAILS: SWRI is under contract with the FBI to provide an In-Place Monitoring System (IPMS) for ERF as specified in contract number 115819. SWRI is also under contract with the FBI on a MONOPOLEE project.

SSAs [redacted] will travel to San Antonio on February 11, 1985, to review the software for the IPMS and talk to SWRI personnel on the MONOPOLEE project and on tape recorder detectors.

b6
b7C

There is a growing need for tape recorder detectors. SWRI has designed four prototype systems which have been used by Technical Services Division personnel. The Intelligence Division and several Field Divisions have requested these detectors. At the present time, there are only four SWRI detectors in the inventory. SSAs [redacted] will discuss possible changes to the present SWRI body recorder detectors (BODETs). The Engineering Section will procure 10 body recorder detectors for field deployment.

DETAILS: On 2/13/85, Electronics Technician [redacted] checked the RICOH FT 4060 copying machine in room 4997 and the Royal 130R in room 5999 using a Tektronix 492P spectrum analyzer with a whip antenna and a LPA550 log periodic antenna. The RICOH FT 4060 radiated a signal at 6 MHz when the antenna is two feet or closer. The signal could not be picked up with the Royal 130R. No signals were observed at a distance of ten feet from any machine.

DETAILS: On 2/13/85, Electronics Technician [redacted] completed a TSCM of the Director's Office and conference room.

b6
b7C

The TSCM included a radio frequency spectrum check and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was also conducted. No evidence of clandestine listening devices or tampering with the telephones was found.

DETAILS: On 1/25-29/85, a transponder device was tested by the Electronic Analysis Unit in an effort to determine if its presence could be detected employing passive electronic search techniques, and if the transponder while in the field of an appropriate signal would radiate radio frequency (RF) energy in a manner which identified its presence.

Each test conducted is briefly outlined below. The results of these tests indicate that passive search techniques are ineffective. However, once the transponder is activated by RF energy within its band-pass, it re-radiates a very characteristic and easily identifiable modulated signal.

~~SECRET~~

Memorandum from R. W. Witzel to Mr. Bayse
Re: Technical Surveillance Countermeasures (TSCM) Matters/
Test of Transponder Tag

The first test consisted of a general search of the electromagnetic spectrum from 20 Hz to 1.8 GHz using Hewlett-Packard 3585A and Tektronix 492P spectrum analyzers. Long wire and whip antennas were used. No signals were received which could be attributed to the transponder.

The second test was a passive search of the electromagnetic spectrum below 100 KHz using the Hewlett-Packard 3585A and a flat copper "antenna", (a 2½" by 8" section of printed circuit board stock). Signals attributable to the transponder were received at 27 KHz and 54 KHz. The signal at 54 KHz carried sidebands at ± 840 Hz. When the transponder was placed directly on the "antenna" the received signal was 10 db above the noise. When the transponder was placed four inches to the side of the "antenna", the signal was not discernible from the noise. Although this technique will indicate the presence of a transponder, the device to antenna proximity requirements preclude it as a viable search procedure.

The third test consisted of a search of the RF spectrum from 100 MHz to 2.0 GHz using a Tektronic 492P spectrum analyzer and a 0 dbm signal from a Fluke 6071A signal generator that was being hand-swept from 50 MHz to 1.0 GHz (its upper limit). Both the generator and analyzer used whip antennas. The purpose of the test was to search for harmonics of the illuminating signal. None were found which could be attributed to the transponder.

The fourth test consisted of a narrow band (span = 50 KHz, resolution band width = 10 KHz) search with the Tektronix 492P analyzer in the frequency range of 600 MHz to 1.0 GHz using the Fluke 6071A as a hand-tuned tracking generator, (set at 0 dbm). Both generator and analyzer used whip antennas. They were vertically oriented, and placed approximately 30 inches apart. The transponder was horizontally oriented on a non-metallic surface at a distance of approximately 30 inches from either antenna. Within the 800 MHz to 1.0 GHz band, a distinctive pattern of sidebands was observed on the spectrum analyzer which were directly attributed to the transponder. Peak sideband amplitude was observed at 900 MHz.

(CONTINUED - OVER)

~~SECRET~~

~~SECRET~~

Memorandum from R. W. Witzel to Mr. Bayse
Re: Technical Surveillance Countermeasures (TSCM) Matters/
Test of Transponder Tag

The fifth test was essentially the same as test four except the transponder was vertically oriented and placed in a 36-inch per side triangle with the generator and analyzer antennas. A Hewlett-Packard 8660C signal generator was used. The frequency range was extended to 1.8 GHz. The results were the same as in test four.

Test four and five indicate that a transponder can be located within a specific area with relative ease. Using high-gain, directional antennas located outside each other's beam width, using higher radiated power, and employing signal averaging techniques the viable search area can probably be extended to a range of 10 meters. Although this amount of range is not necessary to perform an effective search, it is indicative of the ease at which it can be discovered once its operating parameters are known.

March 18, 1985

~~BY LIAISON~~

[redacted]

Dear [redacted]

0
COUNTER MEASURES

Reference is made to your letter sent to [redacted] dated June 25, 1984, and his response to you by letter, dated July 3, 1984.

In response to your request, on July 16, 1984, the FBI, with the assistance of other member agencies of the United States Intelligence Community and the United States Capitol Police, conducted a technical and physical security evaluation of [redacted]. We undertook this evaluation to determine [redacted] vulnerability to technical and physical security penetration by adversaries, and to make security recommendations which would assist you in bringing [redacted] up to standards for the discussion of ~~Top Secret Sensitive Compartmented Information~~.

The security evaluation was divided into five principal areas of concern: radio frequency transmissions, concealed magnetic recordings, wire communications (telephone and intercommunications systems), power distribution systems and physical security.

Based upon this security evaluation, we offer the following observations concerning technical and physical security weaknesses.

Audio information can easily be recovered from within [redacted] using easily concealed small transmitting and recording devices similar to those used by hostile intelligence services. The unprotected telephones and extensive intercommunications systems now serving [redacted] provide

[redacted]
numerous opportunities for a technical penetration.

In addition, we observed that [redacted] main floor and Gallery are elevated several feet which provides virtually unprotected areas for either a physical and/or technical penetration. The area above [redacted] has minimal physical protection and poses the same security weaknesses as within [redacted]

We further believe that occupancy of the offices immediately contiguous to [redacted] by members of the Press or other persons not possessing appropriate security clearances could pose a significant threat to the integrity of [redacted]

Each of the technical and physical security findings cited above poses a significant threat to any discussion of classified material in [redacted]. The present physical environment of [redacted] does not meet the physical and technical security standards, which have been established by the U. S. Intelligence Community for the discussion and storage of ~~Sensitive Compartmented Information~~.

We are enclosing for your guidance a document which will assist you in determining protective measures which should be employed to protect ~~Sensitive Compartmented Information~~.

The technical and physical security measures delineated in the attachment are the established standards for the protection of this information. Although the security measures are complete in scope, they are in outline form in that specific construction details and installation criteria have been omitted in the interest of brevity. Full and complete construction data may be obtained by contacting Supervisory Special Agent [redacted] [redacted] Technical Services Division, telephone number (703) 550-7931, extension 3145.

DETAILS: On 4/2/85, Electronics Technician [redacted] FBI Headquarters, and SA [redacted] Washington Field, conducted a TSCM of the [redacted]

The TSCM included a radio frequency spectrum check, a check of the telephones and telephone lines, and a nondestructive physical search. A contemporaneous monitoring of the meeting was conducted. No evidence of clandestine listening devices or tampering with the telephones was found.

On same date, [redacted] to the [redacted] was advised of the outcome of the TSCM.

JUN 7 1985 *SW*
~~68 JUN 3 1985~~

~~CONFIDENTIAL~~

Memorandum from R. W. Witzel to Mr. Bayse
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING

DETAILS: During a Technical Coordinators (TCs) In-Service held at Quantico in January 1985, several TCs requested that regional TSCM update In-Services be held by the Engineering Section. Several of these TCs have not received any update training in TSCM since they attended the Phase I TSCM In-Service, some of which received their initial training in the the spring of 1981.

At the present time, the lack of TSCM equipment in the field offices makes it difficult for TCs and other Technically Trained Agents to be familiar and proficient with the current TSCM equipment.

In FY 1984, three Phase I TSCM In-Services were held outside of Quantico, two in Oak Ridge, Tennessee, and one in Pensacola, Florida. The use of the facilities at these two areas was at no cost to the Government.

There are no vacancies at the FBI Academy to hold these TSCM update In-Services and Engineering Section personnel are currently inquiring with Oak Ridge, Tennessee, personnel and several TCs in the field offices for facilities to be used for this training.

The In-Services will be one week in duration and ten TTAs per session.

The estimated cost for Engineering Section personnel will be approximately \$500 travel, \$750 per diem and \$400 for two rental cars (if no public transportation is available to and from the training facility), totaling \$1,650 per session.

The location(s) for training and names of field TTAs will be provided upon approval for this training.

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

During the period of February 19, through March 11, 1985. Technical Services Division personnel Electronics Technician [redacted] and Supervisory Special Agent [redacted] conducted several TSCM surveys in your division with the assistance of Special Agents [redacted] of your office.

b6
b7C

The TSCM surveys consisted of searching the radio frequency (RF) spectrum for unauthorized RF transmissions, physically and electronically checking selected telephone instruments throughout the field office, tracing of all the trunk lines, both commercial and FTS, coming into FBI space, including the Mayaguez and St. Thomas Resident Agencies (RAs), physically checking the perimeter of office space and the alarm systems in both RAs.

No evidence of unauthorized transmitters, tampering with the telephones or telephone lines was found during the TSCM surveys.

80-805-416X

Most of the San Juan Field Office trunk lines are on Cable #35, Pairs 2551 through 2600 which is supposed to be a dedicated service from the telephone company central office. Although above pairs do not have any other appearances in the Federal Building, most of the telephone extensions used in your field office appear in one or more of the four telephone wire

~~CONFIDENTIAL~~

MAILED 13
MAY 16 1985
FBI
97-AUG 02 1985

~~CONFIDENTIAL~~

Letter to SAC, San Juan dated 5/16/85
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

closets located in the 5th floor outside FBI controlled space. In tracing other trunk lines assigned to your office, including FTS and [redacted] it was determined that they also appear in the telephone wire closets located outside your office and have appearances in the basement where they are connected to Cable #35 which services the entire Federal Building. Also, according to SAs [redacted], they have been advised by [redacted] telephone company repairman, that the possibility exists that Cable #35 also appears at the Pan Am Building.

b6
b7C
b7E

It was also noted that one of the telephone closets had a wire wrapped around the inside and outside door knobs, preventing the door from being locked. This could have been done by one of the subcontractors working on office telephones in the 5th floor.

In tracing the office trunk lines, it was found that in one occasion, one trunk line appeared in different pairs on the 66 block which has the trunk lines connecting with the electronic switch. This problem was checked by [redacted] and the problem was corrected the following day.

b6
b7C

During TSD's personnel stay at San Juan, the office experienced several problems with the electronic switch, ITT TD 100. The office telephone console would fail to function after connecting an outside call to another trunk line. The fix to this problem was done by unplugging the two trunk line cards associated with the telephone call. However, this method would create more problems or the console would fail to work again for sometime. [redacted] was apprised of the problem with the console. [redacted] that the current office telephone switch was not equipped to conduct "teleconferencing calls". According to him, incoming calls cannot be transferred out without the call being transferred to an inside extension first. He also advised that office telephone operators have been taking out trunk line cards and turning off the console to correct the problem, and this causes more problems. [redacted] called the telephone company in an attempt to have telephone company personnel come to the FBI Field Office and provide more training to the telephone operator on the use of the console. ITT Trained personnel were unable to provide any assistance to the San Juan Office telephone operators during that time because of manpower restraints.

b6
b7C

- 2 -

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

Letter to SAC, San Juan dated 5/16/85
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

[redacted] was also asked why several of the FBI trunk lines do not service the office through Pairs 2551-2600. Instead, other trunk lines come into the building on other pairs of Cable #35. He advised that when asking for additional trunk lines for the FBI office that telephone company personnel should be advised that the service should be connected to any of the unused Pairs 2551-2600 of Cable #35.

b6
b7C

As you are aware, your office added two FTS lines recently. TSD personnel encountered problems in identifying FTS telephone lines 753-2855 and 2860 by the use of dialing identifier #124. When [redacted] was advised of this problem, he was also unable to identify the lines. [redacted] called the telephone company marketing office and was advised that these two lines are not in "hunting" with the other FBI FTS lines and added that according to the telephone company records, the use of these FTS lines is limited to calling the United States and St. Thomas.

b6
b7C

On the same day, February 28, 1985, [redacted] OSM, and [redacted] AOSM/Communications were advised that the FTS lines, 753-2855 and 2860, were not in "hunting" with the other FBI FTS telephone numbers in the office and that although there were several spare pairs on Cable #35, between Pairs 2551 and 2600, several trunk lines, including [redacted] numbers came on other pairs with appearances in the basement. It is noted that although several telephone lines were not on the dedicated pairs, at the present time, the only difference is that these lines have appearances in the basement of the Federal Building. Service to FBI telephone instruments of most, if not all, is done through the telephone closets located outside FBI office space.

b6
b7C
b7E

Both [redacted] advised SSA [redacted] that they have had no previous training on telephones, telephone systems or services associated with telephones. They are not even familiar with dedicated Cable #35, Pairs 2551-2600. [redacted] stated that upon a request and authorization for telephone service, she calls the marketing office of the telephone company and orders the requested service. She stated that the telephone company in turn, subcontracts most of the services to one of several local contractors. Once the service is effected and the subcontractors leave, she does not see them again. She added that recently every order for telephone service is being done by different subcontracted personnel.

b6
b7C

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

Letter to SAC, San Juan dated 5/16/85
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

On March 1, 1985, a TSCM survey was conducted of the Mayaguez RA. The alarm system was checked for its proper operation. The alarm system functioned properly when it was set off intentionally and the CCTV system was also operating.

The telephone lines to the RA appear in an adjacent vacant office. The lines run along the baseboard in that office and into the RA office space. This problem was reported on a previous TSCM survey conducted by the same TSD personnel.

On March 4 and 5, 1985, a TSCM survey was conducted of the office space of the St. Thomas RA. Two problems were found during the TSCM survey, 1. the alarm circuit to the local police did not function and 2. the focal length of the lens on the camera located outside the RA is too large. People standing at the RA door can only be seen from the waist down.

SA [redacted] and the Electronics Technician [redacted] were advised of these problems.

b6
b7C

In addition to conducting TSCM surveys at FBI space, per your request, limited TSCM surveys were conducted at [redacted]

b7E

[redacted]

It should be noted that the TSCM surveys conducted for [redacted] on March 7, 1985 were limited to checking the telephones, telephone lines and to an RF search. At the condominium, telephones were physically checked in [redacted]

b7E

[redacted] All the telephone lines were checked for on-hook audio at the 66 block located in the small room next to [redacted]. Due to the number of areas asked to be checked at [redacted] and time constraints, it was not feasible to conduct a reasonable physical search.

At [redacted] was afforded a physical check of the telephone lines and instruments and a radio frequency search. [redacted] was also checked with a non-linear junction detector. The telephone lines at the [redacted] were checked at the electronic switch

b7E

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

Letter to SAC, San Juan dated 5/16/85
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

for on-hook audio. In checking telephone lines appearing on a 66 block in [redacted] several extension numbers and an outside line appeared at this block. [redacted] [redacted] was made aware of these lines.

b6
b7C
b7E

After the work was terminated in [redacted] [redacted] should take no more than one hour to check. [redacted] was advised by SSA [redacted] that the Bureau had planned to spend approximately two days at [redacted]. He seemed surprised that it would take so long to do a TSCM survey at [redacted]. [redacted] He forcefully stated that if we had to take that long to go ahead and take the time. However, he continued by subtly indicating that the work should be finished that evening since we did not have to trace the telephone lines. The telephone lines in the [redacted] were being serviced by a telephone switch located at the San Cristobal Fort, approximately two miles away. From there the telephone service is through microwave to the telephone company in Santurce. [redacted]

b6
b7C
b7E

[redacted] Detail, were present during the entire TSCM surveys at both the condominium and at [redacted]. At the conclusion of the TSCM surveys, [redacted] was informed that the TSCM survey had been very limited and that a thorough check would take weeks if not a month to conduct. He seemed very pleased that we had acted on their request for a TSCM survey and added that he was fully satisfied with the work we had performed. He requested that a list be made available to him of places for TSCM training for Puerto Rico Police officers and of company names from which they could purchase TSCM equipment. Enclosed is a list of companies that sells TSCM equipment and of some that provide TSCM training.

On 3/11/85, a TSCM survey was conducted [redacted] [redacted] office space. No evidence of any electronic eavesdropping or tampering with the telephone/telephone lines was noted at the time of the survey.

b7E

All the telephone line appearance information for your office, Mayaguez RA, and Saint Thomas RA are attached.

The following recommendations are being made:

1. Ensure that Cable #35 is dedicated from the Telephone Company Central Office to your office and that no appearance exists at the Pan Am.

- 5 -

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

Letter to SAC, San Juan dated 5/16/85
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

2. Installation of the new telephone system in your office should have all appearances and wire closets in FBI controlled space.

3. Have slab to slab walls installed in the latest addition of your office space that has

b7E

4. Disconnect all non-paging speakers not associated with the internal paging system located in the office space.

5. Have all your FTS lines put on rotary or as stated "on hunting."

b6
b7C

6. Replace the lens on the camera to the CCTV located outside the St. Thomas Resident Agency.

7. Repair the alarm system at the St. Thomas Resident Agency so that it will alarm at the local Police Department.

8. Telephone lines to the Mayaguez RA should be rerouted so that the telephone lines do not appear in the adjacent building or any other office in the building.

9. Submit the name of a Technically Trained Agent for TSCM training, August 26 - September 6, 1985.

TECHNICAL SURVEILLANCE
COUNTERMEASURES MATTERS (TSCM)

All markings, notations and items of information contained in this communication are classified "~~Confidential~~" unless otherwise noted.

Re letter from FBIHQ, dated 3/22/85, advising of request for a sweep for [redacted] on 4/10/85.

Attached is a copy of a ~~confidential~~ letter regarding that sweep, which was sent to [redacted]

b7E

On 4/10/85, WFO TTAs [redacted] (TSCM trained) conducted an audio countermeasures sweep at [redacted]

b6
b7C

[redacted] No devices were found.

The sweep consisted of a search of the rf spectrum using the PR700A receiver, on line and off line testing of the WECO AB554 single line instrument (Sta. A., CO/PBX line 472-1792) using the modified Triplet 3400 digital multimeter, and a non-destructive physical search of the space, fixtures and furnishings.

~~CONFIDENTIAL~~

For information of the Bureau, [redacted] contact at GSA for the above sweep, hinted to [redacted] that she would like the GSA facilities under her charge to be swept by the Bureau once a year. She was advised the Bureau does not schedule routine TSCM surveys for other agencies and that they are normally performed when specific facts and circumstances indicate a sweep would be prudent. On 4/23/85, she telephonically contacted SA [redacted] and advised GSA has additional sweeps to be performed. The above policy was reiterated and she was advised to submit requests for the additional sweeps to FBIHQ.

b6
b7c

In regard to the above, several agencies assume the FBI is responsible for conducting routine TSCM surveys of their facilities and this is becoming a problem for WFO. While WFO stands ready to respond to situations where facts and circumstances indicate a sweep would be prudent, it does not have the manpower or equipment to respond to run-of-the-mill requests. A policy setting forth the conditions for Bureau involvement needs to be established and adhered to.

TO: DIRECTOR, FBI (80-805) (ATTN: SSA [redacted] EAU, TSD)

FROM: SAC, WFO (66-5539)

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS

Retelcall from SA [redacted] EAU, to SA [redacted] WFO, on 4/23/85, requesting assistance with a sweep of the office suite used by [redacted]

Attached are two copies of a letter sent to [redacted] regarding that sweep.

On 4/25/85, TTAs [redacted] (CG), [redacted] (PX), [redacted] and [redacted] (WFO), and [redacted] (FBIHQ), conducted the sweep.

It included an RF search using the PR700B and Scanlock receivers, a check of the telephone lines at the frame room using the modified Triplet 3400 DVOM and disassembly and physical inspection of all forty (40) telephone instruments located inside the suite, and a non-destructive physical search of the spaces, fixtures and furnishings using the non-linear junction detector and the Lixi Scope. A separate sweep of [redacted] was conducted 4/26/85 by SAs [redacted]

No devices were found.

80-805-418

One telephone instrument was found to be malfunctioning. It is a [redacted] "Call Director" located in a caucus room adjacent to the conference room; it would not pick up central office line 523-7917. The problem was isolated to the instrument

as the line was functional between the key telephone unit and the instrument. Physical examination of the set's internal components found a burned capacitor on the circuit board, but it is not known if this caused the problem because the other line into the set, 523-7918, worked properly.

FBIHQ is reminded that EAU was conducting a refresher TSCM course at Oak Ridge, Tennessee, during the week 4/22-26/85, and had borrowed WFO's Dektor Telephone Analyzer, PR700A, and Scanlock receivers and non-linear junction detector for that school. As a result, the only pieces of telephone test gear available at WFO and FBIHQ were the Triplet 3400 DVOM and the prototype Computerized Telephone Analyzer (CTA). The Triplet DVOM was used in the telephone closet to check all appearances and SA [redacted] used the CTA on [redacted]. The PR700B and Scanlock receivers and non-linear junction detector were provided by SAs [redacted] who happened to be at Newington doing sweeps at that facility.

b7E

Dear 

By this letter I am reporting the findings of the audio countermeasures survey conducted in  by Special Agents of the FBI on April 25, 1985.

No devices or evidence of wiretapping or electronic eavesdropping were found. The survey encompassed 

b7E

 It included a sweep for surreptitious radio frequency devices, a check of all telephone instruments and lines and a non-destructive physical search of the offices' spaces, fixtures and furnishings.

One telephone instrument was found to be malfunctioning. The Western Electric 2872 AZM "Call Director" in the caucus room adjacent to the conference room would not pick up line 523-7917. The problem is isolated to the instrument as the line is operational from the key telephone unit in the telephone closet to the set.

I must caution you that even though our sweep did not find anything out of the ordinary, it does not guarantee the security of the offices involved or, more particularly, your telephones. It merely means that nothing was found at the time it was performed and that discretion and caution must always be exercised when privileged or classified information is being discussed.

If my office can be of any further assistance to you with this matter, please do not hesitate to contact me.

Sincerely,

Norman A. Zigrossi
Special Agent in Charge

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS

Re Alexandria teletype to WFO, 5/16/85, requesting sweep
of [redacted]

For information EAU, retel advised a vehicle tracking
device was found attached to [redacted] and set forth lead
to conduct sweep of [redacted]

Arrangements were made with [redacted]
[redacted] to conduct sweep 5/22/85. When WFO personnel arrived at
[redacted] conduct sweep, [redacted]

[redacted] did not know why the change but surmised it
resulted from discussions between [redacted]

[redacted] initiated the request for the sweep
of [redacted] when the tracking device was found and
that he [redacted] had relayed the request to Alexandria SA [redacted]
[redacted] who was investigating the matter. WFO complied with the
requested change.

- ② - Bureau i-TSD-ES, EMU, ED
- 2 - Alexandria (62A-854)

b7E

b6
b7C
b7E

On 5/23/85, SA [redacted] WFO, contacted SA [redacted] to determine if the WFO sweep satisfied retel lead. SA [redacted] advised [redacted] initiated the request and retel was merely a relay of that request and not an investigative lead. So far as Alexandria is concerned the change [redacted] was its prerogative.

b6
b7C
b7E

On 5/28/85, [redacted] recontacted SA [redacted] and requested the sweep of [redacted] be reinstated and, additionally, three others needed to be surveyed. [redacted] did not know why [redacted] wanted the sweep reinstated but felt the [redacted] incident may have sparked the imaginations of certain [redacted]

b6
b7C
b7E

He was apprised WFO provides an investigative response when specific facts or events or circumstances indicate a wiretap or other illegal eavesdropping device is being used or when national security matters are involved and that it does not routinely perform countermeasures surveys for other agencies. He was advised [redacted] request did not require an investigative response considering the lack of any specific evidence of a wiretap and the indecisiveness about [redacted] office. He was advised, however, to submit a written request to TSD, FBIHQ, for approval and if approved, WFO would conduct the sweeps when work schedules permitted. [redacted] concurred [redacted] request did not require an investigative response and said he would advise his superiors about the procedures for requesting the sweep. Later that day he called back and said the sweep would not be needed.

b6
b7C
b7E

On 5/29/85, [redacted] Facilities and Building Services Branch, contacted SA [redacted] and again requested the sweep of [redacted] be reinstated. He was advised the same as [redacted]

b6
b7C
b7E

Concerning the sweep, all telephone instruments and lines appearing in the office of the Acting Director, the office of the Special Assistant to the Acting Director and the reception room were tested with the Dektor Telephone Analyzer. The telephone instruments included one (1) WECO 2831 CM, four (4) WECO 2630 "Call Directors" and one (1) WECO 2830. The lines tested included 632-4724, 632-4725, 632-4747, 632-6100, 632-6101 and 632-6102. Also, the appearances of the involved lines were physically examined in the telephone closet and at the main distribution frame.

Additionally, an rf sweep was conducted using the PR700A receiver and a physical search was made of the offices' fixtures and furnishings using the non-linear junction detector.

WFO 66-5539

No devices or evidence of wiretaps or other listening devices were found.

WFO personnel who performed the sweep were TTAs [redacted]
[redacted] (TSCM trained).

MI []

b3
b7E

This rescheduling is necessary due to the following factors:

SA [] is Milwaukee's only PIC and as a consequence, every effort is made to keep his absences from the Division to an absolute minimum;

b6
b7C

Milwaukee is scheduled for Inspection 9/9-20/85 and it is preferable for SA [] to be present;

b6
b7C

Two of the proposed training seminars are scheduled for the same time (8/19-23/85);

Approval was granted in 5/85 for SA [] to take annual leave 8/5-16/85 and based on that approval, SA [] negotiated visitation with his minor children during that period.

TECHNICAL SURVEILLANCE
COUNTERMEASURES (TSCM) TRAINING

WFO's TSCM survey requirements have increased considerably in the recent past and we are in need of additional countermeasures trained technical personnel to handle this increased tasking.

It is requested WFO be provided two (2) slots in the next Basic TSCM class.

The agents to be trained are:

Memorandum to Mr. Bayse from S. A. Killion
Re: Request for Private Lines for Technical Surveillance
Countermeasures (TSCM) Laboratory Use

The TSCM Laboratory requires that an additional TRW Cinch Super Mod 25 connector block be installed on the south wall of Room 1411, Engineering Research Facility (ERF), Newington, Virginia, for access by the Electronics Technicians. The connector block should be paralleled with the existing block in Room 1411. Point of contact for the above work is Electronics Technician [REDACTED] ERF, Newington, Virginia, Extension 3154.

18 TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING
 IN-SERVICE/PHASE II - FBI ACADEMY, QUANTICO, VIRGINIA
 16 SEPTEMBER 9 - OCTOBER 4, 1985

FOR THE INFORMATION OF RECEIVING OFFICES, THE TECHNICAL
 14 SERVICES DIVISION (TSD) HAS SCHEDULED 2 TWO-WEEK TSCM PHASE II
 TRAINING SESSIONS IN ORDER TO PROVIDE ATTENDEES WITH THE FOL-
 12 LOWING SUBJECTS: CONVENTIONAL KEY SYSTEMS, COMKEY SYSTEMS,
 HYBRID KEY SYSTEMS, ELECTRONIC PRIVATE BRANCH EXCHANGES, (EPBXS)
 10 HYBRID EPBX KEY SYSTEMS, PRACTICAL EXERCISES, RADIO FREQUENCY
 RECEIVERS, TELEPHONE AND SPECTRUM ANALYZERS, NON-LINEAR
 8 JUNCTION DETECTORS AND OTHER TSCM MISCELLANEOUS EQUIPMENT.

THESE TRAINING SESSIONS HAVE BEEN SCHEDULED AS A RESULT
 6 OF SEVERAL REQUESTS FROM FIELD OFFICES AND FROM TECHNICALLY
 TRAINED AGENTS (TTAS) AT IN-SERVICES FOR ENHANCED TSCM
 4 TRAINING AND TO PROVIDE ATTENDEES WITH SOME KNOWLEDGE ON
 COMPUTER BASED TELEPHONE SWITCHES AND ITS ASSOCIATED EQUIPMENT.
 2 IN ADDITION, A LARGE NUMBER OF FIELD OFFICES ARE BEING EQUIPPED
 WITH NEW EPBXS. CURRENT BUREAU POLICY REQUIRES THAT TSCM

Counter measures

All markings, notations and items of information contained in this communication are classified "~~Confidential~~" unless otherwise noted.

Re telcal SA [redacted] FBIHQ, to SA [redacted] WFO, requesting assistance with telephone circuit check at [redacted] 6/6/85.

WFO TTAs [redacted] (ACM trained) assisted [redacted] FBIHQ, trace and physically examine telephone circuits [redacted] pursuant to an allegation that a device, possibly a tape recorder, was being used to eavesdrop on these lines.

80-805-43X1

The allegation was made by [redacted] who is the [redacted] She advised that on 6/4/85 she definitely heard tape recorder type noises during a call [redacted] She also advised she has heard strange noises on both lines since last April. These noises do not happen with every call and they occur randomly, that is they are not limited to calls made to any particular person or office. For instance, she has heard them during calls to various offices at the Department of Agriculture, the Executive Office Building and the White House.

Re Butelcall from SSA [redacted] to SSA [redacted]
[redacted] WFO, 5/14/85; and Butel to WFO, 5/16/85.

