

This document is made available through the declassification efforts
and research of John Greenewald, Jr., creator of:

The Black Vault

The image shows a close-up of a heavy, metallic vault door. The door is partially open, revealing a complex internal mechanism with multiple locking bolts and a central handle. A bright blue light emanates from the gap between the door and its frame, creating a strong glow and casting shadows on the surrounding metal. The overall aesthetic is industrial and mysterious.

The Black Vault is the largest online Freedom of Information Act (FOIA)
document clearinghouse in the world. The research efforts here are
responsible for the declassification of hundreds of thousands of pages
released by the U.S. Government & Military.

89th Congress, 2d session

CONTENTS OF BOOKS 1, 2, AND 3

[Book 1 contains Papers No. 43 to 62; book 2 contains Papers No. 63 to 79; book 3 contains Papers No. 80 to 102]

Paper No.	Page	Date	Subject
43	<i>Book 1</i> 4639	Sept. 22, 23, 28, 29, 30, Oct. 6, and 14, 1966.	Special Subcommittee on Tactical Air Support hearings on close air support.
44	4859	Feb. 1, 1966-----	Report of Special Subcommittee on Tactical Air Support on close air support.
45	4875	Feb. 3, 4, 7, 8, 9, 15, 16, and 17, 1966.	Full committee hearings on fiscal year 1966 supplemental authorization for Vietnam (H.R. 12334 and H.R. 12335).
46	5253	Mar. 1, 1966-----	Universal Military Training and Service Act, as amended, with analysis. Includes a brief description of the Selective Service System.
47	5309	Feb. 23, 1966----	Subcommittee No. 3 consideration of H.R. 11509, to amend and clarify the reemployment provisions of the Universal Military Training and Service Act, and for other purposes.
48	5323	Mar. 1, 1966-----	Full committee consideration of H.R. 11509, to amend and clarify the reemployment provisions of the Universal Military Training and Service Act, and for other purposes; and proposed amendment to H.R. 12889, to authorize appropriations during the fiscal year 1966 for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, research, development, test, evaluation, and military construction for the Armed Forces.
49	5331	Mar. 17, 1966----	Statement of Laszlo Szabo in hearings before the CIA Subcommittee of the Committee on Armed Services.
50	5379	Mar. 21, 22, 23, and 24, 1966.	Subcommittee No. 1 hearings on various stockpile commodities: H.R. 13368—Bismuth; H.R. 13365—Chromite, metallurgical grade; H.R. 13578—Rhodium; H.R. 13662—Refractory grade bauxite; H.R. 13580—Amosite asbestos; H.R. 13367—Acid grade fluorspar; H.R. 13371—Phlogopite mica; H.R. 13373—Muscovite mica; H.R. 13579—Thorium; H.R. 13364, H.R. 12412, H.R. 13569, H.R. 13570—Platinum; H.R. 13663—Ruthenium; H.R. 13774—Vanadium; H.R. 13369—Molybdenum; H.R. 13661—Battery grade synthetic manganese dioxide; H.R. 13320—Industrial diamond stones; H.R. 13372—Crude silicon carbide; H.R. 13370—Crude aluminum oxide; and H.R. 12694—Jamaica and Surinam type bauxite.

(III)

IV

Paper No.	Page	Date	Subject
51	<i>Book 1</i> 5629	Mar. 23, 1966----	Subcommittee No. 3 consideration of H.R. 12617, to amend the act providing for the economic and social development in the Ryukyu Islands.
52	5663	Apr. 5, 1966-----	Report by Subcommittee No. 1 on deferral of military construction projects authorized and funded by the Congress for fiscal year 1966.
53	5711	Apr. 6, 1966-----	Report by Subcommittee No. 4 on base closures and reductions.
54	5731	Mar. 24, 25, and 28, 1966.	Subcommittee No. 2 hearings on military medical benefits as proposed in H.R. 9271, H.R. 13582, and H.R. 13583.
55	5991	Apr. 5, 1966-----	Full committee hearings on unidentified flying objects.
56	6077	Jan. 25, 26, 27, 28, Feb. 1, and 2, 1966.	Subcommittee No. 2 hearings on Department of Defense decision to reduce the number and types of manned bombers in the Strategic Air Command.
57	6305	Mar. 30, 1966-----	Full committee consideration of H.R. 14088, to amend ch. 55 of title 10, United States Code, to authorize an improved health benefits program for retired members and members of the uniformed services and their dependents, and for other purposes; and H.R. 12617, to amend the act providing for the economic and social development in the Ryukyu Islands.
58	6323	Feb. 2, 1966-----	Subcommittee No. 1 hearings on deferment of military construction.
59	6397	Jan. 25 and 26, 1966.	Subcommittee No. 4 hearings on base closures and reductions.
60	6541	Apr. 4, 1966-----	Report by subcommittee No. 2 on Department of Defense decision to reduce the number and types of manned bombers in the Strategic Air Command.
61	6605	Oct. 6, 12, 13, 14, 19, 21, 22, Nov. 4, 1965, Jan. 18, 19, 20, and 27, 1966.	Special Subcommittee on Military Airlift hearings on military airlift.
62	7177	May 16, 1966----	Report by Special Subcommittee on Military Airlift on military airlift.
63	<i>Book 2</i> 7221	May 4 and 5, 1966.	Subcommittee No. 1 hearings on various stockpile commodities: H.R. 13366—Aluminum; H.R. 13768—Celestite; H.R. 13769—Cordage fiber (sisal); H.R. 13770—Crocidolite asbestos (harsh); H.R. 13771—Diamond tools; H.R. 13772—Metallurgical grade manganese ore; H.R. 13773—Opium.
64	7287	Mar. 8, 9, 10, 15, 31, Apr. 5, 6, 19, 20, 21, 26, 27, 28, and May 2, 1966.	Full committee hearings on military posture and H.R. 13456.
	8165	Jan. 24, 25, 26, Feb. 21, 23, 24, 25, 28, Mar. 2 and 3, 1966.	Subcommittee No. 3 hearings on fiscal year 1967 defense research, development, test and evaluation program.

Paper No.	Page	Date	Subject
65	<i>Book 2</i> 8635	May 10, 11, 12, 16, 17, 18, 23, 24, 25, 31, June 1 and 16, 1966.	Full committee hearings on military construction authorization for fiscal year 1967.
66	9293	May 5, June 7, 8, and 9, 1966.	Subcommittee No. 2 hearings on H. J. Res. 421—Joint resolution providing for appropriate ceremonies in connection with the raising and lowering of the flags of the United States surrounding the Washington Monument; H.R. 2450—To amend title 10, United States Code, to provide that members of the Armed Forces shall be retired in the highest grade satisfactorily held in any armed force, and for other purposes; H.R. 3313—To amend titles 10 and 37, United States Code, to provide career incentives for certain professionally trained officers of the Armed Forces; H.R. 5256—To amend title 10, United States Code, to change the method of computing retired pay of certain enlisted members of the Army, Navy, Air Force, or Marine Corps; H.R. 5293—To amend ch. 7 of title 37, United States Code, relative to allowances for quarters, and for other purposes; H.R. 5297—To amend title 10, United States Code, to limit the revocation of retired pay of members of the Armed Forces, and for other purposes; H.R. 9916—To amend title 10, United States Code, with respect to the nomination and selection of candidates for appointment to the Military, Naval, and Air Force Academies, and for other purposes; H.R. 12616—To amend ch. 7 of title 37, United States Code, to authorize a dislocation allowance for travel performed under orders that are later canceled, revoked, or modified; H.R. 14741—To authorize an increase in the number of Marine Corps officers who may serve in the combined grades of brigadier general and major general; H.R. 14875—To amend sec. 1035 of title 10, United States Code, and other laws, to authorize members of the uniformed services who are on duty outside the United States or its possessions to deposit their savings with a uniformed service, and for other purposes; and H.R. 15005—To amend title 10, United States Code, to remove inequities in the active duty promotion opportunities of certain officers.

Paper No.	Page	Date	Subject
67	<i>Book 2</i> 9445	June 9, 1966-----	Subcommittee No. 4 consideration of H.R. 3013, to amend title 10, United States Code, to provide gold star lapel buttons for the next of kin of members of the Armed Forces who lost their lives in war or as a result of cold war incidents; H.R. 12031, to authorize the appointment of Col. William W. Watkin, Jr., professor of the U.S. Military Academy, in the grade of lieutenant colonel, Regular Army, and for other purposes; H.R. 12615, to amend sec. 404(d) and 408 of title 37, United States Code, to authorize members of the uniformed services to be reimbursed under certain circumstances for the actual cost of parking fees, ferry fares, and bridge, road, and tunnel tolls; and H.R. 13374, to amend title 10, United States Code, to authorize the award of trophies for the recognition of special accomplishments related to the Armed Forces, and for other purposes.
68	9463	June 15, 1966-----	Full committee consideration of H.J. Res. 421, H.R. 2450, H.R. 3013, H.R. 3313, H.R. 5256, H.R. 5297, H.R. 9916, H.R. 12031, H.R. 12615, H.R. 13374, H.R. 14741, H.R. 14875, and H.R. 15005.
69	9505	May 24, 1966-----	Subcommittee No. 3 consideration of S. 2421, to authorize the adjustment of the legislative jurisdiction exercised by the United States over lands within the Columbia River at the mouth project in the States of Washington and Oregon.
70	9525	June 15, 1966-----	Subcommittee No. 4 consideration of H.R. 7973, to amend sec. 4339 of title 10, United States Code; and H.R. 11979, to make permanent the act of May 22, 1965, authorizing the payment of special allowances to dependents of members of the uniformed services to offset expenses incident to their evacuation, and for other purposes.
71	9545	July 19, 1966-----	Report of special subcommittee following visit to southeast Asia April 7-19, 1966.
72	9571	June 30, 1966-----	Full committee consideration of H.R. 15712, to amend sec. 2634 of title 10, United States Code, to authorize payment of expenses incidental to the transportation of motor vehicles of certain members of the Armed Forces.
73	9585	July 13, 1966-----	Subcommittee No. 1 consideration of H.R. 15485, to authorize the exchange of certain fluorspar and ferromanganese held in the national and supplementary stockpiles; and H.R. 13320, to authorize the disposal of industrial diamond stones from the national stockpile and the supplemental stockpile.
74	9609	July 14, 1966-----	Subcommittee No. 3 consideration of H.R. 11984, to amend sec. 701 of title 10, United States Code, to authorize additional accumulation of leave in certain foreign areas.

VII

Paper No.	Page	Date	Subject
	<i>Book 2</i>		
75	9615	June 22, 23, 24, 28, 29, and 30, 1966.	Full committee hearings on review of the administration and operation of the Selective Service System.
76	10175	Aug. 4, 1966-----	Interim report by full committee on review of the administration and operation of the Selective Service System.
77	10193	July 13 and 20, 1966.	Subcommittee No. 1 consideration of H.J. Res. 561, to authorize the Secretary of the Army to furnish memorial headstones or markers to commemorate those civilians who lost their lives aboard the submarine U.S. ship <i>Thresher</i> .
78	10207	July 14, 1966----	Subcommittee No. 3 consideration of H.R. 15748, to amend title 10, United States Code, to authorize a special 30-day period of leave for a member of a uniformed service who voluntarily extends his tour of duty in a hostile fire area.
79	10213	July 20, 1966----	Full committee consideration of H.R. 15485, H.J. Res. 561, H.R. 28, H.R. 11984, H.R. 15748, H.R. 7973, H.R. 11979, and proposed legislation on "selected tenure program."
	<i>Book 3</i>		
80	10225	July 20, 1966----	Subcommittee No. 1 consideration of H.R. 420 and H.R. 8158, to amend title 10, United States Code, to authorize the commissioning of male persons in the Regular Army in the Army Nurse Corps and the Army Medical Specialist Corps, and the Regular Air Force with a view to designation as Air Force nurses and medical specialists, and for other purposes; and H.R. 11488, H.R. 11727, and H.R. 15056, to authorize the grade of brigadier general in the Medical Service Corps of the Regular Army, and for other purposes.
81	10247	Sept. 1, 1965, and July 14, 1966.	Subcommittee No. 3 consideration of H.R. 28, to provide for the conveyance of certain real property of the United States to the State of Florida.
82	10285	July 26, 1966----	Special Subcommittee on Discharges and Dismissals consideration of H.R. 16646 and H.R. 15053, to amend title 10, United States Code, to authorize the award of exemplary rehabilitation certificates to certain individuals after considering their character and conduct in civilian life after discharge or dismissal from the Armed Forces, and for other purposes; and H.R. 10267, to amend title 10 of the United States Code to extend for a period of 10 years the time during which certain military, naval, and air service records may be corrected.
83	10315	July 28, 1966----	Subcommittee No. 1 consideration of H.R. 16306, to amend the Central Intelligence Agency Act of 1949, as amended, and for other purposes.
84	10347	Aug. 9, 1966-----	Full committee consideration of H.R. 10267, H.R. 15244, H.R. 16646, H.R. 420, H.R. 11488, and H.R. 16306.
85	10377	Sept. 12, 1966----	Report of special subcommittee visiting American military installations and NATO bases in France.

VIII

Paper No.	Page	Date	Subject
86	<i>Book 3</i> 10653	Aug. 4, 5, 24, and 29, 1966.	Subcommittee No. 2 hearings and full committee consideration of H.R. 16435 and H.R. 17195, to amend titles 10, 14, 32, and 37, United States Code, to strengthen the Reserve components of the Armed Forces, and clarify the status of National Guard technicians, and for other purposes.
87	10819	Aug. 8, 1966.----	Subcommittee on Real Estate consideration of H.R. 15244, to authorize the Secretary of the Army to adjust the legislative jurisdiction exercised by the United States over lands within Camp Atterbury, Ind.
88	10825	July 28, 1966.----	Full committee hearing on the impact of the airline strike on defense posture.
89	10863	Aug. 15 and 18, 1966.	Subcommittee No. 3 consideration of H.R. 12536, to amend sec. 409 of title 37, United States Code, relating to the transportation of house trailers and mobile dwellings of members of the uniformed services; and H.R. 17119, to amend title 10, United States Code, to permit members of the Armed Forces to be assigned or detailed to the Environmental Science Services Administration, Department of Commerce.
90	10891	Aug. 24, 1966.----	Full committee consideration of H.R. 12536, to amend sec. 409 of title 37, United States Code, relating to the transportation of house trailers and mobile dwellings of members of the uniformed services; and H.R. 17119, to amend title 10, United States Code, to permit members of the Armed Forces to be assigned or detailed to the Environmental Science Services Administration, Department of Commerce.
91	10895	Aug. 8 and 26, 1966.	Subcommittee on Real Estate consideration of S. 3148, to provide for the conveyance of all right, title, and interest of the United States reserved or retained in certain lands heretofore conveyed to the city of El Paso, Tex.
92	10919	Sept. 1, 1966.----	Subcommittee No. 1 consideration of H.R. 17376, to authorize the disposal of nickel from the national stockpile.
93	10941	Sept. 21 and 22, 1966.	Subcommittee No. 3 consideration of H.R. 17500, to amend ch. 141 of title 10, United States Code, to provide for price adjustments in contracts for the procurement of milk by the Department of Defense.
94	11029	Sept. 21, 1966.----	Subcommittee No. 1 consideration of S. 3500, to authorize the President to advance Maj. Gen. Robert Wesley Colglazier, Jr., to the grade of lieutenant general; and H.R. 16000, to amend titles 10, 32, and 37, United States Code, to remove restrictions on the careers of female officers in the Army, Navy, Air Force, and Marine Corps, and for other purposes.
95	11071	Oct. 6, 1966.----	Report of Special Subcommittee on Proposed Disposal of U.S. Naval Academy Dairy Farm.

IX

Paper No.	Page	Date	Subject
96	<i>Book 3</i> 11079	Oct. 10, 1966-----	Report of Special Subcommittee on Commercial Air Transportation for Service Personnel While on Authorized Leave.
97	11089	June 13, 14, 27, July 21, Aug. 4, 10, 17, and Sept. 28, 1966.	Special Subcommittee on Commercial Air Transportation for Service Personnel While on Authorized Leave hearings.
98	11637	Sept. 29, 1966----	Subcommittee No. 2 consideration of H.R. 17451, to amend titles 10 and 37, United States Code, to authorize certain rank, pay, and retirement privileges for officers serving in certain positions, and for other purposes.
99	11671	Oct. 4, 1966-----	Full committee consideration of H.R. 12822, H.R. 16000, H.R. 16394, H.R. 13320, H.R. 13661, H.R. 13370, H.R. 17376, H.R. 17451, H.R. 17500, H.R. 18019, S. 3148; report of Special Subcommittee on Proposed Disposal of U.S. Naval Academy Dairy Farm; and report of Special Subcommittee on Commercial Air Transportation for Service Personnel While on Authorized Leave.
100	11701	Oct. 5, 1966-----	Full committee consideration of S. 3500, to authorize the President to advance Maj. Gen. Robert Wesley Colglazier, Jr., to the grade of lieutenant general; and H.R. 18019, to authorize the Secretary of the Army to construct an addition at the Walter Reed Army Medical Center, Washington, D.C.

CLOSE AIR SUPPORT

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
SUBCOMMITTEE ON TACTICAL AIR SUPPORT,
Washington, D.C., Wednesday, September 22, 1965.

The subcommittee met at 10:11 a.m., Hon. Otis G. Pike (chairman of the subcommittee) presiding.

Mr. PIKE. The committee will come to order.

Let the record show that a quorum is present.

We open today hearings which I know will be interesting, and I hope will be fruitful.

In January 1961, in a report to a Communist Party conference, Chairman Nikita Khrushchev set forth the doctrine by which Communist conquest was to be governed in the future. He described four kinds of war:

1. World wars.
2. Local wars.
3. Liberation wars.
4. Popular uprisings.

Mr. Khrushchev announced to the world that international communism was opposed to both world wars and local wars as being too dangerous for profitable utilization in a world armed with nuclear weapons.

With regard to what he referred to as wars of national liberation, however, he stated that the Communist movement would recognize and support such wars. With specific reference to the war in Vietnam, he said "It is a sacred war."

For four and a half years we have been forewarned. What Khrushchev referred to as wars of national liberation and described as "sacred" in Vietnam have been translated on the battlefield and in the cities and countryside into attacks by terrorists at night, the blowing up of restaurants and buses as well as bridges and barracks. In a jungle environment attacks on Government outposts are carried on most frequently by platoon or company-sized units at night. These small units are armed with mortars, recoilless rifles, machineguns, and automatic weapons. They do not have tanks or armored personnel carriers, and they walk into battle. They would be hard to find in a jungle environment in the daytime. They are harder to find during the nighttime, which they claim for their own.

Arrayed against these small and elusive units is the military power of America. We have all the tanks that there are in South Vietnam. We have all the armored personnel carriers that there are in South Vietnam. We have almost all of the artillery, and we retain complete mastery of the skies. Over 20 different models of American air-

craft, undisturbed by enemy aircraft, roam the skies of South Vietnam at will, subject only to the danger of ground fire from conventional small arms.

Many voices have been raised asking why our air power is unable to find and destroy the Vietcong in South Vietnam. Chairman L. Mendel Rivers has asked this subcommittee to look into this question. Due to the present pressing congressional obligations of the members and staff of the subcommittee, we will have limited opportunities to travel for the purpose of field investigations until recess of this session of Congress. In addition, the time allotted to the subcommittee is not sufficient to allow us at this time to inquire into every detail related to tactical air support, and therefore we must limit our investigations to the following aspects:

1. The adequacy of our close air support during the course of the war in Vietnam and today;
2. The availability of close air support 24 hours a day under all weather conditions;
3. The quantities available, the cost and effectiveness of the various tactical aircraft being used in South Vietnam today;
4. The adequacy of liaison and communications between the air forces and the ground forces in Vietnam;
5. The adequacy of existing logistic and support facilities for tactical aircraft in Vietnam;
6. The development of new tactics and techniques for close air support;
7. Whether any progress has been made in developing and producing a new type aircraft for close air support in limited war situations;
8. The adequacy of our training environment to simulate conditions such as those found in Vietnam.

For the purpose of the subcommittee during these investigations we have adopted the Joint Chiefs of Staff definition of close air support:

Air action against hostile targets which are in close proximity to friendly forces and which require detailed integration of each air mission with the fire and movement of those forces.

I believe that these hearings have a significance beyond our current confrontation in Vietnam. As we look at the globe we can see over much of its land surface other peoples who must be considered amenable to Communist propaganda, to Communist subversion, to Communist terror. We see people who remain hungry, who remain ill clothed, ill housed, and uneducated. We can see at the outset that no amount of military power of any kind is the answer to their problems. We would be blind indeed, however, if we could not also see, as we see in Vietnam, that no government can attack and solve these problems when it is the steady victim of armed terror and armed insurrection aimed not at the solution of the people's problems, but at the domination of the people themselves. As we look at the globe we also find countless other areas where not only the economic and social problems are the same as those in Vietnam, but where the geography is the same. We find countless regions where small bands of armed guerrillas can operate effectively in jungles, as the Vietcong do in Vietnam, as Castro did in Cuba, and as is being done on the continents of Africa and South America today.

The question before us is, having been forewarned, have we adequately forearmed ourselves? Have we used too much of our resources in preparing for the kind of warfare which Khrushchev has described as intolerable, and not enough of our resources in preparing for the kind of warfare he described as inevitable?

These hearings will of necessity be held almost exclusively in executive session. They will not be accompanied by spectacular press releases, nor will any of the issues to which we direct our attention be prejudged. It is our purpose to study, and, if we can, to help solve them. We are starting our hearings not with the testimony of planners in the Pentagon, who would tell us how our system should work; we are starting our testimony instead with witnesses who have been on the firing line in Vietnam and can tell us how it does work. Today we will hear witnesses who have been on the ground, and who have needed air support; tomorrow we will hear those who have been in the air and have tried to provide it. It is obvious that any weaknesses in our system of close air support have not proved fatal to those whom we will hear from. What others who called for air support and failed to receive it might have testified we can never know. In future sessions we will hear from the men who plan our tactics, procure and manufacture our planes, and train our pilots. We will visit the bases and places where these activities are conducted.

I say to each of the witnesses that before we can help you, you will have to be candid with us. I enjoin each of the witnesses to speak freely and in his own words, to give an account of his personal combat experiences in Vietnam during which close air support was requested. We are particularly interested in your personal evaluation of what happened, or what should have happened.

Mr. Marshall, would you get the first witness for us?

Mr. MARSHALL. First Sgt. Wade Damron is the first witness.

Mr. PIKE. Come on up.

Mr. MARSHALL. He is sitting at the table.

Mr. PIKE. All right.

Sergeant Damron, I don't know whether this is a unique experience for this committee, or not, to start a hearing with an enlisted man, but I think it is highly proper, frankly. We are always starting with the Secretary of Defense and working our way down, and now we will start with the man who has been on the ground, and we may wind up with the Secretary of Defense.

(The biographical sketch of Sergeant Damron is as follows:)

BIOGRAPHICAL SKETCH OF FIRST SGT. WADE DAMRON

First Sgt. Wade Damron was born in Dingen, W. Va., on February 8, 1935. His first tour of duty was at Camp Breckenridge, Ky., for basic training. Sergeant Damron was assigned to Eta Jima (Japan) Specialist School for medical training in December 1952 and from the school to Korea in February 1953. In Korea he served as a medical aid man and as an infantry rifle squad leader.

Transferred to Fort Knox in April 1954, Sergeant Damron served as a platoon sergeant in the 3d Armored Division. In April 1956, he went to Europe for a 3-year tour with the division on Operation Gyroscope.

After returning to the United States in April 1959, he served as an instructor and adviser with the USAR in Greensboro, N.C.

Damron went to Vietnam in May 1964 where he was assigned as assistant adviser to the 27th Regional Forces Battalion, Vinh Long Province in the Mekong Delta. While working with the battalion, Sergeant Damron acted as a forward

air controller on several occasions. These were usually missions of an emergency nature and not preplanned air support.

His decorations include the Silver Star, Bronze Star, Army Commendation Medal, Purple Heart (two awards), Combat Infantry Badge, and Combat Medical Badge.

He is married to the former Mary Lou Marcum of Dingen, W. Va., and resides at 5805 Sylvan Drive, Columbia, S.C. Sergeant Damron is currently assigned at the Army Training Center (Infantry), Fort Jackson, S.C.

STATEMENT OF 1ST SGT. WADE DAMRON, U.S. ARMY

Mr. PIKE. Sergeant Damron has a very fine record. He has been, well, I guess you started in the service back in 1952; is that correct, Sergeant Damron?

Sergeant DAMRON. Yes, Mr. Chairman, in June of 1952.

Mr. PIKE. And when did you go to Vietnam, Sergeant Damron?

Sergeant DAMRON. May of 1964, sir.

Mr. PIKE. What were your duties there? Where were you stationed?

Sergeant DAMRON. I was assigned in the delta area in the 4th Corps, in Vinh Long Province, sir. I was assigned as assistant adviser to the Regional Forces and Popular Forces.

Mr. PIKE. And the Regional Forces—how would they correspond with our forces in America? They are not the Regular Forces, are they?

Sergeant DAMRON. No, sir; they are not. I don't think there would be a direct—

Mr. PIKE. Would it be sort of like a State Guard?

Sergeant DAMRON. Sort of like a National Guard, which is used only in the State. The Regional are used only in that Province, in most cases with the exception of some border-type operations between Provinces.

Mr. PIKE. And how long were you assigned to this Régional Force unit, Sergeant?

Sergeant DAMRON. One year, sir.

Mr. PIKE. And you lived with them?

Sergeant DAMRON. Well, in the field; yes, sir. When we were back in the city, I lived in the MAAG house with the rest of the Americans.

Mr. PIKE. I see. How much time did you spend in the field?

Sergeant DAMRON. Usually 3 to 7 days a week, in one type of operation or another.

Mr. PIKE. I think I can say for all of the members of this subcommittee, Sergeant Damron—now, I can say this for Mr. Ichord and Mr. Chamberlain who have been out there and have seen some of the work that you were doing, that we are just as proud of you as we can be. We really mean it. We have seen the conditions under which you worked, the conditions under which you lived, and we cannot speak too highly for the work you have done and the sacrifices you have made.

I think it is wonderful that you were chosen to come here and lead off these hearings.

Sergeant, in the course of your duties did you ever have occasion to call for air support?

Sergeant DAMRON. Yes, sir.

Mr. PIKE. About how many times would you say this situation arose?

Sergeant DAMRON. I would say approximately 10 times, sir, but I am not sure of the exact number.

Mr. PIKE. Would this be when you were out on missions and it was preplanned, or would it be when an attack was mounted against some place where you were, and you did not know that the attack was coming?

Sergeant DAMRON. All of the air missions that I had, sir, were emergency type missions with the exception of one.

Mr. PIKE. So in the typical mission that you had you were being hit by the enemy; is that correct?

Sergeant DAMRON. Yes, sir; we were always in contact before we ever called for air support.

Mr. PIKE. And what would be the nature of a target? Can you give us an example of a time when you called for air support? What was the target you wanted support against?

Sergeant DAMRON. Yes, sir; I can give an example.

On the 24th of February we made contact with a Vietcong battalion, which I estimated at the time to be 600, but we learned from a prisoner that it was approximately 700. They were well dug in, and when I say "well dug in," I mean with overhead cover, of from 2 to 3 feet thick, over top of a foxhole, and trench-type placements.

Mr. PIKE. Now, you say you made contact with it. Who made the contact? Was this the Vietnamese forces?

Sergeant DAMRON. This was the Vietnamese Regional Force battalion that I was advising, sir.

Mr. PIKE. And how would you get your information on this?

Sergeant DAMRON. I don't know where the original information came from, the direct source, but the piece of intelligence that we were reacting to was information I had received from my senior adviser, he said we had a Vietcong company dug in in this area. So the plan was to take a battalion to try to engage them and overrun them or destroy them.

Mr. PIKE. So it was really—as far as you were concerned—a planned operation?

Sergeant DAMRON. Yes, sir. The ground operation was planned, but this was a little bit of an unusual operation because we started in the middle of the day instead of early in the morning. We did react to a piece of hot intelligence, so to speak.

Mr. PIKE. I see. When you called for your air support had your unit already moved out toward this objective?

Sergeant DAMRON. Yes, sir; we had already suffered a number of casualties, I would say in the neighborhood of 25 to 30 casualties at that time.

Mr. PIKE. Right. And had you suffered these casualties before you called for the air support?

Sergeant DAMRON. Yes, sir.

Mr. PIKE. Were you the individual who made the contact for the air support?

Sergeant DAMRON. The adviser that I worked for, Captain Spoons, called initially, sir, and then he went with the battalion commander, and I did the radio control.

Mr. PIKE. I see.

Sergeant DAMRON. Through the Airborne L-19 that we had. This is a type of liaison plane.

Mr. PIKE. And you say this operation started around noon?

Sergeant DAMRON. Yes, sir; that is the time we moved out by boat from Vinh Long. We used our own boat company to move out. This particular district lies in the middle of the Mekong River on an island. It is on one end of an island, if you recall the area there.

Mr. PIKE. Do you know what time the captain called for the air support?

Sergeant DAMRON. Not exactly.

Mr. PIKE. Can you give us an approximation?

Sergeant DAMRON. Mr. Chairman, I would say approximately 1400, or 2 o'clock in the afternoon.

Mr. PIKE. Right. When he called, or when you called for air support, did you ask for particular types of bomb loads or particular types of aircraft?

Sergeant DAMRON. We did ask for a particular type of bomb load on this day, sir.

Mr. PIKE. What did you ask for?

Sergeant DAMRON. We asked for napalm, sir.

Mr. PIKE. Napalm?

Sergeant DAMRON. Yes, sir.

Mr. PIKE. Did you ask for a particular quantity or a number of sorties?

Sergeant DAMRON. I am not sure if he asked for a number of sorties, or a particular quantity, Mr. Chairman. Captain Spoons made the initial request, and I handled it after that. We did get a number of sorties; however, we didn't get any napalm.

Mr. PIKE. What kind of sorties did you get, Sergeant?

Sergeant DAMRON. Well, initially we got two Vietnamese type of A-1's and each plane dropped one bomb, high explosive type, I assume, from the sound of it. It definitely was not napalm. Then they left.

Mr. PIKE. Do you know what time those first two planes arrived on target?

Sergeant DAMRON. Approximately 1,500, sir. But, again, I couldn't be sure. This would be within a few minutes.

Mr. PIKE. That would be roughly in the area of an hour?

Sergeant DAMRON. An hour; yes, sir.

Mr. PIKE. After they were called for?

Sergeant DAMRON. And I understand from Colonel Roberts, who was the sector senior adviser, that these two planes were on a mission someplace else and they were diverted to us because we were in such trouble at the time. We were trying to extract ourselves from this situation.

Mr. PIKE. And do you know whether these two bombs were on target or in the target area?

Sergeant DAMRON. No, sir; they weren't on target. They were between us and the target.

Mr. PIKE. They were between you and the target.

Now, at what time did the next—did you get more air support, then?

Sergeant DAMRON. Yes, sir.

Mr. PIKE. What else came in? What came next; let's put it that way.

Sergeant DAMRON. I would say about 45 minutes to an hour later we got some American-flown Vietnamese-type aircraft and they came in lower. They delivered——

Mr. PIKE. These would be A-1's, again?

Sergeant DAMRON. I would say about 45 minutes to an hour later we got some American-flown Vietnamese-type aircraft and they came in lower. They delivered——

Mr. PIKE. These would be A-1's, again?

Sergeant DAMRON. Yes, sir; A-1's. I never used jets as long as I was there.

Mr. PIKE. Right.

Sergeant DAMRON. They came in lower. They dropped I think what were 250-pound bombs, maybe 500. They made cannon runs, 20-millimeter cannon runs. They were pretty well on target, although they didn't cover all the targets, but you feel this was due to the fact they didn't have enough planes. The target was too long to cover it all.

Mr. PIKE. How many planes came in this mission which was about 2 hours?

Sergeant DAMRON. In the second mission there were two, sir. We got another mission about an hour after that, and there were five planes coming in. But we never got any napalm.

Mr. PIKE. So at the end of 3 hours, you had received eight planes over target; is that correct, two and two and then four?

Sergeant DAMRON. Yes, sir; and then we got another strike that night.

Mr. PIKE. At night?

Sergeant DAMRON. Yes, sir; about dusk—dark.

Mr. PIKE. All right. Now, did you remain in contact with these enemy forces through the night?

Sergeant DAMRON. A limited contact, sir. When I say limited contact, I mean sniper fire and we ran a couple of patrols out to try to find out the extent of the positions after we got reorganized, of course, that night. The battalion I was with had to withdraw.

I don't think anyone could have done better under the situation.

Mr. PIKE. Did you call for any air support during the night?

Sergeant DAMRON. No, sir; we didn't call for air support after dusk.

Mr. PIKE. You didn't feel that it was necessary, or did you know you weren't going to get it?

Sergeant DAMRON. Maybe some of both at that time, sir. I didn't feel personally that we needed it because we had pulled back to another wood line. We had what I considered a reasonably secure area, in that we had our defenses organized by then, by the time of the last strike being finished.

Mr. PIKE. All right. Sergeant, I think you have explained that one fairly well.

Mr. CHAMBERLAIN. (Aside to Mr. Pike.)

Mr. PIKE. Mr. Chamberlain asks when the four planes—that wasn't the last one?

Mr. CHAMBERLAIN. At dusk.

Mr. PIKE. At dusk, what did they carry?

Sergeant DAMRON. They carried high explosive type bombs and cannons. But the longer air strikes came, the higher they kept getting. Because this battalion had intense small-arms fire as big as .50 caliber, and maybe 20 millimeter. I couldn't tell from my distance. Of course they had to come in higher than they usually do.

Mr. PIKE. Mr. Blandford, did you want to ask a question?

Mr. BLANDFORD. Just two questions.

Sergeant, how close were you to the Vietnam battalion at that point?

Sergeant DAMRON. At which time, Mr. Blandford?

Mr. BLANDFORD. You were in contact with them, and you heard the bomb explode, and I assume they were 500 pounders. How far away were the bombs that were dropped?

Sergeant DAMRON. Well, it was varying distances. I could see the explosion from where I was.

Mr. BLANDFORD. Roughly 500 yards or 1,000 yards?

Sergeant DAMRON. Initially closer than that, sir. I was within 300 meters, I would say, of where one bomb exploded. We got as close as 50 or 60 meters to where the battalion was dug in. We just couldn't make it any farther. Of course, the further we fell back after we got back to the wood line, we would have been some 800 meters.

Mr. BLANDFORD. How did you identify your target?

Sergeant DAMRON. I identified it by telling the L-19—that is, the aircraft in the air—where the canal ran, what our position was in relation to the canals, and the wood line on the ground. We were using point-type reference.

Mr. BLANDFORD. You didn't have grid zones or you didn't attempt to use smoke or white phosphorous shells or something of that nature?

Sergeant DAMRON. We didn't. The L-19 could see clearly where it was, and he put a red smoke grenade out of the window.

Mr. BLANDFORD. He didn't attempt to vector them?

Sergeant DAMRON. We also had helicopters, armed helicopters, that had fired on the wood line, and they had put white phosphorous in the wood line.

Mr. BLANDFORD. So they did use white phosphorus to mark the targets?

Sergeant DAMRON. From the helicopters.

Mr. BLANDFORD. All right.

Mr. PIKE. How many armed helicopters were used; do you recall that, Sergeant?

Sergeant DAMRON. We had four initially, sir.

Mr. PIKE. Did they have rockets?

Sergeant DAMRON. Yes, sir.

Mr. PIKE. And machineguns?

Sergeant DAMRON. Yes, sir.

Mr. PIKE. Twenty-millimeter machineguns?

Sergeant DAMRON. No, sir; 7.62's.

Mr. PIKE. I see. Tell us about some of your other operations, Sergeant Damron. Was there ever an operation in which you called for close air support, and did not receive it?

Sergeant DAMRON. Yes, sir. On the 1st of July in 1964 we had an operation in the Tam Binh district, which is in the southernmost dis-

trict of the province. We called for air support on that day for an airstrike, and we did not get it for one reason or another. I don't know why.

Mr. PIKE. What was the nature of your target on that day?

Sergeant DAMRON. Approximately the same situation as we had in Cho Lach.

Mr. PIKE. You had a dug-in Vietcong company or larger?

Sergeant DAMRON. Initially I estimated the strength to be two companies.

Mr. PIKE. Two companies.

Sergeant DAMRON. I understand that it was a little larger than that when they finally found out. I say I understand, because I was evacuated that day and I didn't get to finish that operation.

Mr. PIKE. Did you call more than once on that day for air support?

Sergeant DAMRON. I didn't, sir. Personally, I couldn't tell you—

Mr. PIKE. Do you know whether air support was called for more than once on that time?

Sergeant DAMRON. Captain Qualtrea said he did call for air support again after that. To my knowledge they never did get it. Now I am not—

Mr. PIKE. Were you evacuated on that day for any particular reason?

Sergeant DAMRON. Yes, sir; I was wounded.

Mr. PIKE. I thought that, but I wanted to get it in the record.

Now, was there more than one occasion when you called for air support and didn't get it?

Sergeant DAMRON. Oh, yes.

Mr. PIKE. How many times would you say that you called for air support and received none, Sergeant Damron?

Sergeant DAMRON. I wouldn't know for sure, Mr. Pike, but I would say in the neighborhood of four or five. And this would strictly be a guess.

Mr. PIKE. I see.

Sergeant DAMRON. Because I never kept a record of it.

Mr. PIKE. And were there any times, Sergeant Damron, when you tried to call for air support and found that for reasons of your communications equipment you couldn't get through?

Sergeant DAMRON. Yes, sir; without the aircraft in the air overhead, the liaison-type aircraft, it would have been impossible in most cases for me to get an airstrike.

Mr. PIKE. There was no way for you to communicate with the operations center through the liaison plane flying overhead?

Sergeant DAMRON. That is right, sir.

Now, let me clarify that a little. If it was a real emergency, I would go through Vietnamese channels. In other words, I would tell the Vietnamese operator to call his operator and get some American on the other end, because their communications would go through the district. It was very slow and it was a long process of relays from our position in the field back to district and back to province. We could have gotten it that way.

Mr. EVANS. Mr. Chairman, could I ask a question at that point?

Mr. PIKE. Yes.

Mr. EVANS. What type of communications were you using?

Sergeant DAMRON. PRC-10 radio.

Mr. EVANS. What kind of a range?

Sergeant DAMRON. It has a range of from 3 to 5 miles supposedly, but we never could get that range out of it in the delta.

Mr. EVANS. Why?

Sergeant DAMRON. I don't know, sir.

Mr. PIKE. As far as you know, they couldn't get that range out of it anywhere else, either?

Sergeant DAMRON. I have on occasion in Germany gotten that kind of range out of it.

Mr. PIKE. I see. Is that an AM system?

Sergeant DAMRON. The ANPRC-10 is an FM radio, sir.

Mr. BLANDFORD. Mr. Chairman, could we ask how far on these communications, how close your airfields actually were from your position, do you know, Sergeant?

Sergeant DAMRON. I can tell you where the airfield was, sir. I assume that the closest airfield to us was in Saigon or in Bien Hoa.

Mr. BLANDFORD. Roughly how much flying time was involved from the closest airfield to the places where you were calling for close air support?

Sergeant DAMRON. I don't know the flying time, sir.

Mr. BLANDFORD. How many miles?

Sergeant DAMRON. We were about—the province capital was approximately 65 miles from Saigon.

Mr. BLANDFORD. Sixty-five miles?

Sergeant DAMRON. Yes.

Mr. PIKE. Sergeant, were there—tell us now about the best example of close air support you ever saw. When you called for air support, what was the best experience you ever had?

Sergeant DAMRON. I guess the best experience, sir, was in Ducton district. We had an operation and we made contact with the Vietcong. We called for an airstrike when the fire got pretty hot on us and they were there in, I would say, approximately 20 minutes.

Mr. PIKE. And did they have the kind of load that you had asked them to have?

Sergeant DAMRON. Again they didn't have the kind of load, but they were reasonably effective. They did hit right on target.

Mr. PIKE. Right.

Sergeant DAMRON. With the bombs and they made cannon runs on them and they did rout the Vietcong and that day we got 34 of them.

Mr. PIKE. I see.

In summary, Sergeant, would it be a fair statement to say that in your experience in Vietnam you called for close air support somewhere between 10 and 20 times and there were occasions when you could not get any and there were occasions in which, because of your communications, you couldn't even get your message through and there were occasions when the air support arrived but was poor and there were occasions when it arrived and was good? Is that a fair statement?

Sergeant DAMRON. Yes, sir; I think so. [Deleted.] There is probably a number of reasons why we didn't get it. There were many

considerations, I understand, up the line to allocate aircraft and this sort of thing.

Mr. PIKE. I am sure of that. And I am sure there will be plenty of people to tell us about the reasons why it didn't come. But we just want to know your experiences. There were occasions when you asked for it and it wasn't there?

Sergeant DAMRON. Yes, that is right.

Mr. PIKE. Go ahead, Mr. Gubser.

Mr. GUBSER. Sergeant, before I ask this question, I just want to say how much I admire your candor and the way you present it. It is a beautiful thing to behold.

Sergeant DAMRON. Thank you, sir.

Mr. GUBSER. But could you tell me what type of load you customarily asked for? Was there any pattern? Did you ask for more napalm, more high explosive bombs, or is there any pattern to it at all?

Sergeant DAMRON. I never asked for a load unless we did particularly ask for napalm, Mr. Gubser.

Mr. GUBSER. Every time that you specifically asked for a load, it was napalm that you requested?

Sergeant DAMRON. Yes, sir.

Mr. GUBSER. Did you ever get napalm?

Sergeant DAMRON. No, sir.

Mr. GUBSER. Do you have any possible explanation for that, or was any explanation ever offered to you?

Sergeant DAMRON. Yes, sir; we got explanations all the time. [Deleted.]

Mr. GUBSER. Was there any other explanation other than that ever offered?

Sergeant DAMRON. Yes, sir. Another explanation was that the planes couldn't land. After they had loaded napalm they had to drop it for some reasons. They had to find some target to drop it on. This was another explanation given. I don't know about the accuracy of the statement, but this was put out, sir.

Mr. GUBSER. To your knowledge—and I suppose this would be better addressed to the Air Force, but was the napalm load always available at the airstrip?

Sergeant DAMRON. I have no idea, sir.

Mr. GUBSER. Is it a problem of loading on aircraft? Would it delay the strike? Again, that is probably a more proper question for someone else.

Sergeant DAMRON. I couldn't answer it with any degree of authority, Mr. Gubser.

Mr. GUBSER. But every time you requested napalm you never got it?

Sergeant DAMRON. No, sir.

Mr. GUBSER. On a single occasion.

Sergeant DAMRON. That is correct.

Mr. GUBSER. Would you give a guess as to how many times you requested napalm?

Sergeant DAMRON. Well, it wouldn't be very accurate, but I would say five or six.

Mr. GUBSER. Thank you very much, Sergeant.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. Sergeant, the first incident you were talking about, in Vinh Long Province: The first two pilots—the first two aircraft were A-1's piloted by Vietnamese; is that correct?

Sergeant DAMRON. This was what I was told by the senior adviser; yes, sir.

Mr. ICHORD. Then two American pilots came with A-1's, on the second—

Sergeant DAMRON. Yes, sir. This was again my information coming from the senior adviser as to the type of aircraft. Of course, I could tell the type of aircraft from looking at it.

Mr. ICHORD. And what kind of ammunition, bombs, did they have?

Sergeant DAMRON. These were high explosive bombs of some type, sir, and 20-millimeter cannon.

Mr. ICHORD. But they missed the targets?

Sergeant DAMRON. No, sir. The second one didn't miss the target. Only the first one missed the target.

Mr. ICHORD. I see.

Now, you talked about four other planes that came in later.

Sergeant DAMRON. Yes, sir.

Mr. ICHORD. And what were they?

Sergeant DAMRON. They were American-flown A-1's.

Mr. ICHORD. And what did they use?

Sergeant DAMRON. They used the same type of load as the second group, high explosive bombs and 20-millimeter cannons.

Mr. ICHORD. What is your judgment, Sergeant, out there in the field? Overall do you think the close air support is good or bad?

Sergeant DAMRON. I don't believe that I would be in position to know from the overall picture, Mr. Ichord, whether it was good or bad from my particular little spot on the ground there. It wasn't as good as I would like it to be.

Mr. ICHORD. Thank you, Sergeant.

Mr. PIKE. Mr. Chamberlain.

Mr. CHAMBERLAIN. Just one question, Mr. Chairman.

First, I would like to say I join my colleagues in commending you for a very forthright statement here. And I think this is a splendid way, Mr. Chairman, for us to start these hearings.

You say that you were the forward air controller, is that it?

Sergeant DAMRON. No, sir. I wasn't a forward air controller as such. I had to act as such sometimes.

Mr. CHAMBERLAIN. You had to act as such?

Sergeant DAMRON. The forward air controller—

Mr. CHAMBERLAIN. Who is the forward air controller?

Sergeant DAMRON. We didn't have one, sir.

Mr. CHAMBERLAIN. But you were acting as such?

Sergeant DAMRON. Well, this was just part of my job, as an assistant adviser.

Mr. CHAMBERLAIN. I see. What responsibilities and duties did you have after the aircraft arrived in the area, if any?

Sergeant DAMRON. Well, I really wouldn't have any at that time.

Mr. CHAMBERLAIN. After you had ordered or requested the support, the close air support, when the planes came you weren't in touch with them?

Sergeant DAMRON. No, sir, not directly. I was in touch with the liaison aircraft.

Mr. CHAMBERLAIN. The L-19?

Sergeant DAMRON. That is right.

Mr. CHAMBERLAIN. You were in touch with them and the L-19 was in touch with the pilots on the A-1's?

Sergeant DAMRON. Right, sir. My radio will not net with the pilot's radio. I was on FM and they were on UHF.

Mr. CHAMBERLAIN. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Nedzi.

Mr. NEDZI. Would it have been helpful to you to have direct communication with the pilots? Would this prove a stumbling block at all in your operations?

Sergeant DAMRON. I don't know, Mr. Nedzi, really. I never had it, so I don't know if it would be considered a stumbling block or not. It would have been nice to have had someone else on the ground that would have been qualified to direct an air strike. I really am not qualified to direct an air strike, except I knew I needed it where I needed it at the moment.

Mr. NEDZI. Sergeant, can you just explain, if you know, the reasoning that napalm would have killed civilians and the high explosive bombs and the cannon doesn't kill civilians?

Sergeant DAMRON. Well, the napalm burns all the houses, sir. In fact, if an area is saturated with napalm, it just about burns everything in it. And high explosive bombs, of course—the explosive was contained by the mud and water in the delta. They weren't as effective as they would be on dry, hard terrain.

Mr. NEDZI. They would kill less Vietcong, too?

Sergeant DAMRON. Absolutely.

Mr. NEDZI. Mr. Chairman, I would just like to add my comments to that accorded by Mr. Gubser and Mr. Chamberlain. I think you are doing a wonderful job, Sergeant. I want to express my appreciation.

Mr. PIKE. Mr. Evans.

Mr. EVANS. Just a couple of questions.

Sergeant, in your experience do you have any preference for the type of aircraft that comes for close air support?

Sergeant DAMRON. No, sir, I really couldn't have a preference because I never got but one type, other than the armed helicopters.

Mr. EVANS. You just got the A-1's or the helicopters?

Sergeant DAMRON. Right.

Mr. EVANS. Was weather over a problem in your opinion in securing air support?

Sergeant DAMRON. I don't think so, sir. I don't really know, but as far as I was concerned it was never a consideration of mine. I don't know, really.

Mr. EVANS. Thank you, Sergeant.

Mr. PIKE. Mr. Wilson.

Mr. WILSON. Let me—I missed the first part of your testimony. Maybe you said it. How many men were involved in your unit at the time these airplanes—

Sergeant DAMRON. It varied greatly, Mr. Wilson. We had [deleted] companies in the battalion, but for an operation, a search and destroy type operation at any rate we would take from [deleted] companies

to go out and search for the Vietcong. At this particular time, of the operation I described there, we had [deleted] companies of approximately [deleted] strength per company.

Mr. WILSON. You were in effect calling in the airplanes for the [deleted] men, then?

Sergeant DAMRON. Captain Spoons initially, who was my superior, called in the aircraft. I made the radio conversation with the liaison aircraft, to tell him where the target was and describe it to him by using point reference on the ground.

Mr. WILSON. What type of radio contact did you have with the liaison craft? Was it a direct voice communication?

Sergeant DAMRON. Yes, sir.

Mr. WILSON. Off, on.

Sergeant DAMRON. An AN/PRC-10. Just a little mike that you use.

Mr. WILSON. In other words—

Sergeant DAMRON. A hand set.

Mr. WILSON. And you couldn't talk to the pilot yourself that is doing the interdiction. You had to go to the liaison airplane and the airplane relayed your message to the A-1 coming in, right?

Sergeant DAMRON. Yes, sir; that is correct.

Mr. WILSON. Didn't you feel this was a little bit cumbersome?

Sergeant DAMRON. Yes, sir; I suppose it could be considered cumbersome, by having to go through a relay point to direct the air strike.

Mr. WILSON. I haven't seen you in operation. I suppose you are pretty calm and cool. But when you are calling in things of this type, doesn't it get rather exciting—you and the pilot in liaison and the other pilot might find it difficult to be calm and get the message exactly right.

Sergeant DAMRON. Well, I think scared would be more the word for it. It is difficult to get a radio communication in a situation like this at times because of the noise involved.

Mr. WILSON. Sure.

Sergeant DAMRON. It would be better, I think, if you had someone that had nothing else to do but this.

Mr. WILSON. You had other duties besides calling in the A-1's?

Sergeant DAMRON. Oh, yes; absolutely. I was usually trying to help some company commander some place get a company started or get the mortar team going in the headquarters group. I had plenty to do.

Mr. WILSON. Now, what about—you were talking about operations in the day time. Did you have an occasion to call in airplanes at night?

Sergeant DAMRON. Yes; one time.

Mr. WILSON. Were they successful in hitting the target at that time?

Sergeant DAMRON. We didn't get them, sir.

Mr. WILSON. You didn't get them?

Sergeant DAMRON. We didn't.

Mr. WILSON. You called them but they weren't there?

Sergeant DAMRON. No, sir. We got armed helicopters instead.

Mr. WILSON. Did you reach—at that time were you talking to a liaison airplane again?

Sergeant DAMRON. No, sir; I talked directly to helicopters.

Mr. WILSON. In other words, you can talk to the helicopters but you can't talk to the A-1?

Sergeant DAMRON. That is right, sir.

Mr. WILSON. This is rather complicated.

Mr. PIKE. The interesting thing to me the sergeant said, before you got here, was that he couldn't call the operational center unless there was a liaison plane overhead for him to call through. So he couldn't even order the A-1's unless the liaison plane was there.

Mr. WILSON. That is all, Mr. Chairman.

Mr. PIKE. Mr. Blandford.

Mr. BLANDFORD. You served in Korea, Sergeant?

Sergeant DAMRON. Yes, sir.

Mr. BLANDFORD. How do you compare your close air support in South Vietnam with the close air support in Korea?

Sergeant DAMRON. During the time in Korea, sir; that I had occasion to observe any air strike, I was a medic for a rifle platoon. I am not really in a position or don't have enough knowledge about air strikes in Korea to make a fair comparison.

Mr. BLANDFORD. How close was your close air support in Korea compared—that is, the bombline was how close compared to the bombline in South Vietnam?

Sergeant DAMRON. Well, it was considerably farther out.

Mr. BLANDFORD. In Korea?

Sergeant DAMRON. In Korea. I couldn't give you any distance, Mr. Blandford, because I was usually tied up with other things and I didn't have—

Mr. BLANDFORD. You have seen armed helicopters and you have seen A-1E's and A-1H's. If you had your druthers, which would you rather have, the armed helicopters or the A-1E's?

Sergeant DAMRON. Well, if I could get them as fast as I wanted them, sir, I would rather have the A-1E's because they are a much more powerful strike. The helicopters have the 2.75 rockets and the 7.62 machineguns. It is not near as effective on the ground as an A-1E would be if you got it when you wanted it and could get it on the target.

Mr. BLANDFORD. Now, if you were to choose the one thing—you were asked to choose one thing that you thought needed the greatest improvement with respect to close air support, in other words that would help you do the job—if you go back to South Vietnam and somebody said, "You can pick one thing and we will improve that product to your satisfaction," what would you select?

Sergeant DAMRON. Well, I would have to choose the planes from the Air Force of course and with the stipulation that I could get enough of them sooner.

Mr. BLANDFORD. In other words, it is the aircraft—the weakest part of the close air support from your viewpoint is the aircraft, and not communications and not the ability of the pilot to hit the target and not weather, but the aircraft itself?

Sergeant DAMRON. I don't believe I understand what you mean, Mr. Blandford.

Mr. BLANDFORD. Well, in your experiences over there I am sure you have gone back to Saigon and a lot of you have sat down and discussed close air support or air strikes and you all explain experiences.

If it has been anything like my experience in close air support, it turns into a pretty good swearing match on occasion as to why they didn't do something. But everybody has some complaint about something. If they haven't there is something wrong. What was the chief complaint that you had, or the people you talked to, about close air support?

Sergeant DAMRON. I couldn't get them soon enough or I couldn't get them at all.

Mr. BLANDFORD. Was the ability to get them——

Sergeant DAMRON. The ability to get it when you needed it.

Mr. BLANDFORD. And you couldn't get them when you needed it. In other words, by the time they got out the Vietcong has either swept out or your positions have been penetrated and you had to withdraw?

Sergeant DAMRON. Yes, sir.

Mr. BLANDFORD. That is all.

Mr. WILSON. What would you do when you decided you could use close air support? What procedure?

Mr. PIKE. We covered that.

Mr. WILSON. OK.

Mr. PIKE. We have gone through it, Mr. Wilson, pretty well.

Mr. WILSON. I would like to know for my own sake, did you write a requisition?

Sergeant DAMRON. No, sir. I called direct on the radio to the observer plane and told them what I wanted and where.

Mr. WILSON. If they did show up, how soon afterward did they appear on the scene?

Sergeant DAMRON. It varied greatly, Mr. Wilson, from 20 minutes to not at all.

Mr. WILSON. Not at all is quite a little time.

Sergeant DAMRON. It certainly is, sir.

Mr. PIKE. Thank you very much, Sergeant Damron. We are through with you for the moment. We really appreciate your coming here. You have been an excellent witness.

Sergeant DAMRON. Thank you, sir.

Mr. PIKE. Mr. Marshall.

Mr. MARSHALL. The next witness is Capt. Michael V. Barnes, U.S. Army—armor.

(The biographical sketch of Captain Barnes is as follows:)

BIOGRAPHICAL SKETCH OF CAPT. MICHAEL V. BARNES

Captain Barnes was born March 22, 1939, in Little Rock, Ark. He received a B.A. degree from Arkansas Polytechnic College and was commissioned through ROTC.

He has attended the U.S. Army Armor School and the U.S. Army Special Warfare School. His assignment prior to Vietnam was an instructor at the basic training center, Fort Knox, Ky.

He arrived in Vietnam in June 1964, where he was assigned as an infantry battalion adviser in the 9th Vietnamese Division. Four months later he was assigned as an adviser to an armored cavalry troop in the Vietnamese IV Corps area of the delta. Captain Barnes participated in approximately 50 combat operations and used and observed approximately 25 air support missions.

He is married and has one daughter, age 3. Captain Barnes is presently assigned to the 2d Armored Division, Fort Hood, Tex.

Mr. PIKE. Captain Barnes, we thank you for coming here today. I notice in the experience sheet that the Army has given me, your basic training was the armor school and then you went to special warfare school.

Now would you tell us about when you went to Vietnam and who you were assigned to and what your duties consisted of?

STATEMENT OF CAPT. MICHAEL V. BARNES, U.S. ARMY

Captain BARNES. Yes, sir. I arrived in Vietnam on June 5, 1964. My first assignment was as assistant battalion adviser, with a Vietnamese infantry battalion, 9th Division, IV Corps. This particular location was at the same location that Sergeant Damron was.

Now I was in this job for about 3½ months, until the latter part of September of 1964. At this time I was reassigned to an armored cavalry troop in IV Corps. We were attached for operational control to the 21st Division, which is the southernmost division in Vietnam. It consists mainly of the Camau Peninsula.

Mr. PIKE. And this division was a regular Vietnamese Army division?

Captain BARNES. Yes, sir; it was.

Mr. PIKE. How frequently in your capacity with them, Captain Barnes, did you have occasion to call for air support?

Captain BARNES. Sir, I used air support in the year I was there approximately, I would say, between 15 and 20 times.

Mr. PIKE. Was it any part of your job to make the determination as to whether air support would be called for or not?

Captain BARNES. As an adviser, sir, I did assist my troop commander in assessing the target area—was air support necessary, could we handle it with artillery, or could our troop with its own weapons take care of it.

Mr. PIKE. Now with a regular Vietnamese division, did you have to go through the same operation that Sergeant Damron has just described? Did you have to go through a liaison plane to call for air support?

Captain BARNES. Sir, most of our operations were division controlled and we had already had in most cases air cover overhead or an airplane on ground alert at some airfield, and all I had to do to get an air strike in most instances was call the liaison aircraft, who was acting again as a radio relay, and tell them where I wanted them at.

Mr. PIKE. In other words, the operations that you were talking about where air support was called for were preplanned operations?

Captain BARNES. Yes, sir; the air support in most cases was preplanned, to be available to us.

Mr. PIKE. Did you ever have an occasion when it was not preplanned, where you got hit where you didn't expect to get hit and called for air support?

Captain BARNES. When I was with the cavalry troop, no, sir. On one operation when I was with the infantry battalion I was in the regimental headquarters, which at this time was the control headquarters for this operation. The unit in the field which was in contact did request an air strike and it was denied at division level.

Mr. PIKE. Now when you say the air strike was denied at division level, this was denied by the Vietnamese command?

Captain BARNES. Yes, sir, it was denied by the Vietnamese command.

Mr. PIKE. Then let's talk about this other type a little bit. When you had preplanned your air support and you called for your air support, were you on the ground with the unit which was being supported?

Captain BARNES. Yes, sir.

Mr. PIKE. And how far from the forward edge of the battle area were the targets which you asked to be struck?

Captain BARNES. Sir, it varied in instances from less than 100 meters to maybe 400 meters away from us.

Mr. PIKE. Let's talk about the time when it was less than 100 meters.

Captain BARNES. All right, sir.

Mr. PIKE. What was the target less than 100 meters that you asked for air support against?

Captain BARNES. It was approximately two Vietcong battalions in a dug-in position, along a canal line, which has trees and houses. They were in among the houses and the trees.

Mr. PIKE. What kind of air support did you call for?

Captain BARNES. I called for the first available thing I could get, sir, any air support.

Mr. PIKE. Any air support. As far as you were concerned it was kind of a rush job?

Captain BARNES. Yes, sir.

Mr. PIKE. How long was it before the first available air support got there?

Captain BARNES. It was approximately about 30 minutes, I would say, sir.

Mr. PIKE. What was the air support which arrived?

Captain BARNES. There were two Vietnamese A-1 aircraft flown by Vietnamese pilots.

Mr. PIKE. Had they been on the ground or had they been in the air flying combat air patrol?

Captain BARNES. I think they were in the air at this time, sir.

Mr. PIKE. And when they came to attack this target less than 100 meters in front of you, how did they do?

Captain BARNES. They were accompanied by a Vietnamese liaison type aircraft. He went in and marked the target for them. At this time I had no control over him because the Vietnamese were talking.

Mr. PIKE. Let's start with it. Did he mark it accurately?

Captain BARNES. Yes, sir; he marked it accurately.

Mr. PIKE. All right. Then what happened?

Captain BARNES. The first airplane went in and struck. The second airplane made his pass. And the Vietcong had a 50-caliber antiaircraft weapon. They shot the airplane out of the air. And at this time the other remaining fighter ceased to strike and circled the area.

Mr. PIKE. When the first airplane struck, did he hit his target?

Captain BARNES. Yes, sir; he hit along the canal line that we wanted him on.

Mr. PIKE. All right. And how many bombs did he drop?

Captain BARNES. It was either one or two, sir. They were rather large bombs, either 500 or 750 pounds.

Mr. PIKE. So after 30 minutes two planes arrived. One dropped two, either 500 or 750-pound bombs, and the other one was shot down and the first plane left?

(Captain Barnes nods.)

Mr. PIKE. Did you get any more air support against this particular target?

Captain BARNES. Yes, sir.

Mr. PIKE. How long was it before the next planes arrived?

Captain BARNES. The next planes arrived in about, I would say, another 30 or maybe 45 minutes, sir.

Mr. PIKE. All right.

So somewhere between an hour and an hour and a quarter after the first call had gone in, you got some more planes. What planes were these?

Captain BARNES. Sir, this particular battle developed into a major fight and our aircraft from then on were a mix. They were A-1 type aircraft flown by Vietnamese and A-1 flown by U.S. Air Force pilots and U.S. Air Force B-57's.

Mr. PIKE. What were the second group that arrived?

Captain BARNES. I think the second ones were the U.S. Air Force, sir.

Mr. PIKE. You say Air Force A-1's?

Captain BARNES. Yes, sir.

Mr. PIKE. And what happened when they came?

Captain BARNES. Sir, they continued striking the target that we had outlined for them. At this time we were heavily engaged with the enemy and the target area was rapidly expanding as we developed where the enemy's positions were.

Mr. PIKE. How was the target marked at this time?

Captain BARNES. In my particular case, sir, in this area—

Mr. PIKE. On this occasion I am talking about.

Captain BARNES. On this occasion, the tree line was very distinguishable from the ground. Also in the Armored Cavalry troop you can see the carriers from the air. We have numbers on the roofs of them and they are very distinguishable and they are usually as far up to the front as we are. They are right up with us so it is very easy to tell where we are and where the enemy is.

Mr. PIKE. All right.

How did you tell the pilot—they could tell where you were, but how did the pilot know where the enemy was, other than the tree line?

Captain BARNES. We would use a reference. Maybe there was a bamboo thicket to the right of this, so many meters.

Mr. PIKE. You would orally describe some landmark on the ground?

Captain BARNES. Yes, sir.

Mr. PIKE. To the pilot?

Captain BARNES. To the fighter pilot.

Mr. PIKE. To the liaison?

Captain BARNES. Yes, sir; to the liaison.

Mr. PIKE. And you could not—even when you were assigned with a Regular Vietnamese division, you couldn't talk directly to the strike pilots; is that correct?

Captain BARNES. No, sir.

Mr. PIKE. Well, what happened in this battle? You say it developed into a major battle. How much air support did you get?

Captain BARNES. Sir, I would say the fight lasted from approximately 9 until 6 o'clock in the evening.

Mr. PIKE. 9 a.m., until 6 p.m.?

Captain BARNES. Yes, sir. And we probably got between the neighborhood of 75 to 100 sorties flown that day for us.

Mr. PIKE. All right.

What happened at 6 p.m.?

Captain BARNES. They broke contact, sir.

Mr. PIKE. Who broke contact?

Captain BARNES. The Vietcong broke contact. We overran their position approximately at 4:30 that afternoon. They had moved off and broke contact.

Mr. PIKE. Mr. Wilson?

Mr. WILSON. You mentioned in the first strike the two airplanes flown by Vietnamese pilots and you had a Vietnamese liaison plane. Did you have any language problem in dealing with them?

Captain BARNES. Sir, I did not talk with the Vietnamese airplane. This was done by personnel in my troop.

Mr. WILSON. You had a Vietnamese with you who was doing the actual calling, then?

Captain BARNES. Yes, sir.

Mr. WILSON. Just generally speaking, would you say that you were satisfied with the air support you got on that particular day, with that number of sorties and the type of armament that was used? Do you think the 750 pound or 500 pound were the right thing to be using against the sort of enemy?

Captain BARNES. Sir, I was completely satisfied with the type of ordnance that was delivered that day. It varied. We had napalm, we had white phosphorus, we had all types and all sizes of the high explosive bombs. As the strikes later came in, there were varying types of ordnance used.

Mr. WILSON. Generally speaking, not just about this battle or this day, but generally speaking, did you feel at any time that there was any restraint on the amount of airpower that you were allowed to call? Did anyone say, Well, sorry, that it has to be a real emergency before you call in any airplanes?

Captain BARNES. No, sir; I have never felt this way. This was never presented to me, that you have a limited number.

Mr. WILSON. Did you—in all the airplanes that were called in on that particular day, were any of them armed helicopters?

Captain BARNES. Yes, sir.

Mr. WILSON. Were they effective?

Captain BARNES. Yes, sir.

Mr. WILSON. That is all I have.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. Captain, did you ever call for air support and didn't get it?

Captain BARNES. One instance I mentioned, sir, when I was with the infantry battalion at regimental headquarters. It was denied by the Vietnamese division command. That is the only instance I can recall.

Mr. ICHORD. Thank you.

Mr. PIKE. Mr. Gubser.

Mr. GUBSER. Captain, have you ever specified the type of ordnance you wished delivered in an air strike?

Captain BARNES. No, sir.

Mr. GUBSER. You never have?

Captain BARNES. No, sir.

Mr. GUBSER. On no occasion whatsoever?

Captain BARNES. No, sir; I did not specify the type that I wished to be delivered.

Mr. GUBSER. Thank you.

Mr. PIKE. Mr. Blandford?

Mr. BLANDFORD. What was the most common complaint that you had among your forward air controllers—not forward air controllers so much but the people on the ground with respect to close air support?

Captain BARNES. Well, due to location, it would be the same complaint that Sergeant Damron had—the time that it took for the aircraft to arrive after you put in the request for it.

Mr. BLANDFORD. How about your communications?

Captain BARNES. In most cases, sir, my communications were very good because I was on division size operations and we usually had an aircraft in the air.

Mr. BLANDFORD. But always you were using communications with an L-19 or the equivalent?

Captain BARNES. Yes, sir.

Mr. BLANDFORD. As a relay.

Don't we have any equipment over there larger than the 10 that will let us go through to, say, the regiment, with some kind of antenna that can go more than 5 miles?

Captain BARNES. Sir, I used a larger radio than the 10. It is a vehicular mounted radio, basically the same, but it is larger, and I could get maybe 15 miles out of my radio.

Mr. BLANDFORD. Are they still as undependable as they were in World War—I shouldn't ask you this. You probably weren't in World War II.

Captain BARNES. No, sir.

Mr. BLANDFORD. But it seems that every time you come up with a radio, they work fine if there is nothing between you and the receiving station, but as soon as you put a couple of palm trees in the way you just don't get any communications. Is that still true?

Captain BARNES. This is true in most instances, sir. Our radios that we use are FM-series radios and from the most experience I have had with them, they are dependable but they are voice communications and the range is limited.

Mr. BLANDFORD. How about the effect of humidity on your radio over there?

Captain BARNES. It very definitely affects the portable-type radio, sir. The heat causes battery life to decrease very rapidly.

Mr. BLANDFORD. Would you say one of the greatest weaknesses in our whole system today is lack of adequate and dependable communications?

Captain BARNES. This is one of the big problems, Mr. Blandford.

Mr. BLANDFORD. Would you like to see aircraft with greater radius that can give you constant coverage as you move forward? Do you think this would be an improvement?

Captain BARNES. I think it would be an improvement, sir, if the aircraft could remain in the area longer.

Mr. BLANDFORD. I am talking about the equivalent of combat air patrol, not necessarily a fighter type but an airplane that could give you support when you needed it. Did you ever have to go to corps to get approval of an airstrike?

Captain BARNES. I did not myself.

Mr. BLANDFORD. Have you heard of cases where they had to go to corps to get approval for an airstrike?

Captain BARNES. Not in the sense of approval to strike the area. From the sense of approval to get an aircraft, yes.

Mr. BLANDFORD. Yes. What would be your estimate of the amount of time involved with each layer of command involved?

Captain BARNES. Sir, I have no estimate.

Mr. BLANDFORD. You said it took 30 to 45 minutes to get your airstrike when you had an L-19 in the air and two A-1H's that were diverted from another mission perhaps. That took you from 30 to 45 minutes because those aircraft were available. Roughly, if you went back to corps, how long would it take you to get air support?

Captain BARNES. I would say it would take maybe an hour or two, sir.

Mr. BLANDFORD. An hour or two?

Captain BARNES. That is right.

Mr. BLANDFORD. And for your purposes and the type of war that you are fighting over there, is that too long?

Captain BARNES. I feel it is too long, sir.

Mr. BLANDFORD. So it is your complaint or the complaint you have heard from others that lack of adequate aircraft, a weakness of communications, inability to control the aircraft—would you say that has something to do with it?

Captain BARNES. No, sir. In my case, inability to control the aircraft was not—

Mr. BLANDFORD. You never had any problem with control?

Captain BARNES. No.

Mr. BLANDFORD. Once the airplane was committed to you, yes. But have you had occasion when your aircraft have made runs and you wanted them to stay on station and they left notwithstanding?

Captain BARNES. No, sir.

Mr. BLANDFORD. On any occasion or on every occasion when you asked the aircraft remain in the area, assuming they had the fuel to do it, they did remain on station?

Captain BARNES. Yes, sir.

Mr. BLANDFORD. How about the target acquisition capability to the best of your knowledge? How often were these aircraft actually on target?

Captain BARNES. You mean they put the bombs where I wanted them to?

Mr. BLANDFORD. Yes.

Captain BARNES. In most instances, sir, they were on target. Of course, you will get a few that are out of the target area. But in this particular battle I described they were on target.

Mr. BLANDFORD. On any occasion were any of these bombs in your area?

Captain BARNES. No, sir.

Mr. BLANDFORD. None of them were ever short?

Captain BARNES. No, sir.

Mr. BLANDFORD. What would be your recommendation to this subcommittee with respect to improving close air support?

Captain BARNES. My recommendation, sir, would be to have enough aircraft in the country that when you call for them you could get them and have them so located around the country that the time it takes to acquire these aircraft over your area is automatically shorter.

Mr. BLANDFORD. For your purposes what is the best aircraft over there today?

Captain BARNES. Sir, I saw two A-1's and the B-57's, and I would lean a little bit toward the B-57's.

Mr. BLANDFORD. You prefer the jet to the A-1?

Captain BARNES. Yes, sir.

Mr. BLANDFORD. How about their ability to deliver on target? Do they have any problem?

Captain BARNES. No, sir. In this particular instance there was no problem because they could readily identify the target and the patterns they were flying, the striking pattern—they put it right on it.

Mr. BLANDFORD. And what were your weather conditions during this period? Were there occasions when your A-1's were coming in through a low ceiling?

Captain BARNES. Yes, sir. There were occasions when they did come—not on this particular battle but in other instances where they did come through low ceilings. There were also occasions when the aircraft were not available due to the weather. They could not fly.

Mr. BLANDFORD. What would you say would be the minimum altitude at which they could fly, the A-1's and the B-57's, from your own experience?

Captain BARNES. And be secure, sir?

Mr. BLANDFORD. And hit the target. To find you to start with and then hit the target?

Captain BARNES. I would say, about, maybe [deleted].

Mr. BLANDFORD. [Deleted.]

Captain BARNES. To fly over and find us.

Mr. BLANDFORD. No further questions, Mr. Chairman.

Mr. PIKE. Mr. Nedzi.

Mr. NEDZI. Captain, were there any other planes lost in this particular battle that you described?

Captain BARNES. There were two UH armed helicopters lost, sir.

Mr. NEDZI. No other A-1's?

Captain BARNES. No other A-1's or anything else, sir.

Mr. NEDZI. Now did you have direct communication with the armed helicopters?

Captain BARNES. I did, sir.

Mr. NEDZI. One other question. In this one strike, which you called for and which was denied, was any reason given for the denial?

Captain BARNES. Yes, sir. The reason given for the denial was at this time we had four tubes of 105-millimeter artillery with us, and they said use this instead of the airstrike.

Mr. NEDZI. Was that sound advice in your judgment?

Captain BARNES. Yes, sir; it was sound advice.

Mr. NEDZI. I have no further questions.

Mr. PIKE. Mr. Chamberlain.

Mr. CHAMBERLAIN. Mr. Chairman, I have one question, one matter I would like to get cleared up in my mind a little, if I may.

You say that you are operating in conjunction with an L-19, liaison plane, is that it?

Captain BARNES. Yes, sir.

Mr. CHAMBERLAIN. Well now that plane—you don't have that plane in the area. That plane comes with the others, is that it?

Captain BARNES. No, sir. In most cases—

Mr. CHAMBERLAIN. Where does that plane come from?

Captain BARNES. These were Army L-19's, sir.

Mr. CHAMBERLAIN. Yes.

Captain BARNES. And they were located at our airfield, where our home station was, our division headquarters, and they were there before fighters or anything else was there.

Mr. CHAMBERLAIN. Well, are they aloft as you are out in the field then?

Captain BARNES. Yes, sir.

Mr. CHAMBERLAIN. You don't have to call them to get them in?

Captain BARNES. No, sir.

Mr. CHAMBERLAIN. I see.

Captain BARNES. They are all aloft.

Mr. CHAMBERLAIN. How far were they from their strip, then?

Captain BARNES. On this particular operation, they were about, I would say about 70 kilometers away from their home strip, but they were using an unimproved strip that was right in the area there, maybe 30 kilometers away.

Mr. CHAMBERLAIN. Now you have a Vietnamese aloft, too, in that plane?

Captain BARNES. There is a Vietnamese in most cases that rides in the back seat, sir.

Mr. CHAMBERLAIN. So as to help with the language problems that might develop?

Captain BARNES. Yes, sir. He helps with the language problems, and he also adjust artillery fire that is fired by the Vietnamese. And we did have—we finally equipped our L-19's with dual radio where he could talk and the pilot could talk at the same time.

Mr. CHAMBERLAIN. Now have you ever encountered any difficulties in your close air support problems in say having the combat aircraft come in and your liaison plane unavailable because they have had to return to refuel or something like that? Have you ever had any problems with this observation plane?

Captain BARNES. Sir, I can't think of anywhere the observation plane was not there to direct the strike.

Mr. CHAMBERLAIN. Thank you very much, Mr. Chairman.

Mr. PIKE. Mr. Irwin, do you have any questions?

Mr. IRWIN. I would like to ask two questions. One: Could the helicopters be more effective if they were heavier and could carry more armament, and the second question I would like you to respond to is for you to put in your own words what you think is needed over there, without regard to all the problems that your superiors might put in your way and we might put in your way. If you were suddenly to come back from Vietnam and be a Congressman, what would you advocate?

Captain BARNES. Well, sir, in answer to your first question, the helicopters could very definitely be more effective if they were heavier armed, with heavier armament and were able to stay in the area longer.

In answer to your second question, the one thing that I would like to see, sir, would be additional aircraft of the type of the A-1E or the B-57. These are the two I observed. I feel they did a good job. And have them located out in the country, at more convenient locations.

Mr. IRWIN. Closer to you?

Captain BARNES. Closer to the troops so we could get them faster when we needed them.

Mr. IRWIN. Now is there a problem that you are aware of in bringing them closer to you in terms of protection for the planes and what not?

Captain BARNES. No, sir. When I was with the infantry battalion, it was one of our missions for a month and a half to secure a new airfield they were constructing in the field and to handle these types of aircraft. And when I left in the latter part of May of this year, this airfield was not actually operational. But they were working to solve this problem by building an airfield closer to us.

Mr. IRWIN. Thank you, Captain.

Mr. PIKE. Mr. EVANS.

Mr. EVANS. A few quick questions, Captain.

No. 1. Is it a problem to identify and mark targets for tactical air support?

Captain BARNES. In my area, no, sir.

Mr. EVANS. Why do you prefer the B-57's?

Captain BARNES. I prefer them, sir, because they carry more ordnance. They carry more bombs, I believe. I am not sure of this. But it seems to me they carried more ordnance and the type of cannons and guns that they have seem to me more effective than the ones on the propeller driven aircraft.

Mr. EVANS. Can they stay in the area longer?

Captain BARNES. I don't know what their stay time is, sir. I know they can get there faster.

Mr. BLANDFORD. They can't.

Mr. EVANS. One final question. Looking back and comparing what you had in your training to what you faced in Vietnam, do you think your training was adequate?

Captain BARNES. Overall, I believe my training was adequate, sir.

Mr. EVANS. Thank you.

Mr. PIKE. Mr. Wilson, did you want to ask another question?

Mr. WILSON. Just one question. Did you have occasion to see any of the Century series aircraft in operation, the 100's or 104's?

Captain BARNES. No, sir.

Mr. WILSON. Have you had any scuttlebutt over there, have you talked to anybody who saw them being used in this particular type of operation, as to whether they were a good type to be using for this rather unusual use?

Captain BARNES. I have heard people talk about their use, sir. In most instances they said they were good; good planes.

Mr. WILSON. All right.

Mr. PIKE. Thank you very much, Captain Barnes. We appreciate your being with us this morning.

Mr. Marshall.

Mr. MARSHALL. Yes. The next witness is Lt. Col. Frank S. Plummer, U.S. Army, Infantry.

(The biographical sketch of Lt. Col. Frank S. Plummer is as follows:)

BIOGRAPHICAL SKETCH OF FRANK S. PLUMMER, LIEUTENANT COLONEL, ARMY—INFANTRY

Born at Coalgate, Okla., in 1925. Entered military service in 1943. Served as platoon leader, executive officer, and commanding officer of Infantry units of Infantry and airborne divisions (100th, 1st, 82d). Prior to departure for Vietnam served 3 years as Assistant Secretary of the General Staff Office, Chief of Staff, Army.

In Vietnam, served for 1 year as G-3 adviser, III Vietnamese Corps. In reference to tactical air support, participated as follows:

- (a) Tactical air support planning for over 300 airmobile operations.
- (b) Participated in and assisted in directing tactical air support for over 100 airmobile operations.
- (c) Called and directed tactical air strikes for numerous operations from helicopter.
- (d) Participated in ground operations where tactical air strikes were made from 300 yards to 1 mile in front of his position.
- (e) Planned and participated in first combined US-ARVN ground operation where combined tactical air was used.
- (f) Planned and participated in first massive tactical bombing of 342 sorties in Vietnam using carrier based Navy-Marine air to include air based in Vietnam.
- (g) Planned and participated in first operations utilizing B-52 bombing.
- (h) Planned and participated in first operations utilizing B-57 air strike.
- (i) Allocated through Vietnamese counterpart all tactical air in corps area.
- (j) Participated in rewriting air agreement to allow ground unit commanders to direct air strikes.

Lieutenant Colonel Plummer is currently assigned as battalion commander, 18th Battalion, Army Training Center (Armor), Fort Knox, Ky.

STATEMENT OF LT. COL. FRANK S. PLUMMER, U.S. ARMY

Mr. PIKE. Colonel Plummer, would you tell us when you went to Vietnam?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. And how long you stayed there?

Colonel PLUMMER. Yes, sir; I went in July 1964 and returned in July 1965.

Mr. PIKE. And where were you stationed during that period?

Colonel PLUMMER. I was the G-3 advisor, III Corps, which is at Bien Hoa, east of Saigon.

Mr. PIKE. So you were in the planning of the operations, is that correct?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. Were you on the ground with the ground troops during any of the combat operations?

Colonel PLUMMER. Yes, sir; I was.

Mr. PIKE. About how many?

Colonel PLUMMER. Actually participating in anywhere between 20 and say 30.

Mr. PIKE. And did you ever serve as a forward air controller?

Colonel PLUMMER. Yes, sir; to a degree both on the ground and especially in the air with the command chopper.

Mr. PIKE. And you were in a command helicopter?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. The missions which you were involved in were again then the preplanned missions, is that correct?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. So when you had a preplanned mission, roughly you knew where you were going to be and you knew at least, to the extent necessary, to keep them on alert what you were going to need in the form of close air support, is that correct?

Colonel PLUMMER. That is right, sir. We planned missions daily and allocated the resources.

Mr. PIKE. Did you also allocate the bomb loads for the planes?

Colonel PLUMMER. Yes, sir; in most instances we did, along with, of course, our liaison officer from the Air Force.

Mr. PIKE. Now, let's talk about some of the ground operations in which you were on the ground. Can you tell us first about the best close air support you ever saw? Give us an example of the best you ever saw in a ground operation.

Colonel PLUMMER. There are several operations of course. I guess even though I was on the ground, the most perfect was the Dong Xoai operation.

Mr. PIKE. And you were on the ground?

Colonel PLUMMER. Yes, sir. We were on the ground at the position, but we were in a command chopper during the actual strikes. Then we got on the ground. As a battalion adviser.

Mr. PIKE. When the battle of Dong Xoai started, where were you?

Colonel PLUMMER. At night I was at Bien Hoa.

Mr. PIKE. Right.

It started at a quarter of 12 one night.

Colonel PLUMMER. Yes, sir.

Mr. PIKE. You were at Bien Hoa?

Colonel PLUMMER. At Bien Hoa.

Mr. PIKE. What was the time of the first request that you got for air support?

Colonel PLUMMER. I requested immediately air support as soon as they were hit at a quarter to 12.

Mr. PIKE. This is what you requested at Bien Hoa. Do you know what time the request was made from Dong Xoai?

Colonel PLUMMER. Yes, sir. I got a call about 20 minutes after they were hit. It was a telephone conversation between myself and the 5th Division commander. He said, "Dong Xoai is hit, this could

be what we are looking for." He said, "I think we are going to have to stay pretty alert on it."

Mr. PIKE. And did he call for air support at that time?

Colonel PLUMMER. He didn't say air support by word, sir. He said we were going to need everything probably that we had planned and we had planned air support for this.

Mr. PIKE. Did he call for a strike at that time?

Colonel PLUMMER. No, sir, he did not. Each night—let me explain, if I may, sir.

Each night we may get anywhere from 10 to 20 requests such as this. And after the initial hit, then we immediately, or they, the division commander or regimental commander, develops it and decides at this time if it is going to be a sustained hit or simply light rifle fire.

Mr. PIKE. Well, the first attack on Dong Xoai was mortar fire, was it not?

Colonel PLUMMER. The first one I think, sir, was very light rounds, followed immediately by a mortar attack, almost simultaneously.

Mr. PIKE. Simultaneous rifle and mortar fire?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. Now, when that happened at about a quarter to 12 at night, there were no planes orbiting.

Colonel PLUMMER. No, sir.

Mr. PIKE. There was no such thing as a combat air patrol going on at that time; is that correct?

Colonel PLUMMER. No, sir; there was not.

Mr. PIKE. When were planes first sent to Dong Xoai?

Colonel PLUMMER. Approximately—again I am not sure, sir. Approximately an hour and 25 minutes later.

Mr. PIKE. That was a flare plane, was it not?

Colonel PLUMMER. Flare plane was about 45 minutes, sir. They have them orbiting in the area. We immediately dispatched the flare ship to the area.

Mr. PIKE. Then there was a plane orbiting?

Colonel PLUMMER. Yes, sir, a C-47.

Mr. PIKE. That was a flare plane?

Colonel PLUMMER. A flare plane.

Mr. PIKE. What time did he get there?

Colonel PLUMMER. I think he dropped his first flare approximately 45 minutes after the first hit.

Mr. PIKE. All right. Then when was the first strike conducted?

Colonel PLUMMER. I think roughly at 2 o'clock, sir.

Mr. PIKE. Two o'clock in the morning?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. Who conducted that strike?

Colonel PLUMMER. The strike was by—I am not sure whether it was an H or E. I believe it was the E, because we have [deleted] aircraft on standby at all times.

Mr. PIKE. Was the first strike conducted by American or Vietnamese pilots?

Colonel PLUMMER. I can't answer that, sir. I believe it was American piloted E's, A-1's; but I can't say for sure.

Mr. PIKE. This is a situation I was somewhat familiar with. The information we got was the first strike was conducted by Vietnamese pilots. What happened in the first strike?

Mr. Marshall, can I have that piece of paper you are looking at?

Mr. MARSHALL. Yes.

Colonel PLUMMER. The first strike was called off, sir.

Mr. PIKE. The first strike which got on the scene about 2 hours after the attack was called off.

Colonel PLUMMER. Yes, sir, it was passed over.

Mr. PIKE. And at what level was that called off?

Colonel PLUMMER. At the level on the ground.

Mr. PIKE. The ground people asked—

Colonel PLUMMER. To my knowledge, it was the ground.

Mr. PIKE. The ground people said "Don't pursue this strike"?

Colonel PLUMMER. No, sir—well, yes, to this degree. The aircraft is dispatched—

Mr. PIKE. Let me clarify that. Ground people where?

Colonel PLUMMER. Ground people at the scene, at Dong Xoai.

Mr. PIKE. At Dong Xoai.

Colonel PLUMMER. Yes, sir. Communications were lost, and it was regained. The reason given to us was that they could not maintain contact with them and they were afraid to drop because they did not know the distance the patrols were out from the area.

Mr. PIKE. Well, Colonel Plummer, I don't want to go round and round too much on this. But let me just quote from the report which MAC-V in Saigon gave to our subcommittee when we were out there on this very situation.

"0155"—which is within your time frame, of roughly 2 hours after the request was given—"two Vietnamese air force A-1H's arrived overhead, but did not expend because of bad weather.

Now, you were telling us it was because it was called on the ground?

Colonel PLUMMER. Yes, sir. They could not find out where to strike, sir.

Mr. GUBSER. That could be consistent.

Colonel PLUMMER. I am again not sure of my exact facts. I do know it was called off because they could not strike on the ground.

Mr. PIKE. Well, did another request for air support come in?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. What time did that come in?

Colonel PLUMMER. I am afraid, sir, I don't have the records.

Mr. PIKE. Do you know when the strike was launched?

Colonel PLUMMER. No, sir, I don't.

Mr. PIKE. Well, I will continue to read here.

"0400. Two American A-1E's take off."

Do you know what happened after this, this takeoff? Do you know what these pilots were able to accomplish there?

Colonel PLUMMER. Sir, I believe these two pilots didn't strike either, to the best of my memory.

Mr. PIKE. It wasn't that bad. These two actually did. And they were both recommended for silver stars as a matter of fact.

But now let's get on to what makes you think that this operation was the best one you have seen as far as close air support. Now, you pick it up and tell us in your words what you saw at Dong Xoai.

Colonel PLUMMER. The next morning—we were there, of course, in daylight the next morning, in the command ship, with the general in command of the Third Corps, General Vien.

Mr. PIKE. Why do you wait until daylight, Colonel?

Colonel PLUMMER. The division commander is responsible for his area. I was up during the night after immediately calling him, arranging helicopters to be used, to move additional fuel and tanks, and this sort, for the next morning, knowing if we had to launch an attack we had to have all the helicopters available, and lining up troops and making plans. This was during the night hours.

The next morning we went to the scene to see what we could do to assist the division commander.

Mr. PIKE. When you got to the scene, did you go on the ground?

Colonel PLUMMER. At that time, no, sir, we did not.

Mr. PIKE. You couldn't get on the ground, could you?

Colonel PLUMMER. Sir?

Mr. PIKE. It really wasn't healthy to get on the ground.

Colonel PLUMMER. No. We flew over it. You could see the automatic weapons firing at our aircraft. We could see the recoilless weapons firing on the ground.

Mr. PIKE. The military compound had been overrun at that time, had it not?

Colonel PLUMMER. Yes, sir, it had. They had withdrawn back to the little compound where you went to, the first part.

Mr. PIKE. Right.

All right, you take it from there. What did you call for and what did you see?

Colonel PLUMMER. Well, at that time, of course, we had an Army liaison aircraft. MAC-V was aware it was a sustained fight, which is an immediate indication it could be similar to another fight that we had had back in December, at Phouc Tuy. This was an immediate indication to us that in sustained battle—the VC had never been able to have sustained battle and therefore it was going to be a big one. Over the area, the air strikes were coming in. They diverted [deleted] air strikes [deleted] into us. There was a scrambling of pilots. Our forward air controllers in the air were coming in. We were talking to the people on the ground from our command chopper, discussing with them where to hit. The forward air controller was discussing with the sergeant on the ground, who was at that time alive, by PRC 10 radio—they were directing the strikes completely around their area.

The spot where you landed: Just behind that was the schoolhouse. And in one instance here, he said, "They are firing at us from the schoolhouse with an automatic weapon now", and he said, "I can't stick my head up over the sill." And the forward air controller asked if he wanted us to hit it and he said, "Destroy it."

It is sort of humorous here, I guess. The forward air controller in the air talked to the pilot in A-1E and said "Destroy that schoolhouse," and he identified it, and the pilot asked him if he wanted the center or either side. Two of them came in and destroyed—direct hits, both of them—destroyed it immediately and all that was inside of it.

Then you also saw alongside, where they dropped the napalm.

Mr. PIKE. What happened to the sergeant you were in communication with at that time?

Colonel PLUMMER. What happened to him? He was evacuated—he survived, the sergeant—with a Navy man and a lieutenant. They survived. They were picked up that afternoon in a quick raid around 3 o'clock, or 3:30.

Mr. PIKE. That was in the open field——

Colonel PLUMMER. Yes, sir; just where you landed. They came out of the compound. They evacuated them and the district chief.

Mr. PIKE. Of all of the people who had been in that military compound, do you know what the total number of people were?

Colonel PLUMMER. Yes, sir. I think it was just about 22 American. There were about 70 Regional or Popular Forces which he described. There was a Navy liaison team.

Mr. PIKE. Of the 22 Americans in the compound, how many survived?

Colonel PLUMMER. I think 16, sir.

Mr. PIKE. Now as this battle developed, they flew in—it was the 5th Division of the Army of the Republic of Vietnam or—I guess it was three battalions of them.

Can you tell us what happened to the first battalion that they flew in in relief?

Colonel PLUMMER. Yes, sir. They were piecemealed into the battle. They landed to the north, about a kilometer away from Dong Xoai. They were annihilated there.

Mr. PIKE. They were annihilated. And what kind of air support was being given to this battalion at the time that they were annihilated?

Colonel PLUMMER. We had air cover, we had ships coming in every 20 minutes, and probably the most outstanding air support that I have ever observed.

Mr. PIKE. And despite this, they were annihilated?

Colonel PLUMMER. They were, sir.

Mr. PIKE. Why do you describe it as the most outstanding air support you have ever observed, Colonel Plummer?

Colonel PLUMMER. I was talking to the lieutenant on the ground, the battalion adviser, and talked to him just before he left. He called for the airstrike directly in front of him. They laid napalm down along the tree line, the square that came in there, and it landed within 30 meters of him, splashed within 30 meters of him, and all he could shout was "Outstanding, outstanding." They were right on the edge of the tree line. The tree line extended 400 meters.

Mr. PIKE. So at that given moment the napalm was on target and you presume that it killed any Vietcong who were right in that area?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. Then what happened?

Colonel PLUMMER. They came back in and made another pass, both 1-E's and 1-H's. They put it on the straight line, right down the tree line. They made a 90° turn and put it right down the tree line where he was again.

We expended all the tactical aircraft we had that was available at that time. We had, I would say, roughly 18 aircraft that helped him.

Mr. PIKE. You had roughly what?

Colonel PLUMMER. Eighteen at this particular—18 tactical aircraft.

Mr. PIKE. The report we got was better than that. The report we were given said 24 Vietnamese A-1H's and 35 A-1E's.

Colonel PLUMMER. This was at the specific time, sir, before he was killed.

Mr. PIKE. I see. You only had 18 planes available at the time that this battalion went in and got wiped out?

Colonel PLUMMER. Yes, sir. Of course, more was en route, and more continued, and we continued to bomb the entire area, until he was killed.

Mr. PIKE. Roughly, what time was he killed; do you know that?

Colonel PLUMMER. I would say, sir, 10 o'clock, 10:30.

Mr. PIKE. In the morning?

Colonel PLUMMER. Yes, sir.

Mr. PIKE. And this was some 10 hours after the battle had first started?

Colonel PLUMMER. After it had first started.

Mr. PIKE. After the first attack.

Colonel PLUMMER. We had moved troops to the area, which again was accomplished with tactical aircraft.

Mr. PIKE. In other words, Colonel Plummer, it seems to me that you describe it as outstanding close air support, in that the pilots laid their bombs right where they should have been.

Colonel PLUMMER. Yes, sir.

Mr. PIKE. In close proximity to the forces. However, there weren't enough aircraft. They expended everything that there was. Is that what you said?

Colonel PLUMMER. That is right.

[Deleted.]

Mr. PIKE. And this was after the airstrikes had—

Colonel PLUMMER. Yes, sir. We prestruck the area.

Mr. PIKE. Right.

Colonel PLUMMER. The area was prestruck. The troops landed and were almost completely unopposed.

Mr. PIKE. Right.

Colonel PLUMMER. But they didn't move off the field of course fast enough or the area was wide enough. The Vietcong were able—it was an air mobile ambush, which is exactly like we had last December. This is why we were very cautious. We knew this was a probability, when you tried to hold a town, that they were going to ambush us as we came in to reinforce them.

Mr. PIKE. What was cautious about the operation of sending in one battalion?

Colonel PLUMMER. We had about, again roughly, 150 people left in those compounds, calling for assistance and help. We had to make a choice of where to land. There were roughly six, or eight different landing places in there. We picked this area, which was about a kilometer away, roughly 1,000 meters of clear area, where we could be able to support them there.

We had no artillery. We were depending entirely upon tactical aircraft and helicopters. The cautious approach was that we landed to the north—

Mr. PIKE. The fact was, though, that after they were landed—you picked this area because it was wide and open and you could support them from the air.

[Deleted.]

Mr. PIKE. Mr. Wilson, you want to ask some questions?

Mr. WILSON. Yes, sir, Mr. Chairman.

Now, Colonel, you mentioned being in a command helicopter. When you are in a command helicopter in an operation of that type with airstrikes, do you in effect direct the operation of the airplanes? Do you call them in, so to speak?

Colonel PLUMMER. No. We use our forward air controller, which is normally in an L-19 in most cases, sitting right next to me.

Mr. WILSON. But I would like to know what you did in this particular case. Was there an L-19 in the network there, too?

Colonel PLUMMER. Yes, sir. In this case I came in, in the air, broke up the priority, and set new priorities for them and told the L-19 where to strike.

Mr. WILSON. You told the L-19 you—you were in a helicopter. You told the L-19 and the L-19 told the A-1?

Colonel PLUMMER. Yes, sir.

Mr. WILSON. Did you have any armed helicopters?

Colonel PLUMMER. Yes, we did.

Mr. WILSON. Did you directly tell the armed helicopters or did you tell the L-19 to tell the armed helicopters?

Colonel PLUMMER. No, the L-19s worked on our command liaison, where we also had a frequency to the command of the helicopters, who instructed them.

Normally, the helicopters, Mr. Wilson, would talk directly to the ground commander and he would tell them where to strike. But while the tactical airstrikes were coming on, we told the helicopters to move out of the area—move back.

Mr. WILSON. What advantage was there to have a command helicopter? Do you think you could get a little bit better picture of the total operation by operating from a command helicopter?

Colonel PLUMMER. Yes, sir. In this area, it is almost vital because the forward ground air controller or whoever is on the ground can't see through the jungle to strike ahead of him. In the jungle, when you strike ahead of you, you can't tell the distances from your troops. So it is almost vital that we have a command chopper to keep all the elements going in the direction that you desire.

Mr. WILSON. Then you became another element in this chain.

Did you eliminate your FAC?

Colonel PLUMMER. No, sir.

Mr. WILSON. Did you take his place, in effect?

Colonel PLUMMER. Only in this case, when the lieutenant was killed, I turned to the Vietnamese commander and I recommended that we take control.

Mr. WILSON. Let me try to reconstruct it. I mean under a normal operating situation, if you have a command helicopter, does the forward air controller talk to you and then you talk to the L-19?

Colonel PLUMMER. No, Mr. Wilson. He talks directly to the ground commander. We monitor.

Mr. WILSON. You are just sort of the superintendent up there?

Colonel PLUMMER. Yes, sir.

Mr. WILSON. Do you find the L-19's—are they vulnerable to ground fire?

Colonel PLUMMER. Yes, sir.

Mr. WILSON. Did you lose any of them in any of the operations you were concerned with?

Colonel PLUMMER. Yes, sir.

Mr. WILSON. What happens when the L-19 gets shot down and then you don't have any communication with your A-1E's?

Colonel PLUMMER. Well, we have, sitting next in the command chopper, another air liaison officer or a forward air controller with us in the command chopper. He just automatically takes over. In addition to this, we also have the backup forward air controller that we can launch into the air.

Mr. WILSON. But your helicopters are somewhat vulnerable to ground fire, too, aren't they?

Colonel PLUMMER. Yes, they are.

Mr. WILSON. Would it appear that there seems to be an extra step in here that might be unnecessary if the FAC could directly talk to the airplanes and say "This is where I want you in," and not have to go through a liaison?

Colonel PLUMMER. No; I don't think so, Mr. Wilson. You see the Vietnamese commander—as advisers there we really don't command their troops. Therefore they have to make the decision of where the bomb strikes. [Deleted.]

So we almost have to have a liaison officer to talk to the aircraft to bring them in, to mark the target.

[Deleted.]

Mr. WILSON. He was just—he was caught calling them a little too close, is that it?

Colonel PLUMMER. A little too close. In the jungle it is too hard to identify a target. In this case it was identified but it just happened that he marked it by azimuth and by grid coordinates and the identification of terrain feature, and there were two identical terrain features, two identical rivers or streams.

Mr. WILSON. You don't employ any visual-type marker such as a smoke bomb or anything of that kind?

Colonel PLUMMER. Yes, sir; we do, Mr. Wilson. It is very difficult because the smoke will not rise above the jungle. It can't. We fire smoke grenades up through there, but they only last fleetingly, and you have to know the arc that they travel. If he marked it with white phosphorus, again it would mark down through the trees and they couldn't strike. This is a difficult problem.

Mr. WILSON. Just one other question. You mentioned getting back to the vulnerability of the L-19. Have you had any occasions that you can recall when the L-19, the link between the FAC and the A-1's, was shot down and therefore you lost communication with the A-1's?

Colonel PLUMMER. Yes, sir.

Mr. WILSON. There have been some instances?

Colonel PLUMMER. Yes, sir.

Mr. WILSON. Would it be a good idea to have a backup L-19 or maybe two or three of them to pick up in case your vulnerable ones are shot down?

Colonel PLUMMER. Normally, we do. But in other cases we have simultaneous operations, going on through the corps area and we can't have this. Yes; it would be a good idea if we could.

Mr. WILSON. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. No questions.

Mr. PIKE. Mr. Gubser.

Mr. GUBSER. Did your ground commander—your FAC, is that what you call it?

Colonel PLUMMER. Forward air controller; yes.

Mr. GUBSER. Did he talk with the helicopters?

Colonel PLUMMER. Yes; he did.

Mr. GUBSER. Thank you.

Mr. PIKE. Mr. Nedzi.

Mr. NEDZI. I have no questions.

Mr. PIKE. Mr. Blandford, did you want to ask?

Mr. BLANDFORD. Is this a jerry-rigged arrangement or was it a jerry-rigged arrangement while you were there with respect to close air support, this L-19 concept and the idea that you were literally able to control from the ground? Was this done because of the advisory status that you are in over there?

Colonel PLUMMER. Partially; yes.

Mr. BLANDFORD. Now let's take the 1st Cavalry Division that is over there now. Now how will that forward air control operate over there? Will they use the L-19 system?

Colonel PLUMMER. Yes; they will, sir.

Mr. BLANDFORD. But will the ground commander also have the right to vector the aircraft?

Colonel PLUMMER. Yes, sir.

Mr. BLANDFORD. Doesn't the ground controller—when we have an all-American operation, doesn't the ground commander now have the right to vector those aircraft?

Colonel PLUMMER. Correct.

Mr. BLANDFORD. Now you participated, I note here, in rewriting an air agreement to allow the ground unit commanders to direct air-strikes. Would you tell us something about that?

Colonel PLUMMER. Yes. The Vietnamese Air Force, of course, had a hard time differentiating the United States and the Vietnamese. They run the Air Force. They make the strikes. Their concept—where they got it I don't know—is that the ground commander would make the decision of where the strike should go.

Mr. BLANDFORD. At what level? You mean the ground commander on the spot?

Colonel PLUMMER. The unit commander on the spot would make it. And if the troops were killed, it was his responsibility. Their air force works separately from the army.

When he made the decision, the U.S. personnel in there was simply an adviser and furnishing communications, in case their communications went out.

Mr. BLANDFORD. I get the impression, Colonel, that you are more than pleased with the close air support that you received while you were over there, but like everyone else you could use more aircraft. But apparently you had no particular problem with communications. But, of course, you were at division level most of the time?

Colonel PLUMMER. That is right.

Mr. BLANDFORD. And you were coordinating these air strikes in the sense that you were sitting in division on occasion trying to determine who needed the air cover or the air strike more, if you were getting requests from different sources, would that be correct?

Colonel PLUMMER. Yes, sir. We were at corps level.

Also I didn't want to give the impression that I was highly pleased with the air support there.

Mr. BLANDFORD. I got that impression. Why weren't you highly pleased?

Colonel PLUMMER. Well, I guess I am talking myself into a corner. [Deleted.] There were bad examples of tactical air just as well as bad decisions on our part, of the ground forces. But as to the time progress, from the time I was there, starting off in July we were getting about seven sorties a day. We built up when I left to roughly [deleted] sorties per day. And this is a tremendous amount of aircraft.

Mr. BLANDFORD. Yes.

Colonel PLUMMER. Not counting the actual planning.

I have seen examples—in every air mobile operation we plan of course, we plan the tactical air that we would use, and the A-1H's would strike a different LZ. We learned by trial and error—I learned. Then thereafter I made a requirement to have A-1E's on a standby basis with A-1H's striking first, with the E's to come in to strike the area to make sure.

Mr. BLANDFORD. Is it aircraft that causes the problems, is it communications that causes the problem, or is it target identification that causes the problem, or is it simply time?

Colonel PLUMMER. I think it is a combination. The aircraft are good. They are doing a fine job. The E's and H's both are. The majority of the time the Vietnamese are excellent. American pilots are outstanding, from what I have seen.

The trouble, the main trouble is target identification. This is the big bugaboo. They can bomb—if the target is marked they can hit the target.

Mr. BLANDFORD. You think some effort should be made toward devising a method that would—for example, possibly firing a mortar shell with a homing device in it, instead of an explosive: I mean is it that sort of thing for this kind of warfare that we need?

Colonel PLUMMER. No, sir; it is not.

Again, I spent almost about 2 to 3 hours a day working with tactical air, because it is very vital to us. Outside of artillery range, we had to have it.

We have tried to figure every possible way to mark the target. I think Dr. Cheatham right now is working on the most valuable asset that we could possibly have over there. It could be used for marking artillery and for air, any number of things.

Mr. BLANDFORD. It is not only target identification but where you are yourself, too?

Colonel PLUMMER. This is the bugaboo. It stops all the operations for the troops. Sometimes the air may be on the station but they can't identify the troops and meantime the VC made contact.

Mr. BLANDFORD. So some little simple thing could be the answer?

Colonel PLUMMER. Yes.

Mr. BLANDFORD. But basically identification, and identification of friendly troops, to you is the most serious problem over there?

Colonel PLUMMER. This is. Generally they can mass the air in sufficient quantity to do it. On occasions they have not been able to do it.

Mr. BLANDFORD. Do you find the napalm canisters that we are using over there in the jungle are less effective because the fluid or the canisters are penetrated before the canister gets down to the ground, and an awful lot of leakage is involved, and you are losing a great deal of your napalm?

Colonel PLUMMER. That is what I have been told. I have seen them drop, and maybe six napalms failed to explode. They hit the forest. We have to be careful or they will block our LZ's when we use them. Napalm can be used—for instance on targets bombs will not affect—in each village, as an example, across the Oriental-Vico. We had a heavily entrenched Vietcong. We bombed extensively in there, with no apparent results. No one killed. Each of the huts in this area has a concrete bunker inside of its house. And in almost every Vietnamese house there is a trench built on the bottom of it. And they just pull the floor boards.

[Deleted.]

So the napalm is effective, and is used on good targets. It is very important.

Mr. BLANDFORD. When used properly?

Colonel PLUMMER. Yes.

Mr. BLANDFORD. It is not—so ordnance is also a problem here, the prototype of ordnance.

Colonel PLUMMER. Yes.

For instance, we specify, or in discussion among ourselves, that we are getting ready to have an attack, in our preplan—we specify the type of ordnance we would like to have.

Mr. BLANDFORD. To summarize, would you say in your opinion we could certainly stand to vastly improve our close air support weaponry, or equipment? In other words, do you think that we ought to concentrate in this area for this type of warfare?

Colonel PLUMMER. I really cannot answer you truthfully.

Mr. BLANDFORD. Well, compared, for example, to your new rifles, compared to artillery, recoilless weapons, and compared to your personnel carriers, your tanks, where would you put the importance, in your own experience, of close air support with everything else that we have made advances in in the art of warfare?

Colonel PLUMMER. I would leave the aircraft just exactly like they are. For instance, the B-57 can put it on the dime, almost. I have watched I don't know how many.

Mr. PIKE. How do you compare a B-57 with an F-100 or an F-105 or an F-104 or an F-4 as far as putting it on the target?

Colonel PLUMMER. I really cannot compare—I have seen the B-57 many times, and I have seen them hit right on the target, a tree line, or an edge of a stream, and just almost a knife edge.

Mr. PIKE. You haven't seen the jet fighters?

Colonel PLUMMER. Yes, sir; I have seen the F-100's. In fact, we had one shot down over there. I have seen them strike from the air and from the ground. They were on target, too.

In one instance they were way past the target. It took a while to identify the target as they approached. The fact is they fought the wrong side of the road, and in discussing, in listening to the pilots, they couldn't identify the area. They had to back up and come back through a long approach, again. The E's and H's didn't have too much trouble in identifying the exact target.

Mr. PIKE. Right.

Colonel PLUMMER. I think—of course any improvement perhaps would be good, but the target identification, including the troops, I think is the most vital thing.

Mr. BLANDFORD. To you that is the greatest deficiency we have today in the close air support problem?

Colonel PLUMMER. From the ground troops' point of view, it is the most. Of course, more aircraft we could use constantly. But, again, this could be a deterrent. In some cases the Vietnamese have come to depend, as the sergeant said, upon the air strike so much that [deleted].

So quick response, of course, aircraft in the air, is vitally important in this area, to use tactical air in emergency call. It must be in the air within 15 minutes.

Mr. BLANDFORD. To summarize your testimony, then, in your opinion, when you called for a strike, if you cannot get them on target within 15 minutes it loses its effectiveness in geometric proportion to the loss of time, would that be correct?

Colonel PLUMMER. That is correct, sir.

Mr. BLANDFORD. Thank you.

Mr. PIKE. Mr. Irwin.

Mr. IRWIN. What kind of a helicopter were you in there when you were in a command helicopter?

Colonel PLUMMER. We had an HU-1B and later we set up one with a D, a Delta model, which is the same but carries two more people.

Mr. IRWIN. You haven't talked about using helicopters in close ground support at all right now. Have you seen that done, and how does it work?

Colonel PLUMMER. Oh, yes, many times.

Mr. Irwin, in my opinion, again, the helicopter is for suppressive fire. The machineguns that it has doesn't hurt the VC unless you catch them in the open. It simply makes them duck down behind something. The penetration is very small. I have been on many LZ's, landing zones, and I have never seen a VC killed exactly by helicopter fire. I have been on the ground as they fired above us.

Mr. IRWIN. Right.

Colonel PLUMMER. And, again—

Mr. IRWIN. What will work? What kind—

Colonel PLUMMER. Tactical air.

Mr. IRWIN. What kind of actual—

Mr. WILSON. Ordnance.

Mr. IRWIN. Ordnance would you need? You are talking about bombs, rockets.

Colonel PLUMMER. We need bombs.

Mr. IRWIN. Bombs, OK.

Colonel PLUMMER. Helicopters cannot replace tactical air. They are just playing a suppressive role.

Mr. IRWIN. Right.

Colonel PLUMMER. The vital thing about them is that they are immediately responsive, immediately. If an ambush occurs, and we have had many of these ambushes, if we are not there immediately, within 10 to 15 minutes, the VC will hit with all their power, strip and move out. In many cases helicopters have saved many people by simply being there, suppressing the VC until we could get tactical air.

I was in an action similar to this once, where it really did save.

Mr. IRWIN. So it is bombs you really need in this kind of a situation?

Colonel PLUMMER. Bombs, and our tactical air which is using a 10 millimeter cannon. They will drop heavy ordnance to penetrate the trenches, and penetrate the tunnels that they have.

Mr. IRWIN. Now, on the question of marking areas, it seems to me that the techniques that have been used up to now are ones that normally work anywhere else. The smoke bomb, for example, is a very, very fine thing in terrain work. What you have to do, it seems to me, is to mark it from above.

Is there a possibility that the jungle can be marked from above, say, a thing like a liquid or a powder that came down, to mark it from on top?

Colonel PLUMMER. Yes, sir. We have asked Research, and they are researching this now. The point was to mark the jungle with a white liquid, as an example, or a powder.

Mr. IRWIN. Thank you.

Mr. PIKE. Mr. Evans?

Mr. EVANS. No questions.

Mr. WILSON. Mr. Chairman.

Mr. PIKE. Go ahead.

Mr. WILSON. Just one question.

What if you had an airplane such as the proposed COIN airplane that could be pretty well—like a helicopter—attached pretty close to your operation up front. It could operate from a ready or a small field and so forth, and that carried rockets and maybe some light bombs in addition to machineguns and observation capability.

Would something like this be valuable to you?

Colonel PLUMMER. I am not sure of the aircraft, but anything I believe, as you have stated here, that would be responsive, be immediately responsive.

Mr. WILSON. Immediately responsive.

Colonel PLUMMER. That is the key.

Mr. WILSON. Yes.

Colonel PLUMMER. Immediately responsive and able to identify the target.

Mr. WILSON. And this is the advantage you found with helicopters, that you could call them in real fast, and while the firepower wasn't much at least you had something going to make them keep their heads down.

Colonel PLUMMER. We immediately suppress them. We had a forward observer in the helicopters who could identify targets.

Mr. PIKE. Mr. Gubser.

Mr. GUBSER. To follow up on what Mr. Wilson is saying, and to put it in another way, if you had an aircraft which was more or less hangared in the field commander's tent and had the capabilities of the A-1E's and the A-1H's, you feel this would be a distinct asset, wouldn't you?

Colonel PLUMMER. In my opinion it definitely would be for operational control.

Mr. GUBSER. One other question. This area that you have been describing, the action of this ideal operation or a very fine operation which you have described, is a totally different type terrain than what the sergeant was describing; isn't that right?

Colonel PLUMMER. That is correct, sir.

Mr. GUBSER. This is more dense cover, whereas in the delta area there is more open space and target identification is not the problem.

Colonel PLUMMER. That is correct, sir.

Mr. GUBSER. In other words, you have two totally different air wars going on there, just a couple of hundred miles apart, is that right?

Colonel PLUMMER. To a certain degree we have both jungle and open delta flatlands, similar to the area that he was in there.

Occasionally, in marking the target, the VC will mark, as we do, with smoke. [Deleted.]

Mr. PIKE. Colonel Plummer, your biographical sheet here indicates that you planned tactical air support for over 200 air mobile operations. How many of those 300 air mobile operations were night operations?

Colonel PLUMMER. I planned several, sir, but they didn't come off.

Mr. PIKE. They didn't come off?

Colonel PLUMMER. No, sir.

Mr. PIKE. Why didn't they come off?

Colonel PLUMMER. We had trouble, again with support by tactical air.

Mr. PIKE. What about your tactical air? I am interested in our tactical air reasons for not working at night.

Colonel PLUMMER. We had trouble identifying the target on the ground. We could program it, but we really couldn't use it because we had limited ways of having to strike. Really I am trying to answer—

Mr. PIKE. [Deleted.] That is all, Colonel Plummer. Thank you very much.

And we have got a quorum call on. We will reconvene at 10 o'clock tomorrow morning.

(Whereupon, at 12:11 p.m., the subcommittee adjourned to reconvene on Thursday, September 23, 1965, at 10 a.m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
SUBCOMMITTEE ON TACTICAL AIR SUPPORT,
Washington, D.C., Thursday, September 23, 1965.

The subcommittee met at 10:13 a.m., Hon. Otis G. Pike (chairman of the subcommittee) presiding.

Mr. PIKE. First of all I would like to ask the members of the subcommittee whether, if the House is in session tomorrow, they want to

have a meeting tomorrow morning or not, or would they rather go over to next Tuesday?

Mr. GUBSER. You have two members from California on the subcommittee who are leaving for San Francisco tomorrow.

Mr. PIKE. Oh, yes; I had forgotten.

All right. We will establish that as a matter of policy that we will not try to meet again until next Tuesday at 10 a.m.

Mr. Marshall, would you call your next witness?

Mr. MARSHALL. Capt. Alan L. Rennick.

(The biography of Capt. Alan L. Rennick is as follows:)

BIOGRAPHICAL SKETCH OF CAPT. ALAN L. RENNICK

Capt. Alan L. Rennick was born in Wichita, Kans., January 23, 1938. He graduated from the University of Arkansas in January 1961.

Upon entry into the Air Force in March, he was assigned to primary flight training at Webb AFB, Tex., and basic at Randolph AFB, Tex. He attended the F-100 gunnery course at Luke AFB, Ariz., during 1962.

January 1963 brought about his assignment to the 615th Tactical Fighter Squadron, England AFB, La., where he served as a squadron pilot until April 1964. After 60 days of A-1-E transitioning at Hurlburt Field, Fla., Rennick was assigned to Bien Hoa AFB, Vietnam.

The officer arrived in the second group of A-1-E pilots in Vietnam, and was assigned to the 1st Air Commando Squadron. The squadron was at this time undergoing the transition from T-28's and B-26's to A-1-E's.

In February 1965, Rennick volunteered for a 60-day tour as forward air controller, with the Vietnamese airborne brigade. On his first operation, some 4 days later, the 2d Battalion Task Force to which he was assigned was ambushed on landing and under heavy Vietcong attack during the entire night. His next ground operation was not nearly so exciting.

The following 2 months saw him in the central highlands working with another airborne task force assigned to protect the route between Qui-Nhon and Pleiku. He also conducted FAC duties with AF A-1-E's, F-100's, and B-57's.

April saw his return to Bien Hoa and the A-1-E. June 26 he left for England AFB, La.

Captain Rennick is not married.

Mr. PIKE. Captain Rennick, you were here yesterday, I know.

Captain RENNICK. That is right.

Mr. PIKE. And heard the way we proceed here.

Would you go ahead and tell us about when you got to Vietnam and what you did when you were over there?

Captain RENNICK. Yes, sir.

STATEMENT OF CAPT. ALAN L. RENNICK, U.S. AIR FORCE

Captain RENNICK. I was in Vietnam from June 1964 until June this year. I was assigned to Bien Hoa Air Base, 15 miles northwest of Saigon, as an A-1-E pilot. From February until April I served a tour with the Vietnamese airborne brigade, out of Saigon, and my job with them was to act as a forward air controller, both airborne and on the ground on any operations they might have undertaken.

Mr. PIKE. Before you went to Vietnam, you were with the 615th Tactical Fighter Squadron at England Air Force Base, La.; is that correct?

Captain RENNICK. Yes, sir.

Mr. PIKE. What did you fly with them?

Captain RENNICK. The F-100, sir.

Mr. PIKE. And so when you got to Vietnam, you stepped from an F-100 into an A-1-E; is that correct?

Captain RENNICK. Yes, sir.

Mr. PIKE. Were there any F-100's in Vietnam at that time?

Captain RENNICK. I don't know if they actually were in the country, sir. However, I do know they were not striking until some time in February.

Mr. PIKE. They weren't using F-100's when you went to Vietnam?

Captain RENNICK. No, sir.

Mr. PIKE. So you stepped back from a jet plane to a prop plane; is that correct?

Captain RENNICK. Yes, sir. It was a fancy sidestep.

Mr. PIKE. Having had the experience in both the F-100 and the A-1-E, would you care to make any comments on what you would rather be flying in close air support operations?

Captain RENNICK. I would rather fly the F-100, because it has an air-conditioned cockpit.

Mr. PIKE. Well, I can understand that very readily. Everybody would like the air-conditioned cockpit. But I am talking now about laying a bomb or gunfire on a target in close proximity to your own forces.

Captain RENNICK. Yes, sir. I have not flown the F-100 in combat. However, I have many friends who have had that opportunity, and I think I can speak with a certain degree of authority on the F-100.

I think that to draw a comparison between the two airplanes, we must first consider the country of South Vietnam and its complicated topology. In the south we have delta, where we have no problem with target identification or marking. In the north and central highlands we have the jungles. And actually, it is a different complex set of situations, and to say that one aircraft would be better in the delta or the woodlands would—well, I couldn't draw that.

I will say, however, that in certain roles the A-1E is superior to the F-100. It has—for close air support—a long loiter time. It carries more armament and has a slower, a lower speed envelope, and at times is able to effect better close air support than the F-100.

However, we must talk about distances. We have to talk about reaction time. There the F-100 has a distinct advantage on the A-1E. It is capable of taking off and flying—

Mr. PIKE. Well, if you assume they both leave from the same air base to come to the same target, the F-100 flies faster?

Captain RENNICK. That is right, sir.

Mr. PIKE. Right.

Captain RENNICK. Therefore, in varying situations, one aircraft might do a better job in one situation where the other aircraft could do a better job in the other.

Mr. PIKE. What, in addition then to the loiter time, if anything, makes you feel that in certain situations the A-1E is a better plane?

Captain RENNICK. Well, it hauls more ordnance, for one thing. I hope I haven't been misunderstood. I say in certain situations the A-1E is a better aircraft; not all.

Mr. PIKE. I see.

Now, let's talk about the difference between the delta region where there is no problem of target acquisition, and the jungle, which is, I guess, about 80 or 75 percent of the area of Vietnam.

When you are flying over a jungle and trying to find a target—have you done any of this kind of work?

Captain RENNICK. Yes, sir.

Mr. PIKE. How would you characterize the capabilities of the A-1E and the F-100 in this context?

Captain RENNICK. You are speaking now from my standpoint as a strike pilot?

Mr. PIKE. That is right.

Captain RENNICK. Well, a large percentage of our missions in the jungle regions were interdiction-type missions—and I would hate to give a percentage—but I will just say that the greater number were interdiction-type missions. They were preplanned and we had a forward air controller.

We would rendezvous with the FAC at a predetermined point. He was familiar with the area. He would take us to the area, mark the target, and we would expend our ordnance. In this case, I can see very little difference between the type of airplanes involved.

Mr. PIKE. Now, suppose the FAC hadn't been there to mark the target for you?

Captain RENNICK. I can't remember any time that we expended ordnance outside of a predetermined free strike zone without a forward air controller. We had zones set up in-country so that if we had radio difficulty, or the FAC couldn't make it off the ground, or there were emergencies with our airplanes, or something, we could expend in these areas. D zone was a good example. Up until I left, part of it was a free strike zone. I don't know what has happened now, since the last of June.

Mr. PIKE. Roughly, how many combat missions did you fly in Vietnam?

Captain RENNICK. Over 300, sir.

Mr. PIKE. Roughly, how many times in those combat missions did you drop bombs on targets?

Captain RENNICK. About 200 of my missions, or a little over, were in the A-1E, and I would say a little over half of them were bomb-dropping missions.

Mr. PIKE. Roughly about 100?

Captain RENNICK. Yes, sir.

Mr. PIKE. You have gone out with a load of bombs to dump on a target.

How many times would you have been able to identify your target, if the FAC hadn't been there, pinpointing it for you?

Captain RENNICK. Then I would have to speak with degrees. I think that normally I would have known the general area where the target was, especially on the interdiction-type missions, if I would have had a 1-to-50,000 scale map. But the problems associated with navigation, and if I was at the time leading the flight, would have been so great that I think it would have distracted from my ability to lead the mission or to perform the mission, if we didn't have an FAC, sir.

Mr. PIKE. How many times, if ever, did you see enemy troops?

Captain RENNICK. Sir, I would be guessing. Most of our interdiction-type missions were suspected troop concentrations or supply areas. Now, of these, I am not sure how many. But of the times troops were actually on the ground and we knew were either in contact with the enemy or were there, I would guess 20 to 25.

Mr. PIKE. How many times, if ever, did you see enemy troops?

Captain RENNICK. I have seen them several times, sir.

I would guess 15 to 20—10 to 15, I mean.

Mr. PIKE. When you saw the enemy troops, were you attacking them?

Captain RENNICK. Yes, sir.

Mr. PIKE. When you saw the enemy troops, what were they doing?

Captain RENNICK. Sometimes they were shooting back and at those times I didn't see them very clearly; and sometimes they were running, scurrying for cover. I can remember one instance when three were going right in the front door of a house, and I was on a napalm pass. I pickled one can and I was getting ready for another—

Mr. PIKE. Would you translate "pickled one can" for us?

Captain RENNICK. All right, sir.

We were going to drop two cans singly per pass in this area, and I had dropped one and was looking around for another target, I was right above the top of the trees, and I saw three people, three men running into this house, and we knew it was an enemy area because we were getting small arms fire. Just as these three people went under the nose, out of my line of sight, I pickled the can and pulled up, and they were just at the door of the house, and it was a direct hit on the house. I remember the looks on their faces real well. That is one time I can remember.

I can also recall striking down along the rivers, when people were in the barges and sampans.

Mr. PIKE. You heard the Army witnesses yesterday talk about quicker reaction time?

Captain RENNICK. Yes, sir.

Mr. PIKE. As what they would ask for as their top priority.

From the air point of view, how many of the missions that you flew were not preplanned, but were sent out in response to urgent demand on the ground?

Captain RENNICK. I would have to think about that. Let me see if I could estimate it. Many of our missions were diverted when we were in the air, but as far as not preplanned, all our night alert missions were an immediate-request type. I would—I couldn't venture a guess as to how many of those I was on; probably two or three a month.

As far as day scrambles go, sometimes we had a requirement above and beyond the number of aircraft we had flying when someone really got hit and was in trouble. Dong Xoai was a good example.

Other than that, sir, I really couldn't say how many times we thought our duty day was done and everything and we needed more aircraft and pilots than we had standing by but there were several times.

Mr. PIKE. Would you agree that quick reaction would be perhaps the prime consideration? If not, where would you classify quicker reaction as a need?

Captain RENNICK. I think that we could improve close air support by a number of means. Quick reaction is important, very definitely.

I think that primarily we could cut down on our need for immediate air requests by essentially better coordination between the ground and air commanders. This is a level beyond my realm. I can only as a layman, as a pilot, discuss it, however, not with authority. But it seems to me that many times we have to react to immediate requests when, if we had known there was going to be some operation in the area, we could have set aside air resources to cover this operation, that is, airborne alert.

Mr. PIKE. There were times, in other words, when the ground troops were moving out on operations and as far as you could tell——

Captain RENNICK. We had no knowledge.

Mr. PIKE. The Air Force was not aware of it?

Captain RENNICK. That is right, sir.

Mr. PIKE. All right. That is a pretty solid criticism, it seems to me.

What else?

Captain RENNICK. Well, up until I left, we had a shortage of aircraft. From Bien Hoa to the southern part of the delta was an hour and 20 minutes flying time. So from gearup to TOT is an hour and 20 minutes. And that is a long time, especially when you are on the ground, getting shot at.

Mr. PIKE. Sure it is.

Captain RENNICK. Can Tho was supposed to alleviate this problem. It was supposed to be ready some time last Christmas. I don't know if it is ready yet or not, sir. It wasn't when I left.

Mr. WILSON. What is Can Tho?

Mr. PIKE. It is another airport that they are building in the delta region.

Captain RENNICK. I feel that we need multiple-type aircraft. We need aircraft with a quick reaction time, you know, good speed, a high-speed envelope. They would help cut down on this reaction time.

Mr. PIKE. What about just keeping the planes in the air?

Captain RENNICK. That is something I think should be considered. If we have the resources, and if we do not have airbases available in certain regions to provide quick, adequate close air support, I think we should seriously consider airborne patrols 24 hours a day.

Mr. PIKE. Do you think that your planes, either the A-1's or the F-100's enable you to eyeball the target on the ground as well as you ought to be able to?

Captain RENNICK. You mean do you think that we could work without a forward air controller?

Mr. PIKE. Yes.

Captain RENNICK. No, sir; I do not.

Mr. PIKE. And that would have to be a flying air controller?

Captain RENNICK. I would say that an airborne forward air controller over any situation where close air support is required as——

Mr. PIKE. Essential?

Captain RENNICK. Necessary, sir.

Mr. PIKE. Necessary.

Mr. Wilson, I have been going on for quite a while now. Do you want to ask a question?

Mr. WILSON. Just as a follow-on to some of the questions you have put.

Mr. PIKE. Very well.

Mr. WILSON. Captain, when you were a FAC, were you an airborne air controller, on on the ground, with the troops?

Captain RENNICK. I served in both capacities, Mr. Wilson.

Mr. WILSON. Which did you think was most effective?

Captain RENNICK. Again, we have to determine the terrain in which we are operating. Eighty percent of the country is jungle, so 80 percent of the time at least the airborne FAC is most effective.

Mr. WILSON. You mean in the jungle situation you have a much better view of the whole operation—

Captain RENNICK. Yes, sir.

Mr. WILSON. Airborne?

Captain RENNICK. Yes, sir. In a jungle situation, a man on the ground just can't effectively get the job done.

Mr. WILSON. When you weren't in the jungle situation, the other 20 percent of the time, did you live right with the ground troops that you were controlling for?

Captain RENNICK. On operations, I went with them, and I lived with them the duration of the operation; yes, sir.

Mr. WILSON. So you got to know them pretty well?

Captain RENNICK. I got to know the people that I immediately associated with, the task force commander and his staff, as well as the Army adviser.

Mr. WILSON. Were you the only Air Force officer with that particular Army detachment?

Captain RENNICK. Yes, sir.

Mr. WILSON. As a pilot, did you get to know any of the troops? You were stationed at what base?

Captain RENNICK. Bien Hoa.

Mr. WILSON. Bien Hoa.

And this was an hour and some minutes away.

Actually you never got to know any of the troops that you were working with when you were being controlled, when you were flying the A-1-E's, right?

Captain RENNICK. I am sorry, I don't follow the question, sir.

Mr. WILSON. Well, it is pretty obvious that you didn't actually get to live with or know any of the troops that you were providing the air cover for as a pilot.

Captain RENNICK. As a strike pilot?

Mr. WILSON. Yes, sir.

Captain RENNICK. No, sir, I didn't come in contact with them.

Mr. WILSON. I just wondered whether there was any attempt by either the Air Force or the Army to bring you together socially, or some way, to kind of talk about the mutual problems and so forth.

Captain RENNICK. When I was there, sir, I was working with a Vietnamese outfit. I want to reemphasize this.

Mr. WILSON. Yes.

Captain RENNICK. They had Army advisers, and I was the Air Force FAC assigned to the entire brigade.

Mr. WILSON. Yes. All right.

Now, a couple of other things. I don't think we straightened out the nomenclature of "pickled the can" adequately. I suppose this means a can of napalm, and you drop it down the pickle barrel. A good hit with a can of napalm, is that "pickled the can"?

Captain RENNICK. No, sir.

Pickle is a term for release. A can of napalm is, of course, a can of napalm.

Mr. WILSON. I imagined the "pickled" comes from dropping it down the pickle barrel, but that is beside the point.

When you were flying, did you ever use a photograph with a marked out hut or any such device that might help you locate a target, rather than listening to an FAC to tell you where the target was? In other words, were you given, when you started out a sortie, a photograph saying here is some suspected activity; knock this hut out, or some such thing?

Captain RENNICK. I think that on occasion we did have access to photographs, on one or two occasions.

However, I don't really know if this was very effective or not, because normally it seems to me if I were a VC and I thought that somebody had my position located, I would pack up and move. So I am not sure of the effectiveness of photo intelligence.

Mr. WILSON. Well, in the area you were working in, particularly in the jungle, weren't there some instances where you could spot a garden plot from the air and you could tell there was a hut of some sort, like the one that you talked about where the three men ran in?

