NON-LETHAL PERSONNEL BEHAVIORAL CONTROL

General Considerations:

1. Possible contract for a year or more but may be supported by increments.

2. In essence, the effort would be primarily concerned with providing biological-psychological scientific advice and guidance to support behavioral control systems being fabricated and tested by other concerns and/or to recommend the development or abandonment of plans to undertake R&D concerned with potential behavioral control systems.

3. The above may include, but not be limited to:

(a) Evaluation of status and progress of on-going projects. For instance, (a) the use of high intensity light, with minimum risk of permanent retinal damage, as a behavioral control system, and (b) use of [] either in isolation or in combination with [] for temporary individual restraint, the system being activated from a distance.

(b) Evaluation of currently available literature, and research projects underway to determine the feasibility of developing a [] that would meet the incapacitation requirements.

(c) To conduct scientific "armchair" evaluations of potential incapacitation systems, i.e., [] electrical current, etc.

(d) To undertake supporting laboratory studies as appropriate.