On 5/22/85, WFO TTAs [redacted]
[redacted] FBIHQ, conducted an audio
countermeasures survey for the [redacted]
[redacted]

(K)
b6
b7C
b7E

The sweep included twenty (20) office areas and a large
steno pool in the Secretary's office suite. It consisted of on
line and off line checks of thirty-seven (37) telephone
instruments, thirty (30) Centrex lines, an rf sweep and a
physical examination of the Secretary's office and conference
room. No devices or evidence of wiretaps or other eavesdropping
devices or techniques were found.

(mh)

80-805-431 X2

Retel stated Secretary had reason to believe his office
was subject to some type of surveillance but it did not set forth
any specifics. From observation during the sweep, the office did
not seem particularly concerned about security precautions.
There were no perimeter alarms, there were numerous unlocked
interconnecting doors between the various offices, and telephone

[redacted] policy could have a significant impact on that industry. He also said her office does not take any security precautions to protect this information. The main door to the suite is closed and locked but the doors to the various offices are not closed and locked, desks are not locked and the locks for the doors have not been changed since the days of her predecessor.

b7E

[redacted] to send a letter to WFO requesting the sweep but she is hesitant to do so because of concern that it might be discovered under the Freedom of Information Act. [redacted]
[redacted]
[redacted]

b6
b7C
b7E

SA [redacted] was advised sweeps for other agencies must be approved by FBIHQ and [redacted] should send a written request to FBIHQ. He said that information would be relayed to [redacted] office.

b6
b7C
b7E

Later that afternoon SA [redacted] recontacted SA [redacted] and detailed an alternative plan for getting [redacted] telephones checked and which would not require any paperwork on her part. Based upon his experience working drug investigations, he was aware that drug dealers are paranoid about their lines being tapped and that they often times get the local telephone companies to check their lines. He contacted C&P Telephone Company of WDC and learned that it will perform the same service. He suggested this scenario to [redacted] and advised her that if anything were found, the FBI could conduct an IOC investigation. She seemed pleased with this arrangement.

Countermeasures

SUBJECT: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY

On 7/12/85, SAs [redacted] of the Phoenix Division;

b6
b7C

[redacted] of the Chicago Division and

[redacted] of the TSD, conducted a TSCM Survey of [redacted]

During this survey, the following offices and associated telephone equipment were checked:

Telephone Numbers

b6
b7C
b7E

Coinless pay phone

Computer lines

Hospital line

- ② - Bureau
- 1 - Phoenix

TSD, ES, EM

Approved: _____ Transmitted _____ Per _____
(Number) (Time)

b6
b7C

JAH:lss
(3)

69 NOV 8 1985

PX 66-58
JAH:lss

In addition to the above offices, [redacted]

[redacted] No discrepancies were encountered while performing the TSCM Survey; however, a considerable amount of cross talk between telephones was noted. The cross talk could be attributed to the age of the telephone switch, a Leich 40B, the closeness of the telephone cables or corroded connections at the telephone company's outside terminal.

[redacted] the electrician and communications foreman, advised that a request has been made to [redacted] for funds to replace their present telephone switching system. He was also advised to make periodic visual inspection of telephone appearances in the frame room. Enclosing the cable runs in conduit was discussed but was left to their discretion. It was also suggested that the local telephone office be contacted and asked to check all outside terminal connections for conditions which could cause cross talk.

[redacted] was personally advised of the outcome - He was very appreciative of the fact that we had travel to the middle of the main land to conduct the TSCM. *[Signature]*

~~SECRET~~

Memorandum from [] to Mr. E. J. O'Malley
Re: COUNTERMEASURES
COLLECTION AND ANALYSIS

b6
b7c

DETAILS:

Reference airtel noted technical areas identified at above conference as deserving of priority emphasis. These areas were perceived as offering opportunities for significant contributions to the overall goals of the FCI Program. Included among emphasized areas was the captioned topic.

Field representatives attending the FCI Support Conference expressed the need for a central collection and analysis effort for countermeasures encountered in all types of investigations. FBIHQ was seen as the appropriate locus for such data. The nature of the information to be collected would include not only hostile technical countermeasures efforts but also results of FCI investigations including reported equipment acquisitions, unusual activities such as searches of cars/facilities and information from recruitments-in-place. Any tactics, patterns of behavior, policies etc. which could have adverse impact on the FBI's CI investigative efforts would be considered within the purview of the effort.

Details developed relative to hostile countermeasures will be furnished in suitable format to FBIHQ operational sections, and, as appropriate, to FBI field FCI components.

Memorandum from S. A. Killion to Mr. Bayse
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS,
CHICAGO AND PHOENIX

their Technically Trained Agents (TTAs) trained in TSCM either transferred out of the division, or assigned other duties and taken off the technical squad, they are requesting equipment and manpower to conduct a thorough TSCM survey of their new office space.

The Phoenix Division is in receipt of several requests for TSCM from the following: [REDACTED]

b7E

[REDACTED] with whom the Phoenix Division is conducting a joint criminal investigation. In addition, they recently occupied new office space in Yuma and have five other Resident Agencies that need TSCM surveys.

In view of Phoenix technical workload, lack of manpower, and inexperience with most Electronic Private Branch Exchanges, they have requested technical assistance from Headquarters.

It is estimated that it will take approximately eight working days to accomplish the required work.

Dates of travel to Chicago are July 1, 2, and 3, and July 8 through 17, 1985, for the Phoenix Division. Both divisions have been advised of the travel plans telephonically.

The estimated cost for travel is \$800, per diem \$1,300, car rental \$200, totaling \$2,300 for both trips.

TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEY OF

[Redacted]

AR

Reference is made to your memorandum dated May 14, 1985, requesting a microphone and telephone security survey of [Redacted]

b7E

On May 31, 1985, personnel from the Technical Services Division conducted a Technical Surveillance Countermeasures (TSCM) survey of Room 6524 of [Redacted]. The survey included a radio frequency spectrum check, an examination of all telephones and telephone lines and a nondestructive physical search.

One telephone was removed for further inspection, which revealed corrosion at the amphenol plug. The telephone was then reinstalled and tested. No evidence of clandestine listening devices was found.

(Handwritten initials)

[Redacted] was verbally advised of the results at the time of the TSCM survey.

ATTN: TECHNICAL SERVICES DIVISION SSA [REDACTED]

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) PHASE II TRAINING

NEWINGTON, VIRGINIA; SEPT. 9-20, 1985.

THE BH DIVISION HAS RECENTLY RELOCATED TWO OF ITS RESIDENT AGENCIES (FLORENCE AND HUNTSVILLE) AND MAJOR RENOVATIONS ARE EXPECTED ON ONE MORE, (TUSCALOOSA). IN ADDITION, THE AT&T A700 TELEPHONE SYSTEM IN HEADQUARTERS CITY IS EXPERIENCING MAJOR DIFFICULTIES AND MAY NEED TO BE REPLACED IN THE VERY NEAR FUTURE WITH AN ELECTRONIC SYSTEM.

DE-118 80-805-442

IN ORDER TO EFFECTIVELY CONDUCT THE APPROPRIATE COUNTERMEASURE EXAMS, THE BH DIVISION REQUESTS THE TECHNICAL COORDINATOR, SA [REDACTED]

[REDACTED] BE ALLOWED TO ATTEND CAPTIONED IN-SERVICE IF POSSIBLE. THIS

Date: October 11, 1985 **FEDERAL GOVERNMENT**

To:

b7E

RH

Washington, D. C. 20410

From: William A. Bayse
Assistant Director
Technical Services Division
Federal Bureau of Investigation

Subject: ~~TECHNICAL SURVEILLANCE COUNTERMEASURES SURVEY~~

Reference is made to your letter dated May 6, 1985, requesting an Audio Countermeasures Sweep of

b7E

On May 23, 1985, FBI personnel of the Technical Services Division and the Washington Field Office conducted a Technical Surveillance Countermeasures (TSCM) survey of both

(ESP)

b7E

The TSCM survey of suites 10000 and 10100 consisted of a radio frequency spectrum check, an examination of all telephones and telephone lines, and a nondestructive physical search.

DE 38-805-447

No evidence of electronic eavesdropping or tampering with the telephones was detected. However, it was noted that the Muzack receiver had been removed and the speakers which were left installed terminated in the power room. From that point, all areas could be monitored with the use of an amplifier.

OCT 17 1985

It is recommended that the speakers be removed or disconnected.

Technical Services Division

TECHNICAL SURVEILLANCE COUNTERMEASURES
SURVEY OF THE ATTORNEY GENERAL'S OFFICE

JW

Reference is made to your memorandum received September 6, 1985, requesting a microphone and telephone security survey of [Redacted]

b7E

On September 12, 1985, personnel from the Technical Services Division and FBI's Washington Field Office conducted a Technical Surveillance Countermeasures (TSCM) of [Redacted]

b7E

The TSCM included a radio frequency spectrum check, an examination of all telephones and telephone lines, and a nondestructive physical search.

No evidence of clandestine listening devices or tampering with the telephones was found.

[Redacted] was verbally advised of the results in the absence of [Redacted] at the time of the TSCM survey.

TO: DIRECTOR, FBI
 ATTN: TECHNICAL SERVICES DIVISION, ENGINEERING
 SECTION, SA [redacted]

FROM: ~~JAH~~ SAC, PHOENIX (66-58)

SUBJECT: TECHNICAL SECURITY COUNTERMEASURES (TSCM)

ReButelcal, 10/16/85.

On 10/17,18/85, a TSCM survey was conducted for a requesting government agency at Roswell, New Mexico.

During this survey, a radio frequency analysis was made of this Agency's space by using the Scanlock MK V.B and the Compuscan 1A. In addition, one telephone instrument and 28 telephones lines were checked using a Triplet 3400 DVM and an Xetron SPL-60A amplifier. A physical inspection was also conducted.

During the above checks, [redacted], a consultant for this agency, was present and it was explained to him the technical limitations of the equipment used, and that if a further evaluation needed to be done at a later date, an additional request should be made of the Bureau.

For further information of the TSD, [redacted] is technically trained and possessed a Hewlett Packard Spectrum Analyzer. [redacted] was given sufficient instruction in the use of this analyzer so that if need be he could make radio frequency checks of his space. It was also explained to [redacted], checks which he could do both technically and visually to insure the integrity of his telephone lines.

Memorandum to All SACs
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
TRAINING/EQUIPMENT

by letter, airtel or teletype. Those offices having the least number of TTAs trained in TSCM and special needs of some offices will be considered first. Ten TTAs will be scheduled for each In-Service. Those TTAs scheduled for above training should make every effort to reassign any duties and responsibilities to other TTAs or request assistance from another division or FBIHQ in order that attendee is able to stay the entire duration of the In-Service. **This training will be held at the Technical Services Building, FBI Academy, Quantico, Virginia.** Submit your name for the desired training and date at the earliest time possible so that a communication can be sent to the field offices designating selected TTAs.

TSCM EQUIPMENT

Attached herewith is a list of the field offices that have TSCM equipment assigned to them. All field offices have been assigned Scanlock Mark IV Scanning Receivers and Compuscans. The proper utilization of both of these pieces of TSCM equipment can prove to be very effective tools for radio frequency searches. The frequency coverage of the Scanlock is listed on the instruction manual. It is strongly recommended that the instruction be read prior to using the Scanlock and Compuscan. Most field offices that have TTAs with TSCM training have been assigned triplet 3400 volt-ohm-meters (V-O-Ms) modified with an audio amplifier. TTAs that attended the TSCM In-Services in August/September 1985, will receive these TSCM devices in the near future.

If you need additional TSCM equipment to conduct the required TSCM surveys in your division, you are to contact the nearest field office having the equipment and request use of the equipment needed. All the TSCM equipment has been assigned to field offices with the exception of the equipment needed by FBIHQ TSCM personnel.

As is noted from the enclosed list, there are very few manual tuning receivers, telephone analyzers and non-linear junction detectors, however, 30 additional telephone analyzers have been contracted and should be in the field offices by summer 1986. Delivery of two per week starts in April 1986.

PR 700 A&B receivers and Dektor telephone analyzers were shipped to field offices in heavy duty containers to protect the equipment. Above pieces of equipment should be kept in these

~~CONFIDENTIAL~~

Memorandum to All SACs
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
TRAINING/EQUIPMENT

containers when not in use or when shipping them. Repairing telephone analyzers cost approximately \$1,500 and \$3,000 for repairs of the PR 700 receivers.

The Electronic Analysis Unit purchased 40 Research Electronics, Inc., (REI) body recorder detectors, model TRD-800, address, 1570 Brown Avenue, Cookeville, Tennessee 38501. Thirty of these devices have been assigned to field offices already. If you have a need for one of these items, please contact SSA [redacted] and one will be assigned to your division if available. Those offices that have been assigned a TRD-800 are designated on the enclosed list.

b6
b7c

In addition, ten oscilloscopes were purchased for field use. These will be shipped to field offices as soon as they are received by the Engineering Section. Offices with TTAs that have attended TSCM Phase II will receive the oscilloscopes first. Additional oscilloscopes will be purchased this fiscal year.

Also, attached are the results of tests conducted on a Nagra JBR tape recorder with a REI model TRD-800 tape recorder detector.

OPERATIONAL TEST OF RESEARCH ELECTRONICS, INC. TAPE RECORDER
DETECTOR AGAINST NAGRA JBR BODY RECORDERS

Operational tests were conducted using three Research Electronics, Inc. tape recorder detectors (TRDs) and three Nagra JBR body recorders in an effort to determine the maximum distance at which an REI TRD can detect the operating JBR. The recorders and detectors used were all fully charged at the start of the testing. Each TRD was tested against each JBR using five different antenna orientations and twelve different approaches towards the recorder. The distance at which the TRD first indicated a TAPE detection was recorded. These tests were conducted in both a normal office environment as well as an RF shielded enclosure. The collected data was recorded and plotted for best and worst case detection distances using the combined totals of all data collected. The best case can be defined as the maximum distance at which at least one TRD was able to detect at least one JBR with the best antenna orientation. The worst case is the distance by which all TRDs had detected all JBRs using the worst case antenna orientation. It should be noted that no one antenna orientation proved best under all approaches.

Figures 1 and 2 show the resultant plots of tests made with the recorder lying flat with the top facing up. Measurements were made parallel to each of the four sides and the resulting distances joined at the corners. Figures 3 and 4 show the plots made with the recorder standing on the side opposite the microphone and switch attachments. The top of the recorder faces the top of the page. Measurements were made parallel with all four sides and at a 45 degree angle from each of the corners. It was believed that the detector would achieve much better results in the RF shielded environment because of the lower initial RF background, however, this did not occur. The results inside the shielded environment were very much along the same lines as those in the normal environment, sometimes slightly better or worse.

The results of the tests show that the maximum distance at which the JBR was detected was 13 inches. It should be noted that the detection distances were recorded as the point where the TRD gave the slightest indication of detecting the JBR. At this point, the TAPE LED was at minimum brightness. As the TRD antenna was moved closer to the JBR the brightness increased. If the vibrator is used, it will not activate until the LED reaches near maximum brightness. Therefore, when the vibrator is used to signal detection, the range will be slightly less than the results shown here. During the tests it was also noted that while the TRD did not detect the recorder when touching the microphone or switch wires, it did signal a TAPE detection when the antenna made contact with the remote switch.

 FISCAL YEAR 1986

ReBuairtel, 10/9/85.

Countermeasures

The Kansas City Division requests that SA [redacted] be considered for the upcoming Technical Surveillance Countermeasures (TSCM) update training in June or July, 1986.

SA [redacted] is to replace SA [redacted] in TSCM matters inasmuch as SA [redacted] is no longer handling technical matters. SA [redacted] has received TSCM training from the interagency school and assisted at TSD in setting up basic TSCM classes at Quantico. SA [redacted] recently assisted Chicago personnel in a sweep of the Kansas City, Division's office space.

IT IS IMPORTANT THAT EACH ATTENDEE RECEIVE THE ENTIRE COURSE OF INSTRUCTION WITHOUT INTERRUPTION. SACS SHOULD MAKE EVERY EFFORT TO ENSURE THAT ATTENDEES ARE ABLE TO STAY THE DURATION OF THE IN-SERVICE. PENDING TECHNICAL MATTERS REQUIRING THE ATTENTION OF THE ATTENDEE SHOULD BE APPROPRIATELY REASSIGNED WITHIN YOUR DIVISION OR ADDITIONAL ASSISTANCE SHOULD BE OBTAINED FROM ADJACENT DIVISIONS. ATTENDEES NOT ATTENDING MORE THAN THREE QUARTERS OF THE IN-SERVICE WILL NOT BE CREDITED WITH THE TRAINING.

RECEIVING OFFICES ARE TO CONFIRM SA'S ATTENDANCE BY SUBMITTING AN FD-313 TO FBIHQ, ATTENTION: TRAINING DIVISION, AT LEAST TWO WEEKS PRIOR TO BEGINNING OF THE IN-SERVICE.

TRANSPORTATION WILL DEPART FOR THE FBI ACADEMY AT 4:30 PM, 5:30 PM, and 7:00 PM, ON SUNDAY, JANUARY 5, 1986 AND FEBRUARY 23, 1986, FROM THE MAIN BUS LANE AT WASHINGTON NATIONAL AIRPORT. THE AIRPORT TRAVELERS AID STATION INSIDE THE AIRPORT WILL HAVE CURRENT INFORMATION SHOULD ANY PROBLEMS ARISE.

ATTENDEES ARRIVING DULLES, TAKE THE WASHINGTON FLYER SHUTTLE. IT LEAVES EVERY HOUR ON THE HOUR TO WASHINGTON NATIONAL AIRPORT. THE FARE IS \$9. TO SIMPLIFY ACADEMY TRANSPORTATION

PAGE FIVE DE HQ 0106 ~~C O N F I D E N T I A L~~

ARRANGEMENTS, ATTENDEES SHOULD BOOK FLIGHTS TO WASHINGTON NATIONAL BETWEEN 3:00 AND 6:00 PM TO MEET BUSES. NO TAXI SERVICE IS TO BE USED UNLESS THERE ARE EXTRAORDINARY CIRCUMSTANCES BEYOND YOUR CONTROL WHICH PREVENTS YOU FROM MEETING THE BUS SCHEDULE.

THE WASHINGTON FLYER, OFFICES LOCATED ON NORTH SIDE OF MAIN TERMINAL PAST UNITED, OPERATES A SHUTTLE DEPARTING NATIONAL AIRPORT EVERY TWO HOURS BEGINNING AT 9:30 AM AND ENDING AT 9:30 PM WITH SERVICE DIRECTLY TO THE ACADEMY. FARE IS \$14. AVOID USING TAXI SERVICE OR THE WASHINGTON FLYER IN ORDER TO MINIMIZE TRANSPORTATION COST.

ALL STUDENTS ARE NOW REQUIRED TO ATTEND AN ACADEMY ORIENTATION SESSION AT 7:00 PM ON SUNDAY EVENING, THE DATE OF ARRIVAL.

ATTENDEES ARE NOT TO REPORT TO THE ACADEMY PRIOR TO NOON SUNDAY, JANUARY 5 AND FEBRUARY 23, 1986, UNLESS A WAIVER HAS BEEN REQUESTED BY ATTENDEE AND APPROVED BY THE TRAINING DIVISION.

ATTENDEES WILL BE REQUIRED TO ATTEND FIREARMS TRAINING DURING THIS TRAINING PERIOD AND ARE TO HAVE BUREAU APPROVED WEAPON(S) WITH THEM.

DETAILS: The Scanlock Mark V B countermeasures receiver is a high speed scanning receiver used for the detection and location of a concealed eavesdropping radio transmitter. This receiver has a frequency coverage from 10 MHz to 2 GHz; AM and FM demodulation; subcarrier demodulation to 150 KHz; has automatic and manual tuning and automatic and manual tuning of subcarrier. It is a portable receiver, weighing approximately ten pounds; operates from an internal rechargeable battery pack for five continuous hours or from 110 volts AC main circuits.

The Scanlock receiver is a very efficient and effective countermeasures receiver, which requires limited training for its proper operation.

The Compuscan IA Controller is designed specifically for use with the Scanlock Mark V B receiver. The Compuscan IA will store in its memory all radio frequency (RF) signals in the frequency range of the Scanlock Mark V B receiver. The signals can be stored in its memory during a one-minute scan. This function is to be performed away from the area that is to undergo an audio countermeasures (ACM) survey. During the course of the ACM, the Compuscan IA will compare all RF signals received with those stored in its memory and will lock and alarm on signals not in memory.

At the present time, there are 61 Scanlock receivers in the Bureau's inventory. Two additional receivers have been requested by the New York office for support of their FCI programs.

A current review of receivers on the market reflected that there are no receivers comparable to the Scanlock Mark V B scanning countermeasures receiver. TSA, Inc., 13214 L'Enfant Drive, Fort Washington, Maryland 20744, is the sole distributor of the Scanlock receiver in the United States.

(Continued-Over)

~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

Memorandum from S. A. Killion to Mr. Bayse
RE: PROCUREMENT OF . . . COUNTERMEASURES RECEIVERS

[REDACTED] TSA, Inc., has been informally contacted concerning the current price of the Scanlock Mark V B receiver. He advised that the current price is \$5,725 per receiver with an FL-10 filter and a narrow bank IF filter (Model FL-1) and \$2,450 for the Compuscan IA Controller. (letter attached)

b6
b7c

The FL-1 filter improves the selectivity of the Scanlock receiver and it is required for use with the Compuscan IA Controller.

The FL-10 filter is an accessory used at the antenna of the Scanlock receiver to reduce the strength of FM broadcast signals.

The attached requisition (FD-369) #342208 is being submitted for the procurement of two (2) Compuscan IA Controllers and two (2) Scanlock Mark V B countermeasures receivers with FL-1 and FL-10 filters.

69 SEP 10 1986

UNRECORDED COPY FILED IN 62-11200

~~CONFIDENTIAL~~~~CONFIDENTIAL~~SYNOPSIS:

On 11/4/85, SA [redacted] EAU telephonically requested WFO to conduct a countermeasures sweep at [redacted] [redacted] McLean, Virginia. On 11/7/85, WFO TTAs conducted the sweep. It included a variety of on-line and off-line tests and examinations of the telephone system and an RF sweep. No devices or evidence of eavesdropping were found.

b6
b7C
b7EPREDICATION:

[redacted] reported that telephone service to his residence was interrupted for several hours on 10/31/85 and that when it was restored, incoming calls to either of his private lines were crossed; i.e., calls for [redacted] were coming in on [redacted] and vice versa.

b6
b7C
b7EDETAILS:

WFO TTAs [redacted] [redacted] all audio countermeasures trained, conducted the sweep on 11/7/85.

b6
b7C

On-line and off-line tests and disassembly and physical inspections were conducted on each telephone instrument to determine if they could be used to monitor room conversations when in an "on hook" condition. The Dektor Telephone Analyzer was used to make on-line voltage and current measurements and tone sweeps to detect on-line and in-line devices and harmonica transmitters. It was also used for off-line tests to detect resistive, capacitive, inductive and voltage fired devices.

Subscriber circuits [redacted] were identified and verified by CHESAPEAKE AND POTOMAC TELEPHONE COMPANY OF VIRGINIA (C&P TELEPHONE), and ringtown circuits PX109 and PX887 were identified by White House Communications Operator 59. All circuits operated properly although circuits [redacted] and [redacted] were crossed.

b6
b7C

No cause could be found for the crossed circuits. They were traced to the point of egress from the house, but could not be further traced because outside appearance information was not available from C&P TELEPHONE. A physical search of the neighborhood did not find any service pedestals or cross connect boxes where the circuits might appear. Alexandria Division through its liaison with C&P TELEPHONE is securing appearance

~~CONFIDENTIAL~~~~CONFIDENTIAL~~

~~CONFIDENTIAL~~

WFO 66-5539

~~CONFIDENTIAL~~

information for the circuits and is also attempting to determine if any maintenance or repair operations were performed which may have caused the circuits to be crossed.

The Scanlock receiver and Compuscan were used to conduct the RF sweep.

LEAD:

WFO will follow and report Alexandria Division's efforts to secure and maintenance or repair information from C&P TELEPHONE OF VIRGINIA.

SUBJECT: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
TRAINING/EQUIPMENT

This communication is classified "~~CONFIDENTIAL~~" in its entirety.

Re Bureau letter to all SACs, 11/12/85.

Richmond Technical Coordinator (TC) has been afforded Technical Surveillance Countermeasures (TSCM) Phase I training and is interested in TSCM up-date session scheduled for 7/14-18/86. Richmond TC is most interested in a review of Phase I training with emphasis on the scanlock receiver and a discussion of the new AT&T Merlin telephone system.

Memorandum from S. A. Killion to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING
IN SERVICE/PHASE I, JANUARY 6-17, 1986 and FEBRUARY 25
- MARCH 7, 1986, FBI ACADEMY, QUANTICO

This course provides attendees with the techniques for conducting technical surveillance countermeasures surveys and a thorough understanding and knowledge in the use of the FBI's TSCM equipment including radio frequency receivers, telephone analyzers, spectrum analyzers, oscilloscopes, non-linear junction detectors, other equipment used in TSCM surveys and one week in telephony.

The following Technically Trained Agents (TTAs) have been scheduled to attend:

PHASE I, JANUARY 6-17, 1986

1.	SA	<div style="border: 1px solid black; width: 250px; height: 150px;"></div>	Chicago	b6
2.	SA		Chicago	b7C
3.	SA		Detroit	
4.	SA		Honolulu	
5.	SA		Las Vegas	
6.	SA		New Haven	
7.	SA		New York	
8.	SA		Pittsburgh	
9.	SA		San Juan	
10.	SA		Salt Lake City	

PHASE I, FEBRUARY 24 - MARCH 7, 1986

1.	SA	<div style="border: 1px solid black; width: 250px; height: 150px;"></div>	Albuquerque	b6
2.	SA		Chicago	b7C
3.	SA		Indianapolis	
4.	SA		Kansas City	
5.	SA		Las Vegas	
6.	SA		Newark	
7.	SA		Milwaukee	
8.	SA		Mobile	
9.	SA		Philadelphia	
10.	SA		San Francisco

Memorandum from S. A. Killion to Mr. Bayse
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

The TSCM survey consisted of a nondestructive physical search, a Radio Frequency Spectrum check of free space and telephone and power lines, and a detailed examination of telephones and telephone lines. A cordless telephone is in use in the first floor den of the residence. The telephone was examined with a PR700B receiver and spectrum analyzer. The instrument operates at a carrier frequency of 49.8 MHz and radiates spurious frequencies approximately every 20 MHz from 30 to 400 MHz. These spurious radiations are not uncommon in unshielded consumer equipment. Telephone audio is FM modulated on these frequencies and can be easily intercepted using unsophisticated and inexpensive equipment, including a standard FM receiver. This telephone represents a potential security hazard when in use because of the ease with which conversations can be monitored.

The TSCM survey revealed no evidence of clandestine listening devices or tampering with the telephone system.

Re WFO airtel to FBIHQ dated 11/18/85.

Attached for WFO copy is the telephone analyzer worksheet and cable and pair appearance information.

On 12/2/85, WFO TTAs [redacted] physically examined the cable and pair appearances given by nthe CHESAPEAKE AND POTOMAC TELEPHONE COMPANY OF VIRGINIA (C&P) for circuits [redacted]. No evidence of tampering or eavesdropping were found and no cause for the transposition of the circuits was found.

[redacted] Security Officer for C&P of Virginia, advised he could find no record to indicate that any maintenance or repair operation was performed on those circuits in the recent past.

~~CONFIDENTIAL~~

By physical examination of the cable and pair appearances it has been determined that the transposition of the circuits occurs either at the Central Office (CO) providing service to [redacted] or at the termination block in his [redacted]. Inasmuch as the circuits are in separate feeder cables from the CO to the cross connection box where they are connected to a 3-pair buried drop cable going into [redacted] it is most probable that the transposition occurs at the terminal block in [redacted].

b7E

In view of the facts that the Dektor Telephone Analyzer test results were negative and that all cross connections were physically inspected and no anomalies found, UACB WFO will not conduct further inquiry into this matter.

Washington, D.C. 20024

Dear [Redacted]

In response to your request, technically trained Special Agents of the Federal Bureau of Investigation conducted audio countermeasures sweeps in the offices of [Redacted] on December 30, 1985.

b7E

These sweeps included on-line and off-line testing and physical examinations of each telephone in those offices and a free space radio frequency survey. No evidence of eavesdropping was found.

For your information, FBI policy is to conduct sweeps for other federal agencies only when substantial evidence exists that technical penetration has occurred, in which case the FBI has an investigative interest. In the case of private residences sweeps are not usually conducted because the continuing security of the space, telephones and telephone lines cannot be assured. At this time there is no evidence of a technical penetration being perpetrated against [Redacted] and we cannot accommodate your request for a sweep of their residences.

b7E

If I may be of any further assistance in this matter please do not hesitate to contact Supervisory Special Agent [Redacted] Technical Support Squad, telephone 252-7476.

b6
b7C

Sincerely yours,

Norman A. Zigrossi
Special Agent in Charge

TECHNICAL SURVEILLANCE
COUNTERMEASURES MATTERS

Re telcall from SA [redacted] EAU, to SA [redacted] TSS, WFO January 7, 1986, requesting WFO conduct sweeps at [redacted]

b6
b7C
b7E

Attached for FBIHQ are two copies of a letter dated January 9, 1986 and sent to [redacted] reporting results of sweeps. Attached to the WFO copy, in addition to the letter, are the Dektor Telephone Analyzer test sheets.

On 1/9/86, WFO SAs [redacted] conducted ACM sweeps in [redacted]

b6
b7C
b7E

Three WECO 2565HKM telephone instruments were given on-line and off-line tests using the Dektor Telephone Analyzer. Voltages and current draw were normal. The telephones were also disassembled and physically inspected.

The telephone circuits involved were 633-3441, 3442, and 633-3418, 3424, 5534 and 5535.

FILE

In addition to the telephone tests a free space RF survey was conducted using the Scanlock-Corpuscan receiver and a physical examination of each office was conducted.

No evidence of eavesdropping was found.

TECHNICAL SURVEILLANCE COUNTERMEASURES
MATTERS (TSCM): SWEEP OF [redacted]

5/15/86

All markings, notations and items of information
contained in this communication are classified "~~CONFIDENTIAL~~"
unless otherwise noted.