Captain RENNICK. Yes, sir.

Mr. WILSON. Now, isn't it conceivable that aerial photographs taken of suspected positions might be used as a locating device for pilots on a strike?

Captain RENNICK. Yes, sir; it is.

Mr. WILSON. But you never had much experience with that particular device?

Captain RENNICK. I didn't have much experience with it; no, sir.

Mr. WILSON. OK.

One thing I wondered if we could clear up, when you take off with a couple of cans of napalm on your aircraft, do you ever come back in and not have dropped them?

Captain RENNICK. The A-1E, sir, has 14 external stations that we carry ordinance on, plus a center line station for fuel. As we normally flew—with eight cans of napalm—you are well over 5,500 pounds, and with a full tank of fuel you greatly exceed your landing gross weight.

Mr. WILSON. Yes?

Captain RENNICK. Therefore, we had to release our cans prior to landing. It was an aircraft limitation.

Mr. WILSON. I understand. I don't think I would want to land with any of these attached to the bottom of the plane, either. But I wondered if this was a normal practice, when you didn't find a target, to just jettison them.

Captain RENNICK. When we didn't find a target, sir, we had free strike zones—D zone is an example I can remember quite well—and we would go out and drop them in these zones. We had also had

free strike zones down in the south where it was strictly territory controlled by the VC, and anything we saw in there was free game.

Mr. WILSON. I see.

Just one further thing. I notice in your biography you did some combat and student training over in Vietnam. Now you were obviously training the Vietnamese pilots?

Captain RENNICK. Yes, sir.

Mr. WILSON. Were you training them in A-1E's or in F-100's?

Captain RENNICK. In A-1E's. I did not fly the F-100 in Vietnam.

Mr. WILSON. Did you see any Vietnamese pilots being trained in the F-100?

Captain RENNICK. No, sir.

Mr. WILSON. Is there any training program?

Captain RENNICK. To my knowledge there is not, sir.

Mr. WILSON. Only in the A-1E's.

Now, why would that be, in your opinion?

Captain RENNICK. Sir, I am sure that that has some implication that I know nothing about.

Mr. WILSON. It is a rather complicated airplane to learn to fly. You learn to fly the F-100 and it is pretty obvious that it would be hard to train a group of non—

Mr. BLANDFORD. I can answer that question, Mr. Wilson.

I think, if you will recall, that was discussed by the Secretary of Defense during the executive session we had last spring, with respect to the time factor involved, that with the A-1E airplanes the time required for the South Vietnamese to be able to acquire the skill of flying is quite rapid.

Mr. WILSON. Yes. I am just trying to develop that point now.

I think in trying to determine the type of aircraft that would be most suitable for the particular operation you were in that the problem of having a relatively simple airplane for new pilots to quickly learn—I mean, it is a crash program. Obviously, to train somebody who probably has never ridden in an automobile, some of them, and put them in an airplane fast and teach them how to fly it, that the simpler the airplane—obviously there is quite a difference in the A-1E's and the F-100's.

Are you familiar with any of the proposed airplanes that the Defense Department is talking about for operations in that area, the so-called COIN airplane or any of the others that have been suggested as a follow-on for the A-1E's?

Captain RENNICK. I subscribe to Aviation Week, but I haven't been doing my homework too much, sir. I just faintly, vaguely, am familiar with it; yes, sir.

Mr. WILSON. I mean just as a pilot, are you concerned that we are using airplanes that are 15, 20 years old, and they are using them up fast, and what are we going to have when they are gone?

Captain RENNICK. Army officers go into combat carrying—even I did—a gun made in 1917, that seems to work real well.

Mr. WILSON. As long as you know you have a lot of them back in the armory, I suppose you don't have to worry too much. But the big problem with aircraft is they wear out a lot faster than a 1917 revolver would.

Captain RENNICK. Surely.

I will say this. The A-1E—I don't know when the last manufacture date on it was, sometime in the mid fifties.

Mr. WILSON. It is a darn good airplane. I am not running it down, at all.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. Captain, I notice in February of this year you volunteered for service as a forward air controller with the Vietnamese airborne brigade. That was the one you mentioned.

On your first operation you were pinned down every night by heavy Vietcong fire. Did you call for close air support at that time?

Captain RENNICK. Yes, sir.

Mr. ICHORD. Did you get it?

Captain RENNICK. Yes, sir.

Mr. ICHORD. How long was it in arriving?

Captain RENNICK. At the time—would you like a little—30 seconds of background on this?

Mr. ICHORD. Yes. Go ahead.

Captain RENNICK. Well, I was to be an FAC on a two-battalion airborne operation, and my battalion landed in a landing zone approximately 2 kilometers from a larger landing zone. We were to proceed to this large landing zone, meet up with the rest of the task force, and move out on the operation. Unfortunately, the second landing zone, the large landing zone, was being protected by VC, and the battalion that landed there suffered heavy casualties on landing. They finally did make it, and we spent, or they spent the rest of the afternoon evacuating the dead and wounded.

About 1700 that night—1700 or 1730—the VC pulled up parts of three battalions around this zone, and we had only penetrated maybe 75 to 100 meters, at the most, into the woods, and they caught us on the zone with mortar fire, small arms, recoilless rifles, and whatever they have. We had choppers in the area, both armed choppers and the slick's, the troop transport type. They were there and were able to react immediately to us. I requested through an airborne radio relay for A-1E's from Bien Hoa. A first flight arrived approximately 15 minutes later. However, they had expended their ordnance elsewhere, and just made some dry passes.

Mr. ICHORD. It arrived 15 minutes later, after you called them.

Captain RENNICK. With no ordnance. They had expended all their ordnance elsewhere, but they knew we were in trouble and they just made some low passes, which was morale building if nothing else.

I suppose from the time we initiated the request for A-1E's until the time we got them—I couldn't give an exact estimate, but it was within 45 minutes. They scrambled—they had the night alert bird's set up. We have four night alert airplanes that we maintain every night.

Mr. ICHORD. How many of them did you get at that time, 45 minutes later?

Captain RENNICK. We got the first flight of two immediately. The other flight of two arrived as the first flight was still on station and they were delivering ordnance.

Then it was probably, I think another half hour to 45 minutes before we got another flight of four. And we had A-1E's and A-1H's with us all night. I don't know the total flights we had—

Mr. ICHORD. You had them with you all night long?

Captain RENNICK. We had numerous sorties, sir.

Mr. ICHORD. And were they expending?

Captain RENNICK. I believe they were all loaded with HE bombs, from 100 pounders, to maybe some 250's and frag bombs. We had no napalm. We didn't want it. But I had no way—I would take everything there. But it worked out we didn't have napalm.

Mr. ICHORD. Now, Captain, you agreed that we did need quicker reaction time?

Captain RENNICK. Yes, sir.

Mr. ICHORD. And you inferred that we could get the quicker reaction time by either having a plane that would get there faster or having the airports down closer to the battle area.

Where is this airport that you indicated was under construction?

Captain RENNICK. The airport under construction, Can Tho, is right in the central delta.

Mr. CHAMBERLAIN. Whereabouts, here?

Captain RENNICK (addressing Captain Sands). Point it out to him.

Captain SANDS. Right here, sir.

Mr. CHAMBERLAIN. Here is Saigon, right here.

Mr. ICHORD. How far is that from Vinh Long? I remembered—did we fly into a pretty good airfield at Vinh Long?

Captain RENNICK. Vinh Long is down to the southeast, there, sir.

Mr. CHAMBERLAIN. Here [indicating].

Captain RENNICK. I don't know, 25 miles or so. Is that Vinh Long?

Mr. CHAMBERLAIN. This is Can Tho [indicating], and Saigon is here [indicating].

Captain RENNICK. OK.

Vinh Long is 25 miles northeast of Can Tho.

Mr. ICHORD. That is a pretty good sized airstrip, isn't it? How come that hasn't been used for A-1E flights?

Captain RENNICK. As I recall, when I was there, sir, Vinh Long was only an emergency strip for us, because it didn't have sufficient runway.

Now, they might have lengthened it, but we never even considered operating out of Vinh Long, due to the length of the runway.

Mr. ICHORD. What do you need for an A-1E?

Captain RENNICK. It would be best to have 5,000 or 6,000 feet.

Mr. ICHORD. Now, of course, if you take the route of getting the faster plane—you are going to lose some of the advantages that the A-1E has, aren't you? Namely, increased bomb load, increased loitering time, easier to identify the target and better eyeball sight, I believe is the way the chairman put it.

Captain RENNICK. Yes. Well, there are advantages and disadvantages to any two types of systems.

Mr. ICHORD. All in all, I take it that you think that the A-1E is a pretty good airplane?

Captain RENNICK. I think in a given set of circumstances it is a good airplane. It does have its shortcomings, shortcomings that a faster airplane, an airplane similar to the 100, is able to overcome.

Mr. EVANS. Would the gentleman yield to me?

Mr. ICHORD. That is what I wanted to know.

Do you think that you need different airplanes for the calls that are made?

Captain RENNICK. Right now, sir, I think that a mixed fleet of aircraft is better than any one specific aircraft that we could name.

I think we have gone over the various advantages and disadvantages of two airplanes, considering say the A-1E and the F-100, and I think that there is a definite need for both airplanes in this theater, and they both complement one another.

Mr. PIKE. Other than speed, what can the F-100 do better, and the fact that it is air conditioned?

Captain RENNICK. Well, I think speed is the big thing. It can get to the target quicker. It is less susceptible to ground fire, because of the—

Mr. PIKE. Speed?

Captain RENNICK. Yes, sir, of the faster delivery speed. Those are the two big points for it.

Mr. WILSON. How about load-carrying capacity?

Captain RENNICK. It does not have the capacity of the A-1E.

Mr. ICHORD. Well, if you had increased antiaircraft capability on the part of the Vietcong, you would be more inclined to move into the F-100 and take some of its disadvantages, wouldn't you?

Captain RENNICK. That is right; yes, sir.

Mr. EVANS. Could I?

Mr. ICHORD. I would yield to the gentleman.

Mr. EVANS. On that question, if you are over a target with an A-1E or an F-100, which plane—let's say the target is easily identified—can deliver more hardware more effectively from the pilot's standpoint, the test being delivery of more hardware more accurately?

Captain RENNICK. Well, again, I have never flown the F-100, but I can give you a personal opinion on that. We are not considering ground fire?

Mr. EVANS. No, sir. We are just talking about delivery of hardware accurately.

Captain RENNICK. There is a strafe panel down there and a bombing, and we want to drop bombs for the longest time, and most accurately?

(Mr. Evans nods.)

Captain RENNICK. Then I would say the A-1E would be the airplane.

Mr. EVANS. Thank you.

Mr. ICHORD. Well, what—you have a pretty high opinion of the A-1E, even though it is a 20-year-old airplane, as Mr. Wilson put it.

Captain RENNICK. Yes, sir. I think that in the given set of circumstances, that we have discussed, that it is doing a real fine job. And I don't—it is as good an airplane as we have in the inventory right now for a given set of circumstances.

Mr. PIKE. I can understand why it would drop more bombs. Why is it more accurate?

Captain RENNICK. Slower release speed, sir.

Mr. PIKE. How about angle of attack?

Captain RENNICK. You can release your ordnance at a lower altitude and effect the recovery in much less distance. Therefore, you can release closer to the target.

Mr. PIKE. Are you through?

Mr. ICHORD. Yes, sir.

Mr. PIKE. Mr. Gubser.

Mr. GUBSER. You mentioned that up until the time you left there was a rather chronic shortage of aircraft, Captain. And, of course, the downtime of aircraft on the line and the maintenance problem enters into that.

Was your experience with maintenance good, bad, indifferent? Do you feel that the plane has had a minimum of downtime?

Captain RENNICK. Well, Mr. Gubser, maybe I didn't make—I didn't think we had a chronic shortage of aircraft, sir.

Mr. GUBSER. I shouldn't have put words in your mouth.

Captain RENNICK. Yes, sir.

As far as maintenance goes, I never experienced any more than routine difficulty.

We, at one time, had a little problem with engines, but before I left I think it had been remedied. And I have no complaint as to the maintenance.

Mr. GUBSER. Did you usually fly the same aircraft?

Captain RENNICK. No, sir.

Mr. GUBSER. In other words, you may have a different one every day?

Captain RENNICK. Yes, sir.

Mr. GUBSER. But did you find, though, that they were pretty constantly ready and on the line?

Captain RENNICK. Yes, sir. I don't think I aborted over two airplanes in the several months that I was flying A-1-E's.

Mr. GUBSER. What is the runway requirement, comparatively speaking, between the F-100 and the A-1-E's?

Captain RENNICK. The F-100 requires a longer, deeper, heavier runway, sir.

Mr. GUBSER. It probably gets up. You have to have about 7,000, 8,000 feet, at least, for an F-100, wouldn't you?

Captain RENNICK. Yes, sir.

Mr. GUBSER. Did you say that you figured that the A-1-E required—you should have 5,000 to 6,000 feet?

Captain RENNICK. I would say that would be minimum, yes, sir.

Mr. GUBSER. In other words, it can only operate from a prepared strip; is that right?

Captain RENNICK. That is right, sir.

Mr. GUBSER. What would your opinion be, from your experience, if we were lucky enough to have an aircraft of reasonable speed and reasonable ordnance carrying capability and reasonable loitering time that did have a STOL capability so that you could get it right up near the frontline?

Captain RENNICK. I think, sir—

Mr. GUBSER. Something you could operate from an unprepared strip, of 1,000 feet, or a little strip of road or something like that?

Captain RENNICK. What we would do with this plane, sir, would be observation or—

Mr. GUBSER. No; I mean use it in the same capacity that you would use the A-1-E's.

Captain RENNICK. Then—

Mr. GUBSER. For close-in support?

Captain RENNICK. On the surface, it sounds good, but we have to consider the problem of supply. How are we going to supply this airplane? How are we going to defend our supply depot where we mix our napalm, where we fuse our bombs? To operate an airplane like this with a 3,000 or 4,000 pound load, that we are going to turn around two to three times a day. We are talking about 15 or 20 tons of bombs.

Mr. GUBSER. What does turnaround mean?

Captain RENNICK. It is the time required from when the plane lands until it is fueled, loaded, and goes again. Then we have a logistics problem, sir. That is completely out of my realm, but it seems to me if we had many of these places over the country, if we had aircraft operating within 2 or 3 miles of the frontlines, and if they were secure, we would no longer have the need for them, because we would, in effect, control the country.

Mr. GUBSER. That is very interesting.

You operated where your L-19's were identifying targets and relaying messages from the FAC to the pilot?

Captain RENNICK. Yes, sir.

Mr. GUBSER. Did you ever see an L-19 go down, so that you were without the relay?

Captain RENNICK. No, sir; I did not.

Mr. GUBSER. They were vulnerable; are they not?

Do you know of any losses of L-19's, acting in that capacity?

Captain RENNICK. I know of losses; yes, sir. I guess every aircraft is vulnerable in any given set of circumstances. The L-19, of course, can't stand a 50-caliber or even a 30-caliber machinegun. Even in intensive automatic weapon fire, its lifespan is fairly low.

Mr. GUBSER. You want to ask a question, Bob?

Mr. WILSON. Yes.

I just wanted to ask you: What type of guns were used against you over there? Were they conventional anti-aircraft? What were they firing at you that made you nervous?

Captain RENNICK. Well, sir—

Mr. CHAMBERLAIN. Anything.

Captain RENNICK. In the south mostly small arms fire, automatic weapons fire, and on occasion 50-caliber. I don't know of any instances when they used 20-millimeter. We had some reports, but I don't know, because it is hard to tell apart a 20-millimeter and a 50-caliber. But normally, unless you run into a well dug in, fortified battalion, most ground fire will be small arms and automatic weapons.

Mr. WILSON. Thank you.

Mr. GUBSER. What has been your experience with our radio equipment? Yesterday I believe the sergeant indicated that it was less than ideal, the equipment that they were forced to use on the ground? What is your experience with it, Captain?

Captain RENNICK. Well, sir, when I was with the airborne brigade I was equipped with a PRC-25, which—I am not familiar with these radios to a large degree—but I think it is an improvement over the PRC-10. It has preset crystals. I found that it was very adequate to communicate with the airborne radio relay.

As far as the range goes, when you got in dense jungle you had trouble communicating with other units that were a kilometer or

two or three away. But we could pick up aircraft, oh, 15, 20 miles away, possibly, with an antenna.

Then you have an antenna problem. With a short antenna that range decreases greatly. But my own self, when I was on the ground, I experienced very little communications difficulty. But I have heard of cases where it was a problem.

Mr. GUBSER. Mr. Chairman, I don't want to single out any one of these witnesses, because they have all been superb, and I don't intend to continue doing this, but I just want to say once more that the candor and the direct answers that we are getting from all of these witnesses is the finest thing I have ever experienced in the 13 years that I have been in Congress; and I am just delighted with you, Captain, and all the others who have testified before you, and I suspect, those that will come after you.

Mr. PIKE. I think maybe the precedent we set in going down somewhere below the general staff level might well be emulated in future hearings.

Mr. GUBSER. Amen.

Mr. IRVIN. Mr. Chairman.

Mr. PIKE. Yes?

Mr. IRVIN. I wonder if the record couldn't just show that we all subscribe to what Mr. Gubser said, so we won't have to spend an awful lot of time repeating it.

Mr. PIKE. Yes.

Mr. Nedzi.

Mr. NEDZI. Mr. Chairman, I just want to associate myself with Mr. Gubser's remarks. This is one thing we agree on, Charlie. I have no questions.

Mr. PIKE. Mr. Chamberlain.

Mr. CHAMBERLAIN. Yes, I have two or three questions I would like to ask, Mr. Chairman. Thank you.

First, I agree with my colleague here, Mr. Gubser.

You know, a year or so ago we had—there was a big furor created here at home because the wings were falling off some of these A-1-E's out there, and we had a lot of anxiety about it, and made some inquiries here.

I gather from what you have said about the A-1-E's that you feel that they are an entirely adequate plane. Do you have any comments with respect to this fatigue factor that entered into that, at the time that some of the planes were tired?

Captain RENNICK. Well, Mr. Chamberlain, it has been my recollection that it was the B-26 that had the fatigue problem, and not the A-1-E. The B-26's—

Mr. CHAMBERLAIN. The (T)——

Mr. MARSHALL. (B).

Mr. PIKE. (B).

Mr. GUBSER. Side by side.

Mr. PIKE. How about the T-28?

Mr. IRVIN. Yes, T-28's.

Mr. CHAMBERLAIN. That is right, T-28's.

Captain RENNICK. Before the A-1-E, the primary strike aircraft in South Vietnam was the T-28 and B-26.

There was, on the B-26, what came out to be a structural problem with the wing. Now, the A-1-E has replaced, to my knowledge, all of the 28's and B-26's in the Republic of South Vietnam.

The A-1-E is built like a tank, and, in fact, when you first get in one, it flies like it.

Mr. WILSON. Then you come to love it.

Captain RENNICK. It is kind of like an ugly wife. You get to love her.

Mr. WILSON. You are a bachelor.

(Mr. Irwin remarks to Mr. Wilson off the record.)

Captain RENNICK. Anyway, sir, I think that we can disregard any fear of structural problems in the A-1-E. At least, that has been my experience.

Mr. CHAMBERLAIN. And we have no more T-28's out there, anyway, so far as you know?

Captain RENNICK. No T-28's and no B-26's, as far as I know.

Mr. CHAMBERLAIN. You say that you have worked with the Vietnamese pilots out there?

Captain RENNICK. Yes, sir. A part of my duty when I was at Bien Hoa was to instruct Vietnamese pilots in the A-1-E. [Deleted.]

Mr. CHAMBERLAIN. Mr. Chairman, I apologize for being a few minutes late, and perhaps this was covered earlier. If it was, I would skip it, but we haven't heard anything said about night operations here.

Has that been gone into?

Mr. PIKE. No. You go ahead.

Mr. CHAMBERLAIN. I don't know that I can.

Mr. PIKE. Captain Rennick, did you say you flew on some—

Mr. CHAMBERLAIN. Tell us about the night operations. Any difficulties encountered there, limitations, or whatnot? Address yourself to that whole subject.

Captain RENNICK. All right, sir.

Mr. CHAMBERLAIN. Just briefly, please.

Captain RENNICK. Well, as someone said, the only difference between flying night and day is that it is exactly the same, but at night, you can't see where you are going. My night experience has been limited to fort defense, when I was flying A-1E's. We had four airplanes that we maintained on alert every night, and they were scrambled through the immediate air request system. They rendezvoused with a flare ship that was maintaining airborne alert the entire night—we had one Vietnamese and one American type. Normally, they would scramble us, we would go to the fort, get radio contact with the flare ship that had a Vietnamese FAC on board in contact with the fort, and we would receive instructions from him as to where to expend our ordnance.

Mr. CHAMBERLAIN. Where did this plane come from?

Captain RENNICK. Sir?

Mr. CHAMBERLAIN. Where did this plane come from?

Captain RENNICK. The flare ship was based at Tan Son Nhut, sir.

Mr. CHAMBERLAIN. Well, that is if you are right in that area, but—

Captain RENNICK. Yes, sir. It maintained airborne alert wherever an area of suspected activity might be. In other words, it might be 50 or 70 miles south of Saigon, for example.

Mr. CHAMBERLAIN. Yes.

Captain RENNICK. The flare ship has some sort of pattern that it flew, and whenever it got the word to go to a target, it went directly there.

Mr. CHAMBERLAIN. It was there, if you were there?

Captain RENNICK. No, sir.

Mr. CHAMBERLAIN. No?

Captain RENNICK. It was there normally before us, because we were setting ground level, on 10- to 15-minutes ground alert.

Mr. CHAMBERLAIN. That is what you mean. They were there and called you when you got there?

Captain RENNICK. Yes, sir.

Mr. CHAMBERLAIN. You had no problem with this other ship then?

Captain RENNICK. No, sir. Sometimes it was sufficient for the flare ship to get to the fort, drop a few flares, and the attack would cease. Many times it would drop flares and we would not be called, because there was no requirement for strike aircraft.

Mr. PIKE. Were the flare ships C-47's?

Captain RENNICK. The Vietnamese were, sir. The American ships were 123's.

Mr. CHAMBERLAIN. There are some of us on the committee that were at Dong Xoai. What was your assignment in connection with Dong Xoai?

Captain RENNICK. I was not in on the initial day's activity at Dong Xoai, Mr. Chamberlain. The following night—it would actually be about 24 hours after the initial attacks—I led a flight up there.

Mr. CHAMBERLAIN. At night?

Captain RENNICK. At night, yes, sir. The night that I was there, we flew—every 2 hours. We took off in flights of two, orbited the area, expended our bombs when our fuel ran low, and returned and landed at Bien Hoa. So we had entire coverage of the area at night.

Mr. CHAMBERLAIN. Did you have a forward air controller there at night, too?

Captain RENNICK. Yes, sir.

Mr. CHAMBERLAIN. And you were expending ordnance on target or in zone D?

Captain RENNICK. In the general area of Dong Xoai. The time I was there there was no attack. But the forward air controller who was in contact with the men on the ground got from the people on the ground areas they suspected concentrations of the enemy were, and we would go out and dump our bombs there, prior to returning home. We were mainly airborne alert or airborne cover, in case anything broke.

Mr. CHAMBERLAIN. Just one final question.

Going back to your A-1E's and inventory, you have made reference to this mix that we have with seemingly a high degree of satisfaction. Now, some of us here are concerned about providing a plane that might not be in the inventory to do these things.

Do I gather from your testimony, Captain, that it is the talk around with your fellow officers at the club and so forth that there is no COIN aircraft needed, that you have everything that you want right now to do the job out there, or is there a little chatter that maybe you could come up with something that would be of greater help in doing the job that has to be done?

Captain RENNICK. Yes, sir; Mr. Chamberlain. I think that it is important that we always strive to improve our weapons systems. If I left you with the impression that I am satisfied with the A-1E or the F-100 or whatever it might be, well then I didn't mean to do that.

What I am saying there is that I think they are doing a real good job. But I think that we should be constantly trying to improve our weapons systems. And the thing we need is an aircraft that will carry a fairly large payload, an aircraft that will be able to take off from bases—not right here at the frontline, because that is impractical, we can't support them, but from bases as close as we can get them, within 50, 75, or 100 miles—that will have a quick reaction time, can fly rapidly to the target, with a low enough speed envelope for the capability of effectively dropping in close support and with a large load of ordnance, and with a good loiter time.

I think we should try to improve our weapons systems in any way possible.

Mr. CHAMBERLAIN. Thank you very much, Mr. Chairman.

Mr. PIKE. Mr. Irwin.

Mr. IRWIN. I have no questions, Mr. Chairman.

Mr. PIKE. Mr. Evans.

Mr. EVANS. Are you familiar with the features of COIN aircraft?

Captain RENNICK. I have seen, or I have read about a couple of projected COIN aircraft, sir.

Mr. EVANS. Do you have any opinion as to the usability of such an aircraft, as one that would take the place of the plane you are describing? Are you that familiar with it?

Captain RENNICK. I don't think that I am really that familiar—I am certainly not an expert on it.

Mr. EVANS. Do you have any opinion on it?

Captain RENNICK. Well, I think that any new airplane that we develop specifically for close air support should have a good capacity to carry—a large capacity to carry ordnance. It should have a long loiter time, and be able to respond rapidly. I would think that these three things would be of most importance.

Mr. EVANS. Do you have sufficient knowledge of the COIN's characteristics, at least the characteristics they are shooting for, to be able to say whether or not you feel such a plane would meet these requirements that you specify?

Mr. RENNICK. No, sir, I do not have that knowledge.

Mr. EVANS. I have no further questions.

Mr. PIKE. Captain, what is the speed at which an A-1E travels from takeoff to its target?

Captain RENNICK. With a full ordnance load, sir, about 150 knots indicated, which would be about 180 miles an hour true.

Mr. ICHORD. What altitude?

Captain RENNICK. 4,000 to 5,000 feet, sir.

Mr. PIKE. What is the speed at which an F-100 travels to its target?

Captain RENNICK. I am not familiar with that, sir. I would guess it to be somewhere around 350 to 400 knots indicated.

Mr. PIKE. More than twice as fast?

Captain RENNICK. I wouldn't know. I would say twice as fast, but I am not sure.

Mr. ICHORD. Well, Captain—

Mr. IRWIN. Mr. Chairman.

Mr. PIKE. Go ahead.

Mr. ICHORD. Captain, I take it what you are more or less reaching for is an airplane that will have the capabilities of an A-1E when it gets there to the target, but have the in-out cruising speed of an F-100?

Captain RENNICK. If you have it, I will buy it.

Mr. WILSON. Could I ask one question?

Mr. PIKE. Mr. Irwin.

Mr. IRWIN. I wonder, Mr. Chairman, if it would be possible for someone to give us these facts (exhibiting brochure) so we can look at them all on one sheet, and maybe include in it, to the extent that it is available, some information on, say a COIN aircraft, so that we could see it all at one time?

I have been trying to sort of pick my way back and forth, and I can't remember what I see on one sheet to another, here.

Mr. WILSON. In other words, the points that the captain was making about the size of payload of the different aircraft?

Mr. IRWIN. Right.

Mr. WILSON. Comparatively, on a chart?

Mr. IRWIN. Right.

Mr. WILSON. And speed?

Mr. IRWIN. The speed, takeoff.

Mr. WILSON. The loitering speed.

Mr. PIKE. You can't get all the information you need on one page. That is the whole problem.

Mr. IRWIN. You could get a big page, Mr. Chairman. I have seen you thumbing back and forth. And I have a hard time remembering.

Mr. PIKE. I'll tell you what I will do. As long as you can maintain the classification of secret, I am going to give you permission to cut the pieces out of this thing and paste them all on one page.

Mr. IRWIN. I was about to do that, but I thought maybe you would be watching me.

Mr. GUBSER. May I ask, when you are through—

Mr. PIKE. Yes. All I was going to say—you go ahead. We are going to have to adjourn.

Mr. GUBSER. I just wanted to ask this question.

All the operations you have been on as a pilot which provided close support for ground troops were, of course, in single place A-1's; is that right?

Captain RENNICK. No, sir. The A-1E.

Mr. GUBSER. One or two.

Captain RENNICK. It is side by side; yes, sir.

Mr. GUBSER. Did you have a copilot, or were you alone?

Captain RENNICK. There was a requirement up until, well, for the first few months, I was there, to have a Vietnamese on board. Then after that, they deleted that requirement and we flew them solo.

Mr. GUBSER. What is your opinion, insofar as your effectiveness is concerned, on a single pilot, versus two pilot mission?

Captain RENNICK. Again, sir, this is just a personal opinion.

Mr. GUBSER. That is what I want.

Captain RENNICK. But I think that when you add the second seat to any strike aircraft you just add 80 (sic) pounds, and that is it.

Mr. GUBSER. Another pair of eyes isn't helpful?

Captain RENNICK. We operate in flights of four, and the difference between four and eight eyes is—I don't know.

Mr. WILSON. It would be 8 and 16 eyes.

Captain RENNICK. Yes, sir.

Mr. GUBSER. Do you like the single engine concept for close in air support?

Captain RENNICK. Sir, I have never flown anything but the single engine for close air. I couldn't draw a parallel there, then.

Mr. GUBSER. Is your forward vision good, not impaired in any way?

Captain RENNICK. Pretty good, yes, sir. The A-1 was limited in that you couldn't see out the right side. But, of course, in the A-1H, which has a single cockpit you don't have this problem.

Mr. GUBSER. Thank you very much.

Mr. PIKE. Did you want to ask anything else?

Mr. ICHORD. No, sir.

Mr. PIKE. Captain, where did you do all your training?

Captain RENNICK. I went to primary training at Webb Air Force Base, Tex., sir. Basic at Randolph. Gunnery school at Luke, Phoenix, Ariz. I was assigned to England Air Force Base, La., and then went 60 days to A-1-E transitioning at Hurlburt Field, Fla.

Mr. PIKE. You had 60 days of training in an A-1-E before you went to Vietnam; is that correct?

Captain RENNICK. Yes, sir.

Mr. PIKE. In that training, what was the doctrine given to you as far as close air support is concerned?

For example, what did they tell you about how close you should or could drop to friendly troops?

Captain RENNICK. Maybe I should expand a little bit on my training, sir. I also attended air-to-ground operations school when I was at England Air Force Base, and served in the squadron as a forward air controller for simulated strikes in Louisiana, for quite a while. I had never dropped any live ordnance until I got to Hurlburt. We were given the approximate explosion—the radius of effective shrapnel and things, of these bombs. We never, of course, were right near when a bomb went off, and we couldn't witness the blast from eye level.

Mr. PIKE. No. But what did they tell you, about how close you could drop to friendly troops?

Captain RENNICK. Well, you just drop as close as the people on the ground or the forward air control wants it, I can't remember if any definite guidelines were ever presented to me that said, "Memorize these for different sizes of bombs, the distance that can be safely dropped from troops." I don't recall this, sir. It is just good judgment.

Mr. PIKE. In other words, this is a decision which is not made by the pilot, but is always made by the people on the ground or the forward air controller?

Captain RENNICK. Being a pilot, if you know where the friendly troops are located, even though you are working with a forward air controller, you know about where the bombs should go. He might mark a target and then give you a correction from that mark in feet or meters, and if you know where the friendlies are, you know

pretty instinctively about how close the bombs can go and still not do any damage to the friendly forces.

It is something, sir—it is sort of second nature with you. I am sure you recall that.

Mr. PIKE. You have been pretty well briefed on us, haven't you?

Captain RENNICK. No, sir; but you look like a fighter pilot to me.

Mr. WILSON. Well, that is the first mistake you made today.

Mr. IRWIN. It is half right.

Mr. PIKE. What about angle of attack in a bombing run?

Captain RENNICK. Well, it has been my experience that the steeper dive angle you have, the less longitudinal, or 6–12 error that you will have. In other words, if we are trying to hit a pinpoint target, and we are coming in this way, the closer we get, we won't have the problems of dropping either long or short. This is something that also comes up in close air support. You always drop parallel to the line of the friendlies.

Mr. PIKE. If you know where the line of the friendlies is.

Captain RENNICK. If you know where they are. You normally don't want to drop unless you know.

Mr. PIKE. In other words, the steeper the dive, the more accurate the bombing?

Captain RENNICK. Within reason; yes, sir. That is just a general rule.

Mr. PIKE. Now, I will tell you, I was not a fighter pilot, I was a dive bomber pilot. And I am glad to get your statement on the record to the effect that the steeper the dive the more accurate we can aim and hit.

Now, you talked about a 30-degree angle that you used in an A-1E, did you not?

Captain RENNICK. I might have, sir. I don't recall.

Mr. PIKE. Well, at what angle were you taught to dive an A-1E, to release?

Captain RENNICK. I believe, sir, it was either 40 or 45. I am not sure.

Mr. PIKE. Forty or forty-five?

(Bells ring.)

Mr. PIKE. Well, I am afraid we have to adjourn.

Mr. IRWIN. Ask that last question.

Mr. PIKE. All right.

Would we not be better off if we had some planes that we could dive a great deal more steeply than 40 or 45, consistently?

Captain RENNICK. Well, the thing, too, to remember is, the steeper your dive angle, the higher you are going to have to pickle to effect a safe recovery altitude.

Mr. PIKE. That is true.

We used to have to release it at about 1,500 feet, in order to get out, with the dive flaps and everything.

Captain RENNICK. So——

Mr. PIKE. You are always a smaller target.

Captain RENNICK. Yes, sir. So I personally like a steep dive angle.

Mr. PIKE. But the trouble is that without dive flaps, et cetera, we can't dive them in as fast as we used to; isn't that correct?

Captain RENNICK. I like to come across the target fairly rapidly, sir. I don't like—

Mr. PIKE. Whether it interferes with your accuracy, or not?

Captain RENNICK. Well, let's maintain—let's get the degree of proficiency where we can accurately deliver this ordnance at a fairly rapid speed so we don't suffer too many hits. I think that is the answer.

Mr. PIKE. Well, I think we have got to adjourn at this time.

Mr. WILSON. Let me just ask two brief questions.

At what speed, when you are dropping your ordnance, does your A-1E fly?

Captain RENNICK. It releases the dive bomb at 260 knots, sir.

Mr. WILSON. You are going about 260 knots when you cut her loose?

(Captain Rennick nods.)

Mr. WILSON. What about—would you have any knowledge about your F-100?

Captain RENNICK. No, sir, I would not.

Mr. GUBSER. How many G's do you pull at 260 knots, Captain?

Captain RENNICK. Four and one-half to five.

Mr. PIKE. You have been a most interesting witness. That is why we can't get this meeting adjourned.

The meeting is adjourned.

Mr. MARSHALL. Tuesday?

Mr. PIKE. Yes, Tuesday, at 10 o'clock.

Mr. MARSHALL. Tuesday at 10 o'clock.

(Whereupon, at 11:20 a.m. the subcommittee was adjourned to reconvene Tuesday, September 28, 1965, at 10 a.m.)

HOUSE OF REPRESENTATIVES, COMMITTEE ON ARMED SERVICES,

SPECIAL SUBCOMMITTEE ON TACTICAL AIR SUPPORT, *Washington, D.C., Tuesday, September 28, 1965.*

The subcommittee met at 10:10 a.m., Hon. Otis G. Pike (chairman of the subcommittee) presiding.

Mr. PIKE. We want to finish with the Air Force witnesses today. We have two Air Force witnesses. They both had tremendous experience in Vietnam.

Last week we heard from an A-1 pilot, and today we have another witness, Capt. David A. Sands, who has flown an F-100 in combat. He may have some different views about the relative missions and competencies of the two aircraft.

(The biography of Capt. David A. Sands, U.S. Air Force, is as follows:)

BIOGRAPHICAL SKETCH OF CAPT. DAVID A. SANDS, U.S. AIR FORCE

Captain Sands was born on December 11, 1931, in Wooster, Ohio, and later moved to Arcadia, Calif., where he was graduated from high school and attended 2 years of college. He entered the Air Force as an airman basic in January 1951 and served 2 years as a clerk-typist. After a break in service of approximately 3 years, he enlisted in the Air Force in April 1956 as an aviation cadet and received his commission on August 29, 1957.

Captain Sands served as an F-100 fighter pilot at Cannon Air Force Base, N. Mex.; Misawa Airbase, Japan; and England Air Force Base, La. He deployed from England Air Force Base to Takhli, Thailand, in October 1964 for 2 months and again to Da Nang Airbase, Republic of Vietnam, in February 1965 for 4 months.

Captain Sands participated in 91 combat missions in RVN flying the F-100. Most of these missions were flown in-country but 10 missions were flown in North Vietnam. The last 3 weeks of his Vietnam tour was spent at Bien Hoa.

Captain Sands has approximately 2,300 hours in fighter aircraft, of which 1,850 hours are in the F-100.

He was married to the former Miss Joan Evans of Clovis, N. Mex., on August 24, 1960. Captain and Mrs. Sands now have a son and a daughter.

Captain Sands' military decorations include the Air Medal with two Oak Leaf Clusters and the Air Commendation Medal with one Oak Leaf Cluster.

STATEMENT OF CAPT. DAVID A. SANDS, U.S. AIR FORCE

Mr. PIKE. Captain Sands, when did you go to Vietnam?

Captain SANDS. The last part of March of this year, sir.

Mr. PIKE. When you were in Vietnam, were the majority of your missions in support of preplanned operations?

Captain SANDS. Yes, sir; the majority of them.

Mr. PIKE. How many times were you—of your total number of missions, how many of them would you say resulted from standing by on ground alert?

Captain SANDS. Are you speaking just of close air support?

Mr. PIKE. Let's start with the broad figure first—total.

Captain SANDS. I would say I had about 15 to 20 missions.

Mr. PIKE. Fifteen to twenty missions where it was not a preplanned operation but you were standing by waiting for the call.

Now, of those 15 to 20 missions, how many of them would you describe as in close support of ground troops?

Captain SANDS. About 10, sir.

Mr. PIKE. You had 10 missions which were not preplanned. You were standing by. And you were called out to support ground troops.

Were the troops that you were called upon to support on those 10 missions engaged in offensive operations, or were they under attack?

Captain SANDS. Most of them were offensive operations, sir.

Mr. PIKE. Does it seem at all strange to you that on these offensive operations you were merely standing by on ground alert, and there was no preplanning which required your knowledge of what your mission was to be ahead of time?

Captain SANDS. Strange, sir?

Mr. PIKE. Yes. Where the troops were engaged—where the ground troops were engaged in offensive operations, does it not seem strange to you that you would not be aware of these operations ahead of time?

Captain SANDS. Well, we would sit ground alert for the ground operation, and we would also have some airplanes on airborne alert, also, at the same time, sir.

Mr. PIKE. So at the same time you were sitting on the ground, on alert, there were aircraft in the air supporting these operations?

Captain SANDS. Yes, sir.

Mr. PIKE. Now, on these occasions, what made it necessary to call the ground-alert planes into the air in addition to the ones that were already there?

Captain SANDS. Well, if they made contact, then we would scramble.

Mr. PIKE. You mean aircraft or ground troops made contact?

Captain SANDS. Beg pardon, sir?

Mr. PIKE. You mean the aircraft made contact?

Captain SANDS. If the ground troops made contact, they called the airborne alert down, and we would replace the airborne alert immediately.

Mr. PIKE. I see. When you went up you didn't engage directly or initially in close air support, you went to replace the planes that had been on airborne alert, is that correct?

Captain SANDS. Yes, sir; in this particular instance we are speaking of, yes. In other cases, we have been scrambled for fort defense, so to speak, and this would not be the offensive operation we are speaking of.

Mr. PIKE. I didn't mean to be talking about any particular instance. I thought you said there were about 10 of these occasions where you were on ground alert and then were scrambled to go up for close air support?

Captain SANDS. I wanted to expand it, to show it was not all in this one type of operation.

Mr. PIKE. Right. Can you make an estimate of what the average length of time was between when you got the word to take off and when you arrived either at your air-alert station or in support of the ground targets?

Captain SANDS. Yes, sir. Let me cite two specific examples here, if I may.

Mr. PIKE. All right. Give me the best one and the worst one.

Captain SANDS. All right. I will give you the worst one first, sir, that was Dong Xoai where we were stationed at Da Nang.

Mr. PIKE. You flew all the way from Da Nang to the battlefield?

Captain SANDS. Yes, sir; that is a distance of 300—I think it is about 330 miles from Da Nang to the Dong Xoai area, Dong Xoai is only 32 miles north of Saigon, I believe.

Mr. PIKE. As I look at this chart which the Air Force has given me, you have a combat radius of 350 nautical miles, and with a typical load, and this particular flight was 330 miles. How much gas did you have when you got there?

Captain SANDS. We had 6,000 pounds when we got there, and we had a 4,500-pound come-home fuel. When we reached 4,500 pounds, we had to go home. We had 1,500 pounds, which would give us about 15 minutes on the target area, sir.

Mr. PIKE. So—

Captain SANDS. From takeoff, to answer your first question, sir, from takeoff to the time that we arrived over the target was about 40 minutes.

Mr. PIKE. Right.

Captain SANDS. And the other example would be from the time we were stationed at Bien Hoa supporting the 173d Brigade that was also stationed at Bien Hoa was a matter of 3 minutes across the river until we got on station.

Mr. PIKE. That was not a preplanned operation from the time you got the word to go, you were over the target in 3 minutes? It was not preplanned?

Captain SANDS. It was preplanned; yes, sir.

Mr. PIKE. I was talking about the ones not preplanned here.

Captain SANDS. Oh.

Mr. PIKE. Give me the best example of the situation where you are scrambled up on an emergency. I have gotten the worst one out of the Dong Xoai situation.

Captain SANDS. Yes, sir.

Mr. PIKE. Now, the best one.

Captain SANDS. Well—

Mr. PIKE. On a nonpreplanned operation.

Captain SANDS. Yes, sir; that was out of Bien Hoa, we were sitting 15-minute alert. I think we got airborne in about 12 minutes, and we had to go south of Bien Hoa. The distance I am not sure, but I think we were on station approximately 10 to 12 minutes after we were airborne, sir.

Mr. PIKE. That would have been a total of 22 to 25 minutes from the call to an on-station.

Captain SANDS. The distance was about, as I recall, it was south of Can Tho, if you recall where the Can Tho area is.

Mr. PIKE. Yes.

Captain SANDS. A little over 100 miles away, sir.

Mr. PIKE. In this Dong Xoai situation, you had about 15 minutes over target. How big a weapons load were you carrying then? What were you carrying?

Captain SANDS. We had two Lau-3 rocket launch pods carrying 19 rockets each. We had two napalm cans, and—

Mr. PIKE. Before this particular strike, how was your target marked?

Captain SANDS. The target was marked by an airborne controller, sir, with smoke, white smoke.

Mr. PIKE. This was a daytime operation?

Captain SANDS. Yes, sir.

Mr. PIKE. And I presume you were successful. Which did you do first, do you drop the napalm first?

Captain SANDS. Fire the rockets first.

Mr. PIKE. Is this standard doctrine?

Captain SANDS. Pretty much so, sir. Once we fire the rockets we can blow the pods off and this gets rid of a lot of drag.

Mr. PIKE. There is a greater drag from the rocket pods with the rockets than there is from the napalm?

Captain SANDS. Yes, sir. You know what the pod looks like.

Mr. PIKE. Yes, a big round thing with holes?

Captain SANDS. Once you fire the rocket, the round part is fragile, and comes off. This presents a flat surface for drag.

Mr. GUBSER. The same pod the Navy calls Aero 7-D?

Captain SANDS. I am not familiar with that, sir.

Mr. PIKE. Some of the helicopters have these pods, do they not?

Captain SANDS. I don't know what they use, sir; I am not certain of that.

Mr. PIKE. Would it be a fair statement to make that 15 minutes over the target—15 minutes worth of fuel over the target area—is cutting it very, very thin?

Captain SANDS. I don't think so, sir. In this instance it doesn't take us that long to get rid of our ordnance. We have, say, a flight of four, which quadruples everything we carry, of course. I think we can effectively deliver that ordnance in that length of time. And I don't think we are going to send just four airplanes, sir.

Mr. PIKE. How far were you from friendly ground troops at the Dong Xoai target area?

Captain SANDS. We were outside the perimeter of the compound. I would estimate—

Mr. PIKE. Did you know where the friendly troops were?

Captain SANDS. Yes, sir, they were all within the compound at the time I was down there. That is what I was told.

Mr. PIKE. There hadn't been reinforcements for them as yet?

Captain SANDS. Sir, I don't know at this point. In the mission, I was scrambled off on an alert situation, and I got down there, he marked the target, told me where I was to drop, and he said, friendlies are all within the compound, and I was working west of the compound.

Mr. PIKE. Right.

Captain SANDS. I don't believe there were any troops dropped into that area.

Mr. PIKE. The only thing you fired at, then, was a smoke bomb which had been released by the O-1?

Captain SANDS. Yes, sir. He described the target. It was a wide spot in the road that they were using as an airfield. He said there were 50-caliber automatic weapon sites within the trees along that site. We fired the rockets and dropped napalm and then we strafed in there.

Mr. PIKE. How much training in close air support specifically did you have before you went to Vietnam?

Captain SANDS. I had run, oh, at least four or five missions where we dropped hot ordnance for firepower demonstrations.

Mr. PIKE. Where was this done?

Captain SANDS. Fort Campbell, Ky., sir. We also practiced at Fort Hood. They were dry missions, but you get the feel of working with a forward air controller. He describes the layout of the land, and he marks the target with smoke, and you get—you know, the feel of working that way.

Mr. PIKE. Were all of the missions that you ran in Vietnam in close air support run through a forward air controller?

Captain SANDS. Yes, sir.

Mr. PIKE. He always marked the target for you?

Captain SANDS. Yes, sir.

Mr. PIKE. You didn't at any time have to go up on your own and find a target without a forward air controller to do it?

Captain SANDS. No, sir.

Mr. PIKE. Did your training include that kind of—did it include training which would enable you to go up and on your own spot a target being vectored out to it on the ground, and dropped?

Captain SANDS. Referring to Vietnam again, sir, I think it is a little bit unrealistic, so to speak, to try to train for a situation such as that. I think it takes experience in the theater to train your eye to find certain things in a jungle environment, sir.

Mr. PIKE. Don't you think if you had training in a jungle environment you could learn it?

What you are saying is we don't have any jungle environment in which to train, isn't that it Captain Sands?

Captain SANDS. Well, I think in Louisiana we do, sir.

Mr. PIKE. Well, but we don't use it for this purpose?

Captain SANDS. Yes, sir; we are conducting some now under the code of Red Rio, and it is being staged there where we are doing this kind of work.

Mr. PIKE. You are doing this close air support training?

Captain SANDS. Yes, sir.

Mr. PIKE. Why do you say it is unrealistic to train for it?

Captain SANDS. Well, you can get a certain amount of training for this but until you actually see it, it is going to be a little bit different. It is good training in that it helps you work with the forward air controller. It helps you to look down at a jungle situation.

Mr. PIKE. Have you done this yourself?

Captain SANDS. At Peason Ridge?

Mr. PIKE. Yes.

Captain SANDS. Not yet, sir.

Mr. PIKE. You are speaking not from your own knowledge, but either from what somebody else told you about it or something you read about it, is that correct?

Captain SANDS. I am envisioning this in my mind, sir.

Mr. PIKE. You are envisioning it very favorably but you really don't know what the training in this environment consists of?

Captain SANDS. That is right.

Mr. PIKE. I have no other questions.

Mr. Gubser.

Mr. GUBSER. This mission which you described as the poorest and the worst mission, close, air, support mission you were on, why do you call it the worst?

Captain SANDS. Let me clarify one thing, if I may, sir. I think we were talking about poorest reaction time at that time, were we not?

Mr. PIKE. Yes, sir.

Mr. GUBSER. I see.

Mr. PIKE. How long did it take?

Captain SANDS. Forty or forty-two minutes.

Mr. PIKE. That is from the time you were airborne?

Captain SANDS. Yes, sir.

Mr. PIKE. About another 12 minutes from the time you got the word to go, or 15 minutes from the time you got the word to go?

Captain SANDS. I estimate it was between 10 and 15 minutes of the time to airborne, because you have to stop to arm.

Mr. GUBSER. In other words, the thing that was wrong was that you just didn't have an aircraft close enough to the area that needed help, is that the idea?

Captain SANDS. At that time there were only two F-100 squadrons stationed in Vietnam, we were both in Da Nang.

Mr. GUBSER. What happened, did you accomplish your objective?

Captain SANDS. Yes, sir. I think there were four gun placements in the jungle, and we got two and damaged one, as far as I can recall.

Mr. GUBSER. When you go in to deliver ordnance with an F-100 at what speed are you traveling?

Captain SANDS. For napalm we like to do 450 knots, and everything else is 400 knots, sir.

Mr. GUBSER. At that speed, if you didn't have a precisely marked target, you just couldn't go in and identify anything to level, and deliver ordnance, strafing, for example?

Captain SANDS. It depends, again, on the target, sir. I can recall one time where the O-1F, or the airborne forward air controller was out of smoke. He merely flew over the area and said do you have that area in sight, and I said yes. He said, all right, and he physically described the area, and there were a bunch of rice paddies there, and he described the shape of the rice paddies. We said, yes, we understand that. He flew over the area. He said all right, I want you to strafe and drop napalm along that hedge row on the south side of that rice paddy. Which we did. He was out of smoke.

Mr. GUBSER. Of course, this is down in the delta region, isn't it?

Captain SANDS. No, sir; this is up about 35 miles south of Da Nang.

Mr. GUBSER. I see.

Mr. PIKE. Still a level coastal plane in that area, isn't it?

Captain SANDS. Yes, sir.

Mr. GUBSER. But you couldn't do anything like that with an F-100 in this heavy jungle area, what area do you call this?

Mr. PIKE. Any of the highlands—the jungle.

Captain SANDS. In the jungle.

It is going to be pretty much an area he wants to cover in that kind of an environment, is that what you mean?

Mr. GUBSER. Yes.

Captain SANDS. If he can fly over that area, and say "I am over the area now, and put your bombs in that area," something like that, yes. But I cannot see a hut way down in the bottom of the jungles, if that is what you are getting at, sir, unless I have a good idea of where to look, I can't really get in there. I have seen them.

Mr. GUBSER. In that area it is questionable whether an A-1 could see them?

Captain SANDS. Yes, sir. I have seen them, but it is after a few passes over that spot.

Mr. GUBSER. That is all I have.

Mr. PIKE. Mr. Nedzi.

Mr. NEDZI. I have no questions.

Mr. PIKE. Mr. Chamberlain?

Mr. CHAMBERLAIN. No questions, Mr. Chairman.

Mr. PIKE. Mr. Irwin.

Mr. IRWIN. No questions.

Mr. PIKE. Mr. Evans.

Mr. EVANS. What methods were used in marking targets besides these smoke bombs, and word description from flying over them?

Captain SANDS. I cannot recall that they marked them any other way, sir. I have never seen any panels.

Mr. EVANS. Did they use more than one smoke bomb?

Captain SANDS. Yes, sir.

Mr. PIKE. How do they mark them at night?

Captain SANDS. Flares—with the C-123, or C-130, they drop flares.

Mr. PIKE. They don't do it with a smoke bomb on the ground, they light up the whole area with flares, and then they use a smoke bomb, is that it?

Captain SANDS. They light up the whole area with flares, and then describe the target to you.

Mr. EVANS. How long does it take to verbally describe and receive and understand a description of a target?

Captain SANDS. Oh, gosh.

Mr. EVANS. I suppose you are circling while you are watching air control?

Captain SANDS. We try to stand off a distance, to get maximum surprise attack if we can. We are up to 10,000 to 15,000 feet, if we can. If we have to get down lower to get target acquisition, then we do.

To answer your question, it depends upon the situation, sir, how hard it is to describe.

Mr. EVANS. A minute, a half minute, 2 minutes.

Captain SANDS. If it were in a rolling terrain, it may take him a while to get it out to us. If it were flat, then he can get it to us sooner.

Mr. EVANS. If you had your choice, which kind of marking system would you like to see used?

Captain SANDS. I like the smoke, sir, I think it works quite well.

The O-1F, you see, has the smoke rockets hanging under the wing, he can put that smoke fairly accurate. I have seen him mark a smoke here, and a smoke there, and he will say, anything in between. It gives us something.

Mr. PIKE. You cannot see that smoke at night?

Captain SANDS. We can see it as it goes off; yes, sir. Up until recently, and I don't know how much they have been doing it lately, but they were not using O-1F's at night for forward air control. The forward air controller was in the C-123.

Mr. PIKE. You didn't have anything except the flares; is that correct?

Captain SANDS. That is right.

Mr. PIKE. You didn't have anything except the flares. You like to circle or stay off at an altitude of 10,000 to 15,000 feet, which is something better than 2 miles, on the average, and no smoke to mark the target, but you just get a word description?

Captain SANDS. You are speaking of night again, sir?

Mr. PIKE. Night.

Captain SANDS. At night this is a different situation, sir. We don't stand off like that at night. We are usually in flights of two at night, and we will be blacked out so that they can't tell where we are, and it is fairly obvious there is not going to be too much surprise anyhow, with all these flares popping off.

There is no problem. We will sit right there with the flare ship, orbiting around the flare ship, in as tight as we can, to see exactly what he is describing to us.

Mr. PIKE. Do you think you get a lot of surprise in the daytime with that smoke rocket going off? Doesn't that sort of put the enemy on the alert?

Captain SANDS. Yes, sir, but how long have they got to run, once that smoke rocket goes off?

Mr. PIKE. You tell us.

Captain SANDS. Yes, sir. I am posing the question, now. We tried to work it this way, where the O-1F will mark the target, he will call 30 seconds to mark, which he has done quite regularly.

Mr. EVANS. What does he mean by that?

Captain SANDS. He is calling 30 seconds from his time now, then he is going to mark the target. The rocket will be away in 30 seconds. We "roger" that call and start our pass. We can see him starting to roll in on his pass, and as soon as that smoke rocket goes off, we like to be over the target as soon as possible thereafter. It usually works out sometimes less than 30 seconds, sir, and I don't think they can run too far.

Mr. PIKE. If that smoke rocket goes off in the jungle, isn't it true quite often the smoke doesn't even get up about the trees in 30 seconds?

Captain SANDS. It can take that long, yes, sir.

Mr. PIKE. In which case you would have a dry run over the target, and circle around and wait for it to come up; is that correct?

Captain SANDS. Again, sir, we have a flight of four airplanes.

Mr. PIKE. Yes.

Captain SANDS. By the time we get in, and by the time say the last airplane or even the third airplane is across the target, we will have a hot pass.

Mr. EVANS. Does this smoke bomb leave a trail of smoke as it goes in?

Captain SANDS. Sometimes the rocket motor will leave a little trace.

Mr. EVANS. A big trail?

Captain SANDS. While the rocket motor is burning it will leave a trace of smoke.

Mr. EVANS. Have you ever flown the O-1?

Captain SANDS. No; sir.

Mr. EVANS. I have no further questions.

Mr. PIKE. You say by the time the fourth plane makes the pass, it will be a hot pass.

How close together are the passes made by the four planes in the flight?

Captain SANDS. In time, sir?

Mr. PIKE. Yes.

Captain SANDS. It would be 5 to 10 seconds. It depends on the situation, sir. I wouldn't want to pin it down.

We try to tailor our tactics for each individual situation. In other words, I don't want to come in directly behind another man for fear I will get shot down by the guy shooting at the man in front of me.

Mr. PIKE. I see.

Now, at night, when you don't use the smoke, you say you approach—you don't stand off from the target?

Captain SANDS. That is correct.

Mr. PIKE. You have a target visually described to you and it is the general area which is illuminated by flares?

Captain SANDS. Yes, sir.

Mr. PIKE. Without the smoke.

Captain SANDS. Yes, sir.

Mr. PIKE. Don't you find an awful lot of difficulty picking up your targets at night?

Captain SANDS. No, sir. I haven't had any particular problem finding targets at night.

This flare is going to limit your visibility—I mean your eyesight, to that particular area where the flare is over, so you are oblivious to everything else because it is dark. He starts explaining things in this area.

Mr. ICHORD. In relation to the flare?

Captain SANDS. Yes; it is right under the flare.

He can call hedgerows, or he can visually describe the target, if it is 100 meters or 100 feet from X building down there, north, south, east, or west.

Mr. PIKE. You don't have trouble finding these buildings at night?

Captain SANDS. No, sir. A flare is pretty bright.

Mr. PIKE. A flare, just to get the record straight, it is not on the ground, it is hanging on a parachute?

Captain SANDS. It is on a parachute. He will drop anywhere from three to six flares. It is 2.1 million candlepower.

Mr. BLANDFORD. Captain, doesn't it strike you as a little bit awkward to have a close air support system that depends on the airplane to mark the target and another airplane to carry the armament? If the airplane that marks the target is susceptible to ground fire, in placing the armament on the target, you would assume the aircraft delivering the armament would also be susceptible. Doesn't this seem like an awkward system?

Here is an O-1F, firing rockets to a target area, asking another aircraft to come down and hit those targets. Wouldn't it be a better system if we had one aircraft that could not only identify the target, but deliver the armament also?

Captain SANDS. I think the system that we have going right now with the O-1F's has worked very well in the past, sir, and I can't argue with success on this. I don't know how many O-1F's we lost over there, but it hasn't been very many.

Mr. BLANDFORD. Should we lose—the O-1F is a much slower aircraft, and obviously he can't stand off too far; he has to be reasonably close to the area to mark the target.

If we haven't lost any O-1F's, we shouldn't lose any F-100's. The F-100 is going in at 400 to 450 knots while the O-1F is rolling at 130 knots, at the maximum, I presume.

If the O-1F is not vulnerable to ground fire, then the F-100 should not be vulnerable. Doesn't it strike you to be a strange system where you have a fire engine on the scene to bring another fire engine to put the fire out?

Captain SANDS. Well, again, sir—

Mr. BLANDFORD. Isn't the answer that we don't have anything else to do the job at the present?

Captain SANDS. That might be true, sir, but however, I would like to see a better aircraft than the O-1F to do the job.

Mr. BLANDFORD. How about a much improved aircraft, which would actually eliminate the necessity for bringing in the F-100's? How about developing an airplane that would have the loiter time, carrying the armament, mark the target, and destroy the target all in one airplane? Wouldn't that be your idea of an ideal close air support weapon?

Captain SANDS. If you are speaking of close air support alone, sir; you may be right.

However, I think we must think of more than just the close air support. You are thinking along the terms that we have got air superiority, and we will always have air superiority, but we have got to have an airplane that can also do so many more things. As you will remember in my opening testimony, sir, I stated all the different jobs of the F-100 while we were over there. I think we must retain that capability.

Mr. BLANDFORD. You have to have an aircraft capable of air interception; nobody will question that.

What I am talking about, and what we are talking about here is close air support. What I am suggesting is that most of the people who fly an airplane think the airplane they are flying is the best thing that has ever been made. This is fine. This is because they have become accustomed to it.

Captain SANDS. I don't mean to imply that, sir. I mean to use the airplane I am flying as an example.

Mr. BLANDFORD. You are using 100 pounds of fuel per minute, roughly. You carry an average of 11,000 pounds of fuel?

Captain SANDS. 11,200.

Mr. BLANDFORD. You have 1,100 minutes, really, all told, depending on where you start from, maximum.

Now, here is an airplane over here, for example, that has had some prototypes on an OV-10A, that has a 1-hour loiter time. You indicated your loiter time, of course, depends entirely on the distance from the airfield. You are using a very high rate of speed, 400 knots on your rockets, and 450-knot approach on napalm, which gives you, of course, a much better chance of survival after you dropped your ordnance. But here is your O-1F sitting off marking these targets, and apparently they are not marking them out of the skies; just from the viewpoint of close air support, not the versatility.

I am not trying to say the F-100 isn't a versatile airplane, but looking at it from, say, the Pentagon viewpoint, and the amount of dollars expended for results obtained, aren't you really using a pretty awkward system to provide close air support today?

Captain SANDS. No, sir; I don't think so. When you put it in the light of dollars spent and things like that——

Mr. BLANDFORD. I am putting it exactly in that light. Aren't we using a pretty expensive airplane to do a job that a much less expensive airplane can do? Do you think the F-100——

Captain SANDS. The F-100——

Mr. BLANDFORD. What I am saying is you are using an O-1F, that if it were properly equipped could do the job of the F-100 right now. It is obvious if the O-1F can mark the target with rockets, if it were a larger aircraft it could also destroy the target. Wouldn't that make sense to you?

Captain SANDS. Yes, sir.

Mr. BLANDFORD. Why use an expensive F-100 to go down and knock out ground targets?

Captain SANDS. Because, I think that the O-1F, of course it can't carry all that extra stuff, and you are talking of another airplane to replace the O-1F and the capabilities of the F-100?

Mr. BLANDFORD. I am trying to combine them; economy minded.

Captain SANDS. Yes, sir. I believe in testimony given last Thursday Captain Rennick set down some principles he would like to see in a close-support aircraft.

Mr. BLANDFORD. That is what I would like to hear from you. What are your principles?

Captain SANDS. I would like to see an airplane that has a long loiter capability, the capability to fly slow, react fast, and have forward firing guns, and all these other things. I think, too, we must keep in mind the total capability of being able to not only have close air support capability but also to go back and do interdiction, because let's think for a minute, if we did nothing but close air support, the enemy's complete effort would be pushed up to close air support. If we didn't harass him in the rear areas—

Mr. BLANDFORD. I am not talking about eliminating the F-100's. I am talking about using the F-100's or the F-105, or anything else, for what you might call tactical air support, or even strategic support, as contrasted with close air support. This is where you are in contact with the enemy on the ground.

But hasn't it occurred to you people in discussion that this is a pretty expensive way of providing close air support?

Captain SANDS. I still think, sir, that we can build an airplane that has these different capabilities, and use these airplanes to our advantage.

Mr. BLANDFORD. That is the point. We don't have one like that today, do we?

Captain SANDS. No.

Mr. PIKE. How fast is your airplane, the one you envision?

Captain SANDS. The one I envision?

Mr. PIKE. Yes.

Captain SANDS. 1.4 mach.

Mr. PIKE. Do you think you could hit a target with it without an O-1 up there to mark it for you?

Captain SANDS. It doesn't have to go that fast, at that environment, sir.

Mr. PIKE. How slowly would it go?

Captain SANDS. Eighty-five to ninety knots.

Mr. PIKE. That is a pretty good range.

Captain SANDS. Yes, sir.

Mr. PIKE. There is no question about it.

If you can get one that will go 85 knots and also 1.—what did you say?

Captain SANDS. 1.4.

Mr. PIKE. 1.4 mach. That outperforms the F-111, doesn't it?

Captain SANDS. I don't know what its capabilities are, sir.

Mr. PIKE. I am afraid you have envisioned a plane better than anything anybody has thought of thus far.

I agree with you, it would be wonderful if it could go that fast and that slow, in one airplane, but I am afraid, again it is technically unfeasible. I didn't mean to interrupt you.

Mr. BLANDFORD. My point, Mr. Chairman, the speed of 400 knots approach, or 450 approach for the kind of close air support operation we have in South Vietnam today, obviously isn't indicated as an ab-

solute necessity when you have O-1F's going 130 knots, firing targets, and you go in to fire rockets to destroy.

Captain SANDS. My thinking against the O-1F now is if I scramble from any airport over there, then with my speed capability to get to the target—the O-1F does not have the same speed capability to get to the target.

Mr. WILSON. Where does the O-1F operate from?

Mr. BLANDFORD. That is right there with them, frequently. That is the point. The aircraft is invariably right with the troops in a sense—it can be.

Captain SANDS. This was not the case several times when I was involved.

Mr. BLANDFORD. No, but it is basically a question—and this gets into the whole concept of close air support—if you can develop the O-1F, it needs how much of a runway, do you know?

Captain SANDS. No, sir. It is very short.

Mr. BLANDFORD. About a 800-foot runway would be adequate, I would think. You could practically just chop some grass down—I have seen it done—and make your own runway. You can't do that with an F-100.

Captain SANDS. No, sir.

Mr. BLANDFORD. You can't land an F-100, except on concrete or asphalt runways.

Captain SANDS. No, sir.

Mr. BLANDFORD. You have an airplane spotting, delivering missiles or rockets on the targets to be followed by other aircraft to come in and destroy the targets, which indicates that we do not today have a close air support aircraft made for the purpose of this type of warfare. Would you agree with that statement, an aircraft? I am not talking about a combination of aircraft.

Captain SANDS. An aircraft for one specific job?

Mr. BLANDFORD. Close air support.

Captain SANDS. Again, sir, I think we are wasting money by building an airplane to perform one specific job.

Mr. BLANDFORD. You think the B-52 was a waste of money?

Captain SANDS. The B-52 could do many jobs, sir.

Mr. BLANDFORD. Bomb, period; that is all it does.

Captain SANDS. It is performing strategic missions.

Mr. BLANDFORD. I wouldn't get into a discussion, put you on the spot, or myself, in that respect, but what you are saying is that you think you need an airplane that can go 1.4 mach, and down to 85 knots?

Captain SANDS. I am going to a rather extreme there, I know.

Mr. PIKE. That doesn't hurt anything, Captain.

Quite frankly, it is nothing that is not within our capability, as far as doing it; a vertical takeoff aircraft can go at zero knots, as far as forward speed is concerned.

Captain SANDS. Yes, sir.

Mr. PIKE. We can make a 1.4 mach vertical takeoff plane, if we have to. But it is going to be an awful expensive piece of equipment to be used in close air support.

Captain SANDS. Yes, sir.

On the other hand—well, I don't want to—I am not really versed in these matters.

Mr. PIKE. Let me ask you this: You think in the nighttime, without the O-1 dropping smoke flares to mark your target, you do fairly well at close air support, is that correct?

Captain SANDS. Well, I haven't had any—I personally haven't done any close air support at night. The squadron has done some over there in the Quang Ngai operation—close air support.

Mr. PIKE. It was done without O-1's?

Captain SANDS. I am not sure.

They had O-1's.

Mr. PIKE. It was done with O-1's?

Captain SANDS. Yes.

Mr. PIKE. I think, unless there are any other questions for Captain Sands—

Mr. EVANS. I have just one brief question.

Mr. PIKE. Go ahead.

Mr. EVANS. What is your major problem in terms of close air support; you, as a pilot? What is the biggest problem. What is the biggest problem for you to overcome, to become as effective as you possibly can be, as a pilot flying in close air support?

Captain SANDS. I think accurately marking the friendly troop's lines.

Mr. EVANS. Thank you.

Mr. CHAMBERLAIN. Mr. Chairman, I think it might be well if we could pursue just a moment this question of night operations.

Mr. PIKE. The reason I thought we would go on to Colonel Hays, Captain Sands says he hasn't done any of it. I think Colonel Hays can testify better on that subject. That is the reason.

Mr. CHAMBERLAIN. If that is so, I will withhold any questions for him.

Mr. PIKE. I gather that is probably the case.

Does anybody else have any questions for Captain Sands?

If not, thank you very much, Captain Sands.

Again, I want to say, on behalf of the full committee, we are not here for the purpose of giving you a rough time. We are here for the purpose of learning what we can, and we are not only very grateful for the job that you have done over there—you and all of the pilots have done over there—we are tremendously impressed by the job that you have done over here. We thank you for coming here and sharing your views with us.

Captain SANDS. Thank you, sir. It has been my pleasure.

Mr. MARSHALL. The next witness will be Lt. Col. Emmett L. Hays. (The biographical sketch of Lt. Col. Emmett L. Hays, U.S. Air Force, is as follows:)

Emmett LeRoy Hays was born in Van Buren, Ark., November 24, 1921. He entered active military service as an Army Air Force Aviation Cadet on March 15, 1943. Upon graduation from flying training school at Luke Field, Ariz., on January 7, 1944, he was commissioned a 2d lieutenant.

His first assignment was a student pilot at Punta Gorda, Fla., flying P-40 fighter-bombers. Upon completion of training, he was retained as an instructor pilot in P-40 and P-51 aircraft.

In April 1945 he transferred to India for further training and subsequently to China. He completed 36 hours of combat in P-51's before V-J Day. He remained in China until November 1948 flying fighters, liaison, and cargo aircraft.

Upon return to the United States, he was assigned to Hamilton Air Force Base, Calif., to fly F-84D Thundjet day fighters. After 1 year the unit converted to F-89 all weather jet fighters. He remained in Air Defense operations in the United States and Labrador flying various types of all-weather jets.

In 1957, he attended command and staff school and upon graduation in June 1958 he was assigned as an Air Force adviser to the Washington Air National Guard.

He remained as adviser to the Air National Guard until June 1962. His next assignment was squadron commander on the 416th Tactical Fighter Squadron in Misawa, Japan.

When the squadrons returned to the United States under Project Clearwater, Lieutenant Colonel Hays led the squadrons redeployment to England Air Force Base, La. On March 13, 1965, he deployed with the 416th Tactical Fighter Squadron. The unit flew combat missions from Da Nang, Republic of Vietnam, on an augmentation basis until April 22, when the entire unit moved to Da Nang, Republic of Vietnam. The unit flew combat missions in North and South Vietnam until June 23, 1965, when the squadron was transferred to Bien Hoa, Republic of Vietnam. The unit redeployed to England Air Force Base, La., on July 18, 1965.

Lieutenant Colonel Hays flew 118 combat and combat support missions in Vietnam flying F-100D aircraft. He has been awarded the Bronze Star, Air Medal with four oak leaf clusters, Air Force Commendation Medal, Army Commendation Medal, and various service medals.

His wife is the former Anne Gavrilkin of San Francisco, Calif. He has two sons; Richard Lee, age 15, and George Eric, age 7. They reside with him at England Air Force Base, La.

Lieutenant Colonel Hays is presently the Assistant Deputy Commander of Operations, 3d Tactical Fighter Wing.

STATEMENT OF LT. COL. EMMETT L. HAYS, U.S. AIR FORCE

Colonel HAYS. Mr. Chairman.

Mr. PIKE. Colonel Hays, would you tell us what your—well, tell us first when you went to Vietnam and how long you stayed there.

Colonel HAYS. Sir, I went to Vietnam, the first date was March 18 of 1965.

Mr. PIKE. What were your duties in Vietnam?

Colonel HAYS. I was the squadron commander of the 416's, Tactical Squadron F-100's.

Mr. PIKE. Were you stationed at the same places at the same time that Captain Sands was?

Colonel HAYS. Yes, sir.

Mr. PIKE. Was he in your squadron?

Colonel HAYS. Yes, sir.

Mr. PIKE. So by and large your testimony is going to be somewhat similar to his, as far as the operations which were performed?

Colonel HAYS. Yes, sir.

Mr. PIKE. But you are more familiar with the overall picture of what the squadron as a whole did and accomplished; is that correct?

Colonel HAYS. I believe so, sir.

Mr. PIKE. Colonel Hays, of the total missions that your squadron flew, how many of them—let's do this: How many missions did your squadron fly in that period of time?

Colonel HAYS. The total time we were there in North and South Vietnam, it was around 2,150.

Mr. PIKE. Of the 2,150 missions, how many of them were what you would describe as "close air support missions"?

Colonel HAYS. Well, in the classic sense that you have a forward line of troops against an opposing group and you are called in to support them directly, I would say the percentage would be around 10 percent, sir.

Mr. PIKE. Now, if you eliminate the words, "a forward line"—

Colonel HAYS. Perhaps less.

Mr. PIKE (continuing). And just say it was air support with friendly forces in the immediate vicinity, how many would that come to? There doesn't seem to be any line in Vietnam.

Colonel HAYS. Close to 30 percent. However, in our particular case we may not know just exactly how close we are supporting the ground troops.

In other words, it might be 2 miles away, or something like this. In other words, how close is close?

Mr. PIKE. You wouldn't have the knowledge when you took off on a mission as to where the friendly forces were?

Colonel HAYS. Not on a map, specifically; no, sir. We wouldn't be in the planning, at our level, the squadron level, as to exactly where they were going to be. We know the coordinates, the general area of where the battle is going to be fought, but we wouldn't know exactly where the contact would be.

Mr. PIKE. Don't you think this would be useful information to have, at the squadron level, as to where the friendly forces were?

Colonel HAYS. Well, sir, the thing is, it is quite a massive operation. The way it is being worked, at the time I was there, you would be briefed on an operation, but trying to keep up-to-the-minute contact with this fluid situation, would be extremely difficult. I don't think it would be that advantageous to our point of view.

Mr. PIKE. Do you think it might be advantageous to the point of view of the boys who are down on the ground, to think they knew where you were?

Colonel HAYS. I don't think it is particularly important that we would have to know exactly where they were at that specific moment, because they are moving all the time.

Mr. PIKE. Do you have any incidents where friendly forces were hurt by your operation?

Colonel HAYS. No, sir.

Mr. PIKE. Of the roughly 2,150 missions, you say approximately 30 percent would have been in conjunction with relatively close friendly forces. So that is somewhat over 700 or 750 missions, of that nature. How many of those 750 were at nighttime?

Colonel HAYS. At night, I would say a very, very small percentage.

Mr. PIKE. How do you account for that, Colonel?

Colonel HAYS. Primarily I don't think the Army was on the offensive enough, or had enough contact at night.

Actually, we began—if you will recall, as this thing escalated over there, how we phased in to the operation. In other words, it was Vietnamese, primarily. The Vietnamese Army used primarily Vietnamese Air Force aircraft to help them, rather than calling on us. In other words, this was not our specific mission. As the war progressed, and the longer time we were there, we got into this thing, this night operation, more.

Most of our night operations were the result of fort defense, or some large operation, such as Quang Ngai, where the Vietcong were on the offensive, and then we were called in to support by air.

Mr. PIKE. The Vietcong almost always go on the offensive at night, don't they?

Colonel HAYS. I would say this is a fair statement.

Mr. PIKE. That is their pattern over there. If they are going to attack, they attack at night. If we are going to attack, we attack in the daytime.

Colonel HAYS. I wouldn't go so far as to say that, because this is out of my bounds.

Mr. PIKE. Well, your experience would indicate where you did fly night missions, you just said it was in fort defense. This is where the Vietcong is attacking?

Colonel HAYS. Yes, sir.

I would like to emphasize in our mission, our particular mission, that it was not necessarily to support these units, because there were other units that were tasked to support them, rather than ourselves, you see; Vietnamese units, A-1 units, and so forth.

Mr. PIKE. Your essential mission over there was not, as you looked at it, a mission of close air support?

Colonel HAYS. Not strictly. In other words, we started out in North Vietnam and worked our way south, and we wound up with a certain percentage of our missions as direct close air support.

There are other units, and other F-100 units that later came over that assumed this direct close air support role, but this did not mean that we didn't do this sort of thing, you see.

Mr. PIKE. Would you say the F-100 is an aircraft which was basically intended for close air support?

Colonel HAYS. It is a tactical fighter, and it has many capabilities. One of its capabilities is a close air support role.

Mr. PIKE. Would you say that was its—when they drew up the F-100, did they draw it up essentially for the role of close air support?

Colonel HAYS. The first one that came out, I think it was coming out as an air superiority fighter.

Mr. PIKE. That is what I thought. And from air superiority, we got into the realm where you say tactical fighter. Basically the principal number of your missions were interdiction missions, a large percent?

Colonel HAYS. A large percent.

Mr. PIKE. Yes.

That, again, would be the other role for which the F-100 was basically intended, isn't that a fair statement?

Colonel HAYS. Not necessarily.

You see—

Mr. PIKE. All right. You said the F-100 was originally designed as an air superiority fighter.

What else was it basically designed for?

Colonel HAYS. You take an F-100 through the evolution, this is a "D" that we are talking about. In other words, they change, even though it says "F-100," it doesn't mean that that particular model is air superiority. This one certainly isn't. This is a heavier airplane. It is designed to carry bombs, and for ground support, primarily. This is the main thing this "D" aircraft is for, and for a nuclear role.

Mr. PIKE. Do you think we arrive at an optimum close air support program, by designing an airplane for superiority, and then remodeling it for close air support of ground troops later?

Colonel HAYS. I don't think there is any reason why a good airframe can't be changed and modified in such a way as to perform both roles.

Mr. PIKE. There is no question about that, Colonel. But don't you think, really, you are going to get a better aircraft if you design an airplane for close air support?

Colonel HAYS. Frankly, I don't think that you will gain enough more by taking away the other capabilities, and just concentrating in one small area. I don't think that gain is sufficient to throw out all the other capabilities of the airplane.

Mr. PIKE. In other words, you are satisfied with the capabilities of an F-100 as a close air support aircraft?

Colonel HAYS. Yes, sir.

Mr. PIKE. In your squadron operation, how often were you supporting, if ever, American troops on the ground?

Colonel HAYS. When we moved to Bien Hoa—and this was at the end of June—this is where we got primarily into helping the American forces.

Mr. PIKE. That was the 173d?

Colonel HAYS. Yes, sir.

This doesn't mean that we didn't help American forces prior to this time.

Mr. PIKE. I understand.

When you were backing up the 173d, did you back them up in any instance other than a preplanned operation of theirs, in close air support?

Colonel HAYS. I can't recall of any, other than where the Dong Xoai incident happened, and things like that.

Mr. PIKE. Dong Xoai, they weren't ever committed as a ground unit.

Colonel HAYS. Primarily, after we moved to Bien Hoa, any time we worked with them, it was preplanned exercise. And though we had our aircraft on alert, so to speak, we knew what we were on alert for, and what we were trying to do for the whole operation.

Mr. PIKE. All right.

Now, in a preplanned exercise, between the Army and the Air Force, in close air support, how close to the front lines, or the forward edge of the battle area, as they call it, would your pilots strike?

Colonel HAYS. Well, the pilots would strike where they were requested to strike. In most cases I would say it would be about a quarter of a mile, unless there was a contact closer.

Mr. PIKE. Day or night, the strike would be marked by an O-1 aircraft; is that correct?

Colonel HAYS. Well, in day, all operations in the daytime, were marked. The reason for marking with an O-1F, it is not necessarily a requirement for the jet aircraft to hit target. I would like to clarify this.

Mr. PIKE. It is because he can see them more readily, isn't it?

Colonel HAYS. Not only this, but it is to identify and make darned sure you don't hit a friendly village, for example, because the villages

are fairly close together, and you can have a friendly one and an unfriendly one.

Mr. PIKE. What you are saying is the O-1 knows where the friendly village is, and the F-100 doesn't know where the friendly village is?

Colonel HAYS. Essentially this, because his backyard, so to speak, is considerably smaller than ours. If we operated in the same area all the time, such as we were doing at Da Nang, we knew pretty well exactly where everything was, and it wasn't—it wouldn't have been necessary in that case to go out and hit a specific target. It was an area we knew already, you see.

Mr. PIKE. Did you operate out of Da Nang in these areas that you knew without O-1's marking the targets?

Colonel HAYS. Never; no, sir.

Mr. PIKE. But you say it wasn't necessary.

Colonel HAYS. It wouldn't have been necessary.

In other words, because we knew the area so well, working in it, after 2 or 3 months' time, we knew exactly what was friendly and what was not friendly, and where we could go.

Mr. PIKE. It wasn't necessary for them to mark the targets operating out of Da Nang; if that is so why did you use it?

Colonel HAYS. The rules of engagement required at this time that we have an observer to identify the target, just to make positive we didn't hit anything that wasn't the correct target, sir.

Mr. PIKE. The O-1 always carried a VNAF?

Colonel HAYS. At this time they did, sir. However, as I understand, when you are working strictly with American forces now, it isn't required.

Mr. PIKE. When you operated with the 173d, there was no VNAF observer?

Colonel HAYS. I don't believe there was; no, sir.

Mr. PIKE. Any questions?

Mr. WILSON. Yes, Mr. Chairman.

First of all, I want to say in defense of Captain Sands' requirement, I notice in this propaganda, National Geographic, the F-4C can fly at mach 2.1 and can loiter at 130 miles an hour. He wasn't too far off in his ideal.

Colonel Hays, what are the typical targets that you were striking? I mean, specifically. Is this an area, or was it a hut, or tell me some of the types of targets on your mission.

Colonel HAYS. I think we hit just about every conceivable type of mission that we could run into, from a hut——

Mr. WILSON. Possible headquarters?

Colonel HAYS. To a possible headquarters, or weapons factory that was hidden underneath the trees. Even the O-1 couldn't tell exactly where it was, because he couldn't see that.

Mr. WILSON. A factory?

Colonel HAYS. A factory is one case that we hit underneath the trees, a building I would say about 80 feet long by 20 feet wide, that was completely obscured. We hit the area strictly on intelligence information. "It is here, hit it, and destroy it."

Other concentrations—some of the missions I was on, close air support, with the Vietnamese troops, I think the closest one that I was ever on was they had half the town and the Vietcong had the other

half. They had one side of the main street, and we took out the other side where the Vietcong were. This is about as close as I could say, just across the width of the street.

Mr. WILSON. Did you have any targets of troop concentrations, 100 people or so?

Colonel HAYS. Yes, sir.

One particular case there at Quang Ngai, we caught a group of them in foxholes, that had entrenched themselves right out in the middle of an open field, in long hedgerows. Here we had the troops that we could see, and after we napalmed and rocketed, they started to run, and then you could pick them off with your cannons.

Mr. WILSON. Any other particular targets that you can think of—water tanks, or anything like that?

Colonel HAYS. Well, an interdiction type target in the Vietcong area, we have hit areas of food supply, and things like that.

Mr. WILSON. Ammunition dumps?

Colonel HAYS. Yes, sir; everything that is interdiction type target, we hit.

Mr. WILSON. Wouldn't you say most of the targets you specified here, except for the foxholes, and the trenches, and so forth, are pretty much a tactical target, or even strategic targets? A factory would be more a strategic target than a close air support type.

In other words, you know where it is. You don't have to have any troops nearby, necessarily, to knock it out. And I have no—I mean, I think the fact they are located and knocked out on a regular basis is obvious an ideal. But what we are interested in, really, I would think, would be to try to develop the proper airplane that could operate closely with the troops, like the O-1's, and admittedly the O-1 would be useless as a carrier of any consequence of any ordnance. But an airplane that would be able to fly fairly close with the troops. When the troops moved 100 yards forward, they would know it, and move 100 yards—move their target 100 yards, rather than a pre-planned target, where you had a chance to really get an idea where it was, and so forth.

I assume in your duties you pretty well knew about how these airplanes operated, where they came from. Where did the O-1's come from, that are used with the troops in these situations?

Colonel HAYS. The ones that we flew with, they were out of Da Nang and also out of Bien Hoa, and they would have smaller strips that they could go into, like the Quang Ngai strip, where they could refuel.

However, many of these—

Mr. WILSON. How long a runway did they need to operate on?

Colonel HAYS. I would say it would work on a 2,000-foot strip most of the time. There are dirt strips.

Mr. WILSON. How many miles would that be from where the troops were, the frontline?

Colonel HAYS. The Quang Ngai operation of course is right at Quang Ngai. But this was an area where the Vietnamese were not on the offensive. The Vietcong were on the offensive, and they were on the defensive there. As a matter of fact, it was just a matter of trying to secure that particular spot.

Mr. WILSON. Did you have any—did you know any of the pilots that flew the O-1's?

Colonel HAYS. Yes, sir.

Mr. WILSON. Did they feel closer to the operation, perhaps, than the pilot that was stationed at Da Nang? Didn't they move closer with the troops? They had the job of trying to find out what the problem was, didn't they? In other words, where the target was specifically? Did they ever actually go up as frontline observers and get an idea from the ground, perhaps, what they were trying to mark?

Colonel HAYS. I suppose so. I am not entirely familiar with their operation. The O-1 pilots that I knew were stationed either at Bien Hoa, right with us, we talked to them after the mission, and before the mission, and the same way at Da Nang, because they are near corps headquarters.

Mr. WILSON. I am trying to find out where they got their information on exactly the target, and the procedure that was used to instruct them on what the target today was. How did they get it, just from radio contact?

Colonel HAYS. Well, they have—I hate to get into their area of operation, but our frag orders for the following day operations are identical. In other words, they task them to go to a specific place, contact the ground echelon, for example, and this is the unit they are going to work with that day. They tell them where to go and what to do, and the same thing for us.

Mr. WILSON. This is old hat to you but we are trying to get a little better picture for all of us as to specifically how you conduct these operations.

Colonel HAYS. Yes, sir.

Mr. WILSON. The details are interesting and important to us, I think.

Colonel HAYS. They obtain a preplanned strike, the exact coordinates on a map, where to go, frequencies to contact people on the ground, the call signs, all of this is in one single frag order. It also shows what fighters we have, but it doesn't show what Army units are there, actually. In other words, how many troops or anything else we are in support of.

Mr. WILSON. In other words, when they are flying over the target, they are getting pretty detailed information of it.

Colonel HAYS. They have detailed feed-back, back and forth between the ground commander and the forward air controller who is in the air.

Mr. WILSON. Would a typical message from the ground say there are 30 men along that hedge row, and then they are spread out about 10 feet apart?

Colonel HAYS. Well, they would say, don't bomb past this line, for example, or next to this creek on the north side of the creek, our friendly forces are on the north side of the creek, or there is a road, or something, or some geographical point we could recognize. Here again I would like to point out to operate with ground troops it isn't necessary to have an airborne forward air controller, as long as we can tell where the friendly forces are and where the enemy is. In other words, all we need is for somebody to tell us where do you want us to put it. Whether he is on the ground or in the air is relatively immaterial, as long as we can identify it.

Mr. WILSON. Of course, in looking ahead, at the types of terrain and so forth, you might need close air support for, isn't it conceivable you have a mobile force either retreating or advancing—hopefully advancing—with the front line changing constantly, and maps are really of little consequence, do you think it would be worthwhile to have the type airplane that perhaps could fly from the same modest strips, or short strips, that the O-1's can fly from, closer in, in other words, and be able to, rather than to take secondary information, get it right from the front lines and then unleash their ordnance on it?

Colonel HAYS. This thing moves very fast. Whether you have an O-1 or a bombing type of airplane, C-47, kicking the bombs out the door, or whatever it is, is immaterial. You've got to have contact all the time with the people on the ground, because they are moving all the time. Even the ground people can't keep track of themselves in many cases.

Mr. WILSON. Well, as a pilot of an F-100 you didn't have any contact with the ground at all, did you? Yours was always through the O-1's?

Colonel HAYS. In Vietnam it has always been through the O-1, because it is easier to get around. In other words, whether it was an O-1 or helicopter—I worked with a lot of helicopters, too—the people sit up there and coordinate the strike with you, where they want it. I have done a lot of work with forward air controllers on the ground. They normally have to get an advantage point, so to speak, up on a hill, where they can view the surrounding terrain in order to describe it to you. The O-1 is just another means of putting this guy up on a pole so he can see down where the enemy is. The field artillery uses the same setup for spotting artillery drops and correcting them.

Mr. WILSON. You have to admit we have a rather unusual situation in Vietnam on both sides. In the first place, we don't have any enemy in the air against you. If you had the type of sneak and run enemy air that could perhaps knock down your O-1's, you would be in a pretty tough spot to try to depend on the F-100, wouldn't you?

Colonel HAYS. No, sir.

Mr. WILSON. In other words, you maintain that, again, the O-1's are just sort of an unnecessary link in the chain?

Colonel HAYS. The O-1's is a bird dog affair, and an assist. It speeds up the operation, marks the target for you where you can get in and get out quickly if you want to. The F-100, as far as I am concerned, I never found a target, in North or South Vietnam, that I couldn't handle.

Mr. PIKE. What do you mean by "handle"?

Colonel HAYS. I mean strike and hit accurately.

Mr. GUBSER. Without the O-1?

Colonel HAYS. With the O-1's. In other words, I needed somebody to identify where he wanted me to hit, unless it is a strategic target. I can find it on a map just as well as anybody else can. But it takes time to do this. If you take an F-100 pilot, of example, that is on alert, and you scramble him off, he will contact the radar site in most cases in order to save time, and he will direct him directly to it. Unless you know about where this operation is, then you rendezvous with somebody or contact a man on the ground, and then hit the target. It is just that simple.

Mr. PIKE. How would you mark the target without the O-1 in a jungle environment?

Colonel HAYS. If the ground forces are in contact with the enemy, they should be able to release smoke or put up panels of some kind to identify the thing.

Mr. PIKE. Release it how, you mean on the target area, or where they are?

Colonel HAYS. Where they are, and from where they are then they can direct you to where the enemy is, or they use, they have in Vietnam used a mortar round to mark the target. In other words, they shoot a white phosphorous round to mark the target and it is just as good a marker as the airplane marker.

Mr. PIKE. When did the O-1 come into the Air Force?

Colonel HAYS. I don't know.

Mr. PIKE. Have they always had them as far as you remember?

Colonel HAYS. Well, in the Korean war we used a different type of airplane. We used a T-6, it is just an available type of airplane actually.

Mr. WILSON. Are these O-1's operated by the Air Force or the Army?

Colonel HAYS. The Air Force.

Mr. WILSON. The Army doesn't have any?

Colonel HAYS. They have them. We fly our own over there, and we borrow theirs occasionally.

Mr. WILSON. It says in the book they are from the U.S. Army. Evidently they were Army originally?

Colonel HAYS. They were Army; however, they transferred over to the Air Force.

Mr. PIKE. They thought the Air Force needed some, even though you don't think they are essential to the operation?

Colonel HAYS. What I am saying is if a target is identified, it isn't essential to have an O-1 go up and mark it for you. Anybody can mark the target, and a jet aircraft can hit it. But it works a lot smoother to have the capability with an O-1 to go out and identify the target, because you can move airplanes in a lot faster.

Mr. WILSON. Wouldn't you agree that what you have been describing, the operations you have been describing, and that Captain Sands has described, certainly would all come under the category of air support? You are vitally concerned. But really, would you call all those operations close air support? You are really mixing in a lot of strategic bombing with your air support in your operations with the F-100's, weren't you?

Colonel HAYS. In the role; yes, sir.

Mr. WILSON. You have the combined support of air support and close support, right?

Colonel HAYS. We had interdiction and close air support. And in some cases we were—in North Vietnam—we were flying air-to-air role, air escort role.

Mr. WILSON. In your broad category of air support, if you broke down part of it into what you classically call close air support, I think the one example you used was a person where you saw the troops, and so forth, what percentage of your total operation was close air support of that type, and what percentage was preplanned strategic type, headquarters, or ammunition dump, or factory?

Colonel HAYS. Yes, sir. Close air support can be preplanned. And is preplanned in most cases. We actually need more of it. You will have fewer brush fires to put out if you do this sort of thing, if you have the airpower all the time available for you.

Mr. WILSON. That leads up to the important question we have asked other witnesses here: Do you think we have had sufficient airpower for the job in Vietnam? Do we have enough airplanes there to really do the job that is necessary?

Colonel HAYS. That is a very broad statement.

Mr. WILSON. I know it is, but in your opinion?

Colonel HAYS. We had limiting factors, we had a limiting amount of Army personnel, or Marine ground personnel actually going out and making contact with the enemy. As this increases, you will need more airpower.

Our primary limitation, as far as I could see, was the lack of suitable airstrips to operate from, and places to park the airplanes. We could use more. I am sure we can use more, but you've got to have more people out there that have the requirement.

Mr. WILSON. We had some witnesses here from the Army who said they didn't feel they were getting enough A-1's, and some of these things, they prayed for more of them, and yet you feel the limiting factors of logistics and so forth are one of the reasons we don't have enough airplanes in there?

Colonel HAYS. This is my opinion; yes, sir. I am not sure, or I don't know whether you asked the witnesses whether they actually preplanned and requested the air support early enough. In other words, you can't just snap your fingers and say "airpower," unless somebody somewhere has made arrangements for this airpower.

Mr. WILSON. You can't preplan in a tactical situation, either, sometimes. You have a breakthrough. For example, one witness testified about an airdrop, or a movement of, what was it, a brigade, or something.

Mr. PIKE. Battalion.

Mr. WILSON. Battalion. This is a time when you don't do much preplanning, you have to have it there, fast and ready.

Colonel HAYS. Somebody back down the line—and I am speaking of headquarters level—has to say, "All right, I am going in with an operation. I need so much airpower to support this operation." If no one asks, say a squadron, or one base, or anybody to do this, the airplanes just don't sit around and wait for somebody to get into trouble, unless some commander directs this, you see.

Mr. PIKE. This was the Dong Xoai situation, Colonel, and I think in that situation they used everything that we had in Vietnam, otherwise they wouldn't have been flying you people down from Da Nang to back it up.

Colonel HAYS. Yes, sir.

Mr. PIKE. And using everything they had, they ran out.

Colonel HAYS. Well, I would hate to second guess, but I don't know whether the Army commander considered the availability of airpower before he dropped his people in there, you see.

Mr. PIKE. There is no question about it, but what you are saying is the availability of airpower would be a limiting factor on his ability to conduct this operation.

Colonel HAYS. Yes, sir. In other words, he should not overextend himself over his ability for support.

Mr. WILSON. I thought it was interesting you made the point as our operations increase more troops are involved, we are going to need more airplanes to provide this.

Colonel HAYS. Yes, sir.

Mr. WILSON. I wish we could get some statistics, Mr. Chairman, which would show at the time of Dong Xoai how many airplanes were available and the number of ground troops concerned, and compare them with what the total ground troops would be and what the eventual needs in the air might be.

That is all, Mr. Chairman; thank you.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. Colonel, how fast do you make a bombing run in the Air Force?

Colonel HAYS. Well, a standard attack, with guns, and dive-bombing release, is around 400 knots.

Mr. ICHORD. 400 knots?

Colonel HAYS. We can go higher than this. I think, as Captain Sands mentioned, if you have a flat target, where there are no trees or anybody else, just structures, for example, Vietcong structures are there, you want to wipe out the whole bunch of them, you go as fast as you can and spread the napalm further, but 400 to 450 knots is what we do.

Mr. ICHORD. You didn't have to worry over there about too much antiaircraft fire.

Colonel HAYS. There are isolated reports, while I was there, of some so-called antiaircraft, in other words, 37 millimeter, some airburst type of antiaircraft weapons, but I never observed any of them.

Mr. ICHORD. How fast will you cruise to your target area?

Colonel HAYS. Our cruise with a full load of bombs is around 430 knots true airspeed. And returning, of course, it gets up to about 495.

Mr. ICHORD. Most of your targets, most of your operations in South Vietnam were fairly close to where your airfield was; were they not?

Colonel HAYS. No, sir.

Mr. ICHORD. How far?

Colonel HAYS. Well—

Mr. ICHORD. You went from Da Nang—

Colonel HAYS. Sir?

Mr. ICHORD. That is about as far as you would get away from your field, down at Dong Xo Ai?

Colonel HAYS. I made many missions from Da Nang all the way down around Saigon, all the way down, a little further than Saigon.

Mr. ICHORD. How many miles is that, for the record?

Colonel HAYS. It is about 330 nautical miles.

Mr. PIKE. From Da Nang to Saigon?

Colonel HAYS. Yes, sir. In some instances we used air refueling, put a tanker en route, and used the tanker, and hit farther south than that. This is one nice feature about the F-100. When we are talking about time on station, or ability to stay on station, all you have to do is put a tanker there, and you can stay all day if you want to.

Mr. ICHORD. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Gubser.

Mr. GUBSER. Colonel, we note that the Army has O-1's in inventory, and so does the Air Force. Have you ever worked with an O-1 that was flown by an Army pilot?

Colonel HAYS. I don't believe so.

Mr. GUBSER. Is this done at all?

Colonel HAYS. No, sir; I don't think it is over there. There are O-1 pilots flying around, controlling Army air strikes, we use Air Force officers for controlling.

Mr. GUBSER. Do you happen to know—and of course I am asking you about somebody else's business—do you happen to know if this is true of the A-1 squadrons, too?

Colonel HAYS. Sir, I have no knowledge of the A-1 operation, that intimate knowledge.

Mr. GUBSER. Thank you.

Mr. PIKE. Mr. Nedzi.

Mr. NEDZI. Did you say that was not visible from the air, that which you blasted in the jungle?

Colonel HAYS. No, sir.

Mr. NEDZI. How did you acquire the target?

Colonel HAYS. We didn't know exactly where this thing was, only an intelligence report saying on top of this mountain there was a little bow, and we bombed the perimeter in the trees around an open field. By process of elimination we picked up the factory that was there, the munitions factory.

Mr. NEDZI. The only thing you had were map coordinates, is that it?

Colonel HAYS. Yes, sir.

Mr. NEDZI. No one marked it for you in any way?

Colonel HAYS. We had the O-1 there, that pointed out the particular field. They said, this is the one right here. He didn't necessarily have to put a smoke rocket on it, but he said, this is it right here, and described there is a peak here, and the field comes to a point, bomb at this particular point, you see.

Mr. NEDZI. Yes. I have no further questions, Mr. Chairman.

Mr. PIKE. Mr. Chamberlain.

Mr. CHAMBERLAIN. Mr. Chairman, perhaps we could inquire of the colonel here about the night operations to the extent that he is familiar with them.

What percent of your operations were in fact night operations, if you know?

Colonel HAYS. Mr. Chamberlain, first I would like to clarify that I personally am not what we call night qualified. However, I had six pilots in the squadron at the time that were, and I had augmentation of other pilots from other resources.

Mr. CHAMBERLAIN. Before you go on, right there, let's stop.

Define "night qualifications" for us. Of the pilots that you had there how many were night qualified then?

Colonel HAYS. I had approximately one-third of my pilots that were qualified for night operation.

The way you become night qualified, other than just say go out and do it, if you need to, we have an operations that operated out of McCoy Airbase in Florida, and we would take our people on a temporary duty down there and go through a training program that lasts approximately a week, and around 12 to 15 missions at night, dropping flares

ourselves, shooting guns, dropping bombs, everything, and then we consider the man qualified. In other words, this is on a scored range, shooting at scorable targets. When a man can qualify, we say, all right, you are qualified. You have met the requirements.

The requirements, I would like to add, are the same requirements, minimum number of hits on the target, and so forth, at night, as it is in the daytime. There is no difference at all.

Mr. CHAMBERLAIN. About a third of your boys in your squadron out there were night qualified?

Colonel HAYS. Yes, sir; at that time. Since return, we have got more. And I think before another unit goes back probably every one will be night qualified.

Mr. CHAMBERLAIN. Now, I interrupted you to have you explain this to me. Could you go on, then?

Colonel HAYS. Yes, sir.

The night operations that we had—we had people standing on alert, and I want to add, again, we did not do this, or there was no requirement of the intensity of the war, it didn't build up into such a state that we needed to do this in our particular area at Da Nang until about the middle of June. Actually, the end of May, we had some operation here in the country, because Quang Ngai was the 30th of May, I believe was when it started, and we, for 3 days, maintained the night operations, all night long, here at Quang Ngai. That is, people either on alert, or dropping at the time. Then the rest of them, as far as our operation was concerned, our particular squadron, which is 18 airplanes—we are talking about 18 airplanes, and about 25 pilots—or 24 pilots—was in fort defense. If the A-1's that the VNAF were flying, or the Marines who were there, they were tasked for this particular job, if they got more than they could handle, then they called on us.

We were used primarily for other missions. In other words, it is hard for one particular squadron to fly day and night together all the time.

Mr. CHAMBERLAIN. Did you have requests for night flights that you know of that you couldn't put in the air?

Colonel HAYS. No, sir.

Mr. CHAMBERLAIN. They were always available?

Colonel HAYS. Yes, sir.

Mr. CHAMBERLAIN. A final question here about communications.

Do you have any problems in that you care to outline for the committee, or any comments at all about its inadequacy or adequacy?

Colonel HAYS. As far as the O-1 is concerned, it has a limited number of frequencies—I mean different channels you can talk on. So consequently I believe we need definite improvements in the communications between the F-100's and the O-1's.

I also think there should be compatible radio equipment between the ground commander and the strike aircraft, so if something should happen to the O-1 aircraft, then we can fall back to the ground commander to identify the target and continue the strike.

Mr. CHAMBERLAIN. Has that ever happened, to your knowledge, Colonel, where something has happened to the O-1?

Colonel HAYS. I have had cases—

Mr. CHAMBERLAIN. Knocked out?

Colonel HAYS. Not shot down.

I have had cases—I have seen them or heard them when they were hit, but they actually weren't shot down. But I have had considerable radio problems with them, because I don't think their radio is the best. I think they should get a better radio.

Mr. CHAMBERLAIN. I appreciate your contribution here.

Mr. PIKE. Colonel, at the present time, I guess this is known to be a fact—I don't think we ever got it in the record—the radios in F-100's are not compatible with the radios on the ground; is that correct?

Colonel HAYS. This is correct, sir. We have one radio which is a UHF, ultrahigh frequency radio. The O-1 has two radios; they have an FM radio, and the UHF radio, but a small number of channels. In other words, I think they can operate possibly—

Mr. PIKE. They have to go to the FM radio to talk to the ground and to the UHF radio to talk to you. I wanted to get that in the record.

Colonel HAYS. Yes, sir.

I think we should be able to talk to all at the same time.

Mr. PIKE. I could not agree with you more.

I think it is rather fantastic in the Vietnamese war for the Air Force and the Army to discover they couldn't talk to each other on their radios.

Mr. WILSON. Along that line, Mr. Chairman, how could you eliminate your O-1's?

Mr. ICHORD. Additional radio.

Mr. WILSON. Wait a minute.

Colonel HAYS. No, sir. In tactical air command the concept has been for ground support to use an Air Force officer, a team, with the man on the ground, who can communicate, but not all Army units in Vietnam are using this type of equipment. We don't have the Air Force people with them. So every little company that goes out doesn't carry this radio around with them, so we don't have a capability to actually talk.

Mr. WILSON. In other words, rather than letting the Army move in on you, you are going to move in on the Army; is that it?

Colonel HAYS. Yes, sir. You will see, if you will refer to this chart, this man who is standing behind the man with the gun, is the forward air controller, and he has this radio equipment, and can talk to us, but when he is not along, we don't have this capability.

Mr. WILSON. He is an Air Force officer?

Colonel HAYS. He is an Air Force officer, yes, sir.

Mr. CHAMBERLAIN. Can anything be done about this, Mr. Chairman, right now?

Mr. PIKE. Yes, there is, and we will get to this point later on. This is one of the things Dr. Cheatham has been working on for some time. I guarantee that it was a shock to me when I learned that the Air Force and the Army were unable to talk to each other.

Mr. Irwin.

Mr. IRWIN. No questions, Mr. Chairman.

Mr. PIKE. Mr. Evans.

Mr. EVANS. As a matter of practice, Colonel, in the field, when you are in Vietnam, would you find the time to have sessions with Army commanders in regard to air support?

Colonel HAYS. Sir, I, at my level, have never had any direct contact with them, other than on a social basis.

Mr. EVANS. Would there be any officers in the Army or Air Force who would get together and talk about, "How are we coming? Are we having good air support? Are we not?"

Colonel HAYS. Yes, sir; there is an air operations center which has an Army representative, Army representatives, and Air Force representatives, and these people are the ones that do the planning for the joint operations.

Mr. EVANS. Are there any reviews of the air support that has been given of one mission or another, on one problem or another?

Colonel HAYS. I am sure every mission is critiqued at this level. However, down at our particular working level, you must remember it is a small piece of this pie sitting down on the airbase delivering the ordnance on the target.

Mr. EVANS. From your experience, in addition to your comments on communication, do you have any suggestions as to what progress can be made, or how it can be made better?

Colonel HAYS. Made better?

Mr. EVANS. Yes.

Colonel HAYS. It seems to me the Air Force has to be in all the major planning, right from the very beginning. And the Army has to specify what their requirements are, what they want, what they are going to do. If you don't do this, you can't expect the Air Force to be responsive. It is a joint operation.

Mr. EVANS. Let's say on those occasions where there has been pre-planning, and you are aware of what the Army is going to do and the Army knows what the Air Force is to do, given such a situation, in close tactical air support, and in addition to your remarks on communications, is there anything else you need to improve, or do you think with the exception of communications, that it is a perfect situation, for close air support?

Colonel HAYS. Well, sir, there is always a chance for improvement. We are going to improve all the time.

Communications will improve. Our coordination will improve. And appreciation by the Army personnel of capabilities of the air power, and what its limitations are, too, this is something that must be developed.

Mr. EVANS. Are we lacking anything you feel we ought to have in terms of equipment and facilities?

Colonel HAYS. Yes, sir. I think we are operating in a very unusual case. When you first move to a base, like Da Nang, we were equipped to handle about 475 hours a month. We had our supplies geared up for this. And then immediately we were tasked to fly about 1100 hours, you see, so the supply support, and all this stuff has to get cranked up to support an operation this big.

Mr. EVANS. Outside of such a situation, which gears up your movement at a greater speed, outside of that, I am talking basically in terms of equipment and ordnance. Do you need things that you don't have?

Colonel HAYS. Well—

Mr. EVANS. Do you need improvement on the things that you do have?

Colonel HAYS. The F-100, for example, has the capability to carry about as much weight as the A-1. In other words, within 500 pounds,

total weight, because we are showing here 3,000 pounds of bombs, but we are not showing that it also has over 4,200 pounds or 4,400 pounds of fuel on board, you see. This can be changed into bombs, if you want to.

Also, we are limited right now because we are using just the four stations, because the F-100, due to its low tail, you have to forcibly eject the munitions off of the airplane, so it doesn't hit the tail. So with this limitation, we have only been able to carry one bomb on each station. But if you would develop a rack, you could have more capability to carry more smaller bombs. In other words, you could equal a total bomb load, or variety of loads that the A-1 has, for example.

So we need development in this area. They are working on this. But I don't have any in my hand today that I could put on my airplane. This is something that we need.

Mr. EVANS. You indicate you don't need any better equipment for target identification, is that correct?

Colonel HAYS. For target identification, in Vietnam, I think the white phosphorus rocket is about the best that I have seen.

When you get into closer contact with the ground forces, these procedures are already set up, designed to where we can get the identification. I am sure the Army, working underneath a jungle canopy, is going to have more of a problem trying to identify where they are.

Essentially I think we have a good system, if we just make the thing work.

Mr. EVANS. Any good equipment?

Colonel HAYS. Good equipment, yes, sir.

Mr. EVANS. Thank you.

Mr. PIKE. Mr. Blandford.

Mr. BLANDFORD. Just one question, Colonel.

You have been flying for 23 years, according to your record, everything from P-40's to jets, and transport aircraft, and everything else.

Colonel HAYS. Yes, sir.

Mr. BLANDFORD. Have you ever attended any joint Army-Air Force courses on close air support?

Colonel HAYS. Yes, sir.

Mr. BLANDFORD. Where do they hold those courses?

Colonel HAYS. Hurlburt Field.

Mr. PIKE. Where is that?

Colonel HAYS. Hurlburt Field, near Eglin Air Force Base, Fla.

Mr. BLANDFORD. That is a joint school?

Mr. HAYS. Yes, sir.

Mr. BLANDFORD. How long is that course?

Colonel HAYS. Well, for commanders, it runs a week. For forward air controller, it runs about 3 weeks.

Mr. BLANDFORD. About 3 weeks?

Colonel HAYS. Yes, sir.

This is the nonflying stage of it. I think the thing has been expanded now. I have been away, of course, but I think it has been expanded now to include training of the airborne, forward air controller in the same program.

Mr. BLANDFORD. How much of your experience from the Tactical Air Command, how much time was devoted to the close air support problems, as distinguished from interdiction, or tactical—the distinction we make between tactical support as an overall description, and close air support as being in contact with ground troops?

Colonel HAYS. Well, I would say approximately 20 percent. In other words, this is a rough thing. Twenty percent is probably channeled directly down the line, close air support, with troops. All this other massive amount of training we get of delivering, strafing, dive-bombing, and all, is strictly close air support.

Mr. BLANDFORD. How long have you been involved in close air support, yourself?

Colonel HAYS. Myself?

Mr. BLANDFORD. Ever since the P-40 days?

Colonel HAYS. Yes, sir.

Mr. BLANDFORD. As the chairman has indicated, it has taken us 23 years, and we still haven't, up until now, the Army and the Air Force have not agreed upon the radio that they can both use jointly. Doesn't that seem kind of strange to you?

Colonel HAYS. No, sir. The Air Force has the radio equipment, as I explained before, available, but I don't think that you want to have every GI down there on this radio. There would be so much chatter you couldn't possibly do it.

Mr. BLANDFORD. Are these radios so limited in their wavelength or their bands that you can only—

Colonel HAYS. Basically, they have an AM, FM, VHF, UHF.

Mr. BLANDFORD. You have only got four?

Colonel HAYS. This concept—I am not saying this is it—but in our particular UHF band, we have got over 1700—about 1710 or 1750, frequencies we can operate on.

Mr. BLANDFORD. Obviously it is not too much for a man to carry; it can be carried on one person's back. Have you noticed at any time the Vietcong—or have you ever heard of the Vietcong intercepting or attempting to vector in any aircraft because they picked up your radio communications and have our communications systems?

Colonel HAYS. No, sir, I have not experienced this myself.

Mr. BLANDFORD. Have you heard of it?

Colonel HAYS. I haven't heard of it.

Mr. BLANDFORD. Thank you, Mr. Chairman.

Mr. PIKE. If we don't put an Air Force man on the ground with one of the Air Force's radios, you can't talk to the ground troops, is that correct?

Colonel HAYS. That is correct.

Mr. PIKE. So what the Air Force is saying, we have got the radios. If you want to talk to us, you have got to take one of our men down and put him with your troops on the ground.

Colonel HAYS. Whether this would be a fair statement or not, I couldn't say, the particular way you phrased it.

In other words, all I would like to say from my level in this system, is that I don't have the capability. The F-100 can't talk to the man on the ground.

Mr. IRWIN. Unless you have an Air Force guy there?

Colonel HAYS. That is right. Why we don't, I would like to beg off on that one.

Mr. PIKE. Why we don't, I think there will be a lot of talk on that.

Mr. IRWIN. You don't have to answer.

Mr. PIKE. If there aren't any further questions, thank you very much, Colonel Hays.

Tomorrow General Thrash will be champing at the bit here to tell us how the Marine Corps conducts its operation. Tomorrow we are going to have the Marines testify on the subject.

Mr. WILSON. I have one question.

Mr. PIKE. I am sorry.

Mr. WILSON. When you were flying out at Bien Hoa, were you closer to the frontlines, or where the troops were, the friendlies?

Colonel HAYS. I was closer to the American forces.

Mr. WILSON. Yes.

Did you work a relatively small area at that time?

Colonel HAYS. At that time we were working primarily in zone D. However, there are other operations on down in the delta that we operated, around Can Tho.

Mr. WILSON. You met some of these army types socially; you mentioned social contact?

Colonel HAYS. Right.

Mr. WILSON. Yet you never once had an official briefing or critique on the joint problems of air support?

Colonel HAYS. Not at my level.

Mr. WILSON. I am not blaming you.

I was wondering if anybody suggested, since you had been trained over in the States to work together with the Army, when you actually got out in the combat operation, you just lost communication with them?

Colonel HAYS. I think the primary thing is we were all so busy fighting the war we didn't take the time out.

Mr. WILSON. This is not important at all—I am not being critical, believe me, Colonel. I admire tremendously what you have done and what all you men have done. I think a cog has slipped in this whole operation, and we have to find it somewhere.

Mr. PIKE. The meeting is adjourned.

Thank you very much.

(Whereupon, at 11:56 a.m., the subcommittee was adjourned to reconvene at 10 a.m., Wednesday, September 29, 1965.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
SPECIAL SUBCOMMITTEE ON TACTICAL AIR SUPPORT,
Washington, D.C., Wednesday, September 29, 1965.

The subcommittee met at 10:15 a.m., Hon. Otis G. Pike (chairman of the subcommittee) presiding.

Mr. PIKE. The committee will come to order.

Mr. Marshall, will you call your first witness here today.

Mr. MARSHALL. Yes, Mr. Chairman. The first witness is Capt. David A. Ramsey, U.S. Marine Corps.

(The biography of Capt. David A. Ramsey, U.S. Marine Corps, is as follows:)

BIOGRAPHICAL SKETCH OF CAPT. DAVID A. RAMSEY

David A. Ramsey was born in San Francisco, Calif., on April 19, 1932. He has served continuously since September 1950 in the U.S. Marine Corps.

Enlisting as a privet in 1950 he saw action in Korea, served at the American Embassy in Stockholm, Sweden, and was stationed with the 2d Marine Division with the rank of sergeant when he was accepted for a commission as a meritorious NCO. Since being commissioned in 1955 he has commanded three rifle companies and been a battalion operations officer. His experience includes parachute reconnaissance, amphibious reconnaissance and parachute pathfinding. Captain Ramsey has been to 10 resident service schools, most recent of which was the U.S. Army Unconventional Warfare School from which he graduated first in a class of 145.

Captain Ramsey is presently serving as the commanding officer of Company I, 3d Battalion, 3d Marines which arrived in Chu Lai, Republic of Vietnam on May 19, 1965.

He has participated in Operations Starlight, Thunderbolt, and Golden Fleece.

STATEMENT OF CAPT. DAVID A. RAMSEY, U.S. MARINE CORPS

Mr. PIKE. Captain Ramsey, when did you leave Vietnam?

Captain RAMSEY. About 4 days ago, Mr. Chairman.

Mr. PIKE. And what was your position in Vietnam?

Captain RAMSEY. Commanding officer of Company I, 3d Battalion, 3d Marines, sir.

Mr. PIKE. How long had you been over there?

Captain RAMSEY. We had been in Vietnam since May 17, sir.

Mr. PIKE. I notice you are parachute qualified also.

Captain RAMSEY. Yes, sir.

Mr. PIKE. You didn't do any of that in Vietnam, did you?

Captain RAMSEY. No, sir.

Mr. PIKE. They haven't any Marine parachute operations?

Captain RAMSEY. Not to my knowledge; no, sir.

Mr. PIKE. Would you tell us about Operation Starlight and the role that airpower played in it, from your point of view, from the ground point of view. What did you observe of air support in Operation Starlight?

Captain RAMSEY. On Operation Starlight I was the Battalion—

Mr. PIKE. For the record, let us talk about what the operation was, essentially.

Captain RAMSEY. I was the battalion operation officer on that particular caper, and the operation was a combined amphibious, heliborne landing. One battalion landed by sea, which was my battalion, and one battalion landed by helicopters, which was the 2d Battalion, 4th Marines. It was thought to be a relatively routine search and destroy operation initially, and by noon—we landed at about 6:30 in the morning, and by noon we had our hands full.

And so they brought two companies of another battalion ashore, the 3d Battalion, 7th Marines, and the rest of the battalion was landed the following morning, D plus 1.

Mr. PIKE. When you say "We had our hands full," exactly what did you run up against?

Captain RAMSEY. Well, our battalion ran into an estimated 400 or 500 of them in concentrations. They were all dug in; they were well

entrenched, extremely well entrenched; and they had quite a bit of tenacity. They held on. They fought well.

Mr. PIKE. What kind of weapons did they have?

Captain RAMSEY. 81 mm. mortars, 57 mm. recoilless rifles, 60 mm. mortars, an undetermined number of rocket launchers, both of Soviet and American make, and I believe they had some 75 mm. recoilless rifles, because they knocked out a couple of our tanks, and the holes in the turrets appear to be of 75 mm. caliber. I think they had some of those, although I didn't see any.

And they held on and we had to just burn them out.

Mr. PIKE. Was it any part of your job or assignment over there to order air support or request air support?

Captain RAMSEY. Yes, sir. We were using air almost continuously. Airpower was our most responsive supporting arm on that particular operation.

Mr. PIKE. Was airpower used before the landing?

Captain RAMSEY. Not in our battalion zone of action, sir.

Mr. PIKE. Now tell me when you first decided that airpower might be necessary and exactly how you communicated this decision in order to get it.

Captain RAMSEY. Well, we started preparing objectives with air. Artillery—if I may digress, artillery—we had a little trouble with communications with our artillery people. So we turned to air.

Mr. PIKE. By communications you mean your—this was a radio, or a ground wire?

Captain RAMSEY. It was a radio, sir. So we turned to air. And air was on station and it was just a matter of calling it.

Mr. PIKE. You could call it from the ground?

Captain RAMSEY. Yes, sir.

Mr. PIKE. No problem communicating?

Captain RAMSEY. No, sir.

Mr. PIKE. It may seem like a very obvious question, but it isn't, Captain. Go ahead.

Captain RAMSEY. We have had problems communicating at times, sir, but on this particular operation we just literally snagged them out of the sky. And we commenced using aircraft to prepare objectives with napalm, and we used aircraft all of D-day.

Mr. PIKE. Did you personally call for the aircraft?

Captain RAMSEY. I did not personally talk to the pilot.

Mr. PIKE. Right.

Captain RAMSEY. But I did personally call for the aircraft.

Mr. PIKE. I see. And to whom did you relay your request?

Captain RAMSEY. To our forward air controller.

Mr. PIKE. And was the forward air controller with you?

Captain RAMSEY. Yes, sir.

Mr. PIKE. I mean in proximity, so that you could talk to him directly?

Captain RAMSEY. Right next to me.

Mr. PIKE. Right. OK.

You said to the forward air controller "Get us some planes." Did you request any particular kind of armaments?

Captain RAMSEY. Yes, sir. We requested napalm.

Mr. PIKE. Napalm. And you say the planes were in the air. First all, how did you mark the target for the pilots?

Captain RAMSEY. We used two methods of marking the target. One method, white phosphorus, from a 3.5 rocket launcher.

Mr. PIKE. And that is a rocket launcher on the ground?

Captain RAMSEY. Yes, sir.

And the other method is with an 81-millimeter mortar, white phosphorus. But it is possible to run into problems using this because of the angle of fire, and the aircraft normally are rather low and you might have an accident.

Mr. PIKE. In other words, it is conceivable one of the mortar shells might knock a plane out?

Captain RAMSEY. It is quite possible, yes, sir.

Mr. PIKE. I have seen it happen.

How long was it between the time that you told the forward air controller to bring in the air before the air was there?

Captain RAMSEY. On Operation Starlight the time varied from 3 to 10 minutes.

Mr. PIKE. How close to your lines were the targets that you marked? How close to your friendly forces were the targets that you marked?

Captain RAMSEY. The ranges varied from 250 meters to a thousand meters.

Mr. PIKE. How would you characterize the air support you got on Operation Starlight as to how close they were to on target?

Captain RAMSEY. I don't remember seeing any airstrikes that were not on target.

Mr. PIKE. What sort of targets could you identify? Were they emplacements, or buildings, or was it just a matter that you knew that from a certain area you were drawing a lot of fire?

Captain RAMSEY. There were troop concentrations generally in villages or entrenchments. By this I mean trench lines.

Mr. PIKE. Right.

Captain RAMSEY. I can use an example. On D plus one we passed through a village heading toward the sea. It was our final objective. We passed through it rather easily. We got to the dune line overlooking the sea, and we commenced receiving fire from the rear. This was at the 250-meter range I was talking about.

Mr. PIKE. Right.

Captain RAMSEY. We turned around and—

Mr. PIKE. They had just been down in tunnels; is that it?

Captain RAMSEY. Yes, sir. Well, they were down in these elaborate systems of tunnels and caves and whatnot. And we turned around and we called air. [Deleted] and then we walked in and cleaned up.

But we could see the people shooting at us, and we were taking a fair amount of casualties from this fire.

Mr. PIKE. You could actually see the human beings and you could mark them very precisely at that range?

Captain RAMSEY. Yes, sir. As a matter of fact, we killed a few with the marking round.

Mr. PIKE. I see.

Tell us about the other two operations that I notice you participated in, Thunderbolt and Golden Fleece, and in particular what the—

Mr. GUBSER. Before you leave that.

Mr. PIKE. Pardon me.

Mr. GUBSER. Your air support was from Marine airplanes, was it not?

Captain RAMSEY. Yes, sir.

Mr. GUBSER. Were they carrier based?

Captain RAMSEY. No, sir; based at Chu Lai and Danang.

Mr. PIKE. They are flying A-4's?

Captain RAMSEY. F-4's and A-4's, Armed Hughies. Even the troop transport carrying aircraft got into the act.

Mr. PIKE. What was the effectiveness of the Armed Hughies?

Captain RAMSEY. As a strike aircraft, sir?

Mr. PIKE. Yes.

Captain RAMSEY. Limited on Starlight. We lost one.

Mr. PIKE. All right.

Captain RAMSEY. It was shot down by sniper fire, as a matter of fact.

Mr. PIKE. Were they carrying these 19-rocket pods?

Captain RAMSEY. Yes, sir, one on each side, I believe.

Mr. PIKE. Two 19-rocket pods, one on each side?

Captain RAMSEY. Yes, sir.

Mr. PIKE. Were you able to judge the effectiveness of that rocket fire against any of the targets?

Captain RAMSEY. Not on Operation Starlight.

Mr. PIKE. Tell us about these other two operations, Captain.

Captain RAMSEY. On Operation Thunderbolt I saw them fire these rocket pods.

Mr. PIKE. Tell us what—see, we have very little background in your code words, so tell us what the operation was, its objective, and its intention.

Mr. CHAMBERLAIN. Could we have the dates, too, Mr. Chairman?

Captain RAMSEY. I am a little foggy on the date, sir.

Mr. CHAMBERLAIN. Well, just roughly.

Captain RAMSEY. The Operation Starlight was in August, August 18. Operation Thunderbolt was in July, late July.

Operation Golden Fleece was early this month; as a matter of fact, it was the 8th of September, when the colonel got killed; 8th of September.

Now Operation Thunderbolt was a combined operation with the Vietnamese forces. There was a Vietnamese battalion, and there was a Vietnamese marine battalion and our battalion. And it was a search and destroy operation over an area where we thought there were some Vietcong. And it turned out to be pretty much just a long hot walk in the sun. We met very little opposition. As a matter of fact, we received fire just after departing the landing zone, and that was just about it. Ran into a couple of mines, but nothing serious.

Mr. PIKE. Was there anything to cause you to call an air support on that one?

Captain RAMSEY. No, sir.

Mr. PIKE. All right. How about Golden Fleece?

Captain RAMSEY. Golden Fleece we didn't use any air support other than Air Force escort for the helicopters on the landing. And we

had no occasion to call air strikes on Golden Fleece. We handled what we had up there with ground fire.

Mr. PIKE. The Starlight operation obviously received a great deal of publicity back here in the States. It was by and large very wonderful publicity, and I think it did everybody's morale a lot of good.

This is not really within the scope of this committee, but I can't resist asking you a question. We were advised by the press early in that operation that they thought we had approximately 2,000 Vietcong cut off on that peninsula. Eventually we were advised that I believe somewhere between 600 and 700 Vietcong were killed. What happened to the rest of them?

Captain RAMSEY. I think there were more than that killed, sir. But the people that were not killed I imagine just went underground and got away.

Mr. PIKE. You went over the top of them; they came up and disappeared, is that it?

Captain RAMSEY. More than likely; yes, sir.

Mr. PIKE. Would you tell the committee—I think this is pertinent to our investigation. Tell the committee about what you found in these caves and underground networks. The size of them and the layout and concept of them. Because this certainly has to do with the kind of armaments we have got to use.

Captain RAMSEY. These caves, Mr. Chairman, are mammoth things. They are very elaborately tunneled so that you can fire into the cave but there are enough corners and angles to the system of tunnels that the blast effect will not bother everyone in there.

Mr. WILSON. Are there any natural caves, or are they all manmade?

Captain RAMSEY. These are dug.

Mr. PIKE. Give us some dimensions for "mammoth."

Captain RAMSEY. Well, we ran into one tunnel that was about 700 meters long, probably 8 to 10 feet in height, and—

Mr. PIKE. How far underground? How much earth, if you know, between the surface and the top of the cave?

Captain RAMSEY. Oh, about 8 to 12 feet, sir.

Mr. EVANS. Reinforced?

Captain RAMSEY. Shored up; yes, sir.

Mr. EVANS. How?

Captain RAMSEY. Well, with bamboo; some of it doesn't even look like shoring. Twigs. But they weave it in there and pack it up against the wall in the cave.

Mr. PIKE. Mr. Wilson? Any questions?

Mr. WILSON. Yes. Captain, on your Starlight operation, as the chairman mentioned, you got a good press, and we are happy to see it.

But I recall one article that said it was a classic Marine Corps operation with amphibious, close air support, and so forth. Now, in the same article it mentioned that the Air Force had requested the control of the air in this particular operation, and there was a debate and the Marines refused to let Air Force control the air in this operation.

Are you familiar with any such request, or was that scuttlebutt, or was it known that Air Force wanted to provide the air cover for you?

Captain RAMSEY. No, sir; we didn't know anything about an Air Force request to control air.

Mr. WILSON. You had no knowledge of any Air Force request. I just wondered the source of the information for the story.

Captain RAMSEY. I hadn't heard anything of that. I was battalion operations officer at the time.

Mr. WILSON. What is your opinion of the helicopter, the armed helicopter as a basic part of close air support? Is it vital? Has it got prospects for the future?

You know we are talking about another improved armed helicopter as a possible weapon to use.

Captain RAMSEY. In my opinion, helicopters should be armed just for protection. However, I don't think that the armed helicopter—and this is an opinion—I don't think that the armed helicopter has a great future in close air support per se. It is too easily knocked out of the sky, for one thing. But I think that it is valuable in very limited missions: Suppressive fire for medical evacuations of casualties, reconnaissance, flushing fire sometimes possibly. But as a strike weapon, it is OK for very light work. But it doesn't pack the wallop that we need for concentrations of enemy.

Mr. WILSON. Now getting back to the air support that you got in the Starlight operation, you said the airplanes got there within 3 to 10 minutes.

How far did they have to fly from their operating base?

Captain RAMSEY. Well, the planes that came from Da Nang had to fly about 60 miles, I guess. I think that Chu Lai is about that distance south of Da Nang. The planes that came from Chu Lai only had to fly about 15 kilometers, or—no, about 20 kilometers, maybe.

Mr. WILSON. And obviously you were very happy with the air support you got. Can you give me proportionate numbers here, how many men were involved in your operation? You had a battalion?

Captain RAMSEY. We had a battalion of—effective strength was probably about 900 men, 900 marines. And there was another battalion involved, but it was in a different zone of action.

Mr. WILSON. There were no Vietnamese forces at all involved?

Captain RAMSEY. No, sir.

Mr. WILSON. This was a straight Marine operation?

Captain RAMSEY. Yes, sir.

Mr. WILSON. About how many airplanes provided air cover on the critical day?

Is it hard to say because they were shuttling back and forth?

Captain RAMSEY. I couldn't say, because they were in flights of four and two, and there were always—there just seemed to be always some up there.

Mr. WILSON. In other words, you think you had enough airplanes to do the job?

Captain BARNES. We did on that operation; yes, sir.

Mr. WILSON. Do you suppose we could get the figures as to the total number of airplanes involved? I am sure that is in the record.

You will not have to provide it, Captain, but I think we can find it for the record. I think it would be interesting to see the number of airplanes that did provide that type of coverage.

I think that is the only questions I had.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. Captain, what did you use to get the Vietcong out of the caverns that you were talking about?

Captain RAMSEY. White phosphorus, sir.

Mr. ICHORD. Wouldn't that have been an excellent place to use gas?

Captain RAMSEY. We did not have any available, Mr. Ichord.

Mr. ICHORD. Well, you wouldn't have been permitted to use it anyway, would you?

Captain RAMSEY. No, sir; I doubt it.

Mr. ICHORD. Well, wouldn't that be an excellent place, though, to use gas rather than any kind of explosive?

Captain RAMSEY. I think so. And I am not familiar with the policy on this.

Mr. ICHORD. What do the boys out in the field feel about the prohibition against the use of gas?

Captain RAMSEY. We haven't used it. But I personally would like to see it used.

Mr. GUBSER. Will you yield? When you say "gas," you mean the type of gas that isn't fatal?

Mr. ICHORD. Like tear gas.

Mr. GUBSER. Tear gas. Right.

Mr. ICHORD. Right. Of course.

Captain RAMSEY. This would be invaluable for cleaning out these bunkers, because when the Marines go into a village, the population goes underground, and this includes the women and children and the village elders. And a lot of people that are not directly concerned with the fighting; a lot of innocent people, really. Some of them not so innocent, but there are a lot of innocents involved. And the Vietnamese, of course, exploit this. They get in there with them. And we have to get them out.