For your information on 5/15/86 a sweep was conducted
in [redacted]

[redacted] Washington, D.C. It was requested
by [redacted] on 5/15/86 after he received
notification from [redacted]

[redacted] that he had found a suspicious piece of wire
underneath his desk. WFO SAs [redacted] (audio countermeasures
trained) and [redacted] conducted the sweep.

The piece of wire is approximately seven (7) inches
long and is a piece of black-slate conductor taken from the
black/slate pair of a multi-conductor telephone cable. Both ends
are stripped and hooked as if having been connected to something.

OCT 2 1986

~~CONFIDENTIAL~~

[redacted] found the wire 5/13/86. It was laying on the floor near the backside of his desk's chairwell. He notified [redacted] on 5/14/86 which, in turn, contacted WFO 5/15/86. [redacted] had removed the wire from where he found it by the time the sweep team responded.

b6
b7C

A thorough physical search was made of [redacted] office. The WESTERN ELECTRIC 2631 DAM "Call Director" and 2565 HKM telephone instruments were tested using the modified Triplet 3400 DVOM and they were completely disassembled and inspected for evidence of tampering. Likewise, the telephone service cross connect box and multiple 25-pair cables appearing in his office were physically examined and tested with the Triplet 3400. The telephone distribution frame was inspected, and a thorough search of his desk was made. No devices or evidence of tampering were found and no conclusions can be drawn as to how or why the piece of wire came to be underneath his desk.

b6
b7C

During examination of the 2631 DAM "Call Director" it was noted that the two screws attaching the cover to the base plate were missing. [redacted] said he has never noticed the cover to be loose, but he also said he doesn't move the instrument and the cover could have been loose without him ever noticing the condition.

b6
b7C

Room 434 is a single occupant room and [redacted] has occupied it since 1980. He cannot recall any work having been done to the telephone instruments in the office during that time.

The office is wide open during the day and anyone can walk in. At night, when [redacted] leaves, it is vacant and secured with a Simplex lock; other employees remain in the area until about 8 p.m., though. To his knowledge, only his secretary has the combination to the lock. Further, the char force cleans once a month and always during normal working hours.

b6
b7C

In view of the fact that no devices or evidence that the telephones had been tampered with were found UACB WFO is taking no further action in this matter. SA [redacted] telephonically apprised [redacted] the results of the sweep on 5/15/86.

TECHNICAL SURVEILLANCE COUNTERMEASURES
(TSCM)

Re service discussions between SSA [redacted] and SA [redacted]
[redacted] and our telephone conversation, 3/6/86.

Enclosed are 50 copies of a "telephony" article regarding Tektronix time domain reflectometry (TDR) equipment; an audio/video catalog and a videotape from Tektronix used in training on the use of their model 1503 TDR.

Engineering is requested to review and return this videotape (P/N 068-0051-04) as soon as possible, as it is on loan to us from Tektronix sales department. Tektronix has also indicated that more copies of the enclosed article may be available, and will let us know.

LAS VEGAS

SACRAMENTO

WASHINGTON FIELD OFFICE #T

16 THE TRAINING DIVISION HAS MADE AVAILABLE THE FOLLOWING
INFORMATION FOR ATTENDEES TO THE FBI ACADEMY, QUANTICO:

14 RECEIVING OFFICES ARE TO CONFIRM SA'S ATTENDANCE BY
SUBMITTING AN FD-313 TO FBIHQ, ATTENTION: TRAINING DIVISION,
12 AT LEAST TWO WEEKS PRIOR TO BEGINNING OF THE IN-SERVICE.

10 TRANSPORTATION WILL DEPART FOR THE FBI ACADEMY AT 4:30 PM,
5:30 PM AND 7:00 PM ON SUNDAY MARCH 16, 1986, FROM THE MAIN BUS
8 LANE AT WASHINGTON NATIONAL AIRPORT. THE AIRPORT TRAVELERS
AID STATION INSIDE THE AIRPORT WILL HAVE CURRENT INFORMATION
SHOULD ANY PROBLEMS ARISE.

6 ATTENDEES ARRIVING DULLES, TAKE THE WASHINGTON FLYER
SHUTTLE. IT LEAVES EVERY HOUR ON THE HOUR TO WASHINGTON
4 NATIONAL AIRPORT. THE FARE IS \$9. TO SIMPLIFY ACADEMY
TRANSPORTATION ARRANGEMENTS, ATTENDEES SHOULD BOOK FLIGHTS TO
2 WASHINGTON NATIONAL AIRPORT BETWEEN 3:00 AND 6:00 PM TO MEET
BUSES. NO TAXI SERVICE IS TO BE USED UNLESS THERE ARE

EXTRAORDINARY CIRCUMSTANCES BEYOND YOUR CONTROL WHICH PREVENTS
 20 YOU FROM MEETING THE BUS SCHEDULE.

18 THE WASHINGTON FLYER, OFFICES LOCATED ON NORTH SIDE OF
 MAIN TERMINAL PAST UNITED, OPERATES A SHUTTLE DEPARTING
 16 NATIONAL AIRPORT EVERY TWO HOURS BEGINNING AT 9:30 AM AND
 ENDING AT 9:00 PM WITH SERVICE DIRECTLY TO THE ACADEMY. FARE
 14 IS \$14. AVOID USING TAXI SERVICE OR THE WASHINGTON FLYER IN
 ORDER TO MINIMIZE TRANSPORTATION COSTS.

12 ALL STUDENTS ARE NOW REQUIRED TO ATTEND AN ACADEMY ORIENTA-
 TION SESSION AT 9:00 PM ON SUNDAY EVENING, THE DATE OF ARRIVAL.

10 ATTENDEES ARE NOT TO REPORT TO THE ACADEMY PRIOR TO NOON
 SUNDAY, MARCH 16, 1986, UNLESS A WAIVER HAS BEEN REQUESTED BY
 8 ATTENDEE AND APPROVED BY THE TRAINING DIVISION.

6 ATTENDEES WILL BE REQUIRED TO ATTEND FIREARMS TRAINING
 DURING THIS TRAINING PERIOD AND ARE TO HAVE BUREAU APPROVED
 WEAPONS WITH THEM.

4 THIS TRAINING IS TO BE CHARGED TO CLASSIFICATION 240 FOR
 TURK PURPOSES.

2 FOR FURTHER INFORMATION ON OTHER ACADEMY RULES,
 REGULATIONS, POLICY, PLEASE REFER TO THE FBI ACADEMY ADVANCED

NEW YORK OFFICE, THAT INFORMATION COMING TO HIS ATTENTION INDICATED
A POSSIBLE LISTENING DEVICE HAVING BEEN PLANTED IN A LIBRARY -
CONFERENCE ROOM UTILIZED BY [REDACTED]

b6
b7C
b7E

[REDACTED]

SSA [REDACTED] ADVISED SA [REDACTED] THAT [REDACTED] DID NOT WANT A
FULL TSCM SWEEP OF THIS ROOM, BUT WOULD ALLOW SSA [REDACTED] AND CASE
AGENT, SA [REDACTED] TO LOOK AROUND THIS ROOM. SSA [REDACTED]
REQUESTED, AND WAS PROVIDED WITH A SMALL, DISCREET TAPE
RECORDER/TRANSMITTER DETECTOR (TRD-800) TO CONDUCT A LIMITED SEARCH.
THIS DEVICE WAS PROVIDED WITH THE UNDERSTANDING THAT IT WAS VERY
LIMITED IN APPLICATION, AND THAT SSA [REDACTED] WOULD STRONGLY INSIST
THAT [REDACTED] PERMIT A FULL TSCM SWEEP OF THIS ROOM.

b6
b7C

ON MARCH 5, 1986, SSA [REDACTED] PROVIDED SA [REDACTED] WITH A SET OF
THREE BOOKS ENCLOSED IN A BLACK CARDBOARD CASE, WHICH HE SUSPECTED
MIGHT CONTAIN A LISTENING DEVICE. IT HAD TWO FILLER COMPARTMENTS
BECAUSE ONE OF THE THREE BOOKS WAS LARGER THAN THE OTHER TWO, AND
THE FILLERS ALLOWED THEM TO FIT SNUG IN THIS BLACK CASE.

b6
b7C

BEFORE EXAMINATION OF THE BOOKS AND CASE, SSA [REDACTED] ELECTRONIC ANALYSIS UNIT, TSD, FBIHQ WAS CONTACTED AND IT WAS DETERMINED THAT THE ITEMS IN QUESTION SHOULD BE X-RAYED IMMEDIATELY. AT THIS TIME, THE BOOKS AND BLACK CASE WERE THOROUGHLY X-RAYED AND FOUND TO CONTAIN NO LISTENING DEVICES OR ELECTRONIC COMPONENTS OF ANY KIND. THE ITEMS WERE RETURNED TO SSA [REDACTED] HE WAS ALSO ADVISED THAT ONLY A FULL TSCM SEARCH OF THE SUSPECT AREA COULD DETERMINE THE PRESENCE OF ANY LISTENING DEVICES.

b6
b7c

SA [REDACTED] ADVISED SSA [REDACTED] THAT IF A LISTENING DEVICE HAD BEEN FOUND, THAT THE UNITED STATES INTELLIGENCE COMMUNITY HAS WRITTEN PROCEDURAL GUIDES ON THE PROPER HANDLING OF THESE ITEMS. ANY QUESTIONS CONCERNING THESE PROCEDURES SHOULD BE DIRECTED TO THE NEW YORK OFFICE SPECIAL OPERATIONS - TSCM UNIT AND/OR THE ELECTRONIC ANALYSIS UNIT, TECHNICAL SERVICES DIVISION, NEWINGTON, VIRGINIA.

To : Mr. Bayse *WAB/CS*

Date 3/31/86

From : *EUL/waf* [redacted]

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: To report the results of a TSCM check on [redacted]

b7E

RECOMMENDATION: That a TSCM of [redacted] be conducted approximately every six months.

APPROVED:

Director	_____	_____
Exec AD Adm.	_____	_____
Exec AD Inv.	_____	_____
Exec AD LES	_____	_____

WAB/CS

DETAILS: On 3/24/86, Electronics Technician (ET) [redacted] conducted a TSCM on the [redacted]

b6
b7C
b7E

The TSCM included physical inspection of the engine compartments, behind the door panels, and under the seats. The trunk panels were removed and replaced, and the undersides of the cars were also inspected. A radio frequency spectrum check was conducted with the vehicles moving in both forward and reverse directions. No recording or transmitting devices were found.

~~SECRET~~

To : Mr. Monroe *CM* Date 4/4/86

From : W. A. Bayse *wab/0*

Subject : REQUEST FOR SECURITY COUNTERMEASURES RESOURCES DATA (U) 0

KS

The overall classification of this memorandum is ~~SECRET~~. (U)

PURPOSE: To respond to a request from the Security Programs Unit (SPU), RMD for FY87 Budget expenditures for Communications, Computer and Emanations Security, Technical Surveillance Countermeasures (TSCM) including, the status of significant ongoing initiatives, significant new initiatives sought and significant initiatives that are needed but which are not included in the budget due to fiscal constraints. (U)

RECOMMENDATION: None. For information only. (U)

APPROVED:

Director _____	Adm. Svcs. _____	Laboratory _____
Exec. AD-Adm. _____	Crim. Inv. _____	Legal Coun. _____
Exec. AD-Inv. _____	Ident. _____	Off. of Cong. & Public Affs. _____
Exec. AD-LES _____	Insp. _____	Rec. Mgnt. _____
	Intell. _____	Tech. Servs. <i>wab/0</i>
	Lab. _____	Training _____

DETAILS: Listed below are estimated budgeted amounts and narrative regarding initiatives. Our budgetary process funds Automated Data Processing and Telecommunications (ADPT) activities and Engineering activities at a program level. Per the requirements of Office and Budget and Management (OMB) Circular A-130 (formerly OMB Circular A-71) security countermeasures are an integral part of each program. None of the requested data appears as a separate line item at any point in our budgetary process. (U)

JUL 16 1986

~~SECRET~~

Memorandum from W. A. Bayse to Mr. Monroe, dated 4/4/86.
RE: REQUEST FOR SECURITY COUNTERMEASURES
RESOURCES DATA (U)

Included in these estimates are the cost of cryptographic devices, installation, operations and maintenance estimates. Certain costs are impossible to estimate, such as the portion of a programmers time spent on access controls or the portion of a program administrator's time spent in administrator of access controls, etc. (U)

2.d. Communications, Computer, and Emanations (TEMPEST) Security
Estimated FY 1987 \$47,095,091 ~~(S)~~ (U)

2.e. Technical Surveillance Countermeasures
Estimated FY 1987 \$1,852,872 ~~(S)~~ (U)

3.a. Significant ongoing initiatives.

TSD has provided each field office with basic secure telephone communications capability primarily through the installation of Secure Telephone Unit (STU) II's. The current FBI radio system is being replaced office-by-office with a Digital Voice Privacy (DVP) system suitable for protecting non-classified traffic. ~~(S)~~ (U)

All FBI computer applications require individual identification and authentication and provide auditing of security related events. The data network is cryptographically secured. The FBI is pursuing a strategy of distributing its data processing activities to multiple sites to improve both service and survivability of its system. ~~(S)~~ (U)

3.b. Significant new initiatives sought in FY 87.

None budgeted. (U)

3.c. Significant initiatives needed but not underway due to fiscal constraints.

Communications -

There is a need for a secure interoperable radio system to communicate with other federal law enforcement agencies and other federal agencies. Secure interoperability is needed specifically for an effective government-wide drug interaction program. ~~(S)~~ (U)

(CONTINUED-OVER)

~~SECRET~~

~~SECRET~~

Memorandum from W. A. Bayse to Mr. Monroe, dated 4/4/86.
RE: REQUEST FOR SECURITY COUNTERMEASURES
RESOURCES DATA (U)

Secure Low Probability of Intercept (LPI) radios are needed for use in various Foreign Counterintelligence (FCI) activities. ~~(S)~~ (U)

Given the threat to telephone communications from Hostile Intelligence activities and the increasing threat potential from organized criminal activities, additional Secure Telephone Units are needed for FCI and other law enforcement communications. ~~(S)~~ (U)

Computers -

The FBI needs an automated risk analysis/countermeasures evaluation system to effectively secure data processing activities at its approximately 500 locations. (U)

A system to analyze the activities of individuals, legitimately having access to computer applications, to determine unauthorized use of databases needs to be developed and implemented. (U)

An operating system capable of labeling data elements as to their classification level and then enforcing both mandatory and discretionary access controls needs to be developed and implemented. (U)

Efforts to secure information processed by or accessed through personal computers needs to be enhanced to include board level encryption of non-volatile storage devices and integral COMSEC features transparent to the users. (U)

TEMPEST/TSCM

With the increased use of personal computers the ability to test newly acquired machines for TEMPEST compliance and freedom from hardware/software implants needs to be enhanced. ~~(S)~~ (U)

The problem of recertifying TEMPEST compliance after repair or maintenance needs to be addressed. (U)

Certain of these initiatives are only at the planning stage, certain at the R & D stage and some require only a source of funding for implementation. TSD can provide cost and estimates upon request. (U)

		Training _____

DETAILS: On 1/22/86, Supervisory Special Agent (SSA) [redacted] and Electronics Technician (ET) [redacted] had a meeting with [redacted]. They demonstrated three pieces of equipment.

1. A laser detector which is a passive device that can be set to scan a wall to search for a reflection of coherent light. Upon detection, it will record the location and the number of detections during the time between operator checks. The device has no alarm output so that it needs to be monitored or checked frequently. It covers the entire laser spectrum.

2. A hand held portable laser detector was also demonstrated.

3. A microwave energy detector was demonstrated which covered a frequency spectrum of 18 GHz to 48 GHz in 25 MHz steps. The system goes through an elaborate calibration scheme for approximately 20 minutes then it will scan through and record any increase in energy within its frequency span.

CTSD personnel will send detailed information on the above equipment through the British Embassy personnel to the Engineering Section.

[redacted]
[redacted] and it contains a single Mosler safe. It is approximately six feet wide, two feet deep and eight feet high. Construction is solid block with a plastercoat face. Entry is through a single, solid wood door which is secured by a Simplex lock and a Sargent and Greenleaf combination lock. Alarm systems include balanced magnetic switches on the door and inside frame and an Arrowhead IR sensor inside the closet. The alarm control box is located inside the closet and is wired to a dedicated telephone circuit going to the [redacted]

b7E

According to [redacted]
[redacted] who requested the sweep, the closet is used only to secure the safe and no conversations are held therein.

b6
b7C
b7E

[redacted] advised lock and alarm work on the closet was recently completed and he requested the sweep because of two "suspicious" holes in the floor. He said the GSA work crew has denied making them, and he is concerned that someone has or is attempting to penetrate the closet.

[redacted] was advised an audio countermeasures sweep would be of no benefit in this matter. However, the sweep team did make a visual examination of the closet to determine if security had been breached.

b6
b7C

Visual inspection of the holes showed they were obviously drilled in an effort to locate the conduit carrying the telephone cable that runs under the floor. The holes were adjacent to one another and, as a matter of fact, the station wire for the telephone circuit to the alarm control box was fed into the conduit through one of these holes.

One potential hazard to the closet's physical security was noted. The strike plate for the Sargent and Greenleaf combination lock on the door was attached to a wood spacer block which was screwed onto the metal door frame. This whole assembly was loose and a hard blow against the door could break it away from the frame. [redacted] was apprised of this situation.

b6
b7C

No further action was taken in regard to this matter.

April 23, 1986

[Redacted]

b7E

Washington, D.C. 20530

Dear [Redacted]

This is in reference to the physical inspection of a secured closet in the [Redacted] by Special Agents of the FBI on April 7, 1986.

Inasmuch as the closet is secured by various locks and alarms and is used only as a repository for a safe and no conversations are held therein, an audio countermeasures sweep was not conducted. The sweep team did, however, look for threats to the closet's physical security.

[Redacted] of your staff pointed out two "suspicious" holes in the floor. We surmise they were drilled in an effort to locate telephone cable conduit running beneath the floor. In fact, close examination found telephone wire for the closet's alarm box feeding into the conduit through one of these holes.

b6
b7C

The only potential hazard that was found, and which should be corrected, pertains to the assembly attaching the strike plate for the Sargent and Greenleaf combination lock to the door frame. It is too fragile and loose, and a hard blow against the door could break it away from the frame. A more permanent attachment is needed, preferably one that is welded to the frame.

If my office can be of any further assistance to you with this matter, please contact Supervisory Special Agent [Redacted] or Special Agent [Redacted] at 252-7476.

b6
b7C

Very truly yours,

Dana E. Caro
Special Agent in Charge

~~TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)~~
~~TRAINING/EQUIPMENT~~

COUNTERMEASURE DEVICES

Cincinnati recently received a Philips PM3256U Oscilloscope and is scheduled to receive a BTA 3 Telephone Analyzer. This equipment will supplement other TSCM equipment Cincinnati has on hand and will greatly enhance the TSCM effort in Cincinnati.

Inasmuch as Cincinnati Technically Trained Agents have not been afforded training in the use of this equipment, the Bureau is requested to provide this training for Cincinnati's one full-time TTA, SA [redacted] at the earliest available opportunity.

1. 1. 1. 7. 9

PAGE TWO

~~SECRET~~

ON FEBRUARY 21, 1986,

[REDACTED] DELIVERED APPROXIMATELY

14 USED VIDEO CAMERAS FROM THE SAN FRANCISCO SOVIET CONSULATE (SFSC) TO A REPRESENTATIVE OF CALIFORNIA FIRE AND SECURITY SYSTEMS (CFSS), 1334 POTRERO AVE., SAN FRANCISCO, CALIFORNIA.

THIS DELIVERY WAS INTENDED TO ALLOW THE REPRESENTATIVE OF CFSS TO INSPECT THE CAMERAS IN LIGHT OF POSSIBLY PURCHASING THE USED/INOPERABLE CAMERAS. CFSS PLANNED TO HAVE THE USED CAMERAS REPAIRED AND THEN RESELL THE CAMERAS FOR A PROFIT. ~~(S)~~

[REDACTED] AN EXAMINATION OF THE USED CAMERAS BY A SPECIAL AGENT (SA) FROM THE SAN FRANCISCO DIVISION REVEALED THE PRESENCE OF FOUR (4) RCA CLOSED CIRCUIT TV (CCTV) CAMERAS, MODEL TC 2011/8. THE SERIAL NUMBER OF THE POWER SUPPLY ATTACHED TO EACH CAMERA WAS EXAMINED AND THE FOLLOWING NUMBERS WERE REVEALED: 105558, 109818, 109787, AND 015554. THESE SERIAL NUMBERS WERE COMPARED WITH THE RCA CCTV CAMERAS THAT WERE MODIFIED WITH A "VIPER" UNIT BY TSD AND SOLD TO THE SFSC IN FEBRUARY, 1983. ~~(S)~~

SAID EXAMINATION REVEALED THAT THREE (3) OF THE USED

b3
b6
b7C
b7E

b7D

PAGE THREE [REDACTED]

~~SECRET~~

CCTV CAMERAS WERE IDENTICAL TO THE MODIFIED CCTV CAMERAS, AS INDICATED BY THE SERIAL NUMBERS: 105558, 109818, AND 109787. THE SAN FRANCISCO DIVISION OBTAINED THE THREE (3) CAMERAS AND DELIVERED THEM TO SA [REDACTED] ON FEBRUARY 28, 1986. ~~(S)~~

b3
b6
b7C
b7E

SAN FRANCISCO DIVISION HAS NOT BEEN NOTIFIED OF THE RESULTS OF THE ABOVE EXAMINATION. HOWEVER, ON APRIL 21, 1986, SA [REDACTED] EXAMINED THE FOURTH SFSC RCA CAMERA PROVIDED TO CFSS, WHICH BORE THE POWER SUPPLY UNIT NUMBER 015554. SAID EXAMINATION REVEALED THAT THE INTERNAL CAMERA FRAME NUMBER, 106973, WAS REPRESENTATIVE OF ONE OF THE FOUR (4) "VIPER" MODIFIED CAMERAS. IN ACCORDANCE WITH INFORMATION PREVIOUSLY FURNISHED BY TSD WHICH INDICATED THIS CAMERA FRAME NUMBER (106973) WAS ORIGINALLY ASSEMBLED WITH A POWER SUPPLY BEARING 105558. AS SUCH, IT APPEARED THAT SOMEONE AT THE SFSC HAD SWITCHED THE POWER SUPPLY UNITS FOR THE MODIFIED RCA CCTV CAMERA. ~~(S)~~

b6
b7C

ADDITIONAL EXAMINATION BY SA [REDACTED] WHO ASSISTED IN THE ORIGINAL INSTALLATION OF THE "VIPER" MODIFIED CCTV CAMERAS, REVEALED THAT THE "VIPER" UNIT AND ANTENNA HAD BEEN

b6
b7C

PAGE FOUR

~~SECRET~~

b3
b7E

REMOVED FROM THE CCTV CIRCUIT BOARD. IT APPEARED THAT THIS
REMOVAL WAS PERFORMED BY A TECHNICALLY TRAINED PERSON(S. IN
ADDITION, THE RESALE OF THE USED SFSC CCTV CAMERAS TO CFSS
MAY HAVE INDICATED THAT THE SOVIET REPRESENTATIVES WERE NOT
CONCERNED WITH OUR DETERMINATION THAT THEY DISCOVERED AND
REMOVED THE "VIPER" UNITS. (~~S~~)

 Exec. AD-LES _____ Intell. _____ Training _____

DETAILS: On 5/7/86, a product demonstration was held in the conference room at the Engineering Research Facility (ERF) by F. G. MASON ENGINEERING, INCORPORATED, Fairfield, Connecticut. The presentation was made by F. G. MASON, and in attendance were several personnel from the Electronic Analysis Unit (EAU). The main piece of equipment discussed was the PACMR-1 receiver system, which costs approximately \$80,000. The PACMR-1 is a computer controlled system that has its program in read only memory. It has a micro floppy disk for storage of signals or R-F spectrum that can be recalled and compared at a later time. The receiver has a frequency range of 2 Kilohertz (KHz) to 10 Gigahertz (GHz) and a spectrum scan time of 55 minutes. The system has a lot of desirable features, but the computer programs run much too slow for any real time signal comparisons. The system is in four medium size zero cases.

Re: TECHNICAL COUNTERMEASURES RECEIVERS/F. G. MASON
ENGINEERING, INCORPORATED

b6
b7C

The next receiver discussed was the MPR-5 miniature probe receiver system, which costs approximately \$21,000. The MPR-5 is a portable, battery powered, modular, radio receiver. It uses 10 tuners to cover the frequency range of 20 KHz to 10 GHz it is capable of subcarrier detection.

The frequency readout is accurate from 20 KHz to 1600 Megahertz (MHz). It's visual display has a sweep width of 0-5 MHz and 0-50 MHz above 1600 MHz. The receiver is good for portable countermeasures use. EAU has the brochures of the equipment on file. For further information contact Electronics Technicians

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: The purpose of this memorandum is to report the results of a TSCM check of the Director's Office.

RECOMMENDATION: It is recommended that a TSCM of the Director's Office be conducted every six months.

APPROVED:

Director _____	Adm. Servs. _____	Laboratory _____
Exec. AD-Adm. _____	Crim. Inv. _____	Legal Coun. _____
Exec. AD-Inv. _____	Off. of Cong. & Public Affs. _____	Rec. Mgnt. _____
Exec. AD-LES _____	Tech. Servs. _____	Training _____

DETAILS: On 6/23/86, Electronics Technician (ET) [redacted] and ET [redacted] conducted a TSCM of the Director's Office and conference room.

The TSCM included a radio frequency spectrum check and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was conducted. No evidence of clandestine listening devices or tampering with the telephone was found.

		Training _____

DETAILS: On 6/16-17/86 a TSCM survey of the [redacted] was conducted by Electronics Technicians [redacted] of the Electronic Analysis Unit, Engineering Section (ES). b6
b7C

The TSCM survey consisted of a carrier current and voltage check of all telephone lines entering or leaving the building, a physical inspection of all telephone wire closets inside the building, and a radio frequency (RF) examination of all power lines entering the building. An examination was made of the offices of the ES Section Chief and Assistant Section Chief which consisted of a RF check, a detailed physical search utilizing a LIXI X-ray device and an RF check of the power lines.

An RF check is continually being performed by the Radio Frequency In-Place Monitoring System and several man-hours are spent each week in locating and determining the origin of RF signals emanating from within the ERF. 70-805-481
7 JUL 11 1986

No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines was found. [redacted]

THIS DOCUMENT IS CLASSIFIED ~~"CONFIDENTIAL"~~ IN ITS ENTIRETY, UNLESS OTHERWISE NOTED. (U)

FOR THE INFORMATION OF RECEIVING OFFICES, THE TECHNICAL SERVICES DIVISION, ENGINEERING SECTION, HAD PREVIOUSLY SCHEDULED TWO TSCM UPDATE IN-SERVICES, ONE EACH IN JUNE AND JULY. HOWEVER, THERE WERE NUMEROUS REQUESTS FOR TSCM PHASE II TRAINING AND ONLY A FEW FOR THE TSCM UPDATES. IN VIEW OF THIS, THE TWO TSCM UPDATE IN-SERVICES HAVE BEEN CANCELLED IN ORDER TO HAVE ONE TSCM IN-SERVICE PHASE II AS PER CAPTION.

THE FOLLOWING SPECIAL AGENTS HAVE BEEN SELECTED TO ATTEND CAPTIONED TRAINING:†

CHICAGO
JACKSON
JACKSONVILLE
KNOXVILLE
MEMPHIS
NEW HAVEN
NEW ORLEANS

SALT LAKE CITY

SAN ANTONIO

SAN FRANCISCO

SAN JUAN #E

b6
b7c

DURING THE PAST WEEK, PERSONNEL IN YOUR RESPECTIVE DIVISION WERE CONTACTED AND ASKED IF THEY COULD ATTEND CAPTIONED IN-SERVICE IN ORDER TO MINIMIZE THE NUMBER OF CANCELLATIONS AFTER RECEIPT OF THIS COMMUNICATION. LATELY, THE NUMBER OF CANCELLATIONS TO TRAINING SESSIONS HAS REACHED 40 PERCENT.

THIS COURSE WILL PROVIDE ATTENDEES TRAINING IN CONVENTIONAL TELEPHONE KEY SYSTEMS, COMKEY SYSTEMS, HYBRID KEY SYSTEMS, ELECTRONIC PRIVATE BRANCH EXCHANGES (EPBXS), HYBRID EPBX KEY SYSTEMS, PRACTICAL EXERCISES, RADIO FREQUENCY RECEIVERS, TELEPHONE AND SPECTRUM ANALYZERS, NON-LINEAR JUNCTION DETECTORS AND OTHER MISCELLANEOUS EQUIPMENT.

IN ORDER TO PROVIDE ATTENDEES WITH THE LATEST INFORMATION ON TELEPHONES AND TELEPHONE SYSTEMS, A LARGE AMOUNT OF MAN POWER IS CONSUMED IN RESEARCHING INFORMATION ON NEW AND COMPLEX TELEPHONE SYSTEMS. THESE TELEPHONE

SYSTEMS ARE CURRENTLY USED IN SEVERAL FIELD OFFICES AND IN PLACES OF BUSINESS WHERE MOST TECHNICALLY TRAINED AGENTS WILL HAVE THE REQUIREMENT TO WORK ON THEM. THEREFORE, IT IS STRONGLY URGED NOT TO CANCEL ATTENDANCE TO THIS IN-SERVICE EXCEPT UNDER EMERGENCY SITUATIONS.