Mr. ICHORD. In effect you say, then, there is unnecessary loss of civilian life because of the fact you can't use gas in a situation like that.

Captain RAMSEY. There is unnecessary loss of marine life too, Mr. Ichord, because we have to send marines into the tunnels to bring them out. Gas would solve that, I believe.

Mr. ICHORD. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Gubser?

Mr. GUBSER. You served in Korea. Did you have much experience where close air support was used in Korea?

Captain RAMSEY. I saw it used. I was enlisted in Korea, and I was a machinegunner, and I saw it used frequently, very frequently. As a matter of fact, we used to—

Mr. GUBSER. Is it possible to draw any comparisons? Have we shown any improvement in techniques and equipment, or is there no basis that you can compare the two operations?

Captain RAMSEY. We seemed to use air more frequently in Korea, like every morning. But I couldn't really compare the two.

Mr. GUBSER. In Korea that was almost entirely carrier-based aircraft, wasn't it?

Captain RAMSEY. I don't know where they came from, but there were F-4's used, Corsairs, or A-3's, or the A-1's.

Mr. GUBSER. And there was a lot more napalm used too, wasn't there.

Captain RAMSEY. Yes, sir. Pilots were real artistic with that napalm.

Mr. GUBSER. Fighting on the ground I would suspect—and correct me if I am wrong—that you have a real preference for napalm.

Captain RAMSEY. I never called an air strike that I didn't include a request for napalm.

Mr. GUBSER. Did you run into any situations in Vietnam where you were not allowed to use napalm, particularly in your joint operations with the Vietnamese?

Captain RAMSEY. In Vietnam, sir?

Mr. GUBSER. Yes.

Captain RAMSEY. Initially we were not allowed to use napalm.

Mr. GUBSER. To your knowledge was this a situation made by the Vietnamese—a decision made by the Vietnamese?

Captain RAMSEY. No, sir. To my knowledge it was something to do with the fact that napalm is considered a chemical munition; and we weren't allowed to fire white phosphorus at this time either because it is a chemical munition. And we were just denied napalm.

This was subsequently rectified and now we can have napalm whenever we want it.

Mr. GUBSER. For cleaning out pockets of resistance where you are receiving fire, I take it it is your opinion that napalm is just about at the head of the list.

Captain RAMSEY. In my opinion; yes, sir.

Mr. GUBSER. Getting to armed helicopters once again, Captain. Recently a number of us were up at Aberdeen Proving Grounds, and we saw a pretty effective demonstration—at least it was spectacular—of smoke being laid down by a helicopter in order to allow them to come in and support troops.

Is it your opinion that if you did have an effective smokescreen, that the possibilities for use of armed helicopters could improve considerably? I'm saying we have a complete smokescreen which will allow the helicopter to come in and not be seen.

Captain RAMSEY. Smoke might prove valuable. We haven't used it, and I'm just pulling this out of my pocket, but I think there would be applications for that.

Mr. GUBSER. But even then you still think the possibilities of armed helicopters for close-in support of troops would be limited?

Captain RAMSEY. Very limited. You need the big planes for the heavy work; yes, sir.

Mr. GUBSER. Thank you very much, Captain. And San Francisco is proud of you.

Mr. PIKE. Mr. Nedzi?

Mr. NEDZI. Captain, to get back to these tunnels that the Vietcong dig. Apparently they are concealed and camouflaged. Is there any indication what they do with the dirt that they take out of these tunnels?

Captain RAMSEY. No, sir. As a matter of fact, this has puzzled me. I don't know where this dirt goes. It is sure not around the area.

Mr. NEDZI. Nobody has talked about it or speculated as to where it went?

Captain RAMSEY. I often wondered where it went. People wonder where the dirt goes, but just fleeting thoughts.

Mr. NEDZI. That is interesting.

Captain, during this large operation that you had, did you have air support all night?

Captain RAMSEY. No, sir. We had a flare plane dropping flares over the target area—or rather the area which we occupied. But we had no close air support. By this I mean we called none.

Mr. NEDZI. I see. There was none given, then, at any time during the night?

Captain RAMSEY. We didn't ask for it.

Mr. NEDZI. Did you feel you needed it?

Captain RAMSEY. Not during the night; no, sir.

Mr. NEDZI. There was no fighting taking place?

Captain RAMSEY. Oh, there was some fighting taking place, but it was limited actions, small actions, mostly patrols, platoon-sized individual combats.

Mr. NEDZI. I have no further questions, Mr. Chairman.

Mr. PIKE. Mr. Chamberlain?

Mr. CHAMBERLAIN. Yes, Mr. Chairman.

Following up Mr. Nedzi's question about your having no requests for air cover during the night for close air support, do you have the feeling that if you had needed it, that it was there and available?

Captain RAMSEY. Yes, sir.

Mr. CHAMBERLAIN. And you have no reservations about calling for air support at night because there may be some question of the accuracy of the support that you would get and so forth? Does that enter your mind?

Captain RAMSEY. It has entered my mind. We haven't had occasion to call air at night. I don't think that we would run into any problems.

Mr. CHAMBERLAIN. You wouldn't have any reservations if you needed it then?

Captain RAMSEY. I wouldn't. I wouldn't hesitate to call it if I thought I needed it. But we haven't experienced night combat in that intensity.

Mr. CHAMBERLAIN. Captain, you have mentioned, I believe, if I recall correctly, that in late July on Thunderbolt and September on Golden Fleece, that you didn't call for any close air support. It was not necessary, you said, I believe.

Captain RAMSEY. That's right, sir.

Mr. CHAMBERLAIN. Could you tell us whether or not it was available as far as your planning is concerned? Was it on the shelf if you wanted it? Or how did that work out?

Captain RAMSEY. Yes, sir, any time we conduct an operation, whether it is even down to company size, air support is available to us. It is on strip alert, which means that it may take as little as 15 or 20 minutes to get there. Or it may take longer. It may take up to an hour or so.

Mr. CHAMBERLAIN. Just a question about your helicopters now. You had some thoughts on them.

How do you find the speed of these helicopters? It is my understanding that you have some that are faster than others. Does that cause problems or not?

Captain RAMSEY. I don't know of any problems it would cause. I am not really competent to talk on technical characteristics of the air-

craft, but I think that the UH-1 is faster than the H-34. I don't know of any problems that has created.

Mr. CHAMBERLAIN. Well, if they were flying together, if you had an escort or something it would, would it not?

Captain RAMSEY. No, sir. The H-34 is a troop carrying helicopter. The UH-1's are armed and sometimes fly around in circles around the formation and zip in and out down around the landing zone. They don't fly all in—as a matter of fact, the UH-1, there is really nothing that says it can's slow down.

Mr. CHAMBERLAIN. You need all the speed you can get, as a rule, don't you? Don't you like to have speed? Isn't that a highly desirable characteristic?

Captain RAMSEY. Well, speed is fine, but there is no use one or two aircraft going zipping off by themselves.

Mr. CHAMBERLAIN. Yes. Well, I gather, then, from what you have told the committee here, that you are pretty well satisfied with your close air support that you have had available out there.

Captain RAMSEY. As a ground commander, I am extremely well pleased.

Mr. CHAMBERLAIN. Do you have any criticisms at all that you could pass along to us as we are reviewing this important problem?

Captain RAMSEY. I think that on certain occasions it takes too long to get air. This is a weakness in our own request procedures as we are now using them. And we are not using the system right now that was designed, for several reasons, and the system that we are using, it takes too long to get air on occasion. However, the majority of the air support that we have requested has been timely.

Mr. WILSON. On that question: What do you mean "the system that was designed"?

Captain RAMSEY. Well, the system as it is designed, the air request procedures that the Marine Corps normally uses is the ones we used in Korea.

Mr. WILSON. In other words, what you were trained to do?

Captain RAMSEY. Yes, sir.

Mr. WILSON. You are not using it?

Captain RAMSEY. Well, let me elaborate a moment here.

Normally we request air—and I am sure that Lieutenant Schwend can give much more competent testimony on this, but normally we request air silence along the line from the various fire support coordination centers as consent. In other words, they monitor the net, and if they break in, they can break in and cancel the air request. But if they do not break in, it is consent, the air request can go through. That is way the system was designed to work.

The system is not working that way because—or rather, the way the system is working is they have to give specific approval at each echelon along the line for the air request. This takes time. The reason for this is because we hesitate to use weapons of mass destruction like artillery, naval guns, on centers of population. And so each commander, of course, has the responsibility for the centers of population in his area. And the VC, of course, take advantage of this and fire from villages, and they've got us both ways. If we don't destroy them with air power or artillery or naval guns, then that means we have to go in, infantrymen, and take casualties.

[Deleted.]

So each commander has to specifically approve requests for supporting arms, heavy weapons, in these various areas. This takes a little time.

We are working on it. We are ironing it out.

Mr. WILSON. Thank you.

Mr. PIKE. Is that all, Mr. Chamberlain?

Mr. CHAMBERLAIN. Just one final question, and this borders again on what Mr. Wilson just said. I want to ask about the communications problem. Do you have anything else to say with respect to communication problems other than what you have said here, the time?

Captain RAMSEY. No, sir. Generally our communications work pretty well. We are using the PRC-47 and PRC-41, which are single side band radios. They are extremely long-range—

Mr. PIKE. Is that a VHF radio?

Captain RAMSEY. The PRC-47 is a VHF radio and the PRC-41 is a UHF radio.

Mr. PIKE. How do you operate? Are you in touch with your aircraft?

Captain RAMSEY. Through the forward air controller, sir.

Mr. PIKE. And he is—

Captain RAMSEY. He is talking with the pilot.

Mr. PIKE. In an O-1?

Captain RAMSEY. No, he's right next to me.

Mr. PIKE. You don't use O-1's. You did not use any O-1's or observation planes as forward air controllers in this strike?

Captain RAMSEY. Normally we don't use them.

Lieutenant Schwend, the forward air controller, had occasion to relay through a helicopter once, but he can tell you more about that.

Mr. CHAMBERLAIN. Mr. Chairman, I think it might be interesting to find out why, if they know.

Mr. PIKE. It is not their system. Their system is different.

Mr. WILSON. They talk direct to the airplanes?

Captain RAMSEY. We talk directly to the pilot.

Mr. PIKE. They have the ability to talk directly to the aircraft and they have the ability to mark the targets without going through the middleman. Is that a fair statement?

Captain RAMSEY. Yes, sir.

Mr. EVANS. Could I ask a question?

Mr. PIKE. Well, you will get a chance.

Mr. Irwin, any questions?

Mr. IRWIN. No.

Mr. PIKE. Go ahead, Mr. Evans.

Mr. EVANS. On this question of target marking: You mark the target yourself by mortar?

Captain RAMSEY. By mortar or 3.5-inch rocket launcher round.

Mr. EVANS. In your experience this is completely satisfactory; is that correct?

Let me put the question differently. You feel that it would be nice if you had better means of marking the target? Would you prefer better means, or do you feel that they are marked well and accurately and serve the aircraft coming in very well?

Captain RAMSEY. We have experienced no problems in that specific area. Our problem was identifying the target ourselves—or finding the target. Our problem is receiving small arms fire and not knowing where it is coming from. Once we find them, we haven't had any problems in marking the target at all.

I suppose there could be better means of marking the target, but I wouldn't know what they would be. These rocket rounds work well for us.

Mr. EVANS. Whenever you have used your rocket rounds it has always been—or your mortar or whatever else you use—it has always been sufficient, in your opinion, to mark the targets for the planes to accurately strike the area designated; is that right?

Captain RAMSEY. Yes, sir.

Mr. EVANS. Do you have any preference for a particular type of aircraft in support of your operations?

Captain RAMSEY. No, sir. Anything that will carry napalm is all right by me.

Mr. EVANS. I have no further questions.

Mr. PIKE. Do you think, Captain, that an O-1 might be able to spot this source of the rifle fire better than you can on the ground?

Captain RAMSEY. He might be able to; yes, sir. We are working—the ground that we work in is open terrain. It is rice paddies; there are trees, but not heavy concentrations of them. We are not in the jungle. We are not in the canopy. So we don't experience the problems that I am sure that people working in the jungle run into.

Mr. PIKE. Thank you very much.

Mr. NEDZI. Just one question, Mr. Chairman, with respect to this time element of going through the various echelons and procedures which you outlined where each commander has to authorize a strike. This applies also even though you are operating outside of population centers?

Captain RAMSEY. Yes, sir.

Mr. NEDZI. Have you any idea what the rationale there is?

Captain RAMSEY. No; except the centers of population, the towns, the hamlets, the people that live in these hamlets are often working out in the fields and they don't confine themselves to their hamlets. I suppose this may be a factor. I am not totally familiar with what all the thinking is.

Mr. NEDZI. Do you have an opinion as to—obviously from a military standpoint the other procedure would be more effective; but taking into consideration all the problems that exist in the kind of conflict we are engaged in, in Vietnam, do you have an opinion as to whether it would be better to change this to the system that you have been trained in?

Captain RAMSEY. I have an opinion on that; yes, sir. I think that the system as it is working right this minute is the only way it can work, because otherwise we are going to run into some indiscriminate killing. And this is not desirable. Granted we don't want to lose marines on these operations, but then we just can't go around wiping out everybody in front of us like we were able to do at times in Korea. We just can't do this. We are going to have to accept some casualties, as grim as it may be; but this is our job. I think that we have got to get the support of these Vietnamese people on our side. We've got

to get them working with us, giving us information. We are not going to do it by wiping them out.

Mr. NEDZI. Mr. Chairman, I think that is an outstanding statement.

Mr. PIKE. So do I. I couldn't agree with you more. I think it is a magnificent statement. And I think you have been a superlative witness.

Mr. Gubser, you had another question?

Mr. GUBSER. I just wanted to ask: You indicated at one time or another your communications had failed. Could you give any details about this? Was it a radio failure, mechanical failure, weather, topography, or what was it?

Captain RAMSEY. I doubt very much if there is a marine alive whose communications haven't failed at one time or another. But I think it is a combination of the heat, the humidity; the batteries die fast.

Mr. GUBSER. It is equipment?

Captain RAMSEY. It is equipment, that's all it is. Yes, sir.

Mr. GUBSER. But the failures are very few and far between with this equipment you are using?

Captain RAMSEY. Yes, sir. With the new equipment—I say “new”; we just started using it when we went to Vietnam—we have battery problems. It is a wet cell battery. We have problems with that. But generally speaking, the two radios I mentioned are highly reliable radios.

Mr. GUBSER. What is the range on those; about?

Captain RAMSEY. I have no idea, but it is far more than we need. They are real good radios.

Mr. PIKE. You can talk directly from where you are to Da Nang, for instance, a distance of 60 miles?

Captain RAMSEY. I don't know if we could or not. I suppose it is possible, sir.

Mr. CHAMBERLAIN. Mr. Chairman, could I have one question?

Mr. PIKE. My only suggestion is we have two other witnesses who came all the way from Vietnam to testify, and they are very anxious to get back, and we've got to wrap them up this morning.

Mr. CHAMBERLAIN. This question is real short and as far away from air support as you can get. We had quite a damning article printed in our paper at home about your boots. Are they all right or not out there? The boots the fellows are wearing?

Captain RAMSEY. The marine combat boot, in my opinion, is an inadequate piece of equipment in the jungle.

Mr. CHAMBERLAIN. Pleased to hear it.

Mr. PIKE. Was that “inadequate” or “adequate”?

Captain RAMSEY. Inadequate for wearing in the jungle, for wet weather.

Mr. PIKE. It rots.

Captain RAMSEY. Yes, sir; it sure does.

Mr. PIKE. The threads rot and it falls apart.

Mr. ICHORD. Don't you have the canvas-type jungle boot?

Captain RAMSEY. I understand they are there, but they haven't been distributed to us yet, sir.

Mr. ICHORD. But they are not distributed out in the field?

Captain RAMSEY. Not to us, sir.

Mr. PIKE. That is a good straightforward statement with which to wind up your testimony. All I can say, Captain, we are all grateful to you and proud of you, and you have been a magnificent witness, and thank you.

Captain RAMSEY. Thank you.

Mr. PIKE. Mr. Marshall, would you call the next witness, please.

Mr. MARSHALL. Yes, sir. Mr. Chairman, the next witness is 1st Lt. Howard Schwend.

(The biography of 1st Lt. Howard L. Schwend, U.S. Marine Corps, is as follows:)

BIOGRAPHICAL SKETCH OF 1ST LT. HOWARD L. SCHWEND

Howard L. Schwend was born in Billings, Mont., on June 21, 1939. He has served in the Marines since September 1961.

After graduation from Montana State University, he was commissioned a second lieutenant on June 4, 1961. In September of 1961, he was ordered to active duty at the Basic School, Quantico, Va. During April 1962, he was ordered to flight training and was assigned to a helicopter squadron in August 1963.

In January of 1965 Lieutenant Schwend was ordered to the 3d Battalion, 3d Marine Division, as the battalion forward air controller.

Deployed to Chu Lai, Republic of Vietnam, on May 19, 1965, his battalion has participated in several operations (Starlight, Golden Fleece, Piranha, etc.) and the defense of the Chu Lai Airfield. His battalion is presently in Chu Lai.

STATEMENT OF 1ST LT. HOWARD L. SCHWEND, U.S. MARINE CORPS

Mr. PIKE. Lieutenant Schwend, you wear the wings and you have been a forward air controller. As a forward air controller, have you served both on the ground and in the air?

Lieutenant SCHWEND. No, sir. I am in the same battalion as the captain, 3d Battalion, 3d Marines. That is my unit. And my job, except for a little proficiency flying, about 5 hours a month, is strictly on the ground.

Mr. PIKE. What do you fly in your proficiency flying?

Lieutenant SCHWEND. I have been flying the transport helicopters.

Mr. PIKE. Right.

Have you ever done any forward air controlling from the air?

Lieutenant SCHWEND. No, sir; I have not.

Mr. PIKE. Do you feel, as Captain Ramsey indicated, that you might be able to spot targets better from—well, from a helicopter, say? Or from an O-1?

Lieutenant SCHWEND. Yes, sir; I am sure you could see better. But the problem when you are in the air is knowing the situation on the ground. You just can't stay around long enough to really keep up on what is going on and you are not there to really see what is happening.

Mr. PIKE. In other words, as far as the Marines are concerned, close air support is controlled from the ground and it is intimately integrated with the operations of the ground forces?

Lieutenant SCHWEND. Yes, sir. Although, on the other hand, I have had—not several, but a few occasions where I would let my target be known to a tactical air controller airborne, and he would control the airstrike.

Mr. PIKE. Who would he be, the airborne?

Lieutenant SCHWEND. He would be a Hughie, an H-34—I mean a Hughie helicopter. Or he could be in an O-1.

Mr. PIKE. Are the Marines flying any O-1's?

Lieutenant SCHWEND. No, sir; they aren't any more. They have just taken them out.

Mr. PIKE. They have stopped?

Lieutenant SCHWEND. Yes, sir. It is all Hughies now.

Mr. PIKE. So where you do have a flying air controller, he would be in a helicopter?

Lieutenant SCHWEND. Yes, sir.

Mr. PIKE. Under what circumstances would you use a flying air controller? You said you have had occasion where you have. Explain to us what happened.

Lieutenant SCHWEND. On Operation Starlight my PRC-41, which is normally a very dependable radio—I had problems with it the first day of the operation. I could receive but I could not transmit except for sort of intermittently. So I carried three radios in my team, the PRC-10, which is the FM radio which I can talk to helicopters on, although that is not what it is for. The reason I have it is to talk to the other FAC's and the air liaison officer which is in the battalion CP, just local net, and as a backup to the helicopters this is what I used to talk to them in the helicopters, the Hughies.

Mr. PIKE. And the only reason that you went through the airborne controller was the fact that your radio was giving you difficulty so you couldn't go directly to the planes?

Lieutenant SCHWEND. That is not entirely true, sir. I didn't know exactly where my target was. It was a target that I could not see.

Mr. PIKE. Right.

Lieutenant SCHWEND. And I had no coordinates. So he was able to—

Mr. PIKE. When you say you didn't know where your target was, how did you know you had a target?

Lieutenant SCHWEND. Well, sir, we had some amtracks that were being attacked heavily. They were disabled in a rice paddy. It was stuck in the mud, and I was talking to him. I had another communicator which was talking to the amtracks, and they were telling us what was going on around the amtracks.

Mr. PIKE. They had gone too far, hadn't they?

Lieutenant SCHWEND. Yes, sir.

Mr. PIKE. They had gotten a little bit out of—well, perhaps a little bit lost, is that possible?

Lieutenant SCHWEND. Yes, sir. Well, anyway, they were being attacked quite heavily. In fact, the Vietcong were crawling around on their amtracks. They were smart enough to stay inside and talk on the radio and tell us what was going on. And so I was able to call the Hughie up on my PRC-10 and tell him what was going on and he was able to locate the amtracks and run an airstrike himself and call in some A-4's on an airstrike.

Mr. PIKE. What did they do in that case when they called for the A-4's, when the Vietcong were crawling around on the amtracks?

Lieutenant SCHWEND. Well, sir, that just about ended the problems for the people in the amtracks. We found several dead Vietcong there the next day. This was just before dark.

Mr. PIKE. I mean what did the airplanes do?

Lieutenant SCHWEND. Oh; yes, sir. The Hughie made his air strike right as close to the amtracks as he could without hitting them, with rockets and machineguns, just to kind of get them back a little bit, to take the initial danger away. And then he—the A-4's were able to watch him make his strikes so they knew right where the target was, and he just told them where the biggest concentration of them were and they made the strike.

Mr. PIKE. The use of the Hughie in that instance you would describe as fairly successful, wouldn't you?

Lieutenant SCHWEND. Very successful.

Mr. PIKE. As a forward air controller, would you agree that perhaps the principal problem you had in getting in close air support is the elapsed time between when you asked for it and when it arrived?

Lieutenant SCHWEND. In certain cases that is true, sir.

Mr. PIKE. What other problems can you describe to us?

Lieutenant SCHWEND. Well, that is really the only problem we have, if we have a target, because they can hit it, there is no doubt about that.

Mr. PIKE. Identifying the target is a problem?

Lieutenant SCHWEND. My identification, yes, sir, for me to identify.

Mr. PIKE. For you to pinpoint the target. Once you know where it is, you don't have any trouble marking it?

Lieutenant SCHWEND. No, sir, not normally.

Mr. PIKE. And they do not have any trouble hitting it?

Lieutenant SCHWEND. No, sir.

Mr. PIKE. How close are you allowed to bring in air support to your friendly troops?

Lieutenant SCHWEND. Well, sir, that—I am normally attached to a rifle company and that is up to the company commander. If he wants to—

Mr. PIKE. The company commander decides whether he wants an air strike on a given target, is that right?

Lieutenant SCHWEND. Yes, sir.

Mr. PIKE. And your testimony would be the same as the captain's, because you were talking about the same operation, as to the distance; is that right?

Lieutenant SCHWEND. Yes, sir.

I wasn't with the captain on Operation Starlight. I was attached to a company, and he was—

Mr. PIKE. What was the closest that air support was called in in support of the company?

Lieutenant SCHWEND. We had one air strike that was—it was pretty close. I can't say exactly. We had a little shrapnel coming into our company positions. Probably 200 meters.

Mr. PIKE. 200.

Mr. Wilson?

Mr. WILSON. We are educating ourselves on close air support here, so if we ask some obvious questions, be patient with us.

When you send a mortar shell or a rocket to mark a target, the captain testified you use white phosphorus. Do you ever use any colored markings of any kind, colored smoke to indicate a given target?

Lieutenant SCHWEND. Sir, to my knowledge we have very little colored smoke that we can shoot out somewhere and not use right in our position.

Mr. WILSON. Assuming that you got a fast action in the classic close air support and you mark a target and say your mortar is inaccurate, you don't quite get on the target. Do you use that marking merely as a reference point to the target?

Lieutenant SCHWEND. Yes, sir; that is normally the way that I would do it. It is not important that it be right on the target.

Mr. WILSON. You use this as a reference?

Lieutenant SCHWEND. Yes, sir; to get the pilot's eyes in the area of the target.

Mr. WILSON. Yes. Now tell me, Lieutenant: What sort of training did you have as a forward air controller?

Lieutenant SCHWEND. Well, sir, first of all I was a pilot, which the Marine Corps thinks helps. I think it helps. And then I went to a 2-week school at Landing Force Training Unit at Coronado, Calif.

Mr. WILSON. Beautiful place.

Lieutenant SCHWEND. Yes, sir.

Mr. WILSON. Right in the middle of my district. [Laughter.]

Lieutenant SCHWEND. And at this school we learned the air control system as the Marine Corps uses it and teaches it, and we had some practical application where we went out in the field and controlled different types of airplanes with different types of ordnance. Just got our feet wet a little bit.

Mr. WILSON. But in each instance in your training you were actually talking to the pilot of the oncoming airplane or talking through an airborne controller?

Lieutenant SCHWEND. Yes, sir. The system is we talked to the pilots.

Mr. WILSON. Did you have any training at all in using an observation plane with an airborne air controller?

Lieutenant SCHWEND. Well, yes, sir, just a matter—when I use an airborne controller, I have the same problem. I have to somehow tell him where the target is, and that's really my only problem.

Mr. WILSON. Obviously, since you said it helped to be a pilot—in other words, you have to understand the pilot's problem on the ground so that you can better direct him into the target. Is that the reason it is an advantage to have been a pilot?

Lieutenant SCHWEND. Yes, sir; that along with being familiar with the ordnance and the characteristics of the airplanes and characteristics of flying.

Mr. WILSON. How would you feel if you could not have direct communication with the pilot; you had to go through a middleman?

Lieutenant SCHWEND. Sir, I can tell you exactly how it feels. I had it happen on Operation Starlight. It is not a good feeling. It is a very useless feeling.

Mr. WILSON. You feel somewhat remote from the action?

Lieutenant SCHWEND. Yes, sir. I feel very useless.

Mr. WILSON. But all you had was 2 weeks of actual field training here in the States and then they sent you out as a forward air controller?

Lieutenant SCHWEND. Yes, sir. I was not the normal case. Normally an FAC goes to school and he goes with his infantry battalion for approximately 2 months here in the States through pretty good training before they deploy overseas. Now in my case I missed that.

I joined my battalion when they got overseas, when they got to Okinawa?

Mr. WILSON. Now you got to observe a lot of these airplanes laying down their close air support. Did you have any propeller-driven airplanes like A-1's operating at that time?

Lieutenant SCHWEND. No, sir. All my air strikes have been with Marine Corps airplanes. We have no A-1's.

Mr. WILSON. You were satisfied with the accuracy of them despite the relatively high speed of delivery?

Lieutenant SCHWEND. I am very satisfied with their accuracy, sir.

Mr. WILSON. I guess that is all the questions I have.

Mr. PIKE. Mr. Ichord?

Mr. ICHORD. Lieutenant, in this operation you were relating a while ago to Congressman Pike, how long did it take you to get your air support?

Lieutenant SCHWEND. Well, sir, the—

Mr. ICHORD. After you called?

Lieutenant SCHWEND. The Operation Starlight, the air was on station most of the time. I didn't have occasion to call through the tactical air request channels to request air, so it was just a matter of—

Mr. ICHORD. That was a preplanned operation?

Lieutenant SCHWEND. Yes, sir. Very speedily planned, however.

Mr. ICHORD. Are you a little bit unusual for an FAC? Are these ground FAC's usually commissioned, or are they non-commissioned?

Lieutenant SCHWEND. Yes, sir, every Marine battalion rates three aviators, one to be the ALO and two to be FAC's. Most of the battalions in Vietnam have three.

Mr. ICHORD. Most have what?

Lieutenant SCHWEND. Three.

Mr. PIKE. And they are all commissioned officers?

Lieutenant SCHWEND. Yes, sir.

Mr. ICHORD. Now what was the name of this radio that you used from ground to the plane?

Lieutenant SCHWEND. Sir, it is a PRC-41, a UHF radio, backpack.

Mr. ICHORD. What do you use, several assigned frequencies?

Lieutenant SCHWEND. Yes, sir. We have frequencies assigned for talking to helicopters and we have frequencies assigned for talking to fixed wing airplanes.

Mr. ICHORD. Usually send and receive on the same channel?

Lieutenant SCHWEND. Yes, sir.

Mr. ICHORD. How far can you reach out with a PRC-41?

Lieutenant SCHWEND. Well, sir, it is a line-of-sight radio, which is fine for airplanes. It is completely static free, so that you have no trouble understanding each other, and it will reach a long ways, line of sight, just depending on where the horizon is.

Mr. ICHORD. Well, when the planes are coming up on the operation, how do you usually make contact? They usually give you a call?

Lieutenant SCHWEND. Yes, sir. They are assigned—

Mr. ICHORD. And give you their location?

Lieutenant SCHWEND. Yes, sir. They give me a call and tell me what they are carrying and how long they can stay, and what their mission is if I have more than one mission.

Mr. ICHORD. And you say you are perfectly satisfied with your radio equipment?

Lieutenant SCHWEND. Yes, sir. It is awful heavy, but——

Mr. ICHORD. How big is that radio?

Lieutenant SCHWEND. It is not real large in dimensions but it weighs about 60 pounds with the battery, which gets kind of heavy trying to keep up with these infantrymen out in the field. Of course, I don't carry it.

Mr. ICHORD. The biggest problem then, as far as you are concerned, is marking, and you feel that the optimum situation there would be to have an observation plane in the air as well as on the ground?

Lieutenant SCHWEND. No, sir. The biggest problem is my identifying the target, sir.

Mr. ICHORD. I mean—yes, your identifying it, yes.

Lieutenant SCHWEND. My identifying it. Not the airplane's. If I know where it is, it is not normally a big problem.

Mr. ICHORD. Normally the best situation would be to have someone in the air as well as on the ground for target identification?

Lieutenant SCHWEND. Yes, sir, if they could stay up on the situation.

Mr. ICHORD. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Gubser?

Mr. GUBSER. When you talk with the airplanes, say it is a squadron of four, you obviously talk to the squadron commander only. Are the tactics so routine and so established in a variety of situations that they just automatically go into their attack after you have talked to the squadron commander, or is there yack back and forth in the air?

Lieutenant SCHWEND. There is quite a lot of talk on the radio, sir.

Mr. GUBSER. But you talk to one pilot?

Lieutenant SCHWEND. Initially I talk to one pilot, tell him the grid coordinates of the target, the altitude, the heading I want him to run in on, which way I want him to pull out. And the rest of the pilots have to listen in on all this, of course. And then I just tell him in my words, my own words, just where the target is in reference to landmarks or something on the ground—a marking round or something on the ground.

Mr. GUBSER. Then he goes in there and gives his orders to the rest of them, or what?

Lieutenant SCHWEND. No, sir, they listen in and then he is usually the first to fly in, and I tell him if he is on target or not. And if it is close to the friendlies, [deleted].

Mr. GUBSER. Thank you.

Mr. PIKE. Mr. Nedzi?

Mr. NEDZI. Thank you, Mr. Chairman.

Lieutenant, what size units is a FAC attached to?

Lieutenant SCHWEND. Sir, anything down to company level; company patrols and up, sir.

Mr. NEDZI. Nothing lower than that?

Lieutenant SCHWEND. Yes, sir, I have on occasion gone out on platoon patrols.

[Deleted.]

Mr. NEDZI. Do you know what happens in the event they do run into a situation where they do need air support, how they called in for it?

Lieutenant SCHWEND. Yes, sir. They have the means to talk to the Hughies. They will carry a PRC-10 radio also. And they also have means to talk back to the battalion CP whereby if they really need me I can load in a helicopter and go out to their position if we have time and so forth. And they can control the Hughies on their own strikes if it is not something big.

Mr. NEDZI. Under these circumstances then you use an airborne FAC, is that the normal procedure?

Lieutenant SCHWEND. Yes, sir.

Mr. NEDZI. I have no further questions.

Mr. PIKE. Mr. Chamberlain?

Mr. CHAMBERLAIN. Yes, sir, Mr. Chairman.

The story that you related earlier about the difficulty that you had in identifying your target and the time you used your airborne control, this is one of your O-1's, is that it?

Lieutenant SCHWEND. No, sir, it is a Hughie helicopter.

Mr. CHAMBERLAIN. A Hughie?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. A Marine helicopter?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. I see. Well, it rather seems that in this situation had you not had something up there that could have helped, we would have been in pretty bad shape right at that time, wouldn't we?

Lieutenant SCHWEND. Yes, sir, that is certainly true.

Mr. CHAMBERLAIN. So that certainly there must be considerable merit to having someone aloft if possible?

Lieutenant SCHWEND. Yes, sir. Normally on an operation we do have observation Hughies airborne which are capable of doing this sort of thing for us.

Mr. CHAMBERLAIN. And you are in touch with them?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. But they are not in touch with the pilots that are flying the mission?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. They are?

Lieutenant SCHWEND. They can be.

Mr. CHAMBERLAIN. They can be?

Lieutenant SCHWEND. They are not normally on the same frequency, but it is no problem for them to change.

Mr. CHAMBERLAIN. To switch over?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. But they do not do that unless they are told to do so, is that correct?

Lieutenant SCHWEND. Unless they are told to do so, yes, sir, that is true.

Mr. CHAMBERLAIN. Normal procedure would be that they would be in touch with you and you only, is that right?

Lieutenant SCHWEND. No, sir—

Mr. CHAMBERLAIN. On this operation?

Lieutenant SCHWEND. Well, depending, now. We have several types of observation missions for them. Maybe they are artillery FO or maybe it is a Navy gunfire FO or maybe it is just a reconnaissance for the battalion commander or division commander or some-

body. Well, that would depend on what FM net they were on, and then they also carry a UHF radio which they can be on several nets there. They can be on the net with the fixed wing aircraft or they can be on a local net within themselves.

Mr. CHAMBERLAIN. Then you are not without your airborne observation post at all times, is that right?

Lieutenant SCHWEND. Normally on an operation, sir.

Mr. CHAMBERLAIN. Have you ever been on operations without the airborne Hughie there to assist?

Lieutenant SCHWEND. Yes, sir. We have had operations where we didn't have them. Initially we were a little bit short of them, until just recently we've got more Hughies in so that we have enough to go around.

Mr. CHAMBERLAIN. How do you mark your target if you are on the—have you ever experienced any difficulty doing that if you are on the ground and marking the target?

Lieutenant SCHWEND. Normal procedures are to just use a visual reference, but it is always faster and better to mark with white phosphorus from a 3.5 rocket launcher, normally, or an 81 mm. mortar if it is a long way out.

Mr. CHAMBERLAIN. And if you do that, how much notice do you give these people in telegraphing your punches?

Lieutenant SCHWEND. You mean the VC?

Mr. CHAMBERLAIN. Yes.

Lieutenant SCHWEND. Well, of course you give them some notice. But it is a pretty good weapon.

Mr. CHAMBERLAIN. One final question. Have you ever had experiences where our people have missed the target and hit our friendlies? And tell us about that, if you have.

Lieutenant SCHWEND. Well, I have had the rare experience of almost looking up the guns of an F-4 dropping rockets, and this wasn't the airplane's fault. This was the FAC that was controlling's fault. He dropped it about 50 feet from my position. And as far as I know, he didn't injure any Marines. At the time we were right in the middle of mortar attack and we had lots of casualties. That is the only experience I have had.

Mr. CHAMBERLAIN. That is the only one?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. Do you have knowledge of others that you have heard of?

Lieutenant SCHWEND. No, sir; that is the only one I know of.

Mr. CHAMBERLAIN. You feel that while there is an inherent risk there in this kind of an operation, it is one that is being well handled?

Lieutenant SCHWEND. Yes, sir.

Mr. CHAMBERLAIN. Thank you very much, Mr. Chairman.

Mr. PIKE. Mr. Irwin?

Mr. IRWIN. I have gotten the feeling listening to the different witnesses that every situation has a somewhat different quality to it, and for example, you have talked of the importance of being able to talk directly to the planes, and you have made the point that at times you don't think you need an O-1 or helicopters, you don't need an air observer, and yet there were times when you suggested they were helpful. So perhaps the truth is every situation being a little different, different things are important at different times.

You have flown helicopters yourself?

Lieutenant SCHWEND. Yes, sir.

Mr. IRWIN. How helpful are the helicopters in this kind of a situation?

Lieutenant SCHWEND. Well, sir, that is the mission of the Hughie aircraft in the Marine Corps, so they are very helpful.

Mr. IRWIN. Now for actual ground support, how helpful are they?

Lieutenant SCHWEND. You mean for close air support?

Mr. IRWIN. Yes.

Lieutenant SCHWEND. Well, in this one instance they were very effective for just sort of a suppressing fire on the VC. And they are very effective for armed reconnaissance, which they are designed for.

I think it is more a psychological thing with both the pilot and the VC. The VC don't like to shoot at the pilot because they know he is going to shoot back, and because of this the pilot can get down a lot lower and do a more effective job, and they are very effective in escorting small helicopter maneuvers like resupplies, or medical evacuations.

Mr. IRWIN. Do you think that helicopters could be developed to be more effective than the ones you have presently?

Lieutenant SCHWEND. You mean carry more ordnance?

Mr. IRWIN. Yes.

Lieutenant SCHWEND. Yes, sir; they certainly could carry more ordnance, although I can't imagine the size of a helicopter that would be able to carry enough bombs to do us any good. And really, bombs are the backbone of the air support.

Mr. IRWIN. Right. Rockets are not particularly useful in this instance?

Lieutenant SCHWEND. Yes, sir; rockets definitely have their use, and so does strafe. But bombs, and napalm, of course, is a good weapon.

Mr. IRWIN. Right.

OK, that is all. Thank you.

Mr. PIKE. Mr. EVANS?

Mr. EVANS. You mentioned the difficulty of identifying your target. How do you develop the position of enemy fire on the ground? How do you develop the location of your enemy positions?

Lieutenant SCHWEND. How do I call it in, sir?

Mr. EVANS. How do you find out where it is? You say on occasions it is difficult to locate where your enemy positions are.

Lieutenant SCHWEND. Yes, sir. Well, we have a lot of trouble finding where the fire is coming from and of course if we can see a muzzle flash or there is a movement or something, that is our target.

Mr. EVANS. Can air support or air observation ever assist in this regard? Has it ever been helpful in locating where the enemy positions are?

Lieutenant SCHWEND. Only in the case that I mentioned, sir, on the amtracks.

Mr. EVANS. Is it just a matter of exploring on the ground until you run into heavy opposition or heavy enough opposition to have a good idea of the direction the enemy is and how far they are and then stopping so that you can have a pretty good idea where they are firing from before you can be pretty sure where your enemy is positioned?

Lieutenant SCHWEND. Yes, sir; that's about it.

We use air strikes a lot of times for more of a preparation type thing too, cleaning a hill before we move on to it or something like that.

Mr. EVANS. No further questions.

Mr. PIKE. Thank you very much, Lieutenant.

Mr. Marshall, would you call the next witness.

Mr. MARSHALL. Yes, sir. The next witness is Lt. Col. William C. McGraw, Jr.

(The biography of Lt. Col. William C McGraw, Jr., U.S. Marine Corps, is as follows:)

BIOGRAPHICAL SKETCH OF LT. COL. WILLIAM C. MCGRAW, JR.

William C. McGraw, Jr., was born in Oklahoma City, Okla., on September 14, 1922. He has served continuously since May 1943 in the U.S. Marine Corps.

Commissioned a 2d lieutenant September 8, 1943, he served as an aviation ground officer during World War II. In 1946 he was ordered to flight training and was assigned to a Corsair squadron in June 1948. In 1949 he transitioned to jets, flying the FH-1, TO-1, and F2H2. After a tour of duty with the Bureau of Aeronautics he was ordered to Korea and flew 88 combat missions in the Grumman Panther (F9F).

After Korea he was stationed at Sandia Base, N. Mex., then a tour of duty at MCAS Kaneohe flying FY-4 Furies. In 1960 he graduated from the U.S. naval test pilots' school and served for 2½ years as head. Flying Qualities and Performance Branch and later chief projects officer of the Flight Test Division at NATO Patuxent River.

Taking command of Marine Fighter/Attack Squadron 531 at Cherry Point, N.C. in June 1963 he deployed twice with his squadron to Key West, then flew his F4B's to NAS Atsugi, Japan in June 1964.

Ordered to Da Nang, South Vietnam, on April 10, 1965, his squadron flew over 950 combat sorties prior to being relieved on June 15, 1965.

Lieutenant Colonel McGraw personally flew 62 missions during this period, including CAS, helo escort, interdiction night radar bombing, and night CAS under the flares.

He is now the assistant operations officer, Fleet Marine Force, Pacific.

Mr. PIKE. Colonel McGraw, I note from the biography which has been provided to us that you were the commander of Attack Squadron 531 which flew 950 combat sorties between April 10, 1965, and June 15, 1965, and that you personally flew 62 missions during this period.

I am going to, at Mr. Wilson's suggestion, reverse the order of fire here. And Mr. Wilson reminded me that it wasn't very long ago that we were all freshmen and we never got to ask any questions until all the good questions had been asked. So I am going to let Mr. Evans lead off here with questions. We will just go backward up the chain of command here this trip.

Go ahead, Mr. Evans.

Mr. EVANS. Thank you very much, Mr. Chairman. That is very kind of you.

Mr. PIKE. It wasn't my idea.

(Laughter.)

Mr. EVANS. I hardly know what to say.

Just a shotgun question. In your experience in close air support, what do you think our biggest weaknesses are and what suggestions would you have to tighten it up?

**STATEMENT OF LT. COL. WILLIAM C. MCGRAW, JR., U.S. MARINE
CORPS**

Colonel MCGRAW. [Deleted.]

Mr. PIKE. I might say, Mr. Evans, that we have in the room the commander of the first A-6A squadron, who has just returned from Vietnam, and if we have time we are going to ask him some questions this morning, too. I just don't know if we are going to have time.

Colonel MCGRAW. [Deleted.]

Mr. EVANS. You have no difficulty in getting to the target on time and finding out where the enemy is and have it marked, located, and get on target? These are not problems to you as far as you as a pilot see it?

Colonel MCGRAW. No, sir; they are not.

Mr. EVANS. Communication, or knowing where the friendlies are and where the enemies are?

Colonel MCGRAW. The captain put it pretty well when he said everybody has communications problems at times.

Mr. EVANS. Well, you caught me so much by surprise, Mr. Chairman, I ran out of questions.

Mr. PIKE. Mr. Evans, I hoped this would happen.

(Laughter.)

Mr. IRWIN. I notice they called the witnesses in reverse order too, Colonel.

What kind of planes are you flying, or have you been flying in Vietnam?

Colonel MCGRAW. F-4B, sir.

Mr. IRWIN. And what do you carry?

Colonel MCGRAW. Well, they can carry a variety of ordnance: Bombs, rockets, napalm.

Mr. IRWIN. And your planes have been actually based at Da Nang?

Colonel MCGRAW. Yes, sir.

Mr. IRWIN. How far have most of your operations been away from Da Nang?

Colonel MCGRAW. I would say a good 75 percent of them are within 80 miles of Da Nang.

Mr. IRWIN. Within 80 miles?

Colonel MCGRAW. That is right.

Mr. IRWIN. Now when you are giving close ground support, you are in direct communication with an FAC such as Lieutenant Schwend?

Colonel MCGRAW. That is right.

Mr. IRWIN. And I imagine that getting your messages back and forth is very, very simple in this sense?

Colonel MCGRAW. Yes, sir. We have a standard air request form that we carry, and he just goes down the line. He comes on and says "I have a target," gives the grid coordinates, the direction of run, all the information. We can just copy it right down on the form.

Mr. IRWIN. What kind of problem is the speed of the planes for you? Any at all, or not at all? The fact that the planes are as fast as they are? Does this create any kind of a problem at all in hitting a target?

Colonel MCGRAW. No, sir.

Mr. IRWIN. None at all?

Colonel McGRAW. No, sir. The faster the better.

Mr. IRWIN. I think those are all the question I have. Thank you.

Mr. PIKE. Mr. Chamberlain.

Mr. CHAMBERLAIN. Thank you, Mr. Chairman.

I gather that the operations that you people have had have all been Marine operations pretty much?

Colonel McGRAW. No, sir. We supported Vietnamese troops also.

Mr. CHAMBERLAIN. Where was this, Colonel?

Colonel McGRAW. On occasion we have gone as far as 300 miles south of Da Nang.

Mr. CHAMBERLAIN. When was that? Where?

Colonel McGRAW. I can't recall the name of the area where we went, but it was down in the III Corps area. And they had some troops that were under attack down there and for some reason I guess there was not available planes at Tan Son Nhut or Bien Hoa and we scrambled and went down there.

Mr. CHAMBERLAIN. But most of the operations are with your own people, would you say, or not?

Colonel McGRAW. We are a supporting arm for the Marine forces in I Corps.

Mr. CHAMBERLAIN. Well, it seems to me what we have heard here from the lieutenant and the captain is that you people are pretty well satisfied with your own operation. While there may be areas of improvement you think you are doing a pretty good job out there with your close air support; is that correct?

Colonel McGRAW. Yes, sir.

Mr. CHAMBERLAIN. Now, let's talk a minute, then, about your working with the Vietnamese then and what problems you have gotten into in operating down there. What kind of a forward air controller would you be working with when you went down south?

Colonel McGRAW. It was always O-1-type aircraft with Air Force flying it, and he usually had a Vietnamese in the back seat.

Mr. CHAMBERLAIN. Any problems in this type of operation with your people?

Colonel McGRAW. No, sir. They would always mark the target and we would go right on in.

Mr. CHAMBERLAIN. Colonel, I want to ask you the question I asked before here of one of our other boys, and that is, about getting off target, maybe, and inadvertently getting mixed up with our friendlies. All the members of this committee I am certain are just as concerned as are you people, but we would like to know the true extent of this. Tell us of anything in this area that you know of.

Colonel McGRAW. I know of none in Vietnam, sir. I recall one incident in Korea where—but it was not a close air support. It was an interdiction-type mission where two planes took off late and struck the wrong target, but they weren't controlled. They thought they were on the bomblines, and they weren't.

Mr. CHAMBERLAIN. So as far as your personal experience is concerned and what you have heard, you have nothing to report to us in this connection?

Colonel McGRAW. No, sir.

Mr. CHAMBERLAIN. Well, that is encouraging. It really is.

We also heard testimony here from the other witnesses about the time that has been required in getting the word back and forth. Is

there anything that can be done to improve this situation that you know of?

Colonel McGRAW. No, sir. We have a system for taking care of it; as the captain pointed out, sometimes the system doesn't work the way we thought it was supposed to, but as far as the—as an aircraft squadron commander, I have no problems. It depends. On one operation we will have an airborne alert and we will leave our station and we are just constantly circling so we are immediately available. If there is an operation going on where they think they might have it, they would up our alert status where we would be on a 5-minute alert, and the pilots would actually be out under the wings. Normally at Danang it was 15 minutes, and the pilots would be in the readyroom.

Mr. CHAMBERLAIN. Do you ever hear any talk about the need for this recon aircraft that we have been considering for the past few years here?

Colonel McGRAW. Yes, sir.

Mr. CHAMBERLAIN. What do you hear about that? What is your personal opinion about the need for it?

Colonel McGRAW. I think it probably has its place. It won't replace the attack aircraft.

Mr. CHAMBERLAIN. You people would not have any need for it in the way you are operating now, would you?

Colonel McGRAW. There would be occasions when I think the LARA would be a good aircraft. It would take over some of the jobs being done by the Hughies right now.

The armed helicopter is a very vulnerable weapon against any opposition; a 50 caliber can knock them right out of the sky.

Mr. CHAMBERLAIN. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Nedzi?

Mr. NEDZI. Colonel, you have had experience with ground FAC's and airborne FAC's. Could you give us an appraisal of both of them based upon your experience?

Colonel McGRAW. Well, it is normally a different type situation with an airborne FAC. Usually you have both in an operation; there will be an airborne FAC who can mark targets or you can talk direct to the ground FAC.

Mr. PIKE. That is the usual Marine Corps situation.

Colonel McGRAW. Yes, sir.

Mr. PIKE. We do not guarantee this is the usual situation though.

Colonel McGRAW. You have so many people wanting to mark targets for you and usually you see the target right off the bat anyway. And sometimes—I have had a ground controller say "I'm going to mark it," and Hughie says "I want to mark it," and I say I see the target. [Laughter.]

Mr. NEDZI. That is very interesting.

Mr. WILSON. Everybody wants a piece of the action. [Laughter.]

Colonel McGRAW. In this particular time I was talking about, why finally the Hughie got to mark it, and said "Do you see the mark?" and I said "No, I don't see it; I'm looking right at the target." Well, he had dropped green smoke. [Further laughter.]

Colonel McGRAW. When I finally saw it I couldn't believe it.

Mr. NEDZI. I have no further questions, Mr. Chairman.

Mr. PIKE. Mr. Gubser?

Mr. GUBSER. Colonel, have you ever flown a close air support mission where Air Force aircraft were part of the operation as a joint mission?

Colonel McGRAW. Yes, sir.

Mr. GUBSER. In Vietnam?

Colonel McGRAW. Yes, sir. We had a big helicopter operation going on down south of Quang Ngai on which the Air Force was not close air support per se, they were landing preparation. And we were going to escort the helicopters in. So I was circling, I was watching the F-100's.

Mr. GUBSER. So an FAC wasn't used in this operation?

Colonel McGRAW. No, sir.

Mr. GUBSER. Have you ever been on one where there was close-in air support and you had to use a forward air controller for both Air Force and Marine aircraft?

Colonel McGRAW. No, sir; I went on a lot of interdiction where FAC was controlling. We were waiting to get on the same target.

Mr. GUBSER. Instead of a joint operation?

Colonel McGRAW. Yes.

Mr. GUBSER. If there were to be a sudden requirement where you just have to use everything you've got, how would this work out?

Colonel McGRAW. I can see no problem.

Mr. GUBSER. Would you use their system of target identification or would they use yours? You would have to use theirs, wouldn't you?

Colonel McGRAW. Well, now—

Mr. GUBSER. Or would you each have your own?

Colonel McGRAW. You say if we were going to work with the Air Force?

Mr. GUBSER. Yes.

Colonel McGRAW. In support of an Army division?

Mr. GUBSER. In support of a division; yes.

Colonel McGRAW. We have what is called ANGLICO, which is designed particularly to go with Army divisions in the event we have joint operations and they would control air and naval gunfire.

Mr. GUBSER. The Army would?

Colonel McGRAW. Marines. With an Army division. Or the ANGLICO; presently they are working with Vietnamese.

We did the same thing in Korea. We had Marines with the Korean divisions who controlled this.

Mr. GUBSER. Suppose you had Air Force planes and Marine planes in the air at the same time on the same mission. Would there be apt to be some confusion?

Colonel McGRAW. I don't think so; no, sir.

Mr. GUBSER. Who would do the directing in that case? The Army would?

Colonel McGRAW. You can only have one controller, and anybody that can control the aircraft—I can see no problems with the Air Force making a strike. I'm sure Lieutenant Schwend could mark the target for them; as long as they saw it, why—

Mr. GUBSER. But your controller couldn't talk to the Air Force planes?

Colonel McGRAW. Yes, sir; he could talk to them.

Mr. PIKE. The Marine controller now. The Army controller can't.

Mr. GUBSER. I'm confused, Mr. Chairman. Will you straighten me out?

Mr. PIKE. When you are in the air, with your radios can you talk to Air Force planes in the air?

Colonel McGRAW. Yes, sir.

Mr. PIKE. Can you talk to Army troops on the ground?

Colonel McGRAW. If they have UHF, sir, I can.

Mr. PIKE. Well, they don't.

Colonel McGRAW. They don't?

Mr. PIKE. Yes.

Colonel McGRAW. Then I can't talk to them.

Mr. PIKE. Unless there is an Air Force guy or Marine guy on the ground with compatible radios.

Mr. GUBSER. Then is this true, Mr. Chairman: If we had Air Force planes and Marine planes in a joint operation providing close air support for an Army unit on the ground, you would have to deal through an O-1, wouldn't you?

Colonel McGRAW. If they have no UHF; yes, sir. The O-1 has it.

Mr. GUBSER. In other words, you would be forced to accept the lowest level of communications?

Colonel McGRAW. Yes, sir.

Mr. GUBSER. Thank you very much.

Mr. PIKE. Mr. Ichord?

Mr. ICHORD. You said, Colonel, that you had operated, as far as 300 miles from base. How are your navigational aids in South Vietnam? Do you have any complaint about navigational aids? Do you have a good system?

Colonel McGRAW. Yes, sir. We have TACAN. [Deleted.] But they also have radar cover in [deleted] and they are able to direct you and take you down through the overcast and put you right in the area you want to be.

Mr. ICHORD. Now you are talking about all-weather capability. What is the lowest ceiling you have ever provided any close air support operation?

Colonel McGRAW. [Deleted.]

Mr. ICHORD. Would you make any dive-bombing passes, or—

Colonel McGRAW. Rockets, sir.

Mr. ICHORD. Rockets? What would you do? Would you fly straight across the target?

Colonel McGRAW. [Deleted.]

Mr. ICHORD. [Deleted.]

Colonel McGRAW. That's right.

Mr. ICHORD. Thank you, Mr. Chairman.

Mr. PIKE. Mr. Wilson?

Mr. WILSON. Do you think it might be possible for the ground forces to have a rocket- or mortar-launched transponder of some sort that would give off a radar beep to help locate the target through the clouds and through jungles? In other words, the mortar rather than shooting a smoke would shoot a transponder which on impact would set off, say, 5 minutes of radar beeping as a means of locating a target? Would this conceivably tie into an operation of your type?

Colonel McGRAW. Yes, sir; if they had something of that order, why our radars could probably be modified to pick it up.

Mr. WILSON. I just invented it. I just wondered if such a thing could be picked up.

I have no further questions. I hope we can get the commander on.

Mr. PIKE. Colonel, you were there over a long period of time. How would you characterize the quantity and quality of the close air support when you left compared with what it was when you arrived?

Colonel McGRAW. We were the first Marine squadron to go in. I am sure that—you never have enough, but it certainly has improved.

Mr. PIKE. Did the tactics change any as experience developed over there?

Colonel McGRAW. Well, in South Vietnam, of course, the ground fire is very light. It is small arms, and the chances of them hitting a jet are just—well, they don't exist. So in that case, why you can do it just like you are on a target someplace. You can control it, you roll in from [deleted] feet, you start a perfect dive—in the F-4 we have the advantage of a man in the back seat that calls out airspeeds and altitudes.

Mr. PIKE. Colonel, as far as the pilot in the attack plane is concerned, it doesn't make any difference to you whether your FAC is airborne or on the ground. What you are interested in is a white smoke signal essentially that you can use as a reference point either to aim at or aim a certain distance from.

Colonel McGRAW. Yes, sir.

Mr. PIKE. So would you say that whether the particular man who is doing this job is on the ground or in the air is a decision that should be made on the ground?

Colonel McGRAW. Yes, sir.

Now the man on the ground knows where the friendly troops are, whereas the one in the air sometimes will not know what the situation is.

Mr. PIKE. And as far as the Marines are concerned, the essential doctrine is that this fellow will be on the ground and the ground rather than the guy in the middle will be controlling; is that correct?

Colonel McGRAW. Yes, sir. Marine air is a supporting weapon just like artillery or naval gunfire.

Mr. PIKE. Thank you very much, Colonel.

I want to say for all of these marine witnesses, I don't think we have had anything better since this committee has been meeting.

Mr. NEDZI. And we have had some good stuff.

Mr. PIKE. That's right, and we have had good witnesses here.

I particularly would like to ask General Thrash if it might not be possible to release the statement that Captain Ramsey made in his answer to Mr. Nedzi's question about the controls that are required when you are considering an attack on a village and the danger of civilian casualties. I think that really it is one of the finest statements I ever heard, and furthermore, I think it would go a long way to cut down some of the junky image that has been in the newspaper about the marines setting fire to huts and things like that. I think it was really a tremendous statement and I would like to be able to make it public.

General THRASH. Yes, sir.

Mr. WILSON. Mr. Chairman, I would like to request the expansion of that to include Mr. Ichord's question relating to the use of tear gas. I think this question ought to be brought out in the open.

Mr. PIKE. Well, I think that is still too controversial. I think it is not controversial on this committee. I don't think there is a member

of this committee who doesn't feel that the tactics are completely right and the use of tear gas makes all kinds of sense. But I don't think we ought to be going into that particular field, trying to make policy here. In the first place, it is not within our area of responsibilities.

Mr. WILSON. I hope we are going to come in with some recommendations.

Mr. PIKE. We are here on tactical air support. I don't think we are here on ground tactics.

Thank you very much, Colonel.

Commander, would you come up and talk to us just briefly about when you got out to Vietnam.

Mr. MARSHALL. Please give your name.

STATEMENT OF COMDR. LEONARD ALEXANDER SNEAD, U.S. NAVY

Commander SNEAD. Comdr. Leonard Alexander Snead. And I was commanding officer of Attack Squadron 75, which is the first Navy A-6A Intruder squadron to deploy on any ship at any time.

My tour in Vietnam was a very short one. In fact, my tour as a squadron commander was extended so that I could take the squadron and see it through its initial month or 6 weeks. It ended up about 5 weeks on the line. During this period of time, Mr. Chairman, we did not engage in close air support, per se. However, we did do some target work during the 35 days I was on the line. I personally made five strikes, more of a tactical air support nature; working up in North Vietnam we worked day and night conducting strikes on all types of targets.

Mr. PIKE. Tell us what you could do at night in North Vietnam, what your plane's capability is and how you run your operation.

Commander SNEAD. If I may start off by giving you a bit of information concerning the aircraft capability, the A-6A was designed to acquire a radar reflective target on the search radar, but the bombardier and navigator—

Mr. PIKE. On the ground?

Commander SNEAD. Yes, sir. Actually, we can see aircraft in the air on our radar also, but primarily we have an air-to-ground bombing system. The bombardier and navigator work side by side while the pilot works the gear. Once he acquires a target then symbols appear on my vertical display indicator, my primary reference indicator, and I proceed on into the target.

As soon as I get on in within a given range, I'll commit the ballistic computer to an attack mode that I have previously selected: the type of run that I want to make.

Mr. PIKE. Are you dropping a bomb or firing a rocket?

Commander SNEAD. I can do either.

Mr. PIKE. Either?

Commander SNEAD. Yes, sir. This depends on the mode that I select to make the attack. And this can be day or night, fair weather or foul. These work as I am describing them.

At this point I only have to keep my symbols aligned, and as I proceed on in over the target the computer automatically solves the problem and drops the bomb at the proper second.

Mr. PIKE. It drops the bomb?

Commander SNEAD. It drops the bomb. I am on automatic release. I don't do a thing but hold the "Commit" button on my stick.

[Deleted.]

I am impressed with Congressman Wilson's approach here. This is something that we do need, Congressman. Some sort of beacon——

Mr. WILSON. Radar reflective transponder.

Commander SNEAD. A radar reflective transponder that I can pick up on my radar.

[Deleted.]

Mr. PIKE. How about lightning? Doesn't bother it?

Commander SNEAD. It would just come and go. There would be no static.

Mr. WILSON. How about jungle?

Commander SNEAD. [Deleted.]

Mr. PIKE. Commander, this is obviously tremendously complex equipment. How much downtime do you have on your A-6's due to equipment unreliability?

Commander SNEAD. Unreliability is our big problem in the A-6 today, Mr. Chairman. I would hasten to add that we are having, shall I say, historical problems. The equipment that we have was designed 5 years ago and built 2 years ago. We are the first squadron. [Deleted.] We had in VA-75 a real environmental test from day-to-day operations; on and off the catapult, back into the wires, bouncing the gear around. You must put it in this environment. You really can't test for it in an R. & D. activity. So we have found and defined very carefully the problem areas that we have encountered. And these are, of course, being worked on. Pieces of gear just have not held up. They were designed to stress to a certain point, and now we are going into testing for overstress. We are going into a general cleaning up of the circuits and updating of the state of the art.

Mr. PIKE. The system is fine to the extent that it is reliable. Would that be a fair statement?

Commander SNEAD. When we have all components working, Mr. Chairman, it is a thing to behold. I don't mean to say that as if it happens only on sporadic occasions, because we did achieve very good results with it. We have numerous backup modes for each of the inputs into the computer from a given sensor; we have alternate sources which feed the information into the computer.

Mr. PIKE. How many planes did you have in your squadron?

Commander SNEAD. We had 12.

Mr. PIKE. How many did you lose?

Commander SNEAD. We lost three airplanes.

Mr. PIKE. How many strikes did your squadron conduct while you were there?

Commander SNEAD. Let me give this to you on an estimate of weekly strikes. During the month of July we flew 621 hours, and that would be about something over 300 sorties, sir.

Mr. PIKE. What sort of targets were you after? Give us a typical example of the target.

Commander SNEAD. In South Vietnam I'll give you my own personal example. [Deleted] and we carried a heavy load of ordnance; another strong point of the airplane.

Mr. PIKE. Napalm?

Commander SNEAD. No, sir; no napalm. [Deleted.] On the other occasions, the target once was right up a valley, once up a hillside, another time just a small encampment. This was all under the control of a forward air controller, marked with some sort of a white marking.

Mr. PIKE. This was visual bombing?

Commander SNEAD. Visual bombing; yes, sir.

Now the times that we were operating down south we did not conduct any night operations. However, I did receive a letter yesterday from the squadron commander in which he indicated that during the last 6 days of August they had conducted 35 night strikes with the A-6A in South Vietnam. None apparently were close air support types, but he did describe them. He said that they found that the utilization of our system and our radars was, far superior as far as placing the airplane at a point over the ground to that of using a TACAN bearing and distance, shall we say.

Mr. PIKE. What sort of targets did you strike in North Vietnam?

Commander SNEAD. In North Vietnam, bridges. Except by the time we got there bridges had become very scarce. But there were some we did strike and physically knock out with the A-6A. Army barracks, several of those were prime targets. Railyards; the railyard at Vinh and Thanh Hoa. The port facility there at Vinh and the one at—the port facilities up at Thanh Hoa. These were plain, pure, and simple storage areas; great huge buildings that they would use for storage, et cetera.

Mr. PIKE. Can you give us a statistic on the readiness percentage of the aircraft?

Commander SNEAD. Yes, sir. It ran between [deleted] percent; [deleted] percent is a good figure.

Mr. PIKE. And the bulk of the downtime would be black box equipment and not the plane itself?

Commander SNEAD. Yes, sir. We could always go fly. The airplane was the greatest; sturdy and completely reliable. The engine-airframe combination was a real fine piece of equipment.

Mr. PIKE. Any other questions?

There is our quorum call. Thank you, commander. I'm sorry we could not devote more time to your testimony.

Tomorrow we are going into the general officers.

Mr. MARSHALL. We will have the Army and Air Force.

Mr. PIKE. Army and Air Force officers.

(Whereupon, at 12:12 p.m., the subcommittee adjourned, to reconvene at 10 a.m., Thursday, September 30, 1965.)

HOUSE OF REPRESENTATIVES,
COMMITTEE OF ARMED SERVICES,
SPECIAL SUBCOMMITTEE ON TACTICAL AIR SUPPORT,
Washington, D.C., Thursday, September 30, 1965.

The subcommittee met at 10 a.m., Hon. Otis G. Pike (chairman of the subcommittee), presiding.

Mr. PIKE. The committee will come to order.

I want to apologize for the fact that we don't have a very good attendance this morning. It is getting on toward the end of the week and many people are pressed with many things. I believe that we will

get a much better attendance shortly. But I don't want to delay this any longer.

Mr. Marshall, would you introduce the witness?

Mr. MARSHALL. Yes, Mr. Chairman; the first witness will be Maj. Gen. Delk McCorkle Oden, Director of Officer Personnel, Office of Personnel Operations, Department of the Army.

Mr. PIKE. We are delighted to have you here, General Oden. As you can hear I am not in very good voice today. I usually yell pretty loud but this is not my day.

We have your biography here. It will be made a part of the whole record.

(The biography is as follows:)

Biographical Sketch of Maj. Gen. Delk McCorkle Oden

Delk Oden was born in Gordon, Tex., on July 13, 1911. He graduated from Marion Military Institute at Marion, Ala., and entered the U.S. Military Academy, West Point, N.Y., where he graduated in 1937.

After 2 years with the 27th Infantry in Hawaii, General Oden was returned to the CONUS where he served with the 7th and 10th Cavalry units until January of 1942.

From 1942 to 1945 General Oden was assigned to the 4th Armored Division. He remained with this division throughout the war including its five campaigns in Europe. During this time, he commanded the 704th Tank Destroyer Battalion, the 13th Tank Battalion and subsequently became chief of staff of the division.

In 1946 General Oden was ordered to the Pentagon to serve on the War Department General Staff. Following a short tour he attended the Combined Arms Section, Regular Class, Command and General Staff College, Fort Leavenworth, Kans., and then was reassigned to the Pentagon and became Assistant Secretary of the General Staff, U.S. Army, until August 1949.

From the Pentagon, General Oden attended the Armed Forces Staff College, Norfolk, Va., graduating in January 1950. He was then assigned to the joint military mission for aid to Turkey, serving first as director of instruction, the Turkish Armored School at Ankara, Turkey, and second as chief of staff, joint staff, U.S. mission for aid to Turkey until June 1952.

Upon his return to CONUS, General Oden attended the Army War College, Carlisle Barracks, Pa. Upon graduation in June 1953 he was assigned as Chief of Staff, U.S. Forces, Austria for 2 years and subsequently became the U.S. Army attaché in Vienna until October 1956.

Following the overseas tour and attendance at the U.S. Army Aviation School, Fort Rucker, Ala., as a student aviator, General Oden commanded Combat Command A, 1st Armored Division, Fort Polk, La., until May 1959. From this assignment he was returned to Fort Rucker to serve as assistant commandant of the U.S. Army Aviation School.

In October 1961 General Oden was ordered to the Pentagon for assignment to Office Deputy Chief of Staff for Military Operations, Department of the Army, where he was Director of Army Aviation.

General Oden is qualified in rotary-wing, fixed-wing and twin-engine aircraft.

In May 1963 he was assigned as Chief, Army Section, Military Assistance Advisory Group in Vietnam. He moved from MAAG in May 1964 when he assumed command of U.S. Army Support Command, Vietnam.

On April 19, 1965, General Oden was assigned as Director of Officer Personnel, Office of Personnel Operations, Department of the Army.

Personal data

Born: July 13, 1911, Gordon, Tex.

Married: Margaret Avery, June 15, 1938, at San Francisco, Calif.

Children: Delk Avery, Margaret, and Ray Lawrence.

Official address: Elgin, Tex.

Education

U.S. Military Academy, West Point, N.Y., 1937.
 Combined Arms Section, regular class, Command and General Staff College, Fort Leavenworth, Kans., 1947.
 Armed Forces Staff College, Norfolk, Va., 1950.
 Army War College, Carlisle Barracks, Pa., 1953.
 Army Aviation School, Fort Rucker, Ala. (student aviator), 1957.

Chronological list of promotions

Rank	Temporary (AUS)	Permanent (RA)
2d lieutenant.....		June 12, 1937
1st lieutenant.....		June 12, 1940
Captain.....	Sept. 9, 1940	June 12, 1947
Major.....	Feb. 1, 1942	July 1, 1948
Lieutenant colonel.....	Jan. 21, 1943	July 1, 1954
Colonel.....	June 29, 1951	June 12, 1962
Brigadier general.....	Aug. 22, 1961	
Major general.....	Mar. 1, 1960	

Chronological list of assignments

Assignments	From—	To—
27th Infantry, Schofield Barracks, Hawaii.....	June 1937.....	November 1939.
7th Cavalry, Fort Bliss, Tex.....	June 1940.....	January 1941.
10th Cavalry, Fort Riley, Kans.....	January 1941.....	January 1942.
84th Armored Reconnaissance Battalion, 4th Armored Division, Pine Camp, N.Y.....	January 1942.....	July 1942.
Commanding officer, 704th Tank Destroyer Battalion, 4th Armored Division Europe.....	July 1942.....	August 1944.

Protestant (Episcopalian)

Mr. PIKE. I see that you have a prepared statement and you may proceed to give it.

STATEMENT OF MAJ. GEN. DELK McCORKLE ODEN, U.S. ARMY

General ODEN. Thank you, Mr. Chairman.

Mr. Chairman, I am Major General Oden. I am privileged to have been designated as the U.S. Army's representative to appear before this subcommittee. Having recently returned from Vietnam, I am familiar with and endorse the Army's reliance upon close air support. This prepared statement represents the Army's position on this subject. It will be my pleasure to answer your questions following the presentation of this statement.

Army forces committed to battle are dependent upon a wide range of fire support means to assist them in the accomplishment of their combat missions. In addition to the fire support available within the Army Force structure, the Army relies heavily upon the Air Force and the other services for close air support.

The Air Force is primarily responsible for providing close air support to the Army. In April this year the Army and the Air Force agreed upon the current close air support concept, a copy of which is presented herewith.

This concept outlines the procedures whereby the joint unified commander makes daily allocations of the sorties to close air support. It provides for the processing of preplanned air requests through successive Army headquarters, and the expedited transmission of immediate air requests from the battalion level directly to the Direct Air Support Center located at the Army Corps headquarters. The Direct Air Support Center assigns the mission to the Air Force tactical air control parties located at all Army headquarters down to battalion level.

Forward air controllers control the close air support strikes. These procedures are similar to those being used in Vietnam today. A copy of U.S. Military Assistant Command, Vietnam's Directive 95-4, dated July 13, 1965, titled "Aviation/Air Operations in RVN (U)" has also been provided. Relationships with the Vietnamese military structure have caused some variations in this system. However, most of the variances are in nomenclature. Provision is made whereby with the acceptance of responsibility the ground commander can direct close air support strikes in the absence of a forward air controller.

The reliance upon close air support is personified in Vietnam where units are widely dispersed and the routes of communications limit mobility of heavier ground fire support means.

As the Chief of Staff, U.S. Army, has previously stated:

The Air Force is best qualified to determine what type of aircraft is best suited to supporting us. We are interested primarily in getting munitions on targets that we designate in the close support role in adequate quantities to destroy that target in the minimum time.

The U.S. Army recognizes the extreme environment of Vietnam and its importance upon our combat force structure. The Army also recognizes that we should take advantages of all opportunities which technology can provide to improve on equipment, as well as our combat forces. The Limited War Laboratory and other facilities have been established to provide for quick reaction capabilities to meet the crash requirements for newer and improved systems and operational techniques.

As has been the traditional case the Army must remain prepared to meet all possible conflicts which confront the security of the United States. Foremost in the mind of the Army is the unqualified requirement to provide the finest ground combat units supported to the extent necessary to bring the war in Vietnam to a favorable end at the earliest opportunity.

Sir, that concludes my prepared statement and I am ready for any questions the subcommittee may have for me.

Mr. PIKE. Mr. Blandford, in view of the shape of my voice, I am going to let you lead off here for awhile.

Mr. BLANDFORD. All right, Mr. Chairman.

General, in the concept for improved joint air-ground coordination, copy of which I have, there has been quite a very frank statement of the weaknesses in the present, or the situation that existed in Vietnam until recently. Apparently you have agreed upon a new technique.

I will just read this into the record. Apparently this is the system that was in effect for awhile in Vietnam.

Army requests for close air support and tactical air reconnaissance generated at company or higher level are forwarded over Army-owned and Army-operated communications nets. At each ascending echelon of Army command,

the request is examined to determine if it can be satisfied by Army fire support means organic at that level. If it cannot be so satisfied, and is approved, it is passed to the next higher level. When such a request reaches field army, and it is determined that organic fire support means are not available at that level, it is passed as an air support requirement to the Air Support Operations Center (ASOC). The ASOC, which is an Air Force operations facility located in each field army area, then provides the required air support from the available air effort which has been allocated by the tactical air force commander.

Is this in reference to preplanned strikes?

General ODEN. Yes, sir.

Mr. BLANDFORD. This obviously couldn't work as a close air support immediate response system.

General ODEN. That is correct.

During the time that I was in Vietnam, in fact, as far back as last September, in their effort to provide better close air support, General Moore, who at that time commanded the 2d Air Division, got permission to bring in more forward air controllers to get them down as low as the battalion level and the Air Force provided them with the PRC-25 radio; so for instantaneous actions they could call direct to the ASOC which in Vietnam is at the corps level, by the way. And this improved the responsiveness to close air support.

Mr. BLANDFORD. You bypassed several layers of command.

General ODEN. You do it for emergency requests.

Mr. BLANDFORD. Now, Mr. Chairman, I would like to read into the record the weaknesses that a Chief of Staff of the U.S. Air Force and Chief of Staff of the Army apparently agreed upon existed in South Vietnam prior to a change in your technique. I think basically this could summarize a good deal of what we have been discussing here.

Mr. PIKE. It certainly confirms it.

Mr. BLANDFORD (continuing) :

Inadequate responsiveness of the system to the immediate close air support and tactical air reconnaissance needs of frontline Army commanders. Processing of requests through Army command channels is time consuming and the delay in the Air Force learning of an air support requirement is excessive.

(2) Lack of mobility of Air Force facilities placed in the field to coordinate and commit air support to the Army.

(3) Lack of reliable communications, especially for the air request system and the forward air control system.

(4) Lack of trained personnel, continuously available, who are intimately familiar with the coordination and planning techniques for providing air support.

Now, you injected two new concepts here that haven't been discussed as thoroughly as the other two and that is lack of mobility of Air Force facilities placed in the field and lack of trained personnel. Would you elaborate on that a little?

General ODEN. I am not quite sure that I made those statements there and I am talking about the Air Force's business, but I was General Moore's counterpart, we worked very closely together there. I would like to say this, that up to the time we put this into effect there had always been an effort to hold down the number of American military personnel in Vietnam [deleted].

But when it became apparent that the units were not getting as much close air support as they should be getting, why General Moore advocated this and Ambassador Taylor approved it through General Westmoreland, of course, but the Ambassador had to approve all the increased spaces coming to Vietnam. I am sure the Air Force must

have had an adequate number of trained air controllers but they weren't permitted to send them to Vietnam because of the restrictions on the number of military bodies. The PRC-25 radio was a recent development and it had just gone into production in the Army.

Mr. BLANDFORD. Is this the one that took the place of the PRC-10?

General ODEN. That is right. The PRC-10 is still used by U.S. Army battalion-type advisers, I believe I am correct. But with them is an Air Force forward air control, either on the ground—and when he is on the ground he has with him an airman with a PRC-25 on his back. I have seen these guys come out of the woods after 3 or 4 days in the woods looking just as bedraggled as their U.S. Army counterparts who had been struggling through the mire. This has greatly increased the effectiveness of close air support.

Mr. BLANDFORD. Now, the whole concept of close air support, obviously, I am talking in terms of reaction time and I am talking in terms of targets of opportunity or immediate targets, opposition that you are running into.

General ODEN. Right.

Mr. BLANDFORD. I think we have to distinguish between the pre-planned strikes which is in a different element entirely than the target—

General ODEN. Right; I agree with you.

Mr. BLANDFORD. That comes up immediately.

General ODEN. Yes.

Mr. BLANDFORD. Then there is always a great, if I can call upon my own experience as an artillery forward observer, I always had to argue with my battalion that he should always use mortar and machineguns before I used my artillery. I presume the same thing is true today, but the forward air controller always has to try to convince the battalion commander that there aren't as many Vietcong as he thinks are in there, he ought to use his mortar or send in a squad to find out if he is meeting opposition before you call for an air strike. This will continue, unless the battalion commander himself had operational control over the aircraft and he would make the decision as to whether to use the aircraft or mortar shells and machineguns. Now, would you say that of all the problems that we have in close air support, that the greatest problem today is the fact that when a target is sighted, the response time gives the enemy an opportunity to get away? That is when the target is marked, you cannot bring your attack aircraft in fast enough to destroy the enemy?

General ODEN. I would say you are very likely right.

Mr. BLANDFORD. That is the greatest single problem.

General ODEN. Response time, that is correct.

Mr. BLANDFORD. The response time is really the key to close air support.

General ODEN. In Vietnam today, I would say, perhaps.

Mr. BLANDFORD. Wouldn't you say that other than against fixed positions, concrete emplacements, something of that nature, that this will always be true of counterinsurgency operations?

General ODEN. I would not say it would always be true, because it would depend on the terrain and the type of equipment the armies could move along with them to fight. But it is very likely true. For instance in Vietnam, and I believe you were out with the chairman—

Mr. BLANDFORD. No, Mr. Marshall was over there.

General ODEN. Well, while the Vietnamese have considerable artillery [deleted]. The largest concentration of artillery I saw in my 2 years out there in a fight was one battery of six tubes. As a result the only real heavy mobile fire support available in Vietnam up to the time I left and I presume it is still—well, perhaps this isn't completely true with U.S. Army and Marine Forces in there—but up to that time is the fighter-bomber, Air Force strike aircraft. Of course, now the Marines have them and the Navy has them, too. But that type of aircraft is the only mobile heavy fire support. If you are going to try to take these entrenched positions, these tunneled areas, you have got to have something heavier than mortars or the armed helicopter to do it with.

Mr. BLANDFORD. Now, your PRC-25 radio has what kind of a range?

General ODEN. I believe, and I am really not prepared to answer, I could get the answer and send it to you, but I think it is up to 50 miles or something.

(The following material was received for the record:)

The range of the PRC-25 radio in its normal configuration is 3 to 5 miles. Employment of the RC-292 antenna will increase the range to 8 to 10 miles.

Mr. BLANDFORD. Up to 50 miles, but are we dealing with a situation in South Vietnam which is comparable to any jungle area where regardless of the radio you are using, if you are masked by jungle, you still cannot get communications beyond 2 or 3 miles?

General ODEN. Frequently that is correct, yes.

Mr. BLANDFORD. In other words, you really—

General ODEN. These are FM radios and they black out.

Mr. BLANDFORD. That is my point. Now, I don't know whether we are making any progress in communications to the point where we could put up a balloon or something of that nature to get into direct contact with corps; but what I am thinking of is in terms of the O-1. If your O-1A or O-1F isn't available you really don't have any means of close air support do you?

General ODEN. Well, if you had it in, say a jungle area where the man can't get out, and what you just said was true, you would have no means of close air support except going back on CW, on some other set and very slow procedure to get it, and probably the situation would have changed such that it wasn't necessary; you either have been overrun or the enemy has withdrawn by that time. But let me make a point here: In Vietnam today—I believe I am correct on this, I know it was planned to be this way, if it isn't right now—the Air Force is operating in a little country about the size of California [deleted] squadrons of 30/O-1's; the Vietnamese Air Force, I believe I am correct in this, has [deleted] the U.S. Army has [deleted] companies of [deleted] each; and frankly, the air should be, beside the Mohawks and other types of aircraft flying around there, the air should just about—the sun should almost be blanked out [deleted].

Out in the field, with a lot of these aircraft are helicopters. Believe it or not the blue-belted lads and black-belted lads really speak to each other over there, work together and the helicopters are there for relay. In fact, when I left there, there had never been an airplane go down where, if the pilot was still alive, but what he was picked up,

in the longest length of time by helicopter, 11 minutes after he yelled "May Day."

Mr. BLANDFORD. Eleven minutes.

General ODEN. Eleven minutes was the longest time from the time the man transmitted "May Day" until the time he was picked up, at the time I left, which was in April. It would be difficult to imagine a time that there wouldn't be an L-19 or O-1 or helicopter near ground forward air controller even in the jungle area where he can at least, with that limited range, talk to that aircraft.

Mr. BLANDFORD. As I understand it, your O-1's, the lethal range from the ground against on A-1 is [deleted] feet, that your instructions to your O-1 pilots are to maintain an altitude of at least [deleted] feet.

General ODEN. Not ours.

Mr. BLANDFORD. This is not your policy?

General ODEN. Our instructions to our O-1 pilots, and I am talking about Army now——

Mr. BLANDFORD. Yes.

General ODEN (continuing). Is to do the mission. Sometime they have to go lower to do it. I don't know what the Air Force instructions are, but I have seen them lower.

Mr. BLANDFORD. I am sure there are cases of this.

General ODEN. Right.

Mr. BLANDFORD. But aren't there basic doctrines or concepts that both the Army and Air Force adopt in flying air support missions? Don't you have a joint doctrine on this business? Or isn't there a joint doctrine?

General ODEN. The only joint doctrine we have is close air support with the Air Force.

Mr. BLANDFORD. And these are just basically what I have here. Is there a training manual on close air support?

General ODEN. If there is—I presume there is and I imagine the Air Force has a number of them, Navy and Marines.

Mr. BLANDFORD. Yes. But the Army doesn't have?

General ODEN. Not on close air support. We have on all types of air operations.

Mr. BLANDFORD. Are Army——

General ODEN. But we don't call ours close air support.

Mr. BLANDFORD. What do you call yours?

General ODEN. We call ours "Army Aviation." The only thing we have armed are the helicopters and some of the Mohawks that we have.

Mr. BLANDFORD. Is it standard today for Army officers, particularly, say, the more junior officers who are going over as advisory or now even into combat units to be trained in close air support procedures? For example, if your FAC is a casualty or he has a sergeant with him and he, too, is a casualty, are there Army personnel who can replace him? Is this a part of a course that is conducted before they go into South Vietnam?

General ODEN. I cannot answer that. Can you answer that, General Mueller?

General MUELLER. We will get the answer to that.

(The following material was received for the record:)

The Army provides for instruction to its personnel in the conduct of close air support in the following manner:

(1) Training in close air support is included in the course of instructions at all of the Combat Arms Service Schools. Air Force liaison officers are assigned to the faculties of each of these schools, and they participate in the training.

(2) The Army is using the Military Assistance Training Advisor (MATA) Course at Fort Bragg, N.C., to train its adviser personnel being deployed to Vietnam. This course devotes 16 hours of instructions to close air support. Attendance at this course is approaching 100 percent of all enlisted men, lieutenants, captains, and majors being assigned to duties outside of the major headquarters in Vietnam. This course provides the students with a pocket-size handbook covering close air support, and the Army published Field Manual 31-73, Advisor Handbook for Counterinsurgency, which includes information on close air support.

(3) The training course for forward air guides at the John F. Kennedy Special Warfare Center consists of intensified instruction in close air support procedures.

(4) The Air Ground Operations School is a jointly supported Army/Air Force course which has been in existence since World War II. This course is designed to train staff officers in close air support techniques.

Mr. BLANDFORD. My only point, Mr. Chairman, is to try to determine, if I can, the extent to which this has been recognized as a basic problem of warfare in South Vietnam. I am not being critical, General, I don't mean that. But to what extent have people gotten together and said "Look, we have to agree upon a procedure here that close air support is one of the most vital things we have got over here." Anybody that you talked to who has come back from Vietnam will tell you if there is one thing they want over their head it is a friendly airplane. It is a great morale booster, if nothing else. But the greatest defect, apparently, in the whole system is reaction time. I even had the experience yesterday of talking to an Air Force major, an O-1F pilot, who has retired and has nothing to lose at this point. He was very proud of his little O-1F, but he said that even when he marked the target and the procedure apparently is that the target is marked in 15 seconds, in other words, "I am going to go down and I will mark the target and 15 seconds later you go in," and he gives them a baseline, apparently that is an Air Force procedure. I don't know whether the Army uses anything comparable to that, but at any rate he said even 15 seconds can be too long against the Vietcong. Once the rocket's white phosphorous smoke has gone in he said these Vietcong are out of there faster than rabbits, because they know what is coming next. He said what they really need in South Vietnam, more than anything else, is an airplane that sees the target and destroys the target all in one fell swoop, not two airplanes playing "hide and go seek" with each other.

Now, let me ask you, General, what is your idea of the average reaction time when you just don't have a FAC over here and you have to go back to corps with this new procedure which is to bypass certain commands, what would be your concept of reaction time? Say with the airfield 60 miles away, how fast do you think this new joint Army-Air Force doctrine could produce a plane on station?

General ODEN. And not on air alert?

Mr. BLANDFORD. Let's take both, one on air alert somewhere over the airfield, not knowing which direction they are going to go and the other is just on the ground.

General ODEN. I would say about 25 minutes for 60 miles away; 25 minutes for the one on air alert and I am not talking about jets.

Mr. BLANDFORD. Yes.

General ODEN. I am talking about the A-1-E's, although there were some jets being flown when I left, but primarily A-1-E's, and I would say a minimum of 40 minutes if they had to be scrambled.

Mr. BLANDFORD. A minimum of 40 minutes.

Now, you have discussed with many of the people who have come back from South Vietnam, who were with them in the early stages when they were fighting the Vietcong. What was the basic complaint of your people with respect to close air support, other than the four points, if there were any additional complaints concerning the kind of close air support that they obtained? And again I am not trying to start a fight. We are trying to get to the facts of this thing to see if we can recommend something that will improve the system.

General ODEN. Right.

Well, the basic complaint of the people, and I would like this to go off the record if I may.

Mr. BLANDFORD. All right.

(Discussion off the record.)

Mr. BLANDFORD. I have no further questions.

Mr. PIKE. Gentlemen, I have not had a chance to look at this new concept until today. I note in it that still under your revised concept no forward air controller is assigned below the battalion level, is that correct?

General ODEN. That is correct.

Mr. PIKE. Now, yesterday the Marines testified that their requirements called for a commissioned officer at each company level, a forward air controller. Do you not think it might be useful to have forward air controllers assigned below the battalion level?

General ODEN. For U.S. units in Vietnam, Mr. Chairman, that might be quite worth while. For Vietnamese units, I would say no. [Deleted.]

Mr. PIKE. We are talking now about our own concept, this is our program, the Army and the Air Force and on our own program.

General ODEN. All right.

Mr. PIKE. We are not planning to have any air control below battalion level?

General ODEN. I think we are trying to draw, Mr. Chairman, if I may say so, a black and white line. That is why I referred to the counterinsurgency in Vietnam. I don't think the Marines would want an air control party lower than battalion level for normal assignment. That doesn't mean that the control party won't go out with the lead company of a battalion that is carrying the brunt of an assault that has the close air support in front of it. I really believe that the assignment of these control teams down to battalion level is low enough, because you are not going to lead with the whole battalion, you may have two companies up front and where you would want your air support would be in the two companies.

Mr. PIKE. General, I may be wrong, but I believe that the Marines told us yesterday that they do have air controllers assigned at the company level. Are you sure that they don't do this? Are you familiar with their system?

General ODEN. No, I was not objecting to the Marine's system. You asked me, I understood, sir, if I didn't think that was a good idea. The reason I referred to counterinsurgency was, perhaps it is good for U.S. units in counterinsurgency in Vietnam, but I don't believe it would be by and large for normal types of wars. The Army may need to take a look and see if we need tactical air control down at the company levels.

Mr. PIKE. One of the things that bothers this whole committee is we keep talking about normal types of war and the planning and the concepts are derived for what you call normal types of war. Well, there is only one war we are fighting and when we are only fighting one war it seems to me the concepts have to be considered normal for fighting that kind of a war. I simply don't see how you can talk about the only war we are fighting as not normal.

General ODEN. Well, again I say I think the Army should take a look, and the Air Force—perhaps for U.S. units in Vietnam this is worthwhile. I would like to see how the Marines are doing it and why they need it, but apparently they are [deleted] and in that case they should have an air traffic control party.

Mr. PIKE. Hasn't the Army looked in the past at how the Marines are doing this?

General ODEN. Sir, I presume they have. I am not in a position to know.

Do you know the answer to that, General Mueller?

General MUELLER. I don't know, but we will find out.

(The following material was received for the record:)

In the development of the current close air support concept, the Army did investigate into the close air support procedures used by the Marine Corps. An Army Staff representative visited the U.S. Marine Corps School at Quantico, Va., to determine exactly what the Marine Corps procedures for close air support were, and how they differed from those proposed by the U.S. Air Force in its concept. Essentially, the procedures used in these two systems are the same. The number of aircraft in the Marine air wing available for close air support of Marine ground forces will exceed, in number of sorties per division per day, that which the Army normally considers available from the Air Force. The current procedures provide for the presence of a forward air controller, and an air liaison officer at battalion level. In an emergency, both could act as forward air controllers, as could the air liaison officer at brigade headquarters. Further, in an emergency, the Air Force has agreed that ground force personnel who have been trained in the conduct of airstrikes, forward air guides (FAG's), may be used in controlling air strikes when no Air Force personnel are available.

Mr. PIKE. General, you say in your statement:

Provision is made whereby with the acceptance of responsibility the ground commander can direct close air support strikes in the absence of a forward air controller.

What does the "acceptance of responsibility" involve?

General ODEN. Accept the responsibility that if they strike your troops you are responsible for it.

Mr. PIKE. What does he have to do, to say "I accept the responsibility that if they strike my troops I am responsible for it"? How is this communication rendered?

General ODEN. Well, they don't render a communication that way, Mr. Chairman. They just ask for it in Vietnam and the Air Force gives it to them. Nobody sits up there and has to have a written agreement before they strike.

Mr. BLANDFORD. May I inject? Is this comparable to a battalion commander overriding an artillery forward observer and saying you will fire notwithstanding the—

General ODEN. No; it doesn't work that way, this is in the absence of a forward air controller.

Mr. BLANDFORD. In the absence of a forward air controller.

General ODEN. In the absence of a forward air controller.

Mr. PIKE. If we have, I presume—believe me I am no expert on this—I presume that we will have platoon-size patrols and perhaps company-size operations conducted by our Army in Vietnam, is that a fair assumption?

General ODEN. I would say that is a fair assumption, Mr. Chairman.

Mr. PIKE. If we have, and a platoon runs into a situation where it wants airpower, what does it have to do?

General ODEN. The platoon will have to go back to the company and battalion to get it.

Mr. PIKE. The platoon will have to go to company, the company will have to go to battalion?

General ODEN. That is correct, sir.

Mr. PIKE. The battalion will have to go to the TACP, is that correct?

General ODEN. Well, the forward air controller—

Mr. PIKE. The TACP is at the battalion, is that correct?

General ODEN. Yes, sir; tactical air control party, that is correct, sir.

Mr. PIKE. Now, the tactical air control party, as I understand it, at the battalion level does not have to clear higher up, is that correct?

General ODEN. Not if the—in a case such as you mentioned here he does not. He will call direct to the ASOC in Vietnam for the close air support for that platoon.

Mr. PIKE. The platoon is using what kind of radio equipment?

General ODEN. They have PRC-10's, sir.

Mr. PIKE. The company is using what kind of radio?

General ODEN. PRC-10.

Mr. PIKE. When we get to the battalion then the Air Force liaison group at the battalion level is able to communicate with the air operation control center?

General ODEN. That is correct, sir.

Mr. PIKE. And also, I presume, with the aircraft, is that correct?

General ODEN. That is correct.

Mr. PIKE. The platoon cannot communicate with the aircraft?

General ODEN. No, sir.

Mr. PIKE. The company cannot communicate with the aircraft?

General ODEN. That is correct, sir.

Mr. PIKE. Aren't you concerned about the fact that neither a platoon nor a patrol or a company out on an operation can communicate with the airplanes giving the close air support?

General ODEN. Well, I would certainly say if you have—everything else being equal—if you can have tactical control parties down to that level, that is fine, just in case they do bump into something that they would need close air support for. And they do in ambushes. That is about the only time I can think of a patrol needing it, but they do in the case of an ambush.

Mr. PIKE. General, you say the Air Force is best qualified—wait a minute, you are quoting the Chief of Staff there.

General ODEN. That is correct.

Mr. PIKE. Of the U.S. army. [Reading:]

The Air Force is best qualified to determine what type of aircraft is best suited to supporting us. We are interested primarily in getting munitions on targets that we designate in the close support role in adequate quantities to destroy that target in the minimum time.

Now, you have just told Mr. Blandford that in the case of an air alert with the planes 60 miles away from you it would take 25 minutes; if they were on ground alert it would take 40 minutes.

In the situation in Vietnam, are you satisfied with that time as being within minimum time?

General ODEN. No, I am not, Mr. Chairman.

Mr. PIKE. You said that the only planes that the Army, or the only aircraft that the Army has had providing support have been the armed helicopters and some Mohawks.

General ODEN. The only aircraft we have armed are the armed helicopters and the Mohawks.

Mr. PIKE. For the Army. When you got your Mohawks were they armed?

General ODEN. No; we armed over there, Mr. Chairman.

Mr. PIKE. What is that?

General ODEN. We armed them over there.

Mr. PIKE. When were the arms put on the Mohawks?

General ODEN. Back in 1962, sir.

Mr. PIKE. What kind of arms were put on the Mohawks?

General ODEN. Fifty caliber and 2.75-inch rockets.

Mr. PIKE. How many .50 caliber and how many 2.75 rockets?

General ODEN. Two .50 calibers and they carry 36 2.75-inch rockets.

Mr. PIKE. Now, is it a fair assumption to say that the Army determined that they had to arm these Mohawks because they needed armed Mohawks?

General ODEN. That is correct, sir.

Mr. PIKE. How long has the Army been flying O-1 aircraft?

General ODEN. Since the Korean war, sir.

Mr. PIKE. Do you know how long the Air Force has had O-1 aircraft?

General ODEN. Yes, sir; since 1963 they have had a very limited number, but—

Mr. PIKE. I am talking about as observation and forward air control aircraft.

General ODEN. Since 1963, I believe I am correct on that, sir.

Mr. PIKE. And is it not true that the Air Force got O-1 aircraft because the Joint Chiefs of Staff told them to?

General ODEN. I don't believe that is correct, sir. As I recall, and I was Director of Army—

Mr. PIKE. It may be that I more properly should direct it to the Air Force. But I asked about the Air Force getting O-1 aircraft and I have been told that the first deployment of Air Force O-1's came as a result of a Joint Chiefs of Staff directive on March 28, 1963, telling the Air Force to deploy 22 O-1's to the Vietnamese Army. It was through them. That was the first, as far as I know. Then I

am told that on September 4, 1964, Air Force regulation 7 directed the Air Force to procure some O-1's from the Army and it wasn't until February 1965, that the aircraft were received from the Army. Would you know anything about that?

General ODEN. I certainly do, sir; and that is not correct. I was Director of Aviation and we provided the Air Force the aircraft immediately in 1963.

Mr. PIKE. You provided them immediately. Were the ones you provided in 1963—how many did you provide?

General ODEN. We provided three for training here, initially, and a total of 22 shortly thereafter to equip their squadron.

Mr. PIKE. Weren't the 22 the ones that were to be turned over to the Vietnamese?

General ODEN. Oh, no, sir. This is for Air Force squadrons, air commando squadrons.

Mr. PIKE. Do you know when these 22 aircraft were turned over to the Air Force?

General ODEN. In fact I believe, sir, it was before May of 1963.

Mr. PIKE. March is the date I have here.

General ODEN. I thought you said May. About March is about right, sir.

Mr. PIKE. I presume—let me withdraw that.

Do you know why the Air Force decided in 1963 that they needed some O-1's?

General ODEN. No; but the requirement came out of Vietnam, that is all I know, sir.

Mr. PIKE. When the Army finds in a Vietnamese situation that they have to provide O-1's to the Air Force to meet Air Force requirements in Vietnam, and when the Army finds that it has to arm in Vietnam Mohawk aircraft to do a job that needs doing in Vietnam, don't you think that the Army, itself, might properly say that it should have some voice in the type aircraft that are needed for close air support?

General ODEN. Mr. Chairman, I am the official Army witness and I am not speaking personally and I adhere to the position of the Army Chief of Staff.

Mr. PIKE. Well, from that would I gather that by indirection if you were speaking personally and were not the official witness you might not adhere to the position of the Army Chief of Staff?

Mr. BLANDFORD. May I suggest that we follow the directive issued by the Secretary of Defense and that you press the general for his personal opinion, and you must use those words.

Mr. PIKE. Yes. I think I have that piece of paper somewhere around here. I am not sure that I can word this correctly, but I will now ask you for your own personal opinion and not the official opinion as to whether the Army should not have some voice in the type aircraft it gets for close air support.

General ODEN. Mr. Chairman, in response to your question I personally think that the Army should have considerable voice in the type of aircraft that the Air Force procures for its support.

Mr. PIKE. Let me say, General Oden, I appreciate the position you are in. I think we all appreciate the position you are in. I am certainly not going to pursue this any further.

Mr. Gubser.

Mr. GUBSER. No, I agree.

Mr. PIKE. Do you have any questions?

Mr. GUBSER. No.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. I got the point, Mr. Chairman.

Mr. PIKE. Well, there are other subject matters.

Mr. Chamberlain?

Mr. CHAMBERLAIN. Well, may I say, Mr. Chairman, I think that the general's testimony here has been thoroughly covered between yourself and Mr. Blandford.

At the bottom of page 2 is one sentence of the general's statement that I think we might ask him to elaborate on.

The Limited War Laboratory and other facilities have been established to meet the crash requirements for newer and improved systems and operational techniques.

Would you tell us, if you know, what these people have come up with, what they have done there, or what they are doing now to improve our situation?

General ODEN. Mr. Chamberlain, I am not intimately familiar with the detailed operations of this laboratory, I know it is in existence, and I know it is working hand in glove with ARPA, with the other services and with our people in Vietnam, particularly. I don't know of anything other than testing new armament systems or modified armament systems for the Army helicopters in the aircraft business for the Army. They have done considerable in surface vehicles, for instance placing turrets and different types of weaponry on the M-113 in Vietnam; working with the people in Vietnam to design a better way for them to pull the 113 out of the mire; they worked with some of these swamp boats that they use in Florida for getting around the rice paddies; different types of armored cars for Vietnam; some of the surface things I know they have done. They have worked with some weaponry, certain types of radar to pinpoint a man at night a little bit better, and means other than radar for this purpose. But in the field of aircraft, I don't know of anything other than helicopter armament systems.

(The information requested is classified and is being furnished separately to the subcommittee.)

Mr. CHAMBERLAIN. Thank you very much.

Mr. PIKE. Mr. Irwin?

Mr. IRWIN. General, have you had an opportunity to look over an aircraft that we don't have listed here today, the COIN aircraft?

General ODEN. I know something about it, I am not detailed familiar with it, or the LARA, either one, which is similar to it.

Mr. IRWIN. Do you have any idea about whether you think this would be a helpful type of plane for close ground support?

General ODEN. Mr. Irwin, it would be a helpful type of airplane for close air support. There are a lot of capabilities, there appear to be, in both the COIN and LARA, I think the General Dynamics has from what little I have read. Any kind of an airplane that will fly and deliver munitions and do other functions is helpful. I don't mean to oversimplify it. I think this is perhaps a good aircraft. I don't know what the relative cost effectiveness is or any of the details on that. It should be a good aircraft. North American General builds good aircraft; I know that.

Mr. IRWIN. Yes. Earlier the chairman asked you what your personal opinion was about the Army having a say in the design and development of these aircraft and my question really is related to your response on that.

General ODEN. I am not familiar enough, Mr. Irwin, with the COIN aircraft to say whether I think it would be a good close support aircraft. My friends in the Air Force won't agree with me, but I would say the Mohawk would make a very good close air support aircraft and this may be very similar to the Mohawk.

Mr. IRWIN. OK. Thank you.

Mr. PIKE. General, wouldn't you like, or based on what you do know about the COIN aircraft, would you like to see some of them in the hands of Army pilots? Now, I am asking for your personal response.

General ODEN. This is what I—the answer is “Yes.”

Mr. PIKE. I saw the hesitation in your eyes.

General ODEN. The answer is “Yes,” Mr. Chairman, I would like to see a considerable number of an aircraft with the capabilities it is supposed to have. I don't know enough about this aircraft.

Mr. PIKE. Right.

Mr. Blandford, do you want to ask a question?

Mr. BLANDFORD. I have one further question, Mr. Chairman, which again I will ask the general for his personal opinion. If there is any conflict, and there is bound to be conflict in doctrine even in Congress, but if there is any conflict between the Army and the Air Force or perhaps among the four services, as to the type of aircraft that is required for close air support, would I be correct in concluding, general, that the position of the Army, and you are the official Army witness in this respect, is that we should design an aircraft with one purpose in mind and that is to provide close air support for the troops on the ground, whereas the Air Force's position is that we should design an aircraft with much greater versatility? In other words, I am not trying to put words in your mouth, but as I gather it, even from listening to the pilots testify here, they want an airplane that can do many things; close air support, act as a fighter, act as an interceptor, deep interdiction, fast getaway speed, fast arrival time on target. What you are talking about, basically, is the necessity for an aircraft that will do one particular job well and is actually designed for that particular job; is that a correct summary of the difference between the Army and the Air Force?

General ODEN. Well, no; may I put it this way: That is the difference in my personal opinion, not the Army.

Mr. BLANDFORD. I see.

General ODEN. Now, the reason the Army has taken this other position, and there is naturally much logic to it, is because they are thinking of all the missions the Air Force has to perform and this is really not pitched to counterinsurgency, of course, but in all the various missions the various services are faced with throughout the world in all types of wars, in the first place the Army wants air superiority. There is no doubt about it, we want air superiority first. We do want a lot of interdiction work to keep forces off our backs before they get to the immediate battle area and we want close air support and this is the rationale, I believe I am correct in this, that has caused the Army to

maintain this position throughout the years or basically this position. Just on the hard facts of life, considering the amount of money that the taxpayer can put into defense and where it is going to go—and I may be talking out of turn, but I believe in my service with the Army that is why the Army has this official position. They do want air superiority; it isn't absolutely essential but it is awfully nice to have, as you well know. I realize the Chinese Communists didn't have air superiority when they came across the Yalu in the Korean war and they did pretty well. But the way we operate we would prefer air superiority. We have always figured that the Air Force, we would hope that the Air Force would provide aircraft that could provide us close support and they would take care of the air superiority mission.

Mr. BLANDFORD. You are aware, obviously, of the study that was made in 1963 in the close air support boards and as I read the position of the Army and the position of the Air Force, the Army's requirement differed considerably from the Air Force requirement for close air support weapons.

Now, again as I read the position of the Army, it would appear that the Army in 1963 were talking in terms of a VAL aircraft, or perhaps a faster type, or something like COIN, the Air Force's position, if I read the characteristics correctly, comes closer to an F4C than anything else, and now there has been a change of heart apparently in the Army and what you say here leads me, I am sure, to the incorrect conclusion that perhaps if you have to choose between, say, the F-5 and the COIN, that because of this official Army position, you may prefer the F-5 to the COIN aircraft; would that be correct?

General ODEN. No, sir, that would not be correct, I don't believe.

Mr. BLANDFORD. That is good.

General ODEN. Our present position is we would bow to the Air Force's decision on which is the better.

Mr. BLANDFORD. Well, I think I would like to summarize by saying this and perhaps get an opinion from the General, that without downgrading in any way the F-100 or the 100 series and certainly F-5 is a great airplane and I am delighted that it is going to be tried out in South Vietnam; but the official position of the Army with respect to letting the Air Force determine the type of aircraft that they are going to use for close air support, I can see now why the Navy was practically—was the executive agent before the decision on the COIN airplane; it seems to me what you would like in your personal opinion you would like to see us have both COIN aircraft and a versatile fighter, interdiction weapon supporting Army operations, isn't that what it boils down to? You want both?

General ODEN. Are you asking for my personal opinion now?

Mr. BLANDFORD. I now ask for your personal opinion.

General ODEN. Yes. I don't mean to sound harum-scarum about the taxpayer's money which I contribute partly to, but I think any nation that can afford three strategic air forces can—

Mr. BLANDFORD. Can have something to support the boys on the ground real close.

General ODEN. Whether it is this aircraft or something else.

Mr. BLANDFORD. That is exactly right.

Mr. PIKE. I couldn't agree with you more, General. Amen.

Mr. GUBSER. Amen.

Mr. PIKE. As you sit on the ground and you look up in the sky, you don't have any trouble finding aircraft which were designed for air superiority, do you, air-to-air superiority?

General ODEN. Yes.

Mr. PIKE. And you don't have any trouble finding aircraft which were designed for these long-range interdiction missions, do you?

General ODEN. No, sir.

Mr. PIKE. Can you find one that was designed for close air support?

General ODEN. Well, the experts, of course, Mr. Chairman, would tell you that they design for both.

Mr. PIKE. General, I consider you an expert and I am asking you, once again, for your personal opinion.

General ODEN. No, sir; I don't think they are designed for close air support.

Mr. PIKE. Mr. Evans, any questions?

Mr. EVANS. No, I have no questions.

Mr. PIKE. Thank you very much, General Oden. You have been most forthright and cooperative and I hope that—we will make the record abundantly clear that the testimony which you have given was your personal opinion and was dragged out of you most reluctantly.

General ODEN. Thank you very much, Mr. Chairman. I appreciate it.

Mr. PIKE. Mr. Marshall.

Mr. MARSHALL. Yes.

Our next witness is Maj. Gen. Arthur C. Agan, Jr., Assistant Deputy Chief of Staff, Plans and Operations, U.S. Air Force.

(The biography of General Agan follows:)

BIOGRAPHICAL SKETCH OF MAJ. GEN. ARTHUR C. AGAN, JR., U.S. AIR FORCE

Maj. Gen. Arthur C. Agan, Jr., 1759A, was born in San Antonio, Tex., on September 12, 1915. After spending his boyhood in Corpus Christi, Tex., General Agan entered the University of Texas. In 1936 he postponed his studies for a year to enroll as a flying cadet in the U.S. Army Air Corps. Following completion of that course and his commissioning as a second lieutenant, he completed his studies at the University of Texas from which he graduated in 1939 with a degree in business administration.

Immediately following his graduation, General Agan resumed active military duty and obtained a regular commission through competitive examinations. Until early 1942 he served in various squadron duties as pilot, flight commander, and operations officer, Barksdale Field, La., and Savannah Army Air Base, Ga.

In February 1942, General Agan was appointed Chief of Tactical Operations at Headquarters 8th Air Force in England, remaining in that position until January 1944. He then served as Assistant Air Chief of Staff for Operations for the U.S. Army Air Force in the Mediterranean Theater of Operations.

Assigned to the 1st Fighter Group in Italy in September 1944, General Agan became commander of the group on November 15, 1944. After completing 45 combat missions, the general was shot down over Weiner-Neustadt and interned as a prisoner of war until just prior to VE Day.

Returning to the United States in 1945, General Agan was assigned to the Personnel Services Division, Headquarters, U.S. Air Force in Washington, D.C. He became chief of that division in January 1946.

From September 1946 to February 1949, General Agan was Assistant Chief of Staff for Personnel and later Deputy for Personnel and Administration, Headquarters, Air Defense Command, at Mitchel Field, N.Y. He then took command of the 4th Fighter Wing at Andrews Air Force Base, Washington, D.C., for 3 months before transferring in May 1949 to Otis Air Force Base, Mass., to command the 33d Fighter Wing.

Two years later General Agan became commander of the 32d Air Division (Defense), with headquarters at Stewart Air Force Base, N.Y. He remained in that assignment until September 1961 when he was assigned to the staff of the Air Command and Staff School. He then attended the Air War College at Maxwell Air Force Base and was graduated in July 1953.

August 1953 saw General Agan as commander of the 58th Fighter Bomber Wing in Korea. Upon his return to the United States the following year, General Agan was assigned to Headquarters Eastern Air Defense Force at Stewart Air Force Base, N.Y. There he served as Deputy for Operations and later as Chief of Staff, CONAD Forces, Eastern CONAD Region.

On August 1, 1957, General Agan became commander of the 26th Air Division (Defense), with headquarters at Roslyn Air Force Station, N.Y. During the following year, and under General Agan's leadership, the operational concepts for the semiautomatic ground environment (SAGE) system of air defense and the plans for transition of air defense units to that system were developed and initiated.

On September 5, 1958, General Agan assumed command of the New York Air Defense Sector with headquarters at McGuire Air Force Base, N.J., the first operational SAGE sector in the Nation. Reassigned to Headquarters Air Defense Command at Ent Air Force Base, Colo., in October 1959, he assumed the position of Deputy for Plans, later redesignated Deputy Chief of Staff for Plans.

In July of 1963, General Agan was reassigned to Hancock Field, N.Y., for duty as commander, 26 NORAD (CONAD) Region with additional duty as commander, 26th Air Division (SAGE).

On July 1, 1964, General Agan was assigned to the Pentagon, Washington, D.C., for duty as Director of Plans, DCS/Plans and Operations.

On December 1, 1964, General Agan was assigned as Assistant DCS/Plans and Operations. His military awards include the Legion of Merit with two oak leaf clusters; Distinguished Flying Cross; Bronze Star; Air Medal with two oak leaf clusters; Army Commendation Medal with one oak leaf cluster; Purple Heart; Belgian Croix de Guerre with Palm; and French Croix de Guerre with Palm.

The general and his wife, the former Louise Stovall, of San Antonio, Tex., have three children—Mrs. Mary Richards who resides in New York City; Helen Todd and Sarah Louise who reside with the Agans in Alexandria, Va.

A. Personal data

Born September 12, 1915, San Antonio, Tex., father, Arthur C. Agan, Sr. (deceased), mother, Mattie Bell Agan.

Married September 1939; wife, Louise Stovall, of San Antonio, Tex.; children, Mary Ethel, born October 7, 1941; Helen Todd, born March 11, 1946; and Sarah Louise, born September 25, 1948.

Hometown address: 1408 Santa Fe, Corpus Christi, Tex.

B. Education

1933-34: Texas College of Arts and Industry.

1934-37: University of Texas.

1937: U.S. Army Air Force Flying School.

1939: Graduate University of Texas (B.B.A.).

1951: Academic and instructors course, Air Command and Staff School, Air University, Maxwell Air Force Base, Ala.

1953: Air War College, Maxwell Air Force Base, Ala.

C. Service dates

October 1936-October 1937: Pilot training, U.S. Army Air Corps, Randolph and Kelly Fields, San Antonio, Tex.

June 1939-December 1940: Pilot and squadron adjutant, 13th Attack Squadron, Barksdale Field, La., and Savannah Army Air Base, Ga.

January 1941-May 1941: Operations officer, 13th Bomb Squadron, Savannah Army Air Base, Ga.

May 1941-February 1942: Flight commander and Operations officer, 11th Reconnaissance Squadron, 27th Bomb Group; also 13th Bomb Squadron, 3d Bomb Group; Savannah Army Airbase, Ga.

February 1942-January 1944: Operations and training staff officer, Headquarters, 8th Air Force, England.

January 1944–September 1944: Assistant Air Chief of Staff for Operations, Headquarters U.S. Army Air Force, Mediterranean Theater of Operations.

September 1944–March 1945: Commanding officer, 1st Fighter Group, Italy.

June 1945–January 1946: Deputy Chief, Personnel Services Division, Headquarters U.S. Air Force, Washington, D.C.

January 1946–September 1947: Chief, Personnel Services Division, Headquarters U.S. Air Force, Washington, D.C.

September 1947–May 1948: Assistant Chief of Staff for Personnel, Headquarters Air Defense Command, Mitchel Field, N.Y.

May 1948–January 1949: Deputy for Personnel and Administration, Headquarters Air Defense Command, Mitchel Field, N.Y.

January 1949–February 1949: Assistant Deputy for Personnel and Administration, Headquarters Continental Air Command, Mitchel Air Force Base, N.Y.

February 1949–May 1949: Commander, 4th Fighter Wing, Andrews Air Force Base, Washington, D.C.

May 1949–March 1951: Commander, 33d Fighter Wing, Otis Air Force Base, Mass.

April 1951–September 1951: Commander, 32d Air Division (Defense), Stewart Air Force Base, N.Y.

September 1951–October 1951: Student, academic and instructors course, Air Command and Staff School, Maxwell Air Force Base, Ala.

October 1951–August 1952: Chief, Personnel and Administration Division, Headquarters Air Command and Staff School, Maxwell Air Force Base, Ala.

August 1952–August 1953: Student, Air War College, Maxwell Air Force Base, Ala.

August 1953–July 1954: Commander, 58th Fighter-Bomber Wing, Korea.

July 1954–January 1957: Deputy for Operations, Headquarters Eastern Air Defense Force, Stewart Air Force Base, N.Y.

January 1957–August 1957: Deputy Chief of Staff for Operations, Headquarters, Eastern Air Defense Force, and chief of staff, CONAD Forces, eastern CONAD region, Stewart Air Force Base, N.Y.

August 1957–September 1958: Commander, 26th Air Division (defense), Roslyn Air Force Station, N.Y.

September 1958–October 1959: Commander, New York air defense sector, McGuire Air Force Base, N.J.

October 1959–July 1963: Deputy Chief of Staff for Plans, Headquarters, Air Defense Command, Ent Air Force Base, Colo.

July 1963–July 1964: Commander, 26th North American Air Defense Region, 26th Air Division (SAGE), Hancock Field, Syracuse, N.Y.

July 1964–December 1964: Director of plans, Deputy Chief of Staff for Plans and Operations, Headquarters, U.S. Air Force, Washington, D.C.

December 1964–present: Assistant Deputy Chief of Staff for Plans and Operations, Headquarters, U.S. Air Force, Washington, D.C.

Mr. PIKE. We are glad to have you here, General Agan. I understand you have a prepared statement. Is that correct?

General AGAN. Yes, sir.

Mr. PIKE. Proceed.

STATEMENT OF MAJ. GEN. ARTHUR C. AGAN, JR., U.S. AIR FORCE

General AGAN. Mr. Chairman, I welcome this opportunity to testify on behalf of the U.S. Air Force on this vital subject of close air support. The Air Force well appreciates the necessity for and value of hearings such as this and stands ready to cooperate to the fullest extent.

The Air Force includes among its primary responsibilities that of furnishing close air support for ground forces in South Vietnam.

We attach the highest importance to this function and devote an appreciable portion of our resources to close air support. The Air Force has always held the view that the application of close air support firepower, in coordination with the fire and maneuver of friendly forces, is a highly effective method of warfare, one which has been

well proven in past battles, and which today in South Vietnam has taken on especial importance. This is true because of the challenging nature of the present conflict, a conflict which is different from any the United States has faced previously. The Vietcong are widely dispersed among almost the entire country. They strike here one hour, and hundreds of miles away the next, or in many places simultaneously. They generally remain well hidden as they move to concentrate for attack, keeping their intentions secret until they launch their strike. Friendly surface forces, on the other hand, are not of sufficient number to remain concentrated at every one of the hundreds of points of potential attack.

Instead, mobile forces must be employed to meet the concentrated attacks of the enemy. Because of this urgent requirement for a high degree of responsiveness; and because the Vietcong control large areas, and movement by surface transport is difficult, ground forces must move by air. It is this situation which has heightened the importance of close air support. Ground forces, moved by air to reinforce besieged garrisons, may not possess all of the heavy firepower so necessary to reach out and inflict decisive damage on the Vietcong.

Nor do the numerous small outposts have heavy firepower or the freedom to maneuver for advantage when brought under attack. The situation is much the same when friendly forces carry out offensive operations. The nature of the area of combat operations often precludes extensive use of heavy firepower, except that delivered from the air by tactical fighters and bombers.

Mr. Chairman, I do not want to give the impression that the Air Force believes that airpower alone can bring the conflict to a satisfactory conclusion. Tactical airpower, in the vital close air support role, is but one of the important ingredients in the war against the Vietcong. Military success will only come through the joint efforts of surface and air forces employed in concert under unified direction, with each making its unique contribution.

To this end, highly qualified Air Force personnel have been attached to the various levels of commands in the ground forces to assist in the coordination, planning, and employment of airstrikes. The system for requesting and directing close air support missions has been developed as a result of Army and Air Force studies, field exercises, and joint operational experience.

This system is activated by the Army commander's request for assistance. The request is transmitted by the forward air controller to the air support operations center, which assigns strike aircraft. The aircraft are launched either from a ground alert status, an air alert status, or diverted from another mission if warranted. The airstrikes are directed by a ground or airborne forward air controller.

It should be noted the Air Force provides close air support only at the request of the ground force commander—against targets of his choosing, at the time he specifies. In recognition of the difficulty in locating suitable close air support targets in the jungle environment of South Vietnam, the Air Force has provided airborne forward air controllers to assist in target finding.

Constantly we are learning more about South Vietnam and the enemy, his techniques, and his tactics. This has helped us to improve our system and the tactics and equipment employed in close air sup-

port operations. It is envisioned that as operations in South Vietnam continue, additional adjustments or changes may be necessary to insure that the best possible close air support is provided.

Currently, there are problems in night and all-weather operations, communications, ordnance delivery, and munitions that affect our capacity to provide optimum close air support to ground forces. [Deleted.] Full solutions to this problem are not yet in sight. On the other hand, we have several projects underway which should, in time, enhance our capability at night and under very low cloud cover. These projects have been assigned a high priority.

We have been and are continuing to investigate ways to improve our communications, both air and ground, by increasing their capability, reliability, security, and mobility.

To provide faster reaction by our attack aircraft, we are programming navigation aids which will permit more precise flight to the target area, and should shorten our response times in fulfilling close air support requests.

In the munitions area, we have a variety of improvements under test, and recently have started delivery of several improved munitions to southeast Asia. We are continuing to seek ways to improve our ordnance delivery techniques.

We have made special arrangements to provide a faster reaction to new requirements stated by our combat forces in South Vietnam. These procedures allow "quick fixes," wherever possible, to provide better immediate capabilities in the combat area.

Mr. Chairman, it is clear that the war in South Vietnam has provided the Air Force with an opportunity to contribute substantially to the success of the joint efforts of our Armed Forces engaged in defeating the Vietcong. It presents challenges as well. During the course of our close air support operations, we have met these challenges and are continuing to apply the lessons of our experience to improve our operations.

Mr. Chairman, that concludes my statement.

Mr. BLANDFORD. General, in what way did you say the doctrine and technique of the close air support operations in South Vietnam differ from the doctrine and technique that was used in Korea?

General AGAN. Sir, the important thing we have done is to add the airborne forward air controller. We have 120 airborne forward air controllers. This was added for two reasons. This man's job is to perform constant surveillance over prescribed areas; each individual has a sector and it is his job to become intimately familiar with the sector, all of the terrain, with the people in the area, so that he can recognize changes and recognize when the Vietcong are on the move.

He can also function as an airborne forward air controller.

Our idea here is that, being familiar with the area, he can recognize better than the strike pilot precisely where the Vietcong are; he can describe terrain features to the incoming attack aircraft, so that they can get quickly onto the target.

Mr. BLANDFORD. You didn't use any type of forward air controller in the Army Air Forces concept in Korea?

General AGAN. Oh, yes, sir. Ground air controllers.

Mr. BLANDFORD. You were using ground. I am talking about airborne.

General AGAN. We did use airborne, not in the same way that we are using them here.

Mr. BLANDFORD. We had artillery spotting, we have had artillery spotting aircraft for years, we have had it since 1939 or 1940, to the best of my knowledge.

General AGAN. Right. I was trained in 1936, sir.

Mr. BLANDFORD. They started training me in 1939.

At any rate, in 1940. But the concept of having an aircraft over target spotting targets is not new.

General AGAN. No, sir.

Mr. BLANDFORD. Yet, it took South Vietnam to bring about the realization that we had to have a faster means of communication in jungle warfare; is that a correct statement?

General AGAN. Sir, we used airborne control in Korea, but not in the same way that we do with O-1 type aircraft. We used spotting aircraft. We started with a small trainer type aircraft, later as the group commander—we used to go into an area and spot and lead the strikes in.

Mr. BLANDFORD. Was it the communication difficulty that prevented the development of the aircraft; has this been a problem? Has it been communications that have held down the development of close air support, real close air support weapons system, in your opinion, or has it just been the fact that we haven't been faced with the situation comparable to South Vietnam in recent wars?

General AGAN. Sir, I would say that it really is the particular conditions in South Vietnam that led us to this way of operating.

Mr. BLANDFORD. You heard the question that I asked General Oden about the fact that the apparent difference in approach, or at least in his personal opinion, difference in approach between the Air Force and the Army is that General Oden's position is that we should develop an aircraft for close air support, basically a single purpose aircraft, if I can use that expression. Am I correct that the Air Force position basically is that we need a multipurpose aircraft? Is this a fair short synopsis of the difference between the Army's position, or General Oden's position, and the official Air Force position?

General AGAN. Sir, let me state it another way if I may. I will tell you what we are doing.

Mr. BLANDFORD. State it the way you did in Los Angeles. I don't want to trap you, General.

General AGAN. Let me tell you what we are doing.

We have looked at our tactical air forces carefully through several recent studies. We are now involved in one with the Defense Department people. The action that led to this was a study done in the Air Force which states that we need another fighter in our tactical forces. We need more tactical forces and we need a new fighter. We concluded that there is a place for another fighter in our tactical forces, a fighter which would have characteristics to, first, make it less expensive so we can get more of them, and second, we are looking to an aircraft which would be more pointed toward close air support.

Mr. BLANDFORD. More pointed toward?

General AGAN. Yes, sir; toward close air support.

Mr. BLANDFORD. You use those words very carefully, "more pointed toward."

General AGAN. Yes.

Mr. BLANDFORD. Not destined for but more pointed toward.

General AGAN. I didn't say that.

Mr. BLANDFORD. No, but I am trying to make sure we understand exactly what you mean.

General AGAN. Yes.

Mr. BLANDFORD. General, the versatility concept comes in.

General AGAN. Yes, but let me talk to the idea that we are examining now. We are looking to a fighter which would be for close air support and air superiority.

Mr. BLANDFORD. Well, something with some of the characteristics of the F-111 only smaller and less expensive, I presume.

General AGAN. Sir, in order to get an aircraft of the size that we want, well suited to air superiority and the close air support job, you have to give up some things. The first thing you have to give up, probably, is range. So the whole realm of our study is to examine whether we can give up range and hence reduce the size of the aircraft in order to get an airfighting capability. We are really looking at two sets of qualities for an airplane: first, what are the qualities required for air-to-air; second, what are the qualities required for air-to-ground? Then we can see what really is involved in weight, size, cost, performance and trade-offs, to get an aircraft that could do both.

Mr. BLANDFORD. Let's talk—

General AGAN. At the same time we are looking at whether one should have one airplane for air-to-air and another for close support. Does one need to put it in two airplanes, or is it sound—technically, operationally and financially—to put it in one?

Mr. BLANDFORD. Now, this committee is on record, I think unanimously, as being in support of an improved manned interceptor. So there is no argument.

General AGAN. I am not talking about that.

Mr. BLANDFORD. No argument in this committee about an interceptor. A new fighter is something else. We haven't even discussed, this committee, to my knowledge, Mr. Chairman, a new fighter as distinguished from an interceptor.

But I get the impression from various people that I talk to that there is a coolness, or shall I say a relative lack of interest in a COIN—and I don't want to use COIN in connection with OV-10A as the plane that has been chosen, I am talking about the concept rather than an aircraft that has a prototype already flying—I sense there is a coolness on the part of the Air Force toward a COIN aircraft, or a LARA aircraft, because the Air Force thinks in terms of versatility, and because the Air Force thinks it may be a mistake if you have a limited number of dollars to build an aircraft that has only one purpose. It can only do one basic job, it does not have an air-to-air capability; because, perhaps it is your position that we have air superiority today, but we may not always have air superiority, and that it would be a mistake to put money into an aircraft that can only do one job, when it would be better to put more money into an aircraft that can do several jobs.

Is that a fair summary of the Air Force position on this matter?

General AGAN. Sir, let me talk to that in two classes.

Mr. BLANDFORD. Anyway, believe me, I am not trying to trap you here.

General AGAN. Yes, sir.

Mr. BLANDFORD. I am only trying to find out.

General AGAN. All right, sir.

When we talk about aircraft for close air support and for air fighting qualities, this is one general class and size of aircraft. When we talk about an aircraft of the LARA type we look at this as another class and sort of aircraft.

The Air Force believes in a LARA-type aircraft, and has asked for them.

Now, the aircraft that you are looking for for close air support, and the Army says they need real firepower for fire support—is the aircraft that will carry the firepower that can do the job when it gets there.

So if we look at the LARA type aircraft, which has some capability to carry firepower, we believe that there is another aircraft above this needed for the real close air support task.

Mr. BLANDFORD. Now, we are getting somewhere. If you had to choose—today, we have F-4C's, we have 105's, we have F-100's and we have air superiority, and you think, the Air Force apparently thinks that an improved fighter is necessary as opposed to an interceptor or a—I think you are probably talking in terms of fighter-bomber there?

General AGAN. Yes, sir.

Mr. BLANDFORD. Today we do have air superiority in South Vietnam and presumably even if the Mig 21's came into the act we would still have air superiority. That is the F-4C can do the job, the F-111's will be able to—when they finally come into operation—may prove their worth.

But supposing you were faced with this decision right now, all things being equal, just so much money, and the Air Force is faced with the decision of whether they want to develop an improved fighter bomber or to put their money into a LARA or COIN aircraft, what would be the position of the Air Force with respect to a choice between the two? And you could only have one, not both.

Let me press you for your opinion, your personal opinion, on that, General, if there isn't any official position on it, and I don't want to embarrass you.

General AGAN. Well, I am going to give my personal opinion, and that is, they are really pretty different kinds of aircraft capability you are talking about.

Mr. BLANDFORD. Oh, yes, no question about it, you are talking in terms of \$300,000 against \$1,900,000.

General AGAN. No one wants to do a better job of supporting the Army than I do. When they call for it, I want to go out there and be sure I can do the job. If real close air support is our biggest need now, I would feel a little lightweight with a LARA. This is my personal view. I think you need LARA in situations such as we have in South Vietnam. You know in the Air Force we have our special air warfare forces, and this is the area where it seems to me we can really use a LARA-type aircraft.

Mr. BLANDFORD. Well, do you think, as a tactician and as a trained professional military man, that we should be producing an aircraft today, or make up our minds to produce an aircraft very shortly to win the war in South Vietnam or do you think that we already have

the war won in South Vietnam, and we should be concentrating on an improved fighter-bomber for the future wars? That is not an easy question.

General AGAN. Yes. And I am wondering if I have to wait until I get the airplane—which is 5 to 7 years—whether you really are in an area in which we can expect to get major improvements.

I think we can get some LARA-type aircraft, and should get them out there.

Mr. BLANDFORD. We can get them within a matter of probably 18 months or something of that nature, if somebody will make a decision to go ahead with them.

General AGA. Yes, sir and we want to get out and get using these airplanes, and see what we can really accomplish with this type of aircraft.

Mr. BLANDFORD. Then let me rephrase the question: Then you favor the development and the awarding of a contract to go ahead with the COIN aircraft now?

General AGAN. Yes, sir.

Mr. BLANDFORD. You want COIN aircraft out there?

General AGAN. Yes, sir.

Mr. BLANDFORD. You want, also, to discuss with the Army and all of the services the possibility of developing a fighter-bomber that will give you improved capability to carry ordnance for future wars because you are not satisfied in your own mind that a COIN-type aircraft is the answer to close air support, you think it has got to come from an improved fighter-bomber which will be 7 years off; is that a fair analysis?

General AGAN. No, sir. I would say, as I have said, I think we do need the LARA and need to get on with it and get it to South Vietnam. I think we can use it. Looking toward the next aircraft for close air support, I believe that the work that the Air Force is doing with OSD is a valid, correct effort in this area. We are looking first toward what we can do to get an aircraft that will do this job of close air support in the near term, an airplane that we could get by, say, 1969, and we are examining very carefully all the aircraft available, potential new aircraft, with the qualities we have stated. Then we need to work toward the follow-on aircraft after that. This would be an aircraft of considerable improvement.

Mr. BLANDFORD. Then the only difference between what I said and what you said is that there is one step between us, and that you want to take an existing aircraft, jet type, improve it as a fighter-bomber, perhaps improve its loiter time, its reaction time, but in the meantime—and I think this is the important thing, Mr. Chairman—and I presume you can state this is as the official position of the Air Force, that the Air Force is gung-ho for the LARA?

General AGAN. Yes, sir.

Mr. BLANDFORD. Or are you so-so about the LARA?

General AGAN. Sir, I want the LARA.

Mr. BLANDFORD. You want it?

General AGAN. Get it out there and get it in use.

Mr. BLANDFORD. Do you think we are making a mistake in delaying the decision in going ahead on this thing? Don't you think we have enough information to make the decision about it, so that these people can have something out there now, and not for some future war?