IT IS IMPORTANT THAT EACH ATTENDEE RECEIVE THE ENTIRE COURSE OF INSTRUCTION WITHOUT INTERRUPTION. SACS SHOULD MAKE EVERY EFFORT TO ENSURE THAT ATTENDEES ARE ABLE TO STAY THE DURATION OF THE IN-SERVICE. PENDING TECHNICAL MATTERS REQUIRING THE ATTENTION OF ATTENDEE SHOULD BE APPROPRIATELY REASSIGNED WITHIN YOUR DIVISION. ATTENDEES WILL NOT RECEIVE CREDIT FOR THE IN-SERVICE UNLESS THEY ATTEND THE ENTIRE COURSE. CLASSES RUN UNTIL 11:00 AM, JULY 25, 1986.

CANCELLATIONS, IF ANY, SHOULD BE DONE TELEPHONICALLY, FOLLOWED BY A WRITTEN COMMUNICATION PROVIDING DETAILS FOR CANCELING.

THE TRAINING DIVISION HAS REQUESTED THAT ALL ATTENDEES RECEIVE THE FOLLOWING INFORMATION:

TRANSPORTATION WILL DEPART FOR THE FBI ACADEMY AT

4:30 PM, 5:30 PM, AND 7:00 PM ON SUNDAY, JULY 13, 1986,
FROM THE MAIN BUS LANE AT WASHINGTON NATIONAL AIRPORT.
THE AIRPORT TRAVELERS AID STATION INSIDE THE AIRPORT WILL
HAVE CURRENT INFORMATION SHOULD ANY PROBLEMS ARISE.

IF ARRIVING DULLES, TAKE THE WASHINGTON FLYER SHUTTLE.
IT LEAVES EVERY HOUR ON THE HOUR TO WASHINGTON NATIONAL
AIRPORT. THE FARE IS \$9.00. TO SIMPLIFY ACADEMY TRANSPORTATION
ARRANGEMENTS ATTENDEES SHOULD BOOK FLIGHTS TO WASHINGTON
NATIONAL BETWEEN 3:00 PM and 6:00 PM TO MEET BUSES. NO
TAXI SERVICE IS TO BE USED UNLESS THERE ARE EXTRAORDINARY
CIRCUMSTANCES BEYOND YOUR CONTROL WHICH PREVENTS YOU FROM
MEETING THE BUS SCHEDULE.

THE WASHINGTON FLYER, OFFICES LOCATED ON THE NORTH
SIDE OF THE MAIN TERMINAL PAST UNITED, OPERATES A SHUTTLE
DEPARTING NATIONAL AIRPORT EVERY TWO HOURS BEGINNING AT
9:30 AM AND ENDING AT 9:30 PM WITH SERVICE DIRECTLY TO
THE ACADEMY. THE FARE IS \$14.00. AVOID USING TAXI SERVICE
OR THE WASHINGTON FLYER IN ORDER TO MINIMIZE TRANSPORTATION
COSTS.

ALL STUDENTS ARE NOW REQUIRED TO ATTEND ACADEMY ORIENTATION

6

SESSION AT 9:00 PM ON SUNDAY EVENING, THE DATE OF ARRIVAL.

ATTENDEES ARE NOT TO REPORT TO THE ACADEMY PRIOR TO NOON, SUNDAY, JULY 13, 1986, UNLESS A WAIVER HAS BEEN REQUESTED BY ATTENDEE AND APPROVED BY THE TRAINING DIVISION.

ATTENDEES WILL BE REQUIRED TO ATTEND FIREARMS TRAINING DURING THIS TRAINING PERIOD AND ARE TO HAVE A BUREAU APPROVED WEAPON WITH THEM.

THE TRAINING IS TO BE CHARGED TO CLASSIFICATION 240 FOR TURK PURPOSES.

FOR FURTHER INFORMATION ON OTHER ACADEMY RULES, REGULATIONS, OR POLICY, PLEASE REFER TO THE FBI ACADEMY ADVANCED PROFESSIONAL TRAINING HANDBOOK, CHAPTERS 4, 5, AND 6.

JACKSON SA [REDACTED] AND NEW HAVEN SA [REDACTED] ARE TO LEASE AUTOMOBILES FOR TRANSPORTATION TO BE USED FROM QUANTICO TO THE ENGINEERING RESEARCH FACILITY.

FOR INQUIRIES CONCERNING THIS TELETYPE, PLEASE CALL FBIHQ SSA [REDACTED], NEWINGTON, FTS 324-2800.

From : [redacted] Security Programs Manager
Federal Bureau of Investigation (FBI)

FEDERAL GOVERNMENT

Subject : REQUEST FOR SECURITY COUNTERMEASURES
RESOURCE DATA

INFORMATION MEMORANDUM

This document is classified "~~Secret~~" unless otherwise indicated. (U)

Reference is made to your memorandum, dated March 21, 1986, captioned as above. (U)

This is to confirm the following information which was furnished to [redacted] of your staff on April 3, 1986. The information concerning technical, communication, and computer matters was prepared by the FBI Technical Services Division (TSD).

b6
b7C

Listed below are estimated budgeted amounts and narrative regarding initiatives. (Our budgetary process provides the necessary funding for Automated Data Processing and Telecommunications (ADPT) activities and engineering activities at a program level.) Per the requirements of Office of Budget and Management (OBM) Circular A-130 (formerly OBM Circular A-71), security countermeasures are an integral part of each program. None of the requested data appears as a separate line item at any point in our budgetary process. (U)

Included in these estimates are the cost of cryptographic devices, installation, operations and maintenance estimates. Certain costs are impossible to estimate, such as the portion of a program administrator's time spent in the administering of access controls, etc. (U)

- 2.c. Physical Security
Estimated FY 1987 - \$1,7000,000
- 2.d. Communications, Computer, and Emanations
(TEMPEST) Security
Estimated FY 1987 - \$47,095,091
- 2.e. Technical Surveillance Countermeasures
Estimated FY 1987 - \$1,852,872
- 2.f. Industrial Security
Estimated FY 1987 - negligible
Although no budget has been approved
for Industrial Security, there is a
supplemental budget request for FY 1987
in the amount of \$5,700,000.
- 2.g. Operations Security
Estimated FY 1987 - negligible
- 3.a. Significant ongoing initiatives

TSD has provided each field office with basic source telephone communications capability, primarily through the installation of Secure Telephone Unit (STU) II's. The current FBI radio station is being replaced office-by-office with a Digital Voice Privacy (DVP) system suitable for protecting non-classified traffic.

All FBI computer applications require individual identification and authentication and provide auditing of security-related events. The data network is cryptographically secured. The FBI is pursuing a strategy of distributing its data processing activities to multiple sites to improve both service and survivability of its system.

- 3.b. Significant new initiatives sought in FY 1987
None budgeted. (U) -
- 3.c. Significant initiatives needed, but not
underway due to fiscal constraints.
Communications

~~SECRET~~

~~SECRET~~

b6
b7c

There is a need for a secure interoperable radio system to communicate with other Federal law enforcement agencies and other Federal agencies. Secure interoperability is needed specifically for an effective Government-wide drug interaction program.

Secure Low Probability of Intercept (LPI) radios are needed for use in various Foreign Counterintelligence (FCI) activities.

Given the threat to telephone communications from Hostile Intelligence activities and the increasing threat potential from organized criminal activities, additional STUs are needed for FCI and other law enforcement communications.

Computers

The FBI needs an automated risk analysis/countermeasures evaluation system to effectively secure data processing activities at approximately 500 locations. (U)

A system to analyze the activities of individuals legitimately having access to computer applications, to determine unauthorized use of databases, needs to be developed and implemented. (U)

An operating system, capable of labeling data elements as to their classification level and then enforcing both mandatory and discretionary access controls, needs to be developed and implemented. (U)

Efforts to secure information processed by or accessed through personal computers needs to be enhanced to include board level encryption of non-volatile storage devices and integral COMSEC features transparent to the users. (U)

TEMPEST/TSCM

With the increased use of personal computers, the ability to test newly acquired machines for TEMPEST compliance and freedom from hardware/software implants needs to be enhanced.

The problem of recertifying TEMPEST compliance after repair or maintenance needs to be addressed. (U)

~~SECRET~~

~~SECRET~~

[Redacted]

b6
b7C

Certain of these initiatives are only at the planning stage, certain at the research and development stage, and some require only a source of funding for implementation. TSD can provide cost and estimates upon request. (U)

NOTE: Information contained herein attributed to TSD was obtained from W. A. Bayse to [Redacted] memorandum, dated April 4, 1986, captioned "Request for Security Countermeasures; Resources Data." This is to confirm information furnished to [Redacted] by SSA [Redacted] Records Management Division, Operations Section, Security Programs Unit, on April 3, 1986.

AD/TSD and memo to SAC, WFO dated 5/19/86.

b7E

Enclosed for FBIHQ is one copy of the letter sent to [redacted] reporting results of the sweep. Attached to WFO copy are the telephone test worksheets.

Requested sweep was performed 5/21/86 by WFO TTAS [redacted] both ACM trained.

The Dektor Telephone Analyzer was used to conduct on-line and off-line tests on four (4) WECO 2631 DAM 1 "Call Directors", one (1) WECO 2500 MMG single line instrument and one (1) WECO 2565 HKM multi-line instrument. An RF scan was done using the Scanlock receiver and a physical search was conducted in each office using the non-linear junction detector when appropriate. No devices or other evidence of eavesdropping were found.

Dear

This is in reference to a departmental memorandum dated May 8, 1986, requesting the Federal Bureau of Investigation (FBI) to conduct a countermeasures survey in rooms 2111, 2113 and 2115 at main building.

On May 21, 1986, Technically Trained Special Agents of the FBI conducted the requested sweeps. No devices or other evidence of eavesdropping were found.

If my office can be of any further assistance to you with this matter please contact Supervisory Special Agent at (202) 252-7476.

Sincerely yours,

Dana E. Caro
Special Agent in Charge

THIS COMMUNICATION IS CLASSIFIED "~~SECRET~~" IN ITS ENTIRETY.

REFERENCE BUAIRTEL DATED MAY 11, 1986.

AS REQUESTED BY TSD, FBIHQ, SA'S [redacted]
CONDUCTED THE FOLLOWING TSCM SURVEYS IN ASSISTANCE OF THE TTA'S OF
THE NEW ORLEANS DIVISION. THE SURVEYS WERE CONDUCTED AT THE NEW

cc-TSD, ES, EAY

80-805-482X4

JUL 15 1986

97 MAY 14 1987

ORLEANS [REDACTED] AND THE RESULTS ARE AS FOLLOWS:

b7E

ON MAY 17, 1986, A TSCM SWEEP WAS CONDUCTED IN [REDACTED]
[REDACTED]

ON MAY 18, 1986, A SWEEP WAS ALSO CONDUCTED IN THE SUITE
OCCUPIED BY THE DIRECTOR, FBIHQ.

IN THE AFOREMENTIONED SWEEPS, RADIO FREQUENCY (RF) TELEPHONE
LINE, AND POWER LINE CHECKS WERE CONDUCTED ALONG WITH PHYSICAL
SEARCHES. IN BOTH INSTANCES HOWEVER, NOTHING WAS FOUND INDICATING
THE PRESENCE OF ANY ONGOING EAVSDROPPING OR INSTALLATION OF
EAVSDROPPING DEVICES OR EQUIPMENT.

ON MAY 16, 17, AND 18, 1986 SURVEYS WERE MADE OF THE CONFERENCE
AREAS PRIOR TO THEIR OCCUPATION BY FBI PERSONNEL. ON MAY 19, 1986
AND EVERY DAY THEREAFTER THROUGH AND INCLUDING MAY 22, 1986 RF,
TELEPHONE LINE, AND POWER LINE CHECKS, AND PHYSICAL SEARCHES WERE
INSTITUTED IN AND AROUND THESE AREAS.

IT SHOULD BE NOTED THAT AT ALL TIMES [REDACTED] b7E
SPEAKER/AMPLIFIER SYSTEM FOR THESE AREAS REMAINED UNDER FBI CONTROL.

ON MAY 19, 20, 22, 1986 THE CONFERENCE AREA WAS PRIMARILY THE
[REDACTED] AND ON MAY 21, 1986 THE CONFERENCE WAS HELD MAINLY b7E
IN [REDACTED]

AGAIN AS PREVIOUSLY STATED ALL AREAS WERE FOUND TO BE CLEAR OF
ANY ACTIVE EAVSDROPPING AND IN NO INSTANCE WAS ANYTHING FOUND TO
INDICATE THE PRESENCE OF ANY EAVSDROPPING DEVICES OR EQUIPMENT.

KEY PERSONNEL WERE ADVISED TO UTILIZE CAUTION, WHEN DISCUSSING
MATTERS OF AN FCI AND/OR SENSITIVE NATURE AS NO AREA INSIDE OR
OUTSIDE SHOULD EVER BE ASSUMED CLEAR OF THE EAVSDROPPING HAZARDS
KNOWN AND UNKNOWN.

Washington Field Office
Washington, D.C. 20535
July 16, 1986

Rockville, Md. 20857

Dear 

This is in reference to  letter requesting the Federal Bureau of Investigation (FBI) to conduct a countermeasures sweep in 

On July 9, 1986, audio countermeasures personnel conducted the requested sweep. No devices or other indications of eavesdropping were detected.

You are cautioned the suite should not be considered secure from technical penetration even though no evidence of eavesdropping was found. The design and layout and construction of the building and its facilities, particularly the telephone system, provide little protection from technical manipulation and exploitation.

For your information and reference should future sweeps be contemplated, please be advised the primary purposes for the Bureau's countermeasures capabilities, are to insure the security of FBI space, methods of operation and investigations and to provide an investigative tool. The FBI does not provide a countermeasures service per se for other agencies and does not conduct sweeps for them as a matter of routine.

Bureau policy concerning sweeps for agencies and departments outside the Department of Justice is that they will be performed only in response to valid requirements to protect matters of national security or high sensitivity which, if compromised, would cause serious damage to the government's interests. Additionally, all requests must include substantial justification to indicate a technical compromise has been effected and that a sweep is necessary. For instance, a sweep will not be performed in response to a report of a "leak" of information until the requesting agency has thoroughly investigated all possible sources for the leak and no explanation other than a possible technical compromise can be identified.

80-805-482X5

ENCLOSURE

b7E

b6
b7C
b7E

The intention of the Bureau's policy is to insure the efficient and effective use of its countermeasures resources. It is not intended to discourage other agencies from requesting assistance; however, only those requests with sufficient justification that a sweep is needed can be given consideration. With the FBI's countermeasures resources being limited and the demand for their services steadily increasing, I am sure you can appreciate why the Bureau must adhere to this policy.

If my office can be of any further assistance to you with this matter, please contact Supervisory Special Agent [redacted] or Special Agent [redacted] at (202) 252-7476.

b6
b7c

Sincerely yours,

[redacted]

UNSUB;

[redacted]

INTERCEPTION OF COMMUNICATIONS (IOC),
(OO:AX)

Re telephone conversation between SA [redacted]
of Alexandria and Unit Chief [redacted] of the Engineering
Section of the Technical Services Division.

b6
b7C
b7E

The [redacted] has reason
to be believed that they may be the target of electronic eavesdropping
measures perpetrated by members of the LYNDON LAROUCHÉ
ORGANIZATION and have requested FBI assistance in determining
if that in fact is occurring. Investigative authorization
has been obtained from Acting United States Attorney [redacted]
[redacted] in Alexandria, Virginia, to determine if such
activity is taking place.

b6
b7C

Lieutenant [redacted] Public Relations
Officer for the LOUDOUN COUNTY SHERIFF'S DEPARTMENT (SD),
advised SA [redacted] on or about April 25, 1986,
that he had recently received information from a friend
of his whom he considers to be reliable, to the effect
that the LOUDOUN COUNTY SHERIFF'S DEPARTMENT could possibly
be the target of electronic surveillance by someone associated
with the LAROUCHÉ ORGANIZATION. This friend of [redacted]

AX 135-133

Request of the Bureau/Technical
Services Division

Coordinate with Case Agent [] and Lieutenant [] for a technical sweep of the Sheriff's Department Office space to determine if electronic eavesdropping is present. Lt. [] should be contacted at his home telephone []. The office space is normally occupied during the hours of 8:00 a.m., to 6:00 p.m.

b6
b7c

has been interviewed and stated that at a party he recently attended, he had a conversation with a White female by the name of [redacted] who intimated a formal working association with the LAROCHE ORGANIZATION. She repeatedly referred to a book entitled "BALE FIRE" written by KENNETH GODDARD, suggesting that there was a correlation between elements and methods noted in the book, and the LAROCHE ORGANIZATION. The book's theme is that police and Government officials can be neutralized and rendered ineffective through blackmail, confusion over jurisdictional boundaries, and other compromising methods. Part of that neutralization process is obtained through sophisticated microchip electronic eavesdropping devices to keep abreast of activity in the particular Government entity.

b6
b7C

LOUDOUN COUNTY SHERIFF'S DEPARTMENT Officials have been at the forefront of an ongoing dispute with the LAROCHE ORGANIZATION over concealed weapons permits and the General Conduct of business by the organization members in the county. They were full participants in a conference conducted by the Boston FBI, Secret Service, and the United States Attorney's Office into a credit card fraud investigation centered on the LAROCHE ORGANIZATIONS. They continue to be a major player in that overall investigation which now includes a similar Alexandria office of origin case (AX 196B-942).

Ongoing discussions between LOUDOUN COUNTY SHERIFF'S DEPARTMENT personnel and the FBI concerning the investigation into the credit card fraud, take place on a regular basis either in the Sheriff's Department Office space or over the telephone.

It is believed that the LAROCHE ORGANIZATION has the financial wherewithal, talent, capability, and motive to target the Sheriff's Department [redacted]

b7E

It is in the FBI's interest [redacted]

b7E

Sheriff's Department Officials have contacted C&P TELEPHONE [redacted]

DETAILS: On 7/1/86, Electronics Technician [redacted] conducted a TSCM of [redacted] office, [redacted] Building.

b6
b7C
b7E

The TSCM included a radio frequency spectrum check and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was conducted. No evidence of any clandestine listening devices or tampering with the telephone was noted.

CONTINUATION SHEET

✓
TSD WILL PROVIDE NEW YORK WITH ONE TEKTRONIX 494P SPECTRUM
ANALYZER AND TWO ANTENNAS TO BE USED IN LOCATING AND IDENTIFYING
DETECTED EMITTERS. THE ANALYZER IS A PORTABLE UNIT WHICH COVERS
THE FREQUENCY RANGE OF THE IPMS. THE ANTENNAS HAVE OPERATING
RANGES OF 200 MHZ - 1 GHZ AND 1 GHZ TO 12.4 GHZ.

TRAINING ON SYSTEM OPERATION AND EMITTER IDENTIFICATION
WILL BE PROVIDED TO SA [] BY SSA [] AND ET []
WHEN THEY TRAVEL TO NEW YORK TO MAKE THE REQUIRED ADJUSTMENTS
TO THE IPMS.

FOR INQUIRIES CONCERNING THIS TELETYPE, PLEASE CONTACT
FBIHQ, SSA [] NEWINGTON, FTS 324-2800,
EXTENSION 3145.

CLASSIFIED BY 8; DECLASSIFY ON: OADR.

Exec. AD-LES _____	Intell. _____	Tech. Servs. <i>WAB/PO</i>
		Training _____

DETAILS: On 7/24/86, Electronics Technician [redacted] conducted a TSCM on [redacted] office at the JEH Building. The TSCM included a radio frequency spectrum check, and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was conducted. No evidence of clandestine listening devices or tampering with the telephones was found.

Jko

DETAILS: Engineering Section Assistant Section Chief Steven A. Killion is the FBI representative to the TSCC which was recently organized under the auspices of the newly created Interagency Group - Countermeasures/Technical (IG/CM (T)). Participants in the TSCC include members of the Intelligence Community.

DE-60 *80-805-488*

A meeting of the TSCC has been scheduled for September 8-10, 1986, at Camp Peary, Virginia, also known as the Armed Forces Experimental Training Activity. The meeting will include discussions and overviews of the Technical Surveillance Countermeasures Programs for each of the participating agencies, an overview of the Central Intelligence Agency Technical Security Program, discussion of community countermeasures facilities, and review of proposed subcommittee organization, charters, and relationships with other committees and organizations. Travel will be by Bureau car. Meals and lodging will be provided at no expense to the FBI.

(Handwritten mark)

DETAILS: On 7/30/86, Electronics Technician [redacted] conducted a TSCM on [redacted] at the JEH Building. The TSCM included a radio frequency spectrum check and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was conducted. No evidence of clandestine listening devices or tampering with the telephones was found.

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS
(TSCM)

All markings, notations and items of information contained in this communication are classified "CONFIDENTIAL" unless otherwise noted.

Relet dated 8/11/86 from the [redacted] to WILLIAM A. BAYSE, TSD, requesting TSCM assistance.

Attached for FBIHQ is a copy of WFO letter to [redacted] reporting results of sweep.

On 8/27/86, the sweep was conducted. WFO SAs [redacted] assisted [redacted] EAU, with the survey.

The sweep involved 13 office suites. Twenty-five (25) WECO 565HKM, 830CM, 2565HKM, 2631DAM 1 and 2830CM telephone instruments were subjected to on-line and off-line tests and physical disassembly and examination. In addition, rf surveys and physical surveys were conducted. No devices or indications of eavesdropping were found. Details of the tests are maintained in WFO file 66-5539.

FBIHQ will note a summary of the Bureau's TSCM policy is included in the letter to advise [redacted] the FBI does not provide routine TSCM services for other government agencies.

b7E

According to [redacted] [redacted] about three years ago [redacted] which up to that time had provided TSCM service [redacted] advised sweeps were the FBI's responsibility. Since that time [redacted] assumed the FBI will conduct countermeasures services upon request.

[redacted] handles some compartmented information and as a precautionary measure the Secretary desires that sweeps be done quarterly if possible or every six months at the least. He said that past requests have been submitted as a matter of routine and that they have not been in response to any events or circumstances that would indicate a compromise has been attempted.

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
PORTLAND DIVISION

This entire airtel is classified
"Confidential."

Portland has recently installed a new Siemens Saturn IIE telephone switch, purchased from Tel Plus Communications, Inc., with a cutover date of 10/3/86. As a part of this installation, we have requested the Tel Plus station-wire subcontractor to remove all existing wire and terminals. This has been accomplished with the exception of the old wire beneath the off carpet. Since our building has no under-floor ducting, this final phase of wire removal will take place when our new carpet is installed. At this time, new ribbon-type flat cable will be installed in order to reach those telephones not close to a wall outlet.

From a TSCM point of view, Portland is unfamiliar with the Siemens switch and its telephone sets, all of which are manufactured outside the United States. Of the total 96 new station

instruments, 16 are multi-line, digital sets; the remaining 80 are analogue single-line.

In addition, Portland anticipates procurement and installation of new telephones for all Resident Agencies (RAs). In all probability, these instruments will be of the new electronic variety. The Division's largest RA (Eugene) will require a key system inasmuch as it is staffed by one support employee and eight Agents. This new telephone system acquisition has, in part, been precipitated by the RA's upcoming move to new space in the Eugene Federal Building. Space modifications are presently under way, and GSA officials estimate our occupancy to be shortly after the first of 1987.

During the past six months, Portland's space has undergone renovation in anticipation of Field Office Information Management System (FOIMS) implementation, now tentatively scheduled (for Portland) during spring/summer, 1987. Between this construction and the Tel Plus telephone system installation, there have been a significant number of non-FBI personnel requiring access to our space.

Portland requests Engineering Section personnel and equipment support in conducting the TSCM surveys for the Eugene RA and Portland Field Office, in accordance with the circumstances set forth above. Portland anticipates purchasing the same telephone instrument for all remaining five RAs. With some assistance and training from ES/TSCM personnel using similar instruments, Portland will be prepared to conduct the appropriate electronic analysis once the new phones have been installed.

Travel arrangements and accommodations may be conducted between SSA [redacted] and SA [redacted] Portland.

DETAILS: During the period of 11/5-18/86, personnel from the Engineering Section, Electronic Analysis Unit, conducted a TSCM inspection in several offices of the INTD. The TSCM consisted of a radio frequency check, a physical and electronic check, and a check of all the telephones and telephone lines in the rooms inspected. In addition, several typewriters were physically examined and subjected to x-rays. Office word processors were checked to determine if classified information was stored in the non-removable hard disk.

Memorandum from [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)/
INTELLIGENCE DIVISION (INTD)

b6
b7C

The physical and electronic examinations were conducted in the following rooms: 4002, 4012, 4014, 4017, 4026, 4030, 4204, 4216, 4220, 4230, 4417, 4425, 4426, 4429, 4434, 4435, 4436, and 4439.

Special attention was given to rooms in the INTD Front Office and those of the Section and Unit Chiefs. Several other office spaces identified as sensitive areas were also checked thoroughly.

All pictures, wall hangings, desk ornaments, lamps, mementos, and furniture were examined physically and electronically. Those items which were not readily checked physically or electronically were subjected to an x-ray examination.

All power outlets and light switches which were not powering critical equipment were fully exposed and given a close physical examination. Climate controls were taken loose and examined. Ceiling panels were removed and the overhead was inspected thoroughly. The air conditioning grills were removed and the areas examined physically.

[redacted] an Electronics Engineer (EE) with extensive knowledge and experience of computer hardware and software, was assigned to check word processors, computers, and typewriters. During the inspection process, it was determined that a possible vulnerability exists in the operation of the hard disk of the Burroughs B26 terminal. However, this issue is being addressed separately by representatives of the INTD, Records Management Division, Security Programs Unit; and Technical Services Division, Engineering Section, and Systems Development Section.

DETAILS: On 1/8/87, Electronics Technician (ET) [redacted] conducted a TSCM on [redacted]

The TSCM included physical inspection of the engine compartment behind the door panels and under the seats. The trunk panels were removed and replaced and the undersides of the cars were inspected. A radio frequency spectrum check was conducted with the vehicles moving both forward and reverse directions. No recording or transmitting devices were found.

FROM: SAC, WASHINGTON FIELD OFFICE (66-5539)

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS (TSCM) -

[redacted] WASHINGTON, D.C., 11/24/86

For the information of FBIHQ, [redacted]

[redacted] by letter dated 11/17/86, requested the FBI to conduct a sweep of selected telephone lines in [redacted]. His request was predicated on a memorandum from [redacted] expressing concern that his telephone had been "bugged".

Attached for FBIHQ is a copy of [redacted] letter requesting the sweep, a copy of [redacted] memorandum suggesting a sweep might be prudent, and a copy of a memorandum which was distributed to [redacted] advising the date of the pending sweep and which potentially compromised it before it was conducted. Also enclosed is a copy of WFO's return letter to [redacted] advising him the results of the sweep.

On 11/24/86, WFO SAs [redacted] both ACM trained, used the Dektor Telephone Analyzer to check fifteen (15) single line and multi-button telephones. No indications of eavesdropping were found.

Prior to doing the sweep, SAs [redacted] interviewed [redacted] staff member who arranged the sweep. He furnished the following background regarding [redacted] request.

b6 b7C b7E

On or about 11/10/86, [redacted] found a telephone repairman working on the phone in his office. [redacted] was unaware of any problem with his phone and when he inquired about it the repairman produced a handwritten work order for a phone in room 4145. [redacted] informed the repairman he was in room 4146 at which time the repairman apologized and left. [redacted] then checked the [redacted] to learn if any repairs had been ordered in room 4145. When informed that [redacted] had no record and that there is no room 4145, he wrote the memo suggesting his phone be checked for bugs.

b6
b7C
b7E

[redacted] indicated it is not unusual for telephone repairmen to have work orders that cannot be verified from records on file at [redacted] and he said the incident ordinarily would not have caused any alarm. This time, however, it caused a great deal of concern within the [redacted] because it occurred just at the time the [redacted] was surfacing in the national news and because it involved [redacted] a participant in the [redacted] investigation. He said there were no other specific reasons to believe the phones were tapped or bugged.

Subject: TECHNICAL SERVICE COUNTERMEASURES (TSCM) SURVEY -
[redacted] JACKSONVILLE

b7E

Re Jacksonville airtel to Bureau, 10/3/86, captioned, "Monthly Technical Report".

On 12/18/86, [redacted]

[redacted] Miami, Florida, telephone 305/350-4373, contacted the Jacksonville Division in person to determine if a TSCM survey had been conducted by the FBI at [redacted] Jacksonville. [redacted] advised that he was conducting an administrative inquiry to determine the circumstances surrounding this survey. He advised that [redacted] Miami has TSCM survey capability and therefore these services are normally conducted by [redacted]

b6
b7C
b7E

[redacted] was advised that a TSCM survey was conducted by FBI, Jacksonville personnel on 9/22/86.

88-805-504

A review of Jacksonville files reflects that on 9/26/86, a limited TSCM survey was conducted at [redacted] Jacksonville. The request was made by [redacted] in behalf of [redacted] Supervisory Special Agent in Charge of all [redacted] Jacksonville. A survey of the telephone lines was not conducted for technical reasons. At the conclusion of the survey, [redacted] was advised that there was no evidence of IOC violations. [redacted] had requested the FBI conduct the TSCM survey due to unavailability at that time of [redacted]

b6
b7C
b7E

NO FEB 18 1987

In the Monthly Technical Report dated 10/3/86, Jacksonville reflected that this assistance was provided. No letter was initiated by FBI, Jacksonville, to [redacted] Jacksonville, with a copy to TSD, pending receipt of a formal letter of request from U.S. Customs Service. No written request has been received to date.

Subject : SECURITY COUNTERMEASURES (S/CM) WORKING GROUP

Date September 8, 1986

This memorandum is classified "~~Secret~~" unless otherwise noted. (U)

PURPOSE: To establish an S/CM Working Group to conduct risk analyses on FBI equipment, activities, and facilities, and to coordinate elements of the FBI's Security Countermeasures activities under a group chaired by the Security Programs Manager. (U)

SYNOPSIS: Concerns regarding the potential for compromise by penetration techniques of FBI equipment and activities and the current relocation of certain work entities outside FBI-Headquarters and Washington Field Office, need to be assessed and addressed. To deny adversaries (hostile foreign intelligence, and terrorists) information concerning classified activities, the Records Management Division recommends an S/CM Working Group be instituted to ensure the necessary risk analyses are conducted on FBI equipment, activities, and facilities, and to coordinate elements of the FBI's Security Countermeasures activities under a group chaired by the Security Programs Manager.