General AGAN. Certainly. Let me say it this way: We have asked for the LARA—we have asked for them, and the sooner we can get LARA-type aircraft, and get them out into South Vietnam, I think the better it will be.

Mr. BLANDFORD. Good.

I have no further questions, Mr. Chairman.

Mr. PIKE. General, has the Air Force given serious consideration to starting up the A-1 line?

General AGAN. Yes, sir.

Mr. PIKE. What was the basis for this desire?

General AGAN. We were looking to get more aircraft to fill our needs in the units we have in South Vietnam now.

Mr. PIKE. I believe it was Dr. Brown, I could be wrong about that, who testified before the full Armed Services Committee earlier this year, that in his opinion the A-1 was the best close air support aircraft that we had in Vietnam. Would you agree with that statement?

General AGAN. Sir, I wouldn't put it just that way.

Mr. PIKE. In your personal opinion?

General AGAN. If I were to say what is the best close air support aircraft in South Vietnam, I would say the A-1 has done an excellent job, where it could haul a lot of ordnance and move into a situation where it was well suited for that task.

Mr. PIKE. Well, what in your opinion is the best close air support aircraft in Vietnam?

General AGAN. Sir, we are running some comparative tests out there now, or will be soon, to get the facts.

Mr. PIKE. We have been flying planes out there for quite a while, General. Haven't we gotten any opinions yet as to what is the best aircraft for the close air support mission?

General AGAN. Yes, sir. I can give you my personal opinion on various kinds of aircraft.

Mr. PIKE. What is your personal opinion?

General AGAN. You can see what has happened in the past: The A-1 has done a fine job.

Mr. PIKE. Well, let's not project into the future. Let us talk about what is the best close air support aircraft we have, the Air Force has in South Vietnam.

General AGAN. Sir, the A-1, as I said, is the best suited airplane we could get hold of for South Vietnam.

Mr. PIKE. Thank you.

Now, where did you get hold of the A-1?

General AGAN. From the Navy, sir.

Mr. PIKE. This was not an Air Force development?

General AGAN. No, sir.

Mr. PIKE. What aircraft can you point to that the Air Force has developed since World War II aimed at close air support?

General AGAN. Sir, I would name the F-100, F-105, F-4.

Mr. PIKE. Now, in the development of the F-100, where did close air support come in its mission in relation to air superiority?

General AGAN. The close air support was an added mission.

Mr. PIKE. So it was not designed for close air support, but the primary consideration was air superiority; is that not correct?

General AGAN. Yes, sir; that is correct.

Mr. PIKE. With the F-105, where did close air support come in its mission in relation to air superiority?

General AGAN. It was an added mission.

Mr. PIKE. Can you give me any aircraft that the Air Force has developed since World War II for which the primary mission was close air support?

General AGAN. Not that way; no, sir. Now, sir, may I say this: The Air Force in its statements of requirements for aircraft was responsive to the strategy which we had at that time.

Mr. PIKE. Certainly.

General AGAN. The requirements for each of these aircraft were laid down to suit the priorities which our national strategy laid on us at the time.

Mr. PIKE. No question about it. I started these hearings, on the other hand, General, by reminding anybody who was listening—there wasn't anybody there—that it was in the year 1961 in the month of January that Mr. Khrushchev announced that nuclear war was unthinkable, that local war was unbearable, but that what he called wars of national liberation were not only inevitable but that the war in Vietnam was sacred. This was in 1961. We have known for some time that there were other areas, geographically similar to Vietnam, where so-called wars of national liberation might take place.

What have we done since 1961 in the Air Force to develop an aircraft, the prime mission of which would be close air support, in a Vietnam-type situation?

General AGAN. Yes, sir.

Mr. PIKE. Limited war situation.

General AGAN. Yes, sir.

Mr. PIKE. Guerrilla war, it is called.

General AGAN. We wanted a capability quickly. We built up our special air warfare forces with aircraft which we could get hold of. This is where we picked up the A-1. There were B-26's, A-1's, and aircraft which we had in the inventory. The 26's, which we felt were suitable for limited war.

Mr. PIKE. General, you are familiar with the recommendations, I presume, which came out in 1963 from the Joint Air Force-Army Board as to what they needed for close air support aircraft?

General AGAN. Yes, sir.

Mr. PIKE. Do you remember what they gave top priority to as far as what they thought it would—well, they described it as "areas within which improvements would provide the greatest payoffs in overall close air support effectiveness listed by the priority R." and do you remember what the top priority was?

General AGAN. No, sir; I don't remember.

Mr. PIKE. Well, it is listed as improved survivability.

How important is survivability in a close air support aircraft in a guerrilla war situation? In other words, what is the Air Force getting in the nature of antiaircraft fire in South Vietnam?

General AGAN. Mostly small arms, sir, up to 57 millimeters and .50 caliber.

Mr. PIKE. The survivability of the close air support aircraft in Vietnam hasn't really been a problem, has it?

General AGAN. No, sir; it hasn't been in South Vietnam.

Mr. PIKE. So that when they assigned top priority to survivability they were, as recently as 1963, not thinking about the kind of war we are fighting; would that be a fair statement?

General AGAN. Sir, I don't know what they were thinking.

Mr. PIKE. Well, do you think that in a Vietnam situation, guerrilla war situation, in Vietnam or anywhere on earth, improved survivability should have top priority in what you are looking for in a new airplane?

General AGAN. No, sir.

Mr. PIKE. Have you been——

General AGAN. If you are talking of a guerrilla war like South Vietnam.

Mr. PIKE. Yes.

General AGAN. As it is today.

Mr. PIKE. The one we are fighting.

General AGAN. Before it gets——

Mr. PIKE. The only one we are fighting.

General AGAN. All right, sir.

Mr. PIKE. So would it be a fair statement to make that when the Air Force was confronted with the situation such as we had in South Vietnam, we had to go to the Navy for a close air support aircraft, and to the Army for the forward air control?

General AGAN. That is not what we did first, sir.

Mr. PIKE. What did you do first?

General AGAN. We used B-26's, B-57's, some of our own old aircraft first.

Mr. PIKE. Did you not eventually find that the situation was such that you had to go to the Navy for your close air support plane, and to the Army for your forward air control aircraft?

General AGAN. No, sir.

Mr. PIKE. Well, what did the Air Force——

General AGAN. May I reconstruct how we got into Vietnam? We talk about a full close air support operation; I think the fact that the Air Force was in South Vietnam very early, with its special air warfare forces, is leading us to a conclusion as to what the Air Force tactical air forces would do, and do in close air support.

The A-1's and the force out there were a special air warfare force. As soon as we moved the extent of warfare out there upward so that we could get other aircraft into it, we could bring in the regular tactical Air Force aircraft, which do a good job of close air support.

Mr. PIKE. Well, I have been trying to get you to tell us which one does a better job than the A-1 does, and you haven't named one yet for the role of close air support. And you concede that not one of them was designed for this role except as a secondary mission.

General AGAN. Yes, sir.

Mr. PIKE. I don't want to pursue this any further, General. I will drop it.

Do you have any questions you want to ask, Mr. Gubser?

Mr. GUBSER. Just one quick one.

It is true that we sold some of these A-1's at Litchfield Park to France; isn't that right? Didn't the Air Force try to get those back?

General AGAN. I don't know, sir; I cannot answer that.

Mr. BLANDFORD. There was a request made, Mr. Gubser, as I understand it.

Mr. GUBSER. And it wasn't honored, was it?

Mr. BLANDFORD. Not to my knowledge. Obviously we didn't get them back. They ended up in Laos, if I remember correctly.

Mr. PIKE. Cambodia.

Mr. BLANDFORD. Cambodia, yes.

Mr. GUBSER. That is all.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. General, it was brought out by previous witnesses that in close air support situations the Army and the Air Force didn't have the ability of communicating from the ground to the close air supporting airplane. Do you think that there is any need of the observer on the ground being able to communicate with the airplane?

General AGAN. Sir, I would like to get this in context a little bit with what we have really done in South Vietnam. To say, should he be in contact, I would first go to the Army and ask them if they want him in contact.

Now, our system is such that we have in each of the corps 30 A-1 aircraft whose job is to give support immediately. To get this in context, upon querying our people as they come home from Vietnam, as to how many missions they flew in close air support and how many they flew in immediates, it comes out something like this: They fly 60 percent of their missions on interdiction targets where they are hitting VC camps, factories in woods, and so forth, 30 percent on close air support, and 10 percent on requests for immediates. These come up when we have an operation that is not planned, where the Air Force and Army have not been together on the planning. Where they are together on the planning, we have planned aircraft, our response is as fast as they want to make it. The more operations we can do this way, the better we like it in the Air Force.

Now, the situation where we are not as responsive as we would like to be is when there is a small patrol out, that we may not even know it is out, and it gets ambushed and calls for help. The best we can do is to get an O-1 out there and then get the strike in right after him.

Mr. ICHORD. What would we have to have out there in the field for the Army on the ground to be able to talk to the Air Force in the air?

General AGAN. Right now he would have to have a UHF radio.

Mr. ICHORD. And the Army doesn't have that?

General AGAN. They have some, sir, but they do not have enough. They don't give them to all their troops in the field. I would have to check with the Army on this. They want the system so that they can control the air strikes that they are asking for. We want to respond to what they want as an organization, because they are the ones in contact, and contact with the enemy. We want to support them where they want to be supported.

The problem to which we have no good solution at present is to provide immediate assistance to every patrol which needs it. As you know, the Air Force is seldom, if ever, informed of the comings and goings to each patrol.

To me the problem is that we aren't fast enough in getting there. We would like to respond immediately. The patrol has to get the request to any forward air controller. From there the request can go in immediately. Now, if he gets a forward air controller in the air, then he has an ability to get the strike in without delay. The way he can lose that ability is for the forward air controller to get shot down.

We have had three shot down since they have been in South Vietnam. We have lost eight O-1's, three of them acting as forward air controllers. We have had 17 of them wounded.

I tried to find out how many of these were still able to carry on and do their task. So it looks to me that where we failed to do as we should is the occasion that the FAC gets hit if the ground force hadn't planned for close support, but has to have it immediately, another FAC would be sent there; so you could have a time before you got another airborne FAC in place. Therefore, ground forces would be without the close air support for a time.

Now, if it is a situation where you can see the target, if it is pretty clear what he is going after, then the strike aircraft may be able to make a strike. But under the way it operates now, that is the position, the kind of condition that I could see arising where we wouldn't be able to do the job as we should.

Mr. ICHORD. That is all.

Mr. PIKE. Mr. Irwin.

Mr. IRWIN. One question I would like to ask, General.

How do helicopters and O-1's compare for forward airborne air controllers?

General AGAN. We have used O-1's, as a cheap aircraft, and we can keep it in the air a long time.

Mr. IRWIN. How long?

General AGAN. Up to 4½ hours.

Mr. IRWIN. And helicopters, how long might they stay up?

General AGAN. General Oden can tell you better than I can.

General ODEN. Two and a half hours.

Mr. IRWIN. Two and a half hours. Of course they can be armed; is that right, General Oden?

General ODEN. Right.

Mr. IRWIN. The next question, General, is related to the questions asked you by the chairman, and I think I can speak for him in saying that we are all usually caught in the same jam at the same time, there is no point of spending time as to who sees what the problems are that come up first, we usually get to see them pretty much at the same time.

We have the South Vietnam war on our hands now, it is unique in our experience, where the enemy has no capability to knock our planes down, which makes it I think a little different. We have got this thing, we don't know how long it is going to take. Some may want to think that when this is over, this is going to be the last time we are ever going to have this kind of a situation.

What is your opinion? Do you think we are going to have other situations in the future similar to the ones in South Vietnam, so that if we do develop a plan, then it won't just be useful for this situation but it might be useful for other situations in the future?

General AGAN. Sir, I think we are very likely to have this kind of thing for a long time to come.

Mr. PIKE. Mr. Blandford.

Mr. BLANDFORD. Just a summary in a sense.

I would like to say that General Agan's analysis of the 60-30-10, and I like the formula because it jibes pretty much with the testimony of the other witnesses, as to the types of strikes they were called upon

to make. So this must be a fairly constant factor that of 100 flights, 60 of them would be interdiction type, real tactical warfare type of thing. I was interested in your use of the word "30 percent" being used for close air support, and the other 10 percent being used to respond to requests. I think this subcommittee really is talking about the last 10 percent more than the 30 percent; not arguing about the preplanned strikes, and certainly not concerned in the slightest at the moment about the interdiction. Perhaps this is where you are finding it difficult to answer the chairman's question as to what was the best aircraft for close air support, because obviously your F-100's and your 105's do the bulk of the 60 percent strikes for long interdiction, and the 30 percent preplans, if you have your targets, then your problem comes up as to whether you have the proper type of aircraft to hit targets in bad weather, or in night conditions. This is a subject matter we haven't gotten into yet to the fullest extent with respect to night warfare, and the best type of aircraft for close air support in that respect. But now we are down to the last 10 percent.

This is General Oden's problem, the last 10 percent, basically. This is what we are talking about here to a great extent.

Mr. PIKE. I am inclined to disagree with you, Mr. Blandford. I think we are concerned with the 40 percent. I think we are concerned with the 30 and the 10.

Mr. BLANDFORD. Yes, but I am saying—the point I am making is that when you are using the words "close air support," and this if you will recall at the very outset we got—this is in support of ground operations.

Now, a preplanned strike is much easier to arrange because it is arranged where the Army and the Air Force sit down at corps headquarters, and the targets are laid out in advance for them.

Mr. PIKE. I just happen to disagree with you, because I think you get into a fluid situation very frequently, and certainly everything the marines were talking about yesterday was a preplanned operation.

Mr. BLANDFORD. Yes, but that is one of the reasons I am developing this, is let's get our terminology here. When you talk about a preplanned strike, aren't you talking in terms of let's say 24 hours in advance, is this your idea of where the 30 percent preplanned strikes go?

General AGAN. Yes, it does not have to be 24 hours.

Mr. BLANDFORD. When you are talking about a preplanned strike, or what you consider the 30 percent, what are you talking in terms of, timewise?

General AGAN. Generally, as a common operation, anywhere from 12 to 4 to 6 hours.

Mr. BLANDFORD. Well, now, this is the point.

General AGAN. Whatever situation develops that gives you time enough to plan the movement of your Army forces, be they by helicopter or other means, and to get your air forces lined up so that you can go in together and do a whole job.

Mr. BLANDFORD. This is my point; we are talking reaction time here as one of the great defects. Reaction time is when a ground commander—this is my interpretation, and perhaps no one would agree with me—reaction time is important when a ground commander runs into a hornet's nest someplace, and he needs help, and needs it in a

hurry. He didn't know he would run into this or yesterday he would have asked for an air strike or knocked it out yesterday.

But, basically, and I don't want to put words in General Oden's mouth, but I think what General Oden was talking about when he was talking about reaction time is an airplane that is either on station at all times, either going with you as the troops advance, or so close that that plane can be called in almost immediately, and that he is talking about the last 10 percent, is that reasonably correct, General?

General ODEN. Well, on the quick reaction that is reasonably correct.

Mr. BLANDFORD. Isn't this really the problem area in close support?

General ODEN. No, not necessarily, sir.

Mr. BLANDFORD. Well, now, let's get it straight. I don't want to get everybody in the act, but what is your idea of the real problem with respect to preplanned strikes and reaction time on an immediate reaction requirement? Do you need an O-1A on a preplanned strike?

General ODEN. I don't believe that you necessarily need one. The Air Force prefers one, and I think they know their business. It perhaps has to do with the speed of the attacking aircraft, I don't know. I would say normally from an Army viewpoint, for a preplanned operation, an airborne aircraft is not necessary. I am speaking from the Army viewpoint. I do not know what the technical difficulties are of bringing in fast-moving strike aircraft, and having them hit the target, and the Air Force does.

Mr. BLANDFORD. Let me ask you, General Agan: On a preplanned strike, if you are using an O-1A aircraft that has to mark the target, where is the element of surprise at that point? You have lost it as soon as you mark your target.

General AGAN. When you mark your target, yes.

Mr. BLANDFORD. And you have lost it.

General AGAN. Well, one—

Mr. PIKE. I was just going to say, one day—I think you were not here—the Air Force pilots on the job did say that it was a matter of perhaps 5 seconds between the marking of the target. They count down to the marking of the target, and it is a very short elapsed time between the marking and the attack. At least that is what they strive for.

General AGAN. Fifteen seconds, generally.

Mr. BLANDFORD. Fifteen is the number somebody told me; 15 seconds. Of course you can move in 15 seconds, but if you are getting saturated you are going to get clobbered. But you are hitting with one aircraft. They were interspersed about 12 seconds apart, if I am not mistaken.

Mr. PIKE. I guess they were.

Mr. BLANDFORD. Now, I am really talking terminology here more than anything else; your reaction time on a preplanned strike is only important with respect to the speed with which you can get your aircraft in after the target has been marked, and that is just a question of physics, how fast you can follow one aircraft behind the other without shooting each other down, or whether you come in in tandem or how you attack the targets, you may come six abreast, or something like that. In that respect you want something that can get there fast, hit, and get out.

But I still think, Mr. Chairman, that the problem of the ground troops, the platoon commander, the company commander, is that sit-

uation that develops in a matter of minutes, when he is getting the living hell knocked out of him, and he needs help, and he needs it in a hurry, and there isn't any system today to provide that kind of help.

Mr. PIKE. Well, we certainly agree there isn't any system today that would provide it.

I would also point out again that in the recommendations of the Joint Air Force-Army Board, in 1963, on what they needed for close air support, you don't find reaction time given any priority whatsoever.

Mr. BLANDFORD. Not listed.

Mr. PIKE. It is not mentioned as a goal. It was something that certainly all the boys who have been on the ground have talked about.

Mr. EVANS, do you want to ask any questions?

Mr. EVANS. Well, I was just wondering whether or not in your recommendation for COIN aircraft now that could be used in Vietnam, do you recommend having in mind the logistic problem that may be involved, and the defense of aircraft problem that may be involved? Where do you make this recommendation? Have you gone into this aspect of the use of that type aircraft?

General AGAN. Yes, sir. This is the reason, when you get into South Vietnam, and you ask me do you have air defense as a primary task, you make the assumption that there is no air offense, then when we talk about a LARA type aircraft we are talking about an occasion where you do not have the air defense job. You have an air superiority, and you would be able to operate freely.

Mr. EVANS. Would this be limited, or changed materially, if the character of the war over there would change in terms of competition for air superiority?

General AGAN. Yes, sir; it changes immediately. You know, I was just looking at our sorties. When you asked me which is the best airplane for close air support, I looked at what we are doing there now. The sorties last month in close air support were [deleted]. The reason I hesitated in answering your question concerning the best airplane out there, if I were a fighter in one of these airplanes, it would be very clear, I would give you the one I was flying.

Mr. PIKE. I would say this: all your pilots did exactly that.

General AGAN. That is the kind of men I want in my outfits.

Mr. PIKE. Mr. Irwin.

Mr. IRWIN. No questions.

Mr. PIKE. General, let me ask you a question on a different level. The adequacy of the close air support, in any preplanned operation depends entirely, I would think, on the adequacy of the liaison between the Army and the Air Force. In Vietnam are you satisfied with the liaison that you are getting as far as being advised in advance of these operations that are being conducted?

General AGAN. Sir; mine is secondhand, it is many years since I was out there. I think they are coordinating well at the corps level now.

Mr. PIKE. At the corps level.

General AGAN. Yes, sir, and some of the operations—bigger operations—above that level at the AOC and JOC.

We in the Air Force would like to move ahead more and more in this direction. We think maybe this is one of the areas that can help

to avoid having these surprises, these immediates, and we realize the problem the Army has. They have many, many patrols out every day and I realize the problem they have with security out there. [Deleted.]

This is the kind of thing that gets us into trouble on this 10 percent.

Mr. PIKE. Mr. Irwin—

General AGAN. I think basically our coordination is good.

Mr. IRWIN. It occurs to me as things go along and our position improves we may have more 10 percent; that what we are talking about is a very flexible system. So if the Army wants to send somebody out to do something, not knowing exactly what they will be up against, it would be very helpful for them to know that they could call without preplanning for help and that we will have more than 10 percent in the future, as the ground units feel that they can go and try some more daring things than they are able to do now.

General AGAN. Yes, sir. Sir, you know that we do set aside aircraft every day on alert, waiting for immediates. In some cases, when we know not the specific operation, but that there are operations in an area, we put aircraft—strike aircraft, airborne—in the area waiting for calls.

Mr. PIKE. Mr. Nedzi.

Mr. NEDZI. General, you cited some statistics as to how many sorties were flown by various aircraft in a close support role. Would you define close support relative to the 30 and 10 percent figures you mentioned?

General AGAN. I will have to check. I know it includes the 40 percent. It is defined as close support in my report. It certainly includes the 30 and the 40 percent.

Mr. PIKE. I think Mr. Nedzi has registered a very good question. We all too frequently are not talking about the same thing.

General AGAN. Yes, sir.

Mr. PIKE. And one of the things we did do is start off with a definition of close air support and in the figures that you gave us of 30 and 10, would, in your opinion, fall within the definition that we started these hearings with; is that correct?

General AGAN. Yes, sir.

Mr. EVANS. Could I have one last question?

Mr. PIKE. Yes, sir.

Mr. EVANS. A follow-on question in regard to one I asked with regard to the usability in your opinion of COIN aircraft in the event the situation were changed in Vietnam, where you had air opposition, is it your opinion that the COIN type aircraft could still be used effectively in the forward area for close air support?

General AGAN. Well, sir, I would have to know—

Mr. EVANS. This is conjecture, I know, and the problems increase, but even in view of that.

General AGAN. Yes, sir. If you get real opposition, you are going to have to fight for the right to do close air support. This is the reason we say—when we talk about this close air support airplane it is a separate thing from COIN. When the Army calls for help we want to be able to give it, no matter what is in the air around us. We want to fight to win the right to support the Army.

Mr. PIKE. The real question is whether it has to be all done with one airplane.

General AGAN. Yes, sir.

Mr. PIKE. General, you said in your statement there are problems in night and all-weather operations, communications, ordnance delivered. Has the Air Force got a plane in Vietnam that can hit a target which is not illuminated by flares and do it on the basis of radar?

General AGAN. Sir, may I define the target? I mean we have to get clear on the type target.

Mr. PIKE. All right.

General AGAN. A bridge—

Mr. PIKE. All right. [Deleted.]

General AGAN. [Deleted.]

Mr. PIKE. And if you have a radar reflective target like a bridge, can they hit that?

General AGAN. Yes, sir.

Mr. PIKE. With what aircraft?

General AGAN. [Deleted.]

Mr. PIKE. [Deleted.]

General AGAN. You could do it with the 105 types.

Mr. PIKE. Does the 105 have the capability to hit a target which it can fix only in reference to a reflected image, preference point?

General AGAN. Sir, you have to get into accuracies here. The 105 system will not give you the [deleted] kind of thing.

Mr. PIKE. You are familiar with the capabilities of the A-6A; isn't that right?

General AGAN. Yes, sir.

Mr. PIKE. Does the Air Force have a plane which has a similar capability for night or all-weather work?

General AGAN. No, sir.

Mr. PIKE. That is all I have.

Thank you very much, General. We appreciate you being here today. We have given you a rough time and we still think—I do want to say that in spite of the fact that perhaps both of you have had rather an unhappy day here today, all of us are so proud of the job which is being done by the Army and the Air Force and the Marines and the Navy in Vietnam, and we have no other goal than to try to help you.

General AGAN. Yes, sir.

(Whereupon, at 12:10 p.m., the subcommittee was adjourned.)

HOUSE OF REPRESENTATIVES.

COMMITTEE ON ARMED SERVICES,

SPECIAL SUBCOMMITTEE ON TACTICAL AIR SUPPORT.

Washington, D.C., October 6, 1965.

The subcommittee met, pursuant to call, at 10:25 a.m. in room 2216, Rayburn Building, Hon. Otis G. Pike (chairman of the subcommittee) presiding.

Mr. PIKE. The meeting will come to order.

At this point we are approximately through with these hearings, and we anticipate that they will be wrapped up very shortly.

We have as our witness today Dr. Thomas P. Cheatham, Jr., who has been most cooperative all through this hearing in providing us with background information. He has had his problems, and we have had ours.

Dr. Cheatham, I do want to express my personal appreciation to you, and I am sure that of the other members and the staff, for your complete cooperation in this matter.

If you would, take the witness stand and give us your statement.

Mr. BLANDFORD. Mr. Chairman, before Dr. Cheatham begins his testimony, I read his statement. In view of your statement and the fact that we are close to the end of these hearings, I would like to make a suggestion to the subcommittee that it might be wise for us to get some information from the Air Force Systems Command, because of the technology involved in this presentation of Dr. Cheatham's and also because of the technology, technological problems that they have in South Vietnam in the close air support. It might be profitable for the subcommittee to just have some witness from the Systems Command tell us what is being done, if anything has been done, to improve close air support weapons systems and target identification and all sorts of things over there.

Mr. PIKE. This could tell us, I guess, a little more about the present. Dr. Cheatham is in the R.D. & E. end of it. That is General Schriever, right?

Mr. BLANDFORD. Yes, General Schriever. I don't know whether he would be available or not. But we certainly could call and find out before you terminate these hearings.

I think it might be profitable to find out if there are improvements over there, or are they working on, presently, improvements that are going to be put in effect very shortly. We may find ourselves being critical or thinking in critical terms of something that they have already solved or taken steps to do something about.

Mr. PIKE. Dr. Cheatham, do you think General Schriever might be able to add anything that you are not up on in this regard?

Dr. CHEATHAM. Certainly he could add more specific details in areas that have to do with the Air Force thinking in these areas, but in general I think I can probably address myself to the macroscopic viewpoint, things that have been done or are contemplated.

Mr. PIKE. If you think you could add some specifics, really we are quite interested in specifics. Why don't you see, Russ, if he could be available.

Mr. BLANDFORD. Dick, can you call and see when he would be available to the subcommittee, or anybody else that he has?

Dr. CHEATHAM. For the benefit of the committee, General Schriever did head up Project Forecast, and this is the largest major study that addressed itself to the future problems of the Air Force, including close air support. You can get that reference point of 2 years ago, and what has happened since then.

Mr. PIKE. All right.

Doctor, if you will, proceed.

**STATEMENT OF DR. THOMAS P. CHEATHAM, JR., DEPUTY DIRECTOR,
TACTICAL WARFARE PROGRAM, DOD**

Dr. CHEATHAM. I would like to say first, Mr. Chairman, I appreciate very much your opening comment. I always like to think the Department of Defense and the Congress can approach these problems that we have with candor and frankness, and that is what I try to do.

Mr. PIKE. We like to think that, too, Dr. Cheatham.

Dr. CHEATHAM. Mr. Chairman, I welcome this opportunity to testify before the Subcommittee for Tactical Air Support of the Armed Services Committee. As you know, I have been privileged to listen to the hearings you have conducted over the past 2 weeks with regard to the adequacy of close air support in South Vietnam. The manner in which the hearings have been conducted and the witnesses that have been selected have been uniformly excellent: I have learned a great deal from the information presented and feel that my personal perspective with regard to our mutual interests in operations in South Vietnam has benefited to a very large degree.

My job with the Department of Defense is to assist the Director of Defense Research and Engineering in the management, development, evaluation, and procurement of a flexible arsenal of weapons and equipment that is responsive to the full range of potential tactical military needs. Within this framework, we are primarily concerned that a balanced materiel capability is indeed available to meet many different contingencies. The problem is not an easy one and we are certainly not complacent nor satisfied with our achievements to date. I say this because of my firm belief that tactical warfare today is not only complex but that tomorrow it will be even more complex and even more sophisticated in its total demands. To understand it in depth and with confidence to the point of modest proficiency and dominion is a personal challenge to me as it has become today to many others in the Department of Defense.

A great deal of effort over the past decade has gone into our capability to wage a strategic war of nuclear proportions. We have a justifiable feeling of confidence in our technical achievements, in the readiness of our arsenal and its deployment and in our posture to present to the world an overwhelming deterrent of defense. We are not so well prepared in the intermediate range of counterinsurgency and tactical warfare. I do not want to imply that we are badly off, for that is certainly not so, but in the relative scale we are more vulnerable in this region of warfare. The philosophical differences between strategic and tactical warfare are worthy to note here briefly. While strategic nuclear warfare is, in a real sense, more terrible to contemplate, the strategic forces and weapons that define it are chosen from alternatives that are relatively few in number with the war games defined by a similarly small finite number of moves and countermoves. To do the same analysis within the regime of tactical warfare is much more difficult. One of the reasons is the very large variety of inputs and alternatives. Also, while strategic alternatives are mostly scientific and logical in nature, we find tactical warfare alternatives are blend of both science and art, where changing and imaginative tactics are a significant variant. Certainly, for example, we find that tactical airpower and its component parts of close air support and

intratheater logistic support are all an intimate blend of men and machines. You cannot estimate in more than a rough quantitative fashion the cost-effectiveness of guts, heart, morale, flying skill, intuition, sixth sense, imagination, and the dedication of a fightingman in a fighting machine in a fighting environment when in defense of his country and freedom. The technical and nontechnical factors that could be critical to define an end-game for a war as simple (but only deceptively so) as Vietnam would defy the capacity of the most modern-day computer or group of computers that we have available.

I make this statement to emphasize that in the restricted class of inputs having to do with weapon technology alone there is a tendency to think that a new weapon of higher performance and firepower out-modes the older and lesser forms of tactical warfare with the battle mode settled a priori by the newer weapon. In fact, it often does not happen this way—rather the spectrum of forms of warfare often seems to increase with greater strain imposed on our C³ (command, control, and communications) and logistics systems. It is also true by historical inspection that the new weapon system is not just added to the old arsenal but instead it generally causes a rearrangement and adjustment of the mix and types and a demand for growth in capability and performance across the newer but now broader total spectrum of tactical warfare contingencies. The rubber band just stretches tighter and because the enemy has the advantage of initiating the offensive—of selecting the geography and type of limited war—we are forced to build into our tactical warfare programs an even greater degree of flexibility, agility, and quick reaction insurance in terms of a depth of alternatives—certainly more than ever contemplated to date for strategic options.

We seek a balanced R.D.T. & E. program in tactical warfare. I recognize that achieving this balance is a difficult and complex undertaking. It is a provocative challenge because the range of variables, as I have indicated, is very great. The problem is not entirely one of engineering for higher performance or of systems analysis for maximum cost effectiveness, but one that also combines insight into operational and tactical techniques and alternatives of today and tomorrow—many factors having to do with detection and conversion to attack, probability of kill, technique and speed of communications, strategy of attack, closure rates, attrition rates, values of night and all-weather capability, et cetera, must in part be measured empirically as a function of skill, training, and organizational rapport. All of these factors must be understood and appreciated before we go to a computer for a statistical slice to improve our knowledge by refinement.

It is for this reason that I have encouraged continuous dialog between the staff in D.D.R. & E. with returning Navy and Air Force squadron commanders from the Vietnam theater, with Army and Marine combatants, with the expertise of systems analysis, with the air staff, with the Navy development staff of CNO, with the Army staff, with designers from industry, with JTF-2, with the weapons training school at Nellis Air Force Base, with the Eglin test complex, and on occasion with experimental test pilots of new aircraft that are under evaluation. Our decisions today are high-risk judgments involving the security of our Nation and they demand the full and impartial inputs of our best engineering analysis and direct operational field ex-

perience that we can muster. It is for this reason that I value the hearings you have conducted over the past 2 weeks.

Our needs in a potentially broad range of tactical warfare must be met within the limits of national resources, available technology, and time. Of these three, time is perhaps the resource we can least afford to squander. I am acutely aware that a superior, or more correctly, an "appropriate" weapon system or capability is not developed, proven, or obtained quickly. In many areas, such as vulnerability to surface-to-air defense (or as advisers or doers in counterinsurgency) we lack any significant past military experience—yet we must provide for this new dimension of tactical warfare and the capability may be needed so quickly that we will not be able to test and modify but once.

The role of manned aircraft in tactical warfare falls roughly into three broad categories—that of combat, logistics, and command-control support. Under combat roles we define two requirements of air-to-air combat and air-to-ground combat; under logistics we have both inter- and intra-theater requirements with our tactical interests being primarily in the intratheater area; under command-control support we recognize the manned aircraft needs of reconnaissance, airborne and ground warning and control, and depending on the intensity of warfare, also IFF (identification of friend or foe) and ECM (electronic countermeasures). This definition of roles, however, is grossly simplified since tactical warfare is no longer thought of nor fought in terms of two quasi-independent states of air and ground warfare; the trend today is toward a more intimate blend of these two phases in support of each other, with the most significant changes to take place in the next few years.

The elimination of enemy aircraft from the skies over the forward area is one of the specific tasks of the tactical air forces—both Air Force and Navy. Over friendly territory, the task may be shared with Army air defense units armed with SAM missiles and other anti-aircraft weapons. Over enemy territory, the task falls to tactical air alone, although air superiority may not be achieved solely by the destruction of enemy aircraft—because of his SAM missiles and other ground-fired weapons. One recent Air Force study considered enemy SAM sites as ground-locked fighters, thus emphasizing the need to detect, destroy, outmaneuver or provide an antimissile defense in our aircraft that penetrate enemy air. We are confronted with this type of problem in North Vietnam.

All in all, we recognize the changing nature of tactical air warfare and that it is making demands of a significant nature on tailored aircraft performance, munitions, avionics, and tactics. Let me list a few of these trends as they apply to generalized tactical air warfare as opposed to close air support which I will comment on more specifically:

1. Airfields are being made less vulnerable through the use of retentments and adequate ground-to-air-defenses in the form of AA guns and surface-to-air missiles.

2. Takeoff and landing distances are being shortened through increased emphasis on STOL performance.

3. Payloads are being reduced with increased emphasis on improved and specialized munitions. As a result flexibility and range of weapon types for loading, dispensing, and delivery has increased.

4. Air-to-air combat has increased in relative importance and will be particularly emphasized when adequate command and control and identification capabilities are realized.

5. As ground-to-air defenses continue to build up, there will be a corollary buildup in ECM developments and/or a change in tactics that gives greater weight to rollback rather than penetration sorties. In either case, there will result an increased emphasis in the use of standoff missiles, and corollary homing, guidance, and navigation techniques.

6. Higher speed and efficiency in intratheater logistic support is becoming increasingly important to realize the full advantages of rapid closure.

The list of trends for achievement of a modern day capability in generalized tactical air warfare that I have just listed are relatively recent. The reason is simple. After World War II, we entered the nuclear age. This force of potential total destruction had to be capped by a sufficient deterrent posture and capability. It has absorbed our talent, attention, and resources over the past two decades. We have progressively worked down the ladder from strategic nuclear warfare, to tactical nuclear warfare, to advanced conventional warfare and finally today a significant portion of our efforts are directed to limited war and counterinsurgency.

The war in southeast Asia divides into three distinct areas. The first division is between the wars of North and South Vietnam. In North Vietnam we are fighting a sophisticated war—our tactical air-power capacity to deliver air-to-ground strikes at times and places of our own choosing is being challenged by a sophisticated ground-to-air defense that is growing both in capability and intensity. Our losses are all air losses and our attempts to achieve maximum survivability per target kill are directed against optimizing our Air Force and Naval striking forces with regard to tactics, aircraft, avionics, and munitions. Our arsenal of technology in this regard is both suitable and reasonable in my opinion—with the principal requirement being for quick reaction to modest rather than major materiel needs and in the skillful application of tactics suitable to the materiel at hand and in process of delivery and/or modification.

In South Vietnam, we are not fighting a sophisticated war per se from the standpoint of materiel requirements. The war in South Vietnam is of two types determined by the jungle and mountainous terrain to the north on the one hand and the vast flat areas to the south of waterways and rice paddies on the other. Close air support is a critical item in both of these areas of engagement. The nature of the types of terrain in South Vietnam restricts major firepower support mostly to that which can be provided by airpower. It is well to remember that in other terrain the Army's own artillery close support would be providing much of the backup power now expected from aircraft. Practically all losses are with the ground forces and close air support delivered as needed, quickly and in the right amount and kind, is a principal means of reducing losses on the ground.

The basic requirements of close air support are three in number:

- (1) Reconnaissance, including target marking;
- (2) Communications; and
- (3) Striking power.

All of our tactical air forces are equipped to perform these three functions in a generalized fashion. But our classical approach is apparently being found awkward in some respects in its application to South Vietnam and there is obviously room for improvement.

What lessons have we learned in each of these three requirement areas and are our energies now directed in the right direction and with the correct sense of urgency and timing? I am sure, Mr. Chairman, that these are some of the questions that are in your mind and which prompted the initiation of these hearings. Let me give you my analysis of these questions and our status and position at this time.

Our first attempts at reconnaissance and surveillance in South Vietnam using general reconnaissance aircraft of the RF-101 and RB-66 types to find an enemy who was not distinctive in appearance, who mounted an attack in minutes and disappeared quickly in an equivalent time period, were found inadequate. Photographic processing and interpretation was much too slow. We rediscovered the efficiency and efficacy of the human eye and brain that was able to obtain an intimate back-of-the-hand knowledge of a specific sector and thus introduced the O-1 in large numbers. The airplane could be obtained from the Army and deployed quickly. It, however, had its disadvantages in limited payload for communication and inadequate handling qualities for climb and maneuverability. Many targets were found that could not be struck due to distances involved in bringing strike aircraft from the very limited number of available airfields. The net result was the realization that a light attack reconnaissance airplane capable of continuous harassment of the Vietcong was needed in South Vietnam. We are moving as rapidly as possible to provide an airplane of this type (the COIN/LARA) for use in Vietnam to replace the O-1. The characteristics and capabilities of this type airplane are well known and I hope endorsed by this committee.

I would like to inject parenthetically at this point however that the combining of recce and strike in one airplane is generally valid only in a low intensity air-to-air or ground-to-air environment. As the intensity of defenses increase, the functions are best handled on a separate basis.

The COIN/LARA, however, cannot do the entire job of close air support in South Vietnam. As developed frequently in your hearings, there is a role for a heavy strike airplane capable of sustained operations with the larger bombs, napalm, and rockets when the Vietcong have dug in in strength. The A-1E has been doing a yeoman job and this workhorse airplane has been augmented by use of A-4's, F-100's and B-57's. A more ideal solution, for a heavy support strike capability in a totally permissive environment, could be in the use of the new A-7A or the A-6A. The A-7A is now going into production and the A-6A is available in limited numbers with the added advantage of an all-weather and night bombing capability. Unlike the Navy, the Air Force has not itself developed an airplane since World War II with emphasis on close air support. But it is not important which service develops an airplane. The concern should be that suitable aircraft are available in our arsenal or in our development programs. It is important that each service look at all production lines and inventories as legitimate sources to fill their mission needs. I emphasize this because I recognize tactical warfare in all of its forms of today

and tomorrow as requiring flexibility and agility to modify and adapt to special needs.

With regard to the war in South Vietnam, I want also to discuss the problem of incompatible communications. In the past, the Army and Air Force developed, organic to each service, different communications systems. The Army system is basically VHF/FM and the Air Force system is basically UHF/AM. On an individual basis, each system has a strong technological foundation for justification. The Army problems of propagation and avoidance of mutual interference in a dense electromagnetic environment dictated their choice and the Air Force's problems of limited space and weight in a line-of-sight geometry, together with worldwide agreements for traffic control, dictated theirs. We are making substantial progress in reconciling these two systems for missions where Army/Air Force cooperation is necessary. All new units going to Vietnam are properly equipped and all units in Vietnam are being supplied on an expedited basis. I understand that [deleted] of the dual jeep-mounted systems are in Vietnam to equip all tactical air control parties in the theater.

A question has been raised as to the adequacy in numbers of FAC's on the ground, with a point being made that the Marine Corps battalion is deployed with three times as many forward air controllers as an Army battalion. This question is being examined right now by the Army and Air Force with specific reference to South Vietnam operations.

I might add; as a result of these hearings, with regard to the use of airborne FAC's and ground FAC's, I am personally in favor of both. I think, as a fundamental point, I would want close air support aircraft to be able to talk directly to forward air controllers on the ground. However, airborne FAC's should be used wherever they make the job easier and more efficient; in South Vietnam they are a necessity for two reasons, for reconnaissance in the jungle areas and for communications.

As a last item, Mr. Chairman, I would like to acquaint the subcommittee with Project Provost, which stands for "Priority Research and Development Objectives for Vietnam Operations Support." It is a program that recognizes the changing nature and intensity of the war in southeast Asia. The project was established on July 29, 1965, by direction of D.D.R. & E. It was conceived as a continuing program to meet any urgent needs that may arise at the request of MACV or be indicated by intelligence or analysis data. Funding for Provost is to be provided by emergency funds, supplemental funding, reprogramming and/or adjustment of the fiscal year 1967 budget requests where appropriate. During the first 2 weeks of August, Project Provost reviewed over 300 items forwarded by the services, recommended support of 145 with 81 of these recommended for emergency funding. Emphasis was given to—

- (a) Night operations and night vision devices.
- (b) Target intelligence and marking.
- (c) Communications.
- (d) Aircraft modifications and accelerations.
- (e) Improved munitions and weapon delivery.
- (f) Protection of ground troops.
- (g) Special and/or improved ground weapons and techniques.

In summary, Mr. Chairman, since the first of this year we have witnessed a significant change in the character of operations in South

Vietnam. The breakpoint for this significant change was in June and I can assure you that American ingenuity, commonsense, and forthright action will be continuously asserted to maximize our gains and minimize our losses.

Mr. PIKE. Thank you, Dr. Cheatham.

Mr. Wilson?

Mr. WILSON. Doctor, I am sure I am speaking for the committee when I say we appreciate your frankness and your thoughtful analysis of the problem. I think your last line is perhaps pretty self-explanatory. I think you are expressing American ingenuity, commonsense, and forthright action, in what you have laid out here for us.

I would like to—first of all—I wonder if your statement was cleared by the Department of Defense? You were not particularly complimentary of the ability of the computers to really analyze the war in Vietnam. I wonder if Mr. McNamara was planning any objection to your picking on his computers?

Dr. CHEATHAM. Well, it was cleared.

Mr. WILSON. It was cleared all right. Was it cleared without change?

Dr. CHEATHAM. Well—

Mr. WILSON. Or is that a fair question?

Dr. CHEATHAM. Let me say, modest editorial changes, to improve it.

Mr. WILSON. I think there is a bit of prose, on page 3, that ought to go down in American literature, that "you cannot estimate in more than a rough quantitative fashion the cost effectiveness of guts, heart, morale, flying skill, intuition, sixth sense, imagination, and the dedication of a fightingman in a fighting machine in a fighting environment when in defense of country and freedom"; that is a beautiful line, and I agree with you. I think we ought to publicize that particular point as an indication of the spirit that we are showing over in Vietnam to date.

Getting down to some specifics, I am happy that you are taking action as a result of these hearings. I think it is obvious, you agree with us, that the hearing showed some weak spots in the close air support program.

You did mention about the radio incompatibility, and I wonder if you could tell us specifically—you say you are making substantial progress in reconciling the two systems. You mean you are just duplicating, having both systems available to the forward air controllers on the ground, of the Air Force and Army radio systems?

Dr. CHEATHAM. Yes, because of the reasons of the extreme complexities of the communications requirements of the two services, the fact that a typical Army, for example, will have some 72,000 radios within its operation, plus some 75,000 additional electronic devices, which also emanate, to some degree. You have a problem here of very tight and densely packed spectrums with regard to channels.

In fact, the normal channel separation that we have been using of about 100 kc. has very recently been forced upon us to be reduced to 50. The Army, in fact, is under pretty strong pressures to have to move out of their typical VHF/FM band into higher frequencies at the present moment. They would prefer not to, because in a classical deployment, a more generalized Army deployment—we are as much concerned about the enemy jamming the system as we are the fact of our own operations making it ineffective by mutual jamming.

I think the best that probably can be done right at the present moment is to match the system at the points where they are needed by supplying FM receivers in all the aircraft that can handle it. In fact, all future ones will have to have it, because it is my belief that the airplane must be able to talk to the ground directly, and we are also supplying—I mean the Air Force communications system, to the ground, with the forward air controllers. [Deleted.]

What I would like to say, this is a fact of life which I think we have just entered upon, and probably the only practical solution is to match it at the point of contact by efforts of reducing the space and weight so that I can provide both communications in both places—not total, but where they need it.

Mr. WILSON. I was interested in your comparison also, moving into the aircraft field, of the O-1, the COIN/LARA to follow on from the O-1.

Don't you think that really a COIN/LARA could offer far more than the O-1 by the very designation of light arms reconnaissance? Don't you think that the bomb-carrying and gun-carrying capacity could be of some use? I can understand that it wouldn't be the total answer for delivering heavy strikes, but don't you think in the type of operation we have in Vietnam, and which we might have in these limited brush-fire wars, that the gun-carrying and bomb-carrying capacity is tremendously beneficial, too?

Dr. CHEATHAM. Yes, sir; there is no question about it.

We intended—indeed we in D.D.R. & E. feel the COIN/LARA meets the ideal requirements in Vietnam for harassment of the enemy, light attacks also.

Mr. WILSON. We have heard of flying jeeps. This could be as versatile as the jeep is to the Army, in that you could carry personnel if you had to, or supplies, if you had to, and armaments, and reconnaissance, communications, the whole thing. It would be a platform that could be pretty versatile in a changing situation such as you find in Vietnam, and certainly your O-1 does not offer that. It doesn't offer much more than reconnaissance for possibly target marking.

One further point: You mentioned the A-6A's. We had some testimony—you have heard it, I am sure—from the Navy, saying what fine airplanes they were. And I certainly agree. Are you satisfied with the delivery schedules, or doesn't that really concern you in your area?

Dr. CHEATHAM. It does not primarily concern me. The rates of delivery or decisions of that sort really reside with the Department of Defense, in the systems analysis portion of our offices. The only responsibility in my office is that it is available.

Mr. WILSON. Do you have, in Vietnam, a good testing ground for ideas being generated in your shop?

Dr. CHEATHAM. Yes.

Mr. WILSON. As you mentioned, we are deficient in this particular area; while we have developed our strategic forces well, we are deficient in the classical close air support, and also in limited warfare capability.

Dr. CHEATHAM. Philosophically and practically one of my major worries, of course, is that there is a war going on there, and there is a

great tendency to want to turn it into a testing laboratory. I am very anxious not to overload MACV with things he has to carry on in support of tests of this sort that divert his attention from the war.

I might add, if I may, for these reasons, we have augmented all of our tests and evaluation facilities with additional support. I would like to have the tests done very quickly, so anything shipped to Vietnam, the probability of it being extremely useful is going to be high.

Mr. WILSON. Since we are running out of A-1 aircraft, there is some talk of a new buy in this particular field. Are you advocating such a—in other words, rather than a new airplane, going back to the one that has proved itself.

Dr. CHEATHAM. There has been a study in this particular area, going back over the past about 4 months.

Mr. WILSON. Have you been called in to test the F-5? I understand there has been a testing team over there now, including some staff members from the other body, who are actually testing a limited number of F-5's as a possible use.

Dr. CHEATHAM. Yes; this goes into the Skoshi Tiger program. There are 12 airplanes that will be deployed there, I think.

Mr. WILSON. The designation F-5 doesn't quite fit the category of close air support, yet we are using the Century series fighters for some close air support, or some tactical delivery. Is it being considered as an attack, possible close air strike airplane?

Dr. CHEATHAM. It certainly has capability in this area. The airplanes we are sending over have had certain modifications put on them; we put an air fueling probe on it; we are placing nose cameras on it in order to get backup data. It certainly is being looked at as a cheap—relatively cheap, you see, airplane, that has also modest air-to-air capabilities in addition to use in air-to-ground work. [Deleted.]

Mr. WILSON. It was originally designed then as an air-to-air fighter, but now you are considering modifying it to make it air-to-ground as well?

Dr. CHEATHAM. Well, at about 3,000-pound payload, it still has a fairly good performance.

Mr. WILSON. Thank you, Dr. Cheatham.

Mr. PIKE. Mr. Ichord.

Mr. ICHORD. Thank you, Mr. Chairman.

I want to go along with Mr. Wilson in complimenting and thanking the doctor for a very clear and forthright statement. He has recognized our deficiencies and has shown that he is taking steps to correct them. [Deleted.]

This COIN/LARA aircraft, however, will not replace, or will not do the things that the A-1 is doing now, will it?

Dr. CHEATHAM. Not entirely, of course, because the payloads and the range payload characteristics are certainly significantly different.

Mr. ICHORD. Do you still envisage a need for something like the A-1 in addition to the other aircraft that we are using for close air support?

Dr. CHEATHAM. Yes. Generally—I don't think there is a single airplane that can do the job in Vietnam. I think it must be two airplanes. So in a sense you can compare, if you like, a team of O-1 and A-1 which are doing the job now, and ask yourself, "Is there a better team for doing that job?"

I would, myself, pick the COIN/LARA and then a heavy strike airplane as being a better match for the requirements of close air support in Vietnam. The principal reason for this is that the COIN/LARA does have—it does a very important thing: It is capable of continuous harassment; it keeps the enemy from building up any major defenses.

Mr. ICHORD. Better observation?

Dr. CHEATHAM. Better observation. We have frequent reference to this 60-30-10 formula, with a 10-percent emergency request. I think the COIN/LARA can cut significantly into that 10 percent, as an important way of reducing it. That is the place where we tend to lose our manpower—I mean our forces on the ground.

When they have dug in, and they must occasionally be able to do this, then I think we need a heavy strike airplane. The A-1 can do this; the B-57. I picked, however, because it is sort of designed for the job in this more modern day, an A-7 and A-6, talking here about [deleted] pound payloads. It is a pretty heavy strike.

Mr. ICHORD. On page 8 you mentioned that you are devoting a significant portion of your efforts toward limited war and counterinsurgency.

Do you find you are devoting an increasing part of your efforts toward limited war and counterinsurgency?

Dr. CHEATHAM. Well, I can give you some statistics; then we can judge them.

Starting in 1960 we had devoted \$10 million, I think, to counterinsurgency. In 1961 this was increased to \$20 million. In 1962 it went to \$40 million. In 1963 it rose to \$70 million. In 1964, \$140 million; and in 1965, \$160 million.

Mr. ICHORD. I take it, then, it is your view, and certainly the view of the Department, that the South Vietnam type of conflict is what you are going to likely be faced with in the future, more and more?

Dr. CHEATHAM. I would like to add one other item of information so the picture is complete.

To that \$160 million I have added \$45 million of emergency funds from Project Provost, which in a sense you can take as an indication that the rate at which I was building up somehow had gotten behind. I needed to jump up again. So, in fact, what I am really saying is because of Provost I now recognize the fiscal year 1966 requires about \$200 million. Our present plans for fiscal year 1967, as far as the budget is concerned, is about [deleted].

Mr. ICHORD. [Deleted] dollars.

While you are on Project Provost, you mentioned the emphasis was placed on night vision devices. I would like to ask you what kind of night vision devices are deployed in South Vietnam.

Dr. CHEATHAM. Infrared sniper scopes would be an example. We have [deleted].

Mr. ICHORD. Are they being actually used by the man out in the field?

Dr. CHEATHAM. Yes, sir. [Deleted.]

Mr. ICHORD. You think perhaps, then, our potential enemies probably have developed the same device?

Dr. CHEATHAM. Yes. As far as technology, it is not a breakthrough. This is a question of skill in production. That is my current problem.

Mr. ICHORD. Thank you very much, Mr. Chairman.

Mr. PIKE. Mr. Gubser?

Mr. GUBSER. Doctor, when do you anticipate there will be a COIN/LARA aircraft in Vietnam for evaluation?

Dr. CHEATHAM. Well, this is apparently being processed through the Department of Defense, and coordination on the study, of course, is under the Assistant Secretary for Systems Analysis.

The recommendation that has been made by D.D.R. & E. is to—well, let me say first of all we have funded \$1 million to speed up the static test and the flying test for the airplane. That is well within the regime of the research and development cycle of the airplane. In addition to that, however, we have recommended that about [deleted] be released in [deleted] for long-lead time items. The reason for this is to provide the option for early production, if the test which we have programed, now, static and flying, is satisfactory.

Now, normally basic trials would be over and completed by July of next year. By the action that we have taken, it makes it possible to come to a production decision on a logical basis you see.

Mr. GUBSER. What is the production lead time?

Dr. CHEATHAM. From the time that I say "Go," probably the first operational squadron will have it in 1 year.

Mr. GUBSER. That fast?

Dr. CHEATHAM. That fast, yes, sir. The point being the airplane is certainly within the state of the art, you see. I am not pushing anything.

Mr. GUBSER. But there will be COIN/LARA aircraft in Vietnam prior to a year from [deleted].

Dr. CHEATHAM. No, sir. No, that is the soonest.

Mr. GUBSER. How many aircraft are being built right now?

Mr. BLANDFORD. Six.

Dr. CHEATHAM. Six airplanes, sir.

Mr. GUBSER. None of those will go to Vietnam?

Dr. CHEATHAM. No, sir, those are all for tests. Those are all required in our static and flying tests. They are our all-service evaluation requirement. There are seven planes actually involved. Two go to each service for any special configuring they want to do for their own particular mission.

Mr. GUBSER. Probably, assuming everything went to perfection, the very earliest that any of those planes could be in Vietnam would be [deleted] is that correct?

Dr. CHEATHAM. Yes, sir. That is correct, sir.

Mr. GUBSER. Doctor, I feel—

Dr. CHEATHAM. That is allowing—I am saying 9 months for production, and I am allowing 3 months to get the crews together, to deploy and complete testing and training.

Mr. WILSON. I just want to ask a question on the COIN/LARA testing. Are you conducting a test on the Convair Charger which was built independently by the Convair people?

Dr. CHEATHAM. Yes, sir. We are having the same test crews that will be testing the North American airplane. We will run the test on the Charger to the extent that it is possible in San Diego, and, I think, starting there within the next few days.

Mr. GUBSER. What studies have been made on the logistics problems which would come with the COIN/LARA aircraft?

In other words, the advantage of the aircraft is that it would be closer to the front line, and operating from short strips, make-shift strips. But as one Air Force officer mentioned in these hearings a few days ago, there will be problems of supplying the ordnance that is to go on these aircraft.

What studies have been conducted which are aimed at finding some answers to that particular problem?

Dr. CHEATHAM. For COIN/LARA, I don't know of a specific study, but a general study in terms of intratheater logistics is being conducted within D.D.R. & E. at the present moment, with regard to materiel requirements. This is matching fixed wing and helicopter types of equipment.

Mr. EVANS. May I ask a question on that same question?

Mr. GUBSER. Go ahead.

Mr. EVANS. Have you taken into consideration the protection of the aircraft and logistics in arriving at your decision to build, to proceed as you have?

Dr. CHEATHAM. I had a couple more things I did want to say in regard to Mr. Gubser's question.

The airplane has been designed and configured for minimum maintenance per flight hour. It is a minimum amount for any airplane that we have had. Compared to the Century series which gets up to around 30 hours, it is practically 10 as a reduction factor.

The ordnance, of course, that would have to be supplied dictates the same logistic requirements that go with that ordnance. There is nothing special about that.

So, all in all—I mean, the airplane has been configured to minimize all of these sorts of classical problems you will have, you see, in deployment on short trips.

Mr. GUBSER. If you had a COIN/LARA operating 2 or 3 miles behind the front line, it could be supplied by helicopter, rather easily, couldn't it?

Dr. CHEATHAM. Certainly I consider helicopters as a very proper means for intratheater support, up to anything of about 50 miles. That is about the break point. When you start to go from 50 toward 200, I tend to think in terms of fixed wing support, because of the ton-nages involved.

That is just a rule of thumb.

Mr. Wilson, you have the same logistics problem in supplying the mortars, ground weapons, and so forth.

Mr. WILSON. It isn't actually much of an extra burden. You have to bring those things up where the troops can use them; you have to have your ammunition dumps and your trucks and so forth, if you are going to keep operating. Conceivably COIN/LARA could operate within that 50-mile radius, but not necessarily within 1 or 2 miles of the front line, where it would be—

Dr. CHEATHAM. Mr. Wilson—

Mr. WILSON (continuing). Subject to attack.

Dr. CHEATHAM. I would hesitate emphasizing 1 or 2 miles. I prefer that the COIN/LARA be back on something that would look roughly like an airfield operation, because it does need maintenance and over-haul. You can't ignore this.

In other words, I would say you have to do about what you have to do for helicopters at least, and that is not easy.

Mr. GUBSER. Will the COIN/LARA aircraft need different types of fuel?

Dr. CHEATHAM. No, sir.

Mr. GUBSER. It will operate on the same thing as trucks will operate on?

Mr. BLANDFORD. Multifuel.

Mr. WILSON. Multifuel, gasoline, jet fuel.

Mr. BLANDFORD. It is designed for multifuel, as I recall it.

Mr. GUBSER. In other words, it wouldn't bring in the requirement of a different kind of fuel needed in the frontlines?

Dr. CHEATHAM. Oh, no, sir.

Mr. GUBSER. I certainly echo what my colleagues have said about your testimony. I appreciate it.

Mr. PIKE. Mr. Nedzi?

Mr. NEDZI. Thank you, Mr. Chairman.

Doctor, what do you envision as the role and sum of the problems of the COIN/LARA aircraft if we don't have air superiority?

In other words, we are talking about a rather peculiar situation in Vietnam. Is this the premise on which the COIN/LARA was designed?

Dr. CHEATHAM. I have to answer that in terms of defining sort of a gray scale. It becomes a point, of course, if the enemy has won this air battle, overwhelmingly, we are just in great trouble in terms of countering him with aircraft. And you have to resort back to something sort of like the North Vietnamese have been doing, which is a very intense ground-to-air defense in order to do your job.

But within permissive environment, I think it is an ideal airplane for South Vietnam, up to some point of increasing intensity. I certainly don't expect the COIN/LARA to be able to cope even with a Mig-15, you see.

So the Air Force has got to carry this type of opposition out of the way.

Now, the fact is, in some types of warfare we will not have total air superiority, but we will have a sort of air supremacy as a function of space and time; you have it for awhile, and then you don't have it. During those brief moments that you have to make sweeps, to make a frontal assault from the ground possible with air support. I think this is a question of tactics. This is why I am perhaps so conscious of the complexities of it, because I don't tend to like to think about tactical warfare as black and white; as all or nothing. I think where you are going to fight is in the gray areas. Many time tactics are a very strong variant.

I can make it possible for COIN/LARA's, and A-7's and A-6's, to survive and be very useful, but I do require that upper limit be there in order to cap the situation.

Mr. NEDZI. I have no further questions.

Mr. PIKE. Mr. Evans.

Mr. EVANS. Doctor, I didn't understand your remarks in regard to the engines that are being developed for COIN/LARA.

I assume that you were saying that they are being built so they require less maintenance. You are talking about 3 hours and 30 hours. What is this, in terms of what?

Dr. CHEATHAM. As far as engines are concerned, I wanted it to be 1,000 hours between overhauls. This is sort of a rule of thumb, sort of a minimum requirement for tactical aircraft. I was talking in terms of the whole airplane. We talk about a number of maintenance man-hours per flight-hour, is the way of sort of roughly describing the complexity of the airplane, to keep it airborne.

Mr. EVANS. I see.

Dr. CHEATHAM. In a Century airplane, well, to give you some typical figures, we consider for example the A-7 has been designed with real attention to reliability and minimum maintenance. Here we are heading for an airplane that requires approximately 13 maintenance-hours per flight-hour. If you jump on up to F-4's or F-105's, and so forth, you get up into the 30-hour bracket of maintenance per flight-hour.

Mr. EVANS. With the COIN/LARA you are aiming to 3?

Dr. CHEATHAM. Three to five, in that area. I think the spec probably calls for 3.22. What I want to emphasize is, what we are after there is a small, tough, highly reliable airplane; lots of armor on it to take small caliber fire, and so forth, and survive.

Mr. PIKE. Is that all, Mr. Evans?

Mr. EVANS. Yes, thank you.

Mr. PIKE. Dr. Cheatham, I am going to start by saying I take exception to the description which the Air Force has given us time and time again, and which Mr. Nedzi just echoed here, to the effect that this is a unique or peculiar situation that we are confronted with in South Vietnam.

Isn't it the same kind of warfare we had all through World War II in the South Pacific?

Dr. CHEATHAM. Yes, sir; to a very large degree.

Mr. PIKE. Isn't it the same kind of a war that you think we can anticipate in any guerrilla situation, anywhere in the world?

Dr. CHEATHAM. Yes, sir.

Mr. PIKE. You say that we are proceeding—this is page 11 of your statement—we are moving—quote, “as rapidly as possibly to provide an airplane of this type, the COIN/LARA, for use in Vietnam to replace the O-1.”

Now, I believe it was Dr. Brown testifying before the Appropriations Committee last year who said that that plane would be flying last December. Is that an accurate statement? Is my recollection accurate on that?

Dr. CHEATHAM. I can't quote from my own personal knowledge on that, sir.

Mr. PIKE. I believe it was the Secretary of Defense testifying before the full Armed Services Committee who said that the plane would be flying in May of this year. Do you recollect that?

Dr. CHEATHAM. That is very possible, sir.

Mr. PIKE. Now, when you say “we are proceeding as rapidly as possible,” when was the COIN/LARA—what was the initiating document for the COIN/LARA? Somebody came up with a specific operational requirement.

Dr. CHEATHAM. The first requirement for this was, of course, the Marine Corps, who actually, I think, were behind the concept.

Mr. PIKE. When was that?

Dr. CHEATHAM. From my own personal knowledge, I can't give you a date, but it certainly precedes—I would guess at least about 2 years ago.

Mr. PIKE. Now, at this particular point, has any final decision been made to proceed with COIN/LARA aircraft?

Dr. CHEATHAM. As of right at this moment; no, sir.

Mr. PIKE. So, 2 years ago, the Marines indicated they had a specific operational requirement for it. Today there is, as yet, no decision to go ahead with it.

Do you really think it is a fair statement to say "we are proceeding as rapidly as possible"?

Dr. CHEATHAM. In an ideal sense, no, sir. In a practical sense, in terms of the numbers of people who have to be coordinated, the number of studies that have to be made, we are probably moving with continuous pressure.

Mr. PIKE. Where is the pressure coming from?

Dr. CHEATHAM. Some it comes from my office, because I happen to believe in the airplane and its need.

Mr. PIKE. Does any other come from the Armed Services Committee?

Dr. CHEATHAM. I suspect a fair amount of it has been in evidence for the last 2 weeks.

Mr. PIKE. To me it is a fiction to say that "we are moving as rapidly as possible" in this direction at this time, and in this context.

Now, I know that you have been trying to push the plane, but today there isn't any decision as to whether we are going to buy any COIN/LARA aircraft or not, and nobody has come to Congress with a request for any reprogramming of funds that I am aware of, have they, Mr. Blandford?

Mr. BLANDFORD. No, sir.

Mr. PIKE. And I expect if they were going to push for some [deleted] million, they would have gotten this by now.

Dr. CHEATHAM. Well, the final responsibility for coordination is with the Assistant Secretary for Systems Analysis. I understand that he will be making his recommendations to Secretary McNamara.

Mr. PIKE. Dr. Cheatham, would it be a fair statement to say that you might well have a month to go with respect to the same thing?

Dr. CHEATHAM. I would hope for it; yes, sir.

Mr. PIKE. All you are doing at the moment is hoping for it; is that correct?

Dr. CHEATHAM. I am waiting.

Mr. PIKE. Vietnam is waiting, too.

Now, you talk about the increased funds which are going into research and development in what you refer to as counterinsurgency and limited warfare, and you described how over the past 5 years in the Vietnamese contest we have gone from \$10 million to this year \$205 million, I believe, including your emergency appropriation; is that correct?

Dr. CHEATHAM. Yes, sir.

Mr. PIKE. That is \$205 million for limited war and counterinsurgency, out of a total budget of what?

Dr. CHEATHAM. Of \$6.7 billion.

Mr. PIKE. Somewhat less than 3 percent; is that correct?

Dr. CHEATHAM. Yes. I think probably though, in this context, I should point out that it is estimated that approximately \$300 million is being spent in the tactical warfare programs which are applicable, which you might call advanced COIN, or limited war.

In other words, this is the throw-off from your generalized programs. So you might make it \$500 million, if you want to be charitable.

Mr. PIKE. If we want to make it real charitable, we come up with well under 10 percent of all of our R.D. & E. going into the only kind of war we are fighting; is that correct?

Dr. CHEATHAM. Yes, sir; that is a correct statement.

Mr. PIKE. And you find this to be a significant portion?

Dr. CHEATHAM. Well—

Mr. PIKE. Let me ask you this: Do you find it to be an adequate portion?

Dr. CHEATHAM. At the present moment; yes, sir.

Mr. PIKE. You do?

Dr. CHEATHAM. Well, in the R.D. & E. area, yes, sir, because you have to ask yourself the question: "Could I spend it any faster?"

I have to spend this through organizations and agencies and existing facilities or capabilities. It takes time to build this up. It is not only to say just the brick and mortar and this and that, but you have to build up the importance of the concept in peoples' minds so that it has a priority to go with the money.

Mr. PIKE. Would it be a fair statement to make over the past two decades since World War II it hasn't had any importance in the minds of the Air Force, for example?

Dr. CHEATHAM. Well, I think that would be a bit unfair to the Air Force, Mr. Chairman.

Mr. PIKE. Well, how has the importance that the Air Force attached to it been manifested in their actions?

Dr. CHEATHAM. They have set up the special air warfare center activities, and also TARC, the tactical Air Force centers, and the weapons evaluation center down in Eglin. That did not exist 2 or 3 years ago. That has been done, I think, quite efficiently and very fast, in response, I think, to the realization of certain people in the organization of the importance of this, that they were going to be involved.

I would like to speak in defense of the effort that has been made by people like General Prichard, and so forth, down in that area, and I think with real dedication and interest in this field.

Mr. PIKE. I don't doubt for 1 minute there are individuals in the Air Force who are just as interested and devoted and dedicated as they can be, but I am trying to put the amount of effort that the Air Force has put into this in its proper perspective in relation to the total effort they put into everything.

What is the whole Air Force budget, do you know, for the current year?

Dr. CHEATHAM. I can give it to you in terms of TAC and SAC, which are some figures that I have.

Mr. PIKE. All right. Would you give it to us in the terms of TAC and SAC?

Dr. CHEATHAM. And the Air Defense Command.

If I talk about the total R.D.T. & E. investment and operating totals, for SAC it is \$3.7 billion.

Mr. PIKE. Right.

Dr. CHEATHAM. For TAC it is \$3.68 billion.

For ADC, it is \$1.319.

Mr. PIKE. Now, where is the TAC \$3.6 billion being spent?

Dr. CHEATHAM. R.D.T. & E. is \$213 million. Investment is \$1.8 billion, rounding it off. The operating expenses are \$1.66 billion, for TAC.

Mr. PIKE. How much was the R.D. & E.?

Dr. CHEATHAM. \$213 million.

Mr. PIKE. \$213 million. And of the \$213 million, R.D. & E., do you have any idea how much of that is being devoted to the problems of close air support?

Dr. CHEATHAM. In the sense of a close air support airplane, I can give it. Our budget figure at the moment is to give them \$10 million to study the problem.

Mr. PIKE. So the Air Force is devoting \$10 million to R.D. & E., on a close air support aircraft.

Dr. CHEATHAM. Yes.

Mr. PIKE. Out of a total budget of \$3.6 billion?

Dr. CHEATHAM. Yes, but probably as a percentage, you better reference it to 213, and then criticize it that way.

Mr. PIKE. All right.

Of the 213 R.D. & E. funds, \$10 million, somewhat less than 5 percent of TAC's R.D. & E. is going into a close air support aircraft?

Dr. CHEATHAM. Right.

But now to this, in all fairness—and I don't know how I can do this—I will estimate it fairly roughly—but I do have to add the work being done on munitions. In other words, this is the APWEP operation down there, and that is significant. So just the 10 might not be enough.

Mr. PIKE. Let's just basically ask this: It is the Air Force's job to provide close air support for the Army, essentially; is it not?

Dr. CHEATHAM. Yes, sir; there is no question about that.

Mr. PIKE. Now, the workhorse for close air support aircraft, in Vietnam, has been the A-1; correct?

Dr. CHEATHAM. A-1, up until about June. Since then the F-100 has flown many more sorties, percentagewise, than the A-1.

Mr. PIKE. And the F-100 we know was not designed for close air support.

Dr. CHEATHAM. No, sir; it was not.

Mr. PIKE. In its many sorties, has it carried more weight of armaments than the A-1? It doesn't carry as much armaments; does it?

Dr. CHEATHAM. I can give you some actual statistics. You would like this for South Vietnam?

Mr. PIKE. Oh, yes. Close air support.

Dr. CHEATHAM. Tons per sortie of an A-1 [deleted]. For an F-100 [deleted].

Mr. PIKE. How about the number of sorties?

Dr. CHEATHAM. If I am fumbling a bit for this information, Mr. Chairman, it is because I got it at 9:22 this morning, sir.

Mr. PIKE. In fairness to the chairman, I will say I told him I was going to ask him these questions last night.

Dr. CHEATHAM. I am sorry, the information systems analysis has given me did not include the number of sorties.

Mr. BLANDFORD. We have it for August, Mr. Chairman. The F-100's close air support single task sorties for the month of August were [deleted] for the A-1 versus [deleted] for the F-100.

Mr. WILSON. Do you have the total number of aircraft involved?

Mr. BLANDFORD. No. These are just the total sorties.

Dr. CHEATHAM. I don't know whether there are three times as many F-100's flying as A-1E's. I imagine the A-1's are getting kind of tired right now.

Mr. PIKE. We have run out of A-1's?

Dr. CHEATHAM. That is right.

Mr. PIKE. There are not any additional A-1's that we can use; isn't that correct?

Dr. CHEATHAM. That is correct.

Mr. WILSON. On this one point, to be sure our statistics are correct, is this Air Force-flown A-1 sorties?

Mr. BLANDFORD. These are just the U.S. Air Force participation, in sorties, in close air support sorties, for the month of August.

Mr. WILSON. You don't have any record of the A-1 sorties by the A-1E's?

Mr. BLANDFORD. Those are A-1E's, not A-1H's.

Mr. PIKE. How much does a sorties cost for an F-100?

Dr. CHEATHAM. I have this in average cost per ton of ordnance expended.

Mr. PIKE. Average cost per ton of ordnance expended? All right, what is the average cost per ton of ordnance expended?

Dr. CHEATHAM. For the F-100?

Mr. PIKE. For the F-100.

Dr. CHEATHAM. I have this in South Vietnam and for North Vietnam.

Mr. PIKE. We are only interested in South Vietnam, I think.

Dr. CHEATHAM. All right. The figure comes out as [deleted].

Mr. PIKE. [Deleted] ton expended. The average sortie you gave us earlier carried [deleted] tons?

Dr. CHEATHAM. Yes, sir.

Mr. PIKE. So—

Dr. CHEATHAM. I did want to emphasize this includes ordnance, operation, and attrition.

I have a figure which may be useful to you, the cost of ordnance only; that was [deleted].

Mr. PIKE. I come up with a figure of [deleted] every time an F-100 goes off on a sortie. Does that jibe with your figures, every time an F-100—not every time it goes off on a sortie. Every time it expends a ton—no, it would be a sortie.

Dr. CHEATHAM. Every time it goes on an average sortie.

Mr. PIKE. On an average sortie.

How much does an A-1 cost, every time it goes off? You have yours on a ton expended?

Dr. CHEATHAM. I have here a figure of [deleted].

Mr. BLANDFORD. [Deleted] per sortie?

Dr. CHEATHAM. Per ton delivered, or expended.

Mr. BLANDFORD. It would be [deleted] times [deleted].

Dr. CHEATHAM. [Deleted] times [deleted].

Mr. BLANDFORD. It would be [deleted] a sortie.

Mr. PIKE. All right.

How much does a B-52 cost every time it goes off on a sortie?

Dr. CHEATHAM. Well, again for South Vietnam [deleted] is the cost per ton of ordnance expended.

Mr. PIKE. [Deleted] per ton.

Dr. CHEATHAM. And it carries, on an average sortie, [deleted] tons.

Mr. PIKE. [Deleted.]

Mr. BLANDFORD. That would be about [deleted].

Mr. PIKE. [Deleted] per average B-52 sortie.

How many sorties did we conduct, let's say in the most recent month that you have available, all types of aircraft? This is in South Vietnam.

Dr. CHEATHAM. Running at a rate of about [deleted]—wait a minute; that figure would include southeast Asia—that is north and south.

The figure for South Vietnam I don't have right here at my fingertips, Mr. Chairman. The rates were running—there have been peaks of [deleted] a couple of times in recent weeks, but the average is more like [deleted].

Mr. BLANDFORD. Is this just the Air Force, or the total, Mr. Chairman?

Mr. PIKE. There would be [deleted]. But you are talking about north and south?

Dr. CHEATHAM. North and south when I say that.

Mr. PIKE. Well, that is not close air support by a long shot.

Haven't the cost effectiveness people run any studies about the average cost of a sortie in South Vietnam?

Dr. CHEATHAM. Well, I think I could give that by just selecting the airplanes here.

Mr. PIKE. All right.

Dr. CHEATHAM. And multiplying them out. I suspect it comes out about—South Vietnam I think the average would come out about [deleted] per ton expended. I would have to multiply that by sort of an average number of tons, and if I ran across—

Mr. PIKE. It would be about [deleted].

Dr. CHEATHAM. It would be somewhere there, as long as I left the B-52 out. That is what kind of swamps the calculation.

Mr. ICHORD. I didn't understand what all was included in that cost. Is that the gas, oil, and cost of the munitions?

Dr. CHEATHAM. Munitions, operating costs, including all the factors you are talking about, plus attrition.

Mr. PIKE. Let's clear the record up on that.

On attrition, what does the Air Force compute the loss of a B-52 to be?

Dr. CHEATHAM. For these calculations they are using in-country. They are using [deleted].

Mr. PIKE. If you lost a B-52, it costs you [deleted].

Dr. CHEATHAM. No. That would be [deleted] on the average.

Mr. PIKE. I am asking you what they calculate in their attrition figures, the loss of a B-52 to be.

Dr. CHEATHAM. Well, I can calculate it for you very quickly, Mr. Chairman.

Mr. WILSON. Mr. Chairman, does he have a slide rule?

Dr. CHEATHAM. I have it down to [deleted].

Mr. PIKE. How much does a B-52 cost?

Dr. CHEATHAM. I can't answer that.

Mr. PIKE. Colonel Coons, can you tell us how much a B-52 costs?

Colonel COONS. I can't. I will find out right now. (See page 4287.)

Dr. CHEATHAM. But the figures that have been used here are on the basis of [deleted].

Mr. PIKE. [Deleted] when a B-52 is lost.

Dr. CHEATHAM, how much are we spending a week or a month, for airstrikes in South Vietnam?

Dr. CHEATHAM. I would be the wrong one to estimate that, sir. I think I would have to ask systems analysis to provide us with that figure. I can do this on the basis of what my peak number of sorties are and what the average cost per sortie is, and if I were then to assume that was the bill, the total bill, I can give you that type of a figure right here, just by multiplying these two figures. In other words, I can take [deleted] sorties—

Mr. PIKE. [Deleted] sorties?

Dr. CHEATHAM. And I can certainly multiply it by a cost in-country per sortie, of about [deleted] so I would have something like [deleted].

Mr. PIKE. [Deleted] per month we are spending for air support in Vietnam?

Dr. CHEATHAM. Yes, sir, that is about what the figure is. On the other hand, I don't know whether I have the whole slice in those figures, but working with what they have given me, that is what I come out with.

Mr. PIKE. That is a very ball park figure, we understand that. You are not going to be crucified or nailed to it, but it is a ball park figure which I have heard before.

Mr. BLANDFORD. These are total sorties; these are Air Force, Marine Corps and everything, are they not?

Dr. CHEATHAM. Yes, sir.

Mr. PIKE. Not including the Vietnamese Air Force?

Dr. CHEATHAM. No. That would include them, because in a sense we are paying for it.

Mr. PIKE. We certainly are. It does include them?

Dr. CHEATHAM. I would include them.

Mr. PIKE. So at the current rate of expenditure, assuming this figure is right that would be [deleted] a year in air support in North and South Vietnam?

Dr. CHEATHAM. Yes.

Mr. NEDZI. That is for North and South?

Dr. CHEATHAM. No, the figure I just tried to estimate was South.

Mr. PIKE. Was South only?

Oh, I see. I thought the [deleted] sorties included both North and South.

Dr. CHEATHAM. I am sorry, that is right. I multiplied it by average sortie, South. To do this correctly I should take an average between that and the figure for the North.

The North figure is about [deleted] as opposed to [deleted]. I should be multiplying by [deleted] to have an average, here.

Mr. PIKE. So your figure is closer to [deleted] per month, for both North and South?

Dr. CHEATHAM. [Deleted.]

Mr. PIKE. [Deleted] per month for air power in North and South Vietnam.

Dr. CHEATHAM. To make sure we don't have it misunderstood, that is at the latest rate. It wouldn't apply necessarily to the bill you might find at the end of the year. At the beginning you will find we were flying about one-tenth of that.

Mr. PIKE. In the future we anticipate flying a little more than that?

Dr. CHEATHAM. Certainly I don't anticipate less, at the moment.

Mr. PIKE. General Oden of the Army testified that the Air Force had to have adequate forward air controllers, but he didn't know whether we had them or not. Do we have them, Dr. Cheatham?

Dr. CHEATHAM. Yes, sir. I would like to comment on that. The allocation within the Air Force is 12 forward air controllers per squadron, 4 of which are jump-qualified. That is to allow for the fact if a forward air controller is needed, and he isn't on the ground, they can drop him in.

If you really figure this roughly on the basis of 80 squadrons, we have within the Air Force today something like 960 forward air controllers available.

On the basis of about 200 battalions in the Army, taking a rough figure, this equates out to about 4.8 FAC's available per battalion. They are available. This is the only point I want to make.

It isn't a question here of having to build up or train the organization to provide for a sufficient number of FAC's. In fact, it is in excess of the Marine allocation. The point you are addressing, of course, is that this number is not in Vietnam at the moment, but it is available.

Mr. PIKE. Dr. Cheatham, what is your conclusion as to the effectiveness of close air support in South Vietnam?

Dr. CHEATHAM. Well, from a system standpoint, it can be improved.

I think the sort of average response time we find there is longer than we are capable of. I would hope that in the next few months we will rapidly close that time gate, which at the moment is the one that I consider most serious.

Mr. PIKE. You are going to close that by having faster aircraft, is that it?

Dr. CHEATHAM. No, not entirely.

I would like to close it in terms of having the proper communications. I don't think we have found that except when somebody was in real bad trouble and he had to fly from way up north to way down south, that the speed of the airplane was such a predominant factor. If I had to get way south, then it is very necessary to have a 400-plus knot airplane.

Mr. PIKE. Doctor, you mentioned earlier General Schriever having headed up a study under a code name of Forecast.

Dr. CHEATHAM. Project Forecast.

Mr. PIKE. Project Forecast.

Is that the same study that was a joint Air Force-Army group, that issued a secret report back in 1963?

Dr. CHEATHAM. No, sir.

Mr. PIKE. So there have been two studies; is that correct?

Dr. CHEATHAM. Two studies. Forecast was entirely an Air Force study.

Mr. PIKE. I see.

Dr. CHEATHAM. It went across the board in terms of all its requirements, forecasting the needs of things it ought to do in the future. Within that was included requirements of close air support, which was a substudy.

Mr. PIKE. Have there been any more studies you are aware of, say in the last 4 or 5 years, on the problem of close air support?

Dr. CHEATHAM. I think probably the most significant one is the one that is going on at the present moment, which is a joint Air Force-OSD study.

Mr. PIKE. I am not interested in that.

What I want to ask is this: Did either the 1963 joint Air Force-Army study or Project Forecast, make any mention of the fact that the Army and the Air Force could not talk to each other?

Dr. CHEATHAM. Of my own personal knowledge, I can't remember. I would have to go back and actually—let me put it this way: Certainly not a major point was made. I would have to go back and look to see if somewhere, you know, in chapter 3, paragraph 2, somebody did make a statement to that effect.

Mr. PIKE. When was it first brought to the attention of the Department of Defense that there was a very serious communications problem between the Air Force and the Army?

Dr. CHEATHAM. I think it became a very strong point with D.D.R. & E., with my office, in terms of our examination of command and controls systems. In other words, we found incompatibilities, for example, in some of the MTDS systems, NTDS systems, and similar Army systems; in other words, from the standpoint of data-processing requirements, we suddenly found there were incompatibilities in the communications. We became aware of this. I think Dr. Fubini should be given credit for having hit into this problem with a great deal of drive and enthusiasm; in fact, he certainly kind of turned things upside down.

Mr. PIKE. When was that?

Dr. CHEATHAM. About 2 years ago.

Mr. PIKE. It was after we got involved?

Dr. CHEATHAM. A year and a half, if you want to define the peak of activity.

Mr. PIKE. All right.

But it was after we got involved with Army troops on the ground, and Air Force planes flying air support, in Vietnam; is that correct?

Dr. CHEATHAM. I would certainly have to say that certainly focused real practical attention on the problem.

Mr. PIKE. Dr. Cheatham, you mention, on page 14 of your statement, that Project Provost, during the first 2 weeks of August, reviewed over 300 items forwarded by the services recommended support of 145, with 81 of these recommended for emergency funding.

Of the 81 which were recommended for emergency funding, have they gotten the funds?

Dr. CHEATHAM. No, sir. In this case the paperwork is waiting and in Mr. McNamara's Office, for his signature. We are awaiting release of funds from Congress in this case.

Mr. PIKE. For the release of funds from Congress?

Dr. CHEATHAM. Yes, for the emergency funds, the appropriations.

Mr. PIKE. Wasn't this included in the \$1.7 billion?

Dr. CHEATHAM. No, sir; it was not.

Mr. BLANDFORD. Well, it could have been, though.

Dr. CHEATHAM. It could have been.

Mr. BLANDFORD. Yes.

Dr. CHEATHAM. But it was not.

Mr. PIKE. Has Congress been asked to release the funds?

Dr. CHEATHAM. I don't know, sir. I can't answer that. In other words, I don't know what the Secretary's Office has done.

Mr. PIKE. You have certainly thrown down the gauntlet here, Dr. Cheatham, when we hear 81 projects which you requested during the first 2 weeks of August for emergency funding have not been funded because Congress has failed to act.

I think, Mr. Blandford, that maybe you could do some staff work on this. I would like to know exactly what the status of these 81 projects that Congress is holding up is.

Mr. BLANDFORD. I don't think you are going to find that the Congress is holding up these 81 projects. I think it is a question of decision as to whose emergency funds are going to be used. The only thing I could possibly think of is that they have decided to reprogram some items in connection with these 81 projects, and then they are going to submit a request for the reprogramming, because you have got money coming out of your eardrums over there right now.

Dr. CHEATHAM. If you are talking of procedures that I don't have intimate knowledge of, let me make sure my statement is without confusion.

I understand the emergency funds have not been released to the Department of Defense; that is, the appropriation to spend it. That is what I am waiting for.

Mr. BLANDFORD. That is the appropriations act of the past. That is just a bookkeeping operation, somewhere in the Bureau of the Budget. In other words, it hasn't been apportioned to you, I guess, is what you are talking about?

Dr. CHEATHAM. That is right.

Mr. BLANDFORD. That is not our fault.

Dr. CHEATHAM. All right, then, it is not your fault.

Mr. GUBSER. That is not in the President's supplemental?

Mr. BLANDFORD. Not to my knowledge.

The President signed the other day the \$1.7 billion, to be spent any way they see fit.

Mr. PIKE. All of these items that you really specified as having priority and emphasis were included in that 81?

Dr. CHEATHAM. The ones that are in the 81, the ones I felt could not wait until January for the next supplemental request.

Mr. PIKE. The reason I pursue this, Dr. Cheatham, is that your statement, on the face of it is so very encouraging. Then when we get down to the guts of it, we find that there hasn't been anything done, any go-ahead on the COIN/LARA, that the 81 items you requested emergency funding for in the first 2 weeks in August you don't have your money for. It does seem to me that once again the pressure just plain is not there to push these things as fast as they ought to be pushed.

Mr. BLANDFORD. Mr. Chairman, may I ask Dr. Cheatham to furnish for the record, if it is possible, a breakdown of what these 81 items are, or at least those items that are applicable to this inquiry, into close air support, and explain any funding difficulties that he has?

Dr. CHEATHAM. Yes, sir.

Mr. BLANDFORD. I frankly would like to know if you are having funding difficulties, where the stumbling block is, because I suspect it is just the fact of somebody's failure to sign a letter, to ask for re-programming, or they haven't been apportioned, but certainly not here.

Dr. CHEATHAM. Yes, sir.

(The information requested is classified and is in the files of the subcommittee.)

Mr. PIKE. Dr. Cheatham, you indicate that you would also like to see—I believe I got this from your earlier testimony—instead of one airplane generalized for, say, air-to-air and air-to-ground and close air support, you would like to see a single plane specialize in close air support. Is that a fair statement of your personal views?

Dr. CHEATHAM. Yes, and in fact I can expand on it, to make a general statement.

My feelings are quite strongly that we need the best in air-to-air. We need the best in air-to-ground. And then I would like to have a predominant third group of airplanes which are dual purpose, so I can throw them to either side of the battle as a function of time and place and phase of the battle, as they would be needed.

Mr. PIKE. In other words, you would have a specific air-to-air superiority plane. You would have a specific close air support aircraft. And then you would have a third aircraft——

Dr. CHEATHAM. Third class of aircraft.

Mr. PIKE. Third class of aircraft, let's say, capable of fighting either way, fighting its way in for close air support, under air opposition conditions; is that right?

Dr. CHEATHAM. Yes, sir. I just think it is a logical way to attack it.

Mr. WILSON. On that third point, doesn't your third class of aircraft really take over the area now occupied by helicopters and your observation aircraft? Doesn't that cover both?

Dr. CHEATHAM. I don't replace them. I am a very strong supporter for helicopters, and I don't think I do away with all my observation airplanes.

Mr. WILSON. But essentially, isn't your third class of aircraft to provide some of the functions of the helicopters, such as troop movement, observation, targeting, various things of that type?

Dr. CHEATHAM. When I think of a close support airplane, I think of it as a fixed-wing airplane. When you add some of the characteristics of the helicopter, then you take me over into another theater, and then I like to slice it differently.

Within these areas I have specialized requirements. I am not talking about three airplanes, and I hope the committee doesn't take it that way.

All I am saying is I can't afford to lose the air battle. I can't afford not to mop up the end game, and in between I need an efficient backup, you see, because I think technology can produce the dual. But anytime you do a dual, there is always a bit of compromise, and I don't want to compromise at these two important extremes.

Mr. BLANDFORD. Are you talking about a supersonic STOL aircraft as the third class?

Dr. CHEATHAM. Not right now.

Mr. BLANDFORD. Is this what you have envisioned as a follow-on for COIN/LARA, at some future date, in 1980 or the late 1970's?

Dr. CHEATHAM. Not necessarily, sir.

My feelings are not that fixed. I will still want to go back to the fact that this is a very flexible game. I play it to my best knowledge; I will forecast it as best I can for 5 years, but I want to change it the next year if the game didn't come out that way.

Mr. BLANDFORD. Would it be possible to conclude that the F-5 squadron which you are sending to South Vietnam for testing, that no decision will be made on COIN/LARA until the F-5 has been thoroughly tested?

Dr. CHEATHAM. No, sir. Absolutely not.

Mr. BLANDFORD. Is there any relationship between the study and the F-5 study?

Dr. CHEATHAM. No, sir. In fact, may I please clarify that, because I would like to be understood on this point very clearly.

My reason for supporting the F-5, the test program, relates as much to its possible use in that area as it does to the fact that I am concerned with regard to my responsibilities for providing insurance for readiness, in case we suddenly need a lot of airplanes. I feel that modification test and evaluation of the best I could produce next year, or when the gong is rung, resides with me today. Therefore, I want to see an F-5 improved, I want to see the F-5 pushed as far as I can have knowledge of the test data on it. I would like to see the F-104 in terms of the CL-901 configuration, et cetera, down the line.

If somebody asked me suddenly what is the best airplane I can produce in a hurry, I have an answer. I just feel that is an obligation of R.D. & E. to do that.

Now, with regard to the question of the F-5, in that sense, it is not a competitor in my mind, at all.

Mr. BLANDFORD. I just wanted to make sure that we understood that the AAFSS program, or the F-5 testing, or the X-V5 testing or any of these is not in your opinion a roadblock with respect to a decision to go ahead with the COIN/LARA program.

Dr. CHEATHAM. I would get most discouraged if it ever were.

Mr. PIKE. I won't ask you whether you have gotten discouraged already on the length of time it has taken to get this decision. All I can say is that I might have been, in your position.

Dr. Cheatham, when you look down the road for close air support, you envisage, in place of the O-1, which was an Army aircraft, then, and the A-1, which was a Navy aircraft, you envisage a COIN/LARA, which was essentially a Marine Corps aircraft, and as your attack plane, either an A-6 or an A-7A. Who developed the A-6A and A-7A?

Dr. CHEATHAM. These are Navy planes.

Mr. PIKE. Would it be a fair statement to make that in your opinion the Air Force has not indicated—I am going to withdraw the word "indicate," and substitute, the Air Force has not demonstrated a sufficient interest in close air support to take care of problems which we encounter in guerrilla-type warfare?

Dr. CHEATHAM. Mr. Chairman, I would like to answer that. I have tried to address myself, I think, to that problem a little bit in my opening statement.

I think there is a very justifiable and recognizable lack of concentrated attention on that in recent years in the sense of maybe going back 10, because they had a unique job which none of the other services had, which was the strategic posture.

It is very reasonable that the Navy, having the role of applying roll-back techniques, in support of the landing of the Marines on the beaches, and so forth, would have tended toward an attack type airplane.

All I can say is "Thank goodness, that was so for the country."

In the meantime—and I think within the last year—there has been a very strong increase in the Air Force's interest and attention to this problem. It has to grow, of course, you know, through the organization.

Mr. PIKE. In the context in which we find ourselves in Vietnam, wouldn't you be rather horrified if there hadn't been an increased interest in the Air Force?

Dr. CHEATHAM. Yes, sir; that would be horrifying. I am not at the moment horrified by the Air Force attitude. They are a strong supporter of the COIN/LARA. In fact, they are asking for the first [deleted]. They would like to get it before the Marines.

Mr. PIKE. Who is asking for the next [deleted].

Dr. CHEATHAM. Between the Marines and the Air Force, we have a pretty bona fide requirement for the first [deleted] which is what I was working toward.

Mr. WILSON. On that point, the initial requirement for COIN/LARA, when it was called COIN, was what, do you recall? How many planes did the Marine Corps say they wanted; how many could the Navy use; how many the Army said they could use?

Dr. CHEATHAM. The Marine Corps has always had a very firm requirement for [deleted] immediately. That has stayed with them for all time.

The Air Force requirement, I think, probably came next in terms of firmness of numbers.

Navy and Army probably are less firm, although they are now getting firmer.

Mr. WILSON. What is the total requirement as of now?

Dr. CHEATHAM. Well, a requirement has been passed through to the Joint Chiefs that would total up to about [delete] if you include MAP requirements. After this has been thoroughly screened, you come up with a requirement of about [delete] which, in my opinion, is very firm.

Mr. PIKE. Mr. Blandford.

Mr. BLANDFORD. I just want to read one thing, Dr. Cheatham, and this is what we asked Dr. Agan about the other day. Let me read a report from Aviation Daily. I want to know if this is a basically correct analysis of the symposium that was conducted out in Beverly Hills:

Air Force Maj. Gen. Arthur C. Agan, Jr., said several new aircraft are needed for the tactical inventory, including a light attack and utility aircraft for low-scale limited war. Existing aircraft are being examined for this as well as the COIN competitors. Agan said there is a need now for a new fighter-bomber, smaller than the F-111, for close air support and air superiority.

This would seem to imply there is some issue between a single weapon, a single mission aircraft, as proposed by the Marine Corps, LARA, and a several-mission aircraft, apparently proposed by the Air Force.

Now, is this correct or incorrect?

Dr. CHEATHAM. The statement as you read it there, I think, is a fairly accurate reporting of what was said there,

Mr. BLANDFORD. Isn't COIN/LARA a single mission aircraft in that sense of the word?

Dr. CHEATHAM. No, COIN/LARA—well, this is semantics, but I tend myself to look at the COIN/LARA as having multipurposes, and functions, that it can perform. But down very definitely in the counterinsurgency limited war region; it is specialized for that, specialized for the requirement, but it does do multiple functions.

In fact, we tried to build into it as many as we could. The ability to carry six paratroopers, to be able to carry litter patients, perform police functions, as well as to be able to do light attack. But we have kind of insisted that this function not be perverted in any way. It is still a little, tough airplane, and it is going to be able to deliver a pretty good munitions payload.

Mr. BLANDFORD. So is this why the decision has not been reached to produce the COIN/LARA aircraft?

Dr. CHEATHAM. It is not attributable to the Air Force.

Mr. BLANDFORD. I don't mean to imply the Air Force is the road-block, but is it this type of thinking, or are these types of questions being asked in OSD, that have led to—

Dr. CHEATHAM. No; I think the questions that are being examined and studied are more in the terms of cost effectiveness of alternatives; I mean whether this airplane can in fact replace O-1's, whether I can phase these out, get them paid for, and so forth. It is pretty much, I think, a systems-analysis/cost-effectiveness type of study, and not one of requirements or needs.

Mr. PIKE. I believe we can easily elicit from your statement your personal belief that the cost effectiveness is not the answer to the problem of close air support.

Dr. CHEATHAM. It is not certainly the total answer; no, sir.

Mr. PIKE. Dr. Cheatham, we have been giving you kind of a rough time here. I want to conclude your testimony. I may have to drag this out of you, but I would like the members of the subcommittee to hear what your shop has done in regard to the problem of tactics in relation to SAM missiles and the results that have been achieved thereby.

Dr. CHEATHAM. [Deleted.]

So I conclude that we at the moment are staying abreast of them, anyway.

Mr. PIKE. I just wanted to conclude with that one thing, which I was aware of. I think it is a really tremendous achievement, Dr. Cheatham. I think you deserve all the credit in the world, not only for this concrete result, but for your whole approach to the problem, which demonstrates conclusively that you know both the uses and the limitations of the computer.

Mr. BLANDFORD. Mr. Chairman, I believe General Schriever can be here on the 14th of October, Thursday the 14th.

Mr. PIKE. That being the case, this committee has no further business until the 14th of October, which is 1 week from tomorrow.

Mr. WILSON. We discussed the possibility—

Dr. CHEATHAM. I had a note here that I forgot to read you. Col. Coons did get the average fly-away cost of the B-52, which is \$9.1 million.

Mr. ICHORD. Mr. Chairman, a question on that.

I was surprised to learn the cost per ton on the A-1 was more than the F-100 [deleted] per ton on the A-1 and \$2,900 on the F-100. Those were the figures that I heard.

Of course, the A-1 costs less. I think the fuel cost would be less. What accounts for the reason that the cost of the F-100 is more?

Mr. BLANDFORD. Increased attrition.

Mr. ICHORD. Increased attrition?

Dr. CHEATHAM. That is probably the answer.

Mr. PIKE. I don't believe the fuel does cost less for the A-1. You are using higher octane stuff with the jets.

Mr. BLANDFORD. You throw the loss of one aircraft in here, and you raise your per-ton cost considerably.

Dr. CHEATHAM. You see, the impact of attrition, it might be of interest to the committee that in general you move that same airplane from South Vietnam to North Vietnam, the cost goes anywhere from 2 to 3 times. You can have typical figures—we are talking about the A-1 [deleted] and it will jump up to [deleted].

Mr. BLANDFORD. Due principally to what?

Dr. CHEATHAM. Attrition.

So you have a much more—you have a reasonably high attrition rate.

Mr. BLANDFORD. I see.

Mr. PIKE. Thank you very much, Dr. Cheatham.

(Whereupon, at 12:15 p.m. the subcommittee was adjourned.)

HOUSE OF REPRESENTATIVES,
SPECIAL SUBCOMMITTEE ON TACTICAL AIR SUPPORT
OF THE COMMITTEE ON ARMED SERVICES,
Washington, D.C., Thursday, October 14, 1965.

The subcommittee met, pursuant to call, at 10 a.m. in room 2216, Rayburn Building, Hon. Otis G. Pike (chairman of the subcommittee) presiding.

Mr. PIKE. We are both pleased, proud and privileged to have as our witness this morning General Schriever, whose exploits and accomplishments are known to the country. Some of us who have had the opportunity to get to know him personally are not only aware of his accomplishments, but are also aware of his dedication and the pleasant and unassuming manner with which he has conducted himself, in spite of the fact that he might well have been taking bows in all directions for a long time.

(The biographical sketch of Gen. Bernard A. Schriever is as follows:)

BIOGRAPHICAL SKETCH OF GENERAL BERNARD A. SCHRIEVER

Gen. Bernard Adolph Schriever is commander of the Air Force Systems Command. AFSC is responsible for research, development, procurement, and production actions required to place complete aerospace systems in operation.

General Schriever was born in Bremen, Germany, on September 14, 1910. His parents migrated to the United States in 1917 and he became a naturalized citizen in 1923. He received his early schooling in San Antonio, Tex., and was graduated from Texas A. & M. in 1931 with a bachelor of science degree.

General Schriever's military career began in 1931 when he accepted a reserve appointment in the field artillery after graduation from Texas A. & M.

Entering flight training at Randolph Field, Tex., in June 1932, he earned his wings and commission as a second lieutenant in the Air Corps Reserve in June 1933 at Kelly Field, Tex.

First assigned as a bomber pilot at March Field, Calif., General Schriever later was stationed at Hamilton Field, Calif., and Albrook Field, C.Z. In September 1937 he reverted to inactive reserve status and accepted a position as commercial airline pilot.

Reentering the service as a second lieutenant in the Regular Army in October 1938, General Schriever was assigned to the 7th Bomb Group, Hamilton Field, Calif. A year later he was assigned as test pilot at Wright Field, Ohio. While at Wright Field he attended the Air Corps Engineering School, specializing in aeronautical engineering subjects and was graduated in September 1941. He then entered Stanford University, Palo Alto, Calif., to pursue an advanced course in aeronautical engineering and in June 1942 was awarded a master's degree in mechanical engineering (aeronautical).

In July 1942 General Schriever joined the 19th Bomb Group in the Southwest Pacific. While in that theater he participated in the Bismarck Archipelago, Leyte, Luzon, Papua, North Solomons, South Philippines, and Ryukyu campaigns.

In October 1942 General Schriever became Chief, Maintenance and Engineering Division, and later Chief of Staff, 5th Air Force Service Command. In September 1944 he assumed command of the advanced headquarters, Far East Air Service Command, which supported theater operations from bases in Hollandia, New Guinea, Leyte, Manila, and Okinawa.

PERSONAL FACT SHEET

(a) *Personal data*

1. Born September 14, 1910, Bremen, Germany; father—Adolph Schriever (deceased); mother—Elizabeth Schriever (deceased).
2. Married January 3, 1938; wife—Dora Brett Schriever; children—Brett Arnold, Dodie Elizabeth (wife of Capt. T. G. Moeller), and Barbara Alice.
3. Hometown address: San Antonio, Tex.

(b) *Education*

1. Texas A. & M., Texas, 1931.
2. Stanford University, California, 1942.
3. Primary Flying School, Randolph Field, Tex., 1932.
4. Advanced Flying School, Kelly Field, Tex., 1933.
5. Air Corps Engineer School, 1941.
6. National War College, 1950.

(c) *Service*

1. November 1931 to June 1932: Field Artillery, Organized Reserve Corps.
2. June 1932 to June 1933: Flying Cadet Randolph and Kelly Fields, Tex.
3. July 1933 to September 1938; Air Reserves—two extended active-duty tours and five short tours of active duty.
4. October 1938 to October 1939; Regular Army assigned to 7th Bomb Group, 9th Bomb Squadron, Hamilton Field, Calif.
5. October 1939 to September 1941; test pilot, Assistant Operations Officer, and also attended the Air Corps Engineering School, Wright Field, Ohio.
6. September 1941 to June 1942; student, Stanford University, California.
7. July 1942 to October 1942; joined the 19th Bomb Group in the Southwest Pacific.
8. October 1942 to August 1943; Chief, Maintenance and Engineering Division, 5th Air Force Service Command.
9. August 1943 to June 1944; Chief of Staff, 5th Air Force Service Command.
10. June 1944 to August 1944; Chief of Staff, Headquarters Far East Air Service Command.
11. September 1944 to January 1946; commanding officer, Advanced Headquarters, Far East Air Service Command.
12. January 1946 to August 1949; Chief, Scientific Liaison Branch, Deputy Chief of Staff, Materiel.

13. August 1949 to June 1950; student, National War College, Washington, D.C.
 14. July 1950 to December 1950; Deputy Assistant for Evaluation, Deputy Chief of Staff, Development, Headquarters, USAF, Washington, D.C.
 15. January 1951 to May 1954; Assistant for Development Planning, DCS/D, Headquarters USAF.
 16. June 1954 to August 1954; Assistant to the Commander, Headquarters Air Research and Development Command, Baltimore, Md.
 17. July 1954 to May 1957; Assistant to Commander, ARDC with additional duty as Commander, Air Force Western Development Division, Inglewood, Calif.
 18. June 1957 to February 1958; Commander, Air Ballistic Missiles Division, Inglewood, Calif. (WDD changed to BMD 1 June 1957).
 19. February 1958 to April 1959; Deputy Commander for Ballistics Missiles, ARDC.
 20. April 1959 to March 1961; Commander, Headquarters ARDC, Andrews Air Force Base, Md.
 21. April 1961 to present; Commander, Air Force Systems Command, Andrews Air Force Base, Md.

(4) *Decorations, service medals, and awards*

Distinguished Service Medal with Oak Leaf Clusters	American Defense Service Medal
Légion of Merit	American Campaign Medal
Air Medal	Asiatic-Pacific Campaign Medal
Purple Heart	National Defense Service Medal
Distinguished Unit Citation with two Oak Leaf Clusters	Air Force Longevity Service Award with one Silver Oak Leaf Cluster
	Philippine Liberation Ribbon

(c) *Effective dates of promotions*

Rank	Temporary	Permanent
Second Lieutenant	Nov. 28, 1931	Oct. 1, 1938
First Lieutenant	Mar. 27, 1935	Oct. 3, 1941
Captain	Apr. 15, 1942	
Major	July 16, 1942	Aug. 5, 1943
Lieutenant colonel	Mar. 2, 1943	July 2, 1948
Colonel	Dec. 21, 1943	July 23, 1952
Brigadier general	June 23, 1953	Oct. 24, 1956
Major general	Dec. 13, 1955	Nov. 20, 1958
Lieutenant general	Apr. 25, 1959	
General	July 1, 1961	

Mr. PIKE. General Schriever, it is always a pleasure to see you, and we certainly welcome you here this morning.

General SCHRIEVER. Thank you, Mr. Chairman.

Mr. PIKE. You may proceed with your statement.

General SCHRIEVER. Yes, sir.

STATEMENT OF GEN. BERNARD A. SCHRIEVER, U.S. AIR FORCE

I might say that I am very happy to be called before the committee, since the systems command represents a very large amount of the Air Forces, particularly with respect to the future. It is a pleasure to be here.

Mr. Chairman, the Air Force Systems Command has built up a lot of momentum in support of tactical warfare that I think you will find pertinent to your investigation.

First, I have a few words on my view of limited war and our tactical air operations in South Vietnam—particularly from the R. & D. viewpoint. Then I will cover in some detail the main operational problems in close air support in South Vietnam. These main operational problems are also our main areas of development activity. I'll

discuss the problems of detecting and identifying targets, the command and control and communications problems in calling for fire support, the tactical fighter delivery systems, munitions and logistics support. I'll discuss these main areas and indicate to you some of the development activities we have underway to improve our operations. I'll try to indicate which are quick reaction efforts using the southeast Asia priority, which are interim efforts between 1 and 5 years from now and then indicate some of the larger next generation efforts applicable in 1971 and beyond.

The most difficult thing about supporting limited wars is the wide variety of operational situations. Limited wars include the entire spectrum of conflict intensity [deleted].

Similarly, if you look at the potential locations in the world for which we must plan limited war operations, there is extreme variability in the climate and geography that we must cope with. Perhaps most important of all is the wide variety of sociological and political influences on military operations in all limited war.

The war in South Vietnam is called by many people a counter-insurgency or COIN operation. You will recall that several years ago the nature of the conflict was much lower in intensity and then presented quite a different problem to air power than today. Further down the spectrum are situations like the recent Dominican Republic and in many African and Latin American countries there are situations that are often nearly imperceptible. These too deserve important attention with the idea of preventing the counterinsurgency operation from developing into the shooting stage. Of course you also recognize that there is a lot of the limited war spectrum on the higher side than that today in South Vietnam. There are the demands for interdiction of enemy installations and supply routes, and the necessity to deal with ground defenses such as in North Vietnam now. Beyond this is the need for an effective capability to do air battle if the enemy should engage in a contest for air superiority. All of this spectrum is possible within the realm of nonnuclear war.

Our problem in R. & D. is twofold. We must be sensitive and quick to serve current operational needs while still keeping good perspective across the total spectrum of limited war. We must provide a technological base sufficiently mature that we can quickly adapt the technology needed for rapid production of hardware to meet any situation.

As we all know, our national policy has stressed the maintenance of our deterrent forces. This has been and continues to be sound. Our capability to survive a thermonuclear attack and strike back with sufficient force that the enemy no longer constitutes a viable society is so enormously important that if we were to lose this capability our existence as a Nation would be in grave danger. Our efforts in limited war were given lower priority during the fifties, however, in recent years and as of now, limited war is enjoying equal priority. The sustained emphasis on limited war since late 1961 from top national levels has built up a momentum of support which should be maintained in technology without transient diversion.

Of course, South Vietnam is of extreme importance now for several reasons. One is that we are in direct active combat there but another is that our forces, tactics, and equipment may not be tailored for maximum effectiveness against the tactics of the Vietcong and his use of his particular climate and terrain.

Today's limited war demands for technology stem from two things in particular. First is the wider spectrum of situations we must deal with that I have already mentioned. Second is the increase in surface-to-air defenses. Between the days of Korea and now, ground forces have invested much in a capability for surface-to-air defenses to cope with the decisive impact that airpower can have on a ground campaign. When you couple the increased vulnerability to surface-to-air defenses with the rising costs of military hardware, it is imperative that every sortie represent the very best in combat effectiveness and efficiency.

During Gold Fire exercises last year, the Air Force put forth quite an effort to demonstrate its capability to support strike command in joint tactical operations. In preparation for these exercises, the Tactical Air Command quickly recognized some very important needs for improved hardware and technology. Air Force Systems Command teamed up with TAC on a long list of quick reaction projects to provide the best possible tactical capability. Several impressive demonstrations of new technology were made in areas of real time reconnaissance, airborne command posts, and tactical airlift aerial delivery.

Turning now to our operation in South Vietnam, our mission is largely close air support to the ground forces. The close air support job is more difficult than usual by old standards and it compounds the problems of target detection, communications for fire support, and response time. Ground forces are in much wider dispersed deployments and in relatively small units compared to past experience such as Korea. In previous operations, we knew that close support targets would materialize along a fairly well known line of contact with the enemy. We could position our forward air controllers with those ground forces in contact with the enemy, set up our communications and deploy our fighters with some confidence that our posture would be very close to maximum responsiveness in close air support. In South Vietnam these days, ground contacts occur in an unpredictable pattern over a wide area. This limits considerably our ability to be ideally positioned with the elements critical to close air support. In many instances, we find that tactical flexibility isn't sufficient to cope with basic facts such as these about the battle situation. We therefore, have placed emphasis on technology to achieve significant improvement in some of our essential operations. I will proceed now to discuss some of the more pressing problems and describe our responses as examples of what I mean.

First, the target detection problem. To blunt some of the Vietcong initiative in springing up anywhere, we try to locate him first. But, finding troop-sized targets under foliage and jungle concealment is a tough assignment. [Deleted.] We have gotten our forward air controllers airborne especially for better local visual reconnaissance in nonjungle areas. We have a quick reaction effort to provide the forward air controller stabilized optics to assist him in visual target detection. For jungle terrain, we turned to exploration of technology that could be adaptable to the situation. [Deleted.]

It has aided in correlating with intelligence reports and in pinpointing Vietcong locations. We are continuing to improve the detection capability [Deleted]. Another quick reaction program has been

operational in South Vietnam for some time. To assist in detecting ambushes along transport routes, we equipped C-123's and later C-130's with defoliant spray tanks that have seen much use. [Deleted.]

Once a target in South Vietnam is found by any means, one of the big problems is to establish its location so the strike fighter pilot can find it. In such undeveloped areas, there are all too few identifying features for reference in target location. We could make valuable use of an accurate position reference system for common use by ground forces, reconnaissance, forward air controllers, and fighters. [Deleted.]

It will be particularly suited for use in South Vietnam and has promise of increasing our responsiveness measurably at night and in bad weather.

Also in the target positioning and communications area, there are other examples of technology payoffs in smaller but important ways. The forward air controller is a keyman in coordinating close support fire and he must be at least as mobile as his associated ground units and sometimes more so. In the very forward area, he is least conspicuous if he leaves his jeep concealed a few hundred feet to the rear and proceeds on foot. The weight and communications capacity of his man-pack radios have needed improvement. Solid-state miniaturized electronic technology developed over the very recent years has enabled us to proceed directly to develop communications sets that are truly and easily man-portable. We have already delivered multimode man-pack radios to South Vietnam that cover VHF AM and FM in addition to UHF and HF. The total package weighs 48 pounds which represents a factor of 4 in improvement in communications and lightweight. We now have designs for a miniaturized UHF radio weighing only 6 pounds and for the interim period, we are continuing development of a still lighter weight multimode package.

Once the call for supporting air weapons is received, our problem is response time. This depends on our deployment, speed, and loitering time of fighter aircraft. Today, we have deficiencies in all of these. The A-1E is a 150- to 180-knot airplane that is too slow for adequate responsiveness except at very short distances. The F-100 is fast enough but is limited on loitering time. All our aircraft need too much runway to permit a shifting and dispersing deployment to improve responsiveness. I am convinced that we must increase the numbers and types of our tactical fighters if we are to effectively and efficiently perform the wide variety of fighter missions in limited war. In the conditions of air superiority as in South Vietnam now, we need an aircraft such as the LARA. Compared to the A-1E, it has much better short-field performance for easily shifting deployment and much better speed for covering distances. But I emphasize that its adequacy is limited to the permissive air environment where we have complete air superiority, and where distances and required payloads are modest. It carries enough payload for light close air support needs and this leads to the second type of aircraft that is to be designed primarily for close air support. We would want to retain the short-field deployment capability but increase the performance in both speed and firepower capability.

As I see it, these two types are needed in addition to the high-performance fighters needed for deep penetration of enemy territory and the air defense mission. The improved F-5 is representative of this

second type and as you know, we have a dozen of them [deleted]. Now for evaluation. Once the fighter arrives in the battle area, the next problem is to orient the fighter pilot and identify the target to him. Our current use of smoke rockets and flares leaves much to be desired. We have, in quick reaction development, several types of [deleted] target marking systems which will yield improvements. [Deleted.]

This leads to a discussion of our munitions program.

Since 1961 we have developed and introduced into South Vietnam a number of really significant advancements in nonnuclear weapons. Some of the close-support targets are hard and dug in and require large loads of heavy ordnance. However, many of the close-support targets are soft and dispersed for which an area weapon is much more suitable. One of our most valuable weapon achievements has been the dispenser-type munitions which distribute small bomblets over an area. Using these dispenser munitions, the Century series aircraft can cover an area [deleted]. We have also provided a dispenser munition for the A-1H which covers an area about [deleted]. Further development of dispenser munitions is continuing that will increase area coverage [deleted]. Another big improvement has been in the warhead for the 2.75-inch rocket. We have in production a new warhead which explodes on the surface using our new super-quick fuse and breaks up into [deleted] fragments, a [deleted] increase over the old warhead. For the interim period, we have a warhead employing [deleted].

It was evaluated in South Vietnam this summer and we are now in full production. Another weapon improvement that we are quite proud of was developed in-house. [Deleted.]

We have an extensive munitions development program that will provide continuing improvements over the near and interim period. We are working hard on several tactical air-to-surface missiles [deleted].

In the area of logistics, our problems are of two kinds. First is the airlift and resupply of deployed and dispersed ground forces in the midst of a primitive and hostile environment. The second problem is quite different. It concerns the logistics support of the flying units at their operating base.

In airlift and resupply, one main deficiency is inaccurate aerial deliveries in remote areas where the cargo cannot be recovered or may be captured by Vietcong. Another problem is vulnerability of the delivery aircraft. We have a number of quick reaction programs in test phase that measurably improve both accuracy and survivability. We have several methods of cargo extraction during a grass-level flyby. One method uses a cable and hook and another a parachute for cargo extraction. For smaller loads we are developing steerable parachutes that help survivability by a standoff delivery. Using ground beacon guidance for the steerable parachute, we are expecting accuracies of about 100 feet.

In the area of base support, we need to modernize support equipment such as shelters, vehicles, and power generators to be more deployable. We need to reduce size and weight of equipment for practical air mobility. We have a long list of item improvements in process. Some new lightweight aircraft maintenance shelters have been sent to South Vietnam and a number of improved items are scheduled for delivery over the near and interim periods.

My discussion so far has indicated the direct applications of advanced technology to current operations in South Vietnam. I think you'll agree that cumulatively R. & D. is importantly relevant in such wars. I would like now to discuss some of our long-term aspects.

Beyond our response to the hardware and technology needs of current operations, however, the Air Force has another important obligation that we all must understand and appreciate. We must maintain perspective and balance in our valuable technological commodity. We cannot take the easy route of narrowing our attention to only those immediately urgent problems. Even in the field of limited war, we must constantly recognize that the close air support operations of South Vietnam are not far in distance or time from considerably different circumstances in North Vietnam. Even in South Vietnam it is not inconceivable that air superiority could be contested. The Air Force must constantly seek the capability and flexibility to react to any situation any time. There will always arise some unforeseen and specialized needs for which we are not optimized. Here is the place where a broad and sustained technology program is of utmost importance. As I have previously indicated, available technology can furnish some hardware for an immediate capability and a readiness to proceed directly to development and production of operational equipment of maximum effectiveness. We are fully aware of the direct and important operational payoffs we can provide across the entire spectrum of COIN and limited war.

Beyond all the improvements that will become operational over the next 5 years, there remain some areas requiring additional effort. I'll mention several that were identified as long-term goals during the AFSC study called Project Forecast several years ago. We are working hard on the critical technology now for use as building blocks for the next generation tactical systems for the post-1970 period.

The first is a capability that bears on a whole range of problems such as target detection and location, communications, and command and control. It is the airborne warning and control system (AWACS). It will solve much of our low-altitude surveillance and communications problems and allow simultaneous observation of targets and friendly fighters and permit direct control of intercepts and ground strikes.

Another important capability needed for our tactical delivery aircraft is V/STOL. It permits dispersal and thus adds much to responsiveness and survivability of both our fighter and airlift aircraft. We have a comprehensive technology program in support of V/STOL. We are developing high-performance lift and cruise engines, V/STOL flight control, and such supporting items as rapid pad construction. In conjunction with the Federal Republic of Germany, we are planning development of a prototype V/STOL fighter for operational evaluation.

[Deleted.] Our navigation, computation, and displays are being improved, we have an advanced technology program in tactical avionics across the board that is aiming to produce a Mark II avionics package for a block change in the F-111A production [deleted]. Solid state microelectronics is being exploited to the maximum possible for important gains in size, weight, and reliability in addition to performance. This program includes work on radar homing and

warning [deleted] to increase our effectiveness against surface-to-air defenses beyond that now in work. We plan that this program will continue beyond the F-111 package to develop still more improvements for V/STOL fighters several years later.

When we consider the whole spectrum of tactical targets, we are having to engage in destruction of defended ground targets at too high a risk of attrition of our forces. We have the CBU dispenser munitions and the BULLPUP air-to-ground missile [deleted].

Sustained operation of tactical fighters inside the firing range of World War II type AAA and small arms is costly. Even a minimal exploitation of our air medium dictates that our altitude and mobility advantages should yield the benefits of a standoff delivery. We must first develop guidance technology as a prerequisite to practical and useful operational hardware. We have such a technology program underway but it takes time to develop the standoff guidance technology. Our current efforts are aimed at visual delivery from about [deleted] miles out from the target and a delivery accuracy of [deleted]. Beyond that we will continue with technology on guidance techniques [deleted].

Now I'd like to cover some of the organizational and management procedures we've set up in support of tactical warfare. Coming out of South Vietnam's experiences seems to be a growing recognition of the influence that R. & D. can have in such operations. Over the past several years, there have been so many needs for improved technology and hardware that a direct communications pipeline has been established between the Air Force Systems Command and the theater of operations in South Vietnam. We now have professional engineers in South Vietnam for on-the-site investigations and firsthand experience. Special management procedures have been established for processing southeast Asian requirements simultaneously by a number of supporting agencies. Quick reaction funding procedures have also been established to shortcut the redtape in getting action underway. Within the Air Force Systems Command we have established the Aeronautical Systems Division as the lead division for coordinating the entire command support of limited war and giving technical support to tactical air commands, tactical air warfare center, tactical air reconnaissance center, and special air warfare center.

I think we are likely to be engaged in various kinds of limited war for a long time. Since this kind of war is a very expensive operation, we must take adequate long-term measures to keep the cost down by driving hard for efficient capabilities in addition to effective ones. Since our problems and the alternative solutions are so numerous, we must do our best at planning and analysis to get good selectivity in our chosen goals. And of course, fundamental to all of this is the need for sustained momentum in an adequate technological base. That is one of the best investments in dollars and good people the Nation can make for its future security—in limited and other kinds of wars.

Mr. Chairman, I have here a paper on close air support and excerpts of combat evaluation of close air support effectiveness. The Secretary of the Air Force and the Chief of Staff have asked that I submit these to you for inclusion in the record.

Mr. PIKE. Without objection, they will be placed in the record right at this point.

(The documents previously referred to are as follows:)

U.S. ARMY,
MILITARY ASSISTANCE COMMAND, VIETNAM,
II CORPS ADVISORY GROUP,
APO U.S. Forces, 96295, February 28, 1965.

MACTN-IIC-SA.

Subject: Outstanding air support in the An Khe Valley operation.

Through: Commander, U.S. Military Assistance Command, Vietnam, APO U.S. Forces, 96243.

To: Commander, 2d Air Division, APO U.S. Forces, 96307.

1. In the month of February the nature of the counterinsurgency effort in the II Corps tactical zone has changed considerably. We have been faced with heavier concentrations of enemy forces. Actually, we welcome this change for it provides an excellent opportunity to exploit even further the outstanding air support which we are receiving. This is particularly true since the 2d Air Division has been permitted to add jet aircraft to our in-country support.

2. During the period February 21-23 we had several company size road security units heavily engaged along Highway 19 in the An Khe Valley. The combined operation which was executed on February 24, 1965 to extract two of these units is a typical example of truly outstanding air support. This operation would not have been possible without the integrated close air support of the B-57's from the 405th Tactical Wing, the F-100's from the 613th Tactical Fighter Squadron, and the A-1E's of the 602d Air Commando Squadron. The bombing and strafing by these aircraft suppressed heavy enemy ground and antiaircraft fire allowing helicopters of the 52d Aviation Battalion to make 3 lifts from Highway 19 and extract 220 officers and men who had been surrounded and would have otherwise been lost. This operation demonstrated the mutual support potential which can be called on to produce victory from what might become defeat under the unusual battle conditions in counterinsurgency.

3. The An Khe Valley operation provides a typical example of the fine air support we have been receiving in the II Corps tactical zone. May I extend our congratulations to you and the participating units of the 2d Air Division for a job exceedingly well done.

THEO C. MATAXIS,
Colonel, Infantry, Senior Adviser.

HEADQUARTERS, U.S. MILITARY ASSISTANCE COMMAND, VIETNAM,
APO San Francisco, 96243, March 3, 1965.

MACJOO-1st Ind-Serial No. 872

Subject: Outstanding air support in the An Khe Valley operation.

To: Commander, 2d Air Division, APO U.S. Forces, 96307.

The increased integration of U.S. airpower in the counterinsurgency campaign in South Vietnam has been a significant accomplishment. The air support provided by your command, as cited by the senior U.S. adviser of Army of Republic of Vietnam II Corps, is typical of the support rendered by the 2d Air Division throughout the area of operations. The AnKhe Valley operation on February 24, 1965, using aircraft from the 405th Tactical Wing, the 613th Tactical Fighter Squadron, and the 602d Air Commando Squadron reflects great credit on the 2d Air Division. I want to take this means of commending those personnel responsible for the outstanding air support which was rendered.

W. C. WESTMORELAND,
General, U.S. Army, Commanding.

CLOSE AIR SUPPORT (1965)

Definition.—Close air support is air action against hostile targets which are in close proximity to friendly forces and which requires detailed integration of each air mission with the fire and movement of those forces.

The Air Force and Army both recognize that close air support relates directly to the two other functions of tactical air operations—interdiction and counter-air. Recognition of this interrelationship is a product of joint training and battle experience in World War II, Korea, and the Republic of Vietnam (RVN);

it stems from the need to obtain maximum effectiveness from the mobile and concentrated firepower of aircraft.

The close air support function is designed to assist surface forces in the immediate battle area through the accurate and timely aerial delivery of firepower against selected targets. The destruction of these targets is intended to have an immediate impact on the battle in progress.

The close air support function includes two essential components:

(1) A responsive command and control system which will permit exploitation of the flexibility of airborne firepower and its integration with the fire and maneuver of the surface force.

(2) Air weapons systems capable of accurate and discriminate delivery of firepower on designated targets.

Application of this capability occurs within the framework of the unified command structure. We believe that unified strategic direction and unified command of combatant forces is the best way of integrating land, naval, and air forces into an efficient team. USAF combatant capabilities are allocated by JCS action to the operational command of the commander in the chief of one of the U.S. unified commands. The commander of a unified command may further allocate USAF squadrons to a subordinate unified or joint command. In such cases, broad allocation of tactical air support becomes the job of a commander whose responsibilities extend beyond any one service.

This commander may allocate the entire force for close air support or allocate only a portion to close support, using the remainder for other tasks which may be determined by priority. When the priorities are being established, the joint force commander can apply the entire effort to the support of a single operation or distribute the allocation to several operations. Decisions as to specific close air support targets and time on targets rest with the commander of the supported ground unit.

Responsiveness

Responsiveness is a primary criterion for measuring the usefulness of close air support. Support that is not timely cannot be useful.

Important to enhancing response in close air support operations is joint, coordinated preplanning. Operational experience in World War II, in Korea, and again in RVN reflects that joint planners have not always adequately preplanned close air support for known operations. Joint preplanning allows us to meet foreseeable needs, inevitably reduces response times and enhances the exploitation of available airpower assets.

Another significant factor is the command and control system which provides rapid and reliable control of close air support operations. Since the development of the first tactical air control system in World War II the system has been continuously improved by the use of better and more flexible communications equipment and procedures.

When we deployed our initial cadre of special air warfare (SAW) aircraft to RVN in 1961, we introduced a tactical air control system (TACS). The TACS was introduced to provide the communications link between the ground forces and the close air support capability. We attached air liaison officers and forward air controllers to every major United States and Vietnamese ground unit in direct contact with the enemy. The centralized control capability of the TACS has proven to be a vital ingredient in conducting the responsive close air support mission. The TACS represented the first control network to be introduced into southeast Asia. Today it provides an integrated control structure capable of responsive operational direction of the total air effort.

From 1957 until 1965, joint doctrine required the Army to provide the communications equipment and vehicles and operate the air request net. Joint and service studies of better ways of operating and subsequent tests by Strike Command in field exercises have resulted in a complete overhaul of the tactical air control system. As of July 1, 1965, the Air Force, in agreement with the Army, will provide the vehicles, communications equipment, forward air controllers, and operate the air request net. The system is designed to permit the fastest possible direct response to a ground unit requiring support. Upon request by the ground commander, an air strike is launched unless an intervening ground echelon vetoes the request. The TACS provides the command and control linkage to the close air support assets which have been dispersed throughout RVN. Strike aircraft are deployed to as many as [deleted] airfields as the battle situation requires.

[Deleted.] To reinforce the total capability for a flexible, responsive tactical strike system, a number of close air support aircraft are maintained on both air-

borne and ground alert. The numbers and types of aircraft on alert status vary according to expected operations, and provide a capability for rapid response to requests for immediate close air support. The improved TACS, the new air request net, and the recent deployments of first line tactical aircraft have significantly increased our capability to provide responsive and accurate close air support. Recent reports from COMUSMACV and U.S. Army officers in the field attest to the effectiveness of this increased capability.

Special air warfare capabilities

Since 1961, all of the services have devoted increased effort to the development of capabilities, optimized for operations in so-called wars of liberation. A small portion of the Air Force SAW force was deployed to the RVN as early as November 1961.

The nature of conflict like that in South Vietnam [deleted].

Our experience has shown that often the local situation precludes the introduction of "first line" aircraft and equipment, particularly in the early stages of counterinsurgency. Consequently, the SAW force used in Vietnam was equipped with selected, less sophisticated close air support aircraft to provide compatibility with the VNAF.

As an initial step to provide "nonfirst line" aircraft to RVN, the U.S. Air Force introduced a composite unit of modified T-28's and B-26's. As the tempo of activities increased, the U.S. Air Force recognized the need for additional close air support aircraft in RVN. We procured and modified A-1's because of additional firepower and because the aircraft assisted us in our training mission in South Vietnam as they expanded their A-1 force. In 1964, the U.S. Air Force was authorized to increase its SAW fighter force in Vietnam to two squadrons of A-1 aircraft.

Commencing in 1962, the Air Force initiated actions to expand and modernize the SAW force. In that year we proposed a force of 254 aircraft to be made up largely of types optimized for the SAW mission, but at that time the prevailing view was that old aircraft no longer needed for their original missions should be employed for this purpose. However, the SAW force, which is specifically designed for combating "wars of liberation," has grown since 1962 to a total authorized strength of nearly [deleted] aircraft. [Deleted.]

In order to provide for future improvements, the U.S. Air Force examined the light armed reconnaissance aircraft (LARA) as a close air support aircraft for counterinsurgency warfare. We have supported its procurement, in numbers up to [deleted], for various purposes. These include [deleted] to replace O-1's presently used by the airborne forward air controllers in South Vietnam. Others could partially replace the strike/recce aircraft of the SAW force and be used for transport/utility in the SAW force. The final number will be dependent on the outcome of performance, cost, and effectiveness comparisons.

We believe the LARA type will provide a suitable follow-on aircraft for many SAW close air support missions. Procurement of the LARA type by the Air Force will provide an aircraft to perform the two ground attack missions in a counterinsurgency environment. [Deleted.] If, however, our commitment to a conflict of this nature intensifies, as it has in Vietnam, the special air warfare force must be backstopped by the heavy firepower of the general-purpose tactical fighter force.

Tactical fighter aircraft for close air support

Historically, the development of tactical fighter aircraft for U.S. air forces has emphasized high performance and versatility. During World War II, aircraft such as the P-51 and P-47 provided the close air support and interdiction required by the ground forces, and also fought and won the air battle over Germany. During the Korean war, the F-80 and F-84, both high-performance aircraft, also became the workhorse close air support airplanes, and did an outstanding job.

In Vietnam today ground attack missions, both close air support and interdiction, are being flown interchangeably by U.S. Air Force A-1's, B-57's, and F-100's. None of these aircraft was designed with the Vietnamese war specifically in mind. Yet these aircraft are being used effectively—indeed decisively—in our national effort in Vietnam. [Deleted.] All of these aircraft have characteristics which lend themselves to the close air support task. Their speed permits faster response from strip alert bases or airborne combat air patrol. Their capability to carry heavy armament and ordnance loads provides the air-to-ground firepower so necessary to this mission.

Throughout its history, the Air Force has met two demanding criteria. First, we have been responsive to the needs of our national policy and its strategic direction. Second, we have configured our force structure to meet the credible threats of the international environment.

We have made a significant contribution to deterrence of high-level nonnuclear as well as nuclear conflict. We shall continue to have an increasing ability to deter higher levels of nonnuclear war as our tactical forces are modernized with the F-4 and the F-111. We have also recognized that insurgencies and low-level limited wars are the most difficult to deter, and we are therefore likely, indeed almost certain, to continue to be involved in them in the future. Because the probability of our waging such wars is so high, we are and have been moving to obtain not only aircraft, but sensors, ordnance, communications, and techniques specially suited for waging them.

For the near term we are working jointly with OSD officials to select an aircraft for direct support, at various levels of conflict, which could be procured from existing design. Versions of the CL-901, F-4, F-5, A-6, and A-7 are being examined.

Night and all-weather capability

Acquisition of night and inclement weather capabilities is now and has been a major Air Force objective for 25 years. In both World War II and Korea every effort was made to utilize technological advances to enhance around-the-clock operations.

The ability to operate at night and in adverse weather requires the precise mating of highly trained personnel, navigational aids, ordnance, and target acquisition equipment into a weapon system.

All of our current strike aircraft have the ability to navigate to a target area, penetrate and operate against point targets below an overcast. The Tactical Air Command has increased the night strike training of all its F-100 and F-4 squadrons. F-100's, B-57's, and A-1's have been conducting night attacks in South Vietnam with significant effects. [Deleted] effectiveness of these attacks has been enhanced by the use of cargo aircraft dropping flares. Often the mere appearance of flares has caused guerrillas to break off their attacks. [Deleted.]

In addition to these near-term fixes we have an active R. & D. program to develop sensors to improve the all-weather capability needed for close air support.

Summary

We have focused on two related issues—the U.S. Air Force capability to fight effectively in “wars of liberation” and the U.S. Air Force capability to provide close air support. We have dealt with these two issues in the context of the total U.S. Air Force capability for tactical air operations.

In the early 1960's, a new emphasis was given to preparing to fight counterinsurgency. Fundamental to our national approach to this problem has been a recognition that we would be responding to requests for help from beleaguered nations having limited resources and modest development.

In the forces we have utilized to train friendly forces for counterinsurgency and in some of our own operations, we necessarily turned to off-the-shelf aircraft like the A-1. Multipurpose aircraft in our inventory, such as the F-100, have an excellent capability to meet close air support criteria—and today this is being effectively demonstrated in South Vietnam.

Our close air support system is designed to meet the criterion of responsiveness. We shall meet the requirements of the future environments; first, by improving the tactical air control system and, second, by procuring more effective aircraft.

In respect to aircraft, the Air Force wants a LARA type aircraft for counterinsurgency operational tasks. The Air Force also wants an aircraft with greater capability than the LARA, designed primarily for close air support, to augment our capability to deal with wars at the level of intensity current in Vietnam and also with combat at higher intensity.

[Deleted.]

General SCHRIEVER. I have a short, 10-minute film. I hope you won't consider this a snow job, but pictures are worth a thousand words, or perhaps 10,000 words, and you will know we are working on the problem.

Mr. PIKE. We will not consider it a snow job if they are pictures of things you have, instead of things you hope to have some day.

General SCHRIEVER. We will try to keep it in proper perspective.

Mr. PIKE. The thing that concerns us is that time after time we are told what we are going to have "some day"—and "some day" never comes.

We have been told about vertical-take-off aircraft for as long as I have been on the committee. I have not seen any, at least enough for operational use. It has been experiments and experiments.

We would like very much to see the movie.

General SCHRIEVER. Thank you.

Colonel MARET. General Schriever has indicated the immediate, mid-range, and long-range programs within the Air Force Systems Command to enhance our operations. He has stressed, in particular, those aspects of our programs that have direct bearing on our involvement in southeast Asia. We would now like to show you, in a brief series of film clips, some of the systems he discussed and others which were not touched on, but which are the products of our research and development efforts to strengthen limited war capabilities. Many of the systems shown in these clips are presently fully operational in southeast Asia. Others are undergoing operational evaluation in the combat areas. Some are still under development and will add to our limited war capabilities in the near future.

The film covers, in sequence, logistics-supply systems, reconnaissance communications, command and control systems, and tactical air and munitions systems.

(Whereupon, a short film was shown, with the accompanying commentary by Lt. Col. Paul L. Maret, Headquarters Air Force Systems Command, as follows:)

6. *The C-130 with JATO.*—Eight JATO bottles give improved short field take-off performance for the C-130 with benefits similar to those for the C-123B. The aircraft takes off in less than 800 feet.

7. *Dust suppression.*—A substance called coherox, applied to unimproved surfaces reduces the amount of dust created by aircraft reversing propellers. This improvement in dust suppression reduces the amount of engine damage. It is possible to land aircraft at more frequent intervals instead of waiting for big dust clouds to dissipate. Dust clouds may help the enemy to pinpoint landing operations, and for this additional reason, need to be kept to a minimum.

8. *RF-4C.*—The RF-4C is a multisensor tactical reconnaissance airplane. The aircraft is equipped with the KA-56 camera. [Deleted] exposure with one shot.

9. *EIMSS (electronic image motion stabilization system).*—The electronic image motion stabilization system is a new technique to stop image motion induced by vibration or random motion. At present, the system is being applied to provide stabilizing binoculars for the forward air controllers. It will improve our visual reconnaissance. The stabilizing unit will have application to such equipment as motion picture, television, and reconnaissance cameras, and to sighting devices.

10. *Communications and reconnaissance.*—In 1964, Systems Command completed a communications link [deleted]. The system consists of a radio microwave, a submarine cable, and a troopscatter radio link.

11. *Airborne command post.*—[Deleted.]

12. *Control tower.*—Five transportable control towers should be operational in SEA by mid-1966.

13. *Manpack radios.*—The manpack radios increase the communications capability for forward command and control.

14. *Communications jeep.*—Also, 150 communications jeeps are being used in SEA to provide ground-to-air communications. They also link Army and Air Force controllers.

15. [Deleted.]

16. *"Charger" COIN A/C.*—Short field take-off and landing are a few of the capabilities of new counterinsurgency aircraft now being evaluated by the Air Force, Navy, and Army. Assets include a wide range of munition loads, aerial delivery, and utility transport capabilities. This is an example of a counterinsurgency aircraft which is being produced and evaluated at the present time. This aircraft can perform missions of reconnaissance, bombing, and strafing for close air support operations.

17. *HH-3E.*—Presently the CH-3C helicopter is being introduced into Vietnam as a rescue helicopter.

18. *F-100 Super-Sabre.*—The F-100 with the BULLPUP is designed to hit hard ground targets. This guided missile is controlled by the pilot after launch. [Deleted.]

19. *Mach 2 F-104G.*—The Mach 2 F-104G attacks ground targets with Vulcan cannons.

20. *F-104.*—The F-104 launches a SIDEWINDER heat-seeking missile against an aerial target. The missile homes on the Q-80 jet exhaust heat source.

21. *F-105 Thunderchief.*—The F-105 Thunderchief with an external bomb load delivers 16, 750-pound high explosive bombs.

22. *F-105.*—The F-105 is also equipped with the Vulcan cannon.

23. *LAU-3, 2.75 rocket launcher.*—The LAU-3 launcher on an F-100 fires 19 2.75 folding fin rockets in ripple fire.

24. *F-5.*—Although not in the Air Force inventory, operational evaluation of the F-5 starts [deleted] in Vietnam. Systems command has pushed development to get 12 of these aircraft into a combat role under control of the 2d Air Division.

25. *SUU-16 Gun Pod.*—The SUU-16 Gun Pod incorporates the M-61 Gatling Gun and a linkless feed system.

26. [Deleted.]

27, 28, 29. *Firebombs.*—Those are actual combat scenes of the effect of napalm delivery in Vietnam. A spotter plane directs the attacking plane against known targets.

30. *Station keeping equipment.*—To satisfy the need for formation flying in adverse weather, a radar station keeping system has been tested and evaluated. As a result, Air Force transport aircraft will have this equipment installed.

31. *B-52.*—The B-52 has been modified to drop conventional bombs. Iron bombs are dropped out of the bomb bay or from externally mounted racks. The aircraft have a capacity for about 50 750-pound bombs. The B-52's are operationally based at Guam.

32. [Deleted.]

33, 34. *CBU-2 antipersonnel and material munition.*—The CBU-2 is a dispenser munition which uses the standard dispenser to disperse antipersonnel/material bomblets. An F-105 is dispersing the bomblets. The CBU-2 is deployed in Vietnam.

35. [Deleted.]

36. *Qualification test of M-3 incendiary cluster with B-57.*—This was one of a series of munitions qualified for release and delivery from the B-57.

37. *Retarded bomb.*—This shows a retarded bomb being developed by the Air Force for low-level delivery. Then the fighter plane can escape prior to the detonation of the warhead.

Colonel MARET. As General Schriever pointed out, there is extreme variability in the climate and geography that we must cope with.

Our research and development efforts are not confined to conditions that apply to Vietnam alone. We are advancing our technologies for limited war under all possible conditions.

Thank you.

I must apologize for losing a loop on this projector. These were just made and clipped together last night.

Mr. PIKE. General Schriever, we certainly thank you for your most comprehensive testimony and the film, which certainly goes far beyond our particular concern and jurisdiction, which is limited to tactical air support.

How much does one JATO bottle cost?

General SCHRIEVER. The last time the Air Force bought JATO bottles was in 1962. At that time, the unit cost was \$187 each. Best estimate of present cost is \$240 each. AFLC is the purchaser of these items for the Air Force. The AFLC records do not show any usage rates or requirement to restock the items.

It requires eight JATO bottles to launch a C-130. After takeoff, the bottles are jettisoned. At the 1962 cost, this is about \$1,500 per launch. At the estimated 1965 cost, this is about \$1,900 per launch.

JATO is not presently proposed for augmenting C-123 takeoffs. Small jet engines are under consideration for this.

Mr. PIKE. Isn't using JATO tanks to get a plane off the ground an awful expensive way to get a plane off the ground?

General SCHRIEVER. It is certainly not the way we would like to do it.

Mr. PIKE. Where are our SHRIKE missiles? We have been hearing for a long time about our capability to use a SHRIKE missile against targets which emit radar impulses. Why haven't they been used against the SAM sites in Vietnam?

General SCHRIEVER. Design, development and production of the SHRIKE missile is under U.S. Navy control. The U.S. Air Force acquires the missiles and any other equipment or data common to both services by military interdepartmental purchase request.

[Deleted.]

Mr. PIKE. Can you tell us why it hasn't been successful?

General SCHRIEVER. No, sir; I cannot tell you exactly why.

Mr. PIKE. General Schriever, what is the Air Force's definition of "limited war?"

General SCHRIEVER. I don't know that we have an official definition, (The definition of "limited war" was supplied for the record, and is as follows:)

[Extract from Joint Chiefs of Staff Publication 1, Dictionary of United States Military Terms for Joint Usage (short title: JD), Dec. 1, 1964, p. 83]

EXTRACT

Limited war.—Armed conflict short of general war, exclusive of incidents, involving the overt engagement of the military forces of two or more nations.

This definition is identical with that shown on page 81, Air Force Manual 11-1, dated December 7, 1961.

Mr. PIKE. On page 2 of your statement you say, "In recent years and as of now, limited war is enjoying equal priority," and you refer to "priority" as pertaining to our efforts and national policies.

Can you tell us how much of the research and development funds of the Air Force have gone into planning for limited war, say since 1960, as compared with strategic war?

General SCHRIEVER. I don't have all those numbers here. I have them in my headquarters; yes, sir.

If you take the general war forces, which are your strategic forces, with quick recovery program, you will find there has been a very significant decrease in the amount of moneys that have gone into strategic warfare as compared to general purposes forces.

Mr. PIKE. I am sure with the accumulation of what has been considered to be an adequate nuclear missile deterrent there will be a relative decrease. But are you saying to us that the limited war funding is equal to the strategic war funding?

General SCHRIEVER. I would have to check the figures, because this would not only involve the Air Force but the other services as well.

Mr. PIKE. Well, I am talking only about the Air Force.

General SCHRIEVER. The general purposes forces, which includes the procurement of such aircraft as the F-4, for example, the development of the F-111, the airlift forces that support general purpose forces, like the C-141, I think actually—I have to check the figures—we are spending more money in this area now than for strategic forces.

Mr. PIKE. If you start to throw in the C-141 as a limited war procurement, I am sure I would have to agree. On the other hand, I am not sure that I would throw in the C-141 as a limited war procurement.

General SCHRIEVER. It is not solely limited war procurement, but we are using it to go to South Vietnam, now, so it certainly applies to limited war activities.

Mr. PIKE. And it also applies to strategic war activities.

General SCHRIEVER. That is true.

Mr. PIKE. Because it applies to both, it is a little unfair, I think, to throw it in on the side of limited war.

General SCHRIEVER. It is a little difficult—

Mr. PIKE. This is the reason I asked you to start with, for your definition of a "limited war." Were we talking about the same thing?

General SCHRIEVER. Well, I consider limited war—we have defined or attempted to define "counterinsurgency," which is the operation we were engaged in in South Vietnam prior to the active engagement of U.S. forces.

It is a limited war now, by definition, but this could, of course, escalate, and the war we are fighting as it pertains to North Vietnam is quite a bit different than it is in South Vietnam, for example. You have a variety of levels of intensity that can be applied to "limited war."

Mr. PIKE. Agreed.

Off the record.

(Remarks were directed off the record.)

Mr. PIKE. You say on page 4:

Our forces, tactic and equipment may not be tailored for maximum effectiveness against tactics of the Vietcong and his use of his particular climate and terrain.

Wouldn't it be accurate to say, rather than "may not," "are not"?

General SCHRIEVER. I wouldn't say they are not. I would say they are not optimum, and they are not optimum for several reasons. In some cases it is because technology doesn't provide us with an optimum system against some of these activities in South Vietnam.

Mr. PIKE. Technology never provides you with an optimum system for anything, does it? There are always new realms of technology.

The question is: Have we aimed our efforts and our technology at the type of situation that we have in a guerilla type of war?

General SCHRIEVER. No, I think it is fair to say that we have not aimed our capabilities specifically at that particular problem. We have not overlooked it as a problem.

Mr. PIKE. Well, General, you say that—now I go over to page 6—you say:

We have gotten our forward air controllers airborne especially for alert local visual reconnaissance in nonjungle areas.

You had your forward air controllers airborne in Korea, the Korean war, didn't you?

General SCHRIEVER. Perhaps General Ferguson can answer, he was in Korea.

General FERGUSON. Yes, Mr. Pike.

Mr. PIKE. Then there came a time when you lost the capacity or lost the equipment to keep your forward air controllers airborne, did you not, General Ferguson?

General FERGUSON. In 1953, after the Korean war, the Army and the Air Force agreed that the Army would provide communications in connection with close air support. This agreement continued in effect until this year. As a result of recently conducted joint field exercises, the Army and the Air Force decided that the Air Force would again provide these equipments. We are doing this now as stated, and formalized, in the September 1965 agreement. Previous testimony before this committee has indicated the equipments currently in place in Vietnam. These equipments include both the jeeps and the O-1E observation aircraft, both equipped with appropriate communications.

Mr. PIKE. In the business of getting your forward air controllers airborne, then, you have gone back to the situation that existed at the time of the Korean war?

General FERGUSON. Yes, sir, and further back than that, to World War II, in certain cases.

Mr. PIKE. Right.

You told us, General Schriever, at the bottom of page 9, here, after talking about the desirability for aircraft such as LARA, you say that it "leads to a second type of aircraft that is to be designed primarily for close air support."

Then on the next page you say, "The improved F-5 is representative of this second type."

Was the improved F-5 designed primarily for close air support?

General SCHRIEVER. No, sir. As you know, the F-5A is an evolution of the T-38 jet trainer. The intent behind the F-5A design was to provide a military assistance tactical fighter that would have pretty versatile capability to do interdiction, close air support and serve as a decent air-to-air fighter as well. Using that as a departure point, the further evolution into the improved F-5 was very definitely designed primarily to optimize its use in close air support.

Mr. PIKE. Do you have a plane that was designed primarily for close air support?

General SCHRIEVER. We have no plane that was primarily designed for close air support.

Mr. PIKE. Are you at the present time working on a plane designed primarily for close air support?

General SCHRIEVER. Do you mean planning, or actually working on it?

Mr. PIKE. Well, I mean—there are enough people in the Air Force so that I am sure someone is thinking about one, someplace. But are you actually working on a plane designed primarily for close air support?

General SCHRIEVER. Not working on a plane in the sense of bending metal but over the past year or so, the Air Force has been intensively studying the best characteristics that should be built into our new TAC

fighter types. As I mentioned, the improved F-5 we regard as representative of an interim airplane but the F-X is our main thrust of effort to get the best possible fighter to cope with our anticipated close support needs. In the Systems Command we have been studying the problem and conducting supporting technology for quite a long time.

Mr. PIKE. I think one of the reasons we are all here, General Schriever, is that there just hasn't been one. We have been working on it, and we have been thinking about it, but since World War II, I think it is fair to state that, the Air Force simply has not developed a plane designed primarily for close air support. Is that not a fair statement?

General SCHRIEVER. That is true.

Mr. PIKE. You say on page 10 that you have "another quick reaction program to get the best available [deleted] installed on the A-1E's to improve our night capability for visual strike."

Why on earth are you putting this new product on those old, old planes?

General SCHRIEVER. They are over there, and doing the job. We want to improve their capability.

Mr. PIKE. Don't you have other things over there that would be better?

General SCHRIEVER. We have the F-100 and the A-1E's. We could certainly put them on our higher performance airplanes, but they are not being used at the moment to any great extent in South Vietnam. They are being used in North Vietnam.

General FERGUSON. May I add to that, Chairman Pike, please? We are installing [deleted] into four or five A-1 aircraft. This type aircraft was selected because of its flying characteristics and the way our forces are using it now. We plan to install this type of equipment, along with the [deleted] in our 123's for test purposes in Vietnam.

As we refine and improve these devices, we will install them in higher performance or more optimum-designed aircraft.

Mr. PIKE. So you find yourself putting this on A-1E's, on the 123's [deleted].

How old are the A-1E's?

General FERGUSON. They are a product of World War II designs. The production of the A-1 series began about 20 years ago.

Mr. PIKE. Don't you really think—and I will throw this last nasty one at either one of you—that when you find yourself in the position that you are having to put your new [deleted] equipment on World War II A-1E's [deleted] you find yourself in a position where you really just plain don't have the equipment that you ought to have for this kind of warfare?

General SCHRIEVER. [Deleted.] And we actually established our special air warfare forces with this kind of equipment, starting back in about 1962 or 1963.

Mr. PIKE. [Deleted] you find you don't have the modern equipment to use, so you are having to do with the A-1's and the C-47's, isn't that true?

General SCHRIEVER. The answer there is that is true; that is right.

Mr. PIKE. That is all I have.

I apologize, General Schriever. I have to leave. I am going to ask Mr. Ichord to take over the committee. I have to go do something on the Senate side.

(Whereupon, Mr. Ichord assumed the chair.)

Mr. ICHORD. Mr. Chamberlain, do you have any questions?

Mr. CHAMBERLAIN. Yes, Mr. Chairman, I have a few questions I would like to ask.

Referring to your statement on page 9, General Schriever:

I am convinced that we must increase the numbers and types of our tactical fighters if we are to effectively and efficiently perform the wide variety of fighter missions in limited warfare.

I am quite impressed with that sentence. I am wondering if you could expand upon it a bit and tell us a little more about what you are getting at there?

General SCHRIEVER. Well, I can expand it very simply. I think we need an aircraft of the type that LARA represents. This aircraft, in a permissive air environment, can be very effective, and it has a multiplicity of missions that it can perform, including close air support. In a counterinsurgency environment, the other type aircraft is one of higher performance. It has an interim capability.

I would like to see a V/STOL capability here with a higher performance airplane that has the ability to conduct close air support operations and have also a certain amount of survivability in the event of enemy air attack.

I mentioned the F-5's as a representative aircraft. This aircraft is relatively cheap, it has good performance, it has high reliability, and it should be easy to maintain. This is the type of aircraft that I have in mind.

I think technology will permit that [deleted] this type of aircraft can be a V/STOL. We are not ready to lay such an aircraft down at the moment, that is why we are talking about an interim aircraft, such as the F-5 type. These are the two in addition to high-performance airplanes which are presently represented by the 105, the F-4, and then with the F-111 in development and soon to be in production.

Mr. CHAMBERLAIN. You have anticipated my followup question, which was going to be as to the degree of your urgency that you assign to this. What priorities, if any, do you attach to this?

General SCHRIEVER. I put a high degree of urgency to it.

Mr. CHAMBERLAIN. Is there anything that is impeding progress as far as the Congress is concerned? Do you have all the funds you need to push this as you feel it should be pushed?

General SCHRIEVER. There has to be a decision made for the production of the LARA, for example, and this is at the DOD level, not the Air Force.

Mr. CHAMBERLAIN. Are you more or less awaiting that decision to be made at the moment; are you ready to make that decision, or how far down the road is this?

General SCHRIEVER. I can't answer that. The Air Force has recommended that the procurement of these aircraft be made. I don't know—

Mr. CHAMBERLAIN. When, General?

General SCHRIEVER. Well, this was an air staff recommendation. I think the first recommendation came in 1962.

Is that right?

General FERGUSON. The Air Force made its recommendation on the LARA last month, September.

General SCHRIEVER. We are talking about the LARA now?

Mr. CHAMBERLAIN. Yes. Talking about the LARA.

General SCHRIEVER. That is right.

Mr. CHAMBERLAIN. Your testimony is that the first Air Force recommendation for this plane was made in 1962?

General SCHRIEVER. Is that right?

General FERGUSON. No; not for this particular airplane. The recommendation in 1962 was for an airplane to perform a close air support mission, not an airplane that was flying, but an airplane in the design phase optimized for ground attack.

Mr. CHAMBERLAIN. There was a requirement, and a need, and you wanted to fill that need, and that was the basis for your recommendation?

General FERGUSON. That is correct.

Mr. CHAMBERLAIN. Subsequent to that recommendation in 1962, then, how many additional recommendations have been made by the Air Force to meet this requirement?

General FERGUSON. Rather than develop a new aircraft in 1962—it was decided that airplanes of older vintage would be suitable for use in South Vietnam. These included the T-28, the B-26, and aircraft of that class.

In 1963, the Air Force also looked at modifications of certain trainer-type airplanes, such as the T-37. The Air Force investigated larger engines for the T-37 and other modifications to adapt it for ground attack. The T-28 was also proposed, with a new engine, to satisfy the ground attack requirement. We recommended against both these aircraft because of the expensive modifications involved and the relative small gain in capability.

At that point the Marines undertook what is known as the COIN airplane or light armed reconnaissance aircraft, LARA. There was no Air Force interest at that point because of the aircraft characteristics, as we understood them. But in the last year, as the development has progressed, the Air Force has developed considerable interest in this airplane. We went formally to the Secretary of Defense for [deleted] LARA-type airplanes.

Mr. CHAMBERLAIN. Has this been approved?

General FERGUSON. The program change proposal went to the Secretary.

Mr. CHAMBERLAIN. Suppose we get the green light, how long would it be before we would have our plane?

General FERGUSON. With normal development, the first airplanes would be available in [deleted].

Mr. CHAMBERLAIN. For testing or development?

General FERGUSON. There is one LARA flying now and two or three will be flying by January of next year. Under an accelerated development and production scheme, the first production airplanes could be available about [deleted]. I think we will be in a better position to judge the aircraft specifics in 60 to 90 days and freeze the design at that time. The airplane is flying now and providing data on performance.

Mr. CHAMBERLAIN. Thank you, General Ferguson.

On page 10 of your statement, General Schriever, in the middle of the page, you talk about the next problem, i.e.:

The next problem is to orient the fighter pilot and identify the target to him. Our current use of smoke rockets and flares leave much to be desired. We have in quick reaction development several types of [deleted] target-marking systems which will yield improvements. We have another quick reaction program to get the best available [deleted] installed on the A-1E's to improve our night capability for visual strike.

If our smoke and flares "leave much to be desired," and this is a problem we have, what are we talking about in terms of time frame? When are we going to be doing something about this? It doesn't seem to be very clear.

General SCHRIEVER. When I say "quick reaction," all of these are projects—and I might say we have over 125 of them, right now—in this particular category of being responsive to southeast Asia. [Deleted.] I cannot give you the exact time on these two, but I will furnish this for the record.

Mr. CHAMBERLAIN. I do think it would be well, because I think all the members of the committee, from my presence here and the questions that have been asked, realize that our smoke and flares do have their limitations, and if we have something better, I would like to have the feeling it is on the front burner and everything is turned all the way up.

General SCHRIEVER. I assure you every one of these quick-reaction items is on the front burner. I just don't have in mind the exact timing of all of them.

Mr. CHAMBERLAIN. We have nothing being deployed at the present time beyond our—

General SCHRIEVER. Well, this [deleted] as General Ferguson pointed out, is under test at the moment.

Mr. CHAMBERLAIN. I was going to ask the "when" question there, too, General. When?

General SCHRIEVER. I would like to furnish the exact time for the record.

Mr. CHAMBERLAIN. I think we would like to have it, General.

General SCHRIEVER. All right.

(The information requested is classified and is in the files of the subcommittee.)

General SCHRIEVER. In general I assure you, where I speak of quick reaction, these are the highest priority projects, and they are being pursued as rapidly as possible, as quickly as we can get them accomplished.

Mr. CHAMBERLAIN. General, the same page, page 10, the next sentence raises questions in my mind:

In the interim period, we expect to be able to use [deleted] to accurately designate ground targets for detection by the fighter pilot.

Could you expand on that sentence a little and tell us a little more about how this is being done? And, again, the "when" question here.

General SCHRIEVER. Again, I will have to furnish this for the record, on the exact time, but by definition to interim period is 18 months to 5 years, in that time frame.

(The following information was received for the record:)

This problem will be resolved incrementally. [Deleted.]

Mr. CHAMBERLAIN. How is this going to work? My knowledge of [deleted] is certainly somewhat limited, most limited. Could you explain to us how this is going to work here?

General SCHRIEVER. The way this works is that the [deleted].

Mr. CHAMBERLAIN. Where is the spotter?

General SCHRIEVER. It is on the ground.

Mr. CHAMBERLAIN. He must be remote.

General SCHRIEVER. He is remote, but, of course, he has to see the target. So whatever the visual——

Mr. CHAMBERLAIN. How far is he from the target?

General SCHRIEVER. He could be any distance that he can see it. And he would have to have a clear line of sight, [deleted].

Mr. CHAMBERLAIN. No obstruction at all?

General SCHRIEVER. No obstruction.

Mr. CHAMBERLAIN. So even with this we will have quite a few limitations, with this problem?

General SCHRIEVER. Oh, yes. This is just a limitation of this technology; yes.

Mr. CHAMBERLAIN. I don't mean to monopolize the time, Mr. Chairman.

Mr. ICHORD. That is all right.

Mr. CHAMBERLAIN. On the [deleted] here on page 11, you make reference to the new series of [deleted] weapons. I am pleased to hear of this new one that will [deleted] and that you are in full production at the present time. This is perhaps not in our close air support, but I am concerned about it. Is that new [deleted] deployed now?

General SCHRIEVER. Yes, sir; you saw it in the picture.

Mr. CHAMBERLAIN. Are we using it entirely at the present time?

General SCHRIEVER. I couldn't answer that.

Do you know?

General FERGUSON. No, I think we are just transitioning over to it.

Mr. CHAMBERLAIN. How long have we had the new [deleted] out there?

General FERGUSON. It arrived about 6 months ago. It is in production now as a [deleted].

Mr. CHAMBERLAIN. Is everything possible essentially being done to get in the new one there with dispatch?

General FERGUSON. The production rate is very good for this stage of the program. [Deleted.]

Mr. CHAMBERLAIN. I am amazed to find we are having to use something in one place while in another place we are using something that is [deleted]. I think it must be difficult for us to continue to operate out there with the old [deleted].

Thank you, Mr. Chairman.

Mr. ICHORD. General, you referred to the possibility of enemy contesting our air superiority in South Vietnam. Have we ever encountered any enemy aircraft, at all, in South Vietnam?

General SCHRIEVER. Not to my knowledge.

Do you know?

General FERGUSON. No, not to my knowledge.

Mr. ICHORD. I suppose you have in mind the possibility of the Chinese coming in?

General SCHRIEVER. Yes, sir.

Mr. ICHORD. On page 7 you referred to [deleted]. I am not familiar with just how that is going to operate. Could you elaborate on what you are going to do with [deleted] tell us how it operates?

General FERGUSON. May I answer that, Mr. Ichord?

Mr. ICHORD. Yes.

General FERGUSON. [Deleted.]

Mr. ICHORD. Mr. Nedzi.

Mr. NEDZI. I think I have just one question to ask you.

In response to Mr. Pike's question, General, as to whether the Air Force had under development any close air support planes, you said they did not?

General SCHRIEVER. I think that needs to be qualified. We do not have under development at the moment one that is primarily aimed at close air support. We have in the Systems Command and within the Air Force a number of exercises, studies, analyses, and so forth, going on in connection with a close air support aircraft specifically or primarily for that mission.

I think we need to go back a little in history. The Air Force, during World War II, evolved to the fighter-bomber philosophy the P-38, P-47's, P-51's. They were all used for close air support, as well as interdiction, as well as air superiority. And our aircraft, since World War II, the F-105, most of our fighter aircraft, have all had a close air support capability, but they were also designed for interdiction and air superiority.

So the reason I say we have not designed one primarily for close air support is that we went the route of a multipurpose aircraft. So we have a close air support capability, but not one primarily designed for that.

Mr. NEDZI. The primary purpose of my question was to elicit from you your judgment as to whether this is the way we should have proceeded, and whether there are areas in which we should accelerate with respect to the close-air-support plane, using hindsight, foresight or anything else.

General SCHRIEVER. There is also a matter of judgment, here. We, in the military, never feel that we have enough forces to do the job we are responsible for.

Mr. NEDZI. That is the purpose of my question.

General SCHRIEVER. Yes. I, for one, felt that because of the nature of the limited war with which we were faced, that we should develop an aircraft primarily for this mission.

On other other hand, I would not support such an aircraft at the expense of cutting down our force structure of high-performance airplanes, because we need those, too, as evidenced in North Vietnam today [deleted].

Mr. NEDZI. [Deleted.]

General SCHRIEVER. [Deleted.]

We have lost several airplanes to enemy aircraft, although that has not been a factor over there. I think we have only had two or three encounters in this area. But the automatic weapons, the surface-to-air missiles, have all increased the vulnerability and decreased the

survivability of our high-performance airplanes in such a situation as North Vietnam—and that is certainly not the most sophisticated situation that you could get into.

So we need the high-performance planes for that purpose in escalated limited war, certainly.

It has been a matter of judgment, here. I don't think people have been against designing an airplane primarily for close air support, but if we do that, it has been a question, are we going to have to take a cut in our force structure for the other aircraft, and here, I think, has really been the crux of the problem: There just simply are not unlimited forces.

Mr. NEDZI. Is it your position, then, that on balance the development of aircraft in the Air Force has been satisfactory?

General SCHRIEVER. I have to give my personal view here. I would have started a development for a close-support airplane, for the nature of warfare that we have been encountering since the end of World War II, sooner. And I so recommended.

Mr. NEDZI. Is anything being done in this direction now?

General SCHRIEVER. Oh, yes; our technology program, yes. We are doing everything we can to improve our capability for close air support.

Mr. NEDZI. At the present time, in your judgment, is the program satisfactory, then?

General SCHRIEVER. Technology, subsystemwise, yes; I would say yes. But we don't have specifically an airplane laid down at the moment, in other words, the vehicle. We are developing the propulsion, electronics, as technology permits. I think that part of our program is adequate.

Mr. NEDZI. Has there been an orientation, or is there a commitment in the Air Force now toward the development of this kind of aircraft?

General SCHRIEVER. Yes.

Mr. ICHORD. Thank you, Mr. Nedzi. Mr. Gubser.

Mr. GUBSER. Doesn't it really get down to a question of whether it is more effective costwise and missionwise to go the route of one aircraft that can do a lot of jobs, or to proliferate the development and come down to the point of where we have a specific close-support aircraft? Hasn't that been the real question that has caused the delay, if there has been any delay?

General SCHRIEVER. Well, I think that is right. When I went to flying school we had attack aircraft. I have flown every attack aircraft that has been built. This was a close support aircraft. We had small aircraft, finally we went up to as big as the A-26 in World War II. There was an evolution to the fighter-bomber airplane in World War II, which was a multipurpose plane. We had a close air support capability in those aircraft.

I think it was a natural thing for people to want to get the most out of one airplane in terms of capability. Again, when you are fighting for structure you want to retain the maximum capability that you can get with your force. I think it is a matter of judgment as to whether or not we are going to have over the next x years a situation such as South Vietnam, where you have a permissive air environment, where you can employ aircraft with lower performance, that do not need to worry about air superiority and sophisticated ground defenses.

If you take the position that this is going to be the case, we certainly should have a specialized plane for close ground support; and this is the position the Air Force has now taken.

Mr. ICHORD. If the gentleman will yield.

Mr. GUBSER. Go right ahead.

Mr. ICHORD. Isn't that a very important point, General? You can use equipment in South Vietnam because of the fact that we have no contesting of our air superiority, that you could not use otherwise?

General SCHRIEVER. Exactly right. You have that permissive environment.

Mr. ICHORD. Thank you, Mr. Gubser.

Mr. GUBSER. But up until now, I think I am proper in concluding, this question as to which route we will follow has been one that involved—I don't use this as a nasty word—cost effectiveness, isn't that right?

General SCHRIEVER. I am not sure you can apply cost effectiveness very effectively in a limited war situation, because the number of situations that you can have are almost infinite; and to try to come up with cost-effectiveness exercises that prove anything is, in my opinion, pretty hopeless in a limited war.

Mr. GUBSER. Would you say, General, that the lessons we have learned in Vietnam have pointed up the fact that you cannot apply the cost-effectiveness technique in a situation like Vietnam, where the possibilities are so infinite?

General SCHRIEVER. I think the cost-effectiveness analysis is very valuable.

Mr. GUBSER. I do, too.

General SCHRIEVER. If you use it as a tool and then apply judgment. You have to apply judgment, particularly in a limited-war situation, because of the varied, almost infinite number of situations that might apply.

In a strategic or general war situation, here the situations are much more finite, and you can in fact, let us say, apply cost effectiveness in a greater degree in making your decisions than you can in a limited war.

Mr. GUBSER. What I would like to establish in my own mind, General, and perhaps there is no answer to this question, but apparently the Air Force has now made a determination that they should go the route, or we should go the route, of developing a plane specifically designed for close air support purposes.

A DOD witness we had the other day—I don't recall his name—

General SCHRIEVER. Dr. Cheatham.

Mr. GUBSER. Yes; a very impressive witness, I might say.

Mr. MARSHALL. Dr. Cheatham is present today.

Mr. GUBSER. Indicated that the decision will not be made on the requested procurement of [deleted] aircraft until [deleted]. Is that correct? I hope I am wrong.

General SCHRIEVER. I did not read his testimony.

Dr. CHEATHAM. Yes; the decision for production, the earliest one presently planned, could be the end of [deleted].

Mr. GUBSER. Then, though the Air Force has channelized its thinking and made its decisions as to what it considers best, is it a true statement to say that the Defense Department has not as yet decided

that we wish to go this route of developing and procuring an aircraft which is designed specifically for this one purpose, i.e., close air support? Is it still pending?

General SCHRIEVER. It is still pending as far as the Air Force is concerned. But I don't know what their position is.

Mr. GUBSER. In other words, you have never been told that the Defense Department agrees with the Air Force's present position?

General SCHRIEVER. Well, no. But I think the Defense Department itself has been a strong proponent in the development of the LARA. I am talking about the DOD level.

Mr. GUBSER. I am not trying to hang the Defense Department, here. I am just trying to decide what decision has been made, and at what level.

General SCHRIEVER. There may be a decision I don't know about. From an Air Force standpoint, we don't know what decision has been made, if any.

Mr. GUBSER. General, are you familiar with the research and development facts and figures of the LARA?

General SCHRIEVER. No, sir. This has not been under Systems Command. I do not have them readily available.

Mr. GUBSER. Do you happen to know whether or not persons who do have charge of that situation feel that it is proven out to the point of where there should be a procurement?

Now, General Ferguson, you have asked for [deleted]. You must be convinced that the LARA is a proven concept.

General FERGUSON. In concept, I have no reservations. But the airplane has been flying just 2 or 3 months. I have been out to look at it; I have read the test reports and seen films of it flying. But I am not prepared to approve contractual agreements for production tomorrow. I think a few more hours of flight test are necessary. As Dr. Cheatham said, the time to make the decision is [deleted].

Mr. GUBSER. In other words, your request for [deleted] aircraft has the "if" attached to it, "provided it proves out"?

General FERGUSON. I don't question that it will. The few test hours we have today show it is moving along well. But we need more complete flight test data before committing the LARA to production. Give us until the first of January to see what the test data shows. I cannot foresee any major problems in an airplane of this design. It is relatively simple. But there are apt to be minor changes that should be identified before production.

Mr. GUBSER. But it is your opinion that this decision would be expedited and speeded up if the Defense Department would decide that this is an important plane and that we ought to have it as quickly as possible? You are convinced enough that you wanted to ask for [deleted] of them, and there are no if's, and's, or but's?

General FERGUSON. Yes, in concept and general design, I am convinced. But from a development point of view, 2 or 3 more months of flight test will provide the data to optimize the design prior to production and avoid costly modification programs. The modification programs are, of course, time consuming as well as expensive.

Mr. GUBSER. Then you must have some reservations, some doubt. There must be an "if" attached to your request.

General FERGUSON. No, insofar as the airplane is concerned, and the number of airplanes is concerned, there is no "if" in my answer. But the wheels and landing gear might have to be strengthened, or possibly the engines should be bigger, and the flight test data will answer these questions prior to production.

Mr. GUBSER. Well, let me ask another question; and it is a very iffy question, and very hypothetical, and if you don't want to answer it is perfectly all right with me. But here we are in Vietnam with the close air support mission being performed by A-1E's, F-100's and various other aircraft. Nothing new is coming in which will perform the specific job in the same manner as the A-1E and the A-1H are performing it. Let's assume now that we can go along until [deleted] when the LARA could be available, at the same level of use, we have the continuing requirement at the same level as at present, in Vietnam. Are we going to run out of equipment, or will we still have A-1E's, A-1H's, F-100's, which can do this job as they are doing it now?

General FERGUSON. Are you putting the question to me?

Mr. GUBSER. Yes, if it is appropriate.

General FERGUSON. 1. USAF tactical jet aircraft were committed to air support operations in Republic of Vietnam in early 1965 because MACV, air support requirements exceeded the capabilities of VNAF/USAF A-1's to fill them. MACV air support requirements are currently being met by VNAF, USAF and USN aircraft. It is anticipated that the buildup of ground forces in Republic of Vietnam will generate an increased level of tactical air support. [Deleted.]

2. At the forecast attrition rate, sufficient A-1E's are available to maintain the squadrons in South Vietnam at their present level until [deleted]. Additional general purpose tactical strike aircraft can be committed to service in Republic of Vietnam should the actual attrition rates for the A-1's significantly exceed the forecast.

Mr. GUBSER. There will be no gap, no lag?

General FERGUSON. 3. Therefore, there will be no gap in the abilities of the USAF to provide close air support in Republic of Vietnam prior to the projected availability date of the LARA aircraft.

Mr. GUBSER. But you are just right at the borderline, if I correctly interpret your remarks.

That is all. Mr. Chairman, thank you.

Mr. ICHORD. Thank you, Mr. Gubser.

General, is the F-5 going to have any improved capability over the F-100, for example, as a close support airplane?

General SCHRIEVER. Yes, sir. The main advantage it has, of course, is that it will have a much shorter field takeoff capability than the F-100.

Mr. ICHORD. How much does it take for a F-5 to get off the ground?

General SCHRIEVER. There are several different versions, but this airplane can get off the ground in about 2,500 feet. I can provide the performance characteristics of the airplane for the committee, the one that is proposed—that is the one I am talking about here, the improved version.

Mr. ICHORD. I think we have it in the record heretofore, do we not?

Mr. MARSHALL. No; we do not. We would like to have that.

Mr. ICHORD. All right.

(The information furnished to the subcommittee is classified and is in its files.)

General SCHRIEVER. I mentioned the F-5 as a "for instance." There are other airplanes under consideration besides the F-5. I don't want to leave the impression that the F-5 has been selected by the Air Force. It has not. But it is the type of aircraft performance wise, maintainability wise—it should have good survivability against small arms fire, because it has a dry wing—and things of this kind, that are very attractive in the environment in South Vietnam.

Mr. ICHORD. Does it have any more loitering? It doesn't have as much, does it?

General SCHRIEVER. It has about the same as the F-100. One of the things we would like to have is more loitering time.

Mr. ICHORD. The Chair recognizes Mr. Irwin.

Mr. IRWIN. What, specifically, is the LARA plane we have been talking about? Who makes it? And what is its performance?

General FERGUSON. May I have the slide that shows the airplane, please?

This is the LARA airplane. The Department of Defense has contracted with North American, Columbus, Ohio, to produce seven of these airplanes. It is a twin turboprop engine aircraft, with a pilot and observer, designed for short takeoff and landing distances. It carries about 3,000 pounds of ordnance, from the small cluster bombs, to general purpose bombs, to napalm. The fuselage is designed to carry a few passengers. We are looking at a version that would carry 12. The airplane has about a 200-mile radius of action, with about 2 hours of loitering time.

Mr. IRWIN. Someone calls this the COIN aircraft. Whose designation is that?

General FERGUSON. The name has evolved, but I do not know where it started. When we started talking about "counter insurgency," the two words were combined into COIN.

Mr. IRWIN. Thank you.

Mr. ICHORD. Off the record.

(Discussion off the record.)

Mr. ICHORD. On the record now.

Mr. EVANS.

Mr. EVANS. I have no questions.

Mr. ICHORD. Are there any further questions by members of the committee? Mr. Chamberlain.

Mr. CHAMBERLAIN. I don't want to put words in your mouth, General, but I am left with an impression, and I would like to see if it is correct.

First, you told us that some time ago it was your professional opinion as a military man that we should have developed close air support aircraft much sooner than we have. When did you reach that conclusion, general?

General SCHRIEVER. Well, you must realize that as professional military men we are not always in complete agreement around the board.

Mr. CHAMBERLAIN. I understand. I am asking for your personal opinion, when you came to that conclusion.

General SCHRIEVER. I couldn't tell you exactly when, but 7 or 8 years ago I came to that conclusion.

Mr. CHAMBERLAIN. Again, asking for your personal opinion, in light of what you have said and the recommendation you have said you made along that line, that if we had such an aircraft today we could be doing a better job in Vietnam today? Would you say that would be correct?

General SCHRIEVER. Well, I think an airplane tailored precisely to the close air support mission, if we had one, could do a better job than we are doing today.

Mr. CHAMBERLAIN. You don't have this.

General SCHRIEVER. We don't have it. I am not saying we are not doing a reasonably good job today. We are.

Mr. CHAMBERLAIN. With what you have.

General SCHRIEVER. With what we have.

Mr. ICHORD. I don't want to prognosticate, but I think the South Vietnam situation will be over and forgotten before we get this close-air-support airplane we have been talking about. But you do feel that other situations will have the same need, need the same type of plane?

General SCHRIEVER. That is right. This is the world we are living in. That is my personal view. But you must remember that from where the Chief of Staff sits he has to look at the total spectrum of the force structure. I am certainly not going to quarrel with the decision that was made.

My personal opinion is what I have stated, and I have to tell that to you, being a candid witness. But I do not say what we did was not right. In my opinion we certainly did an adequate job in Korea, and in World War II.

You must remember that, from the Air Force standpoint, we have been engaged in the war in Vietnam as combatants for only a relatively short period of time.

Mr. CHAMBERLAIN. I would not want the record to stand with any inference that I criticized the job our boys are doing out there with what they have. I think they are doing a tremendous job.

Mr. ICHORD. Thank you. Are there any other questions? Mr. Marshall.

Mr. MARSHALL. Concerning the communications, General, we have had some witnesses testify to deficiencies in the communications setup.

By agreement between the U.S. Army and the Air Force in December 1957, the Army was responsible for the following:

Furnishing and maintaining the equipment and personnel—except for the forward air controller—of tactical control parties, providing communications equipment to the tactical control party which was compatible with and possesses the same channel spacing as that used in aircraft.

The Air Force was responsible for providing forward air controllers, directing aircraft through the forward air controller.

Now, under the new agreement reached in September 1965 between the Army and the Air Force, the Air Force now is responsible for furnishing all personnel and equipment for tactical air control parties except armored combat and/or special-purpose vehicles and crews; controlling and operating the Air Force Q net and tactical air direction nets.

The Army is responsible for logistic support of tactical air control parties serving with the Army forces: providing such armored vehicles and/or special-purpose vehicles and crews required by TACP's.

This new agreement will not become effective until the availability of Air Force personnel and equipment for the tactical air control parties.

Do you have the Air Force personnel now to fulfill this agreement?

General FERGUSON. I believe in previous testimony the specific numbers of forward air controllers in Vietnam has been given. It is on the order of 200 or more, as I recall. I would like to correct that for the record, if necessary. We are heading for, if we have not already achieved, the numbers of people required for this; we are well down the road to it. This is also true of the equipment. You remember, you have been told we have the jeeps with the equipment on board, and how many are in Vietnam now, which is part of equipment agreement.

Mr. MARSHALL. That was part of the Army responsibility prior to September 1956. Did they provide this equipment?

General FERGUSON. Yes, they provided the standard equipment.

Mr. MARSHALL. Why has the Air Force now taken over the responsibility that previously the Army had? Is there a particular reason for this?

General FERGUSON. Yes. In 1962, a comprehensive Air Force study of the Army/Air Force fire support coordination system concluded that the service responsible for providing tactical air support should also be responsible to provide the means whereby the other service could make its requirements for tactical air support known. By adopting a policy of single-service responsibility for both providing and operating the TACP equipment, questions as to service responsibility would be eliminated and improvements could be more rapidly coordinated and introduced.

Mr. MARSHALL. The Air Force has provided fully equipped TACP's in South Vietnam?

General FERGUSON. We have provided some of the elements of the tactical control system.

Mr. MARSHALL. The Air Force has provided it in South Vietnam, although the Army was responsible for providing it. Why? If they weren't capable of providing why wasn't something done about it sooner?

General FERGUSON. The Army capability to provide this equipment was not an issue. The concept for revised fire support coordination, in which the Air Force would provide the TACP equipment, was originally approved for test purposes in the fall of 1962. After test of the new concept proved its soundness, request for authority to procure the required equipment was submitted to DOD in December 1962. Authority was granted by DOD in May 1963, but funds were deferred to fiscal year 1965. Subsequently, as the equipment became available to the Air Force, it was introduced into South Vietnam as rapidly as the tactical environment would permit. Action thus preceded the formal change of responsibility in September 1965.

Mr. ICHORD. There being nothing further, no further questions, General Schriever and General Ferguson, we want to say that we very much appreciate your appearance here today.

The committee is adjourned.

(Whereupon, at 12:05 p.m., the committee was adjourned, sine die.)

LETTER OF TRANSMITTAL

JANUARY 27, 1966.

Hon. L. MENDEL RIVERS,
*Chairman, Committee on Armed Services,
House of Representatives, Washington, D.C.*

DEAR MR. CHAIRMAN: I have the honor to transmit herewith the report of the Special Subcommittee on Tactical Air Support which, at your request, conducted hearings from September 22 to October 14, 1965, on this subject, with primary interest directed to the question of close air support in Vietnam. This report has been reviewed and approved by the subcommittee members.

The report is submitted for your approval prior to its release to the Department of Defense for security review and final printing.

Sincerely,

OTIS G. PIKE,
Chairman, Special Subcommittee on Tactical Air Support.

(III)

REPORT OF SPECIAL SUBCOMMITTEE ON TACTICAL AIR SUPPORT

On August 17, 1965, Chairman L. Mendel Rivers of the Committee on Armed Services of the House of Representatives, concerned about recurring questions which had arisen over the adequacy of our close air support in Vietnam, constituted a Special Subcommittee on Tactical Air Support.

Chairman Rivers ordered the special subcommittee to investigate in depth certain aspects of tactical air support with special reference to the war in Vietnam, including the following:

1. The adequacy or inadequacy of our close air support;
2. Recent progress in developing and producing new type aircraft for tactical warfare;
3. The development of new tactics and techniques for air support;
4. Present and future capacities for maintaining air superiority in tactical situations;
5. The adequacy of existing logistic and support facilities for tactical aircraft;
6. Costs, quantities, and effectiveness of the various tactical aircraft.

The subcommittee was directed to file its conclusions and recommendations not later than December 15, 1965.

Because of the extension of the congressional session and the delay in the anticipated adjournment date it became impossible for the subcommittee members to visit many of the defense and industrial installations within the continental United States where visits had been anticipated. The committee did, however, hold extensive hearings in Washington.

Hearings were commenced on September 22, 1965, and continued until October 14, 1965. Fifteen witnesses from the Army, the Air Force, the Navy, the Marines, and the Department of Defense were heard. The list of witnesses is as follows:

1. 1st Sgt. Wade Damron, USA, assigned as adviser to 27th Regional Forces Battalion, Vinh Long Province, Mekong Delta.
2. Capt. Michael V. Barnes, USA, battalion adviser to 9th Vietnamese Division.
3. Lt. Col. Frank S. Plummer, USA, planner of air support for over 300 air mobile operations; also served as helicopter forward air controller.
4. Capt. Alan L. Rennick, USAF, A-1E pilot in Vietnam; also served on ground as forward air controller.
5. Capt. David A. Sands, USAF, flew 91 combat missions as an F-100 pilot in Vietnam.

6. Lt. Col. Emmett L. Hays, USAF, squadron commander, 416th Tactical Fighter Squadron; personally flew 118 missions as F-100 pilot.

7. Capt. David A. Ramsay, USMC, commanding officer, Company 1, 3d Battalion, 3d Marines, Chu Lai.

8. 1st Lt. Howard L. Schwend, battalion forward air controller, 3d Battalion, 3d Marines, Chu Lai.

9. Lt. Col. William C. McGraw, Jr., commanding officer, Marine Fighter-Attack Squadron 531; flew 62 combat missions in F-4B's from April 10 to June 15, 1965.

10. Comdr. Leonard A. Sneed, USN, commanding officer, Attack Squadron 75, 1st A-6A Squadron deployed by the U.S. Navy; squadron flew over 300 missions in July 1965.

11. Maj. Gen. Delk McCorkle Oden, USA, Director of Officer Personnel, Office of Personnel Operations, Department of the Army; former Director of Army Aviation; served in Vietnam as Chief, Army Section, Military Assistance Advisory Group, May 1963 to May 1964; commander, USA Support Command, Vietnam, May 1964 to April 1965.

12. Maj. Gen. Arthur C. Agan, Jr., USAF, Assistant Deputy Chief of Staff for Plans and Operations.

13. Dr. Thomas P. Cheatham, Jr., Deputy Director of Defense Research and Engineering, Tactical Warfare Programs, Department of Defense.

14. Gen. Bernard A. Schriever, USAF, commander, Air Force Systems Command.

15. Lt. Gen. James Ferguson, USAF, Deputy Chief of Staff, Research and Development.

Because of limitations of time the subcommittee was unable to pursue the assigned inquiry regarding present and future capabilities for maintaining air superiority in tactical situations and was able to give only superficial consideration to the question of the adequacy of existing logistic and support facilities for tactical aircraft. The subcommittee, on the other hand, concentrated on and pursued in depth the question of close air support in subversive or guerrilla-type warfare generally, and in Vietnam specifically.

The overriding issue is that of the adequacy of the support given by the pilots and aircraft of the Air Force, Navy, and Marines to our own Army, our Marines, and the Vietnamese forces on the ground in Vietnam. This issue is fundamental not only to our conduct of the war there, but also to our ability to fight subversive or guerrilla-type wars in remote and undeveloped environments anywhere in the world.

The type of tactical air support under consideration is that provided to ground units in close proximity to their frontlines and of such a nature as to affect the fire and maneuver of their units. The interdiction type of support behind enemy frontlines or at such a distance from our forces as to have no immediate effect on their situation was not considered.

A WAR IN TRANSITION

The war in Vietnam is not the same war in October 1965, that it was in January 1961. In the early days of our military effort in Vietnam our troops, such as Sergeant Damron, were serving in the field as advisers to the Vietnamese forces which were solely responsible for

both the ground fighting and, with the help of American advisers, for the air support. The aircraft which are available for air support have changed over that period from the small T-28 trainer plane through the A-1 propeller driven attack plane and B-57's to the F-100, A-4, and F-4 jets. Many other types of aircraft, over 20 in all, are in Vietnam today, but these 6 types have provided most of the muscle and have flown almost all of the sorties by fixed-wing aircraft in support of friendly ground troops.

At this point it is essential to mention the role of the armed helicopter. Under the current doctrine of roles and missions assigned to each service, the Army can have armed helicopters, which may direct "suppressive fire" at the enemy, but may not have fixed-wing aircraft to provide "close air support" for its ground troops. A helicopter can supplement close air support, but existing limitations preclude it from delivering sufficient sustained firepower to provide close air support. Present doctrine involves a bit of semantics which may satisfy those responsible for keeping the roles and missions of the two services within the agreed limits, but it is obvious to the most casual observer that the Army's armed helicopters have, in fact, been heavily relied upon to provide what is essentially close air support for friendly forces on the ground.

In the earlier days of the war in Vietnam our close air support was frequently ineffective and primitive. This was due to many factors. As one witness put it, sometimes when he needed and called for close air support the message never got through because of radio transmission failures. Sometimes the message got through and the air support never came. Sometimes the air support came and missed the target; sometimes the air support came and was very effective. It can certainly be said that there has been a substantial improvement; it cannot be said that it is as effective as it should be.

THE COMMUNICATIONS FIASCO

Perhaps the most appalling fact which came to the attention of the subcommittee was the fact that until very recently the Air Force, which has the responsibility for providing close air support to the Army on the ground, could not talk to the Army on the ground because the Air Force radios were not compatible with the Army radios. The only way that the Army troops on the ground have been able to communicate with the Air Force in the air is by assigning Air Force personnel with Air Force radios to the ground troops; this Air Force forward air controller is assigned at the battalion level. General Oden, testifying on what would happen to an Army platoon or Army company needing air support, reported as follows:

The platoon will have to go back to the company and battalion to get it.

Question. The platoon will have to go to the company, the company will have to go to the battalion?

General ODEN. That is correct, sir. * * *

Question. The platoon is using what kind of radio equipment?

General ODEN. They have PRC-10's, sir.

Question. The company is using what kind of radio?

General ODEN. PRC-10.

Question. When we get to the battalion then the Air Force liaison group at the battalion level is able to communicate with the Air Operation Control Center?

General ODEN. That is correct, sir.

Question. And also, I presume, with the aircraft. Is that correct?

General ODEN. That is correct.

Question. The platoon cannot communicate with the aircraft?

General ODEN. No, sir.

Question. The company cannot communicate with the aircraft?

General ODEN. That is correct, sir.

This is the situation today. It has been worse in the past.

In the past 4 years, there have been two major studies on the subject of close air support—one a joint Air Force-Army group which issued a secret report in 1963; the other an Air Force report called Project Forecast. A present joint Air Force-OSD study is being conducted. We hope it is more effective than its predecessors. Dr. Cheatham, in discussing the prior studies, was asked this question:

Did either the 1963 joint Air Force-Army study or Project Forecast make any mention of the fact that the Army and the Air Force could not talk to each other?

Dr. CHEATHAM. * * * Certainly not a major point was made. I would have to go back and look to see if somewhere, you know, in chapter 3, paragraph 2, somebody did make a statement to that effect.

Question. When was it first brought to the attention of the Department of Defense that there was a very serious communications problem between the Air Force and the Army?

Dr. CHEATHAM. I think it became a very strong point with D.D.R. & E., with my office, in terms of our examination of command and controls systems. In other words, we found two incompatibilities, for example, in some of the MTDS systems; in other words, from the standpoint of data processing requirements, we suddenly found there were two incompatibilities in the communications. We became aware of this. I think Dr. Fubini should be given credit for having hit into this problem with a great deal of drive and enthusiasm; in fact, he certainly kind of turned things upside down.

Question. When was that?

Dr. CHEATHAM. About 2 years ago.

Question. It was after we got involved?

Dr. CHEATHAM. A year and a half, if you want to peek at it.

Question. All right. But it was after we got involved with Army troops on the ground, and Air Force planes flying air support, in Vietnam; is that correct?

Dr. CHEATHAM. I would certainly have to say that certainly focused real, you know, practical attention on the problem.

According to the testimony of General Schriever, by agreement between the U.S. Army and the U.S. Air Force in December 1957, the Army was responsible for—

providing communications equipment to the tactical control party which was compatible with and possesses the same channel spacing as that used in aircraft.

It seems to the subcommittee an unbelievably tragic thing that it was only after we got into the war in Vietnam that it was forcibly brought to the attention of the Army and the Air Force that they were unable to communicate with each other in the field.

It seems even more incredible, considering the fact that "close air support" has been a tactical doctrine since before World War II.

WHO'S GOT THE SPOTTER PLANES?

During the Korean war the Air Force tactics called for using light spotter planes to mark targets for the attack planes to hit. After the Korean war all of these planes were taken away from the Air Force and assigned to the Army. The Army has been flying O-1 aircraft since the Korean war. Air Force pilots feel that these aircraft carrying airborne forward air controllers are essential to their operation. Captain Rennick testified as follows:

Question. Do you think that your planes, either the A-1's or the F-100's, enable you to eyeball the target on the ground as well as you ought to be able to?

Captain RENNICK. You mean, do you think that we could work without a forward air controller?

Question. Yes.

Captain RENNICK. No, sir; I do not.

Question. And that should have to be a flying air controller?

Captain RENNICK. I would say that an airborne forward air controller over any situation where close support is required is——

Question. Essential?

Captain RENNICK. Necessary, sir.

When we got into Vietnam the Air Force was unable to provide its own airborne forward air controllers because it did not have a suitable plane to put them in. Under questioning by our counsel, General AGAN was asked how the close air support operations in South Vietnam differed in doctrine and technique from the doctrine and technique that were used in Korea. His answer was, "The important thing we have done is to add the airborne forward air controller. We have 120 airborne forward air controllers."

Under further questioning by Mr. Blandford the following dialog took place:

Question. You didn't use any type of forward air controller in the Army-Air Force concept in Korea?

General AGAN. Oh yes, sir; ground forward air controllers.

Question. You were using ground. I am talking about airborne.

General AGAN. We did use airborne; not in the same way we are using them here * * *

Question. * * * but the concept of having aircraft target spotting is not new?

General AGAN. No, sir.

What was really different in Vietnam was the fact that when we got there the Air Force no longer had the capability which it had once had to provide its own airborne forward air controllers. General Oden was asked how long the Army had been flying O-1 aircraft. The answer was: "Since the Korean war." The questioning proceeded:

Question. Do you know how long the Air Force has had O-1 aircraft?

General ODEN. Yes, sir * * * they have had a very limited number but——

Question. I am talking about as observation and forward air controller aircraft,

General ODEN. Since 1963—I believe I am correct on that, sir.

General Oden testified further:

I was Director of Aviation and we provided the Air Force the aircraft immediately in 1963.

Question. * * * how many did you provide?

General ODEN. We provided 3 for training initially and a total of 22 shortly thereafter to equip their squadrons.

Question. Weren't the 22—the ones that were to be turned over to the Vietnamese?

General ODEN. Oh, no, sir; that is for Air Force squadrons, air commando squadrons.

Question. Do you know why the Air Force decided in 1963 that they needed some O-1's?

General ODEN. No; but the requirement came out of Vietnam; that is all I know, sir.

General Schriever again claimed an innovation in putting the forward air controllers in the air. He said this:

After very little success with photo reconnaissance, we have gotten our forward air controllers airborne especially for better local visual reconnaissance in nonjungle areas.

Under questioning, this Vietnam innovation broke down as follows:

Question. You had forward air controllers airborne in Korea—the Korean war—didn't you?

General SCHRIEVER. Perhaps General Ferguson can answer. He was in Korea.

General FERGUSON. Yes, Mr. Pike.

Question. In the business of getting your forward air controllers airborne then, you have gone back to the situation that existed at the time of the Korean war?

General FERGUSON. And further back than that, to World War II, in certain cases.

Again, it seems strange to the subcommittee that the Air Force should claim as a new tactic and a new technique developed in Vietnam, a technique which had been used in Korea, and it seems even stranger that the Air Force had to go to the Army in order to get the planes required to do the job which the Air Force pilots described as necessary.

WHO'S GOT THE ATTACK PLANES?

There has been a great deal of discussion about which aircraft is the best aircraft available for the job of close air support.

During the authorization hearings held before the full Armed Services Committee this year General McConnell, Air Force Chief of Staff, testified that the best plane we had for the job of providing close air support was the A-1 aircraft. General Agan was not so sure:

General AGAN. If I were to say what is the best close air support aircraft in South Vietnam I would say the A-1 has done an excellent job, where it could haul a lot of ordnance and move into a situation where it was well suited for that task.

Question. Well, what in your opinion is the best close air support aircraft in Vietnam?

General AGAN. Sir, we are running some comparative tests out there now, or will be soon, to get facts.

Question. We have been flying planes out there for quite a while, General.

Haven't we gotten any opinions yet as to what is the best aircraft for the close air support mission?

General AGAN. Yes, sir, I can give you my personal opinions on various kinds of aircraft.

Question. What is your personal opinion?

General AGAN. You can see what has happened in the past—A-1 has done a fine job. I think the F-4 will do a fine job when it gets out there.

Question. Well, let's not project into the future. Let's talk about what is the best close air support the Air Force has in South Vietnam.

General AGAN. Sir, the A-1 as I said, is the best suited airplane we could get hold of for South Vietnam.

Question. Now where did you get hold of the A-1?

General AGAN. From the Navy, sir.

This is the record of the past. As to the present, General Agan testified as follows:

Question. You are familiar with the capability of the A-6A, isn't it right?

General AGAN. Yes, sir.

Question. Does the Air Force have a plane which has a similar capability for night or all-weather work?

General AGAN. No, sir.

Again, it is interesting to note that the A-6A is a Navy, and not an Air Force aircraft.

Not only has the Air Force had to get the spotter planes which it needs from the Army; it has had to get its attack planes from the Navy, and at the present time it is not producing any plane having the same capabilities for attacking ground targets at night that the Navy's all-weather A-6A has.

GUNG HO FOR LARA

As to the future: Both General Agan and General Schriever testified as to the desire of the Air Force to acquire COIN/LARA-type aircraft, designed specifically for the job of providing both a reconnaissance and an attack capability in close proximity to friendly forces. The record is replete with admissions that since World War II the Air Force has not designed any aircraft for the primary mission of close support for ground troops. The COIN/LARA aircraft would have such a primary mission. General Agan testified in response to a question from counsel that the Air Force was "gung ho" for the LARA.

He said:

We have asked for the LARA; we have asked for [deleted] of them; and the sooner we can get LARA-type aircraft and get them out into South Vietnam, I think the better it will be.

General Schriever, testifying on the same subject, was asked by Congressman Chamberlain what priorities, if any, he attached to the LARA aircraft.

General SCHRIEVER. I put a high degree of urgency to it.

Question. Is there anything that is impeding progress as far as Congress is concerned? Do you have all the funds you need and whatnot, to push this, as you feel it should be pushed?

General SCHRIEVER. There has to be a decision made for the production of the LARA, for example, and this is at the DOD level, not the Air Force.

Question. Are you more or less awaiting that decision to be made at the moment? Are you ready to make that decision, or how far down the road is this?

General SCHRIEVER. I can't answer that. The Air Force has recommended that the procurement of these aircraft be made.

The following questions and answers, however, took a little bit of the punch out of the Air Force's gung ho support for the LARA. Mr. Chamberlain proceeded to ask General Schriever when the Air Force had decided it wanted this plane.

General SCHRIEVER. Well, this was an air staff recommendation. I think the first recommendation came in 1962 (addressed to General Ferguson)—is that right?

General FERGUSON. For the LARA airplane it was last month, September.

General SCHRIEVER. We are talking about the LARA now?

Mr. CHAMBERLAIN. Yes, talking about the LARA.

General SCHRIEVER. That is right.

The subcommittee notes with interest that the Air Force's gung ho recommendation for the LARA came the month after this subcommittee was created, and 2 months after another subcommittee of the House Armed Services Committee, after a visit to Vietnam, had recommended that a COIN aircraft must be accelerated. The LARA aircraft, incidentally, has been developed by the Navy in response to a Marine requirement.

DECISIONS, DECISIONS

The Air Force does not stand alone in its responsibility for the lack of an aircraft optimized for close support. The Air Force's indifference to the development of this plane has its counterpart within the Department of Defense.

Dr. Cheatham, in his prepared statement before the subcommittee, testified that—

Our first attempts at reconnaissance and surveillance in South Vietnam using general reconnaissance aircraft of the RF-101 and RB-66 types to find an enemy

who was not distinctive in appearance, who mounted an attack in minutes and disappeared quickly in an equivalent time period, were found inadequate. Photographic processing and interpretation was much too slow. We rediscovered the efficiency and efficacy of the human eye and brain that was able to obtain an intimate back-of-the-hand knowledge of a specific sector and thus introduced the O-1 in large numbers. The airplane could be obtained from the Army and deployed quickly. It, however, had its disadvantages in limited payload for communication and inadequate handling qualities for climb and maneuverability. Many targets were found that could not be struck due to distances involved in bringing strike aircraft from the very limited number of available airfields. The net result was the realization that a light attack reconnaissance airplane capable of continuous harassment of the Vietcong was needed in South Vietnam. We are moving as rapidly as possible to provide an airplane of this type (the COIN/LARA) for use in Vietnam to replace the O-1.

Now, just how rapidly are we moving? The Marines established a requirement for such an aircraft in 1962. Research and development funds have been authorized and expended for the production of seven prototype aircraft by North American Aviation. The Convair Division of General Dynamics built its own version at its own expense.

On February 25, 1965, Dr. Harold Brown advised the Armed Services Committee that the first flight of the North American plane was expected in May. The first flight took place in July. Dr. Cheatham in expanding on his testimony on what the Defense Department meant by "we are proceeding as rapidly as possible," testified as follows:

Question. Now at this particular point, has any final decision been made to proceed with COIN/LARA aircraft?

Dr. CHEATHAM. As of right at this moment, no, sir.

Question. So, 2 years ago the Marines indicated they had a specific operational requirement for it. Today, there is as yet no decision to go ahead with it. Do you really think it's a fair statement to say, "We are proceeding as rapidly as possible"?

Dr. CHEATHAM. In an ideal sense, no, sir. In a practical sense, in terms of the numbers of people who have to be coordinated, the numbers of studies that have to be made, we are probably moving with continuous pressure.

Question. Where is the pressure coming from?

Dr. CHEATHAM. Some of it comes from my office because I happen to believe in the airplane and its need.

Question. Does any of it come from the Armed Services Committee?

Dr. CHEATHAM. I expect a fair amount of it has been in evidence for the last 2 weeks.

In Vietnam, we are involved in a war. American lives are being lost. The availability of such an aircraft should help reduce this loss of life. Under these circumstances, the length of time which it has taken and is still taking to arrive at a decision to proceed with the production of such an aircraft seems inexcusable. Assuming that the decision were made tomorrow, it would, according to General Ferguson, be the summer of 1967 before the first planes would be available under normal development. With every day that the decision is delayed, the troops must continue to wait and wait, and hope and hope.

After the completion of these hearings, and in November 1965, the Department of Defense finally approved production of the COIN/LARA aircraft. In January 1966, Congress was asked to expedite some funds for the aircraft. Even after the decision to produce the plane was reached, the papers moved slowly.

THE SILENT SUFFERERS

It is the official position of the U.S. Army, expounded by the Chief of Staff, that "the Air Force is best qualified to determine what type of aircraft is best suited to support."

The Air Force has done exactly that with the results noted above. They have never built an aircraft designed primarily for close air support. They are not actively engaged in developing one at the present time. The Marine Corps wrote the requirements for the COIN/LARA. In the final report on the joint study conducted in 1963 by the close air support boards of the U.S. Army and the U.S. Air Force, dated August 15, 1963, it became very evident that there was a great difference of opinion between what the Army wanted as a close air support aircraft, and what the Air Force wanted to provide them.

The Army asked for a STOL capability from sod or semiprepared strips; the Air Force asked for a 5,000-foot takeoff. The Army called for an all-weather navigation capability and simple visual target acquisition means; the Air Force agreed that an all-weather navigation system was necessary but called for "optimized weapon delivery capability"—whatever that means.

The Army said that an ordnance load of 4,000 pounds would be adequate; the Air Force called for 10,000 pounds. The Army called for a plane with a speed of from mach 3 to mach 9; the Air Force wanted to cruise at mach 9 and have a supersonic capability.

The Army called for an aircraft such as the Navy VAL (A-7A). The Air Force said they wanted a versatile supersonic fighter aircraft for close air support, and concluded that the presently programed supersonic fighter aircraft provides a substantial gain in effectiveness over the VAL selected by the Army as a close air support aircraft, and "provides the additional bonus of multipurpose capability."

It is obvious that the Army and the Air Force were not talking about the same plane. It is also obvious that in a showdown the Army is not allowed to talk. General Oden, under questioning by the subcommittee in this regard, testified as follows:

Question. When the Army finds in a Vietnamese situation that they have to provide O-1's to the Air Force to meet Air Force requirements in Vietnam, and when the Army finds that it has to arm in Vietnam Mohawk aircraft to do a job that needs doing in Vietnam, don't you think that the Army, itself, might properly say that it should have some voice in the type aircraft that are needed for close air support?

General ODEN. Mr. Chairman, I am the official Army witness and I am not speaking personally and I adhere to the position of the Army Chief of Staff.

Question. Well, from that would I gather that by indirection if you were speaking personally and were not the official witness you might not adhere to the position of the Army Chief of Staff?

Mr. BLANDFORD. May I suggest that we follow the directive issued by the Secretary of Defense and that you press the general for his personal opinion, and you must use those words.

Question. Yes. I think I have that piece of paper somewhere around here. I am not sure that I can word this correctly, but I will now ask you for your own personal opinion and not the official opinion as to whether the Army should not have some voice in the type aircraft it gets for close air support.

General ODEN. Mr. Chairman, in response to your question, I personally think that the Army should have considerable voice in the type of aircraft that the Air Force procures for its support.

In view of the wide divergence between what the Army feels it should have in the form of aircraft providing close air support for

Army forces, and what the Air Force has been willing to provide it in the past, and is planning to provide it in the future, the committee agrees that the Army should have a substantially greater voice in this regard than they have had in the past. The committee feels that the Army has been remiss in not backing up its own views as to its own needs with greater determination and enthusiasm. The committee further feels that in view of the quality of close air support which the Air Force has provided for the Army, it may be appropriate to review the doctrine which forbids the Army from providing its own.

IS RESPONSE TIME IMPORTANT?

According to the men fighting on the ground in Vietnam, whether Army or Marines, the most important single ingredient of close air support is getting on target fast. The Vietnamese war is a hit and run war in which attackers strike suddenly and fade away rapidly.

To a man pinned down by rifle or mortar fire, a minute can seem like an hour, and any delay can be the difference between life and death. The pilots who have flown in Vietnam have agreed fully that what they want more than anything else is to be over the target when needed. There are essentially three ways of accomplishing quick reaction or responsiveness: First, to keep these planes airborne at all times. This is a very expensive proposition at the end of a 13,000-mile pipeline. A second course, which appears to be the official Air Force position, is to have the fastest planes possible on the ground. A third possibility, which the COIN/LARA is designed to accomplish, would be to keep slower aircraft closer to the troops, and on station for a much longer period of time.

The subcommittee feels that there are both advantages and disadvantages with each of these concepts. The important thing, however, is that responsiveness be given the top priority in the thinking of both the Air Force and the Army in planning for close air support. The joint Army-Air Force close air support boards, in listing the areas wherein improvements in aircraft would provide the greatest payoffs in overall close air support effectiveness, listed three areas in the following priorities:

1. Improved survivability.
2. Improved target acquisition by the strike pilot.
3. Development of low level delivered munitions for use against hard point targets.

Quick reaction or responsiveness were not mentioned as a top priority need. Survivability is certainly important against sophisticated ground offense such as those being encountered in North Vietnam, but in the permissive air environment of South Vietnam and with the nature of the ground weapons being used against aircraft in South Vietnam, it is not. General AGAN testified in this regard as follows:

Question. How important is survivability in a close air support aircraft in a guerrilla war situation? In other words, what is the Air Force getting in the nature of antiaircraft fire in South Vietnam?

General AGAN. Mostly small arms, sir, up to 57 millimeter; mostly small arms, 50 caliber.

Question. The survivability of the close air support aircraft in Vietnam hasn't really been a problem, has it?

General AGAN. No, sir; it hasn't been in South Vietnam.

Quick reaction and responsiveness have been accorded far too little attention.

WHERE IS THE TARGET?

There is no question about the second greatest need in order of priority. The problem of acquisition and marking targets in a jungle environment is and remains a headache which is now receiving substantial attention. That it has not received substantial attention in the past is best exemplified by the fact that the same techniques are being used to mark targets in Vietnam today as were being used in the Solomon Islands in World War II. In this respect all services and the Office of the Secretary of Defense must share the blame.

Forward air controllers in airborne spotter planes have added some refinement with target-marking rockets, but the fact remains that the state of the art in regard to marking small targets in a jungle environment has advanced almost nowhere in the last 20 years.

At a time when we find it possible to transmit through 134 million miles of space fairly accurate photographs of Mars, it should be possible to determine what is going on in the jungle 1,000 feet below a spotter plane. If a tiny fraction of the energy and funds which have been devoted to the former were to be applied to the latter, the problem should not be insoluble.

As it is, the problem has not only not been solved; it has been largely ignored.

THE MARINES DO IT DIFFERENTLY

The Marines on the ground have traditionally been provided close air support by Marine and Navy pilots in the air. There have been few problems of incompatibility of radio equipment or lack of liaison between the air and the ground. When a Marine company is engaged in a mission it has a Marine forward air controller, a commissioned officer, and a pilot, on the ground with it, and when the company commander needs air support, he gets it. The air support is controlled from the ground. The Marines do use helicopters as a backup airborne forward air controller, but essentially the company commander orders the airstrike. The forward air controller is with the company commander; the targets are marked from the ground and the planes in the air are called in from the ground by direct communication between the forward air controller and the pilot of the attacking aircraft.

Dr. Cheatham, in discussing the adequacy of the Army-Air Force system as compared to the Marine system, stated the following:

A question has been raised as to the adequacy in numbers of FAC's on the ground, with the point being made that a Marine Corps battalion is deployed with three times as many FAC's as an Army battalion. This question is being examined right now by the Army and Air Force with specific reference to South Vietnam operations.

The subcommittee is pleased to note that the matter is being studied by the Army and Air Force right now. The subcommittee would have been even more pleased if the matter had been studied some time ago. The subcommittee would have been ecstatic if the problem had been solved before the hearings began.

IT'S NOT ALL BAD

This has been a critical report. It has been particularly critical of the Air Force, because we believe it has not devoted a sufficiently large proportion of its interest, time, energy, or funds to the mission of close air support.

The fact remains, however, that with planes which were not designed for the job, the job is being done to some extent. They are delivering massive attacks on the enemy, and the enemy is being hurt by them. The attacks are increasing in numbers, in intensity, and in effectiveness. The pilots who are flying them deserve a nation's respect and praise.

Our criticism is directed at the upper echelons, both in and out of the Air Force, where policy is made, for not preparing well enough to fight guerrilla war. In January 1961 Chairman Nikita Khrushchev addressed a conference of the Communist Party and set forth the military doctrine by which he said Communist conquest would be achieved. He listed four kinds of war:

- (1) World wars.
- (2) Local wars.
- (3) Liberation wars.
- (4) Popular uprisings.

Mr. Khrushchev announced to the world that international communism was opposed to both world wars and local wars as being intolerable in a world armed with nuclear weapons. He described "wars of national liberation," as he referred to guerrilla warfare, as "inevitable," and said the Communist movement would support such wars. With specific reference to the war in Vietnam, he said, "It is a sacred war."

In Mr. Khrushchev's sacred war the tide is turning against him. American men, in American machines and on American feet, are joining with brave Vietnamese men and the job is getting done. We are relearning some age-old truths about the ugly necessity of meeting foot soldiers on the ground with other foot soldiers on the ground, and of having pilots in the air equipped not only with sophisticated radar equipment but also with machines which enable them to use their eyes. We are relearning, also, both the value and the limitations of studies and of criteria which tell us only what aircraft can deliver a ton of bombs to the target area at the smallest price per ton. The B-52 can probably deliver 17 tons of bombs to the target "area" less expensively than an A-1, but it is not a close support aircraft. It must hit predetermined targets and there is a fundamental difference between "area" targets and "point" targets, as defined in close air support doctrine.

There are too many variables in tactical warfare to enable us to arrive at decisions involving procurement of aircraft by computer. Dr. Cheatham stated this quite eloquently in the following passage:

The philosophical differences between strategic and tactical warfare are worthy to note here briefly. While strategic nuclear warfare is, in a real sense, more terrible to contemplate, the strategic forces and weapons that define it are chosen from alternatives that are relatively few in number with the war games defined by a similarly small finite number of moves and countermoves. To do the same analysis within the regime of tactical warfare is much more difficult. One of the reasons is the very large variety of inputs and alternatives. Also, while strategic alternatives are mostly scientific and logical in nature, we find tactical warfare alternatives are a blend of both science and art, where changing and imaginative

tactics are a significant variant. Certainly, for example, we find that tactical air power and its component parts of close air support and intratheater logistic support are all an intimate blend of men and machines. You cannot estimate in more than a rough quantitative fashion the cost-effectiveness of guts, heart, moral, flying skill, intuition, sixth sense, imagination, and the dedication of a fighting man to a fighting machine in a fighting environment when in defense of his country and freedom * * *.

OF MEN AND PICKETS

While all over the United States, in great public display, persons objecting to the conduct of our war in Vietnam were carrying signs, marching, and appearing on television, newsreels, and speaking on the radio, the subcommittee was listening behind closed doors in executive session to a Marine captain discussing close air support in Vietnam.

The discussion had to do with certain delays which were encountered while a request for air support was approved at battalion and higher levels. Under Marine Corps doctrine radio channels are open, and when a request for air support is made by a platoon or a company, silence in the higher echelons of command denotes consent, and unless the silence is broken, the air support is given.

In Vietnam the system has been changed to require the affirmative and vocal approval of each higher echelon of command, in order to make sure that no air attack is delivered where an air attack might endanger civilian lives. This change in the system obviously causes delay. The delay may cost American lives. The Marines have changed their system to a slower system which may cost Marine lives in an effort to save civilian lives. Captain David A. Ramsey, Commanding Officer, Company I, 3d Battalion, 3d Marines, was asked about this:

Mr. NEDZI. With respect to this time element of going through the various echelons and procedures which you outlined, where each command has to authorize a strike * * * do you have an opinion as to whether it would be better to change this to the system that you have trained in?

Captain RAMSEY. I have an opinion on that, yes, sir. I think that the system as it is working right this minute is the only way it can work, because otherwise we are going to run into some indiscriminate killing. And this is not desirable. Granted we don't want to lose Marines on these operations, but then we just can't go around wiping out everybody in front of us like we were able to do at times in Korea. We just can't do this. We are going to have to accept some casualties, as grim as it may be; but this is our job. I think that we have got to get the support of these Vietnamese people on our side. We've got to get them working with us, giving us information.

We are not going to do it by wiping them out.

When we find American military personnel defending a system which may cost American lives rather than unnecessarily endangering civilian lives, this subcommittee feels that this is indeed service beyond the call of duty, and that this faith, judgment, and sacrifice should be spread before the American people, at least to the same extent that the views of those who criticize everything which we have done in Vietnam have been published.

CONCLUSION

The Vietnamese forces and our own forces on the ground in Vietnam are engaged in a deadly and desperate struggle. At the present time the tide in that struggle appears to be turning our way. We believe that a major contribution to the turning of the tide has been made by our pilots and our aircraft. We are aware that our Air Force has the

responsibility of providing the nuclear deterrent which has been the principal ingredient of our defense posture over the last decade. This assignment they have accomplished with their B-52's, their B-58's, and their Atlas, Titan, and Minuteman missiles. The Air Force is also responsible for maintaining air superiority in the tactical area. Today they have the F-100's, the F-105's, the F-4's, and they are developing the F-111 for the air superiority role.

The Air Force has the mission of defending this Nation from attack by enemy aircraft. For this purpose the Air Force has developed the F-102 and the F-104.

The Air Force has fought for its YF-12, for its improved manned interceptor, for its B-70 bomber, for its advanced manned strategic aircraft. It has spent billions of dollars on these projects.

However, the Air Force also has the mission of providing close air support for our Army on the ground. It has never developed one plane for this particular purpose. It is not developing one today. In fact, it insists upon multipurpose aircraft. This is the reason why the Air Force does not today have a true close air support aircraft. While we honor the Air Force for its accomplishments in the strategic field, in the field of air superiority, in its interceptor capabilities, and in its improved tactical airlift capabilities, we feel that in its magnificent accomplishments in the wild blue yonder it has tended to ignore the foot soldiers in the dirty brown under. They need and are entitled to better support than they have received.

The Army has been hesitant to demand better air support than it has been getting. Because of the desire on the part of both services to avoid irritating service rivalries and the roles and missions issue, essential questions have gone unanswered, and essential problems have been swept under the rug.

In approaching the problem of close air support, the Department of Defense has relied too heavily on computer techniques in which there are too many variables to be cranked into a computer. They have overstudied and underdecided. The resultant delays are reducing the efficiencies which the cost effectiveness techniques were designed to improve.

Yet during this period of delays and indecisions a workable, effective, tested close air-support system has been readily available.

The Navy-Marine Corps doctrine, organization, and the equipment employed in close tactical air support of ground forces are obviously superior to that of the other armed services. They meet the requirements for limited war operations, such as the current conflict in South Vietnam, and are readily adaptable to an escalating conflict.

Navy-Marine Corps doctrine requires direct air-ground communications at all times between the ground unit being supported and the aircraft performing the mission. The air control organization of the Marine Corps is equipped to insure this capability.

Each infantry battalion of the Marine Corps has assigned a forward air control party with the appropriate air-ground communications equipment to conduct close air support for that unit.

Each of these forward air control parties has two designated aviators who are trained in the tactics and techniques for delivery of air support to ground units. The forward air-control parties are being utilized by all Marine Corps units deployed to South Vietnam and have proved their worth in this type of conflict.

The Navy and the Marine Corps have devoted primary emphasis to the conduct of close air support and have developed aircraft and related equipment specifically designed for this purpose. These aircraft and equipment provide the capability of providing close air support on a 24-hour basis under all weather conditions.

The hoped for introduction of the COIN/LARA aircraft will further add to the Navy-Marine Corps capability to conduct close air support for ground troops.

In substance, the Navy and Marine Corps have devoted primary emphasis to the development of close tactical air-support operations for ground units and are properly organized, trained, and equipped to carry out this important function.

The knowledge, the technique, the capability for effective close air support exists. It could well be emulated by the Army-Air Force team.

The subcommittee is well aware of the fact that it is easy to criticize shortcomings, for some of them are quite apparent. At the same time, the subcommittee does not want this report to be construed as a unilateral, or perhaps even a parochial, attack upon one service.

The Air Force has many responsibilities, and in most instances it has met those responsibilities in an outstanding manner. No one can criticize the manner in which the Air Force is carrying out the vital mission of SAC; or the indispensable role of MAC (Military Airlift Command—formerly MATS); or the role of the North American Air Defense Command; or, of course, the invaluable services of the Tactical Air Command.

When funds are limited, first things must come first. Unfortunately, close air support did not have the urgency of airlift, or interceptor roles, or strategic bombing in Air Force planning.

Time has been wasted, but there is still time to correct our deficiencies in Army-Air Force close air support operations. We hope this report will serve as a useful prod, and not as a criticism that must be defended or explained.

OTIS G. PIKE, *Chairman.*

LUCIEN N. NEDZI.

RICHARD ICHORD.

FRANK E. EVANS.

DONALD J. IRWIN.

G. ELLIOT HAGAN.

CHARLES E. CHAMBERLAIN.

BOB WILSON (California).

CHARLES S. GUBSER.

I have read the foregoing report and find myself in full accord with the views and recommendations of the subcommittee.

L. MENDEL RIVERS, *Chairman.*

**HEARINGS BEFORE THE FULL COMMITTEE ON FISCAL YEAR 1966
SUPPLEMENTAL AUTHORIZATION FOR VIETNAM (H.R. 12334
AND H.R. 12335)**

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., February 3, 1966.

The committee met at 10:15 a.m., Hon. L. Mendel Rivers (chairman) presiding.

The CHAIRMAN. Let the committee come to order.

Good morning, Mr. Secretary.

Secretary McNAMARA. Good morning, Mr. Chairman.

The CHAIRMAN. Members of the committee, the hearing which we are beginning today is to consider H.R. 12334, a bill to authorize appropriations during fiscal year 1966 for the procurement of aircraft, missiles, and tracked combat vehicles and for research and development.

We will also consider H.R. 12335, a bill to authorize certain military construction. Both of these bills are in support of military activities in southeast Asia.

(For copies of H.R. 12334 and H.R. 12335, see appendix.)

First I would like to deal briefly with the procurement and research and development bill which contains \$3,417,700,000 for procurement, and \$151,650,000 for research and development. You will note that it is in essentially the same form as the regular fiscal year weapons procurement and R. & D. bills. There is, however, one difference which I would like to draw the committee's particular attention to, and that is section 301 under title III which appears on page 3 of the bill.

Under this language in title III any aircraft, missile, or tracked combat vehicle authorized by this bill could be made available to the Vietnamese or any other free world force in Vietnam.

You remember parenthetically we have a barrage of Korean forces in Vietnam. Let's think of them.

It also grants authority to make available to non-U.S. forces in Vietnam items from our current inventory and from production which has been ordered but not yet delivered.

The language in title II is equally applicable to appropriations other than those for aircraft, missiles, naval vessels, and tracked combat vehicles. For example, we would by this language be granting similar authority to use operations and maintenance appropriations for such things as transportation and other housekeeping costs of other free world forces in Vietnam, and other costs directly related to their participation in the conflict in Vietnam.

Although as I have said, any aircraft, missiles, and so forth, funds for which are authorized by this bill, could be given to non-U.S. forces in Vietnam there is nothing in this bill presently identifiable as proposed for allocation to these other forces.

Notwithstanding the fact that this same procedure was followed in the Korean war, I think that we should go into this matter with Mr. McNamara in order that we may be made aware in detail as to the extent of the authority we are being requested to grant.

I will draw your particular attention to page 20 of the Secretary's statement and the following pages which set out the kinds of aircraft, missiles, and tracked combat vehicles which are included in this bill.

We will, of course, go into these in more detail with each of the military departments as they appear and at that time each member will have before him the backup book for the particular department.

I want to say this, I want you to remember, about Vietnam, this is not a posture hearing. Any posture questions you may have I want you to reserve in the regular order which will follow this. Confine every question you have to the matter before us.

Mr. Secretary, you have a prepared statement?

Secretary McNAMARA. Yes, I do, Mr. Chairman.

The CHAIRMAN. I would like you to read it. And whatever questions we have will come after that.

Do you plan to be out of the country?

Secretary McNAMARA. I am not certain. General Wheeler and I are considering possible attendance at a conference being held in Honolulu at the present time, either this weekend, or at some early date next week, and we haven't yet made plans. We would very much like to finish this hearing if we possibly could by tomorrow evening. We are quite prepared to spend any amount of time you or the committee wishes to take today or tomorrow.

The CHAIRMAN. You and the General will finish whatever you have and whatever questions we have by tomorrow afternoon. We will meet this morning and adjourn for lunch. I don't think there is anything that will require our attendance on the floor. We will plan to reconvene at 2 o'clock, go to 4 o'clock, and then start tomorrow at 10 o'clock and finish tomorrow.

You may proceed, Mr. Secretary, without interruption.

STATEMENT OF HON. ROBERT S. McNAMARA, SECRETARY OF DEFENSE

Secretary McNAMARA. Thank you, Mr. Chairman.

I welcome this opportunity to discuss with you our longer range plans for the strategic bomber forces. You understand, of course, that the strategic bombers represent only a portion of our overall strategic offensive forces, and that the strategic offensive forces, themselves, are but one of two components of our general nuclear war posture; the other being the strategic defensive forces. I have found from my own work in this area that both of these components must be considered within a single analytical framework if the relative merits of available alternatives are to be properly evaluated; and last year that was the way I presented the strategic offensive-defensive programs, both to the President and the congressional committees.

Accordingly, I believe it would be most useful for the purposes of your inquiry, today, if I were to review with you at least the nature of the general nuclear war problem as we see it now, the capabilities of the programed offensive and defensive forces against the expected threat, and our specific proposals for the strategic offensive forces in the fiscal year 1967-71 period.

A. THE GENERAL NUCLEAR WAR PROBLEM

Last year I pointed out that the general nuclear war forces should have two basic capabilities:

1. To deter deliberate nuclear attack upon the United States and its allies by maintaining, continuously, a highly reliable ability to inflict an unacceptable degree of damage upon any single aggressor, or combination of aggressors, at any time during the course of a strategic nuclear exchange, even after absorbing a surprise first strike.

2. In the event such a war nevertheless occurred, to limit damage to the population and industrial capacity.

The first of these capabilities we call assured destruction and the second damage limitation.

Viewed in this light, the assured destruction capability would require only a portion of the ICBM's, the submarine-launched ballistic missiles (SLBM's) and the manned bombers. The damage limiting capability would be provided by the remainder of the strategic offensive forces (ICBM's, SLBM's and manned bombers), as well as area defense forces (manned interceptors, longer range antiballistic-missile missiles, and antisubmarine warfare forces), terminal defense forces (antibomber surface-to-air missiles and shorter range antiballistic-missile missiles), and passive defenses (fallout shelters, warning, etc.) The strategic offensive forces can contribute to the damage limiting objective by attacking enemy delivery vehicles on their bases or launch sites, provided that our forces can reach them before the vehicles are launched at our cities. Area defense forces can destroy enemy vehicles en route to their targets before they reach the target areas. Terminal defenses can destroy enemy weapons or delivery vehicles within the target areas before they detonate. Passive defense measures can reduce the vulnerability of our population to the weapons that do detonate.

The vital first objective, which must be met in full by our strategic nuclear forces, is the capability for assured destruction. Such a capability will, with a high degree of confidence, insure that we can deter under all foreseeable conditions a calculated, deliberate nuclear attack upon the United States or its allies. This capability must be provided regardless of the costs and the difficulties involved.

Once enough forces have been procured to provide high confidence of an assured destruction capability, we can then consider the kinds and amounts of forces which might be added for reducing damage to our population and industry in the event deterrence fails. Such damage limiting programs could range across the entire spectrum, from one designed against a threat of a minor nuclear power—for example, the Chinese Communists in the 1970's—to one designed against the threat of a carefully synchronized surprise first strike by the Soviet Union on our urban industrial areas.

With respect to the damage limiting problem posed by the Soviet nuclear threat, I believe it would be useful to restate briefly certain basic considerations which have guided our programs over the last several years.

First, against the forces we expect the Soviets to have during the next decade, it will be virtually impossible for us to be able to insure anything approaching complete protection for our population, no matter how large the general nuclear war forces we were to provide, in-

cluding even the hypothetical possibility of striking first. Of course, the number of fatalities would depend on the size and character of the attack as well as on our own forces. The Soviets have the technical and economic capacity to prevent us from achieving a posture which could keep our fatalities below some tens of millions; they can increase their first strike capabilities at an extra cost to them substantially less than the extra cost to us of any additional damage limiting measures we might take.

Second, since each of the three types of Soviet strategic offensive systems (land-based missiles, submarine-launched missiles and manned bombers) can, by itself, inflict severe damage on the United States, even a very good defense against only one type of system has only limited value.

Third, for any given level of Soviet offensive capability, successive additions to each of our various damage limiting systems have diminishing marginal value. The same principle holds for the damage limiting force as a whole; as additional forces are added, the incremental gain in effectiveness diminishes.

At the other end of the spectrum, it now appears to be technically feasible to design a defense system which would have a reasonably high probability of precluding major damage to the United States from an *n*th country nuclear threat, e.g., Communist China in the 1970's. Such a defense system would also be effective against an accidental missile launching.

It was with these considerations in mind that we have carefully evaluated the major alternatives available to us in meeting the two strategic objectives of our general nuclear war forces—assured destruction and damage limitation—in the light of the latest projections of the threats. In addition, we have given special attention this year to an analysis of Soviet threats considerably greater than those projected, so as to guard against the possibility that their technological progress may be more rapid than we currently believe to be likely.

Accordingly, my discussion today will deal with—

The capabilities of our general nuclear war forces against the expected threat.

The adequacy of our assured destruction forces against a much higher than expected Soviet threat.

Specific recommendations on the strategic offensive forces for the fiscal year 1967-71 period.

B. CAPABILITIES OF THE PROGRAMED FORCES AGAINST THE EXPECTED THREAT

In order to assess the capabilities of our general nuclear war forces over the next several years, we must take into account the size and character of the forces the Soviets are likely to have during the same period. While we have reasonably high confidence in our estimates for the near future, our estimates for the latter part of this decade and the early part of the next are subject to great uncertainties. As I pointed out in past appearances before this committee, such projections are, at best, only informed estimates, particularly since they deal with a period beyond the production and deployment leadtimes of the weapon systems involved.

1. The potential aggressors' strategic offensive-defensive forces

By and large, the current estimates of potential aggressors' strategic offensive-defensive forces projected through mid-1970 are of the same general order of magnitude as those which I discussed here last year.

With these long-range projections of the potential aggressors' forces as background, I would now like to discuss the adequacy of the strategic offensive forces we propose to build and maintain through fiscal year 1971.

2. Adequacy of the strategic offensive forces for assured destruction

Although no one can state with any degree of certainty how a general nuclear war between the United States and the Soviet Union might evolve, for purposes of evaluating the assured destruction capabilities of our forces, we must assume the worst possible case—that the Soviets strike first in a well-coordinated surprise attack. (Since a significant Chinese Communist nuclear threat to the continental United States is not expected to develop any earlier than the 1975–80 period, that threat can be omitted from this particular analysis.) Even if the Soviets in the 1970 period were to assign their entire available missile force to attacks on our strategic forces (reserving only refire missiles and bomber-delivered weapons for urban targets), our analysis shows that a very large proportion of our alert forces would still survive. And, of these surviving forces, a very large proportion could reliably deliver their payloads to their targets.

The effective delivery of even one-fifth of the surviving weapons on Soviet cities would destroy about one-third of the total population and half of the industrial capacity of the Soviet Union. By doubling the number of delivered weapons, Soviet fatalities and industrial capacity destroyed would be increased by considerably less than one-third. Beyond this point, further increments of weapons delivered would not appreciably change the results, because we would have to bring under attack smaller and smaller cities, each requiring one delivered weapon.

It is clear, therefore, that our strategic offensive forces are far more than adequate to inflict unacceptable damage on the Soviet Union, even after absorbing a well-coordinated Soviet first strike against those forces. Indeed, it appears that even a relatively small portion of these forces would furnish us with a completely adequate deterrent to a deliberate Soviet nuclear attack on the United States or its allies.

A considerably smaller number of weapons detonated over 50 Chinese urban centers would destroy half of the urban population (more than 50 million people) and destroy more than one-half of their industry. Such an attack would also destroy most of the key governmental, technical, and managerial personnel and a large proportion of the skilled workers.

Thus, without any use of the bomber forces, the strategic missile forces recommended for the fiscal year 1967–71 period would provide substantially more force than is required for an assured destruction capability against both the Soviet Union and Communist China simultaneously.

3. The role of the manned bomber force

Given current expectations of vulnerability to enemy attack (before and after launch), and simplicity and controllability of operation, missiles are preferred as the primary weapon for the assured destruction mission. Their ability to ride out even a heavy nuclear surprise attack and still remain available for retaliation at times of our own choosing weighs heavily in this preference. (We are quite confident that the Soviets do not now have, and are most unlikely to have during the next 5 years, the ability to inflict high levels of prelaunch attri-

tion on our land-based missiles, or any attrition on our submarine-based missiles at sea.)

However, in order to determine how best to hedge against the possibility that our missile forces may turn out to be less reliable and may suffer greater prelaunch attrition than currently estimated, we have analyzed alternative ways in which additional forces might be provided. To simplify the presentation, we show a hypothetical case in which our missile forces would be barely adequate for the assured destruction task, given the expected missile effectiveness and allowing no missiles for other tasks. (In fact, our approved missile forces are far larger than required for the assured destruction task and, therefore, already have built into them a large measure of insurance.) The table on this page shows the cost of insuring against various levels of unexpected missile degradation, by buying either additional missiles or bombers to attack the targets left uncovered as a result of the "assumed" lowered missile effectiveness. Against the current Soviet antibomber defenses, we have measured the cost to hedge with bombers in terms of B-52's armed with gravity bombs since the FB-111/SRAM would be a more expensive alternative. Conversely, against an improved Soviet antibomber defense, we have used the FB-111/SRAM since it would provide a less expensive hedge than the B-52 armed with either gravity bombs or SRAM.

Cost to hedge against lower-than-expected missile effectiveness

[10-year systems costs in billions of dollars] ¹

Assumed degradation to missile effectiveness (realized/planned)	Cost to hedge with—		
	Additional missiles	B-52/gravity bombs (against current soviet antibomber defenses)	FB-111/SRAM (against im- proved soviet antibomber defenses ²)
1.0.....			
0.8.....			
0.6.....	\$0.8	\$1.3	\$5.4
0.5.....	2.0	2.6	7.7
0.4.....	3.0	3.3	8.7
0.3.....	4.5	4.0	9.6
0.2.....	7.0	4.7	10.6
	12.0	5.3	11.5

¹ 10-year systems costs include for missiles—operating costs plus procurement of missiles for replacement and testing; for bombers—operating costs of bombers/tankers, modification costs plus procurement of the FB-111.

² Assuming the Soviets were to deploy a force of new, improved manned interceptors in the western part of the Soviet Union.

Only when missile effectiveness falls to less than about 50 percent of what we actually expect are bombers less costly than missiles for insurance purposes. Against current Soviet defenses, the presently available B-52G-H force (255 aircraft) is adequate to hedge against complete failure of the missile force, insofar as our assured destruction objective is concerned. Against possible improved Soviet defenses, we must be willing to believe that our missile effectiveness could turn out to be lower than 30 percent of what we expect before we would wish to insure with FB-111/SRAM aircraft rather than with missiles.

Similar arguments could be developed with respect to greater-than-expected Soviet ballistic missile defense effectiveness. I will discuss this and other greater-than-expected threats later in this statement.

In summary, for the assured destruction mission, manned bombers must be considered in a supplementary role. In that role they can force the enemy to provide defense against aircraft in addition to defense against missiles. This is particularly costly in the case of terminal defenses. The defender must make his allocation of forces in ignorance of the attacker's strategy, and must provide in advance for defenses against both types of attack at each of the targets. The attacker, however, can postpone his decision until the time of the attack, then strike some targets with missiles alone and others with bombers alone, thereby forcing the defender, in effect, to "waste" a large part of his resources. In this role, however, large bomber forces are not needed. A few hundred aircraft can fulfill this function. Accordingly, as will be discussed later, we propose to maintain indefinitely an effective manned bomber capability in our strategic offensive forces.

4. Adequacy of the strategic offensive-defensive forces for damage limitation

The ultimate deterrent to a deliberate nuclear attack on the United States or its allies is our clear and unmistakable ability to destroy the attacker as a viable society. But if deterrence fails, either by accident or miscalculation, it is essential that forces be available to limit the damage of such an attack to ourselves or our allies. Such forces include not only anti-aircraft defenses, antiballistic-missile defenses, antisubmarine defenses, and civil defense, but also offensive forces, i.e., strategic missiles and manned bombers used in a damage limiting role.

(a) *Damage limitation against the Soviet nuclear threat.*—With respect to the Soviet Union, the potential utility of all damage limiting efforts, including the use of our strategic offensive forces in that role, is critically dependent on a number of uncertainties:

1. Future developments in the Soviets general nuclear war forces in the absence of further major damage limiting efforts on our part.
2. Their response to our efforts at damage limiting.
3. If deterrence fails, the precise timing of a nuclear exchange as well as the Soviet objective in such an exchange.

In order to illustrate some of the major issues involved in this problem, we have tested four damage limiting programs against two possible future Soviet threats. In practice, of course, uncertainty about the direction in which the Soviet threat was developing would lead us to maintain a flexible approach, matching the scope of our force deployments to our own technical progress and to our evolving knowledge of the Soviet threat. Nevertheless, these cases help to develop an appreciation of the possible future costs and benefits of such damage limiting programs.

Threat I is basically an extrapolation of current Soviet forces reflecting some future growth in both offensive and defensive forces. Threat II is a major Soviet response to our deployment of a ballistic missile defense. It includes a large number of big, land-based missiles equipped with penetration aids designed to overwhelm our ABM defenses and a qualitatively improved and somewhat larger manned bomber force, and also assumes the deployment of a very sizable, sophisticated ABM system. This threat, if it were actually to develop, would require major additions to U.S. offensive forces in order to maintain our assured destruction capability.

The major components of the four U.S. 1975 damage limiting postures considered in this analysis include the NIKI-X antiballistic missile system (SPRINT and the new extended-range interceptor missiles), the SAM-D bomber defense system, the F-12 interceptor, offensive missiles used for damage limitation, and civil defense.

The SPRINT missile, which I described to you last year, is now under development and would be used for terminal defense of population targets. The new extended-range interceptor missile, the development of which was initiated last year, would be used for area defense.

The NIKE-X system would also include a number of different types of radars: multifunctional array radars (MAR), missile site radars (MSR) and perhaps VHF radars.

The SAM-D is a new ground-to-air antiaircraft missile system which is now in a very early stage of development.

The F-12 is the interceptor version of the Mach 3 YF-12A aircraft, three of which are now in a flight test phase.

Two of the four U.S. damage limiting programs, postures A and B, are tailored against threat I; and the other two, C and D, against threat II. Postures B and D include more antiballistic missile defense forces and SAM-D batteries than postures A and C. Postures C and D include more F-12 interceptors than postures A and B.

These postures are highly tentative, but they illustrate the overall costs and effectiveness of a range of possible deployments. As our knowledge in this area of rapidly changing technology increases, we will refine the composition of these deployments and our calculations of cost and effectiveness.

The interaction of the various Soviet threats and the four alternative damage limiting programs are shown in the table below.

Costs of U.S. damage limiting postures and Soviet damage potential
[In billions of dollars]

	Program costs, fiscal year 1966-75			Soviet damage potential in terms of millions of U.S. fatalities ¹	
	Cost attributed to assured destruction ²	Damage limiting increment	Total U.S. posture	Soviet 1st strike	U.S. 1st strike
1970: U.S.S.R. expected threat U.S. approved program.....				130 to 135	90 to 95
1975:					
U.S.S.R. threat I:					
U.S. AD* posture plus limited civil defense program	22.4	1.5	23.9	130 to 135	90 to 105
U.S. AD posture plus full fallout shelter.....	22.4	3.4	25.8	110 to 115	80 to 85
U.S. DL* posture A.....	22.4	22.5	44.9	80 to 95	25 to 40
U.S. DL posture B.....	22.4	30.1	52.5	50 to 80	20 to 30
U.S.S.R. threat II:					
U.S. DL posture C.....	28.5	24.8	53.3	105 to 110	35 to 55
U.S. DL posture D.....	28.5	32.3	60.8	75 to 100	25 to 40

*AD is assured destruction; DL is damage limiting.

¹ Rounded to the nearest 5 million.

² The assured destruction posture designed against threat I is more than just a minimal capability; it is designed to provide insurance against unexpected changes in the threat. In postures C and D a larger strategic missile force is provided for assured destruction to counter the increased Soviet offensive threat and the much more extensive ABM defense. (Threat II requires about 3 times as much surviving, deliverable payload than threat I, just to maintain our assured destruction capability.)

The program costs shown on the table represent the value of the resources required for each of the alternative postures. The costs attributed to assured destruction represent the resources required to insure that we can, in each case, deliver and detonate at least the minimum essential number of warheads over Soviet cities, even after a surprise Soviet attack. The costs for damage limitation represent the value of the additional resources required to achieve the various postures shown on the table. The last two columns of the table show the U.S. fatalities which would result under two alternative forms of nuclear war outbreak. In the Soviet first strike case, we assumed that the Soviets initiate nuclear war with a simultaneous attack against our cities and military targets, and with the weight of their attack directed at our cities. In the other case, we assume that the events leading up to the nuclear exchange develop in such a way that the United States is able to strike at the Soviet offensive forces before they can be launched at our urban targets.

The ranges of fatalities estimated in the table reflect some of the possible variations in Soviet targeting doctrine, in technological sophistication, in errors in attack planning, and in the degree of disruption to Soviet attack coordination. The higher end of the ranges of fatalities shown for each case represents the full damage potential (a well-planned, well-coordinated attack to maximize fatalities) under the assumed conditions. The lower end of the ranges of estimates represents possible degradations in execution and targeting.

The first line on the table shows the Soviet damage potential against the currently approved U.S. program in 1970. It illustrates the projected performance of the currently approved bomber defenses, the civil defense program, and the strategic offensive forces. Without these programs, the damage potential could be 160 million or more U.S. fatalities in a mixed Soviet attack on military and civilian targets. This total would not increase very much even if the Soviets directed all of their forces at our cities.

As shown on the second line of the table, the situation is not substantially changed by the assumed Soviet buildup (threat I) between 1970 and 1975. A full fallout shelter program, at a cost to the Government of about \$3.4 billion, would reduce fatalities by about 15 to 20 million in both cases. Damage limiting posture A (cost, \$22.5 billion) might reduce fatalities to somewhere between 80 and 95 million and posture B (cost, \$30.1 billion) to between 50 and 80 million in an early urban attack. But the benefits of these damage limiting programs could be substantially offset, especially in the case of a Soviet first strike, if the Soviets were to increase their offensive forces to the levels assumed in threat II.

Even larger Soviet responses than that of threat II cannot be ruled out completely by what we know of Soviet technology and resource constraints. Whether or how the Soviets actually would respond depends on how strongly they desired a reliable threat against the United States, and on the alternative military and nonmilitary uses they have for the resources involved. In other words, if we were to try to assure survival of a very high percent of our population, and if the Soviets were to choose to frustrate this attempt because they viewed it as a threat to their assured destruction capability, the extra cost to them would appear to be substantially less than the extra cost to us. This

argument is not conclusive against our undertaking a major new damage limiting program. The resources available to the Soviets are more limited than our own and they may not actually react to our initiatives as we have assumed. But it does underscore the fact that beyond a certain level of defense, the cost advantage lies increasingly with the offense.

The costs of the various damage limiting programs would, of course, be spread over a period of years. Even so, they would reach \$5 to \$6 billion per year in the early 1970's. To maintain or improve the postures shown (against an evolving Soviet threat) might involve continuing annual expenditures of \$4 to \$5 billion.

On the basis of this and other analyses of the damage limiting program in relation to the Soviet nuclear threat, we have concluded that—

1. Against likely Soviet postures for the 1970's, appropriate mixes of damage limiting measures could effect substantial reductions in the maximum damage the Soviets could inflict, but only at substantial additional cost to the United States over and above that required for assured destruction. Even so, against a massive and sophisticated Soviet surprise attack on civil targets, there would be little hope of reducing fatalities below 50 or more million.

2. An efficient damage limiting effort against the kinds of postures which the Soviets could achieve in the 1970's would require a mix of measures, including a full civil defense fallout shelter program, ballistic missile defenses, antisubmarine (SLBM) defenses, and improved bomber defenses. Against a very rapid buildup of Soviet missile forces based in hard silos, additional U.S. missile payload might have to be added.

3. Feasible improvements in missile accuracy and reentry vehicles could greatly increase the efficiency of our offensive forces against Soviet hard targets. However, the effectiveness of offensive forces in the damage limiting role is sensitive to the timing of a nuclear exchange.

4. Assuming that the Soviet bomber threat remained at least as great as we currently estimate, a decision to build a significant U.S. damage limiting capability would require the deployment of a force of improved interceptor aircraft. The choice of a specific aircraft and the desired force size would depend on the composition of the threat, the level of damage limiting effectiveness aimed at, and the timing of the decision.

5. An ABM system employing long-range exoatmospheric interceptors in addition to lower altitude interceptors could complicate even a sophisticated attacker's ballistic missile penetration problem. It could also improve overall system performance compared to an equal cost system employing lower altitude interceptors only. However, this conclusion is based on a preliminary analysis and there are still many unresolved questions about the design and performance of a system employing both exoatmospheric and lower altitude interceptors.

6. The entire problem of the extent and kind of efforts we should make to limit damage is dominated by the great uncertainties about Soviet responses to those efforts. How far we should go in

hedging against these uncertainties is one of the most difficult judgments which have to be made. Analytical techniques can focus the issue but no mechanical rule can substitute for such judgments. Accordingly, we should not now commit ourselves to a particular level of damage limitation against the Soviet threat first, because our deterrent makes general nuclear war unlikely; and second, because attempting to assure with high confidence against all reasonably likely levels and types of attack is very costly, and even then the results are uncertain. Our choices should be responsive to projections based upon the observed development of the Soviet threat and our evolving knowledge of the technical capabilities of our own forces.

Although a deliberate nuclear attack upon the United States may seem a highly unlikely contingency in view of our unmistakable assured destruction capability, it must receive our urgent attention because of the enormous consequences it would have. In this regard, I should make two points clear. First, in order to preclude any possibility of miscalculation by others, I want to reiterate that although the United States would itself suffer severely in the event of a general nuclear war, we are fully committed to the defense of our allies. Second, we do not view damage limitation as a question of concern only to the United States. Our offensive forces cover strategic enemy capabilities to inflict damage on our allies in Europe just as they cover enemy threats to the continental United States.

(b) *Damage limitation against an n th country nuclear threat.*—During the past year, the potential of an n th country nuclear threat to the United States has become more real and the feasibility of a moderately priced defense against it more promising. The Chinese Communists have detonated two nuclear devices and could possibly develop and deploy a small force of ICBM's by the mid to latter part of the 1970's. Other nations are economically and technologically capable of producing nuclear weapons within the next 10 years.

Obviously the threat of greatest concern to the United States is that posed by Communist China. The development and deployment of even a small force of ICBM's might seem attractive to them as a token, but still highly visible, threat to the United States, designed to undermine our military prestige and the credibility of any guarantee which we might offer to friendly countries. The prospect of an effective U.S. defense against such a force might not only be able to negate that threat but might possibly weaken the incentives to produce and deploy such weapons altogether.

In order to illustrate the possibilities of defense against an n th country nuclear threat, we have analyzed two possible U.S. damage limiting postures, E and F, in relation to such a threat in the mid-1970's. Posture E provides SPRINT terminal ABM defense for a number of cities, but no area defense. Posture F also includes long-range interceptor missiles, providing an area defense of the entire country. Both postures might also require some antibomber, ASW, and civil defense.

The effectiveness (and cost) of these postures could be increased further by strengthening them in any of a number of ways. Against attacks employing no penetration aids, increasing the number of long-range interceptor missiles might be preferred. Against more sophisticated or larger attacks, the number of radars at each city might be in-

creased, the capabilities of the radars might be improved, or more cities might be provided terminal defenses.

A minimum antibomber defense could be provided by deploying our current interceptor aircraft around the periphery of the country. Such a force, which would be required for the peacetime air surveillance mission in any event, would provide a relatively effective defense against small bomber attacks. To achieve higher effectiveness, this minimum area air defense could be supplemented first, by an improved surveillance capability to insure against enemy aircraft approaching U.S. airspace undetected; and second, by more advanced interceptors capable of attacking enemy aircraft with a higher kill probability and farther from our borders.

Our analysis suggests that something less than a full fallout shelter program may be appropriate in a light damage limiting posture designed against small unsophisticated attacks. Fallout shelters are designed primarily to protect against collateral fallout from counter-military attacks, weapons aimed at other urban-industrial areas, and weapons deliberately exploded upwind of population targets in order to avoid terminal defenses. The "area" defense described above might be very effective in denying the last of these tactics, especially against small attacks. The other two sources of fallout are also relatively much less important in light attacks.

Much more analysis of light defense postures is required before we are in a position to choose appropriate combinations of the various components. To illustrate the potentials of a "light" defense, however, we have examined the cost and performance of postures E and F against small ICBM attacks of the sort that the Chinese Communists might be able to mount in the latter part of the 1970's. The results of this analysis, which are still highly tentative, are summarized below:

U.S. posture	5-year systems costs (billions)	Millions of U.S. fatalities
Approved program (extended).....	-----	6 to 12.
Posture E.....	\$8.0	3 to 6.
Posture F.....	10.6	0 to 2.

The costs shown are for the ABM components of the program only; they include investment, operating and future R. & D. The lower bound of zero fatalities for posture F represents the defense effectiveness against a very unsophisticated attack, or even an attack on major U.S. cities with a somewhat more sophisticated payload. The upper bound for posture F represents an attack (with more sophisticated payloads) designed to maximize the number of fatalities, even if it means avoiding major U.S. cities with terminal defenses. The table above does not deal explicitly with the contribution of our offensive forces to damage limitation against *n* countries. This contribution, however, would be substantial, both in terms of the retaliatory threat they would pose and in terms of their effectiveness in preemptive countermilitary strikes.

The table brings out two important points: (1) Posture F, which includes exoatmospheric missiles, would be far superior on a cost-effectiveness basis to posture E which does not; and (2) the successful development of the exoatmospheric system would, for the first time

give hope of achieving a high confidence defense against a light ICBM attack, not just for a few selected cities but for the entire nation.

Although the problem of designing light damage limiting postures is still under study, I believe that the following tentative conclusions can be drawn at this time:

1. A light antiballistic missile system using exoatmospheric interceptors and terminal defenses at a small number of cities offers promise of a highly effective defense against small ballistic missile attacks of the sort the Chinese Communists might be capable of launching within the next decade. The initial investment and 5-year operating cost (including R. & D.) would be about \$8 to \$10½ billion, depending on the number of cities defended and the density of the area coverage.

2. It appears likely that such a defense would remain highly effective against the Chinese Communist threat for some time.

3. Once fully deployed, this defense system could be augmented to increase its effectiveness against larger or more sophisticated threats—by adding more long-range interceptor missiles, by improving the radars, or by increasing the number of cities with terminal defenses.

4. On the basis of our present knowledge of Chinese Communist nuclear progress, no deployment decision need be made now. However, the development of the essential components should be pressed forward vigorously.

C. ADEQUACY OF OUR ASSURED DESTRUCTION FORCES AGAINST A HIGHER THAN EXPECTED SOVIET THREAT IN THE 1970'S

Earlier in this section of the statement, I noted that we had given special attention this year to an analysis of Soviet threats over and above those projected in the latest intelligence estimates. We have done so because an assured destruction capability is the vital first objective which must be met in full by our strategic nuclear forces under all foreseeable circumstances and regardless of the costs or difficulties involved. To hedge against the possibility of such a greater-than-expected threat, we now propose to accelerate the development of the POSEIDON missile (which was initiated last year) and move forward on the development of new penetration aids. The timing of a decision to produce and deploy the POSEIDON and the new penetration aids would depend upon how this threat actually evolved.

In the light of the foregoing analysis, it seems to me that there are seven major issues involved in our fiscal years 1967-71 programs for the general nuclear war forces. The first five are related primarily to the threat projected in the latest intelligence estimates. The last two are associated with the more remote possibility of a much more severe threat. These issues are:

1. Should a manned bomber force be maintained in the 1970's; if so, what aircraft should be selected for the force?

2. To what extent should qualitative improvements (in range, payload, etc.) be made in the MINUTEMAN force?

3. Should an anti-ballistic-missile system be deployed; if so, when and what type?

4. Should we produce and deploy a new manned interceptor?

5. What should be the future size and scope of the civil defense program?

6. Should development of new penetration aid packages for the POLARIS and MINUTEMAN missile forces be accelerated?

7. Should development of the POSEIDON missile be accelerated?

Since this committee is concerned specifically with the strategic bomber program, I will discuss only those issues and proposals pertaining to the strategic offensive forces.

D. STRATEGIC OFFENSIVE FORCES

The force structure proposed for the fiscal years 1967-71 period is shown on the classified table provided to the committee.

1. The maintenance of an effective manned bomber force in the 1970's

By the end of the current fiscal year the strategic bomber force will consist of 600 operational B-52's and 80 B-58's. (As I informed the committee last year, two squadrons of B-52B's will be phased out this spring.) Some 345 of the operational B-52's will be the older C through F models. Last year we stated that these aircraft could be kept operational through 1972 by a program of life extension modifications and capability improvements, at a cost of about \$1.3 billion. To keep them operational through fiscal year 1975 would cost another \$600 million for modifications. The 255 operational B-52G-H's can be maintained in a satisfactory operational status at least through fiscal year 1975, and the modifications necessary to insure this have already been included in the proposed fiscal year 1967-71 program.

As indicated in the foregoing analysis, a force of 255 operational B-52G-H's would be sufficient to compel the Soviets to maintain their present antibomber defenses. However, if they were to significantly improve those defenses, a mixed force including some more advanced bombers might be desirable. Shown on the classified table provided to the committee are the characteristics of the FB-111A compared with the B-52C-E, the B-52F, the B-52H, and the B-58. As indicated in that table, the range of the FB-111A, on a typical nuclear strike mission, exceeds that of the B-52C-F's and the B-58's. I believe it is clear from this comparison, alone, that the FB-111 is not an interim aircraft but is, indeed, a truly effective strategic bomber.

Considering the role of the manned bomber in the strategic offensive mission, as we see the threat today and over the next 5 years, large expenditures on the development and production of a new advanced strategic aircraft (AMSA) do not appear to be warranted at this time. A much more sensible course would be to procure a force of 210 (UE) FB-111A's, configured as closely as possible to the fighter version so that it would, indeed, be a dual-purpose aircraft—strategic and tactical—and this is what we propose to do at a total investment cost of about \$1.9 billion. Some \$26 million of fiscal year 1966 funds are being utilized to initiate the necessary development work this year and \$202 million has been included in the fiscal year 1967 budget to continue development and procure the first few aircraft, including initial spares and advance procurement of long leadtime items.

Accordingly, we propose to phase out the B-52C-F's over the next 5 years and the B-58's, in fiscal year 1971, giving us a modernized force

of 465 manned bombers (210 FB-111A's and 255 B-52G-H's) by the end of that fiscal year and at less than the cost which would result from maintenance of the older B-52's and the B-58's in the force.

This decision was reached only after a most careful and lengthy evaluation of all the factors involved. You may recall that when I appeared before this committee a year ago, I said:

There are at least two other alternatives available to us, in addition to the immediate development of the AMSA, which would preserve the manned-bomber option for the period following the retirement of the B-52 force. These are (a) the procurement of a strategic version of the F-111 (i.e., a B-111); and (b) the initiation of advanced development work on long leadtime components which would be needed for the AMSA as well as for other new combat aircraft.

A strategic version of the F-111 could carry the SRAM or bombs, or a combination of both. Its speed over enemy territory would be supersonic at high altitudes and high subsonic at low altitudes. While a B-111 force would have to place greater reliance on tankers than an AMSA force, its range (considerably better than the B-58), its target coverage and its payload carrying capability would be sufficient to bring under attack a very large share of an aggressor's urban/industrial complex. Since the F-111 is already nearing production, and we plan to initiate development of the SRAM in the current fiscal year, a B-111 could be made available in the early 1970's at a much lower cost than the AMSA, even if the decision to commence production is postponed for another 2 or 3 years.

Since that time, the Air Force has conducted detailed studies on the composition of our future bomber forces, including an evaluation of various strategic configurations of the F-111 and an extensive review of service life modifications for the B-52 fleet. In April of last year, General McConnell made an informal proposal to me to replace the B-52C-F series aircraft with a bomber version of the F-111. In June, the Air Force made a formal proposal to procure 210 (U.E.) FB-111's as a replacement for the 345 B-52C-F's. In August, the Joint Chiefs of Staff concurred in the Air Force proposal to deploy the FB-111 and to phase out the B-52C-F aircraft. After a thorough review of all of the facets of the proposal in context with the overall strategic offensive-defensive forces program, I recommended and the President approved, going ahead with development and procurement of this aircraft, beginning in fiscal year 1966, and the phaseout of the B-52C-F on the schedule suggested by the Joint Chiefs.

Although we still cannot see a clear need for a new strategic bomber to replace the B-52G-Hs and FB-111s, we plan, as a hedge against some unforeseen improvement in Soviet antibomber defenses, to continue development work on the components and subsystems which would be required if it should ultimately become desirable to deploy such an aircraft. Last year we proposed a four-part program for an advanced manned strategic aircraft (AMSA) which included work on alternative design approaches, the avionics, the propulsion system, and the short range attack missile, SRAM. For the first three elements of this program we envisioned a 1966 effort costing \$39 million—\$24 million from prior year funds and \$15 million from fiscal year 1966 appropriations. In acting on our request, the Congress added \$7 million specifying that the total of \$22 million provided in fiscal year 1966 was to be available only for AMSA. All of this additional \$7 million has been applied to the program. Advanced development work on the airframe design and propulsion elements can be continued in fiscal year 1967 with funds already on hand. The avionics development will require an additional \$11 million in fiscal year 1967.

2. Air launched missiles

Last year we initiated development of SRAM as an element of the four-part AMSA program. Now, given the decision to proceed with the procurement and deployment of the FB-111/SRAM system, this development program must be reoriented to the FB-111 schedule. The cost to complete the SRAM development program is now estimated at \$170 million, including the related B-52 and FB-111 avionics. Some \$8 million was provided in prior years; about \$40 million will be needed in fiscal year 1967.

Although we do not now plan to deploy SRAM on the B-52G-H's, we propose to undertake the necessary avionics development work to permit such a deployment if it should become desirable later. We would expect to keep the HOUND DOG missiles in the operational inventory through fiscal year 1970 on the same schedule as envisioned a year ago. However, in 1971, with the completion of the phaseout of the B-52C-F's, the HOUND DOG force would be phased down accordingly. We also propose to undertake engineering development and test of a new terminal guidance system for HOUND DOG which gives promise of achieving a better overall system reliability. Total development cost is estimated at \$20.5 million of which \$6.6 million would be obtained by reprogramming presently available funds and \$8.1 million is included in the fiscal year 1967 budget.

In summary, the objective of forcing the Soviets to split their defense resources between two types of threats could be performed adequately by B-52 bomber forces considerably smaller than those we now have; i.e., the B-52G-H's alone. However, a mixed force of B-52G-H's and FB-111/SRAM would force the Soviets to build expensive terminal bomber defenses or be vulnerable to low altitude attack. Even against very advanced terminal defenses, the small size and low weight of SRAM would allow the United States to saturate their defenses with large numbers.

The cost of the manned bomber force we now propose, compared with the cost of continuing the current forces, is shown in the table below.

[Costs in billions of dollars]

	Fiscal year 1967	Fiscal year 1971	Fiscal year 1975
Current force extended forces (number aircraft):			
B-52.....	600	600	600
B-58.....	80	70	64
Costs (cumulative 1967-.....)		\$8.6	\$17
Proposed bomber force forces (number aircraft):			
B-52.....	600	255	255
B-58.....	80	0	0
FB-111.....	0	210	210
Costs (cumulative 1967-.....)		\$8.4	\$14

3. Strategic reconnaissance

The strategic reconnaissance force as shown on the classified table is essentially the same as that projected a year ago. All of these aircraft were procured in prior years.

4. Strategic missile forces

(a) *Qualitative improvements to the MINUTEMAN force.*—There is now general agreement that a force of about 1,000 MINUTEMAN missiles is appropriate in context with the total strategic offen-

sive forces programed and in light of the expected threat. Accordingly, the principal concern at this time is the qualitative improvement of the MINUTEMAN force, including the launch and launch control facilities. Three years ago we initiated a program ultimately to replace the MINUTEMAN I with the MINUTEMAN II, which has much greater accuracy, payload and operational versatility. In addition, its greater retargeting capability reduces the number of missiles that need to be earmarked against a given target system to achieve one reliably delivered warhead against each target. The first 10 MINUTEMAN II's became operational last October and additional missiles will be in place by the end of this fiscal year.

We are now making certain further major improvements in the MINUTEMAN which will so increase its performance as to warrant a new designation—MINUTEMAN III. The initial procurement of this missile will be made in fiscal year 1967.

We still plan to continue the 54 TITAN II missiles in the force throughout the program period.

By the end of the current fiscal year, we expect that 32 POLARIS submarines (512 missiles) will be operational and, by the end of the first quarter of fiscal year 1968, the entire planned force of 41 submarines (656 missiles) will be operational. The force will then consist of 13 SSBN's with A-2 missiles and 28 SSBN's with A-3 missiles. All five of the earlier A-1 boats will have been retrofitted to carry the A-3 missile. We also tentatively plan to modify four of the A-2 submarines during their first overhaul in the fiscal year 1968-69 period to carry the A-3 missiles, in order to avoid the high unit costs which would be involved in restarting the A-2 missile production line (which closed down in June 1964) when present inventories are depleted by testing and training programs.

(b) *Accelerated development of POSEIDON.*—For reasons I have already discussed, it appears prudent at this time to place ourselves in a position to deploy a force of POSEIDON missiles if this should be required. Last year we initiated project definition for this missile, using available 1965 funds, but the pace of the development was not precisely established. Now we propose an accelerated engineering development program for the POSEIDON missile. The total cost of this development is estimated at about \$1.3 billion, of which about \$300 million will be needed in fiscal year 1967. No decisions need be made now on the number of POLARIS submarines to be ultimately retrofitted with POSEIDON.

With respect to other future strategic missile systems, both the Air Force and the Navy have active study programs underway. The Air Force will continue work on several projects which would contribute to the development of an advanced ICBM, if one should be required at some time in the future. In total, some \$10 million is required for fiscal year 1967 for these projects. The Navy will conduct an advanced development study of improved propulsion systems for future sea-based missiles at a fiscal year 1967 cost of \$3 million.

(c) *Accelerated development of penetration aids.*—Five years ago, when I appeared before this committee in support of the first Kennedy amendments to the original fiscal year 1962 defense budget, I said:

While we are recommending a sizable quantitative increase in the strategic missile force we are also concerned with the introduction of qualitative improve-

ments to enhance the combat effectiveness of the missiles. One of the most important such steps is the development of techniques and devices to help our missile warheads penetrate to their targets. The January budget provides for research and development on these penetration aids, but in view of their importance in staying well ahead of possible Soviet defensive developments we are now recommending that the level of effort on such work be more than doubled from \$15 to \$35 million.

Four years ago, in presenting the fiscal year 1963-67 defense program and the fiscal year 1963 defense budget to this committee, I said:

A careful analysis of the problem which a Soviet antimissile defense system would pose to our offensive forces leads to the conclusion that an effective solution would require the development of various penetrations aids for our strategic missiles.

Since that time, we have intensively studied a wide variety of penetration aid techniques and have invested a total of about \$1.2 billion on research and development in this area. We now propose to carry this work forward on an accelerated basis, particularly with regard to the development of new penetration aids, which would be needed to defeat an area ABM defense employing exoatmospheric missiles.