RECOMMENDATIONS: 1. An S/CM Working Group be instituted, chaired by the Security Programs Manager, to conduct risk analyses as set forth in the Details of this memorandum. (U)

DETAILS: Attached are, and reference is made to, W. A. Bayse memorandum to Mr. Mintz of November 20, 1985, captioned "Operations Security Working Group" (tab A); John A. Mintz memorandum to Messrs. Bayse, Monroe, and Sharp of November 27, 1985, captioned "FBI Security Programs" (tab B); and C. P. Monroe memorandum to Mr. Mintz of January 31, 1986, with enclosure, captioned "FBI Security Programs Status Report" (tab C). (U)

Pursuant to the instructions set forth in referenced Mintz memorandum of November 27, 1985, and the points listed in referenced Bayse memorandum of November 20, 1985, regarding the potential for compromise by known penetration techniques of FBI equipment and activities, a recommendation for a Working Group was included in the FBI Security Programs Status Report. The Report contained numerous recommendations, in addition to the establishment of a Working Group. The recommendations made in this Report, as well as other specific security recommendations, have been submitted by the Security Programs Manager and the Assistant Director, Records Management Division, to the Executive Assistant Director - Administration concerning the FBI Security Programs. Action on most of these recommendations has been deferred until the Executive Assistant Director - Administration convenes a forum of Assistant Directors to discuss security and to ensure that the FBI has a coordinated, efficient, and responsive Security Program.

Memorandum from Allen H. McCreight to Mr. Glover
Re: Security Countermeasures (S/CM) Working Group

There are numerous security countermeasures initiatives being instituted and proposed for action by the President. One of the recently directed security countermeasures actions involves restructuring the Interagency Group (Countermeasures) (IG/CM) of the Senior Interagency Group (Intelligence) (SIG/I). By SIG/I Directive 2, the Interagency Group/Counterintelligence (CI) remained the same, but the IG/CM was broken into two groups: Interagency Group/Countermeasures (P) (Personnel, Physical Security, and Information Security); and Interagency Group/Countermeasures (T) (Communications Security, Computer Security, TEMPEST, Technical Surveillance, Countermeasures, and Research and Development).

A coordinated, coherent response for the FBI to activities proposals and requirements of the new IG/CM(P) and IG/CM(T) will be required. We anticipate a new national requirement for risk analyses will be published, which requires a multidisciplinary S/CM review. Whether mandated by the President or not, our sensitive activities deserve such analysis.

The Security Programs Manager recently was made aware of an impending move for three FBI Headquarters components to outside GSA-leased space which has raised serious security concerns as to the FBI's ability to adequately and properly provide for the safety of its employees and the safeguarding of sensitive and classified information. One of the components to be moved maintains no classified information, but its computer terminals may access the Bureau's main frame computers. This may require a higher level of security at this location than was originally anticipated. The second component to be moved maintains classified material, up to the "~~Top Secret~~" level, concerning (among other things) financial information on foreign counterintelligence undercover operations and assets. The third component to be placed in this GSA-leased space will be the Polygraph Unit. The three components involved in this relocation are the Polygraph and Record Analysis Unit, Document Section, Laboratory Division; Audit Unit, Uniform Crime Reporting Section, Office of Congressional and Public Affairs; and Office of Program Evaluations and Audits, Inspection Division.

In addition, the Washington Field Office is planning to relocate two foreign counterintelligence units to outside-leased space in the District of Columbia or the metropolitan Virginia area. Disclosures in the recent past of technical compromising devices implanted in the word processing equipment in the American Embassy in Moscow and in French telecommunications equipment have highlighted the potential vulnerability of office equipment, activities, and space.

The Polygraph and Record Analysis Unit represents several unique security problems since this Unit will conduct polygraphs of high level officials in Government, persons involved in sensitive

~~SECRET~~

(CONTINUED - OVER)

~~SECRET~~

Memorandum from Allen H. McCreight to Mr. Glover
Re: Security Countermeasures (S/CM) Working Group

personnel matters, foreign counterintelligence, assets, Bureau applicants, and others. Additionally, it is anticipated the Bureau will begin polygraphing employees who have access to Sensitive Compartmented Information, special access programs, and communications security information in accordance with National Security Decision Directive 196.

In order for the FBI to have the ability to adequately and properly provide the needed security countermeasures, it is necessary to marshal our limited resources and expertise together in a closely coordinated fashion to assess the threats and vulnerabilities to FBI equipment, activities, and space, which are identified above, as well as to our other equipment, activities, and facilities. To achieve this goal, the Records Management Division recommends instituting an S/CM Working Group to conduct risk analyses of FBI equipment, activities, and facilities, as follows:

Objective: To conduct risk analyses. A risk analysis is an examination of the probability of specific threats exploiting specific vulnerabilities. The purpose of a risk analysis is to thwart hostile efforts to collect and exploit FBI information or to disrupt FBI operations. Risk analysis first is a fact-finding operation to assess threats and vulnerabilities. These inputs are then analyzed to determine the risk in existing operations. Countermeasures (physical; personnel; administrative/procedural; communications/emanations; hardware/software; and applicable supporting technologies) are then developed and recommended to management. To the extent feasible, risk to specific activities will be quantified to provide senior FBI management with a basis to achieve appropriate protection utilizing minimum resources without degradation in operations.

Scope: The Working Group must be able to respond effectively to a wide range of taskings from senior FBI management and to comply with Presidential and Intelligence Community initiatives. The approach outlined here is applicable to operations at FBI Headquarters and in field offices throughout the country. The threat-vulnerability-risk-countermeasures approach is being used increasingly in Federal agencies with sensitive programs to analyze the security of all facets of their operations. It is a recognized approach, with flexibility and a wide range of applications, which will allow the S/CM Working Group to respond effectively to a variety of taskings from senior FBI management.

Approach: The general approach employed will be to conduct fact-find/data gathering assessments through identified members and consultants to the Working Group. Specific tasks will be assigned to a member or group of members, as appropriate. The Working Group Chairman will ensure that appropriate reports are prepared; however,

~~SECRET~~

(CONTINUED - OVER)

~~SECRET~~

Memorandum from Allen H. McCreight to Mr. Glover
Re: Security Countermeasures (S/CM) Working Group

due to the complexity of the task, it is likely portions of the report will be given to members within respective areas of expertise to prepare for inclusion in the overall risk analysis report. This process will culminate in a risk analysis and countermeasures report produced by the Working Group as a whole.

It will be the responsibility of FBI management to consider and determine whether to implement recommended countermeasures. Monitoring and enforcement of countermeasures should be through the Security Officers in our field and Headquarters divisions and the Inspection Division. Certain operations will require reanalysis as hostile intelligence efforts/adversaries develop new priorities and capabilities, both technical and operations.

The key elements of the risk analysis process are:

- a. Functional analyses of a program to identify the specific information or activity that must be protected or controlled.
- b. Listing of "observable" activity and information to identify exploitable characteristics.
- c. Threat analyses to determine applicable hostile intelligence capabilities, interests, and opportunities.
- d. Assessments to determine the relative significance of specific vulnerabilities and what countermeasures can be implemented.
- e. Implementation of countermeasures which respond to specific vulnerabilities during the planning and execution of an FBI activity or program.

Membership: The S/CM Working Group, which will be chaired by the FBI's Security Programs Manager, who is the Section Chief of the Operations Section, Records Management Division, should draw on a wide range of expertise available at FBI Headquarters, in the field offices, and at other Federal agencies, as appropriate. Certain skills may be needed only intermittently, others on a continuing basis throughout the assignment. Suggested initial members and areas of expertise are as follows:

From : W.A. Bayse *[Signature]*

Subject : OPERATIONS SECURITY (OPSEC) WORKING GROUP CHARTER

This memorandum is classified ~~SECRET~~ in its entirety.

PURPOSE: To recommend that an OPSEC Working Group be chartered to conduct risk analyses of FBI operations.

SYNOPSIS: Executive Assistant Director (EAD) Revell requested Technical Services Division (TSD) Assistant Director Bayse to examine the potential for the FBI to be harmed by known technical penetration techniques. EAD Mintz further requested that the subject of physical, personnel and communications security be included, specifically: potential unauthorized physical access or determined penetration threat (e.g. terrorists), vulnerability of property to damage, or harm to, or control of, FBI personnel. The TSD recommends that an OPSEC Working Group be chartered to conduct risk analyses of FBI operations.

RECOMMENDATION: (1) That the OPSEC Working Group be chartered to conduct risk analyses as set forth in the details of this memorandum.

DETAILS: EAD Revell has requested AD Bayse to examine the potential for compromise of FBI equipment and space by known technical penetration techniques. Threat-vulnerability analysis performed by FBI-TSD, and recent disclosures of technical compromising devices implanted in word processing equipment in the American Embassy in Moscow and in French telecommunications equipment have highlighted the potential vulnerability of office equipment and space. EAD Mintz requested that the subject of physical, personnel and communications security be included, specifically: potential unauthorized physical access or determined penetration threat (e.g. terrorists); vulnerability of property to damage; or harm to, or control of, FBI personnel. In order to ensure that the FBI is protected against these and other such threats, an OPSEC Working Group should be chartered to conduct risk analyses as follows:

~~SECRET~~

Memorandum from Mr. Bayse to Mr. Mintz, dated 11/20/85,
RE: OPERATIONS SECURITY (OPSEC) WORKING GROUP CHARTER

Objective: To conduct risk analyses of FBI operations. A risk analysis is an examination of the probability of specific threats exploiting specific vulnerabilities. The purpose of risk analysis is to thwart hostile efforts to collect and exploit FBI information or to disrupt FBI operations. Risk analysis first is a fact-finding operation to assess threats and vulnerabilities. These inputs are then analyzed to determine the risk in existing operations. Countermeasures (physical; personnel; administrative/procedural; communications/emanations; hardware/software and applicable supporting technologies) are then developed and recommended to management. To the extent feasible, risk of specific operations will be quantified to provide senior FBI management with a basis to achieve appropriate protection utilizing minimum resources without degradation in operations.

Scope: The OPSEC Working Group must be able to respond effectively to a wide range of taskings from senior FBI management. The approach outline here is applicable to operations at FBIHQ and in Field Offices throughout the country. The-threat-vulnerability-risk-countermeasures approach is being used by the Department of Energy (DOE) OPSEC Center to analyze the security of all facets of DOE operations from Research and Development through Nuclear Materials Production. It is a recognized approach with a wide range of applications which will allow the OPSEC Working Group to respond effectively to a variety of taskings from senior FBI management.

Approach: The general approach employed will be to conduct fact-find/data gathering assessments through identified members and consultants to the Working Group. Specific tasks will be assigned to a member or group of members as appropriate. This process will culminate in a risk analysis and countermeasures report produced by the Working Group as a whole. To the maximum extent possible, the Working Group Chairman will draft the report. However, given the complexity of the task, it is likely that portions of the report will be tasked to members within their areas of expertise.

~~SECRET~~

~~SECRET~~

Memorandum from Mr. Bayse to Mr. Mintz, dated 11/20/85,
RE: OPERATIONS SECURITY (OPSEC) WORKING GROUP CHARTER

It will be the responsibility of FBI management to implement recommended countermeasures as appropriate. Monitoring and enforcement of countermeasures should be through the Inspection Division. Certain operations will require re-analysis as hostile intelligence efforts/adversaries develop new priorities and capabilities, both technical and operations.

Specific tasks for a typical OPSEC survey are:

- o THREAT ASSESSMENT
 - Determine who/what has the capability to exploit specific vulnerabilities, including operational and technical capability, doctrine, and proclivity of adversaries.
- o VULNERABILITY ASSESSMENTS
 - Exploitable weakness, given existing countermeasures and safeguards, of people; systems; procedures; facilities; and equipment.
- o RISK ANALYSIS OF CURRENT OPERATIONS
 - The probability that threats will successfully exploit vulnerabilities with attendant adverse consequences.
- o PROPOSED COUNTERMEASURES
 - Proposed changes or additions in the areas of physical; personnel; administrative procedures; communications/emanations; hardware/software and applicable supporting technologies, including cost/benefit analysis of proposals.
- o ADJUSTED RISK
 - A final assessment of the residual risk of specific operations, in light of the threat-vulnerability-countermeasures analysis process.

Membership: The OPSEC Working Group, which will be chaired by SA [redacted] FBI ADPT Security Officer, should draw on a wide range of expertise available at FBIHQ, in the field offices and at other agencies. Certain skills may be needed only intermittently, others on a continuing basis throughout the assessment. Suggested initial members and consultants and areas of expertise are:

To : MESSRS. BAYSE, MONROE AND SHARP

Date 11/27/85

From : JOHN A. MINTZ

Subject : FBI SECURITY PROGRAM

Reference my memorandum dated 11/14/85 and captioned as above.

Attached is a copy of a memorandum from Mr. Bayse to me dated 11/20/85 recommending that an Operations Security (OPSEC) Working Group be established and chaired by a representative from the Technical Services Division (TSD). This proposal was in response to prior tasking of Mr. Bayse by Executive Assistant Director Revell and me for information on certain aspects of the FBI's Security Program. Since these requests were made, the referenced memorandum addressed responsibility for the FBI's Security Program. It reaffirms that the Security Programs Manager is responsible for the management and coordination of the overall FBI Security Program. This does not change responsibility for implementation of specific components of the Security Program (i.e., ADPT security by TSD or physical security by Administrative Services Division). It does establish a focal point for effective coordination of this multi-faceted program.

In the attached memorandum, Mr. Bayse has appropriately identified a number of key points for further consideration. However, in view of the responsibility placed with the Security Programs Manager, the OPSEC Working Group will not be established under TSD. Instead, the Security Programs Manager should immediately review the attached memorandum and initiate a course of action responsive to the prior tasking by Mr. Revell and me, as well as the dictates of the FBI's Security Program. Those points identified by Mr. Bayse should be included in the overall security report which I have requested by 1/31/86. As noted above, I expect that by necessity the Security Programs Manager will have to rely on the expertise of various components within FBIHQ and the various Security Program Officers. This combined effort should assist us in assuring that we have a professional and effective Security Program.

FBI SECURITY PROGRAM STATUS REPORT

All information contained herein is unclassified, except that information which is classified "~~Secret~~" and denoted by the letter "~~S~~" in parentheses.

Pursuant to the instructions from Mr. Mintz, the Security Programs Manager (SPM) provides the following Status Report on the major mandated security programs and other specific security responsibilities, all of which are based on Executive Orders, Presidential Directive, Department of Justice (DOJ) Orders, and Director of Central Intelligence (DCI) Directives:

Long Range Goal:

To develop, define, and implement an effective FBI Security Program that is fully operational, both in FBI Headquarters and all field divisions.

Major Objectives:

1. To ensure the adequate protection and safeguarding of all National Security Information (NSI) and sensitive material in the possession of the FBI;
2. Ensure the employment and retention of employees are clearly consistent with the interests of national security;
3. Provide for the safety and physical security of personnel, property, and information in facilities occupied by the FBI;
4. Provide for uniform FBI-Automated Data Processing (ADP)/Telecommunications security policy, including physical security of facilities, administrative procedures, personnel security, hardware/software security, contingency planning, disaster recovery procedures, and the security of communications lines; and
5. Provide for emergency preparedness planning and preparation to enable the FBI to continue its essential operations and discharge its responsibilities during all types of national emergencies, including nuclear or limited war.

I. PERSONNEL SECURITY PROGRAM

Major Objective:

To ensure that FBI employees, who all hold "~~Top Secret~~" Security Clearances, measure up to the trustworthiness standards as set forth in

~~SECRET~~

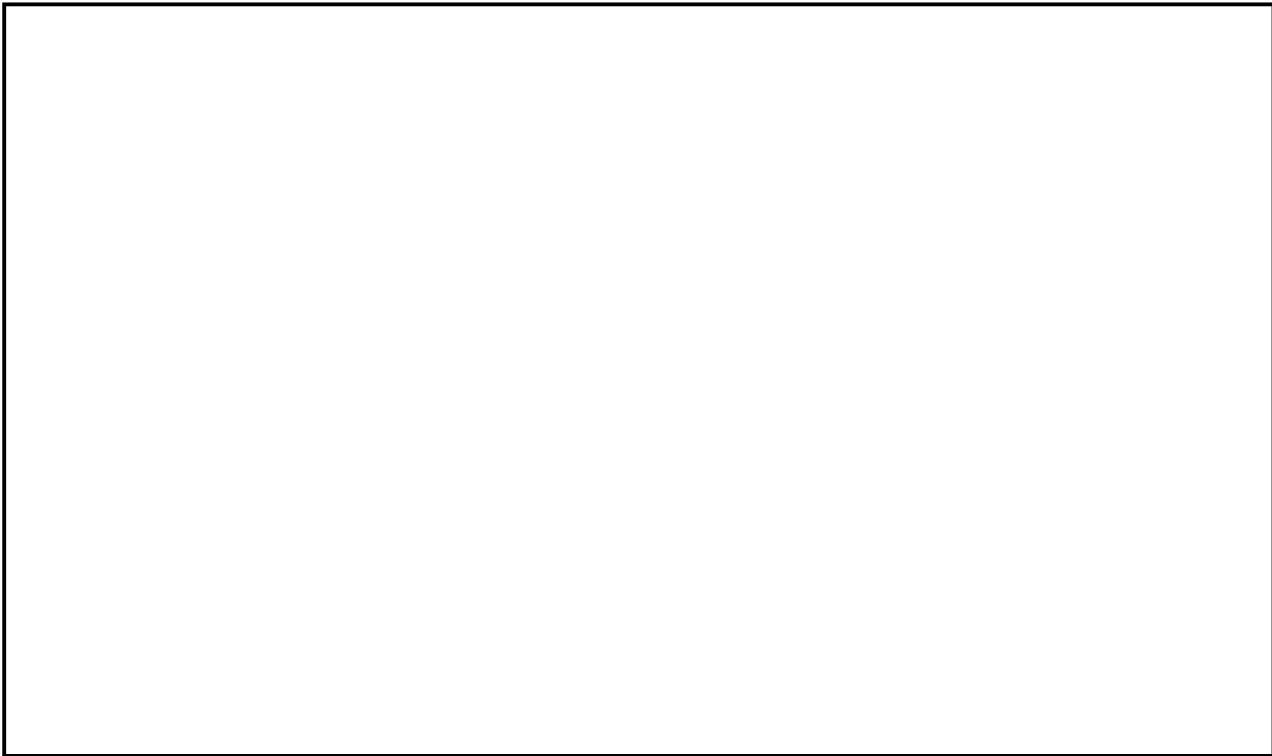

Executive Order 10450 and other trustworthiness standards the Director may institute.

The Personnel Security Program consists of a number of subprograms designed to both keep FBI employees security-conscious and, at the same time, to identify employees who pose a risk to national security.

These subprograms are identified as follows:

- i. Security Vulnerability Assessments;
- ii. Marriage Program;
- iii. Personnel Reinvestigation Program;
- iv. Match Program;
- v. Foreign Travel Program; and
- vi. Security Awareness.

TECHNICAL SURVEILLANCE COUNINTERMEASURES MATTERS (TSCM)

All markings, notations and items of information contained in this communication are classified "~~CONFIDENTIAL~~" unless otherwise noted.

Re request from SSA [redacted] on 8/8/86 for WFO to perform a TSCM survey at [redacted] Washington, D.C.

b6
b7C

On 8/26/86, [redacted] was swept by WFO SAs [redacted]

The sweep encompassed [redacted]

b6
b7C
b7E

[redacted] It included on-line and off-line tests of the telephone instruments and lines using the Dektor Telephone Analyzer and Triplet DVOM amplifier and disassembly and physical inspection of the telephone service cross connect boxes. It also included powerline and free space rf surveys using the Scanlock/Compuscan receiver system. A physical inspection of the suite's fixtures and furnishings was also performed. No devices or indications of eavesdropping were found.

Worksheets recording the details of the various tests conducted on the telephone instruments and lines are being maintained by WFO.

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS (TSCM)
REQUEST FROM [redacted]

All markings, notations and items of information contained in this communication are classified "~~CONFIDENTIAL~~" unless otherwise noted.

[redacted] Letter 4/24/86 to WILLIAM A. BAYSE, AD/TSD, FBI.

Attached is a copy of WFO's letter reporting results of sweep [redacted] Also attached to the WFO copy of this communication are the telephone test worksheets.

WFO TTAs [redacted] both of whom are ACM trained, conducted the sweeps on 5/19/86.

Sweeps were performed in thirteen (13) separate offices. On-line and off-line tests were performed on twenty-three (23) single line and multi-line WESTERN ELECTRIC COMPANY telephone instruments using the Dektor Telephone Analyzer. Radio frequent scans were made using the Scanlock/Compuscan receiver system. Physical surveys were conducted using the non-linear junction detector when appropriate.

ENCLOSURE ATTACHED

[redacted box with signature]

Approved: _____ Transmitted _____ (Number) _____ (Time) Per _____

No devices or other evidence of eavesdropping were found.

For the further information of FBIHQ this particular sweep was potentially compromised from its conception. [redacted] [redacted] employee who arranged and coordinated the sweep, advised he circulated a memorandum about the sweep to the various offices involved. He advised that he did not realize the need to limit knowledge of the matter to only a few people with a real need to know and, as a result, at almost every office the sweep team was greeted with remarks from clerical and staff personnel about the sweep's progress.

Washington Field Office
Washington, D.C. 20535
June 27, 1986

[Redacted]

Washington, D.C. 20549

Dear [Redacted]

This is in response to your [Redacted] letter dated April 24, 1986, requesting the Federal Bureau of Investigation perform countermeasures sweeps in various offices [Redacted] [Redacted] N.W., Washington, D.C.

Pursuant to your request, on May 19, 1986, Technically Trained Special Agents of the FBI conducted the requested sweeps. They included on-line and off-line tests of the telephone instruments, radio frequency surveys and physical searches of the involved offices. No devices or other evidence of eavesdropping were found.

That no evidence of eavesdropping was found must not be misunderstood to mean that the offices are secure. The design, layout and construction of the building and its facilities, specifically the telephone system, provide only minimal protection from technical exploitation.

With regard to future requests for sweeps, please consider that the FBI's audio countermeasures resources are limited and that the Bureau does not perform sweeps for other agencies as a routine service. The Bureau has an audio countermeasures capability primarily to insure the security of FBI space, operations and methods of investigation and to provide an investigative tool. Bureau policy concerning requests from federal agencies and departments outside the Department of Justice is that sweeps will be performed only in response to valid requirements to protect matters of national security or high sensitivity which, if compromised, would cause serious damage to the government's interests.

80-805-512
ENCLOSURE

b7E

b7E

Further, all requests must include substantial justification to indicate a technical compromise has been effected and that a sweep is necessary. For instance, a sweep will not be performed in response to a report of a "leak" of information until the requesting agency has thoroughly investigated all possible sources for the leak and no other explanation other than a possible technical compromise can be identified.

The foregoing statements are included to make you aware that our countermeasures resources are limited and are in heavy demand and that guidelines are in effect to insure that those resources are used most efficiently and effectively. They are not included to discourage your agency from requesting Bureau assistance when thought necessary. After all, the FBI is the primary agency responsible for investigating matters involving the interception of communications, and it will respond immediately when justifiable concerns require an investigative response. If my office can be of any further assistance to you with this matter, please contact Supervisory Special Agent [redacted] at (202) 252-7476 or Special Agent [redacted] at (202) 252-7414.

b6
b7C

Sincerely yours,

Dana E. Caro
Special Agent in Charge

DETAILS: On 10/3/86, a product demonstration was held in the conference room at the Engineering Research Facility by TSA, Fort Washington, Maryland. The presentation was made by TSA President GLENN H. WIDDEN, and in attendance were several personnel from the Electronic Analysis Unit and Capitol Police. The main piece of equipment discussed was the Eagle Plus Model 8601 Receiver System. The Eagle Plus is an automatic scanning receiver that compares a pre-recorded radio frequency (RF) spectrum made near the area of concern to the present RF spectrum. The Eagle Plus is a one-piece small battery powered receiver that can be operated automatically or manually and covers a frequency range of ten megahertz to two gigahertz, weighs six pounds and costs \$9,450. The Eagle Plus compares with the scanlock and compuscan combination that the FBI has in all of its field offices. The scanlock is no longer manufactured.

All markings, notations, and items of information contained in this communication are classified "~~CONFIDENTIAL~~" unless otherwise noted.

On 11/26/86, [redacted] (TSD/EAU) and SA [redacted] (WFO) conducted audio countermeasures checks on the telephone instruments and lines at [redacted] in response to a complaint by his receptionist [redacted] of noise on the lines.

Noise comparison tests were run on [redacted] lines as well as other lines from other offices. All lines were noisy indicating that the source of the noise was in the switching system or in the cabling.

Voltage tests were conducted on [redacted] lines and the voltages were normal.

Inductive tests were conducted with the instruments on hook and off hook. No fortuitous audio was detected.

Memorandum from Allen H. McCreight to Mr. Sharp
Re: Security Countermeasures (S/CM) Working Group
Meeting, 1/13/87, 9 A.M.;
Division 4 Conference Room 5641

for the purpose of developing ISP policy and procedures. Since various components of the Technical Services Division generate many of the contracts involving National Security Information (NSI), representatives of that Division are requested to attend. The Administrative Services Division (ASD) is responsible for the overall contracting process as well as the solicitation of many service contracts; therefore, appropriate representative(s) from ASD component(s) are requested to attend this meeting.

It is recognized that virtually every FBI Headquarters Division is impacted in some way by the scope of the ISP. For that reason, Divisions other than those specified above are invited to participate in this first meeting of the S/CM Working Group.

The following is an agenda and time frame for this meeting:

1) 9 a.m. - Opening remarks by the Security Programs Manager, focusing on objectives and short/long-term goals of the S/CM;

2) Presentation by representative(s) of the Contract Review Unit, ASD, regarding existing procedures for the handling of contracts involving NSI;

Panel discussion regarding the presentation for the purpose of discussing issues and procedures to be developed within the framework of ISP.

3) A presentation by Technical Services Division representative(s) concerning methodology of its contract arrangements with the private sector regarding NSI;

Panel discussion regarding the presentation for the purpose of identifying issues or areas to be addressed within the framework of the ISP.

4) Entertain questions and/or discussion from Working Group members for the purpose of clarifying discussions and to develop agenda items for the next S/CM meeting;

5) 11:30 a.m. - Closing remarks by the SPM.

UNIT-OLIA

IN VIEW OF THE DIFFICULTY IN OBTAINING ASSISTANCE OF THE RSO AND GREATER CONFIDENCE IN PERFORMANCE OF QUALIFIED BUREAU PERSONNEL, IT IS REQUESTED THIS BE HANDLED BY THE BUREAU AS SOON AS POSSIBLE.

THE HOMES OF ASSISTANT LEGATS [REDACTED]

b6
b7c

[REDACTED] HAVE BOTH BEEN BURGLARIZED WITHIN THE PAST FEW MONTHS. THE OFFICIAL AUTOMOBILES (3) USED BY LEGAT PERSONNEL ARE OFTEN PARKED IN PUBLIC PARKING FACILITIES OR ON THE STREET IN CONNECTION WITH CONDUCTING LIAISON FUNCTIONS.

IT IS HIGHLY RECOMMENDED THAT THE BUREAU AUTOMOBILES AND THE HOMES OF THE LEGAT AND ASSISTANT LEGATS BE INCLUDED IN THE SURVEY.

Memorandum from [] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
INSPECTION/LEGAL ATTACHE (LEGAT) MEXICO CITY

b6
b7C

DETAILS: In referenced teletype, Legat Mexico City requests that technical personnel travel to Mexico City to conduct a countermeasures inspection. It was noted during the last inspection (12/86) that TSCM inspections had not been conducted by U. S. Embassy security personnel. Legat Mexico City has requested the assistance for a TSCM inspection from the Regional Security Officer with negative results.

Technical assistance is being requested of SA [] [] Phoenix Division. SA [] has received advanced training in TSCM and SSA [] will require technical assistance in order to perform the requested TSCM inspection of the Legat Office, cars and residence telephones.

b6
b7C

The TSCM inspection is tentatively scheduled for 4/6/86 through 4/14/86.

SA [] name is also on the Notification of Foreign Travel form.

b6
b7C

[] Communications Officer, Department of State, Washington, D.C., has been advised of the possible travel to Mexico City and the purpose of this travel.

The estimated cost for SSA [] is \$340.00 transportation, \$650.00 lodging/meals and \$100.00 for miscellaneous expenses, totaling \$1,090.00.

[redacted]

Countermeasures

Re FBIHQ teletype to WFO, dated 5/28/86, advising of the need for a sweep at [redacted] SA [redacted] (WFO/TSS) to SAC, WFO, advising that per instructions of SA [redacted] the sweep would be delayed until office space had been procured.

Attached for FBIHQ is a copy of WFO's letter to the Independent Counsel regarding the sweep.

On 1/13/87, SA [redacted] advised offices had finally been procured and that a sweep was necessary. Accordingly, on 1/20/87, SAs [redacted] (audio countermeasures trained) conducted the sweep at [redacted] N.W., Washington, D.C. 20037, telephone (202) 333-0025.

SA [redacted] advised there was no particular reason to believe that the suite had been "bugged" and that it was requested merely as a precautionary measure.

WF 211-8

The sweep consisted of an inductive test on the telephone system, a free space rf survey and physical searches of appropriate offices.

The suite's telephone system is a Tie Communication's digital switch with CX2 electronic keyset telephone sets. Inasmuch as the Dektor Telephone Analyzer could not be used to test these instruments inductive tests using the SPL60 amplifier and Tektronics P221 inductive probe were performed. No audio was heard when the instruments were on hook.

A free space rf survey was conducted using the Scanlock receiver. In view of the extremely high ambient rf environment, the survey was done using the manual tuning mode. No rf devices were indicated.

Physical searches were conducted in the offices of [redacted]

b7E

[redacted]
[redacted]
[redacted] No devices were found.