5. Other strategic offensive forces

The other strategic offensive forces are essentially the same as those programed a year ago. With respect to the KC-135's, as the total size of the bomber force declines we intend to retain one tanker for each of the bombers. Most, if not all, of the remainder will be used to improve the air-to-air refueling capabilities of the tactical air forces. However, the specific reallocation of these KC-135's will be made as they become available for reassignment.

With respect to the Post Attack Command and Control System (PACCS), a number of EC-135's have been added to the force planned last year. These aircraft have previously been used principally as refueling tankers with a secondary mission as communications relay aircraft. In 1963, anticipating the time when we might no longer be sure of the survivability of our ground-based missile launch control facilities, we undertook the development of an airborne launch control capability for all of the MINUTEMAN force. The development costs of the necessary equipment through fiscal year 1967 is estimated at \$18.6 million. We now propose to begin procurement of the airborne portion of this equipment in fiscal year 1966 at a cost of approximately \$22 million. The ground portion of the airborne launch control capability is included as an integral element of the MINUTEMAN program.

Mr. Chairman, I have not discussed the details of our proposals for the strategic defensive forces programs, but I will be prepared to do so when I appear before the full committee in support of the fiscal year 1967-71 program and fiscal year 1967 authorization requests. However, I believe it is clear from what has already been said, that the strategic forces proposed—both offensive and defensive—will provide in full the essential assured destruction capability required to achieve our primary objective, the deterrence of deliberate nuclear attack upon the United States or our allies.

Secretary McNAMARA. Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Secretary.

Before I ask the one or two questions I have, I want to read about the next bill.

As I mentioned, during these hearings we will also consider H.R. 12335, a bill to authorize certain construction in support of military activities in southeast Asia and for other purposes.

Mr. Secretary, what do we understand to be southeast Asia; are the Philippines included?

Secretary McNAMARA. Yes, if a project there is associated with our operations in South Vietnam. For example, if a hospital expansion there is required to handle U.S. personnel wounded in South Vietnam the funds are included in this bill. But if a project is not associated with operations in South Vietnam, it is not included in this legislation.

The CHAIRMAN. Otherwise, this really takes in Vietnam, [deleted].

Secretary McNAMARA. That is correct, sir. Outside of that it includes projects only insofar as they are required by our actions in Vietnam.

The CHAIRMAN. The total authorization requested in this legislative proposal is for \$1,238,400,000, of which \$509,700,000 is for the Department of the Army, \$254,600,000 is for the Department of the Navy, and \$274,100,000 is for the Department of the Air Force.

Section 2 of the bill would authorize new construction in the amount of \$200 million for use as determined necessary by the Secretary of Defense for emergencies any place in the world.

While the bill itself does not authorize any line items and thus places no mandatory requirement on the services or the Department of Defense to build any of the items for which justifications will be submitted, I am sure the committee recognizes the good faith of the departments in that the projects presented in the justification books actually will be constructed.

The only project now included in the justification sheets which was denied by the Congress last year is for a POL pipeline from Whittier to Anchorage, a distance of 64 miles. This pipeline would carry [deleted] barrels of oil per day. I wish we had that pipeline now.

I understand this item is required to support airlift activities to southeast Asia via Alaska. The cost of this project is \$5,600,000. As you will recall, the House authorized this item last year but it was deleted by the Senate in the final version of the bill.

You will recall our many discussions on this.

This legislative proposal would provide for construction not only in southeast Asia but would also provide facilities directly relating to our activities in southeast Asia in 20 States. The bill permits the Secretary of each of the military services to develop facilities while waiving provisions of the following four sections of law:

1. It would waive the requirement which prohibits the advance of public money in any case unless authorized by the appropriation concerned or other law and in cases of contracts for the delivery of articles, permits payment exceeding the value of the articles delivered previously to such payment.
2. It waives two sections of law prohibiting the Army and the Air Force from the construction of any facility unless a detailed estimate of its cost has been submitted to the Congress and a specific appropriation has been made therefor.
3. It waives that provision of law which requires the Attorney General to provide a written opinion on the validity of the title to the land where such military facilities are to be constructed.

Section 4 of the bill permits the President to waive that provision of law which permits the Comptroller General to audit and examine books, papers, and documents and other records of contractors and subcontractors when the President determines that compliance with this provision would interfere with the performance of contracts made under this act for the development of facilities in foreign countries. This condition, however, becomes operative only when the Secretary of Defense and the Comptroller General have agreed upon alternate methods whereby the contracts can be audited.

I know it is the desire of every member of this committee to cooperate with the President and the Secretary of Defense in providing whatever is needed in the way of facilities to support our efforts in southeast Asia. But, at the same time, I am sure that the members of this committee will want to know where the money will be spent and the exact purposes for which it is to be utilized.

Now, Mr. Secretary, I have one or two questions. I was in Vietnam. I was quite pleased with the progress at Cam Ranh Bay. I think the way this area was developed is a great compliment to you and those who selected it.

I would like to know how you are progressing with this port Qui Nhon? How is it getting along there?

Secretary McNAMARA. I believe it is getting along very well, Mr. Chairman. I was there November 30, briefly, and General Wheeler has been there more recently than I. You might like to hear his appraisal of it when he was there about 3 weeks ago.

The CHAIRMAN. People ask me questions about the capacity of unloading shipping, which are waiting to be unloaded in so many areas.

Secretary McNAMARA. I can give you a very quick statement on the backlog of shipping in South Vietnam.

The CHAIRMAN. I am referring to Cam Ranh Bay—this is so important?

General WHEELER. The facilities there are being improved in accordance with plans, Mr. Chairman. The Delong pier is in place. The ramp area to bring up the LST's is available [Deleted.] They have a sizable amount of covered storage that is already available and in use. They have refrigerator storage as well for the troops. They have a sizable area of open storage. [Deleted.]

I would say that this facility is on time. The plans to improve it still further are firm, and are being carried out. For example, they are going to [deleted] make it more usable. I think that about covers it, sir.

The CHAIRMAN. You have your refrigeration working?

General WHEELER. That is right. They have some of it afloat, some of it ashore.

The CHAIRMAN. This will relieve a lot of the offshore unloading, will it not, Mr. Secretary?

Secretary McNAMARA. Yes, it will. The total port capability in South Vietnam for our purposes will be increased by 75 percent from January to July 1966, partially by the actions at Cam Ranh Bay and partially by other actions throughout the country. So we are fast resolving the bottleneck that was associated with port facilities. Last November, we had 122 ships, either unloading or awaiting unloading in South Vietnam, or being held in ports in the area awaiting movement to South Vietnam. That number has declined dramatically

since that time. It went to 111 in December, 88 on January 5, 81 on January 11, 64 on January 20, and 43 on January 31, just a few days ago, and that compares with what we would consider to be a normal number unloading or awaiting unloading of 59. So we are in better than a normal condition at the present time.

The CHAIRMAN. The weather has improved, too, in the meantime?

Secretary McNAMARA. It has in some areas, yes. In others, it has not been particularly good.

The CHAIRMAN. Mr. Hardy and I were visiting another port, what is the name of that port?

Secretary McNAMARA. Da Nang and Nha Trang.

The CHAIRMAN. They were unloading the ships in these amphibious vehicles. This was quite a problem.

Now, will [deleted] cause those numbers waiting any problem?

Secretary McNAMARA. I won't predict that we won't have an increase in number of ships unloading or awaiting unloading above the level of 43 which we have today. [Deleted.] I am inclined to think that it may rise above that level. But I do not believe that port facilities, Mr. Chairman, will be a limiting factor on our operations as we now foresee them. And I think General Westmoreland took remarkably effective action between November and the end of January to reduce that backlog of shipping from 122 to 43. And I think he would be able to apply the same measures in the future should the backlog begin to rise.

The CHAIRMAN. Can you give me an example of what he used to reduce that?

Secretary McNAMARA. Well, we have taken a number of actions. A French-owned pier, which had not been available for use, was [deleted] made available to us in Saigon.

The CHAIRMAN. [Deleted.]

Secretary McNAMARA. [Deleted.]

We contracted for the operation of 17 tugs and 35 barges. We increased the number of LSTS very substantially, and are going to increase their number still further. We have borrowed some—

The CHAIRMAN. This is offloading?

Secretary McNAMARA. Yes. We will continue to have to offload a substantial portion of the tonnage.

We borrowed LSTS from Taiwan, with Taiwanese crews for this purpose. We entered into a substantial contract with the Alaska Barge & Shipping Co. to provide lighterage. We established a Cincpac agency at the west coast shipping terminal to screen unessential cargo and prevent it from being put in the ships, and, in particular, to assure that the ships, themselves, were loaded more efficiently, so we do not have so many small items to unload, but, rather, can unload them on pallets. Moreover, that agency attempts to insure that something we need first isn't at the bottom of the hold.

The agency also attempts to insure that the flow of supplies is more closely related to the requirements. One of the reasons for the backlog of shipping in South Vietnam was that we were shipping supplies out on a "push" basis; that is, we were deciding in this country on automatic replenishment levels, putting the supplies on the ships without a request and sending them out there. When it arrived, General Westmoreland sometimes found he didn't need them immediately

and he would leave the supplies on the ship until he had an opportunity to unload them at his convenience.

Now, he has a sufficient backlog of supplies in Vietnam that he can operate on a "pull" system. So he, in effect, is now "ordering" a higher percentage of the equipment that is actually shipped than previously. This will help reduce the volume of shipping.

So for all these reasons, the shipping backlog has dropped dramatically in the last 90 days.

The CHAIRMAN. Those are the two main points I wanted to ask you about.

Mr. Bates, do you have any questions?

Mr. BATES. Just a few.

Mr. Secretary, I agree with you in respect to the need for combining the statistical accounts so you wouldn't have separate accounting for all these various things under these particular circumstances.

Now, do I understand, though, so far as southeast Asia is concerned, this pertains not only to this bill, and as Mr. Chamberlain indicated in his statement, to cover inventories, and from productions which had been ordered but not yet delivered? Won't that also involve anything that will be acquired from any past authority?

Secretary McNAMARA. Yes, section 301 makes that quite clear. It uses the term "funds authorized for appropriation under this or any other act are authorized to be used for these specified purposes."

Mr. BATES. So any money presently available which had not yet been committed, becomes committed, they will receive that fund and use it for that purpose?

Secretary McNAMARA. That is correct, Mr. Bates.

The CHAIRMAN. May I ask this question?

This wouldn't necessitate going to the reprogramming actions?

Secretary McNAMARA. No, sir; it would not. This means we have a rifle in our inventory, paid for by fiscal 1964 appropriations, we may give that rifle to a Korean soldier if he is fighting in South Vietnam.

The CHAIRMAN. This means existing inventories?

Secretary McNAMARA. It means existing inventories and any unexpended funds that may subsequently be used to acquire inventories.

The CHAIRMAN. Are you saying you are reducing the request for reprogramming?

Secretary McNAMARA. I don't think it really affects the request for reprogramming in this area. We haven't had many requests for reprogramming in the military assistance area.

The CHAIRMAN. Excuse me, Mr. Bates. Thank you.

Mr. BATES. Mr. Secretary, does the United States—

Secretary McNAMARA. May I add one sentence in reply to what the chairman asked?

It will reduce the reprogramming from other military assistance programs into the South Vietnamese program. It will not reduce the reprogramming in the sections of the budget previously the responsibility of this committee.

Mr. BATES. You have latitude now? You see, we know absolutely nothing about military assistance. I hope the bill comes before this committee.

Secretary McNAMARA. Let me take just a second, then, to try to explain what we are planning to do with regard to military assistance, and the reason why.

During the past 18 months, as the operations of the South Vietnamese military forces expanded substantially, we have been financing those operations within the previously appropriated military assistance funds by transferring funds from the military assistance programs for [deleted] into the South Vietnamese program. This has been one of the major ways in which we could finance the very substantial increase in Vietnamese military operations. It has not been a desirable or efficient way of doing it. It has created difficulties in the other portions of our military assistance program, a program which we believe to be as essential as any other element of our defense effort.

[Deleted.] Therefore, we feel we are now in much the same situation that the Department was in at the time of the Korean war, when under similar circumstances, it transferred the military assistance program for Korea into the basic defense budget. By doing so in this case, we will avoid this shifting of funds from other military assistance programs into the Vietnamese program.

Second, as you perhaps know, we are proposing to the Congress that the legislation for military assistance be handled separately from the legislation from economic aid. And it will then be up to the Congress to assign to its committees the responsibility for hearing the proposed separate bill.

Mr. BATES. The word around here is that we were not going to get that.

Do I understand—I will speak for myself; I think it is absolutely ridiculous for this committee to consider half the pie and be in ignorance of the rest of it.

The CHAIRMAN. I think so, too.

Mr. BATES. This has never made sense to me. The only justification ever used, to the best of my knowledge and belief, is that the economic aid portion of it wouldn't stand on its own feet. Whether that is valid or invalid doesn't make any difference. I think you ought to have the responsibility of handling the military aspect, as well as the military budget.

Mr. ARENDS. In view of what the chairman has said, would it be out of order for the committee to consider this?

The CHAIRMAN. It wouldn't be out of order to do anything.

Let us not depart on that this morning. Let us get moving.

Mr. BATES. Do I understand, then, Mr. Secretary, you have complete authority to transfer whatever portion of the military assistance funds there are from any country at all to whatever other country you want to?

Secretary McNAMARA. Yes, the President has the authority.

Mr. BATES. You have that authority?

Secretary McNAMARA. Yes.

Mr. BATES. Is the United States presently paying all costs for all forces in Vietnam?

Secretary McNAMARA. No; for example, we are not paying the costs for the Australian forces or the New Zealand forces.

Mr. BATES. Do you pay anything?

Secretary McNAMARA. We are not paying any costs for the Australians or the New Zealanders. That is their responsibility. I believe they are procuring some services from us, for which we charge them.

For certain other forces, for the Korean division, for example, which is there at the present time, we pay many of the costs, but not all of the costs, unless you consider our AID-administered program there; that is, economic and supporting assistance, to be an indirect source of funds for the Korean soldier's basic pay. But the direct costs and the direct payments to them cover only a portion of the expenditures necessary to support the Korean force in South Vietnam. We are paying for some of those through the military assistance program at the present time. We are paying, I would say, in a practical sense, for all of the costs of the South Vietnamese military forces.

Mr. BATES. Mr. Secretary, on page 10 of your statement you refer to the defense stock funds, and a request to have a new provision which would relieve the stock funds of the present cash requirements where the cash balance would be equal to the accounts payable at all times. Why don't we put more money in the stock funds, like we have always done when it was needed?

Secretary McNAMARA. Under the present provision of the law we are required to maintain in the stock funds cash balances for in excess of any amount that we will ever need to meet our disbursements, given the current plan for the acquisition of inventories in the funds. This is true because we are required to maintain cash balances equal to the accounts payable. Since the accounts payable are on a revolving basis, they are never all paid off at one time, and, the maintenance of a cash balance equal to the accounts payable is never required. It actually loosens the control of Congress on the appropriation process. We don't think we need that additional cash. It is contrary to all good business practice, and I would recommend that requirement be canceled.

Mr. BATES. Maybe I don't understand it. The naval stock accounting rule, I know something about that. This is a revolving fund. So you take so much out of that, and have to replace it by allocation out of an appropriation to fill up this thing again.

Now, specifically, what would you do under this situation?

Secretary McNAMARA. At the present time if the Navy stock fund's balance sheet has accounts receivable from customers of, let us say, \$100, and inventories worth \$1,000, and accounts payable of \$200, we are required to maintain a cash balance of \$200 to offset the accounts payable of \$200. But because the accounts payable are always revolving, old ones are paid off and new ones are incurred, we always have about the same accounts-payable level at the end of the year as we had at the beginning of the year. Thus, we don't need all of the \$200 cash balance but only enough to cover the day-to-day disbursement needs.

Mr. BATES. The net effect on your inventory is what?

Secretary McNAMARA. Zero in this hypothetical case of mine.

Mr. BATES. It remains the same?

Secretary McNAMARA. That is correct.

Mr. BATES. You are not borrowing out of the fund?

Secretary McNAMARA. No. There is no effect on the inventory, no effect on the purchases, no effect on the distribution.

Mr. BATES. This is from cash to accounts payable?

Secretary McNAMARA. Yes. It really isn't, of course, cash in the true sense. It is a credit on the books of the Treasury, really.

The CHAIRMAN. All it amounts to is you have to justify an appropriation. That is all it amounts to?

Secretary McNAMARA. I do not believe that we need to maintain such large cash balances in the stock funds, and I think it loosens the control over these funds. I have been concerned about the stock funds for years because the cash balances in them, I think, have been excessive. The best proof of that is the fact that we have been able to transfer from the stock funds to the military personnel accounts several hundreds of millions of dollars a year in lieu of new appropriations. If those funds had been appropriated, they would have been appropriated needlessly. Some of the committees of Congress have pointed this out at various times. We have been returning those excess funds as they were generated. They should have been returned faster, I think, years and years ago by relaxing this unnecessary requirement for large cash balances. But this is just another step in that process.

It doesn't make very much difference to our operation of the funds whether you accept the proposal or not, although additional appropriations will be needed if you do not. To accept it, however, I believe, strengthens the control of Congress over the appropriations. I think this is desirable in this instance.

Mr. BATES. But in any event, it is not using up the present inventory for operating purposes?

Secretary McNAMARA. No, sir.

Mr. BATES. It is not another source of funds?

Secretary McNAMARA. No, sir; it is not a matter of liquidating inventories in order to increase the cash balances. It is the other way around we want to reduce the cash balances in order to increase inventories.

Mr. BATES. I don't notice anything in the bill here—perhaps there is something here which I didn't detect—which would give you this authority that you are speaking of.

Secretary McNAMARA. Yes; it is in the proposed legislation.

Mr. BATES. Where is that?

Secretary McNAMARA. It will be in the appropriation bill. That does not have to be in the authorizing legislation. I mentioned it just for your information.

Mr. BATES. This is not legislation on an appropriations bill; is it?

Secretary McNAMARA. I don't believe so. You can check on this. The language to remove this requirement is to be included in the appropriation act.

Mr. BATES. If that situation is so, then it is beyond our jurisdiction in this particular bill.

I was advised we are flying in 750-pound bombs from [deleted]. Is this correct?

Secretary McNAMARA. It is possible. I am not aware of it.

General Wheeler, are you?

General WHEELER. I cannot answer this in that detail. I do know in a report I received the other day, there have been certain items of ammunition in fairly sizable quantities flown into southeast Asia in the last 90 days.

I might add that I have to go to the Joint Staff to find out some more detail about that for you, Mr. Bates. I cannot answer about the 750-pound bomb question at this session.

(The information requested is classified and was furnished separately to the committee.)

Secretary McNAMARA. I think it is possible on the 750's because we have been using such huge quantities of them in the B-52 operations, which were never anticipated or planned for, that a worldwide redistribution of 750-pound bombs I think has occurred. That may well account for the particular instance you are talking about.

Mr. BATES. Just what is our situation today in Vietnam with respect to ammunition, bombs, and so forth? What kind of shape are we in?

Secretary McNAMARA. I think we are in good shape, Mr. Bates. The best indication I can give you is this, that last month we were scheduled on an annual rate basis—this is on a 12-month basis at last month's rates—we were planning in South Vietnam and in its associated operations, to drop [deleted] and to launch [deleted] 2.75-inch rockets, [deleted] rounds of air-to-ground ammunition [deleted] small arms rounds including .30-caliber machinegun ammo, [deleted] million air-launched 40-millimeter grenades, [deleted] mortar rounds, and [deleted] artillery rounds. These were the planned levels of expenditure for the month of January, the one we just completed, on an annual rate basis.

The supplies to permit that level were in Vietnam. This was also the level desired by the military command in Vietnam.

There are only a few items on which I think you might say supplies are tight, and those are primarily new items. The 40-millimeter air-launched grenade, which was an experimental item up until a few months ago, is now proving highly effective and very popular. Another example is the 2.75-inch rockets with fragmentation warheads, not the HEAT warheads (the anti-armor warheads). This latter case arose because the armed helicopter (the arming of helicopters is a relatively recent innovation) are now being widely used in Vietnam. We decided to procure this new type 2.75-inch rocket only in the past 12 months.

Apart from items of that kind, I would say that, overall, our ammunition supplies are very good indeed.

Mr. BATES. And you will be able to maintain this rate? How many months' inventory do you have that you can call upon?

Secretary McNAMARA. Well, we have varying months' supply for varying items depending, of course in part on the procurement lead time. On the basic 7.62-millimeter ammunition, for example—I will give you the figures as of today as an illustration—we have worldwide stocks of [deleted] rounds, and we planned last month (January) to expend [deleted] rounds in South Vietnam.

Mr. BATES. What is your present situation on the 750-pound bombs?

Secretary McNAMARA. The 750-pound bombs—in January we had [deleted] bombs in inventory, and we planned to consume, [deleted].

Let me point out, that that figure is misleading. It shows a tremendous inventory in relation to expenditures, but there has been no production of that bomb since the middle 1950's, 1955. We are starting production again. So this inventory has to carry us through until production resumes.

Mr. BATES. That didn't bother me. I would rather see that than see it the other way.

Secretary McNAMARA. We think we have enough to maintain the rates we are planning on, but there may be a squeeze because of this fantastic use of bombs by the B-52's.

The CHAIRMAN. What about your production, Mr. Secretary?

Secretary McNAMARA. A rate of [deleted] a month is scheduled to be produced [deleted] a year.

The CHAIRMAN. That production is coming along, is it?

Secretary McNAMARA. Yes, sir; it is. [Deleted.]

Mr. BATES. Not now?

Secretary McNAMARA. That is right.

Mr. BATES. How about the 500-pounders?

Secretary McNAMARA. We appear to be in pretty good shape in that item. We have two types of 500's, I am going to have to add the figures to give them to you in total. We have an inventory of [deleted] against a planned consumption for the month of January of [deleted].

Mr. BATES. That is both of them?

Secretary McNAMARA. Both of them combined, that is right.

Mr. BATES. That is [deleted] a year—at least it was [deleted] a year for the one, the one you gave us?

Secretary McNAMARA. I gave you a total for both of the 500-pound types. We are running up to about [deleted] a year for the 500's and the 750's.

Mr. BATES. That [deleted] of 750's—will that be your rate once you get going?

Secretary McNAMARA. That is right, the production rate. The consumption rate, on present plans, will be lower.

Mr. BATES. The [deleted] you are going to use each year under present planning. That gets to the last question I really wanted to ask, and that is about the planning, and it is a question we tried to go into a little bit last year, Mr. Secretary, when I expressed some concern about ammunition, petroleum, and the number of troops we were going to have. And, of course, this is the question that is in the minds of everybody, just where we are. And these figures you have given us here are only as good as what our plans might be.

I notice you have some room for escalation on these particular figures over an annual basis. You indicate you are going to have around [deleted] in Vietnam, as I recall it, in your statement, exclusive of the 7th Fleet?

Secretary McNAMARA. That is correct.

Mr. BATES. How many people is that?

Secretary McNAMARA. I would say [deleted], in the portion of the 7th Fleet that is operating off of the coast of Vietnam.

Mr. BATES. Now—

Secretary McNAMARA. [Deleted.]

Mr. BATES. Then for the purposes of planning, in what you are representing here now, can we assume the [deleted] total that you referred to will develop what we might expect within the next year, as far as present intentions are concerned?

Secretary McNAMARA. No; I don't think you can assume that. The only authorization for deployment is as I outlined, [deleted] to South Vietnam by the end of February. [Deleted.]

The President stated in July, and he has repeated many times, as have I, that we will provide forces as our commander in Vietnam,

General Westmoreland, requests them. We do not know exactly how many forces he will request. He, himself, doesn't know now. What he will have to request in the future will depend in large part on what the North Vietnamese do.

Mr. BATES. Do I understand you to say, then, whatever he requests he will get?

Secretary McNAMARA. Yes; with the normal review by Cincpac, and the Joint Chiefs of Staff. But, basically, it has been our policy and will continue to be our policy to provide the military commander in Vietnam with the force he believes necessary to achieve our objectives there. What size force that is depends upon the reaction of the enemy.

Mr. BATES. Well, now, if he should ask for [deleted] troops, or [deleted] troops, are we prepared to make this commitment? Is this the kind of decision that will be made?

Secretary McNAMARA. There are two aspects to your question. One is the decision of the Commander in Chief, President Johnson. I do not want to make that decision or preempt it, other than to point out that the President said on July 28, and at other times since then, that he will meet the requests of the commander which the commander believes must be fulfilled in order to meet our political-military objectives.

The second aspect of your question is, if the commander requests certain troops, and the President decides to meet that request, are we prepared to send them? The answer to that is we are so prepared within certain practical limits.

Mr. BATES. You are talking now about logistics, or the actual commitment?

Secretary McNAMARA. I am talking in terms of logistics, personnel, and financing.

The CHAIRMAN. Which requires training, too?

Secretary McNAMARA. Exactly. And we have developed this supplemental, taking account of possible increases in our deployments up to a certain limit. We don't know whether the requests of the commander will rise above that limit. [Deleted.]

Mr. BATES. Well, I can understand that, but the real question, I think, the basic question in my mind, is what are we prepared to do? This is what bothered me a year ago when I was trying to find out just what we are trying to do militarily. We know all about the political aspect, that is fine. But the question that bothered me a year ago is, how far are we willing to go [deleted]. These are the things that bothered me then and bother me now. They bother the American people. We are embarked upon something the dimensions of which none of us comprehend.

Secretary McNAMARA. Mr. Bates, I will try and answer the question, but I will not be able to give you an answer that is very specific in certain respects, and I may not be able to give you one that completely satisfies you. This is because there are just so many uncertainties here that none of us can talk away or talk around.

I must start my answer by emphasizing that we have limited political objectives with respect to the South Vietnam situation. Our military strategy, and the military forces required are directly a function of those limited political objectives. The objectives are not to

destroy or to overthrow the Communist government of China, or the Communist government of North Vietnam. They are limited to the destruction of the insurrection and aggression directed by North Vietnam against the political institutions of South Vietnam. That is a very, very limited political objective.

We wish to minimize the cost of achieving this objective. This guides us in formulating our bombing program against North Vietnam, for example. It guides us in the strategy we follow in South Vietnam [deleted] it is not our objective to destroy the Government of North Vietnam. This fact has a direct effect on the forces we are deploying and may deploy into southeast Asia. Thus, because of this limited political objective, the requirement for forces is very uncertain. We do not know how many U.S. personnel may be needed to defeat the North Vietnamese attempt to destroy the Government of South Vietnam. The main reason we don't know is because we don't know their intentions and the extent to which they will infiltrate additional men and equipment into the South. It is that continuing infiltration and, as a matter of fact, the rising level of that infiltration which is requiring us to expand our troop commitment.

Mr. BATES. This is the unknown quantity as far as they are concerned. But what I am trying to understand is how far we are willing to go to meet whatever threat might confront us to achieve these objectives which we have in mind. This is what I don't understand.

Secretary McNAMARA. Well, again, I cannot look into the future and foresee all the contingencies. Even if I could, I wouldn't wish to give you my opinion, because the specific action this Government would take is, in most instances, the prerogative of the President. Moreover, his action and decisions would depend upon circumstances obtaining at that time throughout the world. But I think he has made it clear what our political objective is. And I think he has made clear that, within limits, we propose to meet the commander's requests for military forces to accomplish that objective.

Mr. BATES. Sir, what was that last one?

Secretary McNAMARA. I said he has made clear our political objective in southeast Asia. And he has made it clear—within the normal limits of decisions affecting the future contingencies which you cannot forecast, for example, future world situations you cannot predict—that we propose to meet the requests of our military commanders for forces to achieve that political objective.

Mr. BATES. So in the absence of a new development elsewhere if something should happen in Vietnam [deleted] and Westmoreland asks for more, this, of course, we will give him?

Secretary McNAMARA. [Deleted.] I don't want to predict what the President will do in that event. [Deleted.]

Mr. BATES. That is the reason we are having the problems, you see. That is the reason why it is so misunderstood. Korea was the first time. Here we get involved in a conflict that first of all we cannot have a hot pursuit, this is the first problem. Then for the first time in my knowledge, in the country's history, we end up with a stalemate. This is a new experience for America. Now, we are involved in this. We are not trying to defeat the whole enemy, and get the entire country, but only a portion of them some places. This is difficult for me or anybody to comprehend. That is why you get into a discussion about enclaves.

I presume you have talked to General Gavin personally, and we read in the papers, figured we are only going to commit a certain amount, and have committed only a certain number of troops, what can you do with them? I assume this is the position, I don't know how to meet it.

The thing that bothers me is how far are we willing to go? A year ago, 23,000 was about the right figure. Now, we are at [deleted]. The people want to know how far are we going to go.

Secretary McNAMARA. I don't think we can tell the people how far we are going to go in terms of particular numbers. I think we can say to them, we have this limited political objective. We have a military program designed to achieve it, we believe we can achieve it with that military program. We can't predict how other major powers in the world will react. Therefore, we cannot tell you with any certainty what responses we would make in the future [deleted].

Mr. BATES. Are we embarked now on a policy of having [deleted] troops there under present circumstances?

Secretary McNAMARA. I don't think one can characterize the policy in those terms. The policy is to provide the military force our commander believes is necessary to achieve the limited political objective outlined by the President. At the moment he has stated that he needs [deleted] men at the end of February and we have authorized that deployment through the end of February.

What he will need beyond that date, I can't predict with certainty. [Deleted.]

Mr. BATES. During the whole progress of this conflict over there, the whole thing is just jumping. Originally we were going to send troops over there to instruct. That was going to be around Saigon. All of a sudden we found this handful going out into the fields, and out into the hamlets, and then some of them get killed.

Then we had 123,000. So we are trying to find out how we embarked on this: This is the question that constantly comes to us. I can't tell about the circumstances. What are we trying to do right now? Are we trying to take over all of South Vietnam, are we trying to kill all of the enemy, or just some of them at some place?

Secretary McNAMARA. We are trying to prove to the Vietcong and the North Vietnamese military associated with them that they can't win in the South. They are experiencing such heavy fatalities that their morale is beginning to be affected. As their morale continues to be adversely affected by our operations, at some point they will have to conclude that they can't win in the South. At that point, we presume they will move to a settlement, either through negotiation or other action.

Mr. BATES. In any event, these items we have before us now, are these predicated on a structure of about [deleted] people over there?

Secretary McNAMARA. No. This supplemental should permit us to send additional forces above the [deleted] if the commander requests them, [deleted].

Mr. BATES. What figure would it take care of?

Secretary McNAMARA. [Deleted.] Our personnel budget and our O. & M. costs are determined by man-months of service, not by an end-strength figure. But I would say the supplemental, depending upon the rate at which he requested they be deployed, would support forces on the order of, perhaps [deleted].

Mr. BATES. Mr. Secretary, you indicated that you didn't want to call up the Reserve. Would you want to explain the reason?

Secretary McNAMARA. The Reserves would be perishable asset, if they were called to active duty under legislation similar to that passed in 1961. You will recall that legislation provide they could be called for a 1-year tour. The chief of one of the services recommended against calling Reserves under those circumstances, because to call them, train them, move them to South Vietnam, and move them back again, would require a substantial portion of that 1-year term, and the number of weeks or months they could be operationally useful in South Vietnam, would be limited. If they weren't sent to South Vietnam, essentially the same problem would result. They would be called, trained, and used in effect in a strategic reserve capacity, and then released at the end of a period of time.

It was felt that we would be better off raising the readiness of certain of the units, three divisions and other units in the Army, for example, so they could be called and deployed more rapidly than would otherwise be the case, should that need arise.

It may become necessary at some time in the future to call Reserves, either the combat units or the support units, but I hope we can avoid that.

Mr. BATES. You would want them for more than a year when you do get them, I assume?

Secretary McNAMARA. Well, it depends on what units, and how many appeared to be needed at that time. I am inclined to think under these circumstances, if legislation were to be passed for that purpose, it should not carry the restriction of a 1-year term of duty.

Mr. BATES. What is the situation today with respect to volunteers in the Reserves?

Secretary McNAMARA. We are accepting them. They are more than adequate in terms of numbers to meet the strengths prescribed by the Congress, 380,000 in the Guard, and 270,000 in the Army Reserve. We are going above that strength in the Guard. We will get up to that strength in the Reserve. We have no problem so far as I am aware in the numbers of men volunteering. We do have a problem——

Mr. BATES. Volunteering for active duty, or active service?

Secretary McNAMARA. Reservists volunteering for active duty?— I don't think we have any substantial number volunteering for active duty that I am aware of.

Mr. BATES. Are we accepting them?

Secretary McNAMARA. I believe so. General Wheeler?

General WHEELER. One of the problems that faces the reservist, as I understand it, is that if he volunteers, he has no job protection and so on, so only a small number have volunteered.

Mr. BATES. You could take care of that?

General WHEELER. We could under a Reserve callup, yes. If you are talking about volunteers to go into the Reserve forces, not into the Active Forces, there have been quite a substantial number.

Mr. BATES. Yes; more than you need, I understand.

Secretary McNAMARA. Well, not more than we need in the Active Forces in the sense that we still have to have a high draft call.

General WHEELER. We still have to have a high draft call.

On the other hand, the Marines, who were going to the draft for a portion of their input, have been able to defer that action in the last month.

Furthermore, we have had a substantial number of individuals in the Active Forces who have volunteered to serve in Vietnam.

Mr. BATES. I didn't get that.

General WHEELER. I said we have had a substantial number of individuals, officers and enlisted men, on active duty, who have volunteered to go to Vietnam to serve.

Mr. BATES. That I understand. I had an inquiry the other day with respect to someone in the Navy. The Navy advised they get more volunteers than they need. If they do that, I assume that is true of the other services?

General WHEELER. The other services have the same experience.

Mr. BATES. Today you don't see any need to call Reserves under the limiting factors that you have?

Secretary McNAMARA. That is correct. The need that might develop in the future might perhaps be for specialized support units of which we may require unusual numbers in South Vietnam. But as of the present time, I hope to avoid calling up the Reserves.

Mr. BATES. You are accepting reservists on active duty?

Secretary McNAMARA. Yes; I believe that is entirely correct.

The CHAIRMAN. Thank you, Mr. Bates.

Do you have any questions?

Mr. HÉBERT. No questions.

The CHAIRMAN. Mr. Arends.

Mr. ARENDS. Just a few short questions, after reading the statement:

I think Mr. Bates covered a good many of the questions I had in mind as to limitations about [deleted]. You have no figures you care to present us?

Secretary McNAMARA. No, sir.

Mr. ARENDS. As far as the military is concerned, you have the long-range plan, as I understand, way down the line; is that correct?

General WHEELER. That is correct, Mr. Arends.

Secretary McNAMARA. [Deleted.]

Mr. ARENDS. You covered the matter of calling up the Reserves which I had marked here.

And on the munitions, could I develop that a little bit?

Secretary McNAMARA. Surely.

Mr. ARENDS. Have we drawn down on existing inventory substantially, ammunition, supplies, et cetera, from other areas of the world?

Secretary McNAMARA. Generally speaking, no.

Mr. ARENDS. Generally speaking?

Secretary McNAMARA. The inventory drawdown for South Vietnam has come basically from central stocks in the United States. There was a drawdown of \$50 million worth of equipment, and supplies from Korea, I think, and there has been a shift of some surplus supplies from Europe.

Mr. ARENDS. There has been a surplus in Europe; then we have dropped down on the Korean?

Secretary McNAMARA. About \$50 million, or something like that. I think it is fair to say the drawdowns of equipment and munitions from non-U.S. based inventories, has been inconsequential.

Mr. ARENDS. The argument that we have dropped down to a dangerous point wouldn't hold?

Secretary McNAMARA. I can say this, without qualification: That there has been no drawdown to a dangerous point in general for munitions, worldwide.

General Wheeler, would you agree with that?

General WHEELER. I certainly would.

The CHAIRMAN. Let me say this, in the defense of the Secretary.

A lot of the others have not met their commitments, and we are above ours. It isn't fair to accuse us of all of the things we are committed.

Secretary McNAMARA. Mr. Chairman, you are entirely correct. As a matter of fact, at some point we are going to have to insist that there be a balancing of the contribution——

The CHAIRMAN. Yes, sir.

Secretary McNAMARA. [Deleted.]

The CHAIRMAN. That is right.

Secretary McNAMARA. [Deleted.]

The CHAIRMAN. That is right.

I was given a very fine answer to my question, and I think they accused our Government of cannibalizing our own forces. That is not exactly accurate?

Secretary McNAMARA. No, I don't believe so, either, sir.

Mr. ARENDS. Mr. Secretary, let me phrase another question somewhat relative to this:

Our so-called friendly allies—are you pushing them or are you prodding them in any respect? This just isn't our effort alone. Perhaps the day comes when they should do better? I get concerned about some of the things that we have done, such as their immediate acquiescence in putting an embargo on Rhodesia, whereas the British slacking off have not complied with our wishes in what they should do in South Vietnam, shipping, et cetera.

Are we pushing these people a little more and more?

Secretary McNAMARA. The answer is "Yes." I don't know any question that I get asked more often by Members of Congress than that one, or with more justification, I think.

But to illustrate why I say "Yes,"—the number of non-Communist-flag ships entering the ports of North Vietnam in the fourth quarter of 1964, was [deleted] and that has been cut by about 60 percent, down to [deleted] in the fourth quarter of 1965. A substantial portion of those [deleted] ships were flying the United Kingdom flag. [Deleted.]

They do not have the power under the law to prohibit the use of British ships in this trade.

[Deleted.]

Mr. ARENDS. This is what I was getting at.

Secretary McNAMARA. Exactly. We have received some from Australia, New Zealand, and Korea. [Deleted.] I hope and believe we will obtain that, as well.

Mr. ARENDS. That is encouraging. I hope you are right.

Mr. Secretary——

The CHAIRMAN. At that point, if you will permit me, Mr. Arends, I want to ask a question.

I pursued this same question, and I understand that there are some British ships that are chartered to some of these other countries, and they don't fly the British flag, but in fact are owned by British nationals.

Mr. Blandford?

Mr. BLANDFORD. Approximately half of the original British registered ships entering Haiphong are under charter to Soviet or Soviet bloc countries. These are the ones the British have no control over, because they have already entered into these charters some time ago.

The CHAIRMAN. This is the question, we found this out.

Secretary McNAMARA. That is correct. This is what I meant when I said, while the British Government wishes to restrict that trade, it can't do so under present law, [deleted.]

I think in that respect——

The CHAIRMAN. That is the way they get around it?

Secretary McNAMARA. Yes.

Mr. ARENDS. Mr. Secretary, on this resumption of bombing, are we pretty much in agreement on that in the State Department and in the military?

Secretary McNAMARA. Let me say this——

Mr. ARENDS. Or is that essentially a decision by the President?

Secretary McNAMARA. That is correct.

Let me say this, our recommendations are not to the State Department on the bombing but where appropriate, to the President.

Mr. ARENDS. Let me ask you the question on the resumption of bombing. Have we changed our pattern of bombing? Maybe this is a question to you, General Wheeler. Are we changing our pattern of bombing, or are we following somewhat the same bombing processes we did before?

This interests me because in here you say, for instance, a great number of storage—that is on page 6—and of course a great number of bombers are used.

To me it must have been ineffective; I mean, getting across our message to the people over there.

Have we changed this? Are we going to be more effective in what we are doing or what is the pattern?

General WHEELER. As of right now, Mr. Arends, we are working on precisely the same pattern as we were previously.

In other words, we are directing our attack against the military-type targets, primarily associated with the lines of communications, and the activities that support those lines of communications—supply dumps, ferries, bridges, and so on.

Mr. ARENDS. Well, General, I just sort of had the feeling that to a degree our bombing had been ineffective over there, and we ought to step it up.

In other words, maybe we will hit more military targets—in the overall, I am not suggesting for a minute we go in there and start lambasting; I am not doing that—it seems to me the pattern in the past has not proven to be as effective as it should be.

You say it is a resumption of the same thing. I wondered how——

General WHEELER. I said the same pattern, Mr. Arends.

I think you know my views on the subject of the air raids.

Perhaps this is the proper time to say this: There is no such thing in North Vietnam as an industrial base that is an appropriate target for destruction by air. [Deleted.]

[Deleted] there is no industrial target system, per se—the destruction of which would have any direct effect on the course of the war.

Mr. ARENDS. That raises one simple question, General. That is, the type of targets, or the bombing we are doing, is it effective?

General WHEELER. Yes, sir, within the limits of the target system that we have targeted the lines of communication primarily, supply depots, and ammunition depots. [Deleted.]

Mr. ARENDS. Well, is it fair to say that the pressure on the north is so intense that they continue to do that, even under that?

General WHEELER. [Deleted.]

In my view, we would never be able to absolutely shut off the flow of men and supplies from North Vietnam to South Vietnam, regardless of the level of bombing that we undertook.

We can reduce the materiel available to them to move, and we can reduce their capabilities to move materiel and men, but we can't absolutely stop it. I think we can decrease their operations in South Vietnam, Mr. Arends. I am not trying to imply that we have reached an optimum program.

Mr. ARENDS. Not as much as maybe the military would like to see, I don't know.

What about the targets you talked about [deleted].

General WHEELER. [Deleted.]

Secretary McNAMARA. We find the B-52 sorties appear to have a great effect on the morale of the Vietcong. Contrary to some of the press comment when these were initiated, we believe they are militarily effective [deleted.]

Mr. ARENDS. Just one more question, Mr. Secretary. Then I take it you are in complete agreement—

Secretary McNAMARA. I am sorry, I couldn't hear you, sir.

Mr. ARENDS. You are in agreement with the procedures now of the resumption of bombing?

Secretary McNAMARA. Yes, I support the bombing program against North Vietnam. I think it is important to recognize what its objectives were, what we have accomplished to date, and the limits on future accomplishments. The objectives were three: (1) to act to improve the morale of the South Vietnamese forces by attacking the north; there is no question but what the bombing will accomplish that; (2) to reduce the flow and/or increase the cost of the infiltration of men and equipment into the south. There is no question but what the capacity of the system has been cut back. [Deleted.]

The best estimates we have are that there are some North Vietnamese personnel diverted from other activities in the areas south of Hanoi to work on roads and bridges, and that some [deleted] thousands [deleted] of Chinese have been brought in to repair rail and other lines of communication north of Hanoi. So the cost has definitely been increased.

The third objective was to decrease the will of the North Vietnamese to continue the effort in the south at a time when we had proved to them they couldn't win in the south; that is, affect their will in such a way as to move them to a satisfactory settlement. We haven't

reached that point yet. I cannot guarantee to you that the bombing will be a major factor when we do reach it, but I think it may be.

Now, we can do more than those three things? I don't think it has been proven that we can, or that attacking any particular additional target in the north would allow us to accomplish more of any one of those objectives.

But the bombing program [deleted] is a measured program of attack against the military targets, particularly the lines of communication.

Mr. ARENDS. In other words, I will then conclude, Mr. Chairman.

In other words, the number of sorties being flown, the number of bombs being flown, you think you have reached the objective you had in mind?

Secretary McNAMARA. I do, sir. I do not mean to say we might not have been more effective in the types of sorties we flew, or the targets we chose, but they have been effective, generally, as I outlined.

The CHAIRMAN. I take it they have had pretty bad weather?

Secretary McNAMARA. I think about [deleted] percent of the sorties before the pause had to be canceled or diverted, and the weather since the initiation of the pause I think was worse than in the weeks immediately prior thereto. This happens to be a very bad time of year as far as weather is concerned over the Red River Delta.

The CHAIRMAN. So these things encroach on your capacity to do a lot of things?

Secretary McNAMARA. We have had to cancel a large number of strikes in the last 2 or 3 days because of weather.

The CHAIRMAN. There is nothing you can do about that?

Secretary McNAMARA. There is not.

The CHAIRMAN. Are there any other questions by any other members? We are going to adjourn at 12, and reconvene at 2.

Mr. Price, did you have any questions?

Mr. PRICE. Just one in the short time left.

Mr. Secretary, would you comment on the importance of this vast deployment of goods and ships, the \$10 million item in there for the Navy in R.D.T. & E.?

Secretary McNAMARA. Yes, sir. We need to increase the speed, both in the transit and in the loading and unloading of certain selected cargo ships for the Navy. And this ship development project is for that purpose.

The CHAIRMAN. This will be a prototype?

Secretary McNAMARA. Yes, sir.

Mr. PRICE. Was this ever requested before?

Secretary McNAMARA. We have requested fast deployment ships before, yes. My recollection is in fiscal year 1964 and fiscal year 1965 they were eliminated from the budget entirely. In fiscal year 1966, they were authorized but in lesser numbers than we requested. This remains one of our serious deficiencies.

Mr. PRICE. That is all I have.

The CHAIRMAN. This committee never deleted any of them?

Secretary McNAMARA. No, sir; I don't recall that it did. But the Congress cut our request, I think, about in half, for these ships in 1966.

The CHAIRMAN. Check whether that is correct.

Secretary McNAMARA. Yes, I will check this for the record.

Mr. BATES. The Senate cut it?

Secretary McNAMARA. It was the Senate, Mr. Chairman. The lack of this type of ship is one of our serious deficiencies and I am very anxious to see it corrected.

The CHAIRMAN. These are very vital, I agree with you.

Secretary McNAMARA. They are, and particularly for this type of operation.

Mr. BLANDFORD. I think we authorized four, and the Senate cut it to two, if I remember correctly.

The CHAIRMAN. Had you finished, Mr. Price?

Mr. PRICE. Yes.

The CHAIRMAN. Mr. Secretary, we will recess until 2 o'clock, and then we will go until 4; I am sure we will finish.

(Whereupon, at 11:55 a.m., a recess was taken until 2 p.m. of the same day.)

AFTERNOON SESSION

The CHAIRMAN. Let the committee come to order.

We finished before lunch, we had gotten down to Mr. Hardy. Do you have any questions, Mr. Hardy?

Mr. HARDY. Yes, I do, Mr. Chairman; I've got a few.

I think the first question I would like to raise is: What is our situation with respect to torpedoes? Are there any torpedoes included in this supplemental budget?

Secretary McNAMARA. I don't believe so. We are not firing torpedoes in combat at the present time, as you know, Mr. Hardy, and I do not know of any situation that would require emergency appropriations for them. I do not believe there are any in here. I may be in error, but I don't think so.

Mr. HARDY. I didn't see any in looking through what documents I had, but that was one of the things, Mr. Secretary, we encountered in our trip overseas. [Deleted.]

I recall particularly the question came up when we were [deleted] the situation they described there to me looked like it was pretty serious [deleted].

Secretary McNAMARA. Mr. Hardy, the torpedo shortage was severe in 1961. We have been, in each year subsequent to that date, providing substantial appropriations for them. [Deleted.] We have research and development projects underway to push the development of technology for torpedoes, but I am not aware we are in an emergency shortage at the present time. I will look into it.

Mr. HARDY. My impression, Mr. Secretary, is there is a pretty good supply of them [deleted].

The [deleted] as I recall it, is supposed to be able to do a fairly good job, but they had practically none in the inventory worldwide.

Secretary McNAMARA. I want to check the budget on this, Mr. Hardy, but my recollection is that we took action in the fiscal year 1966 appropriation to buy this new MK-46 torpedo which we had been working on for some time, and I believe I am correct, although I'm not absolutely sure of this, I asked the Navy to expedite production on that for exactly the reason you point out.

Mr. HARDY. The [deleted].

Secretary McNAMARA. Yes; but I think the point you make is a valid point. Our inventories are adequate for the older types that

are in production, but the new types that are coming in have been coming in slowly and it will be some time before we have adequate inventories of the new types. But I think the financing of them is adequate in the fiscal 1966 budget. I may prove in error on that. I will be happy to look into this matter.

(The information referred to is classified and has been furnished separately to the committee.)

Mr. HARDY. I would appreciate it if you would.

Now, Mr. Secretary, this morning you discussed the rate of utilization of bombs and rockets. I do not recall specifically whether there was any direct discussion of the 2.75-inch rocket. I had the impression our net assets on those was [deleted], is that a correct impression?

Secretary McNAMARA. Well, your impression that there may be a shortage of them is correct. The inventory position at the present time is large, but the rate of usage is so high that before the production will build up to the levels we have ordered, these inventories will be drawn down very substantially. I will give you the figures on it as an illustration here.

Mr. HARDY. I believe the first three quarters of fiscal year 1967 the consumption rate will be several times the net production—

Secretary McNAMARA. You don't mean 1967; you mean 1966.

Mr. HARDY. Fiscal year 1967.

Secretary McNAMARA. The production and consumption rates balance. The average monthly production for the first three quarters of 1967 is [deleted] rockets, and the average consumption is [deleted]. It is in 1966, fiscal 1966, that the production is just building up. First production of new rockets began last month. With respect to critical supply problems the new fragmentation-head rocket is in short supply. The older rockets which we have had for some time are in a much less critical supply position. It is the new fragmentation-head rocket for the armed helicopters that will be in short supply through the first part of fiscal year 1967.

Mr. HARDY. I do not know if this is fragmentation or not, but the sheet I am looking at indicates at the beginning of fiscal year 1967, which will be July 1, we will start out with [deleted] of them, with a consumption rate of [deleted]. Thereafter, our production rate is considerably below the consumption rate until you get into the four quarters of fiscal 1967.

Secretary McNAMARA. Well, I have the average monthly rates for 1967, fiscal 1967, and it shows different figures. I have the June consumption, June 1966. You used a figure of [deleted]. This is [deleted] on my table. So I think the consumption is approximately correct.

I will be happy to supply this for the record based on our schedule. The problem here, Mr. Hardy, is one I think you are completely familiar with. This rocket is a new rocket which was first introduced into regular operational use from helicopters only a matter of months ago. The armed helicopter was an experimental weapon that was sent out to Vietnam to be tested. The first company was organized, I think, in 1962. We were still experimenting with it in 1963 and 1964, and it was not until 1965 when the value of the armed helicopter in Vietnam became evident that this weapon was authorized for what you can call really large-scale production.

Mr. HARDY. Well, I was trying to look over the first three quarters of fiscal 1967, that they show on this sheet I had. I was wondering if there was not something we should do.

Secretary McNAMARA. There is. The answer is, if the first three quarters are a problem, there is something we can do. I will reexamine this schedule and make sure my figures are correct. If they are, I do not believe we need do anything. If yours are correct, I am sure we should do something and can do it within the time available.

Mr. HARDY. As I look at this thing just shown me, I believe in this supplemental [deleted] of these particular rockets are included in your supplemental.

Secretary McNAMARA. No; it is many times that.

Mr. HARDY. That actually is just a little bit more than 1 month's supply, if I read this other chart right. Anyway, I wish you would look into that and let me know just what the situation is.

Secretary McNAMARA. We will be happy to, and we will put in the record the production schedule and our consumption and inventories up through the first three quarters of 1967.

(The information requested is classified and has been furnished to the committee separately.)

Mr. HARDY. Thank you, Mr. Secretary.

Now, in one of the tables in your statement this morning you had indicated aircraft losses in southeast Asia for 1964 and 1965 totaled 315 fixed-wing—

Secretary McNAMARA. May I interrupt you just 1 second, Mr. Hardy, to address this question of the monthly production of rockets? The monthly production of rockets becomes [deleted] a month in February of 1967; to the extent that has to be funded in this supplement it is funded.

Mr. HARDY. In February of 1967?

Secretary McNAMARA. Yes [deleted] a month.

Mr. HARDY. That does not agree with the table I've got, because this shows production—

Secretary McNAMARA. Production will be [deleted] a month in February 1967.

Mr. HARDY. This sheet I've got shows [deleted] in the four quarters of fiscal 1967, which would make it June, I suppose, at least—

Secretary McNAMARA. Let me put the figures in the record for you. If it shows that we are in difficulty 9 months through the 1967 fiscal year, you are quite right, there is something we can do about it today.

Mr. HARDY. This table indicates that to me if I read it correctly.

Secretary McNAMARA. I would be very happy to look into that.

Mr. HARDY. Now with respect to aircraft, as I interpret one of these appendixes hooked to your paper—the table—we have a total of 315 fixed-wing aircraft and 100 helicopters lost during fiscal 1964 and 1965.

Is that all the aircraft that we have lost over there in southeast Asia?

Secretary McNAMARA. These are tactical attack aircraft. The total losses I can give you in southeast Asia for January 1, 1962, through December 31, 1965, all services, all aircraft, hostile and operational losses. The total for that 4-year period for tactical aircraft for all services was 382.

Mr. HARDY. 382?

Secretary McNAMARA. The other types of aircraft losses—what I call nontactical aircraft losses—totaled 133. Therefore, the total of all aircraft losses was 515 for all services.

Mr. HARDY. Does that include helicopters, do they fall into the tactical category?

Secretary McNAMARA. No; this does not include helicopters. This is fixed-wing aircraft. I can give you the helicopters if you wish.

Mr. HARDY. Thank you.

Secretary McNAMARA. The total helicopter losses for the same period are 162 plus—I can't break it exactly the same way—this will be an approximation because I've got to take out 2 months. It is say about 320, Marine Corps and Army combined.

Mr. HARDY. That is all I need. Do you have that total? Is it 320?

Secretary McNAMARA. Wait a minute. I have it here. I can give it to you exactly. Helicopter losses for that 4-year period, Army and Marine Corps, 279, exactly.

Mr. HARDY. 279. That is for fiscal 1964 and 1965?

Secretary McNAMARA. The calendar years 1962, 1963, 1964, and 1965.

Mr. HARDY. Calendar years?

Secretary McNAMARA. Yes.

Mr. HARDY. Thank you.

Now, in connection with these losses this is for a particular type of aircraft?

Secretary McNAMARA. Yes.

Mr. HARDY. Last year, as I recall it, there was included in your savings, because of inventory reductions, \$32 million for a cutback in the procurement of F-4's for the Navy. We are stepping them up now. Does that indicate the saving that we had last year is being wiped out by this account, too?

Secretary McNAMARA. Mr. Hardy, I would like to look at the specific figure you are speaking of, the \$32 million, I don't recall that figure.

Mr. HARDY. 32.6, I think it was.

Secretary McNAMARA. I do not know whether it was for the same series of aircraft. We are trying to get the later series of F-4's into the force, and eliminate the earlier series.

Mr. HARDY. Of 4-B's, I have forgotten what these are in procurement now, but I believe it is the same aircraft. Anyway—

Secretary McNAMARA. Let me look at the savings and check on whether they are the same.

(The information requested is classified and was furnished to the committee separately.)

Mr. HARDY. There is another aspect of this I wondered about. Last year we had a reprogramming of funds for the TA-4E in order to save some money by continuing our procurement. I was wondering whether if as a matter of fact we did curtail our procurement of A-4-B's last year, and now after stepping it up, whether we have to pay more for them or less for them.

Secretary McNAMARA. I am sure we are paying less now, Mr. Hardy, because we are buying in such larger quantities. The rate of production on F-4's goes up from something on the order of [deleted] a month to [deleted] if I recall the figure correctly.

Mr. HARDY. Well it would be interesting I think if we could get a comparative cost figure.

Secretary McNAMARA. Surely, I would be happy to do so. The rate of production goes up from [deleted] a month, and I am certain the larger quantities cost less per aircraft.

(The information requested is classified and has been furnished the committee separately.)

Mr. HARDY. Now, Mr. Secretary, another item that was included in your cost reduction, inventory saving, was 7.62 millimeter ammunition. I think that listing showed a \$30 million saving. I believe you got quite a sizable procurement of those this year. That same question would apply to this that applied to the F-4's I was just describing.

Secretary McNAMARA. We do not have a different series in the 7.62, as we do in the F-4. Most of the Navy F-4 procurement in the supplemental is the F-4J (62 aircraft). There are also four F-4B's in there.

We are stepping up the rate of production of 7.62 ammunition. It would certainly be correct to say that any saving last year in that instance is offset by a procurement now—with this qualification, I do not think it is ever wise to buy anything ahead of the time you need it. Cutting back proposals to buy at times when the circumstances do not justify the procurement quantitative seems to me to be good management practice. So I do not think even with hindsight it was a mistake to cut it back last year. You can argue whether it was a saving, but I don't believe it was at all a mistake to cut it back.

Mr. HARDY. I do not know whether it would be or not. I was just trying to get the factual situation as closely as I could.

Secretary McNAMARA. Our inventories of 7.62 ammunition are very high indeed [deleted] rounds.

Mr. HARDY. And you've got in the supplemental, I believe, some \$50 million?

Secretary McNAMARA. That is correct.

Mr. HARDY. Now, Mr. Secretary, I've got one other area that I wanted to explore with you. In sections 2, 3, and 4 of the bill, this is H.R. 12335, section 2 Mr. Rivers referred to a little earlier, and you referred to it in your statement, as being funds appropriated to the defense agencies, to be apportioned as needed. I believe that is the way—

Secretary McNAMARA. In the construction bill, yes.

Mr. HARDY. Yes, this is in the construction bill, in 12335.

Secretary McNAMARA. Yes.

Mr. HARDY. The way this language reads, the Secretary of Defense may establish or develop installations and facilities which he determines to be vital to the security of the United States, and so forth.

Will you tell us what the mechanics are for making that authorization?

Secretary McNAMARA. Yes. At the present time we have an outline of a construction program, which General Westmoreland thinks is required, broken down into airfields, ports, et cetera, by service. But this can only be the roughest kind of estimate at this time. He has not had enough time to determine even how many airfields he needs, much less which service should finance them, and where they should be located. So we asked that \$200 million not be initially

allocated by service so that as this program develops and firms up and we need to switch between them I can allocate those funds to the service that will then be charged with the responsibility of carrying out the particular project.

Mr. HARDY. Yes, but what would be your mechanics for making that determination?

Secretary McNAMARA. Well, let us say, the request comes in from Westmoreland for an additional airfield, and an elimination of some depots. The airfield might be for the Air Force; the eliminated depots might be Army.

Mr. HARDY. How would you make your decision? Suppose, let's take a hypothetical case, suppose he wants an airfield and suppose it is an elimination of an Army depot? As a matter of fact, you have \$200 million here which would not have been allocated anyway. So if he asks for funds out of this, you won't have to take it away from something else?

Secretary McNAMARA. No, the total program he estimates will be needed, would cost \$1.2 billion. On the basis of the present tentative assignments of service cognizance the projects in this program add up to \$1.2 billion. But we know those assignments aren't firm and final. We recognize there are going to have to be switches between types of facilities, e.g., airfields versus depots, and between services, e.g., Army versus Air Force. We need some form of flexibility in the management of the program as it evolves. And this \$200 million is to facilitate that management.

Mr. HARDY. Yes, but you still do not get to the heart of what I am trying to understand. You've got three sections in this bill that I am concerned with right now, and I would like to understand how they are going to actually work. You have section 2, section 3 and section 4. Now sections 2 and 3—section 2 refers directly to the Secretary of Defense. Section 3 says the Secretary of each military department may proceed to establish, and so forth, and that is without regard to line items which is the usual procedure they follow before the committee.

I was trying to take these a piece at a time and understand how this thing would actually be determined, how the decision would be made. That is why I was starting with section 2. This is your responsibility.

Secretary McNAMARA. That is right.

Mr. HARDY. I wondered how you would make that decision.

Secretary McNAMARA. At the present time the proposed construction program in the fiscal year 1966 supplemental, detailed by type of construction and service, adds to \$1.238 billion.

Mr. HARDY. I see that, Mr. Secretary.

Secretary McNAMARA. This is how we developed the estimate for the authorization request, by adding up these tentative project decisions, but we know the detail of the analysis underlying that program is not adequate for us to be certain that the specific types of project or service assignments of responsibility are firm.

Mr. HARDY. Are you going to present that to us in detail?

Secretary McNAMARA. I will be happy to provide you what detail there is, but that detail will not be the same as the final decisions which have yet to be made. General Westmoreland would be the first to say

that. We had to have some basis for developing a construction authorization request. Now this is the basis. You can provide the construction authorization, of course, any way you choose, just so long as we are given enough flexibility to execute the program efficiently. But we cannot, today, give you a line item breakdown for this construction.

Mr. HARDY. I think I can understand that. But what I am concerned with at the moment is, you have to have something now that adds up to the amount that you are asking for.

Secretary McNAMARA. Right.

Mr. HARDY. Mr. Chairman, the first thing I would like to do is to ask for that, so we can at least see the background in determining what is figured.

Secretary McNAMARA. I have it right here; I will be happy to put it in the record.

Mr. HARDY. I appreciate that. Let us proceed one step further with respect to this \$200 million in section 2.

You say there might be a request that would come in saying we need an airfield instead of something else. But that would not affect your \$200 million?

Secretary McNAMARA. Oh, yes, it would. At the moment the projects I have here from General Westmoreland and the other commanders add up to more than would be allocated in section 1 to the Navy, Air Force, and Army. The \$510 million, the \$255 million and the \$274 million add up to \$1,038 million. What I have listed from Westmoreland and the other commanders adds up to 200 more than that. So if their requests develop as they think they may now, the Army, Navy, and Air Force are not going to be allocated enough under this bill to pay for them.

Mr. HARDY. Well, I would like to see if I could get this thing step by step and understand just how this would happen. Westmoreland sends in a request to you for utilization of some part of this \$200 million?

Secretary McNAMARA. No, sir, he does not. He first uses as much as the Department of the Army has, \$509 million. And after the Army has used all that money, Westmoreland comes in and says, "I have to have another hospital. It has to be an Army hospital. The Army has no more money." At that point, we transfer the necessary funds from the \$200 million. The Navy at that point, may still have some unused funds, but we couldn't transfer them from the Navy to the Army.

Mr. HARDY. Let me start back a moment. Let me explore section 3.

How will the decision be made with respect to what actually will be built under section 3?

Secretary McNAMARA. Well, we have one construction boss in South Vietnam at the present time who reports to General Westmoreland. That construction boss is responsible for laying out a construction program for all three military departments. He will lay that out; Westmoreland will pass on it, and then pass it in to the Chiefs. They will review it and pass it to the services. Now the services may or may not have enough funds in section 1 allocations to pay for it. The probability is some will and some won't. My guess is the Navy will probably have enough, and almost surely the Army and the Air Force will not. And therefore, at that point I will have to allocate to those services out of the \$200 million.

Mr. HARDY. Well before we get to the \$200 million, I am trying to see how this other is going to work, because, frankly, that comes first. Your 509 million comes first.

As I understand it the figures you are putting up in the record will add up to more than the \$509 million?

Secretary McNAMARA. That is correct.

Mr. HARDY. And there is not any obligation under the provisions that are written into this bill to even follow that. And for all that any of us know now, at the time the request comes in for approval of the construction, it might be for something entirely different than anything listed on this sheet?

Secretary McNAMARA. That is correct.

Mr. HARDY. So I am trying to understand if I can what will be the mechanics of making that determination. As I understand it General Westmoreland submits a proposal for construction. That goes to the Joint Chiefs?

Secretary McNAMARA. That is right.

Mr. HARDY. Now, then, the Joint Chiefs presumably scrutinize this proposal and then they submit it with their recommendations to you, is that right?

Secretary McNAMARA. Yes.

Mr. HARDY. Then you will make your decision based on the recommendation from Westmoreland as approved or concurred in by the Joint Chiefs?

Secretary McNAMARA. That is correct.

Mr. HARDY. Now, it seems to me, Mr. Chairman, that since this is the way this is going to be handled, and since we are waiving our line item—normal line item approval of these things—that at the time, or following the decision with respect to what is going to be built by these funds, there should be submitted to the committee something to indicate what has been done and what the Secretary proposes and agrees with.

The CHAIRMAN. Will you do that?

Secretary McNAMARA. I think it is quite reasonable; I will be glad to do it.

The CHAIRMAN. What is wrong with that?

Secretary McNAMARA. Nothing is wrong with it. I ask it be done after the fact.

Mr. HARDY. I think it should be a simultaneous thing. I don't want to hold up the construction project, but I think at the time the approval is given it would be the appropriate or proper time to advise the committee.

Secretary McNAMARA. Yes. Actually, there is the possibility some of this will just be allocated to Westmoreland for his decision, an allocation in the field. And in that case, I would receive from him the kind of information you are asking for. I would be happy to pass it to the committee as soon as I got it.

Mr. HARDY. The thing I am concerned with, Mr. Secretary, is under normal circumstances the committee analyzes the justification for each of these items.

Secretary McNAMARA. Surely.

Mr. HARDY. Under this situation here we are waiving that.

Secretary McNAMARA. That is correct.

Mr. HARDY. Certainly the committee ought to have before it the rationale which justifies it, even if it is after the fact?

Secretary McNAMARA. I think it is entirely reasonable. I would be delighted to do it.

Mr. HARDY. Section 4 goes to the authority given to the President. But it relates also to a waiver of normal committee procedures—conventional procedures.

So presumably it must have this effect—this will be done only on the basis of a submission from you, is that right?

Secretary McNAMARA. Yes, that is correct.

Mr. HARDY. That being the case, Mr. Chairman, it seems to me that we ought to ask the Secretary to submit to the committee the proposal and his rationale for it which he sends to the President.

Secretary McNAMARA. I will be happy to do that.

Mr. HARDY. Thank you very much.

The CHAIRMAN. What Mr. Hardy is talking about, we have that under our jurisdiction.

Secretary McNAMARA. There is no problem, Mr. Chairman.

Mr. HARDY. Thank you very much, Mr. Chairman, and thank you, Mr. Secretary.

Secretary McNAMARA. Thank you.

The CHAIRMAN. Mr. Hébert has something to say for the record.

Mr. HÉBERT. Thank you very much, Mr. Chairman, and members of the committee. I apologize bringing this matter up at the moment, but it is of such great importance. I want the full membership of the committee to know about it.

On last Tuesday Secretary McNamara appeared before subcommittee No. 2 in connection with the investigation ordered by the committee into the decision to phase out the B-52 bombers. He presented a very thorough, comprehensive statement to the committee, and simultaneously with that statement he had a sanitized version of it which is customary and the usual procedure, which was released to the press immediately upon his departure from the committee.

The next day Dr. Brown appeared, the Secretary of the Air Force, accompanied by General McConnell, Chief of Staff of the Air Force, who had classified statements to give the committee which were received, and I was called before the meeting and asked would it be permissible to release the sanitized version of their testimony at 10 o'clock, which was the time they were to appear before the committee. I gladly gave permission to release that testimony at that time. Subsequent to that we had before us General Schriver, General Ryan, and General Ferguson, testifying in connection with this matter. And we had an all-day session with Secretary Foster, who replaced Dr. Brown in the Department of Defense. On yesterday we had Gen. Curtis LeMay as the witness. Gen. Curtis LeMay, as everybody knows—it is no secret—has taken quite the opposite position to the position taken by the Secretary in connection with the advanced manned bomber, and the necessity of bomber replacement.

Of course, General LeMay was the first individual before the full committee to present the other side of the coin. Obviously, he had no prepared statement. He came in cold, and really answered questions. However, during the examination we developed his side of the question, and he brought forth very forcefully his position.

I requested, since he was the first witness on that side, to bring out the other side of the argument, that I thought the public should be entitled to know the other side, keeping in mind his description. The following description I am giving you. At no time has the chairman or any member of my subcommittee discussed in any manner, shape, or form, any testimony taken before this committee. We refrained from doing so. We do not want to make judgment until all the evidence is in and all the facts are before us as to what report we will make.

Now, in compliance with keeping the public informed was the reasonable request, and I asked that General LeMay's testimony be sanitized immediately by the Department in order that I could release it and give the public the benefit of the thinking of the other side of the question, and not allow just one side to remain in the public mind. For example, Secretary McNamara's comprehensive statement was carried in six columns the next day in the New York Times, dominated by him and me shaking hands and laughing and joking with each other. This was a very fine presentation to the public and showed we understood each other.

Now, I think that Mr. Slatinshek, counsel for the committee, should proceed from here to inform the committee of what has occurred since I made a request to sanitize this testimony in order that the public be given the other side of the story, that is other than Secretary McNamara had. Will you please tell now what happened?

MR. SLATINSHEK. In accordance with Mr. Hébert's request I contacted an officer from General Roderick's office, a Major Harper, and requested that he arrange to have someone from the Security Office of the Department come over here and clear the transcript for possible release. I asked him to inquire as to the feasibility of this. He did proceed and was unable to get a firm reply. In view of Mr. Hébert's desire that this transcript be made available, I suggested that as an alternative, Major Harper take this transcript through Security on his own and stick with it until it had been cleared by Security and returned to the committee. This question of course could not be resolved by Major Harper who took it in turn to the Department. I understand Mr. Vance has denied this alternative possibility. General Roderick conveyed this information to me and advised that the Department would only clear all the transcripts simultaneously. He indicated that Secretary Vance believed that this was consistent with the desire of the committee, and consequently felt no justification for clearing one of these transcripts separately. That is the story.

MR. HÉBERT. Now, Mr. Secretary, may I ask you for your comment?

SECRETARY McNAMARA. I am not familiar with it. I do not recall hearing about it. When did you make your request?

MR. HÉBERT. I made the request yesterday, Mr. Secretary.

SECRETARY McNAMARA. I am not familiar with it. I do know about this. We are facing great difficulty because for the first time in the 5 years in my experience in the Department, we are not being permitted to have transcripts of the hearings, and I suspect that is what is involved here. As I understand your proposal, you are proposing to send us a portion of the transcript and ask us to clear that from a security standpoint of view without seeing the others parts of the transcript, and to clear it for release before the whole transcript is released.

Mr. HÉBERT. No, all I am asking, Mr. Secretary, is to follow the procedure that we have followed, which you, yourself, have followed. You have come before the committee with a classified document, and have sanitized that for immediate release upon your departure from the committee. In the case of Dr. Brown, and General McConnell, the permission was given to them to release the sanitized version as they started to testify. Now, the matter of your transcript not being made available to you has absolutely nothing to do with the question. The only thing we are asking, and what I am trying to find out is, that here is testimony the same as yours—classified testimony—we cannot sanitize. We do not take upon ourselves the declassification of any document. We are trying to cooperate to that extent. So it is not releasing a part of the transcript here and a part of the transcript there; it is only releasing the testimony of one individual who testified to opposite views that you hold. I think the American public is entitled to that, don't you agree?

Secretary McNAMARA. I have absolutely no doubt but what the American public has the right to the views of any individual who can testify with some authority on this matter. But I seriously question whether the procedures that are being followed in this case are desirable procedures. I know of no case since I have been associated with the Defense Department where individuals from the Department have testified before a congressional committee and have been refused copies of the transcript of their testimony. I know of no case where we have been asked to clear for security purposes a portion of a transcript, questions and answers, for release before the total transcript is released. I presume that that is what is causing the question. Now I have been testifying here this morning, and I haven't been at the Department, and I wasn't there except for a few minutes at lunchtime. I spent the noon hour at the White House. But I will be happy to look into this when I get back.

Mr. HÉBERT. Naturally we understand what is causing that, but I am trying to separate that from the other.

Secretary McNAMARA. I find it difficult to separate.

Mr. HÉBERT. I do not think it is difficult to separate, because right now by your very action you have released your testimony.

Secretary McNAMARA. We have not released any of the testimony. We have not released any of the testimony. We presented it to the committee for their release—

Mr. HÉBERT. You released that other testimony, so you are being inconsistent. You did release part of the testimony.

Secretary McNAMARA. We released prepared statements through the committee. This is customary procedure. This has been going on for the 5 years I have been associated with the Department, but I have never seen a case where a committee refused the witness copies of his own transcript on questions and answers, and then asked that one witness's statements and questions and answers be cleared and released separately. And I am sure that is what underlies the problem that has developed here. When I get back to the Department, I will be happy to look into it.

Mr. HÉBERT. As I say, I do not care to discuss the other matter, because I do not care to engage in debate on that. We have our reasons the same as you have your reasons. We have the same reasons

which caused you in other years to appear in executive sessions of this committee, offering classified testimony, return to the Pentagon, have it sanitized, and then released that part without the committee releasing it.

You have done that yourself. I don't care to get all tangled up.

Secretary McNAMARA. Mr. Hébert, I do not know of any such case. It may have been done.

Mr. HÉBERT. That is the reason why I state this.

Secretary McNAMARA. Let me say if that was done I think it is incorrect. I just don't believe that this kind of material should be released other than through the committee, that is point No. 1. And point No. 2, I do not believe that parts of it should be released separate from the other parts that deal with the same subject.

Finally, I do not believe a member of the executive branch appearing before a congressional committee should be denied a transcript of his own testimony.

Mr. HÉBERT. As I said, Mr. Secretary—will you sanitize this or not?

Secretary McNAMARA. I can't answer the question until I go back to the Department and discuss it with whomever has been working with it. I do not know any more than you have told me.

Mr. HÉBERT. Will you let us have a decision this afternoon?

Secretary McNAMARA. I will let you have a decision as promptly as I can; I don't know whether it will be this afternoon.

The CHAIRMAN. This transcript belongs to this committee. We asked the Department to sanitize it. Thus far the Department has denied this. We don't belong to the transcript; they belong to us. You testified, and it was perfectly satisfactory to go and release what you wanted to do, under normal procedures. Now there is some sort of recrimination, something that I am doing as chairman of this committee, and at this point I have no notion of changing. I did at one time think I might agree to change my position, but if this is the way you want it, I have to advise you, this is the way you will get it. We will cross the other bridge at the proper time, but I think this is very small on the part of Mr. Vance, as to this point.

Let's get to the next question.

Secretary McNAMARA. Mr. Chairman, I don't wish this charged to Mr. Vance. I don't know whether he did or didn't do it. I don't know what has been done. I think you deviated from normal procedures. You must expect under those circumstances that it requires special thought and treatment in the Department.

The CHAIRMAN. I'm going to try to cooperate with you. We will do whatever we want in the future on something else, but let's get the next question.

Any questions on this side?

Mr. BRAY, do you have questions?

Mr. BRAY. I don't have any questions at this time.

Mr. GUBSER. Mr. Secretary, there was discussed the possibility of calling out Reserves. Does that apply also to National Guard units?

Secretary McNAMARA. Yes; when I used the term "Reserve," I was using the small "r".

Mr. GUBSER. Thank you.

The CHAIRMAN. Mr. Bray.

Mr. BRAY. On page 4 of your statement, paragraph 3, you state—

The number of additional spaces required for this purpose is now estimated at 30,000, 18,500 in the Army National Guard and 11,500 in the Army Reserve.

Is that in addition to the 90,000 that are already enlisted, some of them for as high as 17 months, that have never been able to get their 6-month training? Is this in addition to that?

Secretary McNAMARA. These are personnel spaces, not necessarily spaces to be filled by new enlistees in the Reserve enlistments program.

Mr. BRAY. The reason I mentioned that, because this is not the Reserve hearing, yet you did mention this in your statement, and I think entirely properly so. But there are now, and I recall I expect a score of times, a response to calls that I received, some from Indiana, and some from other States, as to their inability to get the 6 months. As you recall, it is the law that the Reserve and National Guard—that is, all of the Reserves—if they haven't had previous military training, are to have this 6 months. I think in some cases it is down to 4, and in some places up to 9, but generally it is called the 6-month program. Are you aware of that program?

Secretary McNAMARA. Yes, I am.

Mr. BRAY. As I recall, every time that you testified on the Reserves, you mentioned the importance of this part of the program, and I have no objection to that. But it does worry me a little that now the last time I checked—I didn't find out how many—but the best I could find out there are 90,000—not 30,000—that have already enlisted, some as high as 17 months, to my personal knowledge, and have never yet been able to receive the training. I have made inquiries as to why, and I was told that there were not the facilities, the facilities to train the personnel.

I frankly think that is a rather serious condition, as you already have three times the number of spaces, already waiting, for training. Maybe they cut off enlistments which was necessary because they couldn't get those trained. I know recently you have a pretty heavy load, but some of these go back to my knowledge 17 months. I know they have tried to see if they couldn't get them trained. Until we get something down on that it is going to be a serious matter to make the Reserves effective, as you say you desire, and I know we all desire.

Secretary McNAMARA. Well, the answer is, first, your facts are essentially correct. I don't know of any 17-month cases, but the fact is that the backlog of enlistees in the program awaiting training, which normally runs around 35,000 to 45,000 men, has increased substantially above that, and is probably now some place around 90,000 although I am not exactly sure.

Mr. BRAY. I called several times to get this information, and, frankly, perhaps you are doing your best to get them trained, but that is a rather serious thing, and it was brought to my attention very forcibly by a group of women the other day who had something like 100 signatures why the boys were being drafted while there were 100,000 people enlisted that we have not been able to take to training camps.

I wrote back the best I could. It wasn't a very good letter, because I didn't satisfy them. I want to mention that this is a very serious thing, and I do not believe we have given competent consideration to the whole Reserve program until more real effort is made to train them.

Secretary McNAMARA. The problem is twofold. First, we don't need the men in the Army Reserve, but we are required to have them

in order to meet the established ceiling of 270,000. Second, we don't want to divert trained personnel from the Active Army to form training cadres at this time to train people we don't need. We will be able to train a large number of them in fiscal 1967. By the end of fiscal 1966 the number should build up to 135,000. That compares with a normal level of about 35,000 to 45,000. I think I used the figure of about 90,000 today, and I suspect that is about right.

Mr. BRAY. Yes; I heard more than that—

Secretary McNAMARA. I think it is probably right, but it will build to a total of 135,000, I think, by the end of fiscal year 1966.

Mr. BRAY. I see.

Secretary McNAMARA. Then we estimate that it will grow to about 145,000 by the end of fiscal 1967. Currently we plan on training 52,000 of these men in fiscal year 1966 and 135,000 in fiscal year 1967. I think it would be a great mistake at the present time to direct trained Active Army personnel to train these individuals who we really do not need now.

Mr. BRAY. I am glad you think you don't need them. I thought the manpower shortage was going to get serious.

Now, on page 3, the first paragraph, you state:

For the Air Force, an increase in airlift aircraft utilization rates, from 5 to 8 hours per day for Military Airlift Command (formerly MATS) aircraft, and 1.5 to 5 hours per day for C-130E's in other commands.

That is a matter I became rather interested in in the Airlift Subcommittee, in 1960. I was on each of the Airlift Subcommittees as they have been appointed.

Of course, airlift applies to MATS, and also the TAC; that is the troop carriers, and the C-130E's. As I recall, we had a hearing here a short time ago on the airlift, and General Strike testified. We asked him what his needs were, and he discussed them very frankly, and I think very thoroughly. He mentioned the need of more C-130's, and gave us a very good reason and explanation for those needs. But also we discovered that the 130's were not manufactured; is that true?

Secretary McNAMARA. Yes, the C-141 followed the C-130, and is produced by the same company in the same plant.

Mr. BRAY. I believe, if you will read that testimony, you will see that the needs are entirely different. The 141 does not take the place of the 130's, and as I understand it it was never intended to take the place of the 130's. I am not arguing on that, because, after all, you are going to do as you please on that, but I am merely bringing this in as a matter of record, and he did say he needed the 130's, and gave the reason why he needed them.

We asked what the replacement was for the 130's, I don't think we got the answer from him, somebody else suggested that it was an entirely different plane far in the future. I believe it was some type of helicopter that will not be in the inventory until the seventies, this is a long gap.

We asked him what would take the place of the 130's, and he said the 119's. He said they could not do the job of the 130's, but in many instances in the theater they could substitute, you know, for the 130's. We asked him how long it would take the crews who are flying the 119's, to be able to adapt to the 130's, or a similar plane. Well, he said, as I recall, it was something like 30 days, there was great simi-

larity. Then I asked him how the Reserves, National Guard, 119 squadrons, would function, if he knew. He said "Yes," he was very well acquainted with them. He pointed out that they had emergencies opening up all over the world, and I asked if they functioned as well as the regular unit. He said "Yes," they are a very dedicated group.

Now, I am coming to the question I want to ask you. The power in Indiana, it is not in my district, so you are not hurting me any—it is a Democratic district—you are laying down and deactivating and giving the order to 119 squadrons, which to my personal knowledge is full strength at 1,100. I know the instance of one man who drives 200 miles, every drill, without any mileage at all, and is close enough to me, although not in my district, but I do know about the situation. They are needed. They can do any job yet. You have not ordered them activated. I am not quarreling with you for activated power. I want to quote to you from the New York Times on December 7, and it says—this is just the day after you closed the bases—I am questioning the closing of the bases:

As Mr. McNamara laughingly acknowledged, at a Pentagon news conference, the latest action of bases is certain to provoke new congressional inquiries, but Congress has no power to block the action. Mr. McNamara affirmatively indicated as in the past he would not change his decision in the face of objections.

You didn't say "deactivation," and, to me, in all fairness, it is very hard to understand why you deactivate outstanding volunteers, two squadrons, that have the accomplishments, as they do. I am not suggesting you close any base in the United States, there is nothing we can do about it, we think some of them should not have been, but that is not in my district, and it doesn't worry me.

But I do wish you would check on deactivating two squadrons and we heard Paul Landes. I don't know any man in the United States who doesn't have respect for him and the job he has done. I wish you would look that over, and some time tell me just why you have deactivated those people. They are crying about it, and they are a very dedicated bunch. I also checked on their maintenance. They can do all of their maintenance themselves. They are a fine squadron. Their maintenance section does an A No. 1 job, a superior job. To me it is serious.

Secretary McNAMARA. Mr. Bray, may I respond to your question?

Mr. BRAY. If you care to.

Secretary McNAMARA. First, I should like to have the opportunity, Mr. Chairman, to insert in the record at this point whatever the pertinent statements were from the press conference you referred to. There was a transcript made. I am quite confident the report is not as you have read from the newspaper.

Mr. BRAY. Do you want to read it?

Secretary McNAMARA. I am just saying I am quite confident—

Mr. BRAY. I am not misquoting it?

Secretary McNAMARA. I am not suggesting you are misquoting the newspaper.

Mr. BRAY. This quotes you.

Secretary McNAMARA. I don't know that they quoted me. I am not sure that is in quotes. You didn't read it as in quotes. In any case, I would like to insert in the record, Mr. Chairman, if I may.

(The following information was received for the record:)

The article that Mr. Bray refers to appeared on page 1 of the New York Times on December 7, 1965, under the heading of "Pentagon Orders 149 More Bases Shut or Reduced." The referenced paragraph extracted from the article reads as follows:

"As Mr. McNamara laughingly acknowledged at a Pentagon news conference, the latest action on basis is certain to provoke new congressional 'queries'."

"But Congress has no power to block the actions. Mr. McNamara firmly indicated that, as in the past, he would not be persuaded to change his decision by any congressional objections."

The transcribed record of the news briefing clearly indicates that contrary to the statement quoted above, the Secretary of Defense inserted a clause into the written material handed to the press stating:

Secretary McNAMARA: " * * Just for your information, fellows, I inserted a clause that is not in the written material you get, and it is this: 'Subject to congressional review of certain of the actions'—so there's no misunderstanding on that."

Other references to congressional review which appear throughout the transcribed testimony follow:

"I should call your attention to this point, that on January 10th of next year, full reports for all base closures affecting more than 250 people will be filed with the Armed Services Committees of the Congress in accordance with section 611 of the Military Construction Act of 1966, and no closures of bases affected by that act will take place until 30 days after January 10, 1966."

PRESS. "Mr. Secretary, would you go ahead with these closings in the event that Congress objected to some of them?"

Secretary McNAMARA. "Well, I think it depends on the basis for their objection. I don't want to anticipate or speculate on whether they'll object or how we would respond to an objection."

PRESS. "But there's nothing in the law which forbids you from going ahead if you wish to?"

Secretary McNAMARA. "No, no, there's nothing in the law that requires that we go ahead either, Jack, so I don't want to speculate on how they'll respond. I think that these are—have been given very thoughtful consideration by the services, and I've personally gone over all of the justifications. They appear adequate to me as they do to the service Secretaries and the chiefs of the services, and we'll be very happy to discuss them with Congress."

PRESS. "Your parenthetical expression about this all being subject to congressional review—"

Secretary McNAMARA. "We're—we're required by legislation."

PRESS. "But it's still a fact under the law that you may close them regardless of a congressional review. I didn't—"

Secretary McNAMARA. "No, the law simply requires that in certain cases those specifically referred to in section 611(a), that we not act to close until 30 days have elapsed from the time when we present to Congress our proposed action, and since we can't present that or are not presenting it in this case until January 10, it means that for those specific locations, and I think we'll be happy to identify those for you on Wednesday, we will not act until 30 days after that material has been presented to Congress."

PRESS. "Mr. Secretary—"

PRESS. "You can take any action you want, then?"

Secretary McNAMARA. "No; you can take any action that's authorized by law."

Mr. BRAY. It was in quotes.

Secretary McNAMARA. The pertinent passages from the transcript of the press conference. I do not believe the newspaper report is a correct reflection of my attitude or feeling in this matter.

As to the C-130's, there are ample C-130's, in the Airlift Command, to add to the TAC Command resources, if that is desirable and necessary. It isn't necessary to go into the Reserve to use the C-119, which as General Adams said, as I understood you to say, is not a substitute for the C-130.

Mr. BRAY. He didn't say it wasn't satisfactory, but he did say it could substitute for that, and he said you needed far more than you had.

Secretary McNAMARA. Our problem is to get an aircraft we can use in many types of contingencies, and the C-119 with its short range and modest load-carrying capabilities is not that kind of aircraft. It is being phased out of the force completely for that reason as the total airlift capacity is increased. This committee for years, long before I came to the Department, emphasized the need for airlift. We have taken into account those recommendations, and have vastly expanded the airlift you are all familiar with that. Expansion of the airlift using the C-130 as a basis is ample for whatever TAC requires. We have them, but we do not have all of them by any means in TAC; the bulk of them are in the Military Airlift Command, and can be shifted over to TAC if it becomes desirable. As a matter of fact, by the end of fiscal year 1967, all but two of the active forces C-130E squadrons will have been transferred to TAC.

The C-141 is a much more satisfactory aircraft for the Military Airlift Command, and that is why we are buying it for that Command.

The CHAIRMAN. Is there some consideration being given to increase the procurement?

Secretary McNAMARA. We did, Mr. Chairman. We now propose to buy 19 more C-141's than previously planned, 16 more in fiscal year 1966 (for a total of [deleted]) and 3 more in fiscal year 1967 (for a total of [deleted]).

The CHAIRMAN. It has proven satisfactory?

Secretary McNAMARA. It has proven very satisfactory. It is a low cost, efficient, very effective aircraft and we wouldn't think of buying C-130s in their place. But if we did need additional airlift capability before the C-5A comes in, we would wish to buy C-141's. We don't see the need for maintaining the C-119's in service indefinitely, and therefore, we propose to reduce the C-119 force gradually over a period of 3 or 4 years as overall the airlift capability continues to increase. When the C-119s go out during fiscal 1969, the airlift capability will be over 450 percent what it was in fiscal year 1961.

The CHAIRMAN. Wait a minute, did you say when the C-141's go out?

Secretary McNAMARA. C-119's. I perhaps misspoke. When the C-119's go out of the force in fiscal 1969, the airlift capability will be over 450 percent what it was in 1961. We have ample aircraft for TAC, there is no question about that. We could use additional aircraft for the Airlift Command. But when the C-5A comes in, the capability will have doubled between fiscal year 1969 and fiscal year 1972.

The CHAIRMAN. As a matter of fact, I doubt if we will ever catch up with our requirement for airlift?

Secretary McNAMARA. I doubt it, because between 1961 and 1971, say roughly that 10-year period, the airlift capability will have increased nearly 10 times.

The CHAIRMAN. I gather you are having a little difficulty in getting spares for the aircraft?

Secretary McNAMARA. For the C-141?

The CHAIRMAN. For the 141.

Secretary McNAMARA. I hadn't heard that, but it is entirely possible and not unusual for a new aircraft just entering the inventory to encounter some spares shortages until actual experience can help estab-

lish the inventory levels to be maintained. We are certainly utilizing them at a higher rate than originally planned, although I think we are justified in that.

The CHAIRMAN. I think you are.

Secretary McNAMARA. This increase from 5 to 8 hours per day for the Military Airlift Command aircraft, both the C-141's and C-130's, increases our effective capability by three-fifths, or 60 percent. It is a tremendous increase. When we did that we put more spares on order. You authorized us additional funds.

The CHAIRMAN. I hope you recognize that, that is very important?

Secretary McNAMARA. We need the spares and the men to carry this increase in utilization rates out. We actually increased them before we got all the men on board. We also know that we might expect a few maintenance problems before we trained the additional maintenance personnel, but we are getting more effective use out of these aircraft now; that is, more ton-miles of airlift per month.

The CHAIRMAN. I think 8 hours is a lot of use.

Secretary McNAMARA. I know it is. I think this is an excellent program, and I strongly support it.

I think we can meet any needs of the type Mr. Bray pointed out by shifting aircraft from the Military Airlift Command to TAC, if and when that is necessary.

Mr. BRAY. Mr. Secretary, you always talk about materiel. Do you believe that the personnel, trained, dedicated personnel, can take the planes, is of any value if they are volunteers?

Secretary McNAMARA. There is no question but what they are of value.

Mr. BRAY. OK.

Secretary McNAMARA. But there is no sense in having them manning unneeded obsolete aircraft, and the C-119 is fast becoming an obsolete aircraft.

Mr. BRAY. You didn't say about taking planes, you deactivated, and these people are leaving, and there are 1,100 of them—they have done a superior job. It looks to me as if you are going too much to materiel and forgetting every idea of personnel. Maybe not. That is the way it appears to me. I do not see any other answer to your decision on that.

Secretary McNAMARA. Well, I don't believe that we do a man a favor or our society a favor by associating them with a piece of equipment, whatever it is, that we have no use for. I do believe—

Mr. BRAY. Mr. Secretary, when you went from the M-1 you didn't deactivate because you changed to a different one?

Secretary McNAMARA. We turned the new rifles over to the old rifle companies, but we didn't keep—

Mr. BRAY. You didn't deactivate the unit because you changed the rifle, did you?

Secretary McNAMARA. That's right. We didn't activate new M-14 companies. We gave the M-14's to the existing M-1 companies. We couldn't do that in this instance because we didn't have C-130's to give to all the Reserve units now equipped with C-119. So I know of no justification for keeping personnel doing something we no longer require. It is far better from their point of view, their own morale, and the efficiency of our society, to let them do something else.

Mr. BRAY. You are not putting them on something else?

Secretary McNAMARA. They will be working on something else.

Mr. BRAY. Why didn't you tell them that; they got the word they were deactivated.

Secretary McNAMARA. They have that time available for something else. Many of them are transitioning to other aircraft, although perhaps not in the unit you are speaking of. But the C-124's in the Reserve components are increasing as the C-119's are phased out. Many of the Reserve units are transitioning to those aircraft.

Mr. BRAY. The idea is, you are talking about materiel. If you issued a directive they were going to change planes some time in the future, but, no, the order was deactivation.

Secretary McNAMARA. Some of them are being deactivated, Mr. Bray, and others are being switched over to different aircraft. I don't know the circumstances of the squadron you are speaking of.

Mr. BRAY. I don't know, either.

General Wheeler, how much damage, as to our war effort, was done by the 47 days or 37 days' cease-fire in North Vietnam?

General WHEELER. I don't think it is possible to make any assessment, Mr. Bray. Let me recite some facts. There was an infiltration going on through Laos, into South Vietnam, before the bombing pause. It continued during the bombing pause, and it is going on today since we have resumed operations. Whether there was a sizable increase in infiltration during [deleted].

Mr. BRAY. I am not critical.

General WHEELER. I cannot answer the question, Mr. Bray.

Mr. BRAY. I just referred to an article here today in the Washington Daily News, where it says the number of missile sites increased to over 60, and during the lull Communists worked day and night to build up communications, and had large military truck convoys at the time, and increased the North Vietnamese military units in Laos and South Vietnam, and they report today there may be as many as 10 North Vietnamese regiments, as much as 15,000 to 20,000, now operating from North Vietnam. That is an essential piece of news.

General WHEELER. Let me amplify my remarks, Mr. Bray. [Deleted.] There were at least seven positively identified North Vietnamese regiments in South Vietnam prior to the pause. One other regiment General Westmoreland considered as probable, and another one as possible. He accepts actually nine regiments as having been there on December 24, 1965 [deleted].

As to the activities in the north. It is quite true that during the pause, the North Vietnamese, as you would expect, worked around the clock rebuilding bridges, building fords, otherwise improving the lines of communication, and they were moving materiel in North Vietnam in daylight. Prior to the pause, our pilots had very rarely seen a vehicle on the roads in daylight. During the pause they saw a number of them on a number of occasion moving materiel toward the south.

[Deleted.]

Mr. BRAY. Have you run into 120-millimeter mortar fire yet?

General WHEELER. [Deleted.]

Mr. BRAY. Then there is one last question. We were told the other day, from information from these two defectors, that B-52's worried them more than any other bombing. Why was that? They went right down through—

General WHEELER. The factor which apparently worries them the most is that the weight and the acceleration of the 750- and 500-pound bombs are such that they will penetrate deep into the ground before they go off, and then they will collapse the tunnels and caves complexes which the Vietcong had been led to believe were absolutely invulnerable from any sort of bombing. It rather horrifies them that these installations which they must have spent literally months in building can be destroyed by one bomb, collapsing the whole section.

Mr. BRAY. Do they use a delay bomb?

General WHEELER. It is a [deleted] delay, I believe.

Mr. BRAY. [Deleted.]

General WHEELER. [Deleted.]

One other reason the B-52's scare the Vietcong is that the planes fly so high and are going at such speed that the first indication the people on the ground have of their being under a bombing attack is, to quote one of the PW's, "The ground begins to erupt." In other words, contrary to the fighter bombers coming on top of them, these things come down out of the sky without their knowing about it.

Mr. BRAY. There was an article from, I believe, Hanoi, which I read rather religiously, how effective it was on this delay bomb. I thought that would be a little—

General WHEELER. On the contrary, Mr. Bray, we are improving the delay bomb.

[Deleted.]

General WHEELER. No, sir; on the contrary we are trying to improve the capability.

Mr. BRAY. Thank you, General Wheeler.

The CHAIRMAN. Mr. Bennett.

Mr. BENNETT. I think the committee is desirous of giving the military all the tools and manpower needed to have a victory in South Vietnam. I am not technically informed enough to ask you any technical questions, but there are some broader things which do concern me very much.

I would like to ask the Secretary, if I might, is the present projected claim for the South Vietnam war, in South Vietnam, to win the war?

Secretary McNAMARA. Yes; I think I can say that without qualification. I cannot tell you when or how much will be required to do it, but that is the objective we have and that is the objective General Westmoreland is building his strategy and plans to.

Mr. BENNETT. Without revealing anything you should not say in this secret meeting, can you tell me so I could understand how we are winning, or how we plan to win in South Vietnam?

Secretary McNAMARA. Well, as we said before, the basic strategy is to prove to the North Vietnamese and Vietcong in the south that they cannot win while punishing them in the north. I think we are making some progress. We know we defeated their monsoon offensive last July—or last summer. I don't think there is any doubt of that.

We believe the B-52 bombing Mr. Bray alluded to a few moments ago has adversely affected the morale of the Vietcong. Our military attacks on them which are more frequent and heavier than 6 months ago, are also proving effective in harassing them, forcing them to move, destroying their bases, and otherwise adversely affecting their

morale. I think that the Giap statement that was published yesterday, or referred to yesterday in the press, is another sign of that. He points to our tremendous weight of force, materiel, and manpower, and in effect, says "Don't worry about it, we can outlast the Americans." Really, that is what they are depending on. They now recognize they cannot beat us quickly nor can they beat us in direct combat; they can only hope to exhaust our patience and our will and our courage.

Mr. BENNETT. Have we more land today under United States or South Vietnam domination in South Vietnam than we had a year ago?

Secretary McNAMARA. No; I don't believe so.

Mr. BENNETT. From what you said, then, the next question that comes to my mind, following along the lines of your strategy and how you expect to win this war is, why don't we make them pay the heaviest penalty we can make them pay and as promptly as possible?

Secretary McNAMARA. I think that is a good question. The answer is really twofold.

First, there is a real doubt whether there is any feasible way to bomb, or acceptable way to bomb which will break their will. Theirs is not an industrial society, as General Wheeler pointed out this morning, it is an agricultural society.

Mr. BENNETT. I want to interrupt you at this point. The statement you just made disturbs me when I remember what you said about 3 minutes ago.

Secretary McNAMARA. I am speaking about the political leaders.

Mr. BENNETT. You say nothing is going to change their will?

Secretary McNAMARA. I am speaking of the will of the political leaders to carry on the war effort. As I understood you were referring to the bombing effort in the north.

Mr. BENNETT. I am not getting technical at all; it is a broadbrush question. I asked you whether we could expect victory from what we are doing, and I got some questions back, and some answers back. Among the answers I got back were that you felt eventually they would have a fading of will to go ahead, and the last thing you just have said to me when I interrupted you was to say that there is no hope for a break of their will. To me those are inconsistent statements.

Secretary McNAMARA. I question whether there is a reasonable expectation of breaking their will by any practical type of bombing program in the north alone. We propose to break their will by proving that they cannot win in the south, and by showing that as long as they continue to try to win in the south they will have to absorb tremendous losses in the south, and they will continue to be bombed in the north.

But the basic element affecting their will to continue the aggression will be the obvious failure of their military campaign in the south. It is this failure which will lead them to a settlement acceptable to us or to cease their support of the insurrection in the south.

Mr. BENNETT. Therefore, even though you originally said—

Secretary McNAMARA. May I go back to one question you asked a few minutes ago?

The question I understood you to ask was: "Cannot we break their will by more extensive bombing programs in North Vietnam?" This

is a question frequently asked of us. I think it is a very important question. And I would answer by making two points.

First, there is a real doubt that any practical bombing program, no matter how extensive, would break their will in the North. They are not an industrial society. They are an agricultural society. The experts who have studied their philosophy and traditions do not believe that an extensive bombing program would cause them to change their decision to support and direct the insurrection in the south, so long as they thought they had a chance for ultimate victory.

Mr. BENNETT. Mr. Secretary, the only reason why I mentioned this was the framework that you had originally set up in answer to my earlier question. The framework you set up there was you were going to continue to harass and impede and make them uncomfortable in South Vietnam, and you also said you were going to impose penalties upon them, which I thought you meant in North Vietnam.

Secretary McNAMARA. Yes; but the primary element affecting their decision to terminate the war, or to settle it on an acceptable basis to us, would be not the bombing in the north but the elimination of prospects for victory in the south. Without the latter, we do not believe any amount of bombing in the north will break their will. [Deleted.]

We can continue and should continue the bombing program directed against the military targets in the north while taking our primary military action in the south.

Mr. BENNETT. I understand your thinking on the subject. Maybe I will come back to you. I don't want to trespass on everybody's time, but I would like to repeat some of this line of reasoning to General Wheeler, if I may, because it is hard for me to understand what has been said to me, if it is to be associated with a political implication.

I would like in this conversation that we have here today to think a little bit about the difference between the political conversations, or implications, and the military implications. I would like to associate these two lines of thinking, because I think we might get ourselves in the position where, because of the mixture, we have been making poor judgments in certain things.

I would like to ask General Wheeler, in view of the fact the Secretary has testified we expect to make them pay some penalties for both north and south, wouldn't you feel, as a general, as a military man, disassociating your thinking at this point from the purely political consideration, that from a military standpoint it would be a more ready victory, or more likely victory, if we made the enemy stay more north of the boundary line between North and South Vietnam?

General WHEELER. [Deleted.]

Mr. BENNETT. I would like to add another purely military question, which will lead up to the last part of the conversation that the Secretary and I indulged in. That is, from the standpoint of assuring military consideration—entirely disassociated from politics or international implications, or what people think of us or anything like that—is South Vietnam in fact of any vast or very important military value to the United States and its interests?

General WHEELER. I will have to answer that "Yes," Mr. Bennett, but I will have to qualify it by saying this: My schooling, and my approach to things military, is such that I can't recognize any military

action as having any great validity unless it has a political base on which to stand, or you might say a political objective to be achieved. Fighting purely for the purpose of fighting is nothing more or less than a Roman holiday; I mean people get killed for no purpose. There has to be a political objective to be sought; then your military effort becomes meaningful.

I would like to go back to your earlier question, if I might, for just a moment, because I answered you purely in military terms, and I would like to make this point :

I agree, and I think that my colleagues all agree, that we must defeat the Vietcong and the North Vietnamese forces in South Vietnam if we are going to win this war. In other words, we can lose the war in South Vietnam if we permit ourselves to be defeated. [Deleted.]

I am sure that our air efforts against North Vietnam will increase the chances of our winning at less cost in South Vietnam. In other words, I believe that we must have a two-pronged campaign, one of which is a realistic, properly directed air campaign against the North designed to reduce their actual physical capabilities to supply men and materiel to the South, and, to restrict their capabilities of moving men and materiel within North Vietnam and from North Vietnam into South Vietnam. The other part is to mount the type of aggressive campaign against the Vietcong North Vietnamese base areas which General Westmoreland is undertaking at the present time.

These two recent operations, MASHER and DOUBLE EAGLE, for example are designed to do exactly this—to seek out and destroy the Vietcong North Vietnamese base areas, which they need in order to resupply, reequip and train themselves for the continuation of their military operations.

Mr. BENNETT. Then this is going back to the second part of my question. I would like to ask you, what is the military significance of South Vietnam, a sliver of land, a peninsula which we don't hold, surrounded by large areas in which we do have substantial holdings [deleted] what is the peculiar nature of this beachhead if we get the whole thing that gives it such a military significance?

General WHEELER. The significance is twofold. One, the strategic location of the country itself, down on the shoulder of southeast Asia, and two, the fact that it is being sought by the Chinese Communists and the North Vietnamese as a part of their national expansionism designed, in my judgment to take over all of southeast Asia when and if they can.

Mr. BENNETT. In other words, it is a strong beachhead for them?

General WHEELER. That is correct, sir. It also is a channel through which they can exert their power further to the south, and I would say also to the west against Cambodia, Thailand, Burma, down into Malaya, and so on.

I believe that when and if Red China, using perhaps "cats paws" in the way of the North Vietnamese, succeeds in taking over southeast Asia, the other countries—particularly the inland countries in that area, are going to have to accommodate themselves to the Chinese Communists, because historically, the smaller and weaker nations on the periphery of a great power—have to accommodate themselves to a great power. While China is not a great power by Western standards, it is a great power today by Far Eastern-Asiatic standards, and I assume will become more so as the years go by.

Mr. BENNETT. Do you think Red China is determined to take over this area?

General WHEELER. I think there is no doubt about it, Mr. Bennett.

Mr. BENNETT. That being the case, why haven't they done so today?

General WHEELER. They have been trying to do so for 4,000 years, Mr. Bennett.

Mr. BENNETT. Could it be because they don't think they are winning?

General WHEELER. I think the continuing refusal to undertake any sort of a political accommodation in the struggle out there arises from the fact that both the people in Peiping and the people in Hanoi think that in the long term they are going to win this war.

Mr. BENNETT. But do you think this will continue until we do win?

General WHEELER. Probably, until we prove that they can't win. [Deleted.]

Mr. BENNETT. I have no further questions.

Mr. GUBSER. Mr. Secretary, you recognize the President, the Commander in Chief of the armed services, has the full and complete and absolute unquestioned right to determine the extent to which we will bomb the north in this case. He made that determination.

I would like to know if it is not violating safety privileges, whether or not the Department of Defense concurs in the present policy of bombing the north?

Secretary McNAMARA. I strongly do. And I think if you could take the time to discuss more fully with both General Wheeler and me, you would see why I support that policy, and why I believe the answer he just gave also supports that policy. [Deleted.] There is a vast difference between the decision as to whether to bomb a particular military target, or not bomb that target and decide to bomb some other military target, and the decision to undertake a totally different policy of endeavoring to apply, by bombing, so much force to North Vietnam as to break the will of its political leaders.

Generally speaking, those who are quarreling with the bombing program today are proposing the latter policy; that is, trying to win the war in South Vietnam by breaking the will of the north by an extensive bombing program. I think this is an entirely appropriate proposal to examine. Our objective ought to be to win that war as fast as we can and with minimum losses to ourselves. So we have examined that proposal intensively, and I see no evidence whatsoever to support a conclusion that you can win the war just by expanding the bombing program in the north beyond essentially its present character. [Deleted.]

I think General Wheeler said—and he can correct me if I am misstating his remarks—that bombing in the north, without showing them that they can't win in the south, will not win the war. This is the crucial point, gentlemen. [Deleted.]

Mr. GUBSER. Is it proper for me to ask whether or not the Joint Chiefs, the composite views of the Joint Chiefs, concur with that?

Secretary McNAMARA. I think General Wheeler should reply.

General WHEELER. I would say that, in the general scope of the program there is no disagreement. [Deleted.]

Secretary McNAMARA. Yes, I think that is a completely fair statement [deleted].

The Chiefs believe that an expanded bombing program, of the type so frequently discussed in public, could win the war by breaking the will of the north. This is the crucial issue.

General WHEELER. The Secretary's statement is correct.

Mr. GUBSER. To put it another way, you don't believe there is a threshold of pain which you can reach by escalating bombing which will force them to quit, by decision, in the north?

Secretary McNAMARA. I don't believe so, and I don't believe the Chiefs do.

General WHEELER. I don't believe so either.

I would like to make one statement, Bob.

Secretary McNAMARA. Certainly.

General WHEELER. [Deleted.] I know my colleagues will be appearing before you, and you can ask each one of them what his own personal opinion is. I am sure you will get a frank answer.

However, I am sure that no one of them believes that the bombing program, per se, is going to win the war. They will all tell you, as I told Mr. Bennett, that a bombing program is an indispensable and valuable part of our overall war effort in southeast Asia.

Mr. GUBSER. I think that is a very important distinction that very few people have been able to draw.

[Deleted.]

Mr. GUBSER. I have two more questions which may turn into just one. [Deleted.]

Thank you.

The CHAIRMAN. Thank you, Mr. Gubser. Now, Mr. Byrne.

Mr. BYRNE. Mr. Chairman, Mr. Secretary, I still believe in giving the tools to win this war.

I have one question to ask you. Recently two helicopter manufacturers were allowed to acquire new facilities to meet the production schedules. Why is expansion allowed at the time when surface facilities at other helicopter manufacturing facilities are available?

I noticed in your statement at page 20, where you increase the UH and the CH-47A from [deleted] a month.

Secretary McNAMARA. It breaks into two questions: (1) should we use a different helicopter in lieu of the UH-1B/D Iroquois in order to bring another manufacturer in, or (2) if we shouldn't, should we bring another manufacturer in to make the Bell helicopter, the Iroquois?

The answer to the first question is: There is absolutely no question in the minds of the Army but what the Iroquois is the best helicopter available to them, and they far prefer it to any other alternative. And I think they are absolutely right in that judgment. The other question is more difficult to answer. Would we be better off with two manufacturers rather than one? I would strongly favor two because of the competition it would bring. I am not thinking primarily of a price reduction, although I suspect the price reduction would follow, but I think in terms of quality, in terms of delivery time, and in terms of general effectiveness that it would be wise to have two sources of supply for a weapon system as important as that. But we are faced with this problem; we had been producing at a rate of about [deleted] a month. We wanted to almost [deleted] that rate and do it as fast as we could. It turned out that we could do it fastest and apparently cheapest by expanding Bell's production.

If we want to go beyond this level of [deleted] a month, [deleted] from Bell, I think we should give serious consideration to another source, and we are examining that possibility. But these were the considerations that led to our decision.

MR. BYRNE. Thank you, Mr. Secretary, because those people are asking me about this.

Secretary McNAMARA. I could imagine. If we can help you at all, if you will call on us I will be happy to do so.

The CHAIRMAN. Mr. Chamberlain.

Mr. Chamberlain will be the last witness this afternoon. Mr. Secretary, you will be here at 10 o'clock?

Secretary McNAMARA. Yes, sir; I would be happy to stay here later tonight if the committee finds it convenient.

The CHAIRMAN. Do you have any more to mention on your trip?

Secretary McNAMARA. It still looks like a real possibility, Mr. Chairman. I don't want to mislead you on this, because it isn't firm by any means, but it looks like a real possibility. General Westmoreland is scheduled to be in there today.

General WHEELER. He got there this morning.

Secretary McNAMARA. I am very anxious to discuss some matters with him before he leaves, and he wants to go back early in the week. I am not absolutely sure I am going to do it.

The CHAIRMAN. When we finish with Mr. Chamberlain, we will recess until 10 o'clock tomorrow morning. Tomorrow we may not take as long a lunch as we did today; all the members will have some questions.

I am sure we will finish tomorrow, Mr. Secretary.

Go ahead, Mr. Chamberlain.

MR. CHAMBERLAIN. Thank you, Mr. Chairman. I have a few questions, Mr. Secretary.

As we have been hearing of your projected requirements for additional ammunition, I can't help but think of the sad situation we have had here, where we had strikes at one plant. We were having shortages. The whole thought running to the civilian economy, and of our boys being over there, and this strike, I wonder if you would address yourself to this problem of having adequate, duplicate sources of supply, to give us some assurances along this line?

Secretary McNAMARA. Yes.

MR. CHAMBERLAIN. This is a situation that cannot be tolerated at this time.

Secretary McNAMARA. An ammunition shortage can't be tolerated, I will agree with you there.

MR. CHAMBERLAIN. We can't tolerate having our boys over there and having a labor difficulty holding up the ammunition.

Secretary McNAMARA. We can't tolerate an ammunition shortage, this I can agree with you on. We didn't have one then and we don't want to have one. Second, can we tolerate a strike in a munition plant when it isn't causing an ammunition shortage? My answer there is that we've got to. The question was addressed to me; Would you recommend application of the Taft-Hartley law to the Olin Mathieson situation? And my answer was that so long as that strike is not causing us an ammunition shortage or otherwise adversely affecting military operations, we should not. I am unequivocally opposed to the Government stepping into the collective-bargaining process to relieve

the parties of the right and obligation to bargain. And this is what you do when you apply the Taft-Hartley law. So I strongly recommended against it. It happened that others agreed.

Now, another good question I think is: Should we have duplicate sources for this kind of an item?

My answer is, "No, if the duplication of facilities is provided as protection against strikes." The Government should not have to buy strike protection in the form of a physical plant. As it happens, we are bringing in another ammunition plant so that we will have two sources. But we are not doing it as strike protection. Rather, it is because of our requirements for our projected increase for the future, and we think it is justified for that purpose.

The CHAIRMAN. Let me interject this. I think one source is a dangerous thing to pursue, on a commodity so vital; duplicate sources are things that just ought to always be in order. I do not think the difference in the cost would be worth it.

Secretary McNAMARA. Mr. Chairman, I think duplicate—

The CHAIRMAN. I don't think we ought to consider the strike.

Secretary McNAMARA. That is all I am suggesting. A duplicate source as insurance against an emergency, or something of that kind, might well be justified. In this particular case, the single source was dispersed and another source was in existence, although not in operation it could be made so. At the time, it didn't seem wise or efficient to have two operating concurrently. As it turned out, because of the rising demand, we are bringing in the second source. We are giving it to the same contractor, Olin Mathieson, to operate because it constructed the facility.

The CHAIRMAN. I think this is wise, if some kind of sabotage should occur.

Secretary McNAMARA. If that is possible, a duplicate source is desirable.

The CHAIRMAN. A think so vital as this, we couldn't tolerate it.

Secretary McNAMARA. In this case we had an alternative supply source available; we just weren't operating it at the time. As far as strike protection is concerned, I personally doubt if the Government is justified in maintaining duplicate sources for that purpose. I am unequivocally opposed to the Government stopping a strike in a case like this one when it is not leading to an ammunition shortage or otherwise affecting the public interest.

Mr. ARENDS. Didn't they shut down the steel industries, either they did or didn't, as far as the contracts are concerned? You told them, if I read the paper correctly, they were out of the defense business unless they adhered to the price structure. Isn't that the way it was quoted in the papers?

Secretary McNAMARA. No, sir; one steel company—I think I am correct now—one steel company raised prices \$5 a ton, and we simply instructed our purchasing agents, as we do on all procurements, to buy from the lowest cost sources. There were two or three other major sources that hadn't raised prices.

Mr. ARENDS. Had the company that raised the prices been notified?

Secretary McNAMARA. I don't believe they were notified directly, but I think this became public.

Mr. ARENDS. Yes.

Secretary McNAMARA. This is quite unrelated to the question of duplicate sources for protection against strikes.

The fact of the matter is that the law requires us to buy at the lowest price, and I think that is proper.

Mr. ARENDS. Thank you.

Mr. CHAMBERLAIN. Thank you.

Mr. Chairman, you have developed the question that was in the back of my mind, backup source here, and now I gather from your response, Mr. Secretary, that this has been well adhered to by your people. At present time, do you foresee any problem in this area as far as having adequate supplies of ammunition to meet all contingencies we may face?

Secretary McNAMARA. With the exception of what I would call new items. For example, the 40-millimeter, air-launched grenade, which was type classified not too long ago, I have forgotten, perhaps a year or so ago. That kind of a new item, of course, we may be in short supply for a period of time after it is initially produced until stocks can be built up. Or there may be a case where we are using an old item in an entirely new way, such as the 750-pound bomb which is being dropped by strategic bombers, the B-52's, in quantities of [deleted] per B-52, against double-thick jungle canopy targets for area bombing. This is a use never anticipated when the inventory requirements for the 750-pound bomb were established.

Now, in that kind of a——

Mr. CHAMBERLAIN. Did you have any shortages there?

Secretary McNAMARA. In that kind of a case I can conceive shortages developing. We don't at the moment have a shortage of 750's [deleted]. Actually, the bomb racks in the B-52 are being changed to allow it to carry not 51 bombs at a crack, but [deleted] bombs, mixed between 750's and 500's. This is just a fantastic expenditure rate for these bombs [deleted].

[Deleted.]

Secretary McNAMARA. [Deleted.]

The CHAIRMAN. Who is doing that, Boeing?

Secretary McNAMARA. I don't know. Boeing is modifying the bombers. I think the Air Force helped design the rack. It is a tremendous step forward, and the Air Force has been very anxious to do this. I think they are wise. General Westmoreland has been pushing the use of these, I am sure he is wise to do so. [Deleted.] But except for situations such as these, the answer is we are generally in good shape on ammunition.

Mr. CHAMBERLAIN. Mr. Secretary, I would like to go back to the discussion of one of my colleagues here this morning, about the force level that we have in Vietnam at the present time, and the projections for the future.

I believe you told us that you are planning on from [deleted] by the end of February——

Secretary McNAMARA. We are planning to deploy [deleted] by the end of February, which means they will be there or on the way there.

Mr. CHAMBERLAIN. And then the discussion was as to the plans for the future.

Now, I certainly understand from your response that it will depend on the other circumstances as to how many we have to send. Now,

this morning's paper, on the front page, there was one story that said we planned to have 400,000 there by the end of the year. General Westmoreland told us we needed that, possibly [deleted] at some subsequent time. And I can understand why you wouldn't say how many we would have to have out there, that is not my question.

My question is, it is just like stretching a rubber band, you are going to stretch it, pretty soon no more elasticity, and it is going to break. With what we have to work with, men, materiel, and so forth, how far can we stretch this if we are required to?

In other words, if we are having responsibility here to raise and support armies, and to provide and maintain a Navy, I would like to ask you, can we, with what we have, meet any projected requirement?

Secretary McNAMARA. Mr. Chamberlain, I don't mean to be facetious, and I know you won't take it that way, but I am deadly serious when I say we are only short of one thing, and that is patience. What other things do we need? We need men.

Mr. CHAMBERLAIN. There is a shortage of bases back home where I come from.

Secretary McNAMARA. I know you are not conjuring up these problems, you are reflecting the concerns of our people. When I say we are only short of one thing, I mean our people are short of one thing, and that is patience. What do we need? We need men, materiel, and money. Money is the easiest thing to get, and the quickest to get, and we don't need very much for the kinds of things we are talking about in real terms. This is a tremendous supplemental we have before you. We are presenting a very large Defense budget for fiscal 1967, but just how large is it relatively? The fact is that the fiscal 1966 Defense budget plus the supplemental when related to our national product is less than the budgets of 5 of the last 6 years. The same thing is true of 1967. The presently estimated fiscal 1966 and fiscal 1967 Defense expenditures, as a percentage of gross national product, are lower than in 5 of the last 6 years. They are lower than fiscal years 1961 to 1964, inclusive.

With respect to materiel, this is simply money with a leadtime on it. We think we have adequate lead times here in aircraft, munitions, and so forth.

With respect to men, in terms of number of men, we are not short. We have a large enough draft pool and the equipment for them. It is the loss of men in conflict that we are thinking about. While we begrudge the loss of every man, I submit to you the number of men that are being lost and the number of men that may be lost are low in relation to the problem we face.

Now, with respect to patience. The risk to our Nation of not pursuing this course is so great, and the likelihood of higher casualties at some future time, so high if we don't pursue this course that we really have no reasonable alternative. So what is it that we don't have or may not have? Patience.

We are facing an enemy that counts patience as its most fundamental asset. It was only yesterday that General Giap, the director of their military operations, said exactly that. He was directing his remarks to his forces which, if you can imagine, lost 35,000 men last year, a loss rate in relation to their population higher than we have

ever experienced any time in our history. He was telling these men, who are dying by the score every day and every hour, "Don't worry about it. It is true the Americans have a \$700 billion gross national product, it is true they have a Defense budget of \$60 billion, it is true they have firepower, mobility, men, and money, don't worry about it. They can't stick it out. They don't have the guts. They don't have the spirit. They don't have the patience. That is what we have got to have and that is what is going to bring us victory."

You can read it yourselves. This is what he said. And that is why I say that we appear to be short of just one thing, and that is patience. I hope we don't run out of it.

Mr. CHAMBERLAIN. All right. [Deleted.] Can we meet whatever the requirement is?

Secretary McNAMARA. I believe so, Mr. Chamberlain. I cannot guarantee that we won't need additional funds above and beyond the supplemental we are presenting, and the complementary fiscal 1967 budget. Our supplemental and our budget for 1967 are based on: (a) an assumption that the combat operations in South Vietnam will extend through June of 1967 at relatively high levels. If later it looks as though they will extend beyond that date; that is, June 1967, then we will have to come back and ask for additional funds, probably a budget amendment or supplemental in fiscal year 1967, for long lead items.

(b) The supplemental and the fiscal 1967 budget are based on what I would call our present estimates of the likely requirements. If our present estimates prove incorrect as to the level of intensity of conflict, and they are certainly either going to be either too high or too low since it is most unlikely they will be exactly correct, then the budgets will have to be changed. If the estimates proved it too high, the budgets will be more than sufficient; if they prove too low, we will need additional funds. These are the assumptions.

I would say beyond that, the funds would be adequate.

Mr. CHAMBERLAIN. One final question. This is saying everything I said just another way.

Could you tell us how many men you could deploy in the field out there if it were necessary to do it?

Secretary McNAMARA. With what we have in here? Well, again, it depends on what schedule of deployment you are talking about, but I would say as I did earlier today, something on the order of [deleted] men in South Vietnam.

Mr. CHAMBERLAIN. [Deleted.]

Secretary McNAMARA. [Deleted.]

The CHAIRMAN. Thank you, Mr. Chamberlain.

Mr. CHAMBERLAIN. Mr. Chairman, could I ask another question?

The CHAIRMAN. Yes, surely.

Mr. CHAMBERLAIN. I will make it my final one.

The CHAIRMAN. All right.

Mr. CHAMBERLAIN. I wanted to inquire about your footnotes. You have a request in here for [deleted] Swift boats, and a mother ship, for our coastal patrol activities. Then over here in one of your tables, I believe table I, you mention [deleted] Swift boats, and you are increasing your forces there.

Could you address yourself to our total objective in providing small craft for this coastal surveillance? What we are providing you here,

is this going to give you everything you want, [deleted] or just comment quickly, if you will.

Secretary McNAMARA. We are still experimenting with coastal patrol activities, both as to the number of boats required and the type of boats required.

I can't tell you that this will be all we need. I think it probably will be all we need as we now see the problem. I don't believe we have any boats for that purpose in the fiscal 1967 budget, for example. I think that these Swift boats, plus the boats we have ordered previously to replace certain of the Coast Guard vessels, will be sufficient. I do believe that our Navy needs more small boats than it has been provided with heretofore. And I think, as the years go by, we should continue to add to that small patrol boat force. They are very cheap and they are very useful in certain circumstances.

Mr. CHAMBERLAIN. Have they been effective in coastal surveillance work?

Secretary McNAMARA. Yes, we have Swift's out there in operation and they have been effective. The Coast Guard boats have also been effective; yes, very much so. These small boats can go in shallower waters than destroyers and other large craft. Their personnel complement is much smaller. They are much easier to operate, much cheaper to operate, and I think more effective in this role than larger vessels.

Mr. CHAMBERLAIN. Thank you very much, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Chamberlain.

The committee will recess until 10 o'clock tomorrow morning. We will finish with the Secretary tomorrow morning.

Secretary McNAMARA. Thank you, Mr. Chairman.

General WHEELER. Thank you, Mr. Chairman.

(Whereupon, at 4:13 p.m., the committee adjourned to reconvene on Friday, February 4, 1966, at 10 a.m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Friday, February 4, 1966.

The committee met at 10:07 a.m., Hon. L. Mendel Rivers (Chairman) presiding.

The CHAIRMAN. We want to try to finish with the Secretary because the Secretary is making a trip.

Are you any closer?

Secretary McNAMARA. It is getting to look more and more like we will go, Mr. Chairman. We still haven't made a final decision, we probably won't know until tomorrow for certain.

The CHAIRMAN. Maybe if we could go to 1 o'clock?

Secretary McNAMARA. We would be quite happy to.

The CHAIRMAN. I want to make one or two announcements.

You wrote me, Mr. Secretary, inviting the policy committee to have breakfast with you. I think that is a very nice thing and very gracious thing on your part. We can't do it next week but what about the following week?

Secretary McNAMARA. We would be glad to do it in the next week.

The CHAIRMAN. I think it is a good thing.

Secretary McNAMARA. It will be excellent.

The CHAIRMAN. Further escalating our good relations with you.

I want to tell you it is a pleasure to go over this record of yours. When you have finished today the whole file will be made available to you.

Secretary McNAMARA. Thank you, Mr. Chairman.

The CHAIRMAN. Now, we don't make many releases from this committee, as you know.

Secretary McNAMARA. I know.

The CHAIRMAN. Seldom anybody makes any kind of a release from the committee. The only notice I have seen was on the 26th of January. Mr. Stratton placed your statement in the record, a eulogy of your admirable efforts, and he put that in the record when you testified before Mr. Hébert. Mr. Stratton isn't on the committee, but he had great interest and sat in the hearing.

Secretary McNAMARA. I was very grateful for that; thank you, Mr. Chairman.

The CHAIRMAN. I thought it was a very fine eulogy.

Mr. STRATTON. I thought I might do a little escalation of myself, Mr. Chairman.

The CHAIRMAN. It is not unusual for Mr. Stratton to do that on the slightest provocation.

Mr. Blandford, do you have anything?

Mr. BLANDFORD. No, sir.

The CHAIRMAN. Mr. Stratton, I think we had gotten down to you, or up to you, and I will recognize you. I hope we will try to make our questions as concise as we can so we can accommodate the Secretary to get away as soon as he can on this bill.

Mr. Kelleher has brought to my attention, maybe we can make one bill out of these two bills, and make one appearance before the Rules Committee, and have one battle on the floor, instead of two. I think we can work out something along those lines.

Mr. BRAY. The authorization for the materiel?

The CHAIRMAN. We will make one bill out of it.

Mr. BRAY. They won't have line items in them, will they?

The CHAIRMAN. As I say, we only have one appearance, I think we can do this.

Mr. BRAY. One blank check.

The CHAIRMAN. It is not a blank check, we have gotten some good testimony.

Go ahead, Mr. Stratton.

Mr. STRATTON. Thank you, Mr. Chairman, I will try to be as brief as possible in line with your good policy.

Mr. Secretary, I want to support the remarks of the chairman and the other members who have spoken already, to say that I am sure we fully support you in this bill. We certainly want to do everything we can to provide whatever is necessary for carrying on the fighting in Vietnam. And I think based on my own survey of my own area the people back home feel the same way about this situation. They, too, support our policy and want to do whatever is necessary to conclude the situation honorably. At the same time, I think we all recognize this is a complicated problem. We are faced with the same sort of thing we had during the Korean war, a limited conflict for limited political objectives, as you indicated yesterday.

While I think the people understand that better today than they did during Korea, it does create problems, particularly requiring us to explain what we are doing, over and over again. And in the course of this explaining we get into questions from our own people that I think needs some kind of an answer. It is in this spirit I ask some of the questions that I have, because they have been asked me, and I am sure as in the case of other members.

First of all, Mr. Secretary, I noticed just this morning in the paper—this, I think, is of interest, and perhaps you might comment on it—a report from Mr. Joseph Alsop, from Saipan, saying we nearly had the Vietcong on the ropes in November. The situation as it now exists was created by the infiltration of a substantial number of additional North Vietnamese regulars in the months—either in November or immediately thereafter.

Mr. ARENDS. Would you talk into the microphone so we can hear a little better, please?

Mr. STRATTON. I am sorry.

Is this report we nearly had the Vietcong on the ropes in November correct? If it is, doesn't it indicate perhaps our situation over there, if we can stop the infiltrations from the north, is not as hopeless or impossible as some of us have been led to believe?

Secretary McNAMARA. Mr. Stratton, I believe that the article probably overstates the relative military situation in November. I think it is correct to say that the introduction of U.S. combat forces in large numbers in the latter part of the second quarter of last year, and the early part of the summer, did, in conjunction with the South Vietnamese buildup which had been going on for some time, result in the defeat of the Vietcong monsoon offensive.

It is very clear, I believe, that we were correct a year ago when we were saying publicly and otherwise that the Vietcong had been building up their force levels, but up to that time had not yet committed the expanded force to battle. And we assumed that they would do so at a time they considered favorable to them, and we estimated that that time would come with the beginning of the monsoon, about the first of May.

As we expected, their rate of activity did increase at that time. The size of the engagements increased. The intensity of their operations increased. But it was just about at that point that additional U.S. forces in large numbers began to flow into South Vietnam releasing some of the South Vietnamese strategic reserve forces for use against the Vietcong and actually building up that strategic reserve. The result was that this expanded Vietcong force—which appeared to have as its monsoon objective the cutting of South Vietnam in half, and the imposition of heavy defeats on the South Vietnamese—was itself defeated. The Vietcong was made to suffer intensely and incur very high casualty rates, and was forced, in effect, to disengage from this extended offensive during the summer period, and to withdraw to regroup and replenish and reequip its forces.

At that point, it wasn't entirely clear to us whether the Vietcong would follow a future course of action which would involve fewer large-scale actions and greater emphasis on small-scale guerrilla operations, or whether they would seek both to replace their casualties, continue to expand their force and support a large number of intense large-scale engagements.

As it turned out, it was the latter course that they followed, and during the summer and fall they both replenished and expanded their forces. So I do not think it is fair to say we had them on the ropes in November. [Deleted.]

Mr. STRATTON. Is there any evidence that the North Vietnamese undertook any corresponding lull of their own during our own bombing lull? This question is apparently one that may be kicked around.

Mr. Rusk the other day told us this was not the case, and I just wondered whether you had any further information on that particular point.

Secretary McNAMARA. I fully support the conclusion that Secretary Rusk arrived at. This is the conclusion that I hold. I believe the Chiefs hold the same conclusion. I think all the intelligence data supports that conclusion.

There was a rather curious pattern in the level of incidents during the bombing pause. It rose very substantially in the early weeks of the pause, to levels far in excess of any prior levels, and then fell off somewhat, but it fell off only from those extraordinary peaks, and fell down to, not what I would call a normal level but a continuing high level. There are peaks and valleys in the trend of Vietcong large unit actions. They do not have the strength to carry out on a continuing basis a high number of large unit attacks, and it is true there were some peaks and valleys in the trend in large unit attacks during this pause period. But I think it is fair to conclude that there is no indication from our intelligence that they deescalated during the pause.

Let me ask General Wheeler if he has any view to the contrary on this?

General WHEELER. No, I don't; as a matter of fact, I will give you some figures here.