UACB WFO considers this matter handled.

ADDITIONAL FULLY QUALIFIED TTA HAS BEEN RECENTLY TRANSFERRED TO PHILADELPHIA FROM THE NEW YORK DIVISION. TSD RECOMMENDS THAT YOUR DIVISION INCREASE THE UTILIZATION OF PART-TIME TTAS AND THAT THE NEWLY TRANSFERRED TTA BE FULLY UTILIZED ON TECHNICAL MATTERS IN ORDER TO ALLEVIATE THE CURRENT TECHNICAL WORKLOAD. IF ADDITIONAL TTAS ARE NEEDED, SUBMIT A REQUEST TO TSD TO HAVE MORE PERSONNEL TRAINED FROM WITHIN YOUR DIVISION. IF THIS RECOMMENDATION IS PRECLUDED BY PHILADELPHIA MANAGEMENT DECISIONS, SUBMIT A REQUEST FOR ADDITIONAL TTA PERSONNEL TO FBIHQ, ADMINISTRATIVE SERVICES DIVISION, SPECIAL AGENT TRANSFER UNIT.

CONCERNING THE TSCM TRAINING FOR TTAS, YOUR DIVISION CURRENTLY HAS TWO TTAS TRAINED IN TSCM, SAS [REDACTED] [REDACTED] HOWEVER, IF ADDITIONAL TTA PERSONNEL REQUIRE TRAINING IN TSCM, SUBMIT THE NAME OF THE TTA(S) AND APPROPRIATE TRAINING WILL BE PROVIDED AT THE EARLIEST TIME POSSIBLE.

A REVIEW OF OUR RECORDS INDICATE THAT YOUR DIVISION HAS THE FOLLOWING COUNTERMEASURES EQUIPMENT: A SCANNING RECEIVER, AN OSCILLOSCOPE, A TIME DOMAIN REFLECTOMETER

AND A MODIFIED TRIPLETT 3400 WITH AN AMPLIFIER. THE TRIPLETT
20 3400 VOLT-OHM-METER WAS MODIFIED TO ENABLE CHECKING OF
18 TELEPHONES/LINES IN THE ABSENCE OF A TELEPHONE ANALYZER. IT IS
POINTED OUT THAT IT HAS BEEN EMPHASIZED BY AN ALL SAC AIRTEL
16 DATED 11/85 AND AT TSCM IN-SERVICES THAT ADDITIONAL TSCM
EQUIPMENT CAN BE OBTAINED FROM ADJOINING DIVISIONS OR FROM
14 FBIHQ UPON REQUEST. ALL FIELD OFFICES HAVE A LIST OF THE TSCM
EQUIPMENT ASSIGNMENT. PREVIOUS FUNDING FOR TSCM EQUIPMENT
12 PRECLUDED TSD FROM PROCURING THE REQUIRED TSCM EQUIPMENT FOR ALL
FIELD OFFICES. HOWEVER, TSD HAS PURCHASED TELEPHONE ANALYZERS
10 FOR ALL FIELD OFFICES AND WILL BE DISTRIBUTED AS SOON AS
TRAINING CAN BE ARRANGED.

8 THE CURRENT FBI POLICY FOR CONDUCTING TSCM INSPECTIONS
WAS REVISED IN 8/83 BASED ON THE PERCEIVED THREAT TO FBI SPACE
6 BY DRUG TRAFFICKERS, ORGANIZED CRIME ELEMENTS, AND HOSTILE
INTELLIGENCE SERVICES. THERE IS NO INDICATION THE THREAT HAS
4 BEEN REDUCED, ESPECIALLY IN LIGHT OF THE EFFORTS OF THE U. S.
GOVERNMENT TO REROUTE CERTAIN TELECOMMUNICATIONS LINKS TO AVOID
2 INTERCEPTION BY HOSTILE INTELLIGENCE SERVICES.

IN REGARDS TO CHANGING THE CURRENT POLICY TO SUIT

INDIVIDUAL OFFICES WITH ITS UNIQUE SITUATIONS AND NEEDS,

A POLICY OF THIS TYPE WOULD BE EXTREMELY DIFFICULT TO ADMINISTER
AND WOULD BE OPEN TO DIFFERENT INTERPRETATIONS. HOWEVER,
POLICY CHANGE IS BEING CONSIDERED WHICH WOULD ELIMINATE
THE REQUIREMENT FOR INSPECTION OF FBI TELEPHONE LINES AT
THE CENTRAL OFFICE. THIS IS DUE TO THE COMPLEXITY OF CURRENT
COMPUTERIZED TELEPHONE SYSTEMS WHERE MERE OBSERVATION OF
THE TELEPHONE LINES IS INCONCLUSIVE OF ANY TAPS AT THE CENTRAL
OFFICE.

FOR INQUIRIES CONCERNING THIS COMMUNICATION, PLEASE
CALL FBIHQ SUPERVISORY SPECIAL AGENTS [REDACTED] {TSCM
MATTERS} AND [REDACTED] {TECHNICAL TRAINING AND TTA
TRANSFER MATTERS}, FTS 324-2800.

DETAILS: On 4/24/87, Electronics Technician [Redacted] conducted a TSCM on [Redacted] at the JEH Building. The TSCM included a radio frequency spectrum check and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was conducted. No evidence of clandestine listening devices or tampering with the telephones was found.

Memorandum from [redacted] to Mr. Bayse
Re: SOLID STATE DIGITAL RECORDER (GRAMS)
THE BDM CORPORATION
TRIP REPORT
FBI CONTRACT J-FBI-87-016

b6
b7C

DETAILS: The following persons were present at the GRAMS progress review meeting held at BDM CORPORATION, Columbia, Maryland, on 5/22/87:

Mr. DWIGHT E. COMSTOCK FBI, RDU, COTR

[redacted]

b6
b7C

The initial discussion was directed to the expenditure rate and the schedule. [redacted]

b4
b7E

[redacted] BDM attributed the high rate of expenditure to troubleshooting the Computer Processor Unit (CPU) board and the subsequent need to redesign the board. A new board is being manufactured at no cost to the government. Further, labor intensive effort was devoted to the development of fixtures to perform testing of the modules which should result in cost and labor savings throughout the remainder of the development. The problems with the CPU board will result in a two week delay in the delivery of the belt unit which was originally scheduled for the first week of August 1987.

The quarterly report was hand delivered to the COTR during the meeting. The report addressed the schedule and expenditure problems but they project that the majority of the remaining work is not as labor intensive as the initial efforts and most of the materials have been purchased.

All of the memory boards have been completed and are undergoing tests. All of the other boards are nearly complete except the CPU board. The CPU board should be completed during the next three weeks. A breadboard of the CPU board was built to assist in testing the rest of the unit. The boards for the belt unit will be wire wrapped and soldered together. The required cavity for the belt to hold the GRAMS will be 31 inches x 2 inches x 1/4 inches. The belt has been delivered to BDM; the briefcase is being developed.

TO : DIRECTOR, FBI
 ATTN: TSD, ENGINEERING SECTION
 ELECTRONIC ANALYSIS UNIT

FROM SAC, ALBUQUERQUE (66F-1838)

Countermeasures

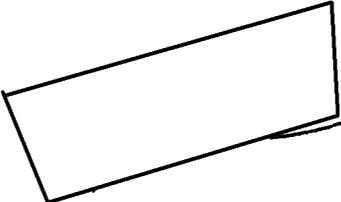

SUBJECT: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)

Albuquerque presently has one Technically Trained Agent (TTA). This TTA is not TSCM trained and due to major case involvement in the past two years, has had to cancel attendance at scheduled TSCM schools twice.

Albuquerque is aware that there are no TSCM schools planned at Quantico for this fiscal year, but would be willing to host a two-week school for those requiring training. This would provide the opportunity to obtain the necessary training for the TTA, and at the same time, provide his availability in the event his services would be required in the Division.

Engineering Section is requested to consider providing a TSCM training session in the Albuquerque Division for those requiring this training. Albuquerque will obtain a suitable training site if the Engineering Section can provide the training. If positive, please advise Albuquerque when this training can be furnished to allow sufficient time to reserve the training site.

DETAILS: On 4/22/87, Electronics Technician [redacted] conducted a TSCM on [redacted] at the JEH Building. The TSCM included a radio frequency spectrum check and a check of the telephone and telephone lines. An X-ray of all small opaque items with a low intensity X-ray imaging system and a nondestructive physical search was conducted. No evidence of clandestine listening devices or tampering with the telephones was found.

fe

To : DIRECTOR, FBI
ATTN: TECHNICAL SERVICES DIVISION
ENGINEERING SECTION, SA [redacted]
From: SAC, COLUMBIA (66-41 SF 2)

Date 4/3/87

b6
b7C

Subject : TECHNICAL SURVEILLANCE
~~COUNTER MEASURES~~ (TSCM)
SURVEYS, COLUMBIA DIVISION

Reference Columbia telcall to FBIHQ, SA [redacted], 3/18/87.

For information of FBIHQ, Engineering Section, discussions with [redacted] Southern Bell Telephone/Telegraph Company, Columbia, South Carolina, determined that the Southern Bell Telephone/Telegraph Company's policy would not allow the inspection of Southern Bell Telephone/Telegraph Company's central offices on a routine basis. [redacted] stated the inspection of FBI telephone service appearances in Southern Bell's central offices would cause unreimbursable administrative expense to the Southern Bell Telephone/Telegraph Company and would serve no useful purpose. [redacted] stated all central offices serving Columbia Division Headquarters and Resident Agency offices are electronic switching stations (ESS); and, therefore, the annual examination of FBI appearances would not be a valid test as to the security of the FBI's telecommunications.

b6
b7C

[redacted] stated that in the event the FBI has a specific need or reason to examine appearances within a central office, the Southern Bell Telephone/Telegraph Company will furnish appropriate cooperation and assistance.

b6
b7C

The Columbia Division Technical Coordinator recommends that the Columbia Division not demand access to Southern Bell Telephone Company's central offices.

By referenced telephone call, SSA [redacted] concurred with the Columbia Division's position that TSCM surveys will be comprised of examination of the FBI office space and examination of Southern Bell Telephone/Telegraph Company's outside multiple appearance points.

JW

DETAILS: On 4/27/87, Electronics Technician [redacted] conducted a TSCM inspection of [redacted] at the FBI Academy, Quantico. The TSCM inspection included a radio frequency spectrum check and a check of the telephone and telephone lines. A nondestructive physical search was conducted. No evidence of clandestine listening devices or tampering with the telephones was noted. However, a hazard exists when the telephone is connected to the Northern Telcom Speaker QUS1B1. Room audio was detected at the Telephone Frame Room where the key service equipment is located. Due to this high level of audio present in the telephone when a button is depressed, it presents an undesirable hazard.

b7E

It is being recommended that the telephone and speakerphone be examined by the ITL and have the problem resolved.

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS (TSCM)

Re W.M. BAKER's memo to WILLIAM A. BAYSE, dated 5/13/87, advising [redacted] had requested a sweep of his residence because he had reason to believe that his telephone and residence had been "bugged".

On 5/14/87, SA [redacted] (WFO/TSS) and [redacted] (TSD/EAU) performed a countermeasures sweep at [redacted]

No indications were detected that his home is technically compromised.

The sweep included an rf survey, power line checks for carrier current, and voltage and current and audio checks on his telephone service. He was advised his cordless and cellular telephones were susceptible to interception and that he should not use them for conversation involving confidential information.

[redacted] furnished the following information as to why he requested the sweep. *JE-188 80-805-542*

At Christmas time, 1986, he hosted a reception for a delegation of visiting Soviets. He later learned that one of them was a KGB officer and he reported the contact to someone on the FBI's congressional liaison staff.

PURPOSE: To report the results of a TSCM inspection conducted of Room 3383 at the [redacted] Virginia.

RECOMMENDATION: That future In-Services, which if by the nature of the subjects discussed, are matters of National Security or are highly sensitive and which, if compromised, would cause serious damage to the Government's interests should not be held at [redacted]

DETAILS: On 3/25-27/87, Electronics Technician [redacted] conducted an initial TSCM inspection of Room 3383, [redacted] and continued to conduct contemporaneous monitoring of the radio frequency spectrum for the duration of the conference. The TSCM inspection consisted of a radio frequency check and of a physical check of the telephone lines.

PURPOSE: To report outcome of TSCM survey at [redacted]
(C) (U)

DETAILS: As requested by referenced communication, a TSCM survey was conducted at [redacted] All the telephones in the rooms identified as those areas to be used during the In-Service were checked physically and electronically for any evidence of tampering with the instruments or telephone lines. The areas in question were also checked for radio frequency transmitters. A physical examination was conducted of all areas of concern. (C) (U)

It was noted that most areas to be used during this In-Service, were equipped with closed circuit televisions, cable television, microphones located in the middle of the rooms, wired intercoms, possible radio frequency intercoms, rear projection rooms and electronic consoles which control the electronic teaching/instructing aids. That is to say the conference area was a maze of wires and electronics which ran throughout [redacted] It was not possible to identify and trace each and every wire or other possible egress path out of the areas of concern. To the extent possible, microphones and

ENCLOSURE

12

Federal Bureau of Investigation

Washington, D.C. 20535

February 10, 1987

MEMORANDUM TO ALL SPECIAL AGENTS IN CHARGE:

RE: FBI MICROCOMPUTER POLICY

BACKGROUND

The FBI Long-Range Automation Strategy (LRAS) calls for a fully integrated, distributed information systems architecture. Upon completion within the next several years, this architecture will provide field offices with the gateway to and from FBI Headquarters and the links to Regional Computer Support Centers necessary to facilitate access to any FBI investigative and/or intelligence information base via intelligent workstations. Currently, microcomputers provide various levels of functionality ranging from executive workstations for decision support systems to dumb terminals for data entry. The recent proliferation of microcomputers and their related software packages challenges management to provide uniform control and guidance to end-users through the implementation of a central management program. This policy is intended to provide the foundation for the central management program.

PURPOSE AND OBJECTIVES OF POLICY

The purpose of this policy is to establish appropriate internal practices and procedures to ensure the proper management and use of microcomputers and the accuracy of microcomputer-processed information. Implementing control procedures unique to microcomputers should reduce the risk of illegal system access, data loss and stolen hardware.

The objective of this policy is to ensure that the management and use of microcomputer resources in the FBI are in compliance with regulations relevant to automation and records management.

2-10-87

MEMORANDUM 5-87

SCOPE AND APPLICABILITY

This policy applies to (1) all elements of the FBI which process, store, or produce information on any microcomputer, including word processors with local storage or memory, (2) microcomputers connected to FBI or public telecommunications networks, and (3) microcomputers used in standalone mode. Microcomputers which are embedded in and dedicated strictly to production systems such as AIDS or to process control systems such as laboratory systems are excepted.

I. RESPONSIBILITIES

- A. The Assistant Directors (ADs) of each FBI Headquarters division and the Special Agents in Charge (SACs) of each field office division are responsible for carrying out their microcomputer management activities in an efficient, effective and economical manner and for enforcing compliance with microcomputer policy, principles, standards and guidelines which I have prescribed.
- B. Each FBI division, through the Headquarters Technical Resources Working Committee (TRWC) member and the Field Office Information Systems Administrator (ISA), shall:
 1. Systematically maintain a current on-site listing of its microcomputer hardware and software including data bases;
 2. Identify, analyze, compile, disseminate and direct end-users to policies, standards, laws, rules and regulations regarding pertinent aspects of microcomputers and their use; and,
 3. Implement control activities involving the collection, use and dissemination of information in conjunction with microcomputers pursuant to this and other related policy.
- C. The Microcomputer Support Group, TSD, will:
 1. Provide hardware and software operation guidance, problem resolution and training tools;
 2. Maintain hardware and software listings and act as an information clearinghouse for users;
 3. Maintain an application bank for dissemination to divisions requesting assistance in a particular area;
 4. Communicate noteworthy developments and activities to users;
 5. Develop, maintain and disseminate microcomputer policies, principles, standards and guidelines;
 6. Coordinate various Records Management Division (RMD) policies with related microcomputer policy contained herein;

2-10-87

MEMORANDUM 5-87

7. Provide guidance on applicable Federal, departmental and Bureau information resources management and information technology management policies, principles, standards and guidelines; and
 8. Provide end-users guidance in determining the feasibility of using either a microcomputer application or a mainframe application for effective implementation of automated technology throughout the FBI.
- D. End-users are responsible for ensuring that information is accurate, complete and reliable, that information is safeguarded, and that proper security procedures are followed during processing. End-users must ensure that all applicable rules, regulations, policies and procedures are followed.
 - E. Office Service Managers (OSM) are responsible for ensuring that microcomputer data files are controlled and integrated with central records system procedures.
 - F. Inspection Division, during field office and Headquarters division inspections, evaluations, and audits will verify and validate both the hardware and software inventories maintained at FBIHQ and the hardware and software listings which are maintained by divisions. Inspection Division will ensure that microcomputers are managed, controlled and used in accordance with FBI policy.

II. UTILIZATION

A. Leased, Purchased and Forfeited Microcomputers

Microcomputers that have been leased or purchased by FBIHQ or forfeited to the FBI have no restrictions set on their use other than adherence to overall Bureau policy.

B. Seized Microcomputers

A seized microcomputer can be used only to evaluate or analyze computer-based files residing on that microcomputer or its peripheral devices in conjunction with the case for which the microcomputer was seized.

C. Personally Owned Microcomputers

Use of personally owned microcomputers is restricted. In extraordinary circumstances, the SAC may request, via written communication, FBIHQ authorization to use personally owned microcomputers on a no-cost to the Government basis. Under no circumstances will personally owned equipment or media be used to process classified information. Entry and removal of such items to operational environments where classified information is processed must be approved by the responsible Security Officer or the FBI Security Programs Manager.

2-10-87

MEMORANDUM 5-87

3

D. Microcomputers in Temporary Bureau-Controlled Space

Use of microcomputers in temporary Bureau-controlled space for processing of any classified or sensitive FBI information is restricted. In instances of imperative necessity to support an investigation, written approval may be granted by the SAC on a case-by-case basis. However, adequate controls must be established to ensure that access to FBI information is available only while Bureau personnel are on-site.

E. Accessing Electronic Bulletin Boards

Currently, there is insufficient predication to warrant a comprehensive program of Electronic Bulletin Board monitoring for either criminal or intelligence purposes.

III. RECORDS MANAGEMENT

A. Accounting for Systems of Records

Any information subject to the provisions of the Privacy Act that is processed by or stored in microcomputers will be either duplicative of information contained in original documents or will be in the form of working papers with the finished document treated as the original. All original documents will be included in Bureau files (the FBI's Central Records System) or in other established FBI systems of records. Indexing will be done from original documents only. Strict adherence to Bureau indexing policy is essential.

B. Credibility of Data and Programs

All investigative information subject to testimony that is processed or stored on FBI microcomputers must be traceable to the case file from which the information was derived. In addition, procedures to ensure data accuracy, completeness and reliability must be established.

The master (original) of any seized magnetic media should be controlled as a bulky exhibit so that a chain of custody and record thereof are maintained. To ensure the purity of evidence, the master should not be altered and its use should be kept to a minimum. To reduce the possibility of inadvertent loss or destruction of seized files, working copies of the original files should be made as necessary.

C. Retention/Destruction of Magnetic Media

When a case is closed, any magnetic media to be retained, must be stored as a bulky exhibit. All other magnetic media should be sanitized and reused or destroyed as classified trash.

D. Access Controls

Access to automated records should be restricted on a need-to-know basis with controls consistent with those afforded counterpart manual records.

2-10-87

MEMORANDUM 5-87

IV. REQUESTS FOR MICROCOMPUTER RESOURCES

Generally, FBI Headquarters will acquire microcomputers and related resources including software, peripheral devices, initial training and maintenance contracts through large volume procurements as a cost containment measure. Priority of need will dictate microcomputer distribution to FOs by FBI Headquarters and application of microcomputer resources within each division. Microcomputers used as part of the "front" operation of undercover or special operations activities will be acquired by either the Criminal Investigative Division or Intelligence Division with procurement assistance provided by TSD.

A. Maintenance Contracts for Other Microcomputers

Microcomputers acquired through means other than FBI Headquarters procurements such as seizure or forfeiture may require maintenance contracts. All requests for maintenance will be submitted to the Microcomputer Support Group.

B. Microcomputer Training

Initial training on microcomputers procured through large volume buys will be provided by TSD. Additional required training will be provided by the requesting divisions. The Training Division will provide new Agents familiarity with microcomputers and will present periodic ADP-related in-services.

C. Supplies

Supplies such as floppy disks and paper will be ordered and purchased by user divisions.

D. Software

Available software packages such as spread sheets and data-base management systems should be used to develop required microcomputer applications.

If investigative steps include a specially prepared computer program, it is advisable to have that program written or reviewed by an individual who can qualify as an expert before the court. The Microcomputer Support Group can advise as to specific recommended practices to establish credibility of data and programs.

V. SECURITY

A. Operations

1. FBI microcomputer systems must be secured and operated in a manner commensurate with the highest classification and sensitivity of the information being processed and/or stored. FBI microcomputers which process classified or sensitive information must be operated only in FBI controlled space (field offices, resident agencies, off sites-only if manned 24 hours a day or alarmed), and under the direct supervision of authorized persons.

2-10-87

MEMORANDUM 5-87

2. Sensitive but unclassified information (hereinafter "sensitive") is information that does not meet the requirements of Executive Order 12356, but requires protection due to the risk and magnitude of loss or harm that could result from inadvertent or deliberate disclosure, alteration, or destruction of the information. The term includes information with improper use or disclosure could adversely affect the ability of the FBI to accomplish its mission; information that is investigative in nature; grand jury information subject to the Federal Rules of Criminal Procedure, Rule 6(e), Grand Jury Secrecy of Proceedings and Disclosure; proprietary information; records about individuals requiring protection under the Privacy Act; information not releasable under the Freedom of Information Act; and information which could be manipulated for personal profit or to hide the unauthorized use of money, equipment, or privileges.
3. A microcomputer becomes classified to the highest level of information that has been entered into, stored on, or produced by the system until and unless the system can be appropriately cleared and certified as such by a competent authority. Security classification and other required control caveats (e.g., WINTEL, SCI CONTROL CHANNELS, RULE 6E MATERIAL, etc.) shall be labeled with equipment, storage media, information and programs in the system.
4. Printouts must be reviewed manually (even if the system initially prints the classification level) to ensure that they are appropriately marked as to the classification and control caveats.
5. All removable media must be marked with an external label clearly indicating the highest classification level of information ever stored on it. Removable magnetic media can never be declassified/downgraded in the field. When no longer needed or usable it must be destroyed as classified trash.
6. When microcomputers have system components (e.g., nonremovable hard disk or other nonvolatile storage) on which classified information is placed, the microcomputer itself, by definition, is classified material. Therefore, it must be externally labeled and secured appropriately.
7. Any time a microcomputer is used to process classified or sensitive information and is not under the direct supervision of an authorized person, whether during or outside regular working hours (such as in nonworking hours in a Resident Agency):
 - o The microcomputer should be logged OFF.
 - o Diskettes and printer ribbons should be removed and properly secured.
 - o Classified information should be cleared from all system memory devices.

2-10-87

MEMORANDUM 5-87

8. When classified information CANNOT be cleared from all system components (e.g., nonremovable hard disk or other nonvolatile storage), the microcomputer itself remains, by definition, classified material. It must be labeled appropriately and secured in accordance with the requirements for any other material of the same classification level.
9. Regardless of the use of any clearing process, a microcomputer which has been used to process classified information may not be removed from its operational or physical environment without the approval of the Security Officer or the FBI Security Programs Manager.

B. Sensitive Compartmented Information

FBI ADPT operations involving SCI will be conducted in accordance with the provisions of the Director of Central Intelligence Directive (DCID) No. 1/16 "Security Policy on Intelligence Information in Automated Systems and Networks." Those microcomputers used to process SCI shall be housed in accredited Sensitive Compartmented Information Facilities (SCIFs). SCI must not be stored on nonremovable media except in accredited SCIFs.

C. TEMPEST Requirements

A microcomputer used to process classified information must be TEMPEST-approved for the specific operational and physical environment, in which it is to be used. Requests for TEMPEST-approval should be made in writing to the Microcomputer Support Group. Any change to the approved configuration, including either internal components or external devices or relocation to another physical environment requires reapproval.

D. Maintenance

Hardware and software maintenance activity may affect the integrity of existing protection measures or permit the introduction of security exposures into a system. Particular care must be taken whenever maintenance must be performed on microcomputer equipment, whether such work is performed onsite or requires removal of the equipment. Unless a microcomputer system can be downgraded to the UNCLASSIFIED level, maintenance must be performed only by properly cleared persons. If off-site maintenance is required, all system memory and storage devices should be removed or certified as UNCLASSIFIED. This requires special procedures that the user cannot perform. Therefore, microcomputer equipment may be transferred for maintenance only through FBIHQ control channels.

E. Equipment and Media Disposal

Microcomputer systems which have been used for classified or sensitive information processing shall not be released from FBI control until the equipment is certified as Unclassified. Disposal of equipment must be only through FBIHQ.

2-10-87

MEMORANDUM 5-87

Unusable or inoperative media (including self-contained storage devices such as fixed disk units) may NEVER be downgraded or released for use at a lower classification level. All such materials must be destroyed by methods approved by FBIHQ.

Printouts, ribbons, diskettes and other such items used to process classified or sensitive information must be destroyed as classified waste.

F. Contingency Planning

Each division must have a documented contingency plan to recover from loss of information while processing and from loss of processing capability. The Microcomputer Support Group can provide guidance on backup/recovery procedures and other aspects of contingency planning.

G. Telecommunications

Microcomputers used as terminal devices linked to any FBI network must not be connected to any other network public or private.

There will be no unencrypted dial-up access to any FBI classified or sensitive information systems or networks.

VI. EVALUATION REQUIREMENTS

Each division must review required files, listings, procedures and practices periodically to assess their effectiveness, consistency and accuracy. Suggested improvements should be reported to the Microcomputer Support Group for possible use by other divisions.

VII. REPORTING REQUIREMENTS

In order to establish and maintain a central applications bank, reports describing particularly useful or innovative applications should be submitted by each division to the TSD Microcomputer Support group upon implementation. In addition, an annual report of cases supported and related data bases developed and used will be provided. Standardized reporting format will be provided by the TSD Microcomputer Support Group.

Memorandum from [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
LEGAL ATTACHE (LEGAT) OFFICES BONN AND ROME

b6
b7C

It had been previously arranged with [redacted] [redacted] Communications Officer, Department of State Headquarters, Washington, D. C., that U.S. Embassy Bonn and Rome communications personnel would assist FBI personnel in the installation of the Merlin KSU.

[redacted] assisted with the installation of the Merlin KSU on 5/10/87, however, he was scheduled to go out of the country the following week and could not continue assisting. [redacted] and other embassy communications technical personnel could not assist as they were experiencing technical problems with the embassys' telephone switch.

b6
b7C

On 5/11/87, [redacted] U.S. Embassy Communications Program Officer (CPO), was advised by SSA [redacted] that a TSCM inspection was being conducted and that a Merlin KSU had been installed in the Legat office space. [redacted] offered their technical assistance in the event it was needed with the Legat telephone lines.

b6
b7C

On 5/14-21/87, a TSCM inspection of the Rome Legat office space was conducted and a Merlin KSU was installed. [redacted] Assistant CPO, U.S. Embassy Rome, was advised of above matter. Due to the pending visit of the U.S. President to Rome, embassy communications personnel were not able to provide technical assistance other than identifying Legat office telephone lines and providing additional lines as requested.

b6
b7C

The Rome Legat office had three telephone extensions from the U.S. Embassy telephone switch. At the request of the Legat, SSA [redacted] requested and received from [redacted] two additional telephone extensions and an outside telephone line which is used as a "HELLO" line.

b6
b7C

The TSCM inspections of both Legat offices consisted of a radio frequency check, a physical and technical check of the telephone lines, and of a physical check of the office space. No evidence of any eavesdropping or tampering with the telephones/lines was noted during the TSCM inspections.

Two Merlin terminals from each Legat office were defective. They were shipped back and are being replaced.

Questions concerning this communication should be directed to the Engineering Section, Electronic Analysis Unit, Newington, Extension 3025.

 (ATTN: TSD/EAU, SSA [redacted])

FROM: SAC, WASHINGTON FIELD OFFICE (66-5539) (TSS)

TECHNICAL SURVILLANCE
COUNTERMEASURES MATTERS

For information of the Technical Services Division, Electronic Analysis Unit (EAU), the Polygraph Unit (Div. 7) made a request to WFO polygraph specialist SA [redacted] for a sweep to be done at its offices at Gallery Row, 7th and D Streets, N.W., Washington, D.C.

In response to that request WFO SAs [redacted] both of whom are countermeasures trained, conducted the sweep on 9/4/87. No indications of a technical intrusion were detected.

The sweep consisted of an rf search using the Scanlock Receiver and P494 Spectrum Analyzer and physical inspections of the telephone instruments and cross connections.

Unit Chief [redacted] advised the sweep was requested because the Unit's offices are located in a commercial office building that is open to the general public and a sweep of the space has never been done.

Memorandum

To : Mr. Bayse *was/cr*

Date *9/18*
8/7/87

From : [redacted] *J. Jones*

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

This communication is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: To report results of a TSCM inspection conducted at the Mexico City Legat office.

SYNOPSIS: A TSCM inspection was conducted of the Mexico City Legat office, 4/6-14/87. The general physical and technical security of the Legat office was good. Two weaknesses were noted in that the office personnel do not escort the cleaning personnel and indices cabinets are locked with a padlock all having a one digit combination number. The office personnel use an incinerator to burn all classified material which at times fills the office space with smoke. The latter prompted an Ambassador to restrict the use of the incinerator for some time. In 8/85, the embassy Fire Marshall instructed the Legat office to replace the incinerator with the appropriate paper shredders. It is being recommended that Mexico City Legat office be provided with two paper shredders. The office has rotary telephones and an electronic key service unit (KSU) is being recommended for efficiency and technical security reasons.

Memorandum of [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

b6
b7c

It is also being recommended that the Records Management Division (RMD) give serious consideration to restricting access of non-FBI personnel to the Legat office space during non working hours. There are plans to relocate the Legat office to a lower level within the embassy. A TSCM inspection should be conducted immediately after the move to the new office space.

RECOMMENDATIONS: 1. That the Mexico City Legat office be provided with two paper shredders.

DETAILS: During 4/6-14/87, Phoenix SA [redacted] and FBIHQ Supervisory Special Agent (SSA) [redacted] conducted a TSCM inspection of the Mexico City Legat office. The TSCM inspection consisted of a thorough physical and technical check of the telephones; physical and technical check of all office artifacts ; a radio frequency (RF) check; a carrier current check of the AC power outlets; an RF check of three Legat office cars; checks of the telephones/lines; and of RF checks of four Legat personnel residences.

b6
b7c

On 4/6/87, [redacted] Communications Program Officer (CPO), U. S. Embassy Mexico City, was contacted and advised of the plans to conduct a TSCM inspection of the Legat office space. On same day, attempts were made to contact the Regional Security Officer (RSO) with negative results. However, the Assistant RSO was contacted and advised that a technical inspection was being conducted of the Legat office.

b6
b7c

Memorandum from [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

b6
b7C

No signs of any eavesdropping was noted during the TSCM inspection, however, the following observations were made:

1. The Legat office physical and technical security was very good. All non-FBI personnel are escorted while in the office space with the exception of the cleaning personnel. It is being recommended that all cleaning personnel be escorted while in the office space.

2. The Legat office currently uses an incinerator to burn classified material. Occasionally, the incinerator backs up and fills the office space with smoke to the point where personnel have to leave the large room where it is located. As a result of the smoke, the fire alarms were disconnected as they were being set off frequently by the smoke. It was learned that an Ambassador restricted the use of the incinerator due to the ashes being deposited over the embassy court yard where he often entertained guests. In 8/85, the embassy Fire Marshall instructed the Legat office personnel to replace the incinerator with paper shredders approved for shredding of classified material. The Legat office is in desperate need of at least two paper shredders and it is being recommended that paper shredders be provided to the Legat office at the earliest time possible.

3. The Indices cabinets are locked with a bar and a Sargent & Greenleaf padlock which has all three digits set on one number and all the padlocks have the same number. These cabinets are unlocked when the office space is being cleaned.

4. The Legat office uses rotary dialed telephones with the appropriate 1A2 KSU. A 25 pair cable is used to bring the embassy extensions and outside telephone lines to the office. Local telephone technicians are constantly working on the KSU as problems with the office telephones occur. Although local telephone technicians work on the office telephones often, no irregularities were found during the TSCM inspection. Nonetheless, an electronic KSU is being recommended for efficiency and security reasons.

5. There were several speakers throughout the office space. These speakers, which were not in use, were disconnected and removed. Two additional alarm speakers located near the vault area and at one end of the hallway will be replaced with Selectone 300 GC speakers which are approved for installation in sensitive areas. [redacted] Electronic Security Officer, U.S. Embassy Mexico City, will replace these speakers.

b6
b7C

Memorandum from [] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

b6
b7C

It was recommended to Legat [] that the office space be secured with appropriate combination locks after working hours and restrict access to non-FBI personnel. However, this would require that the office space be alarmed and arrangements would have to be made to monitor the alarm system. At the present time, the FBI does not have the capability of monitoring and managing a complex system required to fully secure the Legat office space. This matter was also discussed with RMD Section Chief []. His section is currently addressing such issues as to strengthen the physical security of Legat offices and will work with the ES in this matter.

It should be noted that at least one other U.S. Government agency does not allow U.S. Marine guards to enter their space after working hours. In light of recent revelations of security violations by some U.S. Marines guards, above recommendation to strengthen the technical and physical security of the Legat office.

The Legat office is in the process of being relocated to a lower level within the embassy. A TSCM inspection immediately after the move to the new office space would be prudent.

All recommendations being made were discussed with Legat [] by SA [] and SSA []. Legat [] did not see any problems with the recommendations made to him concerning the physical and technical security of the office space.

Legal Attache Mexico City

Acting Director, FBI 80-805

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

This communication is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

On 4/6-14/87, FBIHQ Supervisory Special Agent (SSA) [redacted] and Phoenix SA [redacted] conducted a TSCM inspection of the Legat office space. It was noted that the general physical and technical security of the office space was good. However, in order to strengthen both the physical and technical security of the office space, it is recommended that cleaning personnel be escorted and that padlocks on the Indices cabinets use three digit number combinations. Each padlock should have a different combination number. The installation of an electronic key service unit (KSU) telephone system is also being recommended.

b6
b7C

Although no discrepancies were found on the telephone system, an electronic KSU system will increase the efficiency and technical security of the office. Your office will be advised when the KSU is available so that plans can be made for its installation.

The incinerator currently being used to burn classified material frequently fills the office space with smoke. The fire alarms have been disconnected as a result of the smoke. Your office will receive two paper shredders to replace the use of the incinerator. Immediately after receipt of the paper shredders, connect all fire alarms and discontinue the use of the incinerator.

Memorandum to Legal Attache Mexico City
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

[redacted] Electronics Security Officer, U.S. Embassy, advised that he would replace the alarm speakers, model 50 Selectone, located near the vault area and at the end of the hallway with model 300 GC Selectone speakers which are approved for installation in sensitive areas.

b6
b7C

[redacted] expressed concern that matters on technical security of the office were not addressed as a "~~CONFIDENTIAL~~" matter. All communications on the subject should be classified, at minimum, "~~CONFIDENTIAL~~." These matters should not be discussed on non secured telephone systems. In requesting TSCM inspections from embassy technical personnel, ensure that all written communications are classified.

Immediately upon relocating to the new office space, Legat Mexico City should request a TSCM inspection from Technical Services Division, Engineering Section.

Legat [redacted] was apprised of the results of the TSCM inspection by SSA [redacted] and SA [redacted]. Recommendations being made were discussed with Legat [redacted].

b6

FM DIRECTOR FBI {80-805}
TO ALL FBI FIELD OFFICES ROUTINE
ATTN: TECHNICAL COORDINATORS

BT

~~CONFIDENTIAL~~

TECHNICAL SURVEILLANCE COUNTERMEASURES {TSCM} - EQUIPMENT/TRAINING

THIS DOCUMENT IS CLASSIFIED "~~CONFIDENTIAL~~" IN ITS ENTIRETY,
UNLESS OTHERWISE NOTED. {U}

TSCM EQUIPMENT:

FOR THE INFORMATION OF RECEIVING OFFICES, THE ENGINEERING SECTION, ELECTRONIC ANALYSIS UNIT {EAU}, PURCHASED TSCM RECEIVERS DURING FY 1987 FOR ALL FIELD OFFICES NOT HAVING ONE AT THE PRESENT TIME. IN ADDITION, THE BUREAU TELEPHONE ANALYZERS-3 {BTA-3} PURCHASED IN FY 86 HAVE BEEN RECEIVED BY EAU. THE RECEIVERS ICOM MODEL IC-7000A AND BTA-3S WILL BE ASSIGNED TO FIELD OFFICES AS TECHNICALLY TRAINED AGENTS ARE TRAINED IN THEIR USE.

pm

A TSCM EQUIPMENT LIST WILL BE MADE AVAILABLE TO ALL FIELD

OFFICES. IN THE EVENT NON-LINEAR JUNCTION DETECTORS, TIME DOMAIN
REFLECTOMETERS, BODY RECORDER DETECTORS, OR OTHER TSCM EQUIPMENT IS
NEEDED, FIELD OFFICES REQUIRING THE USE OF ABOVE EQUIPMENT SHOULD
OBTAIN IT FROM THE NEAREST FIELD OFFICE WHICH HAS ONE.

TSCM TRAINING:

THERE ARE NO TSCM IN-SERVICES SCHEDULED AT THE FBI ACADEMY,
QUANTICO, FOR FY 88. IN ORDER FOR THE ENGINEERING SECTION, EAU, TO
MAKE ARRANGEMENTS FOR REGIONAL TRAINING, ALL FIELD OFFICES ARE TO
SUBMIT THE TSCM TRAINING REQUIREMENTS BY PROVIDING THE NAME OF THE
TTA(S) TO BE TRAINED AND THE TYPE OF TRAINING REQUESTED. EVEN IF
THERE ARE NO IMMEDIATE TSCM TRAINING REQUIREMENTS FOR YOUR FIELD
OFFICE. THE INFORMATION IS REQUIRED FROM ALL FIELD OFFICES TO
FACILITATE TSCM TRAINING PLANS BEYOND FY 88. ALL RESPONSES MUST BE
AT HEADQUARTERS COB DECEMBER 4, 1987, TO MAKE ARRANGEMENTS FOR
REGIONAL TRAINING COMMENCING IN EARLY 1988 AND TO ADVISE ALL TTAS
SELECTED TO ATTEND. SELECTIONS WILL BE MADE ON THE PERCEIVED NEED
OF EACH FIELD OFFICE.

THERE ARE THREE TSCM IN-SERVICES PROVIDED BY EAU, NAMELY, TSCM
PHASE I {REQUIREMENT - MUST BE A TTA}, TSCM PHASE II {MUST HAVE
ATTENDED TSCM PHASE I}, AND TSCM UP-DATE {MUST HAVE RECEIVED EITHER

TO: DIRECTOR, FBI (80-805)
(ATTN: ASSISTANT DIRECTOR BAYSE, DIVISION 8)

FROM: SAC, WASHINGTON FIELD OFFICE (66-5539)

TECHNICAL SURVEILLANCE
COUNTERMEASURES MATTERS (TSCM)

Re letter from the [redacted] dated 10/31/87, requesting the Bureau provide TSCM services for 15 offices and [redacted]

By notation on referenced letter, [redacted] and [redacted] the need to sweep it. Accordingly, on 11/3/87 [redacted] was contacted for clarification.

[redacted] said the sweeps are being requested as a matter of routine and are not predicated on any particularly perceived threat or leak. As for [redacted] the sweep is being requested as a precautionary measure, probably because the house has several, unsecured ringdown circuits to the White House.

[redacted] was apprised of the Bureau's policy regarding the sweeping of private residences, namely that homes are not considered secure and sweeps are not done unless supported by sufficient facts and circumstances.

In this particular instance, WFO believes there is insufficient basis to justify sweeping [redacted]. There are no substantial or suspicious facts or circumstances to indicate a sweep would be prudent and, further, there is no

WF 66-5539

practical way to determine if the ringdown circuits have been tapped. To perform a residential sweep as a matter of routine security will set a precedent obligating future sweeps whenever similar requests are received, and WFO does not have the countermeasures resources to provide that kind of support.

WFO also believes the scope of the sweep should be limited to [redacted] and conference rooms. Again, there is no substantial basis to justify the extensive sweep being requested.

b7E

WFO appreciates other agencies' concerns about technical security and endeavors to provide routine sweep assistance as its technical resources allow. It has and always will respond with appropriate and sufficient manpower, equipment and time when facts and circumstances indicate a comprehensive sweep would be prudent. It cannot, however, devote its limited resources to large-scale sweeps requested as a matter of routine.

UACB, and unless additional facts arise to support the request, WFO will not sweep [redacted]. Likewise, it will sweep only [redacted] and conference rooms.

~~CONFIDENTIAL~~

Washington Field Office
Washington, D.C.
December 4, 1986

[Redacted]

Washington, D.C. 20001

Dear [Redacted]

This is in response to your request for an audio countermeasures (ACM) survey at [Redacted]

On November 12, 1986, ACM trained special agents of the Federal Bureau of Investigation (FBI) conducted the sweeps. No indications of eavesdropping were detected.

Your offices are afforded good physical security by the fact that they are located in [Redacted]. That is not to say, however, that they are completely safe from surreptitious intrusion or technical exploitation. If a perpetrator could gain access to your offices, he could easily effect a technical compromise using the numerous electrical power, telephone and computer cables that appear in the offices and which run throughout the building.

One weakness in your physical security was noted: the windows in your offices are not alarmed. As was pointed out during the sweep, these windows are only two or three feet above the fifth and sixth floor roof levels and can be used as breachpoints for undetected entry into the offices. Given the building's guard force and the difficulty a perpetrator would have getting access to these roofs the probability of this scenario occurring is remote; nevertheless, the threat does exist. If you feel the threat is significant, you may want to consider having magnetic, ultrasonic or infrared entry detection sensors installed in those rooms with windows.

b6
b7C
b7E

b7E

80-805-571

Unfortunately, the wiring hazards presented by the utility cables cannot be effectively eliminated without major changes to the electrical power and telephone systems. From a practical standpoint, the best protection against the possible exploitation of these facilities is to insure that all power and telephone service closets and panels are locked at all times and that only authorized service personnel with verifiable work orders be allowed to access them. Likewise, unoccupied offices should always be locked, and maintenance personnel without verifiable work orders should not be allowed access to any parts of the electrical or telephone systems in your offices.

You are cautioned that telephone conversations are not secure and that discretion must be used whenever privileged information is to be discussed. Depending upon the degree of confidentiality attaching to the information, [redacted] and staff may want to consider personal meetings at locations remote from the offices rather than using the telephones.

b7E

If my office can be of any further assistance to you with this matter, please contact Supervisory Special Agent [redacted] at 252-7476.

b6
b7C

Sincerely yours,

[redacted]
Special Agent In Charge

Date: July 10, 1987

To:

b7E

From: William A. Bayse
Assistant Director
Technical Services Division

Subject: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
INSPECTION OF

Reference is made to your memorandum dated June 2, 1987, ^{NR} requesting a microphone and telephone security survey of

 Washington, D.C. 20001.

b7E

On June 9, 1987, personnel from the Technical Services Division conducted a TSCM inspection of
 The inspection included a radio frequency spectrum check, an examination of all telephones and telephone lines, and a nondestructive physical search. No evidence of clandestine listening devices was found.

b7E

was verbally informed of the results of the TSCM inspection.

b6

b7C

b7E

NOTE: The above TSCM check was conducted by Electronics Technician and Electronics Engineer

4 AUDIO COUNTERMEASURES

5
 6 From 9/13/87 through 9/18/87, SSA [redacted] and SA [redacted] both from the Chicago Division, travelled to the San Juan Division to assist San Juan Tech Agents in performing countermeasure sweeps of that division.

7
 8 Sweeps were conducted on headquarters city, the SAC's home, the ASAC's home, offsite locations and Resident Agencies.

9
 10 No electronic penetrations were discovered nor were any significant electronic security violations found.

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) -
 EQUIPMENT/TRAINING

Re: Bureau teletype to All Offices, dated 11/23/87,
 captioned as above.

The following request is being made by Newark to
 schedule whenever available the following TTA's for Technical
 Surveillance Countermeasures Training; SA's [redacted]
 [redacted] for TSCM Up-Date. Both SA [redacted]
 have attended TSCM Phase I. SA's [redacted]
 [redacted] for TSCM Phase I.

Due to the number of requests for TSCM services,
 Newark's requests to train two additional TTA's over the next
 two years will greatly enhance the TTA program in Newark.

9/18/87
8/7/87

Acting Director, FBI 80-805

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

This communication is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

On 4/6-14/87, FBIHQ Supervisory Special Agent (SSA) [redacted] and Phoenix SA [redacted] conducted a TSCM inspection of the Legat office space. It was noted that the general physical and technical security of the office space was good. However, in order to strengthen both the physical and technical security of the office space, it is recommended that cleaning personnel be escorted and that padlocks on the Indices cabinets use three digit number combinations. Each padlock should have a different combination number. The installation of an electronic key service unit (KSU) telephone system is also being recommended.

b6
b7c

Although no discrepancies were found on the telephone system, an electronic KSU system will increase the efficiency and technical security of the office. Your office will be advised when the KSU is available so that plans can be made for its installation.

The incinerator currently being used to burn classified material frequently fills the office space with smoke. The fire alarms have been disconnected as a result of the smoke. Your office will receive two paper shredders to replace the use of the incinerator. Immediately after receipt of the paper shredders, connect all fire alarms and discontinue the use of the incinerator.

Memorandum to Legal Attache Mexico City
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
MEXICO CITY LEGAL ATTACHE (LEGAT) OFFICE
4/6-14/87

[redacted] Electronics Security Officer, U.S. Embassy, advised that he would replace the alarm speakers, model 50 Selectone, located near the vault area and at the end of the hallway with model 300 GC Selectone speakers which are approved for installation in sensitive areas.

b6
b7C

[redacted] expressed concern that matters on technical security of the office were not addressed as a "~~CONFIDENTIAL~~" matter. All communications on the subject should be classified, at minimum, "~~CONFIDENTIAL~~." These matters should not be discussed on non secured telephone systems. In requesting TSCM inspections from embassy technical personnel, ensure that all written communications are classified.

b6
b7C

Immediately upon relocating to the new office space, Legat Mexico City should request a TSCM inspection from Technical Services Division, Engineering Section.

Legat [redacted] was apprised of the results of the TSCM inspection by SSA [redacted] and SA [redacted]. Recommendations being made were discussed with Legat [redacted].

b6
b7C

Inquiries concerning this communication should be directed to FBIHQ, Attention: Technical Services Division, Engineering Section, Electronic Analysis Unit.

technical check of all telephones as well as the phone closet; physical and technical check of all office artifacts; a radio frequency (RF) check; and also a carrier current check of the A.C. power outlets. No clandestine listening devices were discovered, however, it is recommended that blinds or curtains be placed on the windows to prevent a visual penetration. This is due to the fact that the office space is on the fourth floor of a public building which is located approximately 30 meters from a six story public parking garage and a public hotel. There is also a condominium complex approximately 300 meters from the office space. All three of these sights have more than adequate visual access to the office, and they could very easily be used to set up a visual or infrared laser penetration against the office. Almost the entire office space is vulnerable to visual attack.

On 8/27/87, ET [redacted] EE [redacted] and TTA SA [redacted] conducted a TSCM inspection of the Eugene RA. The TSCM inspection consisted of a thorough physical and technical check of all telephones as well as the phone closet, physical and technical check of all office artifacts; an RF check; and also a carrier current check of all the A.C. outlets. No clandestine listening devices were discovered.

b6
b7C

On 8/28/87, ET [redacted] EE [redacted] and TTA SA [redacted] conducted a TSCM inspection of the Salem RA. The TSCM inspection consisted of a thorough physical and technical check of all telephones as well as the phone closet, physical and technical check of all office artifacts; an RF check; and also a carrier current check of all the A.C. outlets. No clandestine listening devices were discovered.

b6
b7C

On 8/31/87, ET [redacted] and EE [redacted] conducted a TSCM inspection of the Coos Bay RA. The TSCM inspection consisted of a thorough physical and technical check of all telephones as well as the phone closet; physical and technical check of all office artifacts; an RF check; and also a carrier current check of all the A.C. outlets. No clandestine listening devices were discovered.

b6

ADDENDUM: ADMINISTRATIVE SERVICES DIVISION, 10/13/87, WPO:ncl

WPO Ncl

Referenced communication reports the results of TSCM inspections conducted at the Portland Field Office by Technical Services Division (TSD) personnel and recommends that some type of blinds or curtains be placed on the windows of the Portland Field Office. Based on this TSCM inspection, the Engineering Section (ES), TSD should advise the Portland Field Office of this recommendation that so that the office may procure appropriate window coverings. Additionally, in view of the fact that almost the entire office was found to be vulnerable to visual attack and thereby compromising the security of office operations, the ES, TSD, should establish policy in conjunction with the Security Programs Unit, Operations Sections, Records Management Division, that these blinds, curtains, or drapes remained closed at all times to eliminate this vulnerability and to preclude any penetration of the office through visual access.

Memorandum from [redacted] to Mr. McCreight
Re: Security Countermeasures (S/CM) Working Group
Minutes of Seventh Meeting, October 27, 1987

b6
b7C
b7E

2.

- 1) Physical Security - A concept involving the use of all the means and methods available to physically protect personnel and prevent unauthorized access to facilities, material, and documents. It is concerned not only with equipment and procedures used to prevent the loss or compromise of sensitive information, but, just as importantly, physical security also includes the techniques and policies that are designed to deter criminal acts such as vandalism, theft, sabotage, and arson.
- a) Access Control - A concept that involves the use of all the means and methods available to control the movement of people. It involves the use of guards, passes, badges, and locking devices that are operated with credit cards or push-button locks. It involves the use of combination locks, key-operated locks, procedures, policy, regulations, and consideration of architectural design. It is inseparable from Physical Security.
- 2) Information Security is a process which involves all the administrative and control techniques used to protect documents, ideas, etc.

Memorandum from [redacted] to Mr. McCreight
Re: Security Countermeasures (S/CM) Working Group
Minutes of Seventh Meeting, October 27, 1987

b6
b7c

- 3) Personnel Security is the process to ensure protection of our organization from either our own employees or people who come in contact with our organization.
- 4) The Physical Security process provides the physical means for security. It is used to deny access by the establishment of barriers.

In order to apply physical protection, threats, vulnerabilities, and risks must be identified and their meanings understood.

- 1) Vulnerability is a state or condition expressing how open you are to attack or damage. A vulnerability is a weakness. Vulnerabilities are exploitable. The probability that you will suffer damage or a loss because of a vulnerability is based on the threat.
- 2) A Threat is an expression of intent to hurt, destroy, punish, etc. Threats are acts or conditions which may result in the compromise of information, loss of life, damage, loss or destruction of property, or the disruption of the mission of the organization.

For example, the threat of catastrophic fire is associated with the vulnerability "inadequate fire protection." The threat of access of hostile intelligence agents is associated with the vulnerability "ineffective or nonexistent internal physical access controls."

A threat analysis determines the need for concern.

- 3) Risks are things from which only liabilities can accrue. The evaluation of risks depends on two things: a) the probability of adverse effects occurring as a result of a threat, and b) the extent to which an activity will be effected by the threat. The degree of loss you will suffer is based upon a judgment as to the importance of the asset in question and the ability to replace it should it be lost, stolen, or destroyed. How critical something is, is a determination of how valuable something is to your operation. This is referred to as criticality.

A risk analysis is a process used to determine an expected loss. Both the vulnerabilities and criticality must be evaluated or analyzed so that risks can be abated, transferred, or spread out. Anything left must then be considered an acceptable risk. The mere recognition of a risk implies there is some estimate of the probability of a loss.

Memorandum from [redacted] to Mr. McCreight
Re: Security Countermeasures (S/CM) Working Group
Minutes of Seventh Meeting, October 27, 1987

b6
b7C

Burglars' technologies have improved, but Government standards have not kept up to prevent unauthorized entry/access via currently used combination locks or security containers, which have not been tested/retested by the Government for over ten years. These issues must be corrected via redressing the Government's acceptable standards and through testing of available equipment. We must understand the opposition's technology in order to defeat it. Standards must be applied and interpreted by informed people, and they must be written with an understanding of intruder knowledge and intrusion resistance.

Once our basic security policy is in place, we must educate the FBI population regarding security. Security Officers, both at Headquarters and in the Field, must promote this attitude. The function of Physical Security is to protect life and property and prevent the loss of our assets (people, equipment, etc.). All the expensive countermeasures equipment in the world is worthless if Physical Security is not present and wisely used.

3. The Bureau's habit of allowing the storage of classified material under lock and key must be ended. There is no provision allowing for the unattended storage of classified information under key-operated locks. The requirement is to use combination locks. Medeco locks on office doors do not provide any more protection for this material than any other office or car key would allow.
4. Thoughts/ideas for upcoming topics of discussion should be provided to Supervisory Special Agent [redacted] on Extension 5339 for inclusion in the agenda.
5. The next meeting of the Security Countermeasures Working Group is scheduled for November 24, 1987, at 9 a.m., in Room 5641.

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING

COUNTERMEASURES

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

REFERENCE: Director teletype to all field offices dated 11/20/87; Jacksonville teletype to Director dated 12/1/88; Memphis airtel to Director dated 1/28/88; and telephone call from Supervisory Special Agent (SSA) [redacted] Interagency Training Center (ITC).

b6
b7C

PURPOSE: To request authorization to conduct two, two-week Regional TSCM PHASE I training sessions; one, two-week Regional TSCM PHASE II training session; and two TSCM Up-date training sessions. As per referenced teletype dated 11/20/87, the training will include use of the new Bureau Telephone Analyzers (BTA-3) and other pieces of TSCM apparatus. Ten Technically Trained Agents (TTAs) per session will be trained. The training will be conducted in the Jacksonville and Memphis Divisions as well as the ITC in Fort Washington, MD. Travel authorization is also being requested for Electronic Engineers (EE) [redacted] Electronics Technician (ET) [redacted] SSA [redacted] and SSA [redacted] to conduct this training.

b6
b7C

SYNOPSIS: In response to referenced Director teletype, the Jacksonville and Memphis Divisions have requested that the Engineering Section (ES) provide TSCM training for their TTAs. Referenced Jacksonville teletype and Memphis airtel indicate willingness for the respective Divisions to host such training.

Memorandum from [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING

b6
b7C

The Jacksonville Division has coordinated this matter with the Mayport Naval Station which has offered space for the class in their facility. The Memphis Division likewise has located suitable space for the class at the Germantown Police Station and, per referenced telephone call, the ITC has offered space in one of its new classrooms.

To date, 34 Divisions have requested TSCM training in response to the referenced Director teletype. MIOG, Part II, Section 16-7.2.6(8) requires that TSCM inspections be conducted on a semi-annual basis at all Field Offices and Resident Agencies by TSCM trained TTAs.

Authorization is hereby requested to conduct two, two-week Phase I TSCM training sessions; two, one-week TSCM Update sessions; and one, two-week Phase II TSCM class. The estimated cost for transportation and per diem for all classes is \$10,517.90.

RECOMMENDATIONS: 1. That authorization be granted to conduct two Phase I TSCM training sessions; two TSCM Update training sessions; and one Phase II training session at the proposed locations.

	Exec. AD-Inv. _____	Laboratory _____	
Exec. AD-LES _____	Legal Coun. _____		

DETAILS: Current FBI TSCM policy requires that TSCM inspections be conducted at all FBI Field Offices and Resident Agencies semi-annually by TSCM trained TTAs. Requests for TSCM training have been received from 72 TTAs to date. No slots are available at the FBI Academy, Quantico for this training.

~~CONFIDENTIAL~~

Memorandum from [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) TRAINING

b6
b7C

During the last three years, the ES has contracted for the construction of 59 telephone analyzers for field use. These analyzers, BTA-3s, have been delivered to the ES and 29 shipped to the field upon receipt of training last year. Thirty BTA-3s remain and will be shipped pending this year's training request. In addition to training with the BTA-3s, the ES has received 42 ICOM receivers and signal monitors, and 30 Phillips oscilloscopes. Training with this equipment and instruction on electronic telephone switching systems will be afforded to the TTAs in the various sessions. The BTA-3 telephone analyzer is necessary to conduct TSCM inspections as specified by the MIOG, Part II, Section 16-7.2.6(8).

The enclosed teletype is being sent to all Divisions in order to advise them of the proposed training schedule and agenda. They are also being advised that selection for the TSCM training will be based upon the following: (1) The need for each Division to have at least one TSCM trained TTA; (2) Particular field TSCM requirements based upon perceived threat and workload; and (3) Travel distance from the field office to the training location. The enclosed letter is being forwarded at the request of SA [redacted] [redacted] Jacksonville Division, to confirm the class schedule.

b6
b7C

The tentative schedule for this training is as follows:

LOCATION	DATES	CLASS
Interagency Training Center Fort Washington, MD	April 18 - 29 May 1 - 6	Phase I Update
Jacksonville Mayport Naval Station	June 20 - July 1	Phase II
Memphis Germantown Police Department	July 18 - 29 August 1 - 5	Phase I Update

The estimated cost for this training is:

1. Interagency Training Center

 5 AND TECHNICAL UPDATE SCHOOL
 6 JULY 18 THROUGH 29, 1988 AND
 AUGUST 1 THROUGH 5, 1988,
 7 TO BE HOSTED BY MEMPHIS DIVISION

8 Re telephone calls from Memphis to TSD.

9 As per conversations with Tech Services Division,
 10 Memphis has arranged for the two-week countermeasures school
 to be hosted and held at the GERMANTOWN, TENNESSEE POLICE
 11 DEPARTMENT training facility, beginning with class on July
 18 and ending on July 29. Also, Germantown has agreed to
 12 provide space for the Technical Update Program beginning
 August 1 and terminating on August 5. Space provided by
 13 Germantown can be secured and will not be utilized by other
 than Bureau personnel during the time interval designated.

14 Germantown training facility is a large classroom
 with tables, and all visual aid materials would be available,
 15 including overhead projectors, carousel, and projection-type
 tv, as well as 16mm movie. GERMANTOWN POLICE DEPARTMENT
 16 has further advised that they would make available to the
 attendees at the school the police physical fitness training
 17 area, which includes a complete universal machine set-up,
 as well as other facilities.

This communication is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: To report the results of a TSCM survey [redacted]
 J. Edgar Hoover F.B.I. Building.

b7E

DETAILS: On 9/8/88, Electronics Engineer [redacted] and Electronics Technician [redacted] of the Technical Services Division conducted a TSCM Survey of [redacted] J. Edgar Hoover F.B.I. Building.

b7E

The survey included a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the room, an inspection of the telephone closet, an inspection of all alternating current power lines, an electronic inspection of all office artifacts, and a non-destructive physical search. There was an anomaly detected on the alternating current power lines. The signal was determined to be radiating outside [redacted]. Further investigation will take place to determine the exact origin of the suspect signal.

Subject : ~~TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)~~

Countermeasures

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: To report the results of a TSCM inspection [redacted] (U)

DETAILS: Reference telephone call between Supervisory Special Agent (SSA) [redacted] and Electronics Engineer [redacted]

[redacted] The reason for the TSCM survey was that the Room was to be used for a briefing on the FBI Library Awareness Program.