The rate of total incidents was 1,150 for the week ending January 1; 950 for the week ending January 8; 850 for the week ending January 15; 950 for the week ending January 22, and as of the time I got this information an incomplete report giving 780 for the week ending January 29.

These rates that I just gave you compare to an average of 850 during the prior 4-week period in December and a somewhat lower incident rate average throughout the calendar year 1965.

Mr. STRATTON. Thank you. [Deleted.]

Secretary McNAMARA. [Deleted.]

Mr. STRATTON. Mr. Secretary, on the question now of the general strategy of our position in Vietnam which Mr. Bennett got into yesterday, would you agree, first of all, with Senator Mansfield, we face an open-end situation, and that every time we escalate the other side will escalate, therefore we cannot achieve any superiority to bring about victory?

Secretary McNAMARA. No, I wouldn't. [Deleted.]

Mr. STRATTON. You mentioned in answer to Mr. Bennett yesterday it was our strategy, our purpose to continue fighting in an effort to prove to the Vietcong that they couldn't win, and therefore hopefully at some point they would get the message and deescalate.

Haven't we actually pretty well demonstrated the fact that these people don't get that kind of a message, that even though they know

they aren't winning, they keep on fighting pretty much the way the Japanese did until the atom bomb hit them? Isn't this idea of trying to establish a mental picture which will then cause them to back down rather a tenuous hope?

Secretary McNAMARA. [Deleted.]

Mr. STRATTON. In order to convince them of this fact, don't we have to do two things: Don't we have to try to seal off the area as much as possible, and then don't we have to try to just undertake the back-breaking job of cleaning them out in South Vietnam?

Secretary McNAMARA. [Deleted.]

You might wish to hear from General Wheeler on this. I know he has studied the same documents.

General WHEELER. I would say these people are getting several messages, Mr. Stratton. They are getting one message which consists of the fact that every time the Vietcong and North Vietnamese forces attempt to stand up to our people, they get whipped and suffer substantial losses. Giap, in his recent statement recognized this; and he commented upon our tremendous firepower, mobility, and so forth.

The other message they are getting, however, and the one to which I think they are paying heed, is that we are not going to stick this thing through, that we will lose patience, and that in some way they are going to win a political type victory in this particular conflict. So long as this is going on, I would say that the leaders in Hanoi and Peiping have every reason to continue their present course of action, because all they are losing is a few characters by the name of—the North Vietnamese equivalent of Joe—and they couldn't care less, the stakes being what they are.

The Secretary mentioned yesterday that he felt that the one thing we lack is patience. I must say I agree in that particular aspect. They are getting diverse messages from diverse sources.

Mr. STRATTON. Wouldn't you agree, General, the best way to get this message across would be to try to eliminate as many of the Vietcong as possible, and doesn't this mean we are going to have to try to convert this operation, if possible, to a kind of conventional system where we can actually sweep through an area and feel sure it has been cleaned out instead of waiting for them to attack, and then kill them?

General WHEELER. Let me actually talk on that subject. Mr. Stratton, this is precisely what General Westmoreland is doing.

The CHAIRMAN. You have two or three offenses going on now.

General WHEELER. That is the point. The great difference between General Westmoreland's activities now and the activities that went on prior to the deployment of our forces and free world forces to South Vietnam is the fact that we are not waiting to be attacked. On the contrary, General Westmoreland has taken the initiative away from the enemy and he is going after them. This is one item.

[Deleted.]

Mr. STRATTON. In other words, then, if I understand you correctly, what we are doing is trying to extend these enclaves, if we can use a word that has suddenly gotten very bad, out from their present site, to try to enlarge the area that we hold; is that correct?

General WHEELER. [Deleted.]

Mr. STRATTON. As you know, the situation in Indochina for many years has been that the Communists, in daytime the government had a good deal of the area under control, and at night the Communists came in and cut everything up and shut up the place, and therefore it was very difficult to know who controls what. If I understand you correctly, one of the things that has disturbed you—Mr. Bennett indicated this—this map shows so little area under our control. If I understand you correctly, in the months ahead we can look for an enlargement of those areas which we now control, which the government controls?

General WHEELER. That is correct, Mr. Stratton. [Deleted.]

Mr. STRATTON. One final question, General: Since to do this we have to try to prevent the Communists from bringing more troops in and constantly increasing our problem, is it also likely that in the months ahead we can expect an effort—an increased effort to cut off the infiltration route?

General WHEELER. [Deleted.]

Mr. STRATTON. Thank you very much, General.

In other words, we have a finite situation, even though it is going to be a long tough struggle, that I think is encouraging.

General WHEELER. That is my belief, Mr. Stratton.

Mr. STRATTON. Thank you very much, Mr. Chairman. I have taken more time than I should.

The CHAIRMAN. We have 14 left, three times 14 is roughly 45. That will be 400 minutes, and 60 into 400 will go—

Secretary McNAMARA. About 7 hours.

The CHAIRMAN. Mr. Secretary, we don't want to keep you 7 hours. We have all this fine information Mr. Stratton has gotten for us, and let us get through as fast as we can. Thank you, Mr. Stratton.

Now, Mr. Pirnie.

Mr. PIRNIE. Thank you, Mr. Chairman.

I would like to ask this question. We are really trying to pass the proposed legislation to furnish different elements of support to the war effort, and there wouldn't be any difference of opinion in this committee as to the desirability of giving what is necessary, so we have to arrive, however, at one decision, as to whether this is for the purpose of continuing the war or winning the war. That is really what is being asked in this questioning.

I would like to get a point out as a preliminary to my question, the very serious aspects of having our own people wonder as to our military capabilities. We talk about trying to get the message through to the enemy, that they cannot win, but in the meantime I am wondering what the message is that is being conveyed to our own people, based upon the questions that I have.

And the one thing that does disturb me is when I get a question that seems to indicate an uncertainty as to our own military capabilities, I think you understand what I mean, generally.

Secretary McNAMARA. Let me say, Mr. Pirnie, there is no question what our objective is. It is to win the war and win it in the shortest period of time, and with the fewest possible casualties. There is no question about that.

Mr. PIRNIE. I hoped that statement would be written clearly into this record, and that we mean what we say.

My next question is, is the route we are being permitted to follow, in view of the testimony on political limitation, is such that it makes it difficult for the military to display its capabilities?

Secretary McNAMARA. I think this is really the question. I don't think anyone would disagree with my statement that our plan of action is to win the war, as you phrase it, in the shortest period of time with the fewest possible casualties. All would agree that is what we are trying to do. All would agree that is the only objective we should have here.

The questions and the controversy arise over the specific program chosen to achieve that objective. And I think it is perfectly appropriate to question that program and consider alternatives.

But I think we confuse the issue by putting so much attention on the bombing of the North and devote so little discussion to the strategy in the South. I think it is fair to say—and I want you to hear from General Wheeler on this question—that there is no disagreement on the program for military action in the South at the present time.

General Westmoreland has requested a given number of combat battalions on a certain schedule. To the best of my knowledge, we haven't missed a date yet in meeting his request for combat maneuver battalions [deleted.]

In substance, there is no disagreement on the military campaign in the South. [Deleted.]

Third, there is actually very little disagreement on the scope of the bombing program in the North, and very little disagreement on what can be expected in terms of accomplishments from that program. [Deleted.]

But I would like you to hear from General Wheeler on this. These are the important military questions I think we should address ourselves to.

The CHAIRMAN. Will you yield there, Mr. Pirnie?

Mr. PIRNIE. Yes, Mr. Chairman.

The CHAIRMAN. I don't understand, Mr. Secretary, the policy you are proclaiming, and everybody else, that we don't want to topple the Ho Chi Minh regime. If he doesn't want to come to the peace table why shouldn't we want to topple him? I don't understand that.

Secretary McNAMARA. This is an important question, Mr. Chairman. It is the definite policy of our Government at the present time to carry out a military program that does not have as one of its objectives the destruction of the political regime in the north.

[Deleted.]

The CHAIRMAN. You are an American, the Secretary is an American, you meet people of all shades of opinion. Do you think they would tolerate that?

General WHEELER. [Deleted.]

The CHAIRMAN. If the Americans demand the escalation of our armies in the north, by acquaintance with my own people, they are growing very tired, the patience you are talking about of my own acquaintances is changing every day, among the people I know. I go all over the country and I hear taxicab drivers, and everyone, and don't you get the same information?

General WHEELER. Sir, I get it every time I turn on the radio, every time I look at the TV, every time I pick up a newspaper.

The CHAIRMAN. I am sure the North Vietnamese, Mr. Secretary, read this speech of Morrison, and these people who are making all these speeches, I am sure they reproduce those, don't they?

Secretary McNAMARA. Yes; I am sure they do, Mr. Chairman. But I think the taxicab driver who says: "Let's get in there and win it and get it over with; drop the "bomb" and get out," fails to understand the military realities of the situation. As to that I would like General Wheeler to——

The CHAIRMAN. I am just telling you what they reflect.

Secretary McNAMARA. Yes. You are absolutely right. There is this desire to get in and get it over with. [Deleted.] We have tremendous power. Why don't we apply it, win, and get out of there? This is the question.

The answer is, to follow that course of action, compared to the one we are following, we are without——

The CHAIRMAN. I don't think they have any nuclear knowledge in North Vietnam?

Secretary McNAMARA. I am not suggesting that Mr. Chairman; but this gets to the question, Will the American public tolerate a 10-year war?

In the first place, I don't think the program we are following would lead to a 10-year war. But, second, I would say that the application of greater military effort in the north with the objective of destroying the Government in North Vietnam would almost surely result in higher casualties. This is not my judgment alone, although it is my firm belief. But it is, I think, the near unanimous judgment of the senior military leaders.

The CHAIRMAN. You know when we first discovered the SAM sites, I remembered distinctly, when we asked if you could destroy them, you said you could take them out any time you get ready.

Secretary McNAMARA. We can take them out any time we are ready [deleted].

The CHAIRMAN. Of course, they are flying over the clouds, as those planes do so often, going over one of those SAM sites, the only thing you know is seeing it come up through the clouds.

General WHEELER. [Deleted.]

The CHAIRMAN. They are pretty active, aren't they?

Secretary McNAMARA. Mr. Chairman, they have shot about [deleted] missiles at us, and we have lost 11 planes in 6 or 7 months. [Deleted.]

The CHAIRMAN. I have used too much of Mr. Pirnie's time. I have finished for Mr. Pirnie. Thank you, Mr. Pirnie.

Mr. PIRNIE. Mr. Chairman, I do want to ask one or two more questions because I don't think we have quite responded to the attitude of the people, although we have discussed whether or not they would accept a 10-year war.

I do feel in order to have negotiations entered into on the right basis, it has got to be because our opponents feel it is to their advantage, because something is being threatened. And I do not feel that when we operate under wraps that we create an accurate understanding of our capability. And I am afraid we will be negotiating from weakness instead of strength, and that some of our people feel that that is true. Is there danger of that?

Secretary McNAMARA. Mr. Pirnie, the alternative is to apply so much force as to appear to be trying to destroy those political institutions in the north. That, as I say, we have decided against, certainly for the present, for the reasons I have outlined previously.

Mr. PIRNIE. Could I just interrupt? On that score, don't you feel their propaganda is that they have the great United States stymied? Don't they hold their people by the use of that propaganda?

Secretary McNAMARA. Well, they have told their people that, but their people see our planes flying over them every hour of every day. They see their roads destroyed and their railroads destroyed; they see that it takes 4 days to go from Hanoi to the southern part of North Vietnam, where it used to take 12 hours. They know that we are far from stymied, and they, themselves, realize that they are constantly in danger of attack. So there is no question but what our bombing—

Mr. PIRNIE. If they know we are far from stymied, why don't some of our American people know it, and why don't some of the people in the other bodies know it?

Secretary McNAMARA. The political leaders know we are far from stymied, there is no question about that. I believe our people also know we are far from stymied. But I think they still ask the question, "Why don't we apply our power more forcefully?" and the answer I have given you is the correct answer, I believe. We are not applying our power more forcefully because to do so would increase our casualties. If we can obtain our political objective in the south without those higher casualties, it is our duty and our responsibility to our people to do so.

Mr. PIRNIE. Mr. Secretary, during the brief time I was able to be there during the fall, I had tremendous respect for what is being accomplished, particularly in certain areas where the buildup is astounding, and a definite credit to American ingenuity. But am I to feel that we are preparing, with this buildup, for a greater military capability, that I can see evidence of that strength in the type of attacks that we will be undertaking?

Secretary McNAMARA. Oh, yes. I think that is very clearly the case.

General WHEELER. For example, Mr. Pirnie, when I was out there over the Christmas season, among other thing that I discussed with General Westmoreland was his program. He showed me, laid out on a chart [deleted] the type of operation that I was mentioning to Mr. Stratton a few minutes ago.

These operations embrace the operations of American forces, the Vietnamese forces, and the Republic of Korea forces. General Westmoreland has an actual schedule laid out, recognizing that this schedule may slip a little bit from time to time for operational reasons. The Double Eagle operations and all the other operations that are going on in Vietnam today are a part of this program. In other words, he has laid out for himself a work schedule for his troops. The whole thing is based upon offensive operations against the enemy to defeat them.

Mr. PIRNIE. Full deployment of our people in offensive operations?

General WHEELER. Absolutely, this is what we are looking to.

Mr. PIRNIE. May I move to the question of the delta for a moment?

General WHEELER. Yes, sir.

Mr. PIRNIE. I had the feeling there was the possibility of civic action generating some strength among the South Vietnamese because there

was evidence to me they felt a little bit more secure in what they saw, the presence of our troops, and the military capabilities were becoming known to them.

Haven't we enough power located in that area so as to increase that sense of security, and possibly hold that?

General WHEELER. I think I know the area you are talking about, Mr. Pirnie. You probably went to Can Tho, where the 4th Corps Headquarters is located.

Mr. PIRNIE. Yes.

General WHEELER. The answer is this: [Deleted.]

Mr. PIRNIE. It seems a very valid part of it. When you responded to the question that has been raised here as to the area under control, and it appears with the introduction of some 200,000 troops, you don't have any greater area than existed before. It is difficult for the people to understand.

General WHEELER. The reason for this, Mr. Pirnie, is that at the same time, or perhaps even a little bit ahead of our deployment of troops, the North Vietnamese had substantially stepped up the infiltration of their forces to the south, and the Vietcong had increased their forces.

Mr. PIRNIE. I am not arguing that point, General. I am just talking about these elements that the public has as a yardstick.

General WHEELER. I would agree with you.

Mr. PIRNIE. I would like to point out that is one of the reasons they feel we are somewhat stymied.

General WHEELER. That may be one of the reasons, Mr. Pirnie. I think the major cause for the public confusion of thought about what goes on in Vietnam, though, does not rest upon their estimate and understanding of what is being done militarily in South Vietnam, but, rather, upon the expression of opinion by leaders, prominent people in this country, questioning every aspect of the war in Vietnam, from the competence of the military people to our capabilities to carry on the war and whether or not we should be there at all. This at least is the reading that I get from some of my sons' associates, who are at the age to question everything, and I am glad that they do.

Mr. PIRNIE. Well, I would just like to point out a great many of us spent the early part of January doing everything that we could, speaking to large groups, trying to explain our war efforts, our capabilities, and the reasonableness of what we were doing. I am just bringing to you some of the questions that are more difficult to answer.

One final question. How much do you feel is forced upon us in the way of delayed success, as a result of the political restraints and your military strategy? What are we losing in the way of time?

General WHEELER. Why frankly, I do not think that we are losing anything in the way of time.

Mr. PIRNIE. General, that cannot be true. Don't we want to defeat the Vietcong rather promptly? There must be some restraint that is cutting down your military activity. We discussed in the past several aspects of that restraint.

General WHEELER. Are you referring now primarily to the air campaign against North Vietnam?

Mr. PIRNIE. All of the military strategy.

General WHEELER. Let me say this, Mr. Pirnie: Insofar as our military activities in the south are concerned, there has been absolutely

no political constraint on General Westmoreland's activities. He has complete and absolute control of what goes on there.

Mr. PIRNIE. Well, that is true, but the communication lines and supplies go outside of South Vietnam, and ordinarily that would be the zone of contact, it would include these areas; wouldn't it?

General WHEELER. I am coming to that, sir. What you really are saying is, to what degree is the air campaign not being pursued to the necessary degree to give General Westmoreland the major military support to carry on the war in the south; is that the point?

Mr. PIRNIE. Remember, we started this questioning on the basis of 10 years, that is the chairman's question.

General WHEELER. Yes.

Mr. PIRNIE. I am just simply saying, what are we sacrificing in the way of time, toward the military solution of this problem, by reason of our restraint to the political considerations?

General WHEELER. Well, I know [deleted].

Mr. PIRNIE. Then what do we have to accept in the time frame?

General WHEELER. I myself do not feel that there are any political constraints on our activities in South Vietnam that are lengthening the war today, Mr. Pirnie.

Mr. PIRNIE. Well, in any phase of the conflict? That is a pretty broad statement, because everybody has been testifying almost to the contrary, General, that we have to avoid certain acts which might be militarily sound because they are politically unwise. You accepted that. But I am simply saying, if there is going to be a long war, how long is it, and is there a danger of repercussions at home about accepting that alternative?

General WHEELER. I find your question very difficult to approach [Deleted].

Mr. ARENDS. Would you yield for a question?

Mr. PIRNIE. Just one last question, then I will yield to you.

Go ahead.

Mr. ARENDS. I just wanted to ask the point you made a minute ago, General, if I understood the answer. You said there are no restrictions about General Westmoreland whatsoever. He can do as he damn pleases today or tomorrow?

General WHEELER. Yes, sir; I said there are no restrictions in South Vietnam, Mr. Arends.

Mr. ARENDS. That explains it. All right.

Mr. PIRNIE. Then, General, in the light of the ground rules as they exist now, how long do you think we have to continue with this type of military operation in order to achieve our military objectives?

General WHEELER. I would say that—and I am not one for making predictions in terms of months, and so on—if you review bidding here you will see the bulk of the military force General Westmoreland now has available to him really became available only in October. As a matter of fact, some of the combat units didn't reach South Vietnam until November. Actually, he has had a reasonable number of U.S. combat battalions available to him only starting in late July and early August.

Mr. PIRNIE. I don't agree with that. You know I have great confidence in you as a general—

General WHEELER. What I am saying, Mr. Pirnie, is, we have been fighting this war out there in the form and with the objectives that we

now have for something less than 6 months, which is not even time to get a good campaign underway.

I feel that during this calendar year, with the resources available to Westmoreland [deleted] we should see substantial progress made toward achieving our objective in South Vietnam. [Deleted.]

Mr. PIRNIE. How long will it take to establish our military superiority, fighting on their terms, instead of ours? I think that has a little bearing on what we are going to be able to do in selling the situation to our people. If they feel that we have definite plans to achieve military victory, that they will just govern themselves accordingly, and will not expect too much too soon. But they have got to have an idea as to what we are doing if they are going to be a part of it.

General WHEELER. Mr. Pirnie, I can assure you that the plans that are being drawn in Saigon by General Westmoreland, the activities that are being undertaken by Admiral Sharp in Honolulu, the activities of the Joint Chiefs of Staff, and the activities within the Department of Defense, I firmly believe, are all designed to win in the terms of political lines laid down by President Johnson. There is no question about this in my mind.

Mr. PIRNIE. You will establish this military victory that will enable us to negotiate?

General WHEELER. That is right. As a matter of fact, if we didn't have this objective, I do not see how we would ever hope to have a negotiation that would be meaningful.

Mr. PIRNIE. A great many of our people have been writing in and saying, it looks as though we are trying to repress our offensive because we are stymied. I want the record to show we don't intend to inform the world we have weakness, or we don't have intentions to go beyond that point.

The CHAIRMAN. Mr. Pike, it is your turn.

Mr. PIKE. Thank you, Mr. Chairman.

General Wheeler, in response to a question by Mr. Pirnie, you said it is only within the last 6 months that we have had the material, I have forgotten your exact language, but it had to do with the fact only within the last 6 months have we had the forces and objectives which we now have.

General WHEELER. To seek the objectives.

Mr. PIKE. Which we now have.

How have the objectives changed in the last 6 months?

General WHEELER. I do not think the objectives have changed at all basically.

Mr. PIKE. All right.

Now, you said it is our desire to control more land. Hasn't this been our desire ever since we got there?

General WHEELER. I think perhaps I should expand on what I said about land. What I really meant to say, if I didn't make it clear, is that General Westmoreland is not going after land just because it happens to be land. His first objective, of course, is to go after the important area. [Deleted.]

Mr. PIKE. Hasn't this always been the objective?

General WHEELER. Of course.

Mr. PIKE. Wasn't the strategic program aimed at accomplishing this objective?

General WHEELER. To a degree.

Mr. PIKE. What was it, the hot pack program, the oil spot program?

General WHEELER. This is very definitely for that purpose.

Mr. PIKE. Now, Mr. Secretary, you said yesterday that we do not control more land than we did a year ago, that we control less land than we did a year ago.

Secretary McNAMARA. I think perhaps somewhat less, Mr. Pike. And I say that because the strength of the guerrilla forces has increased substantially during that time, and they have applied that strength to interdict roads and railroads in South Vietnam. And this action in a sense gives them control of land or at least reduces the Government's control of land.

Mr. PIKE. How much land did the 1st Cavalry lose?

General WHEELER. If I remember correctly, they had about [deleted] killed in the course of about 10 days.

Mr. PIKE. Do we today control the Ia Drang Valley?

General WHEELER. No; however, our people operate in there all the time. They were there last week and had some minor skirmishes with the North Vietnamese. [Deleted.]

Mr. PIKE. General Wheeler, let's say it is our intention to convince the North Vietnamese they cannot win the war by meeting them in the south. Do you think we can convince the North Vietnamese they cannot win the war in the south as long as year after year we control less land in the south and they control more land in the south?

General WHEELER. Of course not.

Mr. PIKE. When do you think we can anticipate controlling more land in South Vietnam?

General WHEELER. As I replied to Mr. Pirnie, I anticipate during the remainder of this calendar year, with the forces available to General Westmoreland, and some I anticipated he is [deleted] we should see a decrease in Vietcong control of area.

Mr. PIKE. Do you equate a decrease in Vietcong control of area with an increase of South Vietnamese, or our control there?

General WHEELER. Oh, yes.

Mr. PIKE. Mr. Secretary, has any directive gone out since the resumption of the bombing limiting that bombing to the southern half of the North Vietcong?

Secretary McNAMARA. The targeting for the [deleted].

Mr. PIKE. Well, it was in the Washington Post this morning. That is how I got it.

[Deleted.]

Secretary McNAMARA. Mr. Chairman, may I take 30 seconds to add a word here?

Mr. PIKE. I was going to give you the opportunity right now.

Secretary McNAMARA. I would like to go off the record for a second, and then I will put on the record whatever you think I should. I am not trying to tell you something that shouldn't be said here.

The CHAIRMAN. Off the record.

(Discussion off the record.)

The CHAIRMAN. Back on the record.

Go ahead, Mr. Secretary.

Mr. PIKE. [Deleted.]

The CHAIRMAN. Go ahead, Mr. Pike.

Mr. PIKE. Mr. Secretary, how many missions have we conducted, roughly, against the supply lines running in from North Vietnam to South Vietnam?

Secretary McNAMARA. Oh, I would guess——

Mr. PIKE. Sorties?

Secretary McNAMARA. [Deleted.]

I would guess on the order of 16,000 to 17,000.

Mr. PIKE. Now, in those 16,000 missions, or all through the course of those 16,000 missions, we are advised that the flow of supplies into South Vietnam is nevertheless increasing. What targets are there which offer a greater opportunity to cut down the flow of supplies into South Vietnam after 16,000 missions have been conducted against the bridges and the roads and the trucks?

Secretary McNAMARA. Mr. Pike, I think more of the same. [Deleted.]

The point I am trying to make, gentlemen, is that we have stated that one of our objectives for bombing the north is to reduce the flow and/or increase the cost of the infiltration of men or equipment. [Deleted.]

I think we definitely reduced the capacity. I think we put a ceiling on the potential number of men that they can move to the south and support in the south, but they are not at that ceiling yet.

Mr. PIKE. Now, Mr. Secretary, does General Westmoreland agree that there are no more profitable targets, as far as those that lie in the south, and a continuation of striking the same targets?

Secretary McNAMARA. [Deleted.]

Mr. PIKE. [Deleted.] The question is, what we can hit which will most reduce the flow, or most work for reducing the flow, or most cost the increase—most increase the cost of maintaining the flow.

Secretary McNAMARA. [Deleted.]

Mr. PIKE. Let's get to the will of the political leaders in the north. You said one of the things that is going to shake their will is the fact they see our planes flying over every day. How many of the people in the north live in Haiphong and Hanoi, and how many of our planes have they ever seen flying over?

Secretary McNAMARA. Oh, there isn't a person—this is a rather broad statement, but I think it is true—there isn't a person that lives in Hanoi or Haiphong that doesn't know our planes fly over every day.

[Deleted.]

Mr. PIKE. Mr. Secretary, I want to go to a different topic. This is a request for a supplemental appropriation for 1966. When is this money going to be obligated?

Secretary McNAMARA. I think by far the great majority of the funds will be obligated before July 1.

Mr. PIKE. There are in the aircraft and helicopter procurements, shown in table 7, some 22 buys of additional quantities of aircraft and helicopters. In your statement you have listed the acceleration of four production schedules. Are the other 18 production schedules all being accelerated?

Secretary McNAMARA. Mr. Pike, I simply listed some of the more important examples in my statement. I will be happy to insert in the record the schedules for each of the other types.

(The information referred to is classified and was furnished to the committee separately.)

Mr. PIKE. Are there any items in the message, to your knowledge, which are not being accelerated at all?

Secretary McNAMARA. I do not know of any specifically. I suppose there are some.

Mr. PIKE. Are there any items in here which have simply been put into the supplemental appropriation and taken out of the regular 1967 procurement?

Secretary McNAMARA. No, not that could remain in the 1967 procurement and be received in time to meet our schedule of requirements for support of southeast Asia. Our basic objective was to not put any funds in 1966 that we could properly defer to a later date without delaying delivery beyond the point of the military requirement.

Mr. PIKE. Then if there are items in here which have just been lifted out of the 1967 procurement and put in the 1966 supplement, and there is nothing for them in the 1967 procurement, how would you account for that?

Secretary McNAMARA. Because we need it sooner. For example, there are southeast Asia items here in construction that we previously thought we could defer to 1967. For example, there was an airfield, I think, for South Vietnam, which we now feel we need 1966 supplemental funding for, because since making our initial plans for 1967 we have increased the potential sortie requirement for South Vietnam to the point where we will need the field sooner.

Mr. PIKE. Now, if the answer to the question is, because you need them sooner, and if you find there are items in here on which the production rates are not being increased at all, how do you account for that?

Secretary McNAMARA. Well, why don't you give me a particular example you must have in mind. I am not entirely sure.

Mr. PIKE. I have several.

Secretary McNAMARA. Give me some examples because I am not entirely clear as to the point of your question.

Mr. PIKE. I would rather, Mr. Secretary, wait until you provide us with a list of all of the items.

Secretary McNAMARA. Surely, I will be happy to.

Mr. PIKE. If there is going to be no increase in production.

Secretary McNAMARA. I would be happy to. I think there may be some A-6A aircraft, for example, produced in Long Island, which, formerly, we had planned to buy in fiscal 1967, which we are now planning to finance with this 1966 supplemental.

Mr. PIKE. Taken out completely of 1967 procurement?

Secretary McNAMARA. Let me check.

Mr. PIKE. I am advised they have been taken out completely.

Secretary McNAMARA. I think the A-6B's have been taken out completely, because the Navy has changed the type of aircraft which they want to use to replace some of the losses in South Vietnam. I believe I am correct in saying that we advanced into the fiscal year 1966 supplemental the A-6's originally planned for fiscal year 1967, in order to get those planes faster and thereby be prepared to replace more quickly potential Navy losses in South Vietnam.

Mr. PIKE. I would like to have in the record at this point exactly how much faster the production schedule calls for producing them.

Secretary McNAMARA. Surely.

Mr. PIKE. How much is left in the 1967, the regular 1967 procurement, for them?

Secretary McNAMARA. I would be delighted to put it in.

Mr. PIKE. The reason I ask this is, the 1967 budget presented by the President calls for a decrease in the procurement of aircraft and missiles by the Air Force—

Secretary McNAMARA. Yes.

Mr. PIKE (Continuing). Of \$1,299,900,000. The budget calls for a decrease in the procurement of aircraft and missiles, 1967, for the Navy, of \$1,385,187,000. It calls for a decrease in the procurement of equipment and missiles, Army, of \$863 million. It calls for a total decrease in procurement, which will come before this committee, or a good part of it will come before this committee, of \$3½ billion.

Now, with an increasing war going on, with an increasing commitment for troops, with increased sorties to be flown, increased bombs to be dropped, how can you have a decrease in fiscal 1967?

Secretary McNAMARA. Very simply, Mr. Pike. We anticipate that in fiscal year 1967, we may lose [deleted] tactical aircraft in southeast Asia operations. At the present time we anticipate in the fiscal year 1968 we will not lose any aircraft in southeast Asia combat operations. Now, if I may finish—

Mr. PIKE. Ah.

Secretary McNAMARA. Now, if I may finish. The [deleted] aircraft we anticipate we may lose in fiscal 1967, we need to finance in this supplemental. Since, under our planning assumption no aircraft losses are anticipated in fiscal 1968, we don't have to finance any replacement aircraft in fiscal 1967. Therefore, the fiscal 1966 budget must provide for aircraft losses in southeast Asia but the fiscal 1967 budget does not. This budgeting arrangement is all based on the planning assumption I described to the committee yesterday, that the fiscal 1966 supplemental and the fiscal 1967 budget are both based on the funding of combat operations at planned levels through June of 1967.

Mr. PIKE. So the 1967 budget presented by the President is only good as far as the Department of Defense is concerned provided that we have stopped losing aircraft and missiles and machinery in southeast Asia by the end of fiscal 1967?

Secretary McNAMARA. By the end of June 1967, that is the assumption for budget planning purposes.

Mr. PIKE. This does help to present to Congress a budget with a consolidated cash surplus of half a billion dollars, does it not?

Secretary McNAMARA. What would you suggest, Mr. Pike, that we put on order today, or in fiscal 1967, aircraft to replace losses on the assumption that high levels of combat operations would continue in southeast Asia through fiscal 1968, and, thereby, buy things now that we don't know we might need? I think not.

Mr. PIKE. I would suggest, when we put into the fiscal 1966 procurement, and call it an emergency for South Vietnam, aircraft which are not being accelerated one iota, aircraft which are being taken out of the fiscal 1967 budget in order to reduce the fiscal 1967 budget,

that we are playing a bookkeeping game, which is not fair to the American people.

Secretary McNAMARA. Mr. Pike, I have great respect for you, you know that. I say you are absolutely wrong, and the implication is absolutely unfounded. I think we ought to take enough time here to clarify that. It just isn't true.

Mr. PIKE. I have been advised by the U.S. Navy that every time, for the procurement of A-6A aircraft and of [deleted], aircraft has been taken out of the fiscal 1967 budget and put into the 1966 supplement, without any acceleration of the procurement of either one.

Secretary McNAMARA. Well, I would like to check that. I am not sure of that particular point. I know I issued instructions that only funds needed in fiscal year 1966 be included in the fiscal year 1966 supplemental. With regard to the A-6A I specifically instructed the Navy to move forward the production schedule so that we could get some of these aircraft earlier. I will check to see if that was done.

But I will say this, if you can find an airplane in the 1966 supplement that we do not need to offset these possible losses by the time it is to be delivered, I will take all the money out that is in the supplement for it.

Mr. PIKE. That is not the issue.

Secretary McNAMARA. Well, it is the issue. The issue is, Are we financing anything in this supplemental that we don't need to finance in order to obtain the delivery by the date required to meet potential military needs? I don't believe we are. That was not my intention. If we are, you can take the money out, as far as I am concerned.

I can tell you that I have already taken out \$2,600 million from the services requests. If any of you can find any more money that ought to come out of this supplemental, and still allow us to meet our military requirements, I will endorse the removal. But I removed the \$2.6 billion of what the services requested for the supplemental, and, in fact, I removed some aircraft. I can give you a list of those if you want. I do not believe there is any airplane financed in this program for which we don't have a military requirement at the delivery date for which the financing is provided.

The CHAIRMAN. Let us ask for that?

(The information requested is classified and was furnished to the committee separately.)

Secretary McNAMARA. I can give you a list of the cuts, Mr. Chairman, or I can tell you about some of the cuts.

The CHAIRMAN. What did the services ask for?

Secretary McNAMARA. For additional airplanes to replace potential losses. As you know, however, there is a considerable range of uncertainty as to how large the losses will be. We are financing in this supplemental possible losses for fiscal 1967, of some [deleted] tactical Air Force aircraft, for example, which we may, in fact, not lose.

The CHAIRMAN. They thought they needed it for their inventories?

Secretary McNAMARA. They thought they needed more for their inventories.

The CHAIRMAN. Certainly.

Secretary McNAMARA. That is correct.

The CHAIRMAN. There is nothing wrong with that?

Secretary McNAMARA. That is entirely correct.

The CHAIRMAN. They know what they need?

Secretary McNAMARA. They think they need even more than I put in.

The CHAIRMAN. There is no question about that. They said they need more?

Secretary McNAMARA. They did, indeed. If you are interested I have here the items I took out.

The CHAIRMAN. Any time you disagree with them—

Secretary McNAMARA. Here is A-6A, if you are interested. I took out \$63 million for the aircraft the Marine Corps wished. If I over-financed A-6's in the supplemental, at least I cut it below what the services wanted.

Mr. PIKE. I am sure you did that. I am not sure you cut it below what the services wanted. I am going to get to that next.

But what I want to get in this testimony on this supplemental procurement is the difference which this supplemental procurement is going to make in the delivery dates and the production schedule of the items which are in the list.

Secretary McNAMARA. I would be delighted to do this. I do not think there is any money in here that we don't need at this time in order to get a delivery date that meets the military requirement. If there is, then I would say we made an error, and I would be delighted to see it corrected.

The point I am trying to make, gentlemen—and I think it is an important point—is that there has been no shifting backward into fiscal year 1966 from fiscal year 1967 in order to make fiscal year 1967 look low. Of that I am certain.

Mr. PIKE. Well, now, if you find that there has been some shifting of the exact number of aircraft, and the exact dollar amount from fiscal 1967 into the 1966 supplemental, will you not agree that the result would be to make the 1967—with no increase in procurement, or no acceleration of procurement—will you not agree the result is to make the 1967 procurement look smaller than it is?

Secretary McNAMARA. Well, if I understand what you are saying, either an error was made initially in thinking it could not be financed for a specified delivery date with fiscal year 1967 money, or, alternatively, if an error was not made initially, then we have got money in here that we don't need to achieve a particular delivery date. If that is the case, take it out. But I do not know of any such money.

Mr. PIKE. I would like a whole list of all the delivery dates on all of the items, because I just happen to be familiar with this one.

Secretary McNAMARA. You may well be right, but if there is any money in here that isn't necessary to get the delivery date that is tied to a military requirement, take it out. That is easy.

Mr. PIKE. Now, Mr. Secretary, I want to talk about the particular items which are being procured. This bunch of clippings—I will go back a little bit.

Yesterday you said [deleted] percent of all of our missions, aircraft missions, were not done because of weather.

Secretary McNAMARA. No, I didn't. I said [deleted] percent of the missions against North Vietnam in December were aborted because of weather.

Mr. PIKE. All right. What were the figures for the other months?

Secretary McNAMARA. I don't have them, but I will be happy to get them for you. It wouldn't be nearly that high. The weather is very bad in December.

Mr. PIKE. Would you say December was not a representative month?

Secretary McNAMARA. Well, it is representative of that period of the monsoon, but the weather over North Vietnam is cyclical. It will be very bad from December to when, Buz?

General WHEELER. The 3d of March.

Mr. PIKE. Then it gets bad in South Vietnam?

Secretary McNAMARA. Yes, over parts of South Vietnam.

Mr. PIKE. So would you not agree the capability to fight in bad weather, and at night, is an essential component of our ability to win over there?

Secretary McNAMARA. Oh, yes. The A-6 aircraft produced in Long Island is potentially a very important aircraft. We have had some difficulty with it to date, but it hasn't destroyed our confidence in it.

Mr. PIKE. Mr. Secretary, it is awfully easy to slide off a question, by indicating that a provincial interest of the questioner has warped his judgment on a particular issue. And I would be the first to concede that I have some provincial interest in this aircraft which is not manufactured in my district, not manufactured in the district next to mine, but is manufactured in the State in which I reside.

I also had an interest in the COIN aircraft, if you may recall. And, believe me, North American doesn't come anywhere near Long Island.

Is there any capability in the A-7A to perform its mission at night?

Secretary McNAMARA. I think not.

Mr. PIKE. Does it make any sense to you to continue to buy aircraft in large numbers which are incapable of performing their mission at night, or in bad weather?

Secretary McNAMARA. Yes. Not only to me, but this is the recommendation of the Navy, which I have accepted.

Mr. PIKE. This was a recommendation of the Navy, was it not, not based on a choice between a procurement of, say, 100 A-7's, or 100 A-6's. Was this not a choice of the Navy based on a right to expend a certain number of dollars?

Secretary McNAMARA. I don't think so, Mr. Pike. I would like to check this. You may have some—

Mr. PIKE. If I am incorrect, all I can say is the Navy has misinformed me.

Secretary McNAMARA. You may have some fact I am not aware of, but if you are suggesting that we should have bought A-6's instead of A-7's in this program, I doubt that is a correct proposition. I may be wrong, but I do not think the Navy even recommended it. I would want to check that.

Mr. PIKE. What I am suggesting is that if the Navy had had the choice between either 100 A-6A's, or 100 A-7A's, or between 100 A-6B's or 100 A-7B's, they would have taken the A-6A's or A-6B's every single time?

Secretary McNAMARA. I am not sure of that, Mr. Pike. Again we have had so many changes in the A-6 schedule, I don't want to speak with certainty here. But I believe I am correct in saying that the

Navy put into the program, I think in August, I am not entirely sure of this, in association with the development of the August amendment of \$1.7 billion, a quantity of A-6B's. Then, last fall, when better estimates of the potential program of air operations became available, our estimates of requirements changed very substantially, and the number of aircraft to be bought increased very much indeed. I believe I am correct in saying the Navy then canceled the A-6B program envisioned at the time of the August amendment, and substituted in the January supplemental other aircraft. I would like to check all this, and I will clarify the record if I am in error, but I think that is correct.

Mr. PIKE. Mr. Secretary, did you change between the August supplement and the January supplement in the nature of what had to be done, diminishing the need for doing things in bad weather and at night?

Secretary McNAMARA. I don't think it diminished the need. But I think it showed to the Navy, and I believe I am correct in saying that they initiated this decision, that the A-6B, which was a cheaper or "stripped down" version, I think, of the A-6A, was not as satisfactory from that point of view as the A-7 and other aircraft, and I think they are correct.

Mr. PIKE. Mr. Secretary, the number of A-6B's which could have been procured for the same number of dollars was not as satisfactory to the Navy as the procurement of a larger number, actually, of A-4's in this case—A-4E's, but as far as the capability of the aircraft and the desire of the Navy was concerned, I believe that I can bring out through the Navy witnesses—I am through, Mr. Chairman—I believe I can bring out from the Navy witnesses later on the fact they preferred the other aircraft. That if it had not been for a dollar limitation they would have gotten the other aircraft, and at the appropriate time I am going to offer an amendment to this bill in that regard.

Secretary McNAMARA. Well, I think you should consider on this point the relative cost of these aircraft. I have forgotten what it is. But I am confident the cost of the A-6B is substantially more per aircraft than the A-7 or the [deleted].

And I think it is entirely appropriate to ask them, therefore, which way do you get more fighting power, 100 A-7's or 50 A-6B's? If these are the equivalent or equal cost resource applications?

Mr. PIKE. Well, what you are saying is, then, the question which was presented to the Navy was not how do you get the most fighting power, but the question that was presented to the Navy was how do you get the most fighting power within the budgetary limitations that have been imposed?

Secretary McNAMARA. No; there were no budgetary limitations, Mr. Pike, but I think it is always pertinent to ask at any given level of budget, are you better off buying A-7's or A-6B's, or a confirmation of both? [Deleted.]

Mr. PIKE. They have more all-weather capability than any plane in the world?

Secretary McNAMARA. [Deleted.]

Mr. PIKE. Mr. Secretary, I had the opportunity, thanks to Mr. Rivers, to head as chairman, the committee that went into this question at some length. We got quite a lot of testimony from the people

who have been flying over there, and the Air Force admits today it doesn't even have on the books a plane with the all-weather capability of the A-6A, but they are buying some now.

Secretary McNAMARA. [Deleted.]

Mr. PIKE. [Deleted.]

Secretary McNAMARA. Surely, I will be happy to.

(The information referred to is classified and was separately furnished to the committee.)

The CHAIRMAN. Mr. Pike was chairman of that subcommittee. It is a published report that is available.

Secretary McNAMARA. I would be glad to have it.

The point he makes about all-weather capability in aircraft is an extremely important point. I don't want you to believe anything I said here discounts the point he makes. But that isn't the issue. The issue is, what kind of aircraft should we buy in this 1966 supplemental to replace losses? I submit to you the Navy is far better off in buying some A-4's and A-7's, rather than all A-6B's.

Mr. PIKE. Can you tell me what happened to change your position on that between the 13th of October, when the Department of Defense announced the contract for the purchase of the A-6B's?

Secretary McNAMARA. Oh, surely, surely. I will get the record on it and find out exactly what it was that the Navy wanted when they initially planned to buy the A-6B, and why the decision was made to cancel it.

Mr. PIKE. Would you also put it on the record, the answer to the question of whether the decision to cancel the purchase of the A-6B was instituted or instigated by the Navy or the Department of Defense?

Secretary McNAMARA. Surely, I would be happy to.

(The information requested follows:)

With respect to the decisions relating to the A-6B, the entire matter of aircraft force structure and procurement in the light of southeast Asian operations was the subject of a joint effort by representatives of the Navy and the Office of the Secretary of Defense. Neither party instigated the eventual decision. Rather, both parties shared in the examination of the alternatives and both agree that the actions taken represent the best alternatives in light of the data in hand at the time.

A full chronology of the events leading to the changes in the A-6A, A-6B, and EA-6B programs has been provided to the committee on a classified basis together with a copy of Secretary McNamara's memorandum to the Secretary of the Navy directing the changes.

The CHAIRMAN. Thank you, Mr. Pike.

Are there any other questions by any other men?

Mr. HALL. Yes, Mr. Chairman.

The CHAIRMAN. Dr. Hall.

Mr. HALL. You referred today to the commanding general of South Vietnam, General Westmoreland.

Is there now, or in the near future, any plans to relieve General Westmoreland from assignment or active duty?

Secretary McNAMARA. Absolutely not, and I think these articles that have appeared, and one which Mr. Hébert brought to my attention this morning, is a disgraceful reflection on one of the finest officers we have in the service today, or we have had in several decades.

Mr. HALL. Mr. Chairman, this has been most interesting and revealing.

I am convinced these people here today with us, and the problems they have, are in regard to productivity; therefore, I am ready for the final discussion on this bill.

The CHAIRMAN. Are there any other questions?

Mr. FISHER; I overlooked Mr. Fisher, excuse me.

Mr. FISHER. Just one or two things.

In connection with the testimony developed by Mr. Pike, in the current issue of Newsweek, I think to complete the record perhaps this question should be asked:

In the current issue of Newsweek there is this statement:

The Joint Chiefs of Staff had advocated resumption, including massive blows at North Vietnam's industry, powerplants, petroleum tanks, airfields, rail lines to China, and Haiphong's docks.

Now, General Wheeler, Is that a correct statement?

General WHEELER. That is not correct. [Deleted.]

Mr. FISHER. I wish some clarification about the missile sites in North Vietnam. You referred to that again.

General WHEELER. Yes, sir.

[Deleted.]

Mr. FISHER. Do we have capability of knocking out sites if we desire?

General WHEELER. Yes, sir; we do.

[Deleted.]

Mr. FISHER. Thank you. That is all.

The CHAIRMAN. Thank you, Mr. Fisher.

Mr. ICHORD. Mr. Chairman.

Mr. Secretary, on page 6 of your statement you go into the losses of aircraft, 235; 76 helicopters, in the year 1965.

I would like to ask if you have any breakdown on where these losses occurred, how many of them were brought down over South Vietnam, how many over North Vietnam, and also how many were brought down by SAM missiles, and if you have any statistics on how many losses were due to engine failures, pilot's error in judgment, or what not?

Secretary McNAMARA. Yes, I can give you some of the answers now, and the others I would like to insert in the record.

(The information is classified and was furnished to the committee separately.)

Secretary McNAMARA. Of the aircraft lost, 11 were lost to SAM missiles, and the others were all lost to antiaircraft fire. And then we had other operational losses in addition.

Let me give you a few of the figures.

Mr. ICHORD. These include operational losses, do they?

Secretary McNAMARA. The 275 I think is hostile action only.

I have the hostile action and other operation losses for a different period of time. Let me give you those now to show you the ratios, and then I will put in the record this particular period you asked for. I happen to have it for January 1, 1962, for the 4 years through December 31, 1965.

Air Force, Navy, and Marine Corps: The total losses to hostile action for the period, for tactical aircraft, are 283, and other operational losses are 99, for a total of 382.

Now, as to how it breaks down South Vietnam versus North Vietnam: I can give it to you for a 6-month period, the last half of 1965, to give you an illustration of it.

Mr. ICHORD. First, what were the years?

Secretary McNAMARA. January 1, 1962, through January 1, 1966. Those were all losses [deleted] and I gave you both hostile action and nonhostile action, and they were for tactical aircraft.

Now these are the losses for the last 6 months of 1965, by country, for tactical aircraft: On nonattack sorties, the other combat losses are very small, for that 6-month period they were only 11 airplanes, and the noncombat losses for these types of aircraft for the 6-month period were 36. [Deleted.]

Mr. ICHORD. Yes, that will suffice.

Mr. Secretary, I heard a radio commentator say last night at least 16 new SAM sites had been discovered, either completed or under construction, that the construction was started during the bombing lull. I am sure that is quite high, but I would like for you to comment.

Secretary McNAMARA. I am not entirely sure that was the report made. But in any event the facts are these: We think they are on the order of [deleted] today, as General Wheeler said a moment ago. We don't believe there have been any significant increase [deleted].

Mr. ICHORD. Mr. Secretary, winning the war in the south will not only require a substantial military effort, but also a concurrent non-military effort. I use "nonmilitary effort" for lack of a better word.

Secretary McNAMARA. Right.

Mr. ICHORD. To persuade and convince the people in the south; namely, the Vietcong forces, and their supporters that lives will be better with a U.S. victory. I think the record should show what we are doing in this area of effort.

Secretary McNAMARA. Well, I think you are quite right in saying that what we call a pacification program in the south will ultimately play a very important role in the victory we hope to achieve. And this pacification effort has lagged primarily because it depends upon first assuring the military security in the countryside for its foundation. That security has been in jeopardy, particularly in recent months, because of the substantial increase in Vietcong terror activities.

It is being better organized at present, however. A new man has been appointed to head it in the South Vietnamese Government, General Tang. He is a very able individual. We see signs of increasing effectiveness in the administration of the program. We have hopes that during the months that lie ahead, we will be able to increase the security in certain areas of the countryside so this program can begin to take hold.

The plan for 1966 is to concentrate on four priority areas throughout the country, and in these areas to introduce teams of specially trained personnel, Vietnamese personnel with U.S. advisers, and to provide the necessary military forces—popular forces and regional forces—to assure security for the people. We also plan to use U.S. aid in the form of technicians, educational help, and so forth, and U.S. materials in the form of cement blocks, medicines, and so forth, and to emphasize programs to raise the standard of living of the people through additional education, additional health measures, and other measures that will improve their economy and their economic welfare.

I have high hopes that in 1966 we will see a resurgence of this type of activity, and that by the end of the year the program will be well underway.

Mr. ICHORD. That program is headed up by the general?

Secretary McNAMARA. In the U.S. mission there are a number of components working on it. General Lansdale's is one. But the U.S. AID mission under Mr. Mann is also heavily involved in it.

Mr. ICHORD. One more question, Mr. Chairman.

The Chairman and Mr. Pirnie got into a field of inquiry which is really the thing that worries me.

Last night I worked on a questionnaire which I usually send out every year to my district. Of course we all know you can phrase your questions and pretty well get the answers that you want. But I was trying to phrase the questions on South Vietnam, and asked the question, do you support the policy of the United States, of the administration, and then state what the policy of the administration is in South Vietnam.

And after having been to South Vietnam, listening to you, Mr. Secretary, and the President in his Johns Hopkins speech, and hearing the Joint Chiefs of Staff for several years, I found that I could not state in understandable language the policy of the United States.

Now, I have asked several members around me here, and they are not so sure they can state what is the policy of the United States of America in South Vietnam.

And I make this statement, and I think it is putting the same thought in different words from the chairman.

I realize the problems that you have. You've got the responsibility of not only devising and employing a way of fighting the war in South Vietnam to best serve the interests of the United States, but under our form of government you have to devise and employ a means which the American people will support. And if you have devised or employed those means, certainly the administration hasn't articulated that policy. That is just the thing that concerns me in the long run, Mr. Secretary.

Secretary McNAMARA. I think it is true that many of our people are confused by some of the aspects of the Vietnamese situation. And some of these aspects are difficult to understand. I don't think I quite agree that they don't know what our policy is. It seems to me that our policy is clear. But I think it is not entirely clear to some people that we are following the most effective means of pursuing that policy, or that we have the capability of achieving the objectives associated with it.

That is why I think these hearings are helpful, and it is why I think, as you suggest, that those of us in the executive branch, and I think you, also, in the legislative branch, can do much to throw light on these issues in our discussions with the people.

Mr. ICHORD. Of course, as I stated, I have spoken out many times on South Vietnam. I supported the administration. I have even defended you, Mr. Secretary, many times, but I still can't state in simple understandable language after this hearing today, and the other hearing, what is the policy of the United States in South Vietnam. I can say to win the war, as you said, with the minimum possible losses, but certainly that isn't giving an understandable statement of the policy in Vietnam.

Secretary McNAMARA. Well, our policy, in a philosophical sense, is to act in a way that we consider is in our national interest. Now, in this particular case that means, first, fulfilling past commitments, because if we don't, we believe that our other commitments around the world will begin to unravel, and if they do, we will be in serious trouble, not only politically, but militarily.

Second, it means, in this case, supporting the efforts of the nation of South Vietnam, to preserve the right to shape its own destiny and to defeat the subversion and the aggression that is directed against it by North Vietnam in an effort to deprive the people of South Vietnam of their right to shape their own destiny.

Mr. ICHORD. Then you come to the problem, when you get down to the particulars, and the questions Mr. Pike had, about why we do not bomb the POL facilities at Haiphong, even the greatest champion of the policy, the aggression of communism, and to let the people shape their own destiny, that weakens it, and you don't have that sort of support you need in democracy.

Secretary McNAMARA. There I think we failed to explain clearly how little the difference really is between advocates of alternative policies.

The magnitude of the difference is not great. I think General Wheeler would agree to that.

If you take the total military problem we face in South Vietnam, the problem of winning there, in the sense of stopping this aggression and achieving our objective of permitting those people to shape their own future—the essence of our military effort there must be to show the North Vietnamese and the Vietcong they can't win in the south. There is no disagreement on that among any of us who are associated with the effort.

There is no disagreement among us as to how that military campaign in the south should be carried out. As General Wheeler said, General Westmoreland is responsible in the field for determining what he needs, and we have provided him what he needs, and he utilizes it and applies it as he sees fit.

[Deleted.]

Secretary McNAMARA. I do not think there would be real disagreement on that, Buz?

General WHEELER. I do not believe so—as I said yesterday.

Mr. ICHORD. The point I would make—

Secretary McNAMARA. If I may say one further word [deleted].

The CHAIRMAN. Have the Joint Chiefs ever changed your mind?

Secretary McNAMARA. Oh, Mr. Chairman, now, you know very well that in the first place, 80 percent of the cases we agree on, and then in the other 20 percent, I would guess, Buz, 10 percent—10 percent of the other 20 percent—

General WHEELER. Let me respond directly to the Chairman's question. The answer is "Yes." Mr. Chairman.

The CHAIRMAN. I withdraw the inquiry because I think sometimes you do it frequently.

Secretary McNAMARA. The fact of the matter is despite what you read in the newspaper, there are very few differences between me and the Joint Chiefs.

The CHAIRMAN. I think you get along fine.

Mr. HÉBERT. There better not be.

Secretary McNAMARA. But, there will always be a few.

The CHAIRMAN. Go ahead, Mr. Ichord.

Mr. ICHORD. In closing, I want to make this point. There has been a lot of—generally, not about the war—it goes on up here on the Hill and in the press—I, for one, have not attempted to do that. But I do think we have got to find some way to articulate these objectives, and I think that is made apparent when you have 70 Members of the House petitioning the President not to resume the bombing in the north, and 15 or 17 Senators, even though involved. Something has to be done in that regard.

The CHAIRMAN. Thank you. Are there any other questions by any of the other members?

Mr. STAFFORD. Almost every question I could think of has been asked at least twice and answered three times thus far, but I do think this has been a very illuminating and helpful session for all of us. It has been very helpful to me.

I have been particularly concerned, I might say, Mr. Secretary, by the implications of this supplementary budget, vis-a-vis, the regular 1967 budget, and had not my colleague Mr. Pike gone into that matter I had intended to.

I won't ask you to comment on it further. I have only one very brief question to ask of you, which may not really be in your field, and that is this: One of the problems I have had at home, in responding to questions from my people, have been in substance, why do we participate in the embargo of Rhodesia, when Great Britain will not cooperate with us in Vietnam? I have heard the facts which you supplied yesterday, but I understand the embargo on Rhodesia now will cut off chromite ore produced by an American concern there in which I have no interest. But my question is will the elimination of chromite ore from Rhodesia, which is apparently the main source of it, materially and disadvantageously affect the production of the steel we need in this country for the war effort?

Secretary McNAMARA. Governor Stafford, I don't believe so. I do think that the supplies of chromite ore are more than adequate to assure production of steel, not only for the war effort but also for our domestic economy. I think that should have been considered and I am sure it was. I have been very much in favor of the economic controls imposed by the British on Rhodesia, because if that situation continues to remain in crisis, as it is at the present time, there is a real possibility that about 14 or 15 percent of the world's copper supply will be cut off. And that could be serious not on the military effort in the United States, per se, because we have adequate copper available to us, and, of course, a large stockpile in addition. But a severe shortage of copper could have a very adverse effect on the economy of the free world and that, in turn, could adversely affect us militarily. So we have a good, selfish reason for supporting the British controls over imports into Rhodesia. This is not to say [deleted] that we should not continue to pressure them to do more than they have done to date to stop the use of British ships in North Vietnam trade.

Mr. STAFFORD. Thank you very much. Mr. Chairman, I yield back whatever time I might have left.

The CHAIRMAN. Mr. Secretary, have the British put any restriction on your bringing the troops into Hong Kong?

Secretary McNAMARA. Basically, no. [Deleted.]

General WHEELER. [Deleted.]

The CHAIRMAN. This is the only contribution they are making in this effort—that is the only contribution?

Secretary McNAMARA. Well, they are giving us a lot of support internationally, Mr. Chairman [deleted]. As you well know, the British have some 50,000 men in Malaysia, and beyond that we are anxious they continue to fulfill their commitments in the Far East. [Deleted.]

We are advocating, and I think hopeful of obtaining, continuing British support in helping defend free world interests in the Far East and including our interests there.

The CHAIRMAN. Are there any other questions by any other members?

Mr. Lennon.

Mr. LENNON. What are the ports in Haiphong?

General WHEELER. The petroleum storage facilities are somewhat inland; they are not in the metropolitan area, if you want to call it that.

Mr. LENNON. About how far inland from the ports are they?

General WHEELER. They are on the shore up above the port proper, as I recall, and about perhaps a mile or a mile and a half from the city itself.

Mr. LENNON. Do I understand approximately 90 percent of the petroleum that goes into North Vietnam moves into those facilities?

General WHEELER. At least 90 percent. There is a small amount, usually Av. gas or products or products of that kind that comes in by rail from China.

Mr. LENNON. Those petroleum products are used in the plants in the industrial complex, as well as being used as gasoline for movements to South Vietnam, are they not?

General WHEELER. That is correct. A small percentage, of course, goes into what I suppose you could call the civilian economy. The rest of it goes into transportation, probably production of power, and that sort of thing.

Mr. LENNON. Is it your personal opinion those petroleum storage facilities could be bombed without tremendous probability of loss in life of civilians?

General WHEELER. [Deleted.]

Mr. LENNON. You stated over and over again that the war must be won in the South, South Vietnam?

General WHEELER. Yes, sir.

Mr. LENNON. And that bombing in the North was to reduce the flow of materiel and increase the cost of the movement thereof?

General WHEELER. That is correct, sir.

Mr. LENNON. There is no single one of the many targets that has been struck, or attempted to be hit, in these sixteen sorties, which substantially contributed to the reduction of the flow of materiel or increase the cost, did it?

General WHEELER. No one target. It is a whole complex of targets that gives the effect.

Mr. LENNON. [Deleted.]

General WHEELER. [Deleted.]

Mr. LENNON. Well, do you know of a single target that you struck attempted to strike, that contributed substantially to the flow of materials?

General WHEELER. No; it is all additive. It is a summation of the result of many strikes, and the effect thereon, on many targets.

Mr. LENNON. I think the American public realizes, or I hope they do, that the war is being directed, both from a political and military point of view, by North Vietnam and Hanoi.

General WHEELER. I have heard some people dispute this, but I think the general public certainly believes the direction and support of the war come from there.

Mr. LENNON. If the majority of the people accept it, then there is a lack of understanding on their part, and that being so, why have we not at least sometime in the past attempted to strike the industrial complex—not the industrial complex but the petroleum facilities from Hanoi?

General WHEELER. [Deleted.]

Mr. LENNON. It would have an adverse effect on the industrial operation of their plants there, as well as affecting to a degree the material moving south?

General WHEELER. [Deleted.]

Mr. LENNON. In your judgment, and from the intelligence you have, what would be the psychological effect on the people of North Vietnam if these storage facilities were struck?

General WHEELER. [Deleted.]

Mr. LENNON. What psychological effect do you think it would have on the public or people generally, in South Vietnam, if the story got around it had been done?

General WHEELER. [Deleted.]

Mr. LENNON. I would like to ask the Secretary of Defense.

Secretary McNAMARA. [Deleted.]

The CHAIRMAN. The Commander in Chief told the world he has one objective—one objective—to get Ho Chi Minh at the peace table. He has told the world.

Secretary McNAMARA. At the lowest cost in American lives.

The CHAIRMAN. That is his one objective, to bring Ho Chi Minh to the peace table, and there isn't any other objective.

He says, you boys, we want you to fight like the very devil. All we want to do is get Ho Chi Minh at the peace table. [Deleted.] You boys go over and do the best you can. How is that going to accomplish this?

Secretary McNAMARA. The objective is not to get Ho Chi Minh to the peace table; his objective is to win in the south, and thereby protect the right of the South Vietnamese to shape their own future. That is his objective.

The CHAIRMAN. He said it 50 times, we have tried everything we know, he told the Congress, he told the world, to get Ho Chi Minh at the table. If we can only get him there that will solve our problems.

Secretary McNAMARA. No, Mr. Chairman, that is "an" objective. It is not "the" objective. The ultimate objective is to win in the south and achieve a satisfactory settlement; that is, one which assumes the right of the people in the south to shape their own future.

The CHAIRMAN. It is hard to explain.

Secretary McNAMARA. I don't doubt it; I know it is.

[Deleted.]

Mr. LENNON. Thank you.

The CHAIRMAN. Now, Mr. Randall, go ahead.

Mr. RANDALL. Mr. Secretary—

The CHAIRMAN. Make your point.

Mr. RANDALL. [Deleted.]

Secretary McNAMARA. [Deleted.]

Mr. RANDALL. You are suggesting we cannot? [Deleted.]

Secretary McNAMARA. [Deleted.]

Mr. RANDALL. Where you say it will come down by rail as another source, that is China. They have no petroleum sources in China, do they?

Secretary McNAMARA. Yes.

Mr. RANDALL. Relatively minor?

Secretary McNAMARA. They have capabilities in China to ship petroleum into North Vietnam. As a matter of fact, we know they do.

Mr. RANDALL. Well, certainly it seems to me, in the discussion, we have talked about the restraints. There are two things to slow them down. I would like to ask if you agree with this.

First, of course, is the requirement of gasoline, to move any of their equipment. Isn't that true?

Secretary McNAMARA. No, sir, they don't "require" it; they do "use" it at the present time.

Mr. RANDALL. They could do without it?

Secretary McNAMARA. I believe so, for the kind of war they are fighting in South Vietnam.

Mr. RANDALL. That is the philosophy as to the increase in cost.

Of course what has always been in mind, certainly all of our armies have to have food in order to move. Where is the food supply coming from, for their troops? Are they coming from the north, or are they still managing to feed off of the south people?

Secretary McNAMARA. I think they are feeding off the south, to a large extent.

Mr. RANDALL. Off the south?

Secretary McNAMARA. Yes, sir.

Mr. RANDALL. That is the important reason why we have to get back some of this land?

Secretary McNAMARA. I wouldn't say to get back the land, but to control the harvest. This is what many of our units in support of GVN forces are presently engaged in attempting to do.

Mr. RANDALL. That is a point as far as I know, which has never been brought out. The Washington Post this morning said it requires 135 tons of food a day, but of that amount being moved in, 65 tons of it were consumed by coolies. In other words, they have only a net of 65 tons. If you cut that off, in a sense maybe they can get along without gasoline, but they can't get along without food.

Secretary McNAMARA. That is right; you are quite right. But I think the reference you are making was to the food required by porters on the lines of communication through Laos. Of course the main food requirement is for the troops in the south, and that food requirement is met, I believe, mostly from the south.

Mr. RANDALL. [Deleted.]

Mr. RANDALL. Thank you, Mr. Chairman. There is some testimony put in here awhile ago, I thought, bearing on, it seems to me, MIG indicated action. Aren't our planes more superior than anything they have?

General WHEELER. They have [deleted] MIG-21s, to the best of my knowledge, and the MIG is a very fine aircraft. This is the Soviet first-line fighter.

[Deleted.]

Mr. RANDALL. How many F-4's do we have?

General WHEELER. We have probably [deleted] squadrons altogether in the area.

Mr. RANDALL. Mr. Chairman, with respect to the other Members, I would like to ask one question about this supplemental. Are we evacuating our people when they are badly wounded? What are we doing? Are we keeping them down there? I don't think that has ever been made clear.

Secretary McNAMARA. The medical program is one of the very bright spots in the Vietnam situation. The percentage of wounded that die of their wounds is substantially lower than any previous campaign. This is, in great part, the result of the evacuation procedures, primarily by helicopter. Although I have forgotten the exact figures, in Korea and in prior periods about 90 percent were evacuated by truck; now about 90 percent are evacuated by helicopter to the field hospitals.

Mr. RANDALL. You are evacuating some to the United States?

Secretary McNAMARA. After they pass through the field hospital. Anyone who can't recover in—

General WHEELER. They have a 60-day evacuation policy. If the man is sure to be well and capable of full duty in 60 days he is normally kept in-country.

If it is obvious his hospitalization will be longer than 60 days, or he will not be able to perform full duty, he will be sent back by Airovac, perhaps to Clark Air Force Base, and then on to the United States eventually. Some evacuees go to Clark, Japan, or Okinawa, anyway, for final treatment. In other words, they are then returned to the theater from there.

I discussed the medical program with General Heaton, and he pointed out to me that our losses of wounded who get to the hospital alive are under 1 percent. And this compares to 2.8 percent wounded that died in hospitals in Korea, and something like 4.2 percent, if I remember correctly, that died in hospitals in World War II.

They are doing a fantastic job. They were getting men actually from the place where they were wounded in some cases into the field hospitals in less than an hour, and in some cases, within 30 minutes—fantastically good.

Mr. RANDALL. Thank you very much.

Secretary McNAMARA. In answer to your question, we do have money for additional hospitals in this program. For example, in South Vietnam itself, we are planning on facilities at 27 locations at a cost of \$76 million.

Mr. RANDALL. Thank you, Mr. Secretary and Mr. Chairman.

The CHAIRMAN. Are there any further questions?

Do you want to wait for these three?

Secretary McNAMARA. I would be delighted to wait.

Mr. LEGGETT. You are not trying to starve us out?

The CHAIRMAN. No.

Mr. SCHWEIKER. If this authorization is approved and your budget for next year is approved, what cash will be spent on Vietnam, approximately, this fiscal year and next fiscal year? In other words, how much will we figure it is going to cost us if your suggestion and recommendations are accepted on the budget and the supplemental? How much cash will we earmark for Vietnam this fiscal year and next fiscal year?

Secretary McNAMARA. Well, the amount of expenditure incremental to what would have been the "normal" level in fiscal year 1966 appears to be on the order of \$4.6 billion, and in fiscal year 1967, \$10.3 billion. A major portion, in other words, of the \$12.3 billion supplemental of new obligational authority which we are asking for now, although it will be obligated in 1966, will not result in expenditures until fiscal year 1967.

Mr. SCHWEIKER. What is the reason for asking for it now instead of next year?

Secretary McNAMARA. Because we have to have the authority to place the contracts with our suppliers, the aircraft manufacturers, for example. In order to place the contract, we have to have the obligational authority.

Mr. SCHWEIKER. As the war stands now, and under present conditions, what do you surmise is the strength in terms of ratio of man to man that we would need to win under present conditions? I have heard a lot of ratios kicked around here.

Secretary McNAMARA. I don't believe it is possible to give a ratio. It varies depending on the size of force and the amount of firepower and the degree of mobility involved. Moreover, as their forces increase, the ratio advantage we need drops. As we increase, the firepower and mobility of the United States and South Vietnamese forces, the ratio drops. [Deleted] and even that number will vary as the circumstances vary.

Mr. SCHWEIKER. What are their total forces?

Secretary McNAMARA. On the order of 200,000.

Mr. SCHWEIKER. What are ours plus the Vietnamese forces?

Secretary McNAMARA. On the order of 900,000.

Mr. SCHWEIKER. We have a ratio of about $4\frac{1}{2}$ to 1?

Secretary McNAMARA. Say roughly 4 to 1.

Mr. SCHWEIKER. What rate are they bringing them in compared to the rate we are bringing them in?

Secretary McNAMARA. This is hard to say. It is not only the rate of infiltration from the north that is involved, but also the rate of enforced recruitment or conscription in the south. There is a lag [deleted] in our intelligence data on those figures, so I really cannot give you that answer now.

Mr. SCHWEIKER. I would like to ask the question another way. I would like an answer.

Do you estimate with the recruitment plus the infiltration they are exceeding the [deleted] buildup as a buildup figure?

Secretary McNAMARA. [Deleted.] General Wheeler may wish to comment on that.

General WHEELER. [Deleted.]

Mr. SCHWEIKER. Based on the strength figures you list under table I, Mr. Secretary, this 452,000 increase, I am not quite clear on what that means. That is not necessarily theoretical men we could put in Vietnam?

Secretary McNAMARA. No; this is in addition to our total active force.

Mr. SCHWEIKER. All right, now, if we maintain our present strategic reserves, for whatever they may be at present, how many men can we put in Vietnam with this new strength, without upsetting our safety minimums?

Secretary McNAMARA. Well, without upsetting our safety minimums, I think we could put [deleted] in there. [Deleted.]

The specific answer to the question I think you are driving at is, we can put about [deleted] men into Vietnam with the forces that will be developed by the increase of 452,000 in our overall military strength.

Mr. SCHWEIKER. That is all I have, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Schweiker.

Now, Mr. Hagan.

Mr. HAGAN. Thirty seconds, Mr. Chairman.

Mr. Secretary, I am grateful to Chairman Rivers for asking his questions earlier this morning which brought on a most interesting colloquy between the chairman and you and General Wheeler. I recall your answer quite well. However, I still am not satisfied, and I do not have the answer to take to my people, for the questions that they are asking me just as the chairman mentioned.

I think if we could end this war, as we did the Japanese war, we would certainly save more lives, and for the next 10 years or so. I would like to ask this question one other way.

If we still consider ourselves the greatest Nation on the face of the earth, and we know we have the greatest arsenal for destruction in history, when are we going to get a better time to prove it? I recall my study of history, I always thrilled at such stories, which I know we all recall, when President Teddy Roosevelt back in 1904 sent that message to the American Consulate General, where he said, "We want Petigarius alive, or Assoulos dead."

I would like to be able to answer my people, and they ask this question constantly, are we going to wait until our enemy becomes our equal before we use this great power that we have to bring this thing to a screeching halt?

Secretary McNAMARA. I think this is a good question. [Deleted.]

Mr. HAGAN. I believe we had 500 fatalities over there in the slow war we are operating over there.

Secretary McNAMARA. That is right. I think it was 400-odd something in November; in December it was around 200. And [deleted].

The CHAIRMAN. Mr. Secretary, you haven't mentioned, as a result of the effect of our occupation, [deleted] who get these tropical diseases. You take that strain of malaria, it is quite a serious thing. The more people we put over there for a long period of time, that is causing us trouble, isn't that a fact?

Secretary McNAMARA. Yes. Malaria has been a problem, Mr. Chairman. I think we have a satisfactory program to overcome it, [deleted].

Mr. BATES. I remember a military expert advising us in those days not to go into French Indochina.

General WHEELER. Ah, and I would agree with him. Under those circumstances my advice to the President would have been negative. The reason is the issues are entirely different. [Deleted.]

My point, Mr. Chairman, is that what we are doing there, and the issues are entirely different. We are engaged in attempting to see that South Vietnam remains free from the imposition of rule from the outside. [Deleted.]

Mr. BATES. I don't know about the timetable, but that is not important to the point I am making. I am only addressing myself today as they addressed themselves at that time, to the military aspect of it. The question was on communism, and the military operation in Indochina. This was the question brought up.

General WHEELER. I suppose the question in those days was whether or not there was basically a Communist effort. I know it was directed by Ho Chi Minh and his capable field commander, and they won several successes culminating in Bien Phu. However, the people in South Vietnam today, many of them—and I am talking about the leaders—were engaged in the war against the French, General Cole—I believe it was Cole—was one of their field commanders. So that you have a group of people in South Vietnam who are not Communists. As a matter of fact, you have a million people from North Vietnam, as you know, who moved south in order to escape communism.

Mr. HAGAN. Mr. Chairman, in concluding my remarks—

The CHAIRMAN. You know the facts on Rhodesia, don't you, Mr. Secretary.

Secretary McNAMARA. No, sir; I don't.

The CHAIRMAN. When you said you believe in blockade, you don't believe in self-extermination.

Go ahead.

Mr. HAGAN. Having been in Congress 6 years, I am not advocating you gentlemen operate a nuclear weapon. Maybe we can scare them to death as we did back yonder in 1962, or at least it seems to me, as far as I am concerned, the people are saying all over, not just down my way, that America is being pushed around, and all that sort of thing, and somebody needs to tell them a little bit more about it, I think, so they better understand what we are doing. They are behind us, of course.

General WHEELER. [Deleted.]

The CHAIRMAN. [Deleted.]

Go ahead, Mr. Leggett.

Mr. LEGGETT. Thank you, Mr. Chairman; I have been waiting for 2 days for a series of questions.

[Deleted.]

Mr. LEGGETT. Now, back to South Vietnam. As I understand from what you have said, we limit our offensive at the present time against North Vietnam.

[Deleted.]

Mr. LEGGETT. Let me ask you this: What level of troop commitment in South Vietnam will our current and projected logistic support arrive at?

Secretary McNAMARA. Well, the supplemental that we have before you, plus what we already have in the 1966 budget, will allow us to support, we believe, by the end of this calendar year, between [deleted] troops in South Vietnam, should that prove necessary.

The CHAIRMAN. Did you mean to say the 1966 budget or 1967 budget?

Secretary McNAMARA. 1966 and 1967.

The CHAIRMAN. 1966.

Secretary McNAMARA. Yes.

Mr. LEGGETT. This would be kind of a top level we anticipate we could support without an all-out over-the-beach type of support?

Secretary McNAMARA. No; not necessarily so. It just happens to be the level that this particular set of budgets would support.

Mr. LEGGETT. Limiting factors at the present time would be our port facilities?

Secretary McNAMARA. No, I don't think so. I think there are a host of other factors that would also be important. Airfield construction, for example, and other facilities. I don't believe port facilities would limit the size of our deployment to that level.

[Deleted.]

Mr. LEGGETT. What does the bombing do with respect to the public support in the United States?

Secretary McNAMARA. Well, I would say a failure to resume the bombing would have further divided the Nation.

General WHEELER. [Deleted.]

Mr. LEGGETT. I got one the other day.

General WHEELER. A lady from Colorado Springs. Mr. Leggett.

Mr. LEGGETT. I got one the other day that said: "Dear Mr. Leggett: Take this as a threat to your security."

He signed his name and left his social security number. What does that mean? We get all kinds of things in the mail.

Let me ask you this now, to sharpen up our objectives in this war, we are not trying to defeat North Vietnam [deleted].

Now, our effort, then, is to, would you say, reach a satisfactory settlement in South Vietnam.

Now, that is a satisfactory settlement with whom, and aimed at what kind of a government represented by whom?

Secretary McNAMARA. Well, first let me say that I don't think it is quite correct to say we are not trying to defeat North Vietnam. We are trying to defeat their aggression against South Vietnam. We are not trying to destroy their political institutions. We are trying to achieve a settlement of the aggression going on in the south at the present time. A settlement either by negotiation or by withdrawal of the military pressure from the north, so that the people of the south can shape their own destiny. "Shaping their own destiny" means that over a period of time they can express their will through elections, and select their own form of government.

Mr. LEGGETT. Does this mean then we are fighting also for the Vietcong to express their will?

Secretary McNAMARA. Well, so long as they function as citizens of South Vietnam and not agents of North Vietnam; yes.

Mr. LEGGETT. Yes. But as long as the Vietcong is expressing their will peacefully, in their own interests, either pro or con, the United

States, or pro or con Red China or North Vietnam, we are prepared to let them do that?

Secretary McNAMARA. Yes. It is almost a contradiction of terms to suggest the Vietcong would act peacefully, but in any event, strictly speaking, yes.

Mr. LEGGETT. Well, you are involved with what, 230,000 Vietcong and North Vietnamese at the present time, is that correct?

Secretary McNAMARA. Yes; that is approximately correct.

Mr. LEGGETT. What is the margin of error in those figures?

Secretary McNAMARA. I can't really answer your question. I think if anything they probably understate the total. The margin of error would differ on the two sides. The margin of error on overstatement would be relatively small. The margin of error on understatement would be much larger.

Mr. LEGGETT. And in the total territory currently occupied by the Vietcong there are how many people at the present time?

Secretary McNAMARA. Well, again, it is difficult to give you a direct answer. They are said to control about 20-odd percent of the population. I would think if you said 3,300,000 that might be a fair estimate.

Mr. LEGGETT. To what degree are those 3,300,000 people sold on Ho Chi Minh?

Secretary McNAMARA. Well, we know that a high percentage of the 230,000 Vietcong have been pressed into service by terror tactics directed against them or their families.

[Deleted.]

Mr. LEGGETT. If the Vietnamese north of the 17th parallel can be so engulfed with Ho Chi Minh philosophy that they are prepared to carry on a war for 20 years, and to withstand [deleted] 250-pound bombs, and [deleted] 500-pound bombs, and [deleted] Mark 117, and all of the rest of your statistics, how is it reasonable that magic line of the 17th parallel means that nobody south of that line, in any substantial numbers, can become imbued with this philosophy that has taken over the north and in Communist China?

Secretary McNAMARA. Well, I don't think there is any indication that free elections in the north would lead to the support of a Communist state by a majority of the people. There is no question but what Ho Chi Minh maintains his power over his people by police state methods. There is every reason to believe that a high percentage of the people in the south oppose those methods. A million of them fled from North Vietnam to South Vietnam; several hundred thousand have fled the areas of Vietcong control in the last year.

Mr. LEGGETT. Don't get me wrong, I support the administration. I am trying to think this problem through.

General WHEELER. May I make a comment, Mr. Leggett?

The people of North Vietnam haven't said they are ready to support this war for 20 years. Ho Chi Minh said they were ready to support it for 20 years. I think there is a substantial difference.

Mr. LEGGETT. [Deleted.] What I read from the newspapers, the corruption in economic aid and such as that, it doesn't look very good over there.

Secretary McNAMARA. We made great efforts to determine the state of mind of the people in the south. Just recently, within the last

10 days, we received the most recent report on it. There is absolutely no reason to doubt the people in the south, given a free choice today, would support their Government's versus North Vietnam's control of their country.

Mr. LEGGETT. That is our purpose, and that is the American policy?
Secretary McNAMARA. That is right.

Mr. LEGGETT. We are supporting the self-determination of people, and we have predetermined by our policy that we think that the vast majority of those people are going to support a democratic-type government in the south?

Secretary McNAMARA. We have determined from the best information available to us that they would not support control of their country by the north. [Deleted.]

Mr. LEGGETT. Of course, when you have a dictatorship, whether from the right or left, you really can't be sure what the people are thinking, can you?

Secretary McNAMARA. I think there are ways to find out. We have used those ways.

Mr. LEGGETT. Somebody said, over the weekend, the people of South Vietnam and all of Vietnam were kind of like a drinking glass: they assumed the form of the container in which they were in.

Secretary McNAMARA. I read that statement, and it would leave one without hope if one believed it. I don't. I don't believe people are that malleable.

Mr. LEGGETT. How do you project that we would reach this settlement in South Vietnam? I am concerned about that. We indicate that the bombing in the north is not going to do any good unless we kill them with the noise, I guess.

Secretary McNAMARA. No, we didn't say it wouldn't do any good. We said that it wouldn't win the war by itself.

Mr. LEGGETT. All right.

Let's talk about that just a minute. As I read this, we are projecting something on the order of [deleted] sorties per month into fiscal 1966 and 1967 and we are going to be dropping on the order of [deleted] tons of bombs a month, which would be, I guess, [deleted] 250-pound bombs.

Now, what kind of damage would you incur in a 30-day period?

Secretary McNAMARA. Well, these air operations will be directed primarily against South Vietnam. And the damage to these Vietcong bases is very great. It is this high level of air attack which is influencing Vietcong morale, which I reported on previously to the committee. I am not certain I gave to this committee extracts from the recent [deleted] report on this subject.

There has been some doubt expressed as to whether the air attacks in the south, on balance, were an advantage or disadvantage. You may have noticed Roger Hillsman, a former Assistant Secretary of State, publicly condemned them the other day. He doesn't know what he is talking about.

The CHAIRMAN. That is for sure.

Secretary McNAMARA. The fact of the matter is we have had independent reports from outside agencies who studied this matter at the scene. We chose them particularly because they were disassociated from the Defense Department. They included psychologists and so-

ciologists and others who could properly appraise the evidence presented to them in this field. Without any question whatsoever, the bombing in the south has been a net advantage to our cause, not only a net advantage, but a tremendous net advantage. And the people in the villages, who have been some times affected by bombing, have not become antagonistic toward either the Americans or the Government. They believe the Vietcong brought this upon them and they want to get rid of the Vietcong so they can get rid of the bombing.

Mr. LEGGETT. You indicate the margin of error on the B-52 bombing runs is [deleted.]

Secretary McNAMARA. The B-52 attacks, because of the fact they are area bombing attacks, are very carefully controlled in relation to population areas. The Joint Chiefs maintain a constant watch over those. General Westmoreland does also. And the commander of the Strategic Air Command does as well. We have been very, very careful. The President has desired this specifically. The commanders themselves have desired this. There is no dispute at all among us with respect to civilian casualties in B-52 attacks. We take every possible caution to avoid them.

Mr. LEGGETT. Is it your position the bombing today has raised the morale of the North Vietnamese in the north?

Secretary McNAMARA. No, I didn't say they raised the morale of the North Vietnamese. [Deleted.]

In the south, there is no question but what the bombing and the air operations have raised the morale of the South Vietnamese soldiers, raised the morale of the U.S. soldiers, and reduced the morale of the Vietcong.

Mr. LEGGETT. Would you compare the Vietcong strength today as against a year ago?

Secretary McNAMARA. Well, these are—

Mr. LEGGETT. Those are figures we have?

Secretary McNAMARA. Yes, these are difficult figures to pin down, because you can't be absolutely sure of the relative accuracy of today versus a year ago. A year ago it would have been something around 100,000 plus. Today we have around 200,000.

Mr. LEGGETT. Now, of this 130,000 increase, what numbers of those would be North Vietnamese?

Secretary McNAMARA. One further word on the year ago strength. I think it was [deleted] odd battalions a year ago and we believe [deleted] battalions today. It gives you some idea of what we think happened during the past year. As to the strength increase, I would guess that [deleted] percent of the increase in strength has been from personnel recruited largely by terror tactics, in the south, and the other [deleted] percent of increase by infiltration from the north. These are the roughest kind of estimates, because we are not sure of our evidence.

Mr. LEGGETT. There has been some evidence the South Vietnamese and the Vietcong are the best soldiers in the world. Is it your best estimate that is because of terror tactics?

Secretary McNAMARA. Well, I don't know that I would say they are some of the best soldiers in the world. They do fight. And we know that terror is applied to them. I read a report yesterday from Ambassador Lodge summarizing some of the latest information, and it just almost turned my stomach to read the report.

It happened to be a report of recent Vietcong recruiting tactics. They go into a village and kill 10 or 12 people, lay their bodies out in the street, get the village elder, cut off his head, put it on a pole, parade it around the town, and then go in and pick up the young males, 15 to 17 years of age, and take them off. I don't know whether you call it terror tactics, or not, but that is how they recruit.

Mr. LEGGETT. Over the last year, then, it is fair to say the North Vietnamese have infiltrated the south to the extent, say, of 40,000, which would be 40 percent of your 100,000, say 50,000?

Secretary McNAMARA. I said 20 percent, I thought. I think the level of infiltration during the past year, we estimate to be 20,000. I suspect it was quite a bit higher than that. I think that as time goes by, you will find us revising last year's infiltration estimate. But the current estimate of infiltration from the north last year was 20,000.

Mr. LEGGETT. That is at the rate of 1,500 a month?

Secretary McNAMARA. That is approximately correct.

Mr. LEGGETT. What kind of equipment are they bringing down there, any heavy equipment?

Secretary McNAMARA. Yes.

Mr. LEGGETT. Any mechanized?

Secretary McNAMARA. Some heavy equipment, some mortars, for example, that are heavy.

Mr. LEGGETT. No trucks?

Secretary McNAMARA. They are bringing trucks down but not into South Vietnam, itself. They are bringing them down to a transfer point in Laos.

Mr. LEGGETT. OK. I think that may be all the questions I have.

The CHAIRMAN. Thank you, Mr. Leggett.

Mr. IRWIN. I hope the American people will have the determination Mr. Leggett had here to stand by and ask questions, Mr. Chairman.

Mr. HÉBERT. He said yesterday all we need is patience.

The CHAIRMAN. All we need is patience.

Mr. IRWIN. I do not have too many questions to ask.

The CHAIRMAN. Go right ahead.

Mr. IRWIN. I have some things to say.

Mr. HÉBERT. Put them on the record.

Mr. IRWIN. Mr. Secretary, there is one long-term problem that I have had that I want to ask your help on. The other one is the one raised by Mr. Leggett.

The first is this: One of the real problems people like me—and I am an unswerving supporter of the administration's policy, and I am grateful you are Secretary of Defense, and we have the Chief of Staffs that we do—one of the real problems we have had over the past few years, when we looked at this problem and said, "What are the prospects," I think we have underestimated the time it was going to take. And this becomes a real problem of public morale. It is awfully hard for the public who isn't professionally trained to respond properly to these developments. And so I would like to ask you a question which maybe you think you answered already, and that is: What do you think the prospects are now as to time? And I would like you to give us, if you can, an exaggerated figure of your own estimate.

Secretary McNAMARA. I honestly cannot answer the question. I don't know what time will be required to accomplish our objective here. I have been accused—

Mr. BATES. You made that before.

Secretary McNAMARA. I was going to say I have been accused of being excessively optimistic in the past, and making erroneous estimates of the future course of the war in South Vietnam. If I may, Mr. Chairman, I would appreciate the opportunity to put into the record 59 statements on the outlook for South Vietnam that I made during the past 3 years, if I might at this point. I have it here, and I will give it to the reporter.

(The statements referred to above are as follows:)

EXTRACTS OF STATEMENTS BY ROBERT S. McNAMARA ON THE OUTLOOK IN SOUTH VIETNAM (JANUARY 1, 1963, THROUGH JANUARY 1, 1966)

1. *January 30, 1963, House Armed Services Committee*

As I have said before on several occasions, victory over the Vietcong will most likely take many years.

2. *February 10, 1963, AP interview*

QUESTION. What is your assessment of the prospects in South Vietnam a year after this country started its big drive to help the pro-Western government stamp out the Communist guerrillas?

ANSWER. You may recall that while I have expressed satisfaction on several occasions during the past year with the progress of the operations in South Vietnam, I have on each occasion cautioned against the conclusion that the progress is leading toward a near-term victory. On each occasion I have indicated that a period of years would be required to wipe out the Communist aggression in that country. Progress has been made, however, during this past year. I can cite some of the factors that lead me to make that statement * * *.

I cite these as favorable factors indicating that we believe the South Vietnamese Government and we have made progress during this past year. But I don't wish to indicate to you that that progress has resulted or will result in the near future in defeat of the Vietcong. We have blunted the attack, but we haven't defeated it.

3. *February 19, 1963, Senate Armed Services Committee*

Senator STENNIS. Mr. Secretary, I have noticed a release of a statement by you in relation to Vietnam in which you said in substance it would be a long, hard struggle. Could you specify a little more; you are not expecting any victory or any accomplishment there or termination of goals or anything like that for several years, is that right? That is what I inferred from your statement anyway.

Secretary McNAMARA. I hope for a gradual strengthening of the control of the government over the activities of that nation and a gradual weakening of the influence of the Vietcong. I think this will go on—I hope it will go on—for a substantial period in the future. I can't really put a number on the years involved, but I think it would be maybe 3 or 4 years.

4. *February 28, 1963, press conference*

QUESTION. Mr. Secretary, you were very optimistic in your foreword to your budget message about the progress of things in South Vietnam. General Wheeler was also optimistic. Are you still optimistic or do you think it may take a little longer?

Secretary McNAMARA. I don't believe I have ever indicated it would be other than a long, hard struggle extending over a period of years. I have felt that way in the past after each of my meetings with our commanders in South Vietnam and with the Ambassador in South Vietnam. I have so reported after each of the visits I have held with those individuals both in Honolulu and Saigon. I feel exactly the same way today. I am optimistic in the sense that progress is discernible. The drive of the Vietcong supported by the North Vietnamese against the established government in South Vietnam has been blunted.

There are a number of factors that are favorable, a number of indications that the South Vietnamese are stronger in relation to the Vietcong than they were a year ago. In that sense there has been progress. For that reason I am optimistic. But I am not predicting the termination of the conflict. It will be a long, hard, dangerous conflict. * * *

I want to repeat again that although there has been a favorable development in the ratio of Vietcong versus South Vietnamese casualties, a favorable development in the improvement in the ratio of arms captured by the South Vietnamese versus the Vietcong, a favorable development in the reduction in Vietcong incidents, nonetheless the Vietcong have been able to reinforce their forces, they have been able to replace all their losses, and they continue to function as a very dangerous arm of the North Vietnamese and Red Chinese Communist Parties.

5. June 13, 1963, Senate Foreign Relations Committee

Although the conflict [in Vietnam] will continue for some time to come, I believe we are making significant gains, particularly in the carrying through of the vital strategic hamlet program, in the gradual extension of Government control, and in the key indexes of comparative defection and the growth in spontaneous intelligence reflecting the growing loyalty and confidence of the people of Vietnam in their Government. It may be of interest to note that in recent weeks we have talked to representatives of other allied and neutral nations who have been observing the picture closely; they share the judgment that we are making significant progress against the Vietcong.

Senator AIKEN. I noticed that you * * * were more optimistic over the situation in Vietnam, and feel that that is coming to a successful conclusion.

McNAMARA. Senator Aiken, I would not wish to obscure the very serious crisis in that country associated with the conflict between the Buddhist sect and the Government. I think this is a cause for great concern. But excluding that factor, progress against the Vietcong, which I specifically referred to in my statement, has been very satisfactory indeed.

6. July 19, 1963, press conference

QUESTION. Do the religious problems in Vietnam have an active effect on the military effort?

McNAMARA. I think the effect of the religious controversy, or what started out, at least, as a religious controversy in Vietnam, has been limited to date on the military effort. The military operations in South Vietnam have been proceeding very satisfactorily and this is true no matter what method you apply to them. If you examine the casualty rates, the rate of incidents, the relative exchange of weapons, those gained versus those lost, the number of prisoners taken, the number of defectors, for example—any one of these measures that you apply to current military operations compared with those of a year ago, or 2 years ago, indicate that they have been proceeding very, very satisfactorily indeed. We are quite pleased with the results. But I don't think they can help but be affected if the current controversies, religious and/or political, continue into the future for any extended period of time. * * *

7. September 23, 1963, planeside press interview, Andrews Air Force Base

QUESTION. Could you summarize the purpose of your visit [to South Vietnam]:

McNAMARA. Yes. Until very recently the progress of the military effort of the South Vietnamese, assisted by the United States, against the Vietcong was proceeding very satisfactorily. It is our purpose to determine whether that military effort has been adversely affected by the unrest of the past several weeks. For that purpose, President Kennedy, after consultation with Ambassador Lodge, has asked General Taylor and me to visit Saigon and extensively review the military program there.

8. September 25, 1963, CBS interview

QUESTION. Might the war [in South Vietnam] be won on the battlefield and lost in Saigon?

McNAMARA. The current period is a difficult one to appraise. Certainly, instability has been accentuated in the last several weeks by the actions of the Government. It is entirely possible that they have alienated important elements of the population, and unless the Government and the population can work together in a unified effort to defeat the Vietcong, they won't be defeated.

9. October 2, 1963, White House statement

1. The security of South Vietnam is a major interest of the United States as other free nations. We will adhere to our policy of working with the people and Government of South Vietnam to deny this country to communism and to suppress the externally stimulated and supported insurgency of the Vietcong as

promptly as possible. Effective performance in this undertaking is the central objective of our policy in South Vietnam.

2. The military program in South Vietnam has made progress and is sound in principle, though improvements are being energetically sought.

3. Major U.S. assistance in support of this military effort is needed only until the insurgency has been suppressed or until the national security forces of the Government of South Vietnam are capable of suppressing it. Secretary McNamara and General Taylor reported their judgment that the major part of the U.S. military task can be completed by the end of 1965, although there may be a continuing requirement for a limited number of U.S. training personnel. They reported that by the end of this year, the U.S. program for training Vietnamese should have progressed to the point where 1,000 U.S. military personnel assigned to South Vietnam can be withdrawn.

4. The political situation in South Vietnam remains deeply serious. The United States has made clear its continuing opposition to any repressive actions in South Vietnam. While such actions have not yet significantly affected the military effort, they could do so in the future.

10. November 19, 1963, planeside interview, Hickam Air Force Base

QUESTION. We've heard several optimistic reports of General Harkins of the [SVN] war there and how our American boys are still dying over there, and we noticed today that there was another insurgency action. When can we expect that you are going to start ordering the American boys to start coming home from that war?

McNAMARA. I expect that the return of certain U.S. personnel will be one of the subjects we will discuss at this meeting. It is our objective to provide the training and logistical assistance which the South Vietnamese Government has requested of us, and upon completion of certain facets of that training, small numbers of the U.S. personnel will be able to return by the end of this year.

QUESTION. Do you consider that the change of regime in Vietnam makes possible a more decisive action now to end the war?

McNAMARA. I think it is quite clear that the previous regime had lost the support of large segments of the population, and a war of this type—a war against guerrilla action, a war against subversion—can only be won with the full support of the people. I think this Government is bound to have, and is already receiving, more support than the previous one either had or deserved.

11. November 21, 1963, planeside statement, Andrews AFB

The meeting that was held yesterday [in Hawaii] was attended by Secretary Rusk, General Taylor, and myself, and other representatives of this Government. It was a very fruitful worthwhile discussion; we reviewed in great detail both economic and military programs of assistance to South Vietnam. We are very encouraged by the excellent working relationships which have developed between our representatives and the new Government in South Vietnam, and we are equally encouraged by the prospects for progress in the war against the Vietcong.

12. December 21, 1963, remarks at the White House

The members of my party and I returned this morning from South Vietnam. We have just completed our report to the President of our observations. We observed the results of the very substantial increase in the Vietcong activity, an increase that began shortly after the new Government was formed, and has extended over a period of several weeks.

During this time, the Vietcong have attacked, and attacked successfully, a substantial number of the strategic hamlets. They have burned the houses, the fortifications, and in many cases have forced the inhabitants to leave. The rate of that Vietcong activity, however, has substantially dropped within the past week to 10 days.

This rapid expansion of activity, I think, could have been expected. It obviously was intended to take advantage of the period of organization in the new Government, a period during which there was a certain amount of confusion—confusion that you might have expected would result from the replacement of the province chiefs and other key administrators in the Government.

We reviewed in great detail the plans of the South Vietnamese and the plans of our own military advisers for operations during 1964. We have every reason to believe they will be successful. We are determined that they shall be.

13. January 27, 1964, House Armed Services Committee

The situation there continues grave. Last September we had hoped we could bring sufficient pressure to bear on the Diem government to persuade it to aban-

don its oppressive measures against the Vietnamese people and get on with the task of winning the war against the Vietcong. Although the military situation in the delta region was still very bad, good progress had been made in the northern areas and especially noteworthy work had been done in the key coastal provinces where Vietcong strength had once threatened to cut the country in half. In the central area and the highlands, progress had been steady, though slower. The situation was still difficult in the provinces to the west and north of Saigon itself. Throughout the northern two-thirds of the country, the strategic hamlet program had developed very well and freedom of movement in the rural areas had grown steadily. We concluded then that top priority should be given to the delta region which contains approximately 40 percent of the population. This region has traditionally resisted central authority. It is the center of Vietcong strength, and the swampy nature of the terrain makes it the most difficult area to pacify.

The first step in that direction had already been taken by September when a third division was moved to the delta. But we felt that additional measures were needed, particularly the consolidation, rather than the further spread, of strategic hamlets; the elimination of many fixed outposts; better hamlet defenses; and more trained hamlet militia. We also felt that the regular Republic of Vietnam Army units should be reserved for use in mobile actions and for "clear and hold" operations in support of the strategic hamlet program.

With these further measures in view, we felt that a start could be made in reducing the number of U.S. military personnel in Vietnam as their training missions were completed. Accordingly, we announced that about 1,000 men were to be withdrawn by the end of 1963 and expressed the hope that the major part of the U.S. military task could be completed by the end of 1965, although we recognized that there might be a continuing requirement for a limited number of U.S. advisory personnel.

In this connection, we must recognize that the U.S. advisory effort cannot assure ultimate success. This is a Vietnamese war, and in the final analysis it must be fought and won by the Vietnamese. To leave our advisers there beyond the time they are truly needed would delay the development of Vietnam's initiative. Therefore, it has been our policy to transfer U.S. responsibilities to the Vietnamese wherever this can be done without impairing the total war effort.

Unfortunately, the Diem government did not choose to follow the advice we offered. In November that government was overthrown and replaced by a new government made up of military officers and civilians. The Vietcong was quick to take advantage of the growing opposition to the Diem government and the period of uncertainty following its overthrow. Vietcong activities were already increasing in September and continued to increase at an accelerated rate in October and November, particularly in the delta area. And I must report that they have made considerable progress since the coup.

The new Government, however, has considerably more popular support than its predecessor and the military revolutionary committee is beginning to take action to intensify military operations and to improve civil administration. The strategic hamlet program which had been overextended in the delta area is now being built more solidly. And the new Government is now applying "clear and hold" tactics in that area.

We hope that, with our full support, the new Government can take hold and eventually suppress the Vietcong insurrection. The dry season will give us a firmer basis for this judgment. However, the survival of an independent government in South Vietnam is so important to the security of all of southeast Asia and to the free world that I can conceive of no alternative other than to take all necessary measures within our capability to prevent a Communist victory. We must prove that Communist aggression cannot succeed through subversion, but will fail as surely as it has failed in direct confrontation.

14. January 27, 1964, Brinkley on NBC

McNamara said the war in South Vietnam has improved very little, if any, since the new Government took over, and he thought the United States must take all necessary measures to prevent a Communist victory.

15. January 27, 1964, CBS-TV

Cronkite reported that McNamara's progress report on the war against communism in Vietnam was far from optimistic. He confirmed reports that the enemy had successfully taken advantage of the change in regimes there.

McNAMARA [in film clip]: I think we should go back to the period immediately following the coup. As you might have expected, there was a period of insta-

bility during the reorganization of the Government. The Vietcong, the Communist insurgents, took advantage of that period of instability, increased the rate of their attacks and greatly increased the pressure they were putting on the South Vietnamese, particularly in the rice-rich delta area south of Saigon.

That period of increased Vietcong pressure endured both through November and December. Since that time, however, Government forces have been greatly strengthened, and we're seeing a reversal of that situation today. Much remains to be done.

16. January 28, 1964, Pentagon press conference

QUESTION. Could you expand a bit on your statement about the war in Vietnam which you made to the House committee yesterday?

McNAMARA. The situation in Vietnam is this: The coup took place on November 2, and at that time the military junta took control of the political administration of the country, and there was what you might have expected—a period of turmoil and instability, uncertainty, as the responsibility for the Government shifted.

The Vietcong took advantage of that, as you would have expected they would. They increased the intensity of their attacks, increased the number of their attacks several fold, and particularly in the area south of Saigon, the delta area, major portions of which had been under the control of the Communists for more than 20 years, way back into the early 1940's.

The Communists moved in, and never at any time since roughly 1940 have major areas of the delta been under the control of anyone other than the Communists. In any event, the Vietcong, expanding from those Communist bases, those long-held Communist bases in the delta, raised the intensity of their attacks, and had many successes during the period of November and December as the new Government formed and consolidated its activities.

The Government was made up of military leaders primarily, as you know, excluding the Prime Minister To, who was a civilian. But General Don, General Minh, General Dinh—all of the others that are members of that committee—in effect held dual roles. They retained their responsibility for direction of military operations while at the same time they assumed this additional responsibility for the administration of the political and economic institutions of that country, a country under severe attack from the Communists.

You can imagine, therefore, that something suffered, and I think that what suffered was the military administration or the administration of military operations, as their attention was forced onto these political and economic problems. They took action, as I remember, toward the latter part of December or early in January, to divide their responsibilities, appointed additional military commanders, sorted out the responsibilities so that greater concentration on military problems was possible, and there has been a very noticeable improvement in the operations as a result.

The Vietcong attacks have decreased in intensity and number and the Government successes have increased. The situation in the delta remains grave, but I am encouraged by the progress of the last 2 week.

17. February 3, 1964, Joint Senate Armed Services-Appropriations Committee

QUESTION. Would you make a few comments about the new South Vietnamese Government?

McNAMARA. I can't speak with any real authority on it. I spent considerable time with General Khanh during my visits to Vietnam. He has impressed me as a very intelligent, articulate, courageous, aggressive, determined army commander. I felt that before he entered the Government last week and I feel it today. But I speak of him in my association with him as an army commander, not as a Chief of State. I am not prepared to evaluate his qualities in that latter role, although I think that many of the characteristics that I have observed in him as an army commander will stand him in good stead in his role as Chief of State.

* * *

McNAMARA. Last fall I was not as optimistic perhaps about the course of the war as I was about being able to bring back our personnel in certain numbers by the end of last year and also in increments. I still am hopeful of doing that. We did, of course, bring back a thousand men toward the latter part of last year. I am hopeful we can bring back additional numbers of men. I say this because I personally believe this is a war the Vietnamese must fight. It is a guerrilla war that must be fought by Vietnamese counteracting the local Vietcong guerrillas. I don't believe we can take on that combat task for them. I do believe we can carry out training. We can provide advice and logistical assistance. But after

all, the training, by the very nature of the work, comes to an end at a certain point. We will have started this expanded training program and carried it out for a period of 4 years, by the end of next year.

I don't believe we should leave our men there to substitute for Vietnamese men who are qualified to carry out the task. This is really the heart of our proposal. I think it was a sound proposal then and I think so now. I don't in any way wish to minimize the difficulties we face in Vietnam. I think they are great but I do believe we must count on the Vietnamese to carry the burden of the war, particularly in terms of supplying men to carry out the combat tasks.

QUESTION. How about the new leaders in South Vietnam? Do they have any more appeal to the local people than their predecessors?

McNAMARA. I don't know. I can't really speak to that other than to say that in the 2d Corps area, which was General Khanh's corps, I was very impressed by what little a Westerner could observe of the relationship between the commanding general of the corps and the local people. I visited numerous hamlets and villages with him during various trips to South Vietnam in his corps area and everywhere he was very well received by the local people. Whether that condition will carry on in his present role, I can't say.

18. March 5, 1964, Pentagon press conference

QUESTION. How are we doing in South Vietnam?

McNAMARA. During [the past 4 months] the country has had three Governments, each of the new Governments has changed Cabinet members, each of the new Governments has changed provincial governors, and each of the new Governments has made changes in the senior military leadership. The Vietcong have sought to take advantage of the resulting period of confusion. They have substantially increased their rate of incidents, their terror attacks, their harassments, and their military attacks upon the Vietnamese. That level of attack is higher to day than it was 6 months ago, it is lower today than it was at some times within the past few weeks, and it is lower today than it was in November and December. What the future holds, I can't say.

19. March 6, 1964, planeside at Hickman AFB

QUESTION. You were quoted yesterday as saying that the situation now in Vietnam was grave. Is that a correct summing up of your views?

McNAMARA. Yes, I think so.

20. March 17, 1964, White House release

Secretary McNamara and General Taylor today reported fully to President Johnson and the members of the National Security Council [on the situation in South Vietnam].

Comparing the situation to last October, when McNamara and General Taylor last reported fully on it, there have unquestionably been setbacks. The Vietcong have taken maximum advantage of two changes of Government, and of more long-standing difficulties, including a serious weakness and overextension which had developed in the basically sound hamlet program. The supply of arms and cadres from the north has continued; careful and sophisticated control of Vietcong operations has been apparent; and evidence that such control is centered in Hanoi is clear and unmistakable.

To meet the situation, General Khanh and his Government are acting vigorously and effectively. They have produced a sound central plan for the prosecution of the war, recognizing to a far greater degree than before the crucial role of economic and social, as well as military, action to insure that areas cleared of the Vietcong survive and prosper in freedom.

[The details of the plan were outlined.]

Secretary McNamara and General Taylor reported their overall conclusion that with continued vigorous leadership from General Khanh and his Government, and the carrying out of these steps, the situation can be significantly improved in the coming months.

21. March 24, 1964, House Appropriations Committee

The situation as we find it is as follows: We believe that the military tools and the concepts which the Government of South Vietnam and the United States have employed are generally sound and adequate. We think some improvements are required as I will mention in a moment.

We believe that the U.S. policy in reducing U.S. military personnel in South Vietnam as the Vietnamese become capable of carrying on the logistical training

and other programs which we are presently supplying to them is sound and should be continued.

As to the situation itself, I believe it has been unquestionably growing worse since last September. This deterioration can be measured in a variety of ways.

As another indication of the deterioration, I think that there are large groups of the population today that are showing signs of apathy and indifference. You can measure this in terms of desertion rates or in terms of draft dodging or in terms of the obvious morale or lack of morale of the militia forces.

I think in the past 90 days there has been some noticeable weakening of the Government position.

Another factor affecting the present situation that must be recognized is that the political control structure in a country which extends from Saigon down through the provinces and the districts and into the hamlets has, in certain cases, practically disappeared following the November 1 coup and you can measure the deterioration of the political control structure by such factors as the shifts in the number of provincial governors.

Furthermore, almost all of the major military commands have changed hands twice since the first of November. You can imagine, therefore, the disorder and confusion that resulted because of these administrative changes.

Another factor of importance in the present situation is the very strong, continued support of the insurgency movement by the North Vietnamese. You can measure this in various ways. One of the significant factors we have encountered in the last few months is weapons of higher caliber than we had seen previously—weapons supplied by the North Vietnamese, including 75-millimeter recoilless rifles, manufactured by the Communist Chinese, large stocks of machine-guns and ammunition of Chinese manufacture.

We captured in one attack on the 24th of December 5 tons of ammunition, 90 percent of which was of Chinese Communist manufacture. I think the greatest factor of uncertainty in the present situation, at least when we arrived in South Vietnam, was the untested Khanh government. You recall he took control on January 30. We feared that his control might be weak and subject to change at almost any time. Investigation on the scene, including consultation with all of the leading U.S. representatives, military and civilian, convinced us that General Khanh does have the general support.

On the positive side there are many favorable factors. Khanh, himself, I felt, based on previous trips, is one of the most active, most aggressive, most imaginative, ablest of the senior military leaders in South Vietnam. He is only 37 years old. He has had little political experience, but despite those handicaps, he brings an active, imaginative, energetic personality to the position of head of state. He has already instituted a number of reforms. He has laid out a national mobilization plan. He is taking his story to the people. He recognizes that the defeat of the Vietcong in the long run depends on political and economic action, at least as much as it does on military action.

We discussed with him and agreed upon a program of increased effort by the Vietnamese, and increased support by the United States.

This program would include, for example, increasing the strength of the regular and paramilitary forces. It would include reorganizing certain of the paramilitary forces. It would include changing the composition of some of the forces in order to improve the pay of those who are actually bearing the brunt of the casualties today. It would include substantially improving the Vietnamese Air Force. It would include additional forms and quantities of equipment for both their army and their air and naval forces. It would particularly include action to increase the productivity of their rice farms, by adding fertilizer in quantities above those previously programmed.

22. March 26, 1964, speech at NSIA dinner

When President Diem appealed to President Kennedy at the end of 1961, the South Vietnamese were quite plainly losing their fight against the Communists, and we promptly agreed to increase our assistance.

Fourteen months later, in early 1963, President Kennedy was able to report to the Nation that "the spearpoint of aggression has been blunted in South Vietnam." It was evident that the Government had seized the initiative in most areas from the insurgents. But this progress was interrupted in 1963 by the political crises arising from troubles between the Government and the Buddhists, students, and other non-Communist oppositionists. President Diem lost the confidence and loyalty of his people; there were accusations of maladministration and injustice. There were two changes of government within 3 months.

The fabric of government was torn. The political control structure extending from Saigon down into the hamlets virtually disappeared. Of the 41 incumbent province chiefs on November 1 of last year, 35 were replaced. Nine provinces had three chiefs in 3 months; one province had four. Scores of lesser officials were replaced. Almost all major military commands changed hands twice. The confidence of the peasants was inevitably shaken by the disruption in leadership and the loss of physical security. Army and paramilitary desertion rates increased, and the morals of the hamlet militia—the "Minutemen"—fell. In many areas, power vacuums developed causing confusion among the people and a rising rate of rural disorders.

The Vietcong fully exploited the resultant organizational turmoil and regained the initiative in the struggle. For example, in the second week following the November coup, Vietcong incidents more than tripled from 316, peaking at 1,021 per week, while Government casualties rose from 367 to 928. Many overextended hamlets have been overrun or severely damaged. The January change in Government produced a similar reaction.

In short, the situation in South Vietnam has unquestionably worsened, at least since last fall.

The picture is admittedly not an easy one to evaluate and, given the kind of terrain and the kind of war, information is not always available or reliable. The areas under Communist control vary from daytime to nighttime, from one week to another, according to seasonal and weather factors. And, of course, in various areas the degree and importance of control differ. Although we estimate that in South Vietnam's 14 million population, there are only 20,000 to 25,000 hard-core Vietcong guerrillas, they have been able to recruit from among the South Vietnamese an irregular force of from 60,000-80,000—mainly by coercion and bandwagon effect, but also by promising material and political rewards. The loyalties of the hard core have been cemented by years of fighting, first against the Japanese, then against the French, and, since 1954, against the fledgling Government of South Vietnam. The young men joining them have been attracted by the excitement of guerrilla life and then held by bonds of loyalty to their new comrades in arms, in a nation where loyalty is only beginning to extend beyond the family or the clan. These loyalties are reinforced both by systematic indoctrination and by the example of what happens to informers and deserters.

Clearly, the disciplined leadership, direction, and support from North Vietnam is a critical factor in the strength of the Vietcong movement. But the large indigenous support that the Vietcong receives means that solutions must be as political and economic as military. Indeed, there can be no such thing as a purely "military" solution to the war in South Vietnam.

The people of South Vietnam prefer independence and freedom. But they will not exercise their choice for freedom and commit themselves to it in the face of the high personal risk of Communist retaliation—a kidnapped son, a burned home, a ravaged crop—unless they can have confidence in the ultimate outcome. Much therefore depends on the new Government under General Khanh, for which we have high hopes.

Today the government of General Khanh is vigorously rebuilding the machinery of administration and reshaping plans to carry the war to the Vietcong. He is an able and energetic leader. He has demonstrated his grasp of the basic elements—political, economic, and psychological, as well as military—required to defeat the Vietcong. He is planning a program of economic and social advances for the welfare of his people.

Conclusion: The road ahead in Vietnam is going to be long, difficult, and frustrating. It will take work, courage, imagination, and—perhaps more than anything else—patience to bear the burden of what President Kennedy called a "long twilight struggle." In Vietnam, it has not been finished in the first hundred days of President Johnson's administration, and it may not be finished in the first 1,000 days; but in cooperation with General Khanh's government, we have made a beginning.

23. April 24, 1964. Pentagon press conference

QUESTION. How is the fight in Vietnam going?

McNAMARA. I think you have to examine two activities in Vietnam at the present time. One is the establishment of a strong political institution and the other is the military campaign. I said before and I want to repeat again that I believe the most important single action that can be taken in Vietnam today is the establishment of a stable political institution. Without that, no military campaign can be conducted effectively. When I first met General Khanh a year or two

ago, long before he was head of the Government, I was very favorably impressed by him. He is a strong, aggressive, active, intelligent individual. He is providing strong direction for that Government. But the Government has gone through a very traumatic period since the 1st of November and it is far from the strong government that he wishes to establish. It is much stronger today than it was a month ago. It is stronger today than it was approximately 2 months ago on January 30 when he took over. In the period between November 2 and January 30, the Government has been run by a committee. I don't believe a committee can possibly run a government effectively when that government is under the pressure of Communist attack as Vietnam is today.

So, in the sense that the political institutions are becoming more effective or becoming more unstable, progress is being made. Now during this period, of course, there have been numerous changes in the administration of the provinces. I think I told you before that some 35 or more of the 41 or so province chiefs have been changed at least once in the last 90 or 120 days. In 9 or 10 of those provinces there have been 3 changes. It is as though you had three governments in a State in our country in 90 days. In one of the provinces there have been four changes. All of the senior military leaders have been changed at least twice in the last 90 to 120 days. And there have been corresponding changes at lower levels of both political and military administration.

As you can well imagine, this has created disorder—there has been a vacuum. Into that vacuum the Vietcong have penetrated. Their rate of activity has increased dramatically as has their fatality rate. If I remember the figures, they lost about 650 men killed or taken prisoner during the past week. This is, I think, the highest total than at any other time in the last 2 or 3 years. The Government forces have been under considerable pressure as a result of the increased level of Vietcong attacks. They have also responded with amazing speed and effectiveness. Their fatalities, however, and their casualties, have been high, again, the highest in the last 2 to 3 years.

I think we should expect a period here when the Vietcong will continue to try to take advantage of the disorder and the vacuum that results from the series of very rapid changes of political and military personnel in the last 90 to 120 days.

I think it will be several months before we see any substantial progress. I think I said when I came back in March that it would be 4 to 6 months before any dramatic progress was visible.

24. May 6, 1964, Advertising Council

QUESTION. Please comment on the situation in Vietnam.

MCMANARA. The problem is a very difficult problem. We've had three governments in a period of 5 or 6 months. You may recall that President Diem's government was overthrown on November 2, and the committee form of government that General Minh introduced at that time was replaced by General Khanh's government on January 30. Each of these governmental changes has brought about what you might expect, a period of turmoil in the administrative agencies. There are about 40-odd provinces in South Vietnam. In a sense, these correspond to our States. Of the 41 province chiefs—41 incumbent province chiefs on the 1st of November—35 have been replaced; in 9 of the provinces, there have been three changes in provincial chiefs since November 1, and in one of them there have been four.

Similarly all of the major military commanders have been replaced at least once, and many of them two or three times. And these personnel changes have filtered down into the districts and the villages and the hamlets as well. So that there's been a period of disorder, a period of administrative chaos that has followed these governmental changes. And the Vietcong, the Communist Vietcong, have taken advantage of this, as you might have expected they would. They raised the level of their tax and increased the intensity of their tax. Of course, their casualties, their fatality rates have risen very substantially. The Communist fatality rates have risen very substantially as a result of this increased level of attack. But so have the casualty and fatality rates of the Government forces.

It is a very serious situation there. The first requirement for progress is a stable government. We believe that General Khanh is making progress toward that objective. He's 37 years old; he's had very little formal education, none other than in military fields—he attended our Command and General Staff School, for example, at Leavenworth, Kans.—but he's had no formal education in economic theory, political theory; he's had no real experience in political-eco-

conomic administration, and you can imagine the burden placed on that man when he suddenly catapulted into the position of head of state of a country which is facing the most intense pressure from the Communist bloc, particularly North Vietnam, which is infiltrated with Communist agents who are receiving material and support from outside the borders of that country, a country which has not had a tradition of self-rule, a country which lacks the educated class necessary for efficient administration of both the political structure and political institutions and economic institutions. It's a tremendous burden to place on one man.

Fortunately, he's an active, aggressive, intelligent, decisive individual. Without question, he's the ablest general—in my opinion—among the Vietnamese forces. He's acting with considerable skill and he's doing much to strengthen the political base which, as I say, is absolutely essential if we're to achieve economic and military progress.

I think we'll begin to see signs of that progress in the months ahead. It's going to be slow, however; the war's going to be long; it can't be won quickly—no guerrilla war has ever been won quickly; this one must be won by the Vietnamese themselves. If they're to win it they just have to have a stable political structure within which to operate. We can provide advice; we can provide logistical support; we can provide training assistance, but we cannot fight the war itself.

25. May 14, 1964, planeside interview at Andrews Air Force Base

QUESTION. What is the outlook for the war in South Vietnam?

McNAMARA. As you know, the Vietnamese are fighting an antiguerrilla war and antiguerrilla campaign against the Communist insurgents. It's going to be a long war. It will be a hard war. The path to victory will be long and it will take courage and imagination for both the Vietnamese and for our forces who are assisting them to assure success, but I firmly believe that the persistent execution of the political-military plans which the Government of Vietnam has developed to carry out the war with our assistance will lead to success.

26. May 14, 1964, remarks to White House press

There is no question in the minds of General Taylor and me but what the Communists have stepped up their rate of attack in recent weeks in South Vietnam primarily against the rural population and primarily in the form of tactics designed to harass the rural population, to instill terror in them, to erode away their confidence in the ability of their Government to provide for their physical security.

These attacks have taken the forms of kidnappings, ambushes, murders, terror of every form. They have been directed particularly against the leaders of the Provincial governments, the district governments, the villages. They have kidnapped district chiefs, for example, and literally cut off their heads. They have ambushed the officials of the districts and the Provinces. One of these ambushes took place while we were there.

The rate of kidnappings, murders, ambushes has increased very substantially in recent weeks. It is absolutely essential, therefore, that the Government of Vietnam increase its activity to counter these attacks and that we consider ways and means through increased economic assistance, increased military support to assist the Government of Vietnam in that activity.

We have agreed with them that their regular military forces and their paramilitary forces must be increased in size very substantially and very soon. We have agreed that the number of aircraft in the Vietnamese Air Force must be increased.

* * *

QUESTION. What would be your estimate of how many more U.S. training personnel would be needed in Vietnam?

McNAMARA. I think on balance the number is not likely to increase substantially.

27. May 20, 1964, remarks on CBS-TV after appearing before House Committee on Foreign Affairs

QUESTION. Did the committee members seem reassured?

McNAMARA. They did indeed, as I think they should be. The behavior of U.S. military personnel in South Vietnam carrying out their role of advisers to Vietnam is outstanding. Everyone of us should be proud of it; every citizen of this country should be proud of it. We should be proud of the Vietnamese. They

are fighting for their independence. It is going to be a long, hard war, no question about it. But they are willing to fight and die for their independence. We should be willing to support them to that end. Every senior American I know of, civilian and military, in South Vietnam—the Ambassador, General Harkins, commander of the Military Assistance Command, every other man I talked to—believes that persistent application of our plans will lead to success. I'm certain it will.

28. May 21, 1964, speech before National Industrial Conference Board

I was in Vietnam again last week, as you know. I found some progress in the fight there—progress toward “bottoming out” the difficulties caused by the recent double change in government—but the journey ahead will still be long, difficult and frustrating.

29. July 15, 1964, Pentagon press conference

QUESTION. Would you give us your appraisal of the situation in South Vietnam, particularly whether new directives have been given to cope with the increasing number of ambushes?

McNAMARA. I think the point to recognize is not the few dramatic episodes of the last week or two, but rather, the continued high level of Vietcong incidents, harassment, terror tactics, kidnaping, murder, these Vietcong-initiated activities are continuing at a high level. As long as they continue at that level, the security of the people is in doubt. As long as the security of the people is in doubt, their allegiance to the Government is in doubt. This is the underlying problem in South Vietnam. This is the problem to direct your attention to.

At the same time that I emphasize the continued high level of incidents, I also want to point out two or three very favorable factors and developments in the last few weeks.

We were quite concerned about the high desertion rate or the increasing desertion rate earlier this year. I reported that, I believe, in March and April. Since that time the desertion rate has dropped dramatically, for a variety of reasons; in part, because of the new pay practices. You may remember that this was one of the major recommendations that we made in March. It is one of the reasons why it was necessary to increase our foreign aid, economic and military assistance, to Vietnam, as was done in June. It is having its effect. It is cutting the desertion rate. Not only is the desertion rate dropping, but the recruitment rate has increased substantially, with the result that the total strength of the regular and paramilitary forces in Vietnam is increasing for the first time in many, many months. This is a highly favorable factor. It is due, as I say, in part to the change in the compensation system and in part it reflects, I believe, an improvement in the morale of the people of that country.

QUESTION. On South Vietnam, you mentioned some favorable factors and you mention two: one, the increasing or the reduction in the increasing desertion rate, and the other the recruitment. Was there anything else?

McNAMARA. I don't think we can expect to give day-to-day accounts of the improvement or retrogression in the situation. But I do call your attention again to this one important point: that the rate of Vietcong incidents is high. As long as that rate of incidents is high, and by an “incident” I mean a terror attack. As long as that incident rate is high, it means that the security of the people is low. As long as the security of the people is low in certain areas of the country, their allegiance to the Government will be in doubt. It is that which makes the problem for us. It is going to take a long, long time to overcome it.

30. October 22, 1964, Pentagon press conference

QUESTION. Is the situation in South Vietnam better or worse than it was a year ago?

McNAMARA. I think it is a serious situation today. It was serious a year ago. Today is October 22. A year ago it was 8 or 10 days before the coup that resulted in the removal of President Diem. You will recall that at that time discussions were taking place. General Taylor and I had returned from a trip to Vietnam in September a year ago and at that time we said it was a very serious situation, serious because of political instability. That, of course, is a primary problem today. The Vietnamese are themselves developing a new structure for their Government. They are planning a transition from the current government of which Premier Khanh is head, to a new structure sometime within the next week or two.

When they ask for our advice, we are giving it to them in connection with both the structure and the movement toward that new government. This is an extremely important development in their struggle against the Vietcong.

In addition to the political problems that they face, problems of instability, problems of change of political institutions, the military situation is serious. The Vietcong remain incapable of meeting the regular forces in any formal engagement. The regular military forces have power sufficient to overcome any Vietcong elements that have been placed against them. The Vietcong, therefore, as you might have expected, have concentrated on the terror attacks on the paramilitary forces or in the countryside. These terror attacks have increased in number. They have increased in intensity. They have increased in the number of fatalities and casualties that result therefrom. They are very serious.

Along with the increase in the number and intensity of terror attacks the Vietcong casualties have risen, as have the casualties of the Government forces. The casualties of the Vietcong last week for example, were about twice the level of the previous week, and the casualties of both the Government and Vietcong forces are higher today than they were a year ago.

31. November 10, 1964, press conference, Texas

QUESTION. Would you give us your latest assessment of the chances of winning the war in Vietnam?

McNAMARA. I think that it's important to recognize what our objectives are in Vietnam. Our objectives are not to align Vietnam to the West as an ally of the West; our objectives are not to utilize the soil of Vietnam as a military base of the West; our objectives are to insure the continued independence of that nation and to insure that it remains free from Communist domination. That has been our objective; that is our objective. I believe we will achieve it. I think some progress has been made recently.

During the past year, we've had a series of problems out there, largely political in character, as you are well aware. In 12½ months we've had four governments and in a society that is under as intense pressure as that society is—political, economic, military pressure—you can imagine the instability in all of those fields brought about by the series of changes in government.

At last we have a civilian government, a government that gives some indication of being able to develop a consensus among the power groups in the nation and move the nation ahead to a more effective response to the Vietcong guerrillas that are attacking and harassing the people.

So I think that today, as compared to a month or two ago, we can look ahead with greater confidence. And I don't want to overstate the case, because during the past 12 months, the Communist guerrillas, recognizing that they did not have the power to confront in open conflict the established military forces of that country, have greatly accelerated and expanded the terror attacks upon the political infrastructure of that country. And when I say the "political infrastructure," I mean their attacks upon the political authorities in every echelon, starting at the lowest level, the hamlet, and proceeding up through the village, the district, the Province, and even the National Government in Saigon. These attacks, these terror attacks, have been very successful. I've forgotten the exact figures, but I think these are rough approximations that in the past 12 months the Vietcong have killed about 500 government officials at all echelons of government and kidnapped an additional 500. To put that in perspective, you have to recognize the total population of South Vietnam is on the order of 12 or 14 million and a portion of that is already under the Vietcong control. So if you take the remaining portion and maybe multiply by 15 to make it comparable to this country and then think of 15,000 government officials in this country being murdered or kidnapped in a period of 12 months, it will give you some idea of the very intense pressure that that society is under. And the fact that those people have been willing to continue to fight, to absorb fatalities at the very high rate at which they are absorbing them, and still to retain sufficient capability as a fighting unit to force the Vietcong into covert as opposed to overt operations, I think it's a tremendous accomplishment and I think sometimes we become weary ourselves, psychologically weary, and spiritually weary, when we look at what we've done.

I've been associated with this 4 years; the Nation's been associated with it for 10. We're going to be associated with it for many years in the future. I'm sure, before we eventually achieve this objective that I mentioned. But I personally believe we can achieve it.

32. February 24, 1965, Senate Armed Services and Appropriations Committees

The present situation in South Vietnam is grave but by no means hopeless. On the purely military side there remains a familiar series of problems—the increasing Vietcong capabilities, and the losses of combat experienced South

Vietnamese small unit leaders and soldiers. However, the past year has also brought some encouraging developments. The regular South Vietnamese forces have been considerably strengthened by the continuing flow of new equipment and by the additional training and operational experience. In open battle, the Vietnamese forces have shown encouraging progress in operational planning, in reaction time, and in interservice coordination. The combat performance of regular troops continues to inspire confidence and toward year's end we noted improvements in recruiting and in active duty strength. The approximately 23,500 U.S. military personnel now in South Vietnam continue to carry out their complex advisory and support missions, in headquarters and in the field, with the skill, dedication, and bravery we have come to expect of our Armed Forces.

QUESTION. I believe it was yesterday you reported in public some extraordinary activity on the part of the Vietcong to cut South Vietnam in half. Can you give us the latest report on this situation?

McNAMARA. Well, there has been a very disturbing movement of the Vietcong in the center of Vietnam. In the Kontum area, roads have been cut between the coast and the highlands. The railroad has been cut between Nha Trang and Da Nang. Certain of the roads going north of Kontum have been cut, and the Vietcong have in the Quang Ngai Province and in the province just south of Quang Ngai greatly increased their control of the territory and the population, all this in recent weeks. Exactly what this means and how far it will go we don't know, but it is a disturbing set of actions.

33. March 2, 1965, House Appropriations Committee

QUESTION. As a South Vietnamese war which we have supported, we seem to have been on the overall losing ground consistently, I believe. Would you agree?

McNAMARA. No, I do not believe consistently. If you go back over a period of time, the South Vietnamese with our assistance have strengthened their position in the latter part of 1961, 1962, and much of 1963. The situation has deteriorated, I think, over the past year. Today I would characterize it as grave, but it is certainly not hopeless.

* * *

QUESTION. If we continue our military and economic support of the Government of South Vietnam at the present rate and scope and the Vietcong continue their present level of effort, in your judgment how many more years will pass before a conclusion is reached?

McNAMARA. I really can't say. I think the period of time required to counter effectively a substantial guerrilla effort of the kind that currently exists in South Vietnam is great, and whether it is 1 year, 2 years, or more, I really can't say, but a long period of time is required to reintroduce effectively peace and stability into a nation that has been torn apart as has been South Vietnam.

* * *

QUESTION. Would it be fair to say that we will be sitting here next year talking about this inconclusive, difficult, costly problem of about the same complexity in South Vietnam that we have today? Is that a reasonable position for me to take?

McNAMARA. It is difficult for me to forecast the course of events in southeast Asia, but I want to repeat what I said a moment ago: An effective opposition to a guerrilla campaign requires an extended period of time for the results to be clear. I don't believe that we can be effective in South Vietnam in a short period of time. We expanded our efforts at the end of 1961. We have been there now 3-plus years on an expanded basis. We have been there pursuing these objectives—the same objectives we have today—for 10 or 11 years, and I think that it will be more before we achieve them.

The form of our action in the future, whether it be political, economic, or military, is difficult for me to predict.

* * *

QUESTION. We find ourselves in a situation where two-thirds of the country is overrun by Communists. They have almost cut it in half. The Government is a shell. Do you feel that anything is being done now which can be expected to reverse this situation?

McNAMARA. First, let me say that while the control of the countryside and the population by the Vietcong is substantial, I do not believe it extends to the degree of controlling two-thirds of the countryside. When I say that, I do not wish to minimize in any way the seriousness of the control of the Vietcong over both people and territory. As to whether anything is being done to reverse the situation, the South Vietnamese continue to fight. That is the most important single action that is required. There is a will to resist. If that were lacking, I think the situation would be hopeless. As long as the will to resist continues, the situation is not hopeless.

* * *

QUESTION. Is it true * * * that even those we think are loyal are not loyal to our side to the point of reporting on their fellow South Vietnamese?

McNAMARA. Is it true that we are not receiving intelligence reports from portions of the population who are terrorized by the Vietcong? The fact is that the Vietcong kidnaped or killed about 1,500 hamlet and other government officials in the past 12 months. Multiplying that by 20 to make it comparable to this country, it is just as though 30,000 mayors and council members and other township, city, and State officials were killed in this country in a year. You can imagine the terror that would be affecting our population in areas where that was taking place. In those areas in Vietnam, the people have been so terrorized that we are not obtaining intelligence information such as we obtain in areas where the terror attacks are not taking place.

34. April 7, 1965, House Appropriations Committee

QUESTION. Is our stepped-up effort there, our direct intervention and air strikes, motivated to some extent by the feeling that time is of the essence?

McNAMARA. Our increased effort is motivated by the fact that the North Vietnamese were greatly increasing their infiltration of men and equipment into South Vietnam. We recognized if they continued that they will just overwhelm the nation.