On 2/10/88 Electronics Technician [redacted] conducted a TSCM inspection [redacted]

The TSCM inspection included a thorough physical and technical check of all office artifacts; a radio frequency check; an inspection of the telephone wiring; and also a carrier current check of a AC power outlets. No evidence of clandestine listening devices was found.

SSA [redacted] was verbally informed of the results of the TSCM inspection. APR 3 1988

RECOMMENDATION: None. For information only. (U)

DETAILS: The January 12, 1988 edition of "The Washington Times" newspaper, page A1, featured an article titled, "KGB Agent Kept Close Ties to US Arms Control Expert." This article referred to a 73-page FBI report, completed in June, and entered by Representative Bill Young in the Congressional Record.

80-805-588X2

It is understood by the Engineering Section that the report referred to in the newspaper article was a "sanitized" version of the "FBI Response for the 1987 Nation Assessment of the Hostile Intelligence Threat and US Countermeasures", released to Congress by the FBI. Inasmuch as portions of the classified Assessment directly pertain to joint INTD-TSD programs as well as ES technical countermeasures operations, it is important to on-going and future technical operations that the ES be aware of what, if any, information regarding technical threat or countermeasures was contained within the report provided Congress.

From : [redacted]

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
[redacted]

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: [redacted] b7E

DETAILS: On 2/23/88, A TSCM survey [redacted] was conducted by Electronics Technician [redacted] and Electronics Engineer [redacted] of the Electronic Analysis Unit, Engineering Section. b6 b7C b7E

The TSCM survey consisted of a carrier current and voltage check of all telephone lines entering the building, a physical inspection of all telephone closets, and a radio frequency check of all telephone and power lines entering the building.

A radio frequency check is continually being performed by the Radio Frequency In-Place Monitoring System and several man hours are spent each week locating the origin of emitters from within [redacted] b7E

No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines were found.

RECOMMENDATION: It is recommended that another TSCM survey be conducted every six months.

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: To report the results of a TSCM survey and contemporaneous monitoring of the Executive Dining and Conference Rooms at the FBI Academy.

DETAILS: On 12/14-15/88, Supervisory Special Agent [redacted] and Electronics Technician [redacted] conducted a TSCM inspection of the Executive Dining and Executive Conference Rooms at the FBI Academy, Quantico, Virginia.

b6
b7C

(18)

The TSCM inspection consisted of a radio frequency spectrum check, a physical inspection of the telephone, an inspection of the power lines and a nondestructive physical search. Contemporaneous monitoring was conducted during the dinner meeting on 12/14/88, from the room adjacent to the Executive Dining Room. On 12/15/88, monitoring was conducted from the Projection Room located below the Executive Conference Room. No evidence of clandestine transmitters, listening devices or tampering with the power lines were found.

REC [redacted]
Washington, D.C. 20549

Dear [redacted]

Reference is made to your letter dated September 27, 1988, requesting a Technical Surveillance Countermeasures (TSCM) inspection [redacted]

b7E

On Friday November 4, and Monday November 7, 1988, personnel from the Technical Services Division conducted a TSCM inspection of [redacted]

b7E

[redacted]

The inspection included a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the offices, an inspection of the telephone closets on both the fourth and sixth floors, an inspection of all alternating current power lines, an electronic inspection of all office artifacts, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines was found. However, it is recommended that the blinds be pulled down over the windows if there is any type of ~~confidential~~ documents out in the open or if any ~~confidential~~ discussions are taking place in the room. This is to prevent a visual penetration of the space from the buildings in close proximity.

80-805-593

[redacted] was verbally informed of the results at the time of the inspection.

~~CONFIDENTIAL~~

Memorandum from [redacted] to Mr. Bayse
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY
[redacted] J. EDGAR HOOVER F.B.I. BUILDING

b6
b7C
b7E

On 5/30/88, Electronics Engineer (EE) [redacted] of the Technical Services Division ran several tests on the suspect battery and conducted a TSCM survey of [redacted]. The battery had registered a voltage reading of 1.53V indicating that it was fully charged. The survey included an electronic and physical inspection of all office artifacts. Particular attention was paid to the curtains, window blinds, and the area above the suspended ceiling. No evidence of any clandestine listening devices was found.

b6
b7C
b7E

[redacted] an Eveready Sales Representative telephonically advised EE [redacted] on 5/30/88 that the Union Carbide #329 battery is a 1.5 volt, silver oxide battery commonly used in calculators and watches.

b6
b7C

[redacted] further advised that approximately four weeks prior to this incident, one of the office walls had been moved approximately two feet. All work corresponding with this move was done by Bureau employees.

b6
b7C

Approximately eight to ten weeks earlier, the curtains in the office were removed and sent to CHESEPEAKE SERVICE to be cleaned. Upon return, they were reinstalled in the office by Bureau employees. This process was monitored by [redacted] who explained the cleaning process in a telephone conversation between EE [redacted] observed no unusual behavior throughout the process.

LEGAT MEXICO CITY HAS REQUESTED THAT THE TECHNICAL SERVICES DIVISION, ELECTRONIC ANALYSIS UNIT {EAU}, PROVIDE PERSONNEL TO INSTALL A MERLIN 820 TELEPHONE SYSTEM AND TO CONDUCT A TSCM INSPECTION OF THEIR NEW OFFICE SPACE. DUE TO THE CURRENT WORKLOAD OF THE EAU, IT IS BEING REQUESTED THAT THE CHICAGO AND PHOENIX DIVISIONS MAKE AVAILABLE TSCM TRAINED AGENTS TO ASSIST MEXICO CITY WITH THEIR REQUEST. MEXICO CITY REQUESTS THAT TECHNICAL PERSONNEL ARRIVE ON AUGUST 11, 1988, TO COMMENCE WORK ON AUGUST 12, 1988, THE SCHEDULED DATE FOR THE OFFICE MOVE. FINAL ARRANGEMENTS CAN BE MADE WITH MEXICO CITY BY CALLING ON SECURE PHONE ONLY 04085 {905} 533-6556.

RESULTS OF THE INSTALLATION AND INSPECTION SHOULD BE FORWARDED TO THE EAU.

PER REFERENCED TELEPHONE CALL TO OLIA, FIELD DIVISIONS WILL UTILIZE LEGAT TRAVEL FUNDS.

From: William A. Bayse
Assistant Director
Technical Services Division
Subject: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEYS
OF [redacted]

b7E

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

On 6/3/88, Electronics Engineer (EE) [redacted] SA [redacted] and SA [redacted] conducted a TSCM survey of [redacted]

b6
b7C
b7E

The TSCM survey consisted of a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the room, an inspection of all alternating current power lines, an electronic inspection of office artifacts, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines was found.

On 6/6/88, EE [redacted] conducted a TSCM survey of [redacted]

b6
b7C
b7E

The TSCM survey consisted of a physical inspection of the engine compartment, behind the door panels, and under the seats. The trunk panels were removed and replaced, and the undersides of the cars were also inspected. A radio frequency spectrum check was conducted with the vehicles moving in both forward and reverse directions. No recording or transmitting devices were found.

THIS DOCUMENT IS CLASSIFIED "~~CONFIDENTIAL~~" IN ITS ENTIRETY, UNLESS OTHERWISE NOTED. {U}

ON JUNE 29, 1988, SUPERVISORY SPECIAL AGENT {SSA} [REDACTED] [REDACTED] ACTING UNIT CHIEF, PERSONAL CRIME UNIT, ADVISED SSA [REDACTED] TECHNICAL SERVICES DIVISION {TSD}, ELECTRONIC ANALYSIS UNIT {EAU}, THAT THE OCE COPIER MACHINES USED THROUGHOUT FBIHQ AND ALL FIELD OFFICES RECEIVING THIS COMMUNICATION ARE POSSIBLY STORING COPIES ON THE PHOTO CONDUCTOR BELT INSIDE THE MACHINE.

FURTHER RESEARCH OF THIS MATTER BY ELECTRONICS ENGINEER {EE} [REDACTED] TSD, EAU, REVEALED THAT THE SERVICE TECHNICIAN FROM OCE ROUTINELY REMOVES THIS BELT WHEN THE MACHINE IS SERVICED.

THE FBI EMPLOYEE(S) RESPONSIBLE FOR ESCORTING THE OCE SERVICE TECHNICIAN SHOULD BE INFORMED NOT TO ALLOW THE PHOTO CONDUCTOR BELTS TO BE REMOVED FROM THE OFFICE. THE BELTS SHOULD BE HANDLED AS ~~CONFIDENTIAL~~ TRASH.

FURTHER RESEARCH CONCERNING THIS MATTER IS ONGOING AND THE RESULTS WILL BE FORTHCOMING.

(Handwritten initials)

DETAILS: In May of 1983, President Reagan issued National Security Decision Directive (NSDD) 95, which directed the establishment of a national crisis information and management system. This system would enable the President, his advisors, and top-level decision makers to convene in secure video teleconferences in times of crisis, thereby eliminating the need for overt, face to face meetings. The SVTS network was designed

~~SECRET~~

Memorandum from F.I. Clarke to Mr. Bayse
Re: Request For A Technical Security Countermeasures
(TSCM) Inspection

to allow transmission of any and all classifications of information. It permits real-time processing and transmission of unclassified and classified information up to and including ~~Top Secret~~ and all categories of compartmented information.

Management of the overall SVTS project for the Government has been assigned to the Defense Communications Agency. Certification and accreditation is the responsibility of the Department of Justice and the National Security Agency. The objective of the certification and accreditation process is to ensure that the SVTS network is implemented in accordance with the required security guidelines and regulations. One required guideline is that a TSCM Inspection be completed by the FBI before October 30, 1988, on our node located in Rooms 5053 and 5182 of the J. Edgar Hoover Building.

Subject : TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
SURVEY OF THE SECURE VIDEO TELECONFERENCING
SYSTEM (SVTS) ROOMS 5053 AND 5182 IN THE JEH BUILDING

This document is classified "~~SECRET~~" in its entirety, unless otherwise noted. (U)

PURPOSE: The purpose of this memorandum is to report the results of a TSCM survey of the SVTS Rooms 5053 and 5182 in the JEH building.

DETAILS: On 10/27/88 Electronics Engineer [redacted] and Electronics Technician [redacted] of the Technical Services Division conducted a TSCM survey of the SVTS Rooms 5053 and 5182 in the JEH building.

The survey included a radio frequency spectrum check, an inspection of all alternating current power lines, a visual inspection under the raised floors, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the power lines was found.

RECOMMENDATION: None. For information only. (U)

APPROVED: *[Signature]*

Memorandum from W. A. Bayse to Mr. Ahlerich
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY OF

[REDACTED]

b7E

During the survey, several anomalies were discovered. All of the 2830 ten-button telephone instruments were found to be extremely microphonic on wire pairs 2/17 and 2/23. It was also noted that the 2856HUM telephone instruments used in the space did not follow a standard wiring pattern. Three of the printers used in the space were found to radiate on several frequencies, some of which could be detected outside of the secure area.

DIGITAL LN03 Printer (1)	178.2Mhz
DIGITAL LN03 Printer (2)	123.7Mhz
DIGITAL LQP02 Printer	96.5Mhz

A signal radiating at 439.94Mhz was found. A malfunctioning piece of TSCM test equipment was found to be generating this signal.

[REDACTED] Director of Security, was verbally informed of the results.

Dear [redacted]

Reference is made to your letter dated August 17, 1988, requesting a Technical Surveillance Countermeasures (TSCM) inspection of three overhead projectors [redacted] conference room. [redacted]

On September 7, 1988, personnel from the Technical Services Division conducted a TSCM inspection of three 3M Overhead Projectors, Government Property Numbers 22873, 23160 and 23161. A thorough physical inspection was done on each of the projectors, as well as a radio frequency spectrum check. No evidence of any tampering or transmitting devices was found.

[redacted] was verbally informed of the results at the time of the inspection.

b7E

Sincerely yours,

William A. Bayse
Assistant Director FBI
Technical Services Division

DETAILS: On 5/19/88, Electronics Engineer (EE) [redacted] and Electronics Technician [redacted] of the Technical Services Division conducted a TSCM survey of [redacted] FBIHQ, J. Edgar Hoover Building.

b6
b7C
b7E

The survey included a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the room, an inspection of all alternating current power lines, and electronic inspection of all office artifacts, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines were found.

Memorandum from W. A. Bayse to Mr. Sharp
Re: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEYS

[REDACTED]

b7E

On 6/3/88, EE [REDACTED] SA [REDACTED] and
SA [REDACTED] conducted a TSCM survey of [REDACTED]
[REDACTED]

b6
b7C
b7E

The TSCM survey consisted of a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the room, an inspection of all alternating current power lines, an electronic inspection of office artifacts, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines were found.

On 6/6/88, EE [REDACTED] conducted a TSCM survey [REDACTED]
[REDACTED]

b6
b7C
b7E

The TSCM survey consisted of a physical inspection of the engine compartment, behind the door panels, and under the seats. The trunk panels were removed and replaced, and the undersides of the cars were also inspected. A radio frequency spectrum check was conducted with the vehicles moving in both forward and reverse directions. No recording or transmitting devices were found.

Subject : ~~CONFIDENTIAL~~ TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) MATTERS
[redacted]

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

REFERENCE: August 11, 1988, telephone call from [redacted]
[redacted]

b6
b7C
b7E

PURPOSE: To report the results of an inspection of a device found in a telephone at the Cohen Building Washington, D.C.

DETAILS: On 8/11/88, [redacted] telephonically advised SA [redacted] Technical Services Division (TSD), [redacted] telephone repairman had observed unknown additional components in a telephone located [redacted] SAS [redacted] Technical Services Section, Washington Metropolitan Field Office, SA [redacted] and Electronics Technician [redacted] TSD, met [redacted] on 8/11/88.

b6
b7C
b7E

[redacted] identified the suspect telephone instrument which was determined to be a WESTERN ELECTRIC Telephone Model 2565. This instrument had been previously disassembled. Photographs were taken of the instrument with cover removed prior to other examination. It was readily apparent that the "additional components" were a standard fix used by WESTERN ELECTRONIC when converting a telephone from rotary dial to touch tone operation. An electronic inspection was conducted to verify that these components were indeed a polarity guard as suspected. The telephone was reassembled and [redacted] was informed of the results. He apologized for the inconvenience and stated *SEP 29 1988* report was necessary.

RECOMMENDATION: None. For information only. (U)

Re WFO airtel to FBIHQ 8/10/87 regarding a request
received from [redacted]
[redacted]
N.W., Washington, D.C.

WFO advised that it was taking no further action
pending notification from [redacted]
[redacted] that he had returned from vacation.

On 9/10/87, [redacted] contacted SSA [redacted]
TSS, WFO, to make arrangements for the sweep. SSA [redacted]
apprised her about the FBI's policy with regard to sweeps for
other agencies.

On 9/11/87, SA [redacted] TSS, WFO contacted [redacted]
about her request. She related that she understood the Bureau's
policy but that [redacted] is determined to have a sweep

because the National Security Agency has recommended one be done. She cited a recent meeting between [redacted]

b7E

[redacted]
SA [redacted] suggested that the U.S. Secret Service (USSS) was the appropriate agency for providing the sweep

b6
b7C
b7E

[redacted]
Office of the White House. [redacted] said a request had been made but USSS had declined to do the sweep because the offices are not physically located within the White House complex.

She became noticeably irritated when SA [redacted] advised a preliminary survey should be conducted so as to determine manpower and equipment requirements for the sweep. She said she did not know a sweep was "such a big deal" and also said she had hoped not to have to go to [redacted]

b6
b7C
b7E

[redacted] eventually agreed to the preliminary survey and said she needed to check [redacted] calendar for an open date.

b6
b7C
b7E

Again, WFO will take no further action in this matter until contacted by [redacted]

DETAILS: On 11/3/87 and 11/5/87, Electronics Technician [redacted] and Electronics Engineer [redacted] conducted a TSCM survey of [redacted] N.W., Washington, D.C.

The survey included a complete physical search and electronic check of the offices [redacted] and SA [redacted] as well as an inspection of their respective telephones. A radio frequency spectrum check, a thorough check of the telephone frame room, an inspection of all alternating current power lines, a radio frequency check of all the copy machines, and a non-destructive physical search of the conference room was conducted. There was a radio frequency signal which could not be resolved with the equipment being used on 11/3/87. Additional equipment was used on 11/5/87 and the signal was determined to be radiating from outside the space of [redacted]. No evidence of clandestine listening devices was found.

TECHNICAL SURVEILLANCE COUNTERMEASURES MATTERS (TSCM) ~~CONFIDENTIAL~~

ALL MARKINGS, NOTATIONS, AND ITEMS OF INFORMATION CONTAINED IN THIS COMMUNICATION ARE CLASSIFIED "~~CONFIDENTIAL~~" UNLESS OTHERWISE NOTED.

Re letter, dated 2/29/88, from [redacted] [redacted] requesting a countermeasures sweep of its offices.

On 3/1/88, a sweep was conducted at [redacted] Washington, D.C., with negative results. It was conducted by [redacted] (TSD/EAU) and WFO TTAs [redacted] both of whom are ACM trained.

On-line tests of the telephone instruments were conducted using the Triplet 3400 DVOM, and voltages and current draw were normal. In addition, each instrument was disassembled and physically examined.

WF 66-5539

~~CONFIDENTIAL~~

An rf sweep was conducted on the 9th floor using the PR700 receiver, and the conference rooms on the 8th floor were swept with the Scanlock Receiver.

A physical search of the offices was conducted using the non-linear junction detector where appropriate.

FBIHQ is advised the sweep should be considered inconclusive. The building is a large multi-storied commercial office building with many tenants and it is open to the public. That no devices or indications of a compromise were found does not mean that the offices are secure or that they have not been technically compromised.

Except for easily opened door locks security for the utility rooms is non-existent. These rooms contain the telephone service distribution frames, the electric power facilities and the heating and air conditioning mechanical equipment and duct work, and they are readily available locations for concealment of monitoring equipment or for the manipulation and exploitation of the utility services themselves. The rooms are located in unlocked emergency stairwells that are infrequently used, and anyone bent on compromising the offices can get access to the utilities without being challenged.

From a countermeasures standpoint very little could be done to determine if the telephone circuits have been tampered with. The frames are expansive and filled with wires and cables, and any illegal cross straps can be easily concealed or, if found, plausibly denied as being the result of poor telephony tradecraft. Further, with the rooms being virtually open any strap or tapping device can be removed and reinstalled at will.

Another easily exploitable hazard is the drop ceiling construction used throughout the building. The open area above the ceiling is filled with duct work and wire runs, some in conduit and some exposed, going to the floor's utility closet or interconnecting with other offices. This construction affords ready egress or concealment opportunities for a technical compromise. Because of the expansiveness of this area a physical examination and circuit tracing was not practical.

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY OF
[redacted]

This document is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

PURPOSE: The purpose of this memorandum is to report the results of a TSCM survey [redacted]

b7E

[redacted] and the Division 8 conference Room, Room 7426 JEH Building.

DETAILS: On 7/25/88, Electronics Engineer [redacted] of the Technical Services Division conducted a TSCM survey of the [redacted]

b6

b7C

b7E

[redacted] A TSCM survey was also conducted in the Division 8 conference room.

The survey included a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the room, an inspection of the telephone closet, an inspection of all alternating current power lines, an electronic inspection of all office artifacts, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines were found.

RECOMMENDATION: None. For information only. (U)

Memorandum from [redacted] to Mr. Bayse
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) INSPECTIONS
NOTIFICATION OF FOREIGN TRAVEL

b6
b7C

DETAILS: On 4/18/88, FBI technicians in LEGAT Rome were advised that the State Department would be unable to help move the FBI LEGAT telephone system which is coinciding with the current office reconstruction. SSA [redacted] advised that the system should be installed during the week of 4/25/88 if possible. The necessary equipment for the installation and a concurrent TSCM inspection of the telephone system has been shipped to Rome and EE [redacted] is scheduled to depart for Rome upon notification of equipment arrival. Upon completion of all renovations, a complete TSCM inspection of the entire office space will be required.

b6
b7C

The attached teletype is to advise Rome of the above travel when the travel is approved.

2

TELEPHONE EQUIPMENT, WEEK TWO WILL COVER BTA-3, TELEPHONE ANALYZERS, MODELS 700 AND 7000 SERIES RECEIVERS, NON-LINEAR JUNCTION DETECTORS, TIME DOMAIN REFLECTOMETRY, AND THE PHILLIPS OSCILLOSCOPE.

UPDATE TRAINING WILL PROVIDE THE ATTENDEES WITH ADDITIONAL INSTRUCTION ON THE BTA-3 TELEPHONE ANALYZERS, MODELS 700 AND 7000 SERIES RECEIVERS, USE OF THE OSCILLOSCOPE, POWER LINE MONITORING, AND GENERAL USES OF THE SPECTRUM ANALYZER.

ATTENDEES TO THE TSCM PHASE I TRAINING SESSION WILL BE SELECTED PRIMARILY FROM THOSE OFFICES NOT HAVING TSCM TRAINED TECHNICALLY TRAINED AGENTS (TTAS). CONSIDERATION WILL BE ALSO GIVEN TO THOSE OFFICES THAT HAVE A HEAVY TECHNICAL WORKLOAD AND NUMEROUS RESIDENT AGENCIES REQUIRING ADDITIONAL TSCM TRAINED TTAS. SELECTION FOR THE UPDATE TRAINING WILL BE BASED UPON TECHNICAL WORKLOAD. TAS SHOULD RE-SUBMIT NAMES OF PROSPECTIVE ATTENDEES TO THE ES, ATTN: SUPERVISORY SPECIAL AGENT {SSA}

FTS 324-2800, EXTENSION 3145, NO LATER THAN MAY 15, 1989. ALTHOUGH TSD IS SEEKING SEPARATE FUNDING, AT THIS TIME PER DIEM AND TRAVEL EXPENSE MUST BE FUNDED BY THE FIELD OFFICES.

ASSISTANCE FOR THE JACKSONVILLE DIVISION. ASSISTANCE IS
REQUIRED DUE TO THE MANY RESIDENT AGENCIES {RAS} AND THE
COMPLEXITY POSED BY INSPECTING NEW OFFICE SPACE.

REFERENCED TELEPHONE CALL FROM JACKSONVILLE ADVISED OF
HEADQUARTERS CITY MOVE TO NEW OFFICE SPACE DURING THE JANUARY,
1990 TIME FRAME AND REQUESTED ADDITIONAL ASSISTANCE IN
PERFORMING TSCM INSPECTIONS OF BOTH THE NEW HEADQUARTERS CITY
OFFICE SPACE AND FOR NEWLY RELOCATED RAS IN FORT WALTON BEACH,
PANAMA CITY AND PENSACOLA AS WELL AS ESTABLISHED RAS IN
TALLAHASSEE, OCALA, GAINESVILLE, AND DAYTONA BEACH.

DUE TO THE INCREASED WORKLOAD REQUIRED TO ADEQUATELY
PERFORM THE TSCM INSPECTIONS AND THE ADDITIONAL DIFFICULTY
POSED BY PREVIOUSLY UNINSPECTED OFFICE SPACE, TA [REDACTED]
REQUESTED ASSISTANCE IN PERFORMING THE MIOG REQUIRED TSCM
INSPECTIONS. TA [REDACTED] FURTHER ADVISED THAT THE TIME PERIOD
OF AUGUST 21 - 25, 1989 WOULD BE OPTIMAL FOR TSCM INSPECTIONS
OF PENSACOLA, FORT WALTON BEACH, AND PANAMA CITY AND THAT
OCTOBER 15 - 20, 1989 WOULD BE BEST FOR THE OCALA, GAINESVILLE,
DAYTONA BEACH, AND TALLAHASSEE RAS. TSCM INSPECTION OF
HEADQUARTERS CITY OFFICE SPACE WILL BE SCHEDULED LATER UPON

Assistant Director FBI
Technical Services Division

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM)
SURVEY OF THE OFFICE OF FOREIGN OPERATIONS,
IMMIGRATION AND NATURALIZATION SERVICE (INS) BUILDING

INFORMATION MEMORANDUM

Reference is made to your telephone call on April 11, 1989, requesting a TSCM survey of [redacted]

b7E

On April 12, 1989, personnel from the Technical Services Division conducted a TSCM survey of [redacted]

b7E

The survey included a radio frequency spectrum check, a check of the telephones and telephone lines, a check of the power lines, and a nondestructive physical search which included an electronic scan of all the furniture in the room. No evidence of clandestine listening devices or tampering with the telephones was found.

[redacted] was verbally informed of the results at the time the survey was completed.

Memorandum from W. A. Bayse to Mr. Sharp
RE: TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) SURVEY
OF [REDACTED]

b7E

The survey included a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the offices, an inspection of the telephone closet, an inspection of all alternating current power lines, an electronic inspection of all office artifacts, and a non-destructive physical search.

Particular attention was paid to all gifts and artifacts recently received [REDACTED]. These gifts, located in the office of [REDACTED] were checked with a non-linear junction detector. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines was found.

b6
b7C
b7E

[REDACTED] was verbally informed of the results at the time of the survey.

U.S. Department of Justice

Federal Bureau of Investigation

In Reply, Please Refer to
File No.

Washington, D.C. 20535
August 4, 1989

[Redacted]

b7E

Washington, D.C. 20410

Dear [Redacted]

In response to your request for countermeasures assistance, on July 20, 1989, Special Agents from the Federal Bureau of Investigation (FBI) conducted an audio countermeasures survey in [Redacted] No indications of a technical compromise were found.

b7E

The sweep consisted of a radio frequency survey, a passive check of the telephone system and a check of the electric power circuits.

You are cautioned that the absence of any indications of a penetration does not mean that one has not been made or that one cannot be made. One conclusion reached as a result of the sweep is that the excessive wiring in your telephone system poses a potentially exploitable and very significant hazard. Our recommendation is that all wires and cables and cross connect apparatus not currently used with the MERLIN telephone system be removed from the telephone closets serving the offices of the secretary and undersecretary. Also, we suggest that the unused wire bundles in the telephone riser cables appearing in those closets be cut off, or at least sealed, so that they cannot be easily used to effect a technical compromise.

If my office can be of any further assistance to you with this matter please contact Supervisory Special Agent [Redacted] [Redacted] at 252-7476.

b6
b7C

Sincerely yours,

W. Douglas Gow

RE: [REDACTED]

b6
b7C
b7E

The TSCM inspection consisted of a radio frequency spectrum check, an inspection of all alternating current power lines, an electronic inspection of all office artifacts, and a non-destructive physical search. There were three AT&T Merlin electronic telephone instruments located in the office. The phones were inspected physically, however, due to the hazards involved with applying test voltages to electronic components, electronic tests were not done on the telephone instruments.

No evidence of any clandestine listening devices, transmitters, or tampering with the telephones or power lines was found.

Countermeasures

ANALYSIS OF THREE PREMIER 2500
TELEPHONES LABELED A, B, C.

This document is classified "~~CONFIDENTIAL~~" in its
entirety, unless otherwise noted. (U)

On 10/16/89, analysis of three Premier Model 2500
telephones labeled A, B, and C was conducted at [redacted]
[redacted] by Electronics Technician [redacted]. The
telephones were removed from the Miami Office during a routine
Technical Surveillance Countermeasures (TSCM) check.

b6
b7c
b7E

These three telephone instruments were analyzed to
determine if they would pass room audio while on-hook. The
individual phone instruments were placed in a sealed sound
chamber and subjected to a high level of acoustic sounds to
determine if they were picking up and transmitting audio
information over the wires exiting the phone instruments while in
an on-hook condition. These three phone instruments did not pass
room acoustic sounds in an on-hook condition. These three
telephone instruments were subjected to direct vibration (hitting
or scratching) and they did pass these signals. This is not a
room audio compromising condition.

The electrical wiring of all three instruments was
compared to its schematic to determine if the phone instrument's
wiring was standard. All these instruments are wired according
to their schematics.

80-805-621

It was determined that the telephones provided no
threat and can be used as normal telephones.

TECHNICAL SURVEILLANCE COUNTERMEASURES (TSCM) INSPECTION

This communication is classified "~~CONFIDENTIAL~~" in its entirety, unless otherwise noted. (U)

Reference Norfolk airtel dated 7/5/89 requesting a TSCM trained Agent to assist the Norfolk Division in performing its semi-annual TSCM sweep of the Norfolk Office and the Newport News Resident Agency.

The Norfolk Field Office received a schedule "F" during their last inspection for not complying with the MIOG. Their TSCM trained Agent has retired and they have no one to do this work. On 8/14/89, Electronics Technician [redacted] Technical Services Division, Engineering Section, traveled to the Norfolk Field Office to work with and provide training for SA [redacted] Norfolk's newly assigned Technically Trained Agent (TTA).

b6
b7C

A TSCM inspection of the Norfolk Office and the Newport News Resident Agency included a radio frequency spectrum check and a check of all telephone lines and telephone frame rooms. A check was also made of telephones, power lines and a non-destructive physical search of the offices of the SAC, ASAC, and the FCI supervisor. No evidence of clandestine listening devices or tampering with the telephone lines was found. However, it was noted that telephone lines for the Norfolk Office are distributed from a telephone frame room that is located in a public hallway. This telephone frame room is locked and the keys are kept in the building manager's office. Norfolk Office personnel should be informed that all telephone conversations can be monitored from this room.

Therefore, any employee finding the telephone room open should report it to the TTA so the room can be checked.

PURPOSE: The purpose of this memorandum is to report the results of a TSCM Survey of [redacted]

[Redacted]

b7E

DETAILS: On 9/21/89, Electronics Engineer [redacted] and Electronics Technician [redacted] of the Technical Services Division conducted a TSCM Survey of the Office of [redacted]

b6
b7C
b7E

The survey included a radio frequency spectrum check, a physical as well as electronic inspection of all telephones in the room, an inspection of the telephone closet, an inspection of all alternating current power lines, an electronic inspection of all office artifacts, and a non-destructive physical search. No evidence of clandestine transmitters, listening devices or tampering with the telephone or power lines was found.

RECOMMENDATION: None. For information only. (U)