35. April 7, 1965, press statement by McNamara at the White House

The military situation in South Vietnam has become increasingly serious during the past year. During that time the North Vietnamese have steadily increased the number of men and the quantity of material which they have infiltrated into that country overland through Laos and across the border between Laos and South Vietnam, over the sea frontiers of South Vietnam. It is through means such as this that they are continuing to support the Vietcong in their attempts to subvert the established Government of South Vietnam.

36. April 12, 1965, interview in U.S. News & World Report

QUESTION. You spoke of the change in tactics of the Vietcong. Does that suggest that they think they are winning the war?

McNAMARA. No, but it does suggest that they are there in larger numbers today than previously, and that they are better equipped than previously. All the evidence points to this. The evidence that we have from captured Vietcong, the evidence we have from documents we have captured, the evidence we have from enemy equipment—all indicates that the rate of infiltration has increased over the past 12 to 18 months. This increase in infiltration has given them a capability they didn't have before, and that capability has permitted them to operate in larger units and allowed them to increase the level and intensity of their attacks, primarily in terms of greater terror and harassment. However, they still don't have the capability today—on any wide scale—to openly confront the regular military units of the South Vietnamese Government.

QUESTION. Why are the Communists so successful?

McNAMARA. The Vietcong are following terror and harassing tactics: They move in by night. They apply pressure against individuals, particularly the hamlet leaders, seeking to subvert them. When they succeed in subverting them, they remove the power base and the security of the hamlet and cause it to associate with the Vietcong. They then move on, leaving behind cells that control that hamlet. Particularly, they are attacking the local officials. In terms of our own population, it's as though the guerrillas were killing several thousand—perhaps as many as 8,000—mayors and city officials a year. You can imagine what that would do to our local governments if it were occurring here. They're kidnapping civilians by the hundreds, attempting to destroy the morale of the population, turn it away from the Government. By these means, the Vietcong are avoiding the need and the necessity for open attack on the Government units.

There's only one way to counter that, and that's by effective counter guerrilla action involving the political, economic, and military factors within the local hamlet.

QUESTION. Are there any major areas in which the South Vietnamese have succeeded in clearing out the Communists and keeping them clear out?

McNAMARA. Oh, yes. There are many—particularly in and around Saigon. There's a special program underway there at the present time that has that as its objective, and is making progress.

The difficulty, of course, has been that, in the last 18 months, the series of changes in the Government in Saigon has been translated into changes at all levels of government—province, district, hamlet—and translated into changes in the military leadership. It has injected instability into both political and military institutions.

This has made extremely difficult the development of effective counter guerrilla campaigns. Such campaigns are very complex. They involve political, economic, and military operations. They require, for success, a strong political and military leadership, and it's difficult to get that leadership when you have the number of changes we've had in Saigon. In one period there were changes in about 35 of 42 provincial governments in a period of 3 or 4 months. In one case there were nine changes in the government of one province within a period of a few months.

QUESTION. Overall, which way is the trend going?

McNAMARA. The situation has been deteriorating for the past year, and it's a very serious and grave situation today, but far from hopeless.

37. April 21, 1965, planeside at Andrews Air Force Base upon returning from Honolulu Conference

Our attention was directed to the actions in the south. It's there that the war against the guerrillas is being fought, and it's there we must direct our primary attention. I want to mention again the very high level of infiltration of men and equipment into South Vietnam. It has increased in recent months. It is continuing at a high rate.

38. April 26, 1965, Pentagon press conference

I should like to report to you briefly this morning upon our latest estimates of the strength of the Communist forces in South Vietnam, of the support which they are receiving from North Vietnam, and of certain of the actions which we are taking to reduce that level of support.

The clandestine infiltrations of personnel and materiel from North Vietnam into South Vietnam continues to play a vital role in providing the Communist Vietcong with the leadership, with the technical competence, with the weapons, and with the ammunition which they need to carry on their insurgency directed against the established Government in South Vietnam.

Recent evidence both from captured prisoners and from captured documents has increased our estimates of the number of infiltrators to a total of 39,000. Reports to date confirm the infiltration of between 5,000 and 8,000 men in 1964 alone.

In view of the normal timelag between the actual active infiltration and our confirmation of it, I think it is probable that we are in excess of 10,000 men infiltrated from the north into the south during the past year.

Furthermore, recent captures indicate that approximately 75 percent of these men sent from the north to the south were born in North Vietnam. It is clear that the Communists are determined to keep up this level of support despite the drying up of the supply of former southerners, men born in South Vietnam, ordered north by the Vietminh at the time of the 1954 Geneva accords. Many of the recent captives are young draftees called into infiltration units that marched south through Laos in units 500 to 600 strong.

With the changing course, changing nature, particularly the intensification of infiltration both of arms and personnel into South Vietnam, the course of aggression pursued by the government of North Vietnam has grown progressively more flagrant and more unconstrained.

The latest step has been the covert infiltration of a regular combat unit of the North Vietnamese Army into South Vietnam. Evidence accumulated within the last month now confirms the presence in Northwest Kontum Province, that is in the central highland area of South Vietnam, around Pleiku and north of Pleiku, recent evidence which we have received confirms the presence in that Northwest Kontum Province of the second battalion of the 325th Division of

the Regular North Vietnamese Army. It is important to recognize, I think, that the great bulk of the weapons which the Vietcong are using and with which they are supplied come from external sources.

Since 1960 the Vietcong have captured approximately 39,000 weapons from troops of the South Vietnamese Government.

During that same period of time the Vietcong lost to those Government troops about 25,000 of their weapons, and therefore the Vietcong had a net gain of about 14,000 weapons during this 5-year period. Thus they gained only 10 to 15 percent of their overall weapons requirements. The remainder of the weapons, those come from external sources.

Moreover, it appears that the Vietcong main force units, their regular units, are being entirely reequipped and entirely retrained with the newest Chinese Communist family of weapons. For example, 101 weapons were captured recently, 3 weeks ago on the days of April 5 and 6, from elements of the Vietcong regiment in the Chuong Thien Province. That regiment was operating far to the south in the Camau Peninsula. The weapons which are captured are believed to be representative of the weapons mix of Vietcong main force units.

QUESTION. Would you say you have successfully isolated the battlefield and if you have, would you preclude the movement of large forces from the north?

McNAMARA. No; I would not say we have isolated the battlefield. I hope I have not given that impression. We have impeded the progress of men and materiel from North Vietnam through Laos and into South Vietnam. We have not stopped it and we surely have not isolated the battlefield.

QUESTION. In what way were the Vietcong, which are operating in South Vietnam, protected by the airstrikes against North Vietnam?

McNAMARA. In two respects. First, as I say, we have slowed down the movement of men and materiel and this has adversely affected the Vietcong, although I don't wish to overemphasize the degree to which it has affected them so far.

Second, the airstrikes against North Vietnam and also the increased tempo of airstrikes by the Vietnamese Air Force and the U.S. Air Force in South Vietnam have significantly and adversely affected the morale of Vietcong captured within the last 4 to 8 weeks.

39. May 5, 1965, remarks on WTOP-TV

The number of terror incidents has dropped slightly, perhaps 10 or 15 percent, but the number of company-size, battalion-size actions which they initiate has dropped 50 to 60 percent. It's hard for us to say why. We know our attacks on the infiltration routes are interfering with the movement of additional men and equipment into South Vietnam from North Vietnam, but the probable explanation for the falloff in the number of large unit actions initiated by the Communists is their desire to regroup, retrain, rest, and prepare for larger attacks in the future.

40. May 9, 1965, interview in New York Journal-American

QUESTION. You have been to Vietnam a number of times, you are in consultation with the commanders—what is your estimate of the situation there?

McNAMARA. First let me say I think it is perfectly clear that the situation in Vietnam has deteriorated during the past year or a year and a half, both politically and militarily. Following the assassination of President Diem on November 2, 1963, there was a series of new governments—10 or 12—and this could not help but be translated into uncertainty and confusion in both the political and military structure. As a matter of fact, we saw evidence of that in both institutions during that time. There were conflicts among the generals, a series of military coups, a substantial number of changes of both political and military leaders in the field.

QUESTION. How did the Communists exploit this?

McNAMARA. All of this gave the Vietcong an opportunity which they seized upon. They increased the level of their infiltration and they increased very dramatically the level of their terror and harassing attacks on the population. The latter increased by about 100 percent during that period of time. This caused a deterioration of the morale of the civilians in Vietnam. It reduced the security of the peasants and, therefore, made them less loyal to the Government. Many of them accepted Vietcong control of their area and paid taxes to them. The Government lost substantial control, therefore, of both its territory and population during that time.

QUESTION. Has there now been a change for the better?

McNAMARA. I think in the last 8 weeks there has been an improvement. I do not wish to place too much emphasis on it because we are a long way from turning the tide and we certainly have a long, hard row ahead of us. But there is clear evidence of improvement in the morale of both the military forces and the civilian population during the past 8 weeks. This is a reflection of several factors: the airstrikes by the Vietnamese Air Force, the U.S. Air Force, and U.S. naval air forces against infiltration routes, the increased use of air against the Vietcong concentrations in the south—such as the very large attack, 450 sorties, against Tay Ninh base recently, and the introduction of the four U.S. marine battalions into South Vietnam. All of these actions, and particularly these actions taken together, have given renewed impetus to the Vietnamese people in their determination to fight on.

QUESTION. Then you, yourself, are more optimistic?

McNAMARA. Yes, I am, but I don't wish to overemphasize the progress because it has only been a matter of weeks during which this has occurred. It is far too early to state the degree to which it has affected the North Vietnamese either in terms of their morale or their capability.

QUESTION. Did you have any time schedule in mind for achieving your objective?

McNAMARA. No. The President has repeatedly said that we don't wish to widen the war but we will provide whatever assistance the South Vietnamese require to effectively counter the guerrilla actions, and we will provide it as long as they request us to do so.

QUESTION. How much territory does the Vietcong control now?

McNAMARA. It is hard to say because you have to define what you mean by control—day control, night control, control of tax collections, etc.—what exactly is it? I would say they have loose control over perhaps a third of the territory.

QUESTION. There's a report that prior to February 7 the Vietcong were about to make their long-awaited strike to cut South Vietnam in half and that you probably averted that by moving quickly into that area.

McNAMARA. It is possible. We can't say exactly what they were thinking about. But former President Diem, as you know, always worried about the Vietcong cutting the country in half, striking from the central plateau down to the coast, and then moving both ways, north and south. They clearly were building up forces in this area, the full potential of which has not yet been seen.

QUESTION. Did they move units from the south up?

McNAMARA. There is evidence they moved up some units from the south. But there is clear evidence that they used the infiltration of 1964 to build up in this area, and it is in this area that we discovered one of the regular battalions of the North Vietnamese Army.

QUESTION. Why was that battalion moved in?

McNAMARA. The Hanoi-directed Vietcong have lost large numbers of men—89,000 in the past 4 or 5 years. With an estimated 89,000 killed, the Vietcong must keep a constant flow coming in to replace the casualties. It has meant the recruitment of very substantial numbers of men both within South Vietnam and from North Vietnam. The Vietcong simply ran out of individual recruits. Therefore, Hanoi called upon one of their regular units to go into South Vietnam to bolster the Vietcong.

QUESTION. Would that seem to indicate that others may follow?

McNAMARA. I don't want to predict it, but I think it is possible.

41. June 16, 1965, Pentagon press conference

I should like to bring you up to date upon our latest estimates of the strength of the Vietcong forces in South Vietnam, and upon the strength of the U.S. combat forces deployed to that country to assist the Vietnamese Government in combating the insurgency.

According to the latest intelligence information available to us, the number of hard core, that is the number of full-time Vietcong Communists, regular combat and combat-support forces in South Vietnam, totals approximately 65,000 men. In addition to that, there are between 80,000 and 100,000 part-time or irregular guerrillas. The regular and irregular guerrilla forces therefore total about 165,000. In addition, there are approximately 30,000 Vietcong serving in political and propaganda activities in South Vietnam. As I have reported previously, between 1960 and the end of 1964, infiltration of combat personnel into South Vietnam totaled approximately 39,000 men, all of these from North Vietnam. It is probable that the actual figure exceeded that number, but 39,000 represents the number of confirmed infiltrates. In 1964 alone, for example, we

believe that about 10,000 men were brought from North Vietnam to fight in South Vietnam.

In addition, as you know, there is at least one regular North Vietnamese Army battalion in South Vietnam, the second battalion of the 325th North Vietnamese Division. That battalion has been located in the central highland region, in the plateau area around Pleiku and Kontum for some time. We have recent indications that as many as eight additional North Vietnamese Regular Army battalions are also in that highland area.

Moreover, the Vietcong forces have recently been reequipped through the infiltration of new weapons, modern weapons from North Vietnam. The net situation at present is that the ratio of guerrilla to antiguerrilla forces is unfavorable to the Government of South Vietnam. Unfavorable, taking into account the hit-and-run characteristics of guerrilla war, unfavorable taking into account the fact that the mission of the Vietcong forces, the guerrilla forces, is to kill and terrorize the people, whereas the mission of the Government forces is to protect the populace.

It is worth noting, I think, that in addition to large-scale activities which have been reported in the news recently, the attacks by the Vietcong forces on the South Vietnamese forces. As always, in addition to that, there has been a deliberate program of terror and harassment, actions to kill, maim, capture hundreds of South Vietnamese citizens every week.

Today's terrorist bombing, for example, of the commercial airport at Saigon is illustrative of these tactics. The South Vietnamese regular and paramilitary forces facing the Vietcong total something in excess of 500,000 men. They are facing, as I mentioned, about 165,000 guerrillas, a ratio of something on the order of 4 to 1.

That is considerably less than is recognized as required to effectively deal with guerrillas. We have made efforts to improve these ratios. About 100,000 men are currently being added to the South Vietnamese forces. As you know, through the assistance of U.S. forces, we increased the mobility and firepower and the close air support of the South Vietnamese making each of their soldiers more effective as a result. But this has not been enough. Therefore, we are seeking to correct the unfavorable manpower balance by the addition of combat forces from other nations—Australia, United States, and Korea.

The United States has deployed nine battalions of combat troops to South Vietnam. These battalions consist of approximately 13,000 men out of the total of about 53,000 U.S. military personnel now assigned to that country. In addition, six new combat battalions, plus additional logistic and combat support, are now moving to South Vietnam from this country. They will be in place in a few weeks. Their deployments will bring the total number of combat battalions to approximately 15 from the United States.

The total U.S. military strength in South Vietnam will then approximate 70,000 to 75,000, of which number about 20,000 will be ground combat personnel.

QUESTION. Do you have anything further for us on the effectiveness of the U.S. bombing raids?

McNAMARA. * * * So I think the answer is that the attacks have been effective. They haven't stopped the flow of men and materiel. They have reduced the flow, and they have greatly increased the cost to the North Vietnamese of continuing their efforts to support the insurgency in South Vietnam.

QUESTION. The monsoon offensive of the Vietcong has made certain initial successes. Could you give us some assessment of the effect on the morale of the South Vietnamese Army and Government and how do you combat it? Can we hold on before our reinforcements get there?

McNAMARA. We have said previously that the Vietcong were building up their strength throughout 1964. They had built it to a total, we believe, by the end of the year, greater than they had then deployed in combat, and we therefore expected that during 1965, and we so stated publicly, that they would deploy these additional troops after they had been fully trained and fully equipped. We assumed that the deployment of additional Vietcong troops would take place during the monsoon season, which began roughly the first day of May and which extends very roughly through the end of October, depending upon the latitude and elevation of the terrain. Our forecasts proved remarkably accurate.

They did increase the number of troops assigned to combat. They did increase the number of overt actions. They did increase the intensity and level of both their harassment and their overt actions. In the month of May we saw, therefore, a substantial increase in terror incidents, a substantial increase

in the number of attacks, and a very large increase in the number of casualties, both to Government forces and to the Vietcong forces.

The level of casualties absorbed by both the Vietcong and the Government forces far exceeds in proportion to the population the level of casualties U.S. forces have ever absorbed in any war in our history.

Under these circumstances, it is remarkable that the morale of the Government troops is as good as it is. They're fighting well, they are fighting hard, they are fighting effectively.

We continue to see increases in their recruitment. We are continuing to see some increase in their strength, not as rapidly as we would like to see, because the casualty rates exceed those estimated at the time the plans for expanding the forces were developed. But the fact that they can recruit, the fact that the men will fight under these very heavy strains, I think is indicative of the morale in those troops.

QUESTION. If you say that the ratio between antiguerrilla forces and guerrilla forces is unfavorable now, what would you say would be a favorable ratio?

McNAMARA. It is difficult to develop a statistical objective here that relates in any way to the assumed requirement of a 10-to-1 advantage in favor of the antiguerrilla forces. It is difficult because never before has there been as much mobility, firepower, and close air support brought to bear upon the guerrilla units.

Therefore, I don't want to give you a statistical answer. I do want to emphasize, however, that the Vietcong strength has increased to such a degree that it is necessary to expand the South Vietnamese forces, that even taking account of that expansion, which is a very substantial one, that they presently have underway, it will be necessary to still further add to the mobility, the firepower, and the air support which we have been adding to recently, and beyond that it will be necessary to provide combat troops in reserve to take care of the emergency situations where Vietcong in force are about to overrun the South Vietnamese forces. Under those circumstances, our troops will be available to come to the assistance of the South Vietnamese.

42. July 14, 1965, Pentagon press conference

As the President has indicated, I am leaving for South Vietnam tonight, with General Wheeler, the Chairman of the Joint Chiefs, accompanying me, as is Ambassador Lodge. One of the main purposes of my trip is to review the force levels planned for South Vietnam, the number of U.S. troops to be assigned there, the equipment required, the expected consumption of munitions and other products.

What the decision will be based upon after this review, I can't say. But I do draw your attention to the fact that the Vietcong are continuing to increase their forces in South Vietnam; that, as we have reported to you on previous occasions, they currently have in that country forces not yet assigned to combat; that the level of operation and the intensity of operation during the summer has increased as we predicted it would; that we can expect further increases in the Vietcong operations because of the likely commitment of forces not yet committed to combat.

All of these circumstances affect our force levels. If the forces assigned to southeast Asia are increased, almost surely this will require additions to the fiscal 1966 budget.

43. July 20, 1965, planeside statement in Saigon

Overall, the situation (in South Vietnam) continues to be serious. As a matter of fact, in many aspects there has been deterioration since I was here last—15 months ago.

The size of the Vietcong forces has increased. The rate of operations and the intensity of their attacks have been expanded. The destruction of the lines of communication, both rail and sea and road are extensive, and they have intensified their campaign of terror against the civilian population, but the picture is not all black by any means.

The Vietnamese people continue to be willing to fight and be willing to die in their own defense. The Vietcong, as you know, are suffering increasingly heavy losses and U.S. combat forces are adding substantially to the combat power, the military power of the Government.

44. July 21, 1965, planeside at Andrews Air Force Base

QUESTION. You said out there that the situation had deteriorated. Can you be a little more specific about the situation at this point?

McNAMARA. Yes; when I made that remark I was speaking particularly of the deterioration between my last trip a year ago and today. The situation is serious today, I think, in several respects. It has deteriorated over the past 12 months. Vietcong strength has increased dramatically during that period, primarily as a result of the continuing infiltration of large numbers of soldiers—now regular army personnel from North Vietnam. That increased strength has allowed the Vietcong to expand and intensify their attacks on the political structure of South Vietnam and in particular to increase their campaign of terror against the civil population.

But the situation isn't all black by any means. The Vietcong themselves are suffering very high casualties. The South Vietnamese force continue to fight and die in defense of their nation and the increases in the combat strength of U.S. forces, both ground and air, have immeasurably added to the combat power of the South Vietnamese Government. As a matter of fact, the most vivid impression I bring back with me, and I think this view is shared by all members of our party, is an impression of the highest possible morale of American personnel and of the technical competence of those personnel and the magnificent state of their equipment and supply.

QUESTION. There is reference to the presence of three North Vietnam divisions either in Vietnam itself or ready to move in. Is this the reason why we need additional U.S. troops?

McNAMARA. I have heard no reference to three North Vietnamese divisions being in or ready to move in South Vietnam. We do know that there are elements of at least one division in South Vietnam today. I don't think we should put too much emphasis on the fact that there are regular troops there today perhaps where a year ago there were not. We need to emphasize and recognize that this attack on the people of Vietnam, an attack on the Government of Vietnam, is directed, supported, and controlled by North Vietnam. They have infiltrated tens of thousands of men over the past several years to build up a very heavy force of guerrilla competency inside that country. Recently, it is true, they have been infiltrating regular units there. I think this is a sign of the strain upon their society. They have run out of volunteers, in effect, and they have had to draw upon their regular forces, but the important point to remember is that they have about 165,000 guerillas in South Vietnam facing no more than 500,000 regular and paramilitary Government forces, and this is quite an unacceptable ratio of antiguerrilla to guerrilla strength.

45. August 4, 1965, Senate subcommittee on DOD appropriations

At various times in recent months, I have called attention to the continued buildup of Communist forces in South Vietnam. I pointed out that although these forces had not been committed to combat in any significant degree, they probably would be after the start of the monsoon season. It is now clear that these forces are being committed in increasing numbers and that the Communists have decided to make an all-out attempt to bring down the Government of South Vietnam. The entire economic and social structure is under attack. Bridges, railroads, and highways are being destroyed and interdicted. Agricultural products are being barred from the cities. Electric powerplants and communication lines are being sabotaged. Whole villages are being burned and their population driven away, increasing the refugee burden on the South Vietnamese Government.

As I mentioned, in addition to the continued infiltration or increasing numbers of individuals and the acceleration of the flow of modern equipment and supplies, organized units of the North Vietnamese Army have been identified in South Vietnam. We now estimate the hard-core Vietcong strength at some 70,000 men, including a recently reported increase in the number of combat battalions. In addition, they have some 90,000 to 100,000 irregulars and some 30,000 in their political cadres; i.e., tax collectors, propagandists, etc. We have also identified at least three battalions of the regular North Vietnamese Army, and there are probably considerably more. At the same time the Government of South Vietnam has found it increasingly difficult to make a commensurate increase in the size of its own forces, which now stand at about 545,000 men, including the regional and local defense forces but excluding the national police.

Combat deaths on both sides have been mounting—for the South Vietnamese from an average of 143 men a week in 1964 to about 270 a week for the 4-week period ending July 24 this year. Vietcong losses have gone from 322 a week last year to about 680 a week for the 4-week period ending July 24. Most important, the ratio of South Vietnamese to Vietcong strength has seriously declined in the

last 6 or 7 months from about 5 to 1 to about 3 or 3½ to 1; the ratio of combat battalions is substantially less. This is far too low a ratio for a guerrilla war even though the greater mobility and firepower provided to the South Vietnamese forces by the United States help to offset that disadvantage. The South Vietnamese forces have to defend hundreds of cities, towns, and hamlets while the Vietcong are free to choose the time and place of their attack. As a result, the South Vietnamese forces are stretched thin in defensive positions, leaving only a small central reserve for offensive action against the Vietcong, while the latter are left free to concentrate their forces and throw them against selected targets. It is not surprising, therefore, that the Vietcong retains most of the initiative.

Even so, we may not as yet have seen the full weight of the Communist attack. Presently, the situation is particularly acute in the northern part of the country where the Communists have mobilized large military forces which pose a threat to the entire region and its major cities and towns. Our air attacks may have helped to keep these forces off balance but the threat remains and it is very real.

Clearly, the time has come when the people of South Vietnam need more help from us and other nations if they are to retain their freedom and independence. We have already responded to that need with some 75,000 U.S. military personnel, including some combat units. This number will be raised to 125,000 almost immediately with the deployment of the air mobile division and certain other forces. But, more help will be needed in the months ahead and additional U.S. combat forces will be required to back up the hard pressed Army of South Vietnam. Two other nations have provided combat forces—Australia and New Zealand. We hope that by the end of this year others will join them.

The Government of South Vietnam's strategy, with which we concur, is to achieve the initiative, to expand gradually its area of control by breaking up major concentrations of enemy forces, using to the maximum our preponderance of airpower, both land and sea based. The number of "fixed wing" attack sorties by U.S. aircraft in South Vietnam will increase manyfold by the end of the year. Armed helicopter sorties will also increase dramatically over the same period, and extensive use will be made of heavy artillery, both land based and sea based. At the same time our air and naval forces will continue to interdict the Vietcong supply lines from North Vietnam, both land and sea.

46. August 6, 1965, interview with Luigi Romersa in *Tempo Illustrato*

QUESTION. What is your evaluation of the present Vietnamese situation after the numerous Vietcong attacks during the monsoon season?

McNAMARA. At various times in recent months I have called attention to the continued buildup of Communist forces in South Vietnam. I pointed out that although these forces had not been committed to combat in any significant degree, they probably would be after the start of the monsoon season. It is now clear that these forces are being committed in increasing numbers and that the Communists have decided to make an all-out attempt to bring down the Government of South Vietnam. In building up the Vietcong forces for a decisive challenge, the authorities in North Vietnam have increasingly dropped the disguises with which they previously attempted to conceal the nature of this aggression.

QUESTION. Do you think that the number of American forces is sufficient for any eventuality, or do you consider sending more troops into South Vietnam in the near future?

McNAMARA. I cannot speculate on future needs or force structures. We have recently announced that an increase of U.S. forces in Vietnam from 75,000 to 125,000 would take place almost immediately; and that further increases could be expected. I can only say that we intend to stand by our commitment and will take whatever actions we deem necessary in the light of future developments.

QUESTION. In your opinion, what is the number of Vietcong units operating at present? Has their armament been bettered? Have they changed tactics? If "yes," in what way?

McNAMARA. There are 70,000 what we call regular guerrillas, and about 90,000 to 100,000 irregulars, for a total guerrilla force of about 170,000, which, because of its size, is attacking in larger and larger concentrations. The number of battalion-size operations is increasing; the duration of them is increasing; the intensity of the attack is increasing. These Vietcong forces, moreover, have recently been reequipped through the infiltration of new, modern weapons from North Vietnam and Communist China.

QUESTION. What have been the effects of American bombing in Vietnam so far? How can you explain that, in spite of them, the Vietcong units are being constantly reinforced and their military potential increased?

McNAMARA. Our objective is to reduce the capability of the North Vietnamese to infiltrate men and equipment from North Vietnam into South Vietnam, particularly to reduce their ability to infiltrate into Laos and through the roads of Laos into South Vietnam.

Into this area in the southern portion of South Vietnam there are about 22 bridges on the main rail and highway lines. We have destroyed or made impassable 22 of those bridges.

We have attacked the bridges to reduce the flow of men and materiel over the roads and the railroads. We have attacked the ammunition storage depots to reduce the amount of equipment they had to infiltrate. We have attacked the barracks to reduce the flow of men and materiel over the roads and railroads. We have attacked the ammunition storage depots to reduce the amount of equipment they had to infiltrate. We have also attacked their supply depots.

These attacks have been effective. They haven't stopped the flow of men and materiel, but they have reduced that flow, and they have greatly increased the cost to the North Vietnamese of continuing their efforts to support the insurgents in South Vietnam.

47. August 9, 1965, CBS Interview with Rusk and McNamara

QUESTION. Secretary McNamara, can you comment on the military aspect of our operations in South Vietnam?

McNAMARA. Well, first has our policy been successful? I think you have to look at this over a period of years and I would say the answer is yes. For 19 years since the nation was born, or reborn, after the Geneva accords of 1954, it has maintained its independence. It is not dominated by the Communists. And for much of that period prior to the recent expansion of the terror reign directed against it by the guerrillas it did increase its strength economically and politically. As you undoubtedly know, between 1954 and 1961 when the terror reign began to increase in number and frequency, the number of teachers in that country increased threefold. The number of students in schools increased 300 percent, the rice production nearly doubled and, by the way, that happened at a time when the rice production per capita in North Vietnam was declining. The income per capita is 50 percent more than it is in North Vietnam. So I'd say much progress has been made, continues to be made. Last year the Communists guerrillas killed or kidnaped about 1,500 civic officials.

Now, when you recognize that the population under the control of the government is less than a 20th of that in this country, you should multiply those figures by 20 to get an impression of what that would mean in this country. It would mean that we would have lost last year 30,000 mayors, members of boards of education, city managers. And yet despite that tremendous loss and despite a loss of about 10,000 civilians kidnaped, murdered, assassinated, the people are continuing to fight, continuing to resist. They are absorbing fatalities today at a rate greater than we have ever absorbed in our history, twice that of World War I, twice that of World War II, 10 or 15 times that of the Korean war, showing that they are fighting, they do have a will to resist, they are opposed to Communist domination. I think this is the best measure I can give you of the success of the policy.

QUESTION. Would you say, sir, that if they were resisting that their defection rate or their desertion rate should drop appreciably? I understand now there are 4,000 to 5,000 a month, and that recruitment barely keeps up with it.

McNAMARA. Recruitment is in excess of desertions, but I don't want to fail to recognize desertions are at a rate higher than we would like to see, higher than the South Vietnamese Government believes satisfactory, and they have acted recently to increase the pay, take care of the families and dependents of men wounded and killed in battle, and I understand the desertion rate is falling.

It has been higher than we would have liked to have seen, however. But the fact that they continue to recruit, the fact that they continue to fight and die for their country in the numbers that they do, I think indicates their will to resist. And also I should mention that the desertions are not to the Vietcong. The desertions are back to their homes to take care of their ricefields. And also, on that same point, I should emphasize that the defections from the Vietcong are rising. And, further, that there has been no desertion of any important personality and no movement to defect of any group—no religious group, no economic group, no labor group has deserted the Government for the Vietcong, although the opportunities for that have been numerous.

QUESTION. There is an area here that I think affects the confidence in this country in what we are doing, and I think maybe we can dispose of it without

h Vietnam trying to pin either of you down on things you have said before; but for instance, McNamara, as you remember about 18 months ago when we had a conversation, you said to roads of the effect that this is a Vietnamese war, it must be won by the Vietnamese, we cannot win it for them. The kinds of things that administration leaders say are all have changed radically in the last 2 years—is this because you have changed made my your minds that much or is there a possibility that you have even now a more advanced attitude and you are letting the country in on it little by little?

McNAMARA. Let me say, first, that the outlook has changed over the past storage 2 years because the action of the North Vietnamese has changed during that are at period of time. They have vastly increased the number of men that they have and re-infiltrated into South Vietnam. They have vastly increased the amount of e am-e equipment and materiel which they have infiltrated into that country. And this y de-p has temporarily given them an advantage which they particularly have applied y of me in the form of terror and harassment. Today they have, for all practical purposes, a numerical advantage, not absolutely, but relatively in guerrilla war terms. They have about 70,000 regular guerrillas, perhaps 100,000 irregulars, and another 20,000 or 30,000 in political cadre to collect taxes or distribute propaganda, and so on. So, there are some 200,000 Communists acting in guerrilla forces. Opposing them are about 550,000 South Vietnam regular and para-military forces, a ratio something on the order of 3 or 3½ to 1 and somewhat lesser ratio in the form of combat battalions. Quite an unsatisfactory ratio in terms of guerrilla wars of the past, where in Malaya, in the Philippines, in Greece, a 10 to 1 advantage was required to defeat the guerrillas. This increase in the strength of the North Vietnamese occurred in the last 12 months. It requires that we supplement, not substitute for, but supplement the South Vietnam forces; and since our forces will supplement and not substitute for their forces, it remains a South Vietnamese war. They are bearing the brunt of the fighting; they will continue to bear the brunt of the fighting. We will furnish a mobile reserve to come in to assist them when their forces are inadequate numerically to effectively counteract the Vietcong concentrations directed against them.

QUESTION. We have had a few months of experience with increased U.S. forces. How is it going this year?

McNAMARA. The Vietcong did expand their force in the last 12 months and, as we stated during the winter of last year and the spring of this, a major part of this expanded force had not been committed to combat at that time. We could only assume they were holding it for some special purpose or some special period. And we assume that they might be holding it to start operations on an expanded basis following the beginning of the monsoon season. This is the season of heavy rains in the highlands. It is a season when our airpower is somewhat less effective than during the dry period and we assume that the Vietcong would believe it was an advantage for them, therefore, to expand operations under those weather conditions. They did so. They expanded operations in number and intensity, beginning in May, and they increased their control of the area. They began to isolate certain particular portions of the village, isolate them in terms of road transportation, road communications with other parts of the country. This made it difficult to move rice from the storage centers out into certain of the rural areas. It made it difficult to move produce from the rural areas into the city.

The number of South Vietnamese killed in action increased. But while that is true, the number of Vietcong killed in action increased dramatically. It is about 70 percent higher today than it was a year ago. So in recent weeks, recent months, they have had some success. They are paying a terrible price for it. And in the last 30 days, as a matter of fact, there seems to have been some withdrawal on their part. Whether this is for regrouping, recuperation, because some of their battalions were severely mauled, I don't know. It may be a reflection of the fact that larger U.S. forces are beginning to enter the country.

QUESTION. Now, would you give us a view into the future? There are estimates that it might take another \$10 billion a year to carry this on. The military advisers are supposed to have proposed a level of 750,000 men in Vietnam. If there is a failure of bombing of North Vietnam, as there may be, isn't the next logical step ground action into North Vietnam? I wonder if you would develop these points in the perspective of the months ahead.

McNAMARA. First, let me say I can't predict the future with accuracy. I do want to mention one thing about the future, however, that I think is very interesting. Within the last 3 or 4 weeks, Ho Chi Minh looked into the future, and he said it might take 20 years for them to win. So while they have had some temporary success, it is obvious even to their own leaders that this is not going to lead to an immediate victory on their side.

Let me comment on one or two of the points you made.

First, I don't know of any military adviser to our Government who has proposed a level of 750,000 U.S. military personnel in South Vietnam.

Secondly, as to the bombing program in the north, I think it is important that we understand what we hope to achieve by that program. In the first place, you recall, it started in part as a reprisal action for the terror bombings that have been carried out by the Vietcong last year at Bien Hoa Airfield, at Brinks Barracks, and more recently in February, early February this year, at Pleiku. It was necessary to show the North Vietnamese who were directing those activities that this would not go unchallenged, that they would pay a price for the continuation of them. And our bombings started in part to make that clear.

It was also important to begin to raise the price to the North Vietnamese of carrying on this war. It was important to try to restrict—although certainly it was never considered it would be possible to stop the movement of men and equipment to the south. And I think these objectives have in part been accomplished. We never believed and we don't believe today that bombing the north will drive the North Vietnamese to the bargaining table, or force them to cease their terror tactics and harassment and subversion of the political institutions of the south. There is only one thing that will stop that in my view, and that is to prove to them they can't win in the south. And therefore our strategy is directed to that end. How long it will take, I can't tell.

QUESTION. On this question of decisions, aren't they now making themselves, or aren't the Communists making them for us? Really they are the ones who are deciding what shall be the nature and the stature of the war so to speak, and we are responding to that. We are putting in more men because of what they do. Therefore, basically the decision as to what we do in the future is in their hands, isn't it?

McNAMARA. Certainly what we do in the future will be influenced by what they do. The price they are paying is increasing. At some point it will reach a level they are unwilling to pay. At that point they will stop, and they will withdraw. How soon that will come I can't tell you. How much force we must apply before they make that decision I can't tell you.

48. August 11, 1965, remarks over NBC-TV

QUESTION. Today Secretary of Defense McNamara was talking to the House Foreign Affairs Committee and [afterward] he was asked if he agreed there were grounds for cautious optimism. Here is what he said:

McNAMARA. I think it is perfectly clear that the Vietcong forces have increased very substantially in recent months—that as we stated publicly, in the winter and spring, they had not yet committed those expanded forces to combat. And they began to do so after the start of the monsoon season, early in May. That they initially achieved success as a result of the expansion of their combat efforts; that that drive was blunted, however, in June, and fell off materially in July.

During this entire period their casualties were very high. They lost about 7,500 men, for example, in the 3 months of May, June, and July. These fatalities were so high as to cause them to withdraw to recoup and regroup and replace their losses. What they'll do in the future, we can't tell. But there is no question but what at the present time we can be cautiously optimistic, while at the same time recognizing that it's going to be a long, hard conflict.

49. September 16, 1965, news conference at the Pentagon

QUESTION. Could you give us an assessment of our present position in Vietnam?

McNAMARA. I remain cautiously optimistic. I think it is useful now to look back over the summer months to review what has happened. I reported to you earlier this year, as well as late last winter, that the dominating factor in the Vietcong operations at that time was the continual increase in their strength.

Moreover, that that increase in strength had not yet been committed to combat. We estimated that they would so commit their strength at a time favorable to them and we assumed that they would conclude that favorable time would be the monsoon season which started roughly the first of May.

We therefore anticipated an increase in the intensity of their operations and in the level of their operations at that time. As you know, we faced such an increase. The number of large-scale attacks rose substantially in the weeks in May and June. It is very clear, I think, that it was their purpose to dismember the country, it was their objective to cut it in two at the waist, and it was their

objective to maul the Army. They carried on a number of large-scale engagements in May and June. These were very costly to them. They did extend their control over certain areas of the country. They did achieve advances but these advances were very costly. Their fatalities were high. I think it is interesting to see what has happened in the last 8 or 10 weeks.

The number of large-scale attacks has fallen off substantially. It is clear that the fatalities they suffered in May and June were so heavy that they were forced to withdraw their forces, to retrain, regroup, reequip, recuperate. What they will do in the future I don't wish to predict.

But I am very clear in my own mind that the South Vietnamese forces plus the U.S. forces blunted the Vietcong monsoon drive, forced it to terminate earlier than planned, prevented it from achieving its objectives of dismembering the country and destroying the South Vietnamese military forces.

Now this was the result not only of the application of U.S. military forces during that period of time, but also of the release from strategic reserve assignments of certain South Vietnamese forces previously held back for good and valid military reasons, forces which were released as U.S. forces moved into the country and were able to take over their strategic reserve role. I told you before that was one of our primary assignments to U.S. forces. I forget the exact figures but I think it is something on this order. The total number of U.S. military personnel in Vietnam doubled between March 31 and June 30. This increase in strength was timed, of course, to phase in with the forecasted increase in Vietcong activity during the monsoon season.

The number of combat battalions increased even more dramatically than did the total strength. I think the U.S. combat battalions in Vietnam rose from two on March 31 to some nine in June. We have there today, depending on exactly what has been landing in the last few hours, something on the order of 25 or 28.

50. September 30, news conference at the Pentagon

QUESTION. The pattern of the war in Vietnam seems to be changing in that larger and larger Vietcong units are meeting more and more Americans in large numbers. Does this mean a change in our or their tactics? Would you give us some assessment of what is happening out there now since we have increased our strength?

MCNAMARA. Compared to May and June, the number of large unit Vietcong initiated actions has declined, and this we believe is a direct result of the introduction of U.S. combat forces. First, these forces released South Vietnamese forces for combat, South Vietnamese forces that had been held as strategic reserve units; and secondly, they made available for combat U.S. personnel. The result has been that the larger unit Vietcong actions initiated in May and June and selected actions initiated since that time have resulted in very heavy fatalities to the Vietcong, and it appears that for that reason they have moved away from such large unit attacks, withdrawn these forces for retraining, recuperation, regrouping, reequipping.

I can't forecast how they will act in the future. Should they reinitiate such attacks at the level of May and June, I have no doubt but what our U.S. combat forces can defeat them and can impose upon them the same heavy level of fatalities as such attacks resulted in May and June.

This isn't to say there won't be large confrontations between Vietcong and United States or South Vietnamese forces. There will be periodically. But I doubt very much that the pattern of activity which the Vietcong appeared to be following in May and June will be resumed in the future. If it is, we believe we can defeat it.

51. October 13, 1965, remarks to employees of Sperry Gyroscope

The military situation in Vietnam in recent months has been dominated by the continuing increase in the Vietcong strength. Both last winter and early this spring, we reported to the public that this strength increase was occurring. We also stated that the increment in power of the Communist guerrillas had not yet been assigned to operation; it has not yet been directed against the Government forces. We assumed it would be sometime favorable to the guerrillas, and we thought they might select the beginning of the southwestern monsoon season, which begins in May, for their offensive. This they did. I think it was clear that their objective for the summer period, which runs roughly from early May to late October, was to cut the country in half at its narrow waist and to dismember and destroy the regular military forces of the South Vietnamese Government.

This they attempted to do by increasing the number of large-scale military actions and by increasing the intensity of those actions, and they came close to achieving both of those objectives during May and June. Then in that period of time they substantially increased their control of the geography of that country. They inflicted very heavy casualties upon the regular South Vietnamese forces, but they paid a very heavy price for that offensive and they were forced by their own heavy fatalities to withdraw at the end of June into their base areas for recuperation, retraining, reequipment, resupply. They haven't yet resumed the large-scale attacks that they had planned to carry on throughout this period. I think it is fair to say that their monsoon offensive has been blunted and to all practical purposes defeated. There is no chance that they will accomplish during this monsoon period the two objectives that they had set for themselves.

Now, why did this occur and what does it portend for the future? To understand this, it is necessary to look at the relative strength of the opposing forces. The Communist guerrillas have roughly 75,000 men in what is known as their regular forces and about 125,000 armed men in their irregular forces. Roughly 200,000 armed guerrillas, plus 30,000 men in their political cadre—propagandists, tax collectors, conscriptors of youths, et cetera.

Opposing this force of 200,000 Communist guerrillas is the Government's military forces of something on the order of 650,000 men. So there's a relative advantage in favor of the Government in the order of 3 or 3½ to 1. I think any of you who have studied the guerrilla wars of the past—those in Malaya, the Philippines, and Greece—will recognize that this is quite an unsatisfactory balance of power, and it's inconceivable that the guerrilla campaign of aggression could be thwarted, could be defeated, unless something were done to increase the strength of the Government forces.

There are several ways this could be accomplished. We've tried them all.

For one thing, we can increase the effectiveness of each of the individual men in the Government forces. This we sought to do by adding to their mobility. For example, in the month of June we had about 500 helicopters in Vietnam for that purpose.

We sought to increase their effectiveness by adding to their firepower. In the month of June, we ran about 10 times as many combat attack sorties with U.S. aircraft than we did in the month of January.

We sought to add to their strength. The U.S. Government and South Vietnamese Government joined together in a program to substantially expand the regular military forces of the Vietnamese. We're adding roughly 10,000 men a month to those forces.

We sought to increase the number of third country combat troops that are active in South Vietnam. The Secretary of State and I were directed by the President to do everything possible to obtain combat forces from our allies. The result is the Australians have about 1,300 or 1,500 combat troops there today. The New Zealanders have artillery personnel. Most importantly, the Koreans are currently moving in a division, and by the end of this month, will have about 18,000 combat troops there.

Even after these actions were taken, after we maximized the effectiveness of the forces of South Vietnam, after we expanded them to the maximum that their manpower would support, after we obtained the maximum degree of help from third countries, it was still clear that the forces opposing the guerrillas were inadequate to defeat them. And it was therefore necessary early this year to make the decision to add substantially to the number of U.S. military personnel there. This was done. And the number of U.S. military personnel on the ground in South Vietnam doubled between March 31 and June 30, and it was this above all else that led to the defeat of the Vietcong monsoon offensive, because of the additional U.S. military personnel both added to the combat power and also released the strategic reserves of the Vietnamese to be applied to the day-to-day action opposing the Vietcong.

The number of U.S. military personnel has continued to increase. We have, perhaps, 140,000 men there today, and as the President said on July 28 when he announced the decision to further increase our strength, we expect requests for additional personnel, U.S. combat personnel, will continue to come in from our commanders in the field and we'll meet them as they do.

Now, what lies ahead; particularly, what lies ahead for defense expenditures?

I can't really answer that question. Our strategy is to pursue our limited objectives and I should digress here to emphasize that our objectives in South Vietnam are limited. We're not seeking to overthrow the Communist Chinese

regime in Peiping; we're not seeking to destroy the Ho Chi Minh government in Hanoi; we're not seeking to force the South Vietnamese into an alliance with the West; we're not seeking permanent bases on their soil—our objective is only to preserve the right of the South Vietnamese to develop political and economic institutions of their own choosing.

It is a limited objective. We're seeking to accomplish that by proving to the Vietcong that they cannot win their war of aggression in the south, while we're continuing to force them to pay the price of the bombing of their military installations in the north.

How long will it take to do it? I don't know. What will be required? I don't know. Whatever is required, we'll provide. What effect will this have on the defense budget? As I said, I couldn't predict this. We do have an amendment to the fiscal year 1966 budget in August, requesting the Congress to increase that budget by \$1,700 million. This is to provide an increase in the production capacity of our Nation so that if we reach the planned levels of expenditure for ammunition and ordnance—which are really staggering as we look ahead—if we reach those levels, we will have the production capacity to replenish our stock and continue to build those stocks as we have during the last 4 years.

52. October 26, 1965, planeside interview at Strike Command

QUESTION. Recent published reports last week are to the effect that the war in Vietnam has tipped decidedly in our favor. Do you agree with that assessment?

McNAMARA. I think we view the situation in Vietnam with what I call cautious optimism. The Vietcong had as their objective, I believe, for the monsoon season, which began in early May and extends to early next month, the division of the country and the dismemberment of its military forces. That objective has not been gained. Their offensive has been blunted and I think this is a result of the additional U.S. forces which the President deployed to that country.

QUESTION. One of the generals in the field is quoted as saying that he once thought it was going to be a 10-year war, but now he is optimistic and leaning toward 9½ years.

McNAMARA. Well, I wouldn't make a prediction as to the duration of the war. I think it is important to recognize that progress has been made during the summer.

53. November 11, 1965, press interview in Austin, Tex.

Today, I first reported to the President upon the status of military operations in South Vietnam. I believe it's clear that the Vietcong planned during their monsoon period, which began approximately the 1st of May and which is just now ending, to split the country of South Vietnam in two at its narrow waist, and to dismember and maul the military forces of the nation.

The South Vietnamese, with our help, have blunted and defeated that Vietcong offensive, and the Vietcong have paid a very heavy price indeed for their monsoon activities. Their fatalities to date in this year are approximately 100 percent higher than those of the comparable period of last year.

Nonetheless, despite these very heavy fatalities, the military strength of the Vietcong guerrillas continues to increase, and, therefore, we believe it will be necessary to add further to the strength of the U.S. combat forces presently deployed in South Vietnam.

At this time, we have a total of 160,000 men in our military units in that country. The President instructed me to meet the request from our military commanders for additional personnel as they are received.

QUESTION. Can you sum up how the war is going? What is the picture today?

McNAMARA. As I indicated, we believe that the South Vietnamese, with our help, have successfully defeated the monsoon offensive of the Vietcong. The Vietcong are suffering very heavy fatalities. But despite these heavy fatalities, through infiltration and other actions, they are continuing to increase their forces. They remain a very severe threat and a serious threat, indeed.

54. November 25, 1965, planeside interview at Andrews Air Force Base

QUESTION. A major battle with the Communists for control of South Vietnam's central highlands appears to be building up. Will U.S. casualties continue to increase?

McNAMARA. I don't wish to predict the outlook for U.S. casualties. I do want to emphasize, however, the very favorable outcome of the battle that has been

raging in the central highlands during the past 10 days. As you know, the Vietcong suffered fatalities approximating 2,500 during that 10-day period in that single engagement. The United States and South Vietnam forces fought magnificently with tremendous effect.

55. November 26, 1965, planeside interview in Paris

QUESTION. What is the reason for your trip to South Vietnam?

McNAMARA. It's been several months since I was last there. During that period we have nearly tripled the strength of the U.S. combat forces in Vietnam; the events of the summer have, I think, proven the wisdom of that move. The Vietcong monsoon offensive has been blunted—defeated, I think, is the proper term to apply to it. Their fatalities have been very high; no doubt they're looking to the future. We should be, too. I'm going there for that purpose.

56. November 28, 1965, planeside interview in Saigon

It has been 4 months since General Wheeler, the chairman of the Joint Chiefs of Staff, and I were last in Vietnam. During the intervening period the strength of the U.S. combat forces here has been almost trebled. The Vietcong have carried out their monsoon offensive with an obvious effort to divide the country in half, to maul and dismember the forces of South Vietnam. Due to the effectiveness of the South Vietnamese Army, with the assistance of the increased U.S. combat strength, that monsoon offensive of the Vietcong has been defeated. Our purpose in visiting here is to receive a status report on the situation and an appraisal of the outlook for the future.

QUESTION. Will additional action by the United States be required?

McNAMARA. I think it is clear that the Vietcong are continuing to increase their strength, continuing to increase the quantity of materiel, combat supplies, infiltrated from North Vietnam through Laos and other routes into South Vietnam, and clearly this action will require counter action by the South Vietnamese and United States forces.

QUESTION. Were you surprised by the Vietcong reaction to the expansion of U.S. forces?

McNAMARA. I think it was clear that in May and June the Vietcong paid a very heavy price for the advances that they made at that time. Their fatalities, as you know, rose very sharply. Cumulatively for the year to date there has been an increase of over 100 percent in Vietcong fatalities compared to last year. At the end of May and June, they withdrew, regrouped, retrained, reequipped and resupplied their forces. And I must say I was surprised by the intensity and scale of their attack of recent weeks, and I am sure they are surprised by the level of fatalities that they paid for those attacks.

57. November 29, 1965, planeside interview upon departure from Saigon

QUESTION. In spite of everything being done, infiltration is increasing at an enormous rate. Will you comment upon this?

McNAMARA. First, let me say my most vivid impression is that we have stopped losing the war. I think that the increases in the strength of the South Vietnamese forces, which we told you many months ago were planned and underway, and the very substantial increases in the strength of the U.S. forces, the Australian, the New Zealand and Korean forces, taken together have denied the Vietcong the victory that almost surely they hoped to achieve during the summer monsoon period. But despite the fact that we've had that success, they have continued to increase the strength of their forces here that have more than offset the very heavy losses which they have suffered. The level of infiltration has increased, and I think that this represents a clear decision on the part of Hanoi to both escalate the level of infiltration and raise the level of conflict. And I'm sure that decision must be countered by an increase in the forces opposing the Vietcong. I'm told by the leaders of the South Vietnamese they have plans to further increase their forces and I am sure these are required.

QUESTION. Does this also mean a change in our militancy and a change in our tactics?

McNAMARA. The tactics that we follow will, of course, in part be dictated by the actions of the Vietcong. As I mentioned yesterday, considering the fatalities that they have absorbed during the past several months, the dismemberment of many of their key battalions, I was surprised by the frequency of their attacks, the intensity of their attacks in recent weeks. I think attacks of that kind must lead to responses by the South Vietnamese and United States and third-country forces of the kind that you saw at Plei Me. And while I am

speaking of Plei Me, let me say that today in flying over the area and later in visiting with the forces, that participated in the combat—the elements of the 1st Air Cavalry Division—I was immensely impressed by the effectiveness of that division. Not only by the valor and courage which we've come to expect of American combat personnel, but by the degree which the concept of increased mobility and increased firepower on which that division is based, has proven out. I am sure the result will be that we will wish to add another air cavalry division to the forces of the U.S. Army.

QUESTION. Would you comment on the significance of the 5-week campaign at Plei Me?

McNAMARA. I don't think I'm in the best position to do so. I think General Westmoreland, Ambassador Lodge and others here can speak more authoritatively on that than I. I'll simply say that the decision by the Vietcong to stand and fight, recognizing the level of force we can bring to bear against them, expresses the determination to carry on the conflict that can lead to only one conclusion. It will be a long war.

QUESTION. You say Vietcong, but these were regular Vietnam troops.

McNAMARA. Well, when I use the word Vietcong, I was using it to cover both the indigenous forces cadred by North Vietnamese personnel and, as you point out, the regular units of the North Vietnamese Army, of which there are, I believe, now some nine regiments in South Vietnam, and I think it is clearly their intention to add to those units.

QUESTION. Could you tell us—could you state the administration's position on why we have not done something about Haiphong Harbor and why we have not done more about the northeast railway leading from Hanoi to the Chinese frontier?

McNAMARA. Yes, first let me say that there are two arms to the railroad between Hanoi and China. One is the northwestern arm, the other is the northeastern arm. Both of those rail lines have been bombed, as have been the parallel highway lines, just because these are infiltration routes, or routes supporting infiltration. As we said before, the bombing against North Vietnam is directed against military targets and particularly those targets which are a part of, or associated with, lines of communication along which men and materiel flow into South Vietnam. Primarily for that reason, attacks have not been made to date on Haiphong Harbor. We have a limited objective in South Vietnam. We've said this before and I repeat it again today. Our objective is not to destroy the Communist regime in North Vietnam. Our objective is to destroy the insurgency movement in South Vietnam, destroy the Vietcong who are seeking to take away the independence of this nation. Our objective, therefore, is to preserve the independence of this nation. It is not even to assure that this nation will be part of Western alliances or that we will have bases here in the future. We don't need such bases, it is not in our plan to seek them. It is our plan, however, to both achieve the independence of this nation, or help it achieve its independence, and help preserve it, whatever that may require. We do not seek to widen the war or extend the area of conflict, and that is why to date we have not bombed Haiphong Harbor.

QUESTION. Will U.S. forces be expanded?

McNAMARA. President Johnson, on July 28, said that he would send whatever forces were required. He would meet the requests of our military commanders. We have done so, and since the end of June this has resulted in a near trebling of the strength of U.S. combat personnel in South Vietnam and we will continue to follow that policy. We will send whatever forces are required.

58. November 30, 1965, planeside interview at Andrews Air Force Base

QUESTION. Could you give us, tell us the results of your mission to Vietnam?

McNAMARA. Yes, General Wheeler and I are returning from a short but very intensive, and I think productive, visit to our forces in South Vietnam. The most vivid impression I'm bringing back is that we have stopped losing the war. The very substantial increases in the South Vietnamese military strength and particularly those in the strength of the free world forces—the U.S. combat strength, the forces provided by Australia, New Zealand, and Korea—have very clearly denied the Vietcong the victory that they sought to achieve during the summer monsoon season. There is no question in our minds but what during that period they hoped to divide the country in half, and maul and dismember, and in a real sense, defeat the military forces of South Vietnam. They have been defeated in achieving that objective. They've paid a very heavy price for their attempt to do so. But despite their very heavy losses, and they're running well over 100 per-

cent higher this year than they were last, they are continuing to infiltrate men and equipment into South Vietnam. As a matter of fact, they have very substantially raised the levels of that infiltration. They have increased the number of their attacks, they have broadened the scope of their attacks, they have increased the level of conflict. And these actions, I think, represent a clear intention on the part of Hanoi to escalate the level of their effort and to raise the level of their conflict.

QUESTION. Senator Russell said last night that we should bomb Haiphong. Do you agree?

McNAMARA. Our bombing of North Vietnam is designed to attack the lines of communication over which the North Vietnamese are infiltrating men and equipment into South Vietnam. I believe we should continue to emphasize that objective. It's not our objective to destroy the government of North Vietnam; it is our objective to preserve the independence of South Vietnam. And it's consistent with that latter objective to concentrate our bombing on the lines of infiltration. The North Vietnamese today, we believe, have nine regiments of their regular Army in South Vietnam. We believe also they have been infiltrating additional men into that country at the rate of about 1,500 a month during the rainy season and that their level of infiltration will approach 4,500 men per month during the forthcoming dry season. That compares with about 800 a month last year. It's to reduce that level of infiltration and particularly to reduce the infiltration of equipment and supplies to support those forces, that our bombing of North Vietnam is carried on.

QUESTION. Is it reasonable to look forward to 300,000 American troops in Vietnam?

McNAMARA. I don't want to forecast the number of troops that may be required there, but I can say the road ahead will be long and hard.

59. December 10, 1965, press conference at Johnson City, Tex.

QUESTION. You said we have stopped losing the war. Can you tell us where we are at this point?

McNAMARA. Well, I can tell you two things about it. I think that perhaps some of you already know first that beyond any question of a doubt the Vietcong objective for the monsoon period, which began roughly the first of May and ended the early part of last month, was to win the war. Specifically, it was to divide the country in half at its narrow waist, the plains between Pleiku and Qui Nhon, and it was to impose such heavy fatalities upon the South Vietnamese as to force them to lay down their arms. I think it is fair to say that the very rapid increase in U.S. military strength in South Vietnam, which rose from perhaps 40,000 at the end of May to, as I said, about 180,000 today, was a major factor in enabling the South Vietnamese to defeat that Vietcong offensive and the Vietcong paid a very heavy price for their efforts to achieve victory during the summer period. Their losses were heavy. They were forced to retire in July and August, recoup, reequip, retrain. Their fatalities, for example, are more than twice in 1965 the comparable period of 1964. But despite the defeat that was imposed upon them, they have continued to infiltrate very substantial numbers from North Vietnam to South Vietnam. They have not only replaced their losses, but increased their strength and give every intention of raising the intensity of the conflict.

Secretary McNAMARA. They consistently say this: "It is going to be a long war, and we shouldn't think that it will be won quickly. We shouldn't think that it could be won cheaply. We must have patience." What they don't say, but what they all imply is that the lack of patience will vastly increase the cost to us without reducing the time required.

The first statement was made on January 30, 1963, and said, as I have said since, on several occasions, that victory over the Vietcong will most likely take many years.

The last statement was made on December 10 of 1965, and said essentially the same thing. I said in effect that I cannot tell you how long it will take. And I am not trying to be evasive, I just don't know. I think patience will be the key to success. And I am absolutely sure that patience will be the key to low costs in terms of life.

Mr. IRWIN. I don't mean to make our life difficult at all at this point, but I think that we have failed, frankly, to convey to the American people how long and how difficult it is going to be. And every month that goes by they get a little disappointed in how long and difficult it is going to be, and more and more people get disappointed, and then we get into a real problem.

I know we have the responsibility, and I am not going to ask you to do my job.

Secretary McNAMARA. I think I may well have contributed to this problem that you mention when I did make a statement on October 2, 1963. In that statement General Taylor and I said the major part of the U.S. military task could be completed by the end of 1965, although there would be a continuing requirement for a limited number of U.S. personnel there. But that was a training task we were talking about. We thought that that task could be completed by then. We didn't think the war would be over by then. And, moreover, the next paragraph which is never quoted in the press, stated that "The political situation in South Vietnam remains deeply serious. The United States has made clear its continuing opposition to any repressive actions in South Vietnam. While such actions have not yet significantly affected the military effort, they could do so in the future."

A month later Diem was killed. And, of course, that changed the character of the environment we were operating in in South Vietnam, and it changed the actions of North Vietnam.

So, frankly, I cannot predict the future. I think it is going to take a long time to control that subversion in South Vietnam. I think that we will vastly increase our costs and our risks and our dangers and our loss of life if we become impatient and try to shorten that period.

Mr. IRWIN. I appreciate that, Mr. Secretary. I frankly feel that perhaps the greatest battle of all, as far as Vietnam goes, is going to be fought right here in the United States—by our being careful and deliberate about what we are involved in.

I think that is our major responsibility as Members of Congress, perhaps, in dealing with our constituents. I know you will always keep in mind what our problems are.

Secretary McNAMARA. Well, your problems are our problems; they are the problems of the people. There is absolutely no question but what our people are impatient, and they are impatient because they don't understand some of the points we discussed this morning. They don't understand that trying to shorten this period by unwise action will result in the loss of more American lives. We have only lost—I say "only," I begrudge the loss of every one—but it is a fact we have lost only 1,600 lives in 5 years. There were many opportunities in that 5 years to try to shorten the conflict. Every one of them that I know of would have increased the costs in terms of loss of life. We are at a much higher level of activity today; we are losing lives much more rapidly, but they are still at a low level compared to the number that would be lost if we were to adopt some of the proposals the public is now hearing discussed.

Mr. IRWIN. Just to get this on the record. Do you think the fact it might take us 10 years to reach our objectives as we state them today is a lot of time?

Secretary McNAMARA. Well, I don't want to be pushed into it, and I know you are not trying to push me into a specific estimate of the time required. But I will say this, it is my belief that 10 years is a much longer period than will be required to accomplish our objectives.

Mr. IRWIN. I can tell my people it is going to take 10 years, because I would rather come back in 5 years and tell them we have the job done.

Secretary McNAMARA. I must say I wish I hadn't phrased my statement in October of 1963 quite the way I did.

Mr. IRWIN. My colleague reminds me I have got to come back next year, but I have been out of the box once before, Mr. Secretary, and it wasn't too bad. So we will face up to that as the time comes.

One of the things that bothered me about your testimony to Mr. Leggett, I can't understand how you can make a pretty rugged fighter out of a guy that you conscript through terror.

The CHAIRMAN. Seventeen-year-olds, at that?

Mr. IRWIN. I really think you should handle that one. I don't think you should leave it on the record as it is.

General WHEELER. Let me respond to this, if I could.

Up until the recent past Vietcong training period, indoctrination period, was very well done. And the bulk of the people, the bulk of their inductees, were not primarily gotten by terror tactics; they were recruited; they actually had a schooling program among other things, believe it or not. Some PW's said the reason they joined the Vietcong is because they got training in various types of activities. They moved them up slowly from being part-time guerrillas in their own hometown, so to speak, moved them from that into provincial-type guerrillas, where they operated in the vicinity of their homes, but not directly in their homes, and then later on they graduated them into what I would call the main force units, and then would use them throughout any part of Vietnam.

They have changed this. They have been forced to because of the losses that have been imposed on them over the past year. And they are now resorting more and more to this terror tactics. They have abandoned their school system, and their GI bill of rights, in favor of taking these kids, and by the way they are going down to 14-year-olds in some cases, taking these kids, throwing them into their units, and putting them in the main force units directly. And the result is that the caliber of some of the Vietcong main force units is very definitely going down, and the PW's report that the older men, the veterans, are greatly dissatisfied with the type of recruits they are getting now. They don't have the same fighting spirit. They complain that if they ever get the opportunity they will desert. They go back to their own homes or else they desert to the Government.

So again, you are talking about two different types of systems.

Mr. LEGGETT. If these people are forced so badly though, when they are captured why don't they tell us where their hideouts are?

General WHEELER. They do. They sing like canaries.

Secretary McNAMARA. I may have exaggerated the case. It is true a higher percentage of their people are recruited by the application of terror tactics, but it is also true, as General Wheeler pointed out earlier, and still today to a lesser degree, they carry on very effective indoctrination programs, and that, therefore, whether the person was re-

recruited by terror initially or whether he was recruited by other means, he frequently becomes a strong advocate of the Communist program.

The CHAIRMAN. Do they have anything like West Point up in North Vietnam?

General WHEELER. I think they have officers—no, nothing comparable, I don't believe, to West Point. They have an extensive training system, and they have officer's schools, and they have noncommissioned officer's schools and specialists schools.

The CHAIRMAN. Do you know where they are?

General WHEELER. We know the location of some of them.

The CHAIRMAN. Why haven't you bombed them?

General WHEELER. The main one is in the middle of Hanoi, Mr. Chairman.

The CHAIRMAN. You better not go up there, they will fire you, I guarantee you that.

General WHEELER. They also send some of their officers back to various Communist countries to schools.

Mr. IRWIN. Mr. Secretary, I want to thank you. If you watch me signing mail, this is 11,000 answers to a questionnaire I sent out on Vietnam—170,000 of them. The questions were phrased as I chose to pose them. About 20 percent of the people felt we should be doing more than we are. About 60 to 65 percent support the President's policy, and about 5 percent, or perhaps less, feel we should get out.

Mr. HAGAN. How did you frame the question?

Mr. IRWIN. Well, I will let you read that.

The CHAIRMAN. Is that all?

Mr. IRWIN. That is all, Mr. Chairman.

The CHAIRMAN. Are there any other questions of any members of the committee?

Well, Mr. Secretary, we have finished.

We won't have a session tomorrow. You said you were going to meet on Saturday.

Secretary McNAMARA. I am very grateful for your willingness to accommodate us by this extended session this morning.

The CHAIRMAN. Are you going to Honolulu?

Secretary McNAMARA. I think the probability is that we will go.

The CHAIRMAN. How long will it take?

Secretary McNAMARA. I may be gone a day or so, perhaps General Wheeler may stay a day or two longer.

The CHAIRMAN. I hope you have a successful trip.

Secretary McNAMARA. Thank you.

(Whereupon, at 1:55 p.m., the committee adjourned.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Monday, February 7, 1966.

The committee met at 10:08 a.m., Hon. L. Mendel Rivers (chairman) presiding.

The CHAIRMAN. Let the committee come to order.

Members of the committee, we have before us this morning the Honorable Secretary of the Navy Nitze; the Chief of Naval Operations, Admiral McDonald; and the General Greene, Commandant, Marine Corps, who will discuss three matters.

Each member has the documents which support the 1966 supplemental authorization. The top document is a brief statement of the Secretary of the Navy, and below it in order are the backup materials. First is procurement, second is research and development, and third is military construction.

I suggest the most orderly procedure for briefing is that the Secretary complete his statement and then go directly into the black loose-leaf notebook and start with the first airplane and continue through the book.

Mr. Secretary, we will be very pleased to hear from you at this time.

STATEMENT OF HON. PAUL H. NITZE, SECRETARY OF THE NAVY

Secretary NITZE. Mr. Chairman and members of the committee, the Secretary of Defense has explained in detail our requirements for various appropriations categories. I will, therefore, limit myself to a few brief comments.

Combat operations in southeast Asia have resulted in an increase in Naval Establishment costs of about \$3.3 billion over those previously funded for fiscal year 1966. These increases are the result of a general buildup of our Navy and Marine forces, an increase in tempo of operations, and expansion of overseas facilities and installations.

I shall review the major requests of the Navy and Marine Corps, and indicate the capabilities or requirements which they fulfill.

The temporary increase in personnel levels will be used to [deleted] permit better rotation for our personnel, and expand our logistics support. The \$360.3 million we are requesting will provide an increase of 52,212 Navy and 59,707 Marine Corps active duty personnel.

Additional aircraft are needed to [deleted] replace losses, and to expand pilot training. We are asking for [deleted] tactical jet aircraft [deleted] helicopters, and [deleted] trainer aircraft. In addition, for combat and training purposes, we are requesting air-to-ground missiles, air-to-air target missiles, and missile support equipment. Our PAMN request totals \$764.5 million.

For Marine ground forces, we are asking \$516.6 million to procure or modernize [deleted] tanks [deleted] artillery pieces, ground-to-air missiles, ammunitions, and for improvements to tracked vehicles.

The \$52.6 million requested for R.D.T. & E. will be used primarily to finance certain aircraft and ship programs.

Our request of \$254.6 million for military construction will be used for needed port, airfield, medical, and logistics support facilities.

Operation and maintenance funds totaling \$608.6 million for the Navy and Marine Corps, and \$607.5 million for other procurement, Navy, have been keyed to the anticipated southeast Asia tempo of operations and expenditure rates. Included in the operating funds are \$134.6 million to activate, or retain in active service [deleted] ships for naval gunfire, patrol, and logistics.

In formulating these requests we have considered long-range values as well as immediate needs. In the event of termination or substantial reduction in combat activity, many of these assets will be recoverable or of continuing value.

The Chief of Naval Operations and the Commandant of the Marine Corps, with several officers from their staffs, are here with me. We shall be glad to discuss items of special interest to the committee.

The CHAIRMAN. In the statement I notice you revised that [deleted]. Is this because you are going to activate some ships; on the former concept you didn't need more guns, you needed missiles. Is this the reason for that?

Secretary NITZE. No, this is an error in the original statement, it should be [deleted].

The CHAIRMAN. You are reactivating them?

Secretary NITZE. I can give you a list of the ships included. [Deleted.]

The CHAIRMAN. These are activated?

Secretary NITZE. No, some of these are retentions and some are activations.

The CHAIRMAN. We will get to that, Mr. Secretary. Let us go right into the procurement of the first airplane.

Mr. PIKE. Mr. Chairman, could I ask another question on the Secretary's statement?

The CHAIRMAN. Yes.

Mr. PIKE. Mr. Secretary, there is another change in your statement. In the second paragraph of the second page, you have stricken out the word "accelerate" and put in the word "finance." When you do that, does this mean that there are certain procurements in this supplemental appropriation which are being financed but not accelerated?

Secretary NITZE. What I had particularly in mind when I changed the word from "accelerate" to "finance," was in the ship R. & D. there is included \$10 million for the FDL program, which is to finance the program definition phase of the FDL, and which I wouldn't really consider to be accelerating. It is a method of getting that program on a sounder basis.

Mr. PIKE. I would ask you the question more directly: Are there items being procured under this fiscal 1966 supplement which are being financed under the fiscal 1966 supplement but which are not being accelerated?

Secretary NITZE. This FDL one is in that category.

Mr. PIKE. Are there any other items in that category?

Secretary NITZE. I believe not. I think there is an item of some \$27 million with respect to the [deleted].

The CHAIRMAN. If that is a fact, then why put it in the 1966, why not put it in the 1967?

Secretary NITZE. We need it now.

The CHAIRMAN. Why not accelerate it?

Mr. PIKE. If you need it now, and it is not being accelerated, why does it help to put it in the 1966 supplement?

The CHAIRMAN. It just doesn't make sense, unless you are juggling the figures. Was it originally in 1967?

Secretary NITZE. No; it was not. [Deleted.]

Mr. PIKE. You say that was not originally in the 1967 procurement?

Secretary NITZE. I believe not.

The CHAIRMAN. We will get to that.

Mr. PIKE. Let me talk about another airplane, Mr. Secretary—

The CHAIRMAN. Wait, let him get to the airplane first.

Mr. PIKE. All right.

The CHAIRMAN. Let him get to the airplane, and then at that juncture I want you to follow the line of interrogation which you did last week, Mr. Pike.

You go ahead with the first airplane, Mr. Secretary.

Mr. HALL. Mr. Chairman.

The CHAIRMAN. Yes.

Mr. HALL. Again, in the opening statement, does the second change in the opening paragraph mean he concurs in all the testimony given by the Secretary of Defense in the detailed requirements in the appropriation categories, inasmuch as he is not going to comment further?

Secretary NITZE. I haven't gone over it in that detail, Mr. Congressman. But I have no deviation between what I believe he said and what I believe to be true.

Mr. HALL. Mr. Secretary, have you or have you not been over his testimony before this committee last week?

Secretary NITZE. I went over it once rapidly, but I haven't been over it since.

Mr. HALL. You say the Secretary of Defense has explained in detail our—I presume that means Navy-Marine Corps—requirements for various appropriations categories. I will therefore limit myself to a few brief comments.

Does that or does it not mean that the Secretary of the Navy, who has certain constitutional and legal responsibilities concurs in those statements that you referred to by the Secretary of Defense?

Secretary NITZE. I do concur, Mr. Congressman.

Mr. HALL. Will we come to a line item in the black book pertaining to the third paragraph on the second page, wherein you spell out medical and logistic support capabilities, under military construction?

Secretary NITZE. I am not familiar with the black book which you refer to, Dr. Hall.

Mr. HALL. The one that the chairman has asked you to take up next.

You supplied this for us.

Mr. KELLEHER. That is just for aircraft, that particular one. Underneath that you will find the military construction, the bottom one.

Mr. HALL. Maybe counsel could advise me. I certainly don't mean to embarrass the Secretary.

Mr. COOK. Yes, sir; it will be included in the military construction book.

The CHAIRMAN. You will be free to ask any questions you want, Doctor.

Mr. HALL. Well, I will pass it up now in line with your desires, and the same way with the control.

The CHAIRMAN. That comes under construction. We want to follow that procedure.

I suggest taking up first the procurement, R.D.T. & E., and then construction.

Mr. Secretary, go ahead with the first item in the black book.

Secretary NITZE. I have just been given sheets which I believe are the same ones that are in your black book.

The CHAIRMAN. Under A-4E, Skyhawk, is that your first?

Secretary NITZE. A-4E, Skyhawk, is the first one I have here.

The CHAIRMAN. Go ahead.

As of January 1, you had [deleted] undelivered, with 66 supplemented in prior funds [deleted] and this bill you want to buy [deleted].

Secretary NITZE. We want to buy [deleted] additional; that is correct.

The CHAIRMAN. [Deleted] additional.

Now, Mr. Pike, do you have any questions on that?

Mr. PIKE. Yes, sir.

The CHAIRMAN. You go ahead.

Mr. PIKE. Mr. Secretary, when the Navy in the person of Admiral Schoech testified before us 2 years ago on the necessity of procuring the A-7A, he said these words, and I am reading from his statement:

As you know, our present inventory is based on the Douglas A-4 series. The first version of this airplane dates from the late 1940's. And while it has been modified and improved over the years, it does not provide the payload radius capability which our recent studies have confirmed are now required.

The Navy itself at approximately the same time put out a justification on the procurement of the A-7A, and they said among other things this: "The A-4 series has done an excellent job of meeting the original requirements. As originally conceived the A-4 was designed to provide at minimum cost the delivery of [deleted] nuclear weapon. However, in recent years the emphasis for nuclear weapon delivery by light attack aircraft has decreased, while the requirements for Navy action in nonnuclear war has become primary. The A-4 has been modified over the years to improve its capability, the most recent improvement being the A-4E version which uses a more efficient jet engine.

The fact remains, however, that the original concept of the A-4 severely limits its capabilities for nonnuclear war. At the same time, this is 2 years ago—the Secretary of Defense, in his statement to the Armed Services Committee, said this:

Last year we had planned to continue procurement of A-4E light attack aircraft into fiscal year 1966. However, last May the Navy completed an extensive study on the entire sea-based air strike system which indicated convincingly that the A-4 series would not fully meet the Navy's needs. The A-4 has been modified over the years to improve its nonnuclear capabilities, yet the fact remains that its original design characteristics significantly limit its capabilities in that role.

Now, with Admiral Schoech saying this, and the Navy putting out a release to this effect, and the Secretary of Defense having told us 2 years ago that the A-4 series—that their study had convincingly demonstrated the A-4 would not meet the Navy's needs, why is the Navy buying A-4's?

Secretary NITZE. We are buying all the A-7's that can be produced. The production of A-7's is [deleted]. We need our planes rapidly, and the A-4 is the best one that we can get within the time frame. But I prefer Admiral McDonald expand on my answer.

Mr. PIKE. Let me ask a question on what you just stated. You say you are buying all the A-7's—the Navy is buying all the A-7's that can be produced?

Secretary NITZE. Within the time frame that we are discussing here.

Mr. PIKE. Well, isn't the production of the A-7's as far as the Navy

is concerned, being vitally slowed down by the fact that the Air Force has been told they are supposed to procure some A-7's, too?

Secretary NITZE. I believe not, within the time frame we are discussing.

Mr. PIKE. What is the time frame which you are discussing?

Secretary NITZE. Let me just check when these planes will be delivered.

We are buying [deleted] in 1965, [deleted] in 1966, and [deleted] in 1967. I think they will be delivered in [deleted] if I am not mistaken.

The CHAIRMAN. Let me see if I understand the response to your inquiry, Mr. Pike.

Are you saying, Mr. Secretary, because you cannot get something else you will take this plane which the Secretary and Admiral Schoech said did not meet your full requirements? Is this your answer?

Secretary NITZE. I think there are two parts to it. The first one is that the A-4 has done extremely well in combat in southeast Asia, so that it does fulfill an extremely useful role. And (b) that we cannot get the A-7A in increased quantity within the time frame that we are concerned about.

Admiral McDonald, would you like to expand on this?

The CHAIRMAN. It looks to me like what you are saying is exactly what I said. You would like to have the 7's, but you cannot get them so you are taking the 4's.

Mr. PIKE. Mr. Chairman, there is another plane I am going to talk about.

The CHAIRMAN. Let us see what Admiral McDonald has to say about that.

Admiral McDONALD. I would like to, if I may, without trying to preempt Mr. Pike's questions, sort of give a little history of how we got into this.

The CHAIRMAN. Go ahead.

Admiral McDONALD. And then try to be responsive.

The CHAIRMAN. Go ahead. The question is how are you going to get out of it?

Admiral McDONALD. That comes later, Mr. Chairman.

The CHAIRMAN. You go ahead and answer his question.

Admiral McDONALD. We found because of the tempo of operations in South Vietnam, and our losses, we had to have more airplanes—more attack airplanes.

Mr. PIKE. Now, when you say "we found," was this the result of something called an attrition study?

Admiral McDONALD. Yes, it was something called an attrition study, Mr. Pike, and it was also something called rotation. Before we started flying and being shot at, we didn't have to rotate our pilots so much. We needed, as you know, more planes and more pilots to help this rotation.

Mr. PIKE. Was the efficiency study something you conducted or something conducted by the Department of Defense for you?

Admiral McDONALD. I think the attrition study is something we have all conducted, Mr. Pike. Everybody has a study, but we base our figures primarily upon the actual losses that come back from South Vietnam—how many airplanes we have lost per thousand sorties.

Mr. PIKE. Do you have a copy of the study which the Navy made?

Admiral McDONALD. I do not, but I have in my pocket what our present attrition rate out in South Vietnam is.

Mr. PIKE. I don't doubt that for a minute, but I am interested in the study you are talking about. I know the Department of Defense made a study, but I would like to see a copy of the attrition study you say the Navy made.

Admiral McDONALD. We get figures from out there, and we base our facts on those figures.

Mr. PIKE. I didn't mean to interrupt you.

Admiral McDONALD. The point is we needed airplanes, and we needed the type of airplanes that we could absorb.

Now, the airplane that we would prefer to have is the A-7. We have gone through that before this committee, and the others pointing out, as Mr. Pike well did, what Bill Schoech said, as to why the A-7 was the preferred airplane. We couldn't get the number of A-7's in the time frame. Then we said, well, what can we get? The next airplane we looked at was the A-6A, but we couldn't absorb the A-6A because a A-6A needs a lot of shop space aboard the carriers, which we do not have. It is a complicated airplane which requires many more technicians, it requires two people in the airplane instead of one, and it requires quite a period of transition of pilots from one form of attack into that airplane. We usually perform a lot of that transition in what we call the CRAW, which is the combat training wing. We have no training A-6A's, and then we look, and here is the A-4's.

The CHAIRMAN. Who has denied you this training, the Secretary of Defense?

Admiral McDONALD. Nobody has denied me anything yet, Mr. Chairman. I am telling you how the Navy reached our recommendation.

Then we looked at the A-4. Here is an airplane that [deleted] we have been using the A-4 very successfully in North Vietnam. It has a higher availability rate. It has a lower loss rate. We could get the A-4 in time. We had a lot of sailors that were familiar with the A-4. We didn't have to train new technicians. The transition of the pilots would be very simple. We could get some TA-4E's which is the training version of the A-4, and as a result we in the Navy went to OSD and requested the A-4.

Now, OSD said, the A-4 is an obsolete airplane. We are not going to let you buy it. Why don't you get a modified version of the A-6A called the A-6B?

Mr. PIKE. Admiral, I don't want to interrupt you, but would you just give us the time when these different transactions took place? When did you go to the Department of Defense and ask to be allowed to purchase A-4E's, and when did they say, "No, you have got to buy something else"?

Admiral McDONALD. I believe we went about August, and they said "No, you will buy A-6B's in October"—Captain Miller, is that right?

Captain MILLER. That is right, last summer.

Admiral McDONALD. When OSD said why don't you get A-6B's we were faced with the fact we couldn't get support for the A-4's, we

needed airplanes, it looked like all OSD would let us get was the A-6B, so we said, certainly, we will take them.

Mr. PIKE. You haven't even mentioned the A-6B until just now.

Admiral McDONALD. That is right.

Mr. PIKE. Make a comparison, will you, Admiral, between the A-4 and the A-6B, in terms of range, in terms of bomb carrying capacity, in terms of speed, in terms of runway length, in terms of ability to fight at night?

Admiral McDONALD. The A-6B, Mr. Pike, [deleted]. It has a far better all-weather capability. The A-4 is simple. We have pilots who can fly it. We have personnel who can maintain it, and we have the shops aboard all our carriers, including the *Hancock* class, which can operate.

Mr. PIKE. The A-6B could have operated aboard the *Hancock*-type carrier?

Admiral McDONALD. Modified, yes, sir. Modified. But once again we have to transition pilots.

But when the OSD says no A-4's, A-6B, we said, well we will take them if we have to. And as a result of that we had a tentative contract with Grumman then for [deleted] A-6B's.

Now, about the time this contract—

Mr. PIKE. What do you mean by a tentative contract?

Admiral McDONALD. I don't believe there is any contract, Mr. Pike, you can't cancel.

Mr. PIKE. Well, I agree with you, but you did have a contract?

Admiral McDONALD. Well, say a contract.

Mr. PIKE. Making the announcement you were going to procure [deleted] of the aircraft, didn't you?

Admiral McDONALD. We in the Navy hoped we could still get the A-4's.

We came down later with a study, we had developed a study in the Navy which pointed out how, and the only way that we could expand our capability.

We have no more heavy attack carriers. The only way the Navy can expand its carrier capability is to take the *Intrepid*, which is an ASW carrier, give it a modified attack capability, take the *Lexington*, give it a slight overhaul and conversion which will give it a modified attack capability. And if we did that, we could use, from those ships, the A-4's. I don't say we couldn't use the A-6B's, but we could use the A-4's. That convinced OSD that although the A-4 might be obsolete, we had a lot of need, and a lot of further use for that airplane.

Concurrently, we had another program which indicated that we must go from a pilot training rate of 1,800 a year to 2,200 a year, and that the best way to absorb those pilots would be to buy some more of the A-4's, put them in the CRAW, and we could train those pilots through Pensacola, through the CRAW into the A-44, on these carriers.

And as a result of that, then this contract was changed—canceled, if you want to call it that—and we bought the A-4's.

But right or wrong, this was something—getting the A-4 I am talking about—was something which was not forced upon the Navy. That was my decision.

Mr. PIKE. All right. Now, it is your testimony, then, you are going to improve and expand the capability of the Navy by buying obsolete aircraft and training pilots to fly them?

Admiral McDONALD. Using them on obsolete ships, which are the only ones we have, Mr. Pike.

Mr. PIKE. You can put nonobsolete aircraft on your obsolete ships, can't you, Admiral?

Admiral McDONALD. The A-6B, if we had them in time we could, if we had the pilots to fly them.

Mr. PIKE. When you talk about having them on time—you would disagree, then, with the comment in the *Aviation Daily* when they talked—this is December 16, 1965—when they talk about the cancellation of the A-7B's—the A-6B contract, when they said, "Time, the Navy feels, is not that critical."

Admiral McDONALD. I would say time is critical to get airplanes—attack airplanes for the Navy.

Mr. PIKE. How much faster do you get these obsolete A-4E's than you could have gotten the A-6B's?

Admiral McDONALD. I can't answer that.

The CHAIRMAN. When are you going to be in position to take on these A-6B's?

Admiral McDONALD. We aren't going to take on the A-6B's, Mr. Chairman, I don't believe.

The CHAIRMAN. What do you have aboard the *Enterprise*, that will take anything, do you have the 4 series?

Admiral McDONALD. The A-6B is an airplane, Mr. Chairman, that we have never programed to buy, except when we let the contract in October. It was never our intention to buy the A-6B. A-6A, yes, sir, A-6A, which is the best airplane, I guess, flying today in the attack role.

The CHAIRMAN. What about the Phantom?

Admiral McDONALD. Well, that is a fighter. I said in the attack role.

Mr. PIKE. Now, Admiral, as far as your capabilities are concerned, you are asking here for what, [deleted] A-4E's? Which would give you more capability [deleted] A-4E's or [deleted] A-6B's?

Admiral McDONALD. If I had the mechanics to keep the A-6B's in commission, and the pilots to fly them, and if the A-6B would perform as satisfactorily as the A-4 has performed, I would take the A-6B, but it is a newer airplane.

Mr. PIKE. In other words, what you are saying is that all of the testimony which we have heard from Navy admirals, and from the Secretary of Defense, about the fact that this plane is not modern, and that it is obsolete, now we are supposed to forget about that and go on and continue to buy what you characterize as an obsolete aircraft because you haven't got the pilots and mechanics to keep a new aircraft in the air?

Admiral McDONALD. This is like if we wanted to use the *Intrepid*, Mr. Pike, instead of getting a new carrier; any old port in the storm, you have to take what you can get. We certainly don't intend to take any more A-4's than we have to. We hope to get, as you can see in the 1967 budget, we are asking for [deleted] A-7's. This is an interim

until we can get the plane which we told this committee we wanted so bad.

Mr. PIKE. What is the A-7's all-weather capability?

Admiral McDONALD. There is no plane that has the all-weather capability that the A-6A has, and the A-6B wouldn't have it either.

Mr. PIKE. But it would have more than the A-7A?

Admiral McDONALD. Oh, yes.

Mr. PIKE. When you say it doesn't have the all-weather capability, you disagree with the witness that came before the R. & D. subcommittee for the reprogramming for the A-7A the other day, who told us the A-7A cannot perform its mission at night. Would you disagree with that?

Admiral McDONALD. He would have to give me a definition of what he means by performing its mission.

Mr. PIKE. Well——

Admiral McDONALD. You see, usually, Mr. Pike——

Mr. PIKE. The testimony which we got was that neither the A-4E nor the A-7A can perform their missions at night.

Admiral McDONALD. Usually when we say modified all-weather capabilities, I am sure you know we mean it can get from the carrier to the target through bad weather, can conduct its mission over the target if the target is clear, and it can get back through bad weather. It cannot fly in bad weather to a target which is obscured and bomb by radar and get back.

Mr. PIKE. The A-6A could have done that?

Admiral McDONALD. If it has all of its systems working.

Mr. PIKE. Well, that is true of any airplane, Admiral. Good Lord, you can't take off unless your systems are working.

Admiral McDONALD. Mr. Pike, I think the A-6A is the best airplane, as I say, in the world today. But the fact remains, you should know that one thing, that made us shy away from this. This whole A-6A, A-6B, is a new affair. It is a new affair. And although our A-6A's are wonderful, and doing a grand job, the fact remains that today we are having to spend [deleted] man-hours for every hour the plane flies, when we expected to spend [deleted].

Now, we don't want to get into this too fast, as we will really be in trouble.

Mr. PIKE. When you talk about all systems operating when you get on target, this is something I know a little something about, too. Do you have all the systems operating on any other plane when they get on target?

Admiral McDONALD. Yes, sir, we do in the A-4, because it is really just two systems, you know, that is the eye and the telescope. That is the easy part about it. But I think we will admit the old propeller A-1, which is quite obsolete, is doing a good job in South Vietnam. Something else can do the job better. And that is what we have really in the A-4. The A-7 can do it better, but until we get it we want to use these that we can use the fastest with the people we have.

I can't emphasize this too much.

Mr. PIKE. Admiral, what people do you have to handle the A-7A?

Admiral McDONALD. Mr. Pike, we are getting the A-7A in numbers, and we are training the people now, and this is another reason that we aren't going for the A-7A so fast, so that we hope we will have

those people quite ready. And the A-7A from a technical point of view is a very simple airplane compared to the A-6's—very simple.

Mr. PIKE. Well, Admiral, isn't it true any plane that can't perform its mission at night is likely to be less technically complicated than one that can perform the mission?

Admiral McDONALD. Oh, yes, and of course we take a loss.

The CHAIRMAN. The Navy can't digest the 6-B but the Air Force can.

Admiral McDONALD. Well, you will have to ask them. They aren't getting any.

The CHAIRMAN. The Air Force is getting some, the Air Force is getting the 6-B.

Mr. PIKE. That is the A-7A.

The CHAIRMAN. Why can't the Navy absorb the new airplane? This is ridiculous.

Admiral McDONALD. Oh, we are absorbing new airplanes, Mr. Chairman, all the time. The A-6A is a new airplane we are absorbing. The A-7, we are going to absorb it, but now you can only absorb so many.

The CHAIRMAN. In other words, if you don't go to the 7, you will not be in position to absorb the 6-B.

Admiral McDONALD. We are going to the A-7's, oh, yes, sir.

The CHAIRMAN. The A-7 is a better step than going from the 4 to the 6, to go from the 4 to the 7?

Admiral McDONALD. They are entirely different airplanes, Mr. Chairman.

The CHAIRMAN. They will be in position to take over the new 6-B?

Admiral McDONALD. There is no such thing as a 6-B, Mr. Chairman. They would have built one, but the 6-B has never been built, and this was a modified version, really, of the A-6A. They were trying to help us out when it looked like we were really in trouble, and Grumman came up with this in their effort to help us. That is what it is all about.

The CHAIRMAN. How about the A-6A, how do they compare with the 7?

Admiral McDONALD. Much more complicated, but much more capable, it is a marvelous airplane [deleted].

The CHAIRMAN. It is in production?

Admiral McDONALD. Yes, sir. The first was deployed abroad the *Independence*, now they are on the *Kitty Hawk*.

The CHAIRMAN. Are you capable of getting the training on schedule for this airplane?

Admiral McDONALD. With the production schedule we now have, we have the production schedule made out in coordination with the training of our pilots and of our mechanics for the systems in the aircraft. That is the difficult part. We must tie the training of pilots and technicians to the production schedule, and we are capable of taking the A-6A's in accordance with our planned operations.

The CHAIRMAN. Nobody has limitations prescribing your program?

Admiral McDONALD. Not to date.

The CHAIRMAN. What about in the future?

Admiral McDONALD. I cannot answer that in the future, sir. In other words, there have been no budgetary limitations placed upon what we have asked for to date.

The CHAIRMAN. Go ahead, Mr. Pike.

Mr. PIKE. Admiral, has the Navy ever asked for any additional A-6A's which the Department of Defense has turned them down on? Admiral McDONALD. I don't think so.

This is a point blank question. I do not think we have, but I am not—

Mr. PIKE. When the Department of Defense crammed these A-6B's down—

Admiral McDONALD. I understand there were some for the Marine Corps that were denied.

Mr. PIKE. Thank you.

Was the Department of Defense cramming these A-6B's down your unwilling throat—when they did that, did you complain to the Department of Defense that you couldn't train the people for these airplanes?

Admiral McDONALD. Yes, we pointed out why we wanted—

Mr. PIKE. In what form was that communication made?

Admiral McDONALD. Our request went down in the form of a piece of paper for the A-4's, and the complaint was made—I hate to put it on somebody else—but in the person of Captain Miller.

Mr. PIKE. Was that complaint in writing, or was the complaint oral?

Admiral McDONALD. I think the fact we couldn't absorb the pilots was oral. The fact we wanted A-4's was written.

Mr. PIKE. What was the date of that written communication?

Admiral McDONALD. Late summer.

Mr. PIKE. Would you produce it for the record, please?

Admiral McDONALD. I would be glad to, yes.

(The following information was received for the record:)

May 18, 1965.

Mr. PIKE. That is all I have at this time.

The CHAIRMAN. Mr. Bates.

Mr. BATES. Admiral McDonald, when you mentioned a few moments ago, any old port in a storm, we recall about the TFX or the FB-111 hearing, and their prediction then, as I presume yours is now, this is the best we can do under the circumstances. In other words, to say any old port in a storm. I remember a long time ago when Admiral Pirie used to come up here and ask for more planes, he used to be sick after the hearings were over. I talked to him on some occasions, but here we are in two specific situations now discussing the so-called AMSA, which we are putting off maybe forever, but in any respect adopting the TFX, which is not as good as the B-52 G to H series, which you discontinued in 1962. We are doing the best we can under the circumstances. We are improvising.

Here is another situation where we are improvising, taking something that is not as good as we would like to have, but the best we can have under the circumstances. Here are two combinations that bother me.

Now I see also a lot of ships lined up from Pearl Harbor to Saigon that cannot be unloaded. The question that bothers me in all of these

hearings conducted, the kind of planning. It seems our inventories are depressed, we are unable to advance with the times. We have to remember that these planes here might fight the latest that somebody else might have, and we cannot fight a compromise airplane against a noncompromised airplane. If the situation should change overnight in Vietnam, so that we would have other planes against us, this is what we have to be ready for, not whether or not they are going to knock us down with small arms fire. This is what disturbs me. This is the pattern which I see developing this year.

I don't know whether it has been just the budget limitations, or what, but we are moving ahead in 1966. We are coming up with planes, in the case of the Air Force, bombers that aren't as good as those we discontinued in 1962. Here we are now with the A-4—how old is that?

Admiral McDONALD. What is that?

Mr. BATES. The A-4.

Admiral McDONALD. In the middle 1950's, but I feel, Mr. Bates, airplanewise, as far as the Navy is concerned, we are, as far as modernization, in excellent shape. We just aren't getting them fast enough. In other words, with the F-4, with the A-6A, with the A-7A, with escalation, I believe you would call it, of the war in South Vietnam, on our light attack we are just about a year ahead of time. But we got the A-7, I believe, as quick as we could, that is to this committee, where you put it in the program or we wouldn't have had that quickly.

Mr. BATES. Yes; you have been able to get it. Here we are in a position where you wish you had the best. This bothers me. You cannot get the best.

Admiral McDONALD. We like the A-4 out there.

Mr. BATES. Under the present circumstances?

Admiral McDONALD. Yes, sir. [Deleted.]

The CHAIRMAN. Suppose if you ran into some MIG-21's, you would have to have some escorts, wouldn't you?

Admiral McDONALD. [Deleted.]

The CHAIRMAN. They wouldn't be sitting ducks going in over the target?

Admiral McDONALD. No, sir.

Mr. BATES. It is this wide range of planning which disturbs me. A year ago we had the Department down here. I asked them then about the program; I asked about helicopters, I asked about ships, and everything was just fine. Inside of 3 or 4 weeks we come up with \$700 million, and then an additional \$1.7 billion, and now here is another \$12 billion. It just doesn't seem to me that we have the long-range planning necessary to take care of contingencies, but we are working our inventories on a peacetime basis. We say next year is going to be the same as next year. I think the Secretary indicated the other day the escalation of forces there now in Vietnam would probably require \$12.3 billion now. I think we are planning things too close to the stomach.

There was a time when we thought the more we could get, the sooner we could get them, was the best philosophy to follow during the war. Nobody knows what is going to happen. We could have a problem in Korea tomorrow. If we are fighting against half of Vietnam, how

are we going to take care of the situation if it arises in Korea? This is without anything happening in Europe or anywhere else.

That is all I have, Mr. Chairman.

The CHAIRMAN. What is the next item, Admiral, or Mr. Secretary? Secretary NITZE. The next is the A-6A, Mr. Chairman.

Mr. GUBSER. May I ask a question, Mr. Chairman?

Admiral, I would like to explore one of your answers to Mr. Pike just a little bit further. I believe you said the Marines had requested A-6A's, which were turned down by the Department of Defense. Could you give me the number requested, and approximately the time they were requested?

Secretary NITZE. I think perhaps General Greene might answer this question.

General GREENE. The Marine Corps requested [deleted] A-6A's, at [deleted] each. The Office of the Secretary of Defense deferred approval of this request. These aircraft were scheduled for delivery to the 4th Marine Aircraft Wing. The deferral was based on the lack of [deleted], the unit cost, and the availability of the A-4 B and C, for this wing. These would have been assigned to the 4th Marine Aircraft Wing. That is our reserve wing which is not actually on active duty at the present time.

The CHAIRMAN. You could have absorbed those planes if you had been permitted to buy them, though. Somebody told you you couldn't get them, didn't they?

General GREENE. Yes; we could have absorbed them, if we had been able to get them.

The CHAIRMAN. They just told you you couldn't have them, so you could get something else. That is the sum and substance of it, isn't it?

General GREENE. Well, they based it on the fact there was [delete]. The approval was actually deferred, Mr. Chairman.

The CHAIRMAN. Deferred?

General GREENE. Yes; that was the term used.

The CHAIRMAN. Deferred means denied, doesn't it?

General GREENE. Well, it could be disapproved, which would be pretty definite.

The CHAIRMAN. You didn't get the airplane, did you?

General GREENE. No, sir; we did not.

The CHAIRMAN. What did you get in place of it?

General GREENE. We are hanging on to the A-4.

The CHAIRMAN. What about that, Admiral McDonald?

Admiral McDONALD. They could have absorbed them because they are going to the reserve wing which is not an active group and they could have absorbed them all.

The CHAIRMAN. What about deferring them?

Admiral McDONALD. If they defer them until [deleted] or if they aren't going to put the 4th Division into combat, I don't make those decisions; if they are going to defer the callup of this group, I guess it makes sense.

The CHAIRMAN. You don't like that word "reserves," do you?

Mr. GUBSER. Mr. Chairman, may I finish?

The CHAIRMAN. Go ahead.

Mr. GUBSER. What concerns me is, if you are ever going to introduce a new aircraft, obviously you have to undergo some experience with

it. And here was an opportunity to undergo some experience with the A-6A, and perhaps speed up the day when it could be brought into the fleet in quantity.

Admiral McDONALD. Mr. Gubser, we have the A-6A.

Mr. GUBSER. It keeps striking me that we defer the deployment, or the purchase of a new aircraft, to improve our capability, hoping we will get a better airplane someday, and meantime we go further and further back into obsolescence. That is what we are doing.

Admiral McDONALD. No, our desire is, and always has been, to have in the attack role, the light attack role, A-6A's, and A-7's. Now, until we can get the A-6A's, and the A-7's in the numbers we want, we are using A-4's, and that was the only thing. The A-6B was going to be a fill-in. So we are getting A-6A's.

Mr. GUBSER. You have to acquire some experience with any new aircraft you have ever put into the fleet inventory?

Admiral McDONALD. Yes.

Mr. GUBSER. If you don't start acquiring that experience you never get yourself in position where you can absorb those aircraft?

Admiral McDONALD. I don't buy a new one to gain experience, only to get rid of it tomorrow.

Mr. GUBSER. Why was it requested?

Admiral McDONALD. It wasn't.

Mr. GUBSER. Even for the Reserves?

Admiral McDONALD. That is a different airplane, that is the A-6A. That is entirely different from the A-6B. We like the A——

Mr. GUBSER. Is this the aircraft which has the all-weather capability which you would like to have?

Admiral McDONALD. And we are getting it. We have never been denied it.

The CHAIRMAN. But the Marines were.

Admiral McDONALD. That is right.

The CHAIRMAN. What is wrong with the [deleted]?

Admiral McDONALD. [Deleted.]

Mr. PRICE. This has come up several times.

The CHAIRMAN. Yes, let's go into [deleted] General Greene.

Are you in charge of the request?

Admiral McDONALD. We buy them. It is under the Secretary, but General Greene and I work together on this.

The CHAIRMAN. What is wrong [deleted] that they did not approve it, General Greene?

General GREENE. I cannot give you the details on that, Mr. Chairman. [Deleted.]

The CHAIRMAN. You didn't know that before? You thought they were pretty good, didn't you?

Admiral McDONALD. I might make just one comment, Mr. Chairman. We deployed the A-6A last summer on the *Independence* about 9 months earlier than we would normally have deployed that airplane. We did it because of its potential capability, and in order to keep those planes flying. Grumman Aircraft could put on board the *Independence* rather large numbers of civilian technicians. We in my office took an experienced naval aviator captain and said, "Your only job is to ride herd on this airplane, and get spares out. [Deleted.]

The CHAIRMAN. Are you capable of absorbing them now?

General GREENE. The Reserve wing would be capable of taking [deleted] A-6A's that we requested, yes.

The CHAIRMAN. Are they in this budget?

General GREENE. They are in the supplemental budget. I mean the approval was deferred, so the money was not in this budget request, Mr. Chairman.

The CHAIRMAN. Did you sign any agreement not to ask for anything other than what is in this budget?

General GREENE. No, I didn't sign any agreement.

The CHAIRMAN. Did you?

Admiral McDONALD. No, sir.

The CHAIRMAN. Would you like to have them?

General GREENE. We would still like to have them; yes, sir.

The CHAIRMAN. Somebody sent me this, talking about an airplane that does everything. Here is the SV-111, VSTOL, the RF-111, the F-111, DC-111, the KC-111, the H-111 helicopter, the high-speed research 111, that is the X-111, the B-111, and the troop carrier C-111.

That is pretty good, isn't it? That is what I call a real versatile airplane. That helicopter looks pretty good.

Mr. PIKE. Mr. Chairman, are we on the A-6A, or are we wrapping up on the A-4E?

The CHAIRMAN. We are on the A-6A.

Go ahead, Mr. Pike.

Mr. PIKE. Admiral McDonald, when you talk about [deleted] the number of man-hours it took to keep it up in the air, and so forth, would you disagree with this statement? I was in Vietnam late in June—early July—from there I went on board one of our carriers, talked with the crews that were flying the A-6. It has performed magnificently well. It is the backbone of our all-weather capability from the carriers operating day and night against particularly the important military targets in North Vietnam. Would you disagree with that statement?

Admiral McDONALD. Mr. Pike, that sounds like it was probably written by probably the air group commander, the squadron commander in charge of those airplanes. I, too, was out there, I was aboard the *Independence* in September, watched the airplane operate, talked to the air group commander. I am very happy to say that our squadron and air group commanders are real enthusiasts. They are going to make these systems work, regardless.

I think this is a very favorable report.

Mr. PIKE. Well, I am glad you think so, because I don't know who wrote that statement, either, Admiral McDonald, but it was delivered by the Secretary of Defense on October 12, last year.

I think it is interesting to note the way language can change as to a plane's capability, depending on what we want to buy, or not buy, at any given moment. The words which I just quoted were from a speech by Secretary McNamara.

Mr. HARDY. You wouldn't disagree with that?

Admiral McDONALD. I am a little bit biased, Mr. Pike, because I was the head of the Navy's Air Warfare Division, which was our requirements section. When we drew up the requirements and spec-

ifications for the A-6A, I kind of think it is my baby, and I am very fond of it. [Deleted.]

Mr. PIKE. Now, we are on the item of procurement of the A-6A, in the supplemental procurement for 1966. How many planes do you plan to procure in the supplemental procurement for fiscal 1966?

Admiral McDONALD. [Deleted.]

Mr. PIKE. How many planes do you plan to procure in fiscal 1967?

Admiral McDONALD. [Deleted.]

Mr. PIKE. Are you accelerating the procurement of the A-6A based on the supplemental procurement of [deleted] in fiscal 1966?

Admiral McDONALD. Getting the [deleted] in the supplemental, will make it possible for us to accelerate should we need to, but to date we haven't taken any steps to accelerate.

Mr. PIKE. You could throw everything in the 1967 budget, in the 1966 supplement, and say it would make it possible to accelerate.

How many planes were you originally planning to procure in the fiscal 1967 budget?

Admiral McDONALD. [Deleted.]

Mr. PIKE. So what you have done is taken the exact number of airplanes out of your fiscal 1967 budget and put it in the 1966 supplement; is that correct?

Admiral McDONALD. If you were to say, Mr. Pike, what has been done, you inferred that I did it—I didn't.

Mr. PIKE. What has been done, has been to transfer the regular 1967 procurement of A-6A's to the fiscal 1966 supplement without any acceleration of the aircraft; is that correct?

Admiral McDONALD. That is correct.

Mr. PIKE. Mr. Chairman, this is the point which I tried to make on Friday.

The CHAIRMAN. You made it.

Mr. PIKE. This is the first acknowledgment.

The CHAIRMAN. Let me ask that question I asked you.

What statements have you been asked to sign, Admiral McDonald, concerning the adequacy of the budget for your service, and the adequacy of logistic support for your service? Have you been required to sign two statements in this regard, and what did you certify to?

Admiral McDONALD. I am checking. I don't believe I signed a thing in the world on this supplemental, Mr. Chairman.

The CHAIRMAN. What did you sign it on?

Admiral McDONALD. On 1967.

The CHAIRMAN. On the 1967?

Admiral McDONALD. That is right. I don't believe we signed anything or discussed anything at all on the budget we are talking about today.

The CHAIRMAN. That was on the 1967?

Admiral McDONALD. Yes, sir.

The CHAIRMAN. Well, we will get to that. We will ask you about that later. But you did sign something for 1967?

Admiral McDONALD. Yes, sir.

The CHAIRMAN. What do you call that, certificates of adequacy?

General GREENE. Certificate of material readiness.

The CHAIRMAN. You had to sign that?

General GREENE. We signed the certificate; yes, sir. This one I have at hand covers the fiscal year 1967.

The CHAIRMAN. Who told you to sign that?

General GREENE. I wasn't told by anyone, sir. I was asked to sign a statement as to our material readiness, which went forward to the Secretary of the Navy, and he in turn consolidated the certificates of the Navy and Marine Corps, and that went forward to the Secretary of Defense.

The CHAIRMAN. When they handed you that you grabbed the page and said "I will be glad to sign," or did you look into it?

General GREENE. Well, I looked into it. I wasn't told what to sign. I was asked to make a statement as to our material readiness which I was quite willing to do, Mr. Chairman.

Mr. BLANDFORD. Did you sign two statements this year, General?

General GREENE. I signed one covering fiscal year 1967, which I believe also covered fiscal year 1966 and prior years.

Admiral McDONALD. I believe we did, Mr. Blandford.

Mr. BLANDFORD. Isn't this the first time you have ever been asked to sign two statements?

Admiral McDONALD. I believe we have signed only one each year. We signed one last year, something on logistics this year.

Mr. BLANDFORD. What Bureau chiefs were also asked to sign certificates of material readiness?

Admiral McDONALD. I don't know that.

Mr. BLANDFORD. Mr. Secretary, were all the Bureau chiefs asked to sign those certificates?

Secretary NITZE. I think my recollection is those who supplied the details for me, the final certificate that I signed, I asked to sign, to certify as to the accuracy of what they gave me.

Mr. BLANDFORD. Adequacy or accuracy?

Secretary NITZE. Adequacy.

Mr. BLANDFORD. Were they asked to sign certificates of adequacy?

Secretary NITZE. This certificate I signed does deal with adequacy, with exceptions noted. What I wanted from everybody were the proper exceptions.

Mr. BLANDFORD. How many of the Bureau chiefs signed certificates of adequacy, noting exceptions?

Secretary NITZE. I would have to get that for you.

Mr. BLANDFORD. Could you furnish for the record the Bureau chiefs' exceptions that were made to their certificates of adequacy?

Secretary NITZE. All those exceptions were conveyed in my certificate as well.

Mr. BLANDFORD. Could you furnish us a copy of the certificates and exceptions you made to the certificate that you signed?

Secretary NITZE. Yes, I believe I have that.

(The following information was received for the record:)

The term "certificate of adequacy" is in error and probably refers to the "certification of materiel readiness" submitted by the Secretary of the Navy to the Secretary of Defense on December 27, 1965. In the preparation of this certificate, the Bureau chiefs were not requested to sign either the eventual certificate or any portion thereof. This certificate was prepared by the working staff of the Navy bureaus and OPNAV for the Secretary of the Navy and coordinated by the Assistant Secretary of the Navy (I. & L.)

Admiral McDONALD. There are a lot of exceptions.

Secretary NITZE. There are a lot of exceptions.

Mr. BLANDFORD. This is the only way the committee can determine what consideration was given to the requests you submitted to OSD. If we don't know what to ask for, Mr. Chairman, we don't know what to look for. It is perfectly obvious you had reservations about certain things, but we don't know what you had reservations about unless we find out what the exceptions were. If we can have that, I think it would be very helpful.

The CHAIRMAN. You furnish us that.

Mr. Hébert.

Mr. HÉBERT. I want some additional information, about signing these certificates. It was only done in the last 2 years, I understand.

The CHAIRMAN. Is this unusual?

Secretary NITZE. I certainly recollect signing one last year. I thought I did the year before, too—that is my recollection.

Mr. BLANDFORD. This is the first time two certificates were signed.

Mr. HÉBERT. What I am trying to find out, is this a prohibition given to you, justifying what you want?

Secretary NITZE. No, I don't believe that is the reason at all. I believe the reason is the Secretary of Defense wanted to be sure we had asked for enough, for instance, in ordnance, and that he knew that we had made clear where we felt there was a deficiency, and why.

Mr. HÉBERT. Wait a minute. What you asked for, you certainly asked for more than you got. So, in effect, as I understand it, what I am trying to clear up, these papers are signed inhibiting you, or the chiefs, from coming before this committee and from going beyond the signed statement?

Secretary NITZE. I don't believe that is correct. Really, the process here is that the Secretary of Defense has indicated logistic guidance to us, that we should have enough ammunition, enough expendable ordnance, things of that kind, to meet these guidelines. And if we will not certify we are funded in order to procure that amount, then he insists that we make that clear and the reasons why. And in working up this certificate, when we went through certain of the items, and demonstrated that we could not say, for instance, that the Marine Corps had all the things that were necessary in order to meet the logistics guidance, the Marine Corps did get additional money in order to cure a number of the deficiencies which it was possible to procure with additional sources.

There are certain deficiencies which are not just resource dependent, because the production line isn't there, or it may be a new item or something like that, where you cannot, with this money, spend it in time to get the item.

But where we needed the money to get the item, we got it, isn't that correct, General?

General GREENE. We have one item under recall here right now, under analysis by the Office of Secretary of Defense. That has to do with our preposition war reserves. We haven't received a final decision on that. And, actually, this is the only major item in which we have a vital interest.

Mr. BLANDFORD. What other officers, General Greene, of the Marine Corps were asked to sign certificates of material readiness? Were you the only one?

General GREENE. I was the only one.

Mr. BLANDFORD. How about in the Navy, Admiral? I believe several Bureau chiefs were requested to sign certificates of readiness?

Secretary NITZE. None were required to sign a certificate of readiness or adequacy.

Mr. BLANDFORD. I think Mr. Hébert's question has not been answered yet, and that is, what is the purpose of the certificate? If you just say we think we are doing fine, but we need the following items, that is one thing, but why is a man asked to sign a certificate to the effect: "I certify that everything I have asked for gives me all the material readiness I need with the following exceptions?" Is that the way it goes?

Secretary NITZE. The certificate isn't quite that way.

Mr. BLANDFORD. I have never seen one, that is why I am asking.

Secretary NITZE. We have funded in prior budgets, and in the budgets under submission, everything that is required to meet the logistics guidance which has been given us by the Secretary of Defense, with whatever exceptions, and to note the reason for the exception. And this, I think, is a very orderly procedure.

It really has forced us to look at, with detail, the guidance, and what it is that we had funded in previous budgets, and the one that is going forward, to see that we have in fact gotten everything necessary to meet that guidance. This comes in part from the fact Mr. McNamara wanted to see to it that we did have enough ordnance, enough of the things that sometimes one puts aside because one is more interested in the major weapons systems, and he wanted to be sure we had this support for those weapon systems, and not just the new weapons system.

Mr. HÉBERT. Yes, but I am trying to point out, why is it necessary to try to state, in effect, this is what I want, and you could be confronted with that piece of paper and you could be told you signed it. Suppose you didn't sign it, what would happen to you? Suppose you refused to sign?

Secretary NITZE. Nobody is telling us what to put in these certificates.

Mr. HÉBERT. No, it is put in for you, then you sign it?

Secretary NITZE. No, no, we got up the answers, we got up all the exceptions. We were given the guidance as to what standards we were to meet, and to fund for.

The CHAIRMAN. What do you mean by guidance? You can have a amount of money, not what do you want to do with it?

Secretary NITZE. No, we were told we were to have enough for a number of sorties.

The CHAIRMAN. How many sorties, then?

Secretary NITZE. And then do we have enough really to carry out that number of sorties.

The CHAIRMAN. Suppose you say they didn't give you enough sorties, we want double the amount of sorties?

Secretary NITZE. That was subject to argument, and we did discuss that. I think we were pretty well satisfied.

The CHAIRMAN. Who would advocate the sorties, a military man or a civilian?

Secretary NITZE. I think the guidance was settled by Mr. McNamara.

Mr. HÉBERT. Who is a civilian?

Secretary NITZE. Who is a civilian, but he had the advice of the Joint Chiefs of Staff in arriving at that figure.

Mr. HÉBERT. Mr. McNamara made the decision—we understand he makes decisions—he made the decision. Was that contrary or at variance with what the military wanted?

Admiral McDONALD. I think at times we were in agreement, at times we were in disagreement, Mr. Hébert. You would have to specify. Right now I believe we are all in agreement with the number of sorties we have been planning for over in South Vietnam because we know the desires of CINCPAC. We know General Westmoreland. We know our capabilities. From those, too, we come up with the number of sorties.

The CHAIRMAN. This comes from your committee that gives the battle plan?

Admiral McDONALD. That is right. Actually, this certificate, it isn't very difficult to sign because if you have differences, the differences would be in the guidance.

Mr. HÉBERT. What disturbs me, Admiral, if you sign this piece of paper it is almost like trying to get the unwilling son-in-law to have a shotgun wedding and sign a piece of paper.

Secretary NITZE. No; I think it is not. We are asked to certify the exceptions to the guidance. This is the way in which you really find out where you are not fully meeting the guidance, and why.

The CHAIRMAN. Mr. McNamara would rather you have too much than too little; isn't that right?

Admiral McDONALD. In one case in fact it wasn't signed up there because of some shortage of marine equipment, where we said we wouldn't sign.

Mr. HÉBERT. Did any Chief not sign?

Secretary NITZE. The question was, all you had to do was certify the exceptions.

Admiral McDONALD. I will say that. We changed the wording of the exception list a good deal.

Mr. HÉBERT. Is anybody supposed to sign that has not signed?

Admiral McDONALD. Pardon?

Mr. HÉBERT. Is there anybody that was supposed to sign that has not signed?

Admiral McDONALD. I initialed or "chopped" the certificate. Only Mr. Nitze was to actually sign it, and he did.

Mr. HARDY. I have one or two other things I wanted to explore here, but there are two questions that have been posed by this discussion that really intrigue me.

We had a discussion the other day in which a civilian took the position that the military didn't know what they wanted, and so they were told about that situation. You remember that, Mr. Bates.

I wonder if we are in the same kind of shape here? You say the guidelines were given. Now, the guidelines were given you by Mr. McNamara, at least that is what I understood; is that correct?

Secretary NITZE. That is correct.

Mr. HARDY. Mr. Chairman, in order for us to understand these things, I think we should have a copy of these items. Will you provide them, or do we have to ask Mr. McNamara for them?

Secretary NITZE. I will consult with Mr. McNamara.

Mr. HARDY. I tell you frankly—

Secretary NITZE. It is his document.

Mr. HARDY. Mr. Chairman, I am not inclined to go too far with this particular bill here unless we get the information we ought to have. That is one thing that I think we ought to have. I think we ought to have a copy of the guidelines.

Mr. BLANDFORD. Mr. Hardy, may I say this? This certificate was not required for the supplemental. The certificate is required for the 1967 procurement, and the reason the question was brought up is that before this committee can act on the 1967 request then we should have the certificate and the exceptions.

Mr. HARDY. The problem about that, however—and this is the real point of my starting out on this question—is that you have transferred a good many items from 1967 into the supplemental. And I wanted to pursue that.

But before I do, I think we ought to have a copy of the guidelines, and one other thing Admiral McDonald just mentioned, that is very intriguing to me.

I understood you to say, Admiral, that you didn't sign the original wording on the certificate, that you changed it.

Now, I think we would like to see the wording that you finally signed, and the wording that was stuck in front of you which you were supposed to sign.

Admiral McDONALD. I think the wording came from our own staff, Mr. Hardy, they took it from last year's, and this year we wanted to change the wording relative to the exceptions a little bit.

Mr. HARDY. Will you provide us with both versions of the language? (The following material was received for the record:)

The "Certification of Materiel Readiness" was prepared by the Assistant Secretary of the Navy (I. & L.) for signature by the Secretary of the Navy, hence the Chief of Naval Operations merely initialed the final draft of the certification. In the development of this certificate, the Chief of Naval Operations initialed a tentative draft without recommending any changes thereto and about a week later initialed off on the final draft of the "Certification of Materiel Readiness" which contained some changes from the tentative draft previously initialed.

Mr. HALL. Will the gentleman yield there?

Mr. HARDY. Yes.

Mr. HALL. I believe the specific question was asked of the gentleman sent to the Subcommittee on Military Airlift, the Navy officer, as to the certificate. I would like to know whether that was encompassed in one of the other bureau chief's certification about strategic and tactical military airlift? It was denied by the officer before the Airlift Subcommittee of this full committee.

Secretary NITZE. I am sorry, I didn't quite understand the question, Doctor.

Mr. HALL. Your office, Mr. Secretary, or the Chief of Naval Operations, sent a man here recently before the Military Airlift Subcommittee. He was a captain or rear admiral, I believe, his name starts with an S.

He was asked the specific question as to whether or not he had been asked to sign the certificate of readiness, or capability, or adequacy, I believe were the three adjectives that were used.

But my question to you is, was he asked to do this, and did not sign it as he said, or is he in one of the Bureaus and was included in his bureau chief's signature of this certificate of capability or functional adequacy, or readiness, or materiel readiness?

Secretary NITZE. No, he was not, but he may have assisted in the staffing of the certificate.

Admiral McDONALD. I think that was Admiral Gillette.

Mr. HARDY. I wish they would provide that.

Just one other question, Mr. Chairman.

Turning back to this A-6a, I was intrigued by the questions Mr. Pike raised, because I had intended to raise similar questions concerning some of the other items.

As I understood Admiral McDonald's testimony it was to the effect we are now asking in the supplemental for exactly the same number of aircraft, at the same dollar value, that was originally in the 1967 budget. I read that correctly, is that not right?

Admiral McDONALD. For the A-6A's and the [deleted].

Mr. HARDY. As I recall it, Mr. Pike posed this question, and it was directed to you, Admiral, and you changed it, and I think you took exception to that question.

It was finally determined that it was changed. What I want to find out—

The CHAIRMAN. He answered the question.

Mr. HARDY. No; he took exception to it. The way Mr. Pike phrased it I think was proper.

The CHAIRMAN. Mr. Pike got his answer.

Mr. HARDY. No; he didn't. That is the point of this. The inference I got was that somebody changed it, but Admiral McDonald did not. Is that correct, Admiral?

Admiral McDONALD. That is correct.

Mr. HARDY. Right now I want to find out who did change it

Mr. Secretary. was it you who changed it?

Secretary NITZE. This was worked out between OSD and the Navy.

Mr. HARDY. Now, let's go back a little bit.

Did you change it or did Mr. McNamara change it or somebody in Mr. McNamara's office change it?

Secretary NITZE. May I complete my answer? It was worked out at the time when it was decided not to go forward with the A-6B, at which time the question arose as to the cancellation problem on the A-6B's. We had contracted \$22 million to Grumman for the specific work on the A-6B's. The problem was would we lose all that \$22 million, or would we not?

I think about \$2 million of the amount is not recoverable unless we subsequently decide that we do in fact again want the A-6B's.

But if the A-6B's are not produced, we will lose, I think it is \$2 million of that \$22 million.

But then we also bought a lot of—or contracted to Grumman, to give them money for long-lead items with respect to the A-6B's, which could also be used in the A-6A's, or the EA-6B's.

It was so we could salvage those longlead items, and also to leave up to us the question as to whether or not it would be wise to accelerate the production schedule beyond the production schedule which had existed. It was proposed and we agreed—

The CHAIRMAN. Let's see if we can't make a little progress now—

Secretary NITZE (continuing). To put this money in 1967, into 1966. I think that is the way it was done.

Mr. HARDY. Let me boil this down. I understood the admiral to say there had been no acceleration in the production of the A-6A.

Secretary NITZE. I think what I said was it was proposed and we agreed it would be wise to put this 1967 money into 1966 so that we in the Navy could work out what the optimum production schedule would be.

Mr. HARDY. Well, there has been no change in it. Now you haven't worked out anything because of this chance, because of the shift?

Secretary NITZE. We have not as yet worked out anything.

Mr. HARDY. The second point I think you made, and I want to be sure I understand this, there were considerations of salvaging something from the A-6B contract which caused you to accelerate the contract for the A-6A?

Secretary NITZE. This was one of the considerations.

Mr. HARDY. Admiral McDonald doesn't seem to agree. Did you save any money Admiral McDonald by moving this—do we save any money on the A-6B contract by shifting this from the 1968 to the 1967 supplement—I mean from the 1967 to the 1966 supplement?

Admiral McDONALD. The procurement people will have to answer that, Mr. Hardy, but I don't think so.

Mr. HARDY. Thank you, that clears that one up.

Mr. Chairman, I am going to ask similar questions as to every one of these that have been moved from the 1967 budget to the 1966—

The CHAIRMAN. [Deleted] you need that pretty bad, don't you?

Admiral McDONALD. We need the [deleted] yes, sir. The point is if you move this ahead, we can't lose. If something should happen and we had to accelerate, we could do it.

The CHAIRMAN. That is right.

Admiral McDONALD. We might not gain anything, but we can't lose.

The CHAIRMAN. You get moving on that, and we would be glad to praise you for it.

Admiral McDONALD. Right.

The CHAIRMAN. I really can't criticize you for that, because that is a vital thing to have that put in.

How long will it take to put that in?

Admiral McDONALD. [Deleted.]

The CHAIRMAN. You better get started.

What is the next thing, A7-A?

Mr. PIKE. Mr. Chairman, before we leave the [deleted] want to get something very clear on the record on this one.

Admiral McDONALD, how many planes are in your 1966 supplement for the [deleted].

The CHAIRMAN. [Deleted.] It says that on here.

Admiral McDONALD. [Deleted.]

Mr. PIKE. [Deleted] in the 1966 supplement?

Admiral McDONALD. You said were or are now?

Mr. PIKE. Are.

Admiral McDONALD. [Deleted.]

Mr. PIKE. How many are in the 1967 regular procurement?

Admiral McDONALD. [Deleted.]

Mr. PIKE. So once again we have taken the 1967 procurement and put it in the 1966 supplement for this airplane.

The CHAIRMAN. Well, you have accelerated the authorization.

Mr. PIKE. Yes, but have you accelerated the procurement of the [deleted] aircraft, Admiral McDonald?

Admiral McDONALD. We haven't yet, Mr. Pike, but we do have that option.

Mr. PIKE. You would have the option to accelerate everything if you put everything in the 1966 supplement, wouldn't you?

Admiral McDONALD. Yes, sir.

Mr. PIKE. Thank you.

The CHAIRMAN. All right, what is the next one?

Secretary NITZE. The A-7A.

The CHAIRMAN. Are there any questions on that?

Mr. PIKE. Yes, sir, Mr. Chairman.

The CHAIRMAN. Go ahead, Mr. Pike. Do you want to ask the same questions on that?

Mr. PIKE. Yes, I do.

You told us earlier, Admiral McDonald, that you couldn't accelerate production of the A-7A because it is going full-blast already. Are you accelerating the production of the A-7A with this 1966 supplement?

Admiral McDONALD. I don't believe so, Mr. Pike.

Mr. PIKE. So you are not getting the [deleted] aircraft which are in this 1966 supplement any faster than you would have if you left them in the 1967 regular procurement, isn't that correct?

Admiral McDONALD. Well, I am not sure—I am not sure.

Mr. PIKE. Well—

Admiral McDONALD. I am not sure, because we are most desirous of getting this, and I believe that we will get them quicker than we would have.

Mr. PIKE. Have the production schedules for the A-7A been changed one iota based on this 1966 supplement?

Admiral McDONALD. I will have to furnish that for the record. I don't know.

Mr. HARDY. If it hasn't, you wouldn't get them any quicker.

Admiral McDONALD. I am sure we will get them quicker, Mr. Hardy, but I don't have that with me.

Mr. PIKE. Then what you told us about it earlier, that it was impossible to accelerate the production line because it was going full blast, isn't correct?

Admiral McDONALD. The way you are putting it now, Mr. Pike, is a little out of context, I believe. What I talked about is that we could not accelerate the A-7 sufficiently to take care of our needs, and that is the reason we are buying A-4's.

Mr. PIKE. And you can't tell us now whether you are accelerating the A-7 or not?

Admiral McDONALD. I can't tell you how much now; no, sir.

Mr. PIKE. Admiral, one of the things that concerns me most of all is the ability of the Navy to make a plane make good when they want to buy it, and make it look lousy when they don't want to buy it.

Would you look at the statistics which you have given this committee on the subject of the combat radius of the A-6A [deleted] and the A-7A, and tell me whether those are accurate statistics or not?

Admiral McDONALD. Assuming the figures that are in your black book are what the Navy gave you?

Mr. PIKE. Well, I am assuming the figures in our black book are what the Navy gave us, yes. Aren't they what the Navy gave us?

Admiral McDONALD. I don't know.

Mr. PIKE. Well, I don't know—

Admiral McDONALD. I am informed here that they are.

Mr. PIKE. It says backup material.

Mr. KELLEHER. It was furnished by the Navy, Mr. Pike.

Admiral McDONALD. I hadn't seen this book until I got here this morning.

Mr. PIKE. They show a range for the A-6A, combat radius, of [deleted] nautical miles.

They show combat radius for the EA-6B of [deleted] nautical miles. And a combat radius for the A-7A of [deleted] nautical miles. Is that correct?

Admiral McDONALD. I don't believe so.

Mr. PIKE. I don't believe so either.

Admiral McDONALD. No. If you were to ask me right off, I would have said what we have on the A-7 is only half of that [deleted].

The CHAIRMAN. Let's get the ball rolling.

Can you answer the question, Admiral?

Mr. PIKE. What is the actual radius of the A-7A, Admiral—the combat radius?

Admiral McDONALD. Mr. Pike, I thought it was about [deleted] miles. I don't want to put that in the record until I am sure.

Mr. PIKE. [Deleted.]

When you make it read [deleted] it sure makes that plane look good, doesn't it?

Admiral McDONALD. Well, you are asking me some questions, I am sorry, I am not embarrassed, but when we get into the thing how high they are going to fly, what is the weight of bomb, how far they are going, I've got to have more information. I do think that what they have in here, I would have said is too large, Mr. Pike.

Mr. PIKE. Just as a generalization would you say on the prettiest, the sunniest day that has ever shown, the A-7A had a greater combat radius than the A-6A?

Admiral McDONALD. Oh, no.

Mr. PIKE. That is what the book shows.

Admiral McDONALD. No. The purpose of the A-7, as this committee will remember, was so we could stand off [deleted] miles from the coast and hit a target [deleted] miles inland. I remember that.

Mr. PIKE. That is all I have on that one.

The CHAIRMAN. All right, let's go to the next one. This is in connection with the 4-B.

Admiral McDONALD. Mr. Chairman, I would like to say I will certainly check these figures, and supply particularly Mr. Pike with any corrections.

Mr. HARDY. All of us would be interested in those, Mr. Chairman.

The CHAIRMAN. I think so. I would like for you to put them in the record, what you mean by combat radius.

Admiral McDONALD. Yes; that is right.

The CHAIRMAN. We want to have some kind of uniformity.

Admiral McDONALD. If you are comparing two planes, you have to give them the same combat load, the same altitude and the same everything.

The CHAIRMAN. Certainly. Don't you remember the fight we had here when Admiral Schoech came here. He gave an awful lot of help to the committee. You remember that, don't you?

Mr. BRAY. Mr. Chairman, would you yield?

The CHAIRMAN. Yes.

Mr. BRAY. I think that should be furnished later for the record. I think that is very important matter, and maybe later put it in the record, but we would not have time to see it before we got on the floor.

The CHAIRMAN. Can you get that here tomorrow, Admiral McDonald?

You get that thing here tomorrow.

Mr. BATES. Mr. Chairman—

Admiral McDONALD. I will do that for you.

Mr. BATES. Can Admiral McDonald indicate whether or not putting these A-7 planes in the supplemental would not or would expedite the procurement?

Admiral McDONALD. What plane?

Mr. BATES. The A-7A.

Admiral McDONALD. I think it will, Mr. Bates.

Mr. BATES. They have those that they are working on now. Are they changing the production schedules to accommodate the new buys?

Admiral McDONALD. I don't know.

Mr. BATES. I wonder if we can get that in the record, Admiral; do you know?

The CHAIRMAN. Mr. Secretary, get somebody to put that in the record, what the schedule is, and we will have that action by the committee on the supplemental.

Mr. BATES. I would like to get that with respect to the other planes originally in the 1967, and now put in the 1966 supplement.

The CHAIRMAN. Anything that was changed over from the 1967 to the supplemental, that is what we want.

(The information requested is classified and was furnished separately to the committee.)

Mr. PIKE. Mr. Chairman, I apologize, but I want to ask General Greene a question.

General Greene—

The CHAIRMAN. Apology accepted, go ahead.

Mr. PIKE. I talked too much this morning, I know I have.

Are any of these A-7A's for the Marine Corps?

General GREENE. Yes; they are, Mr. Pike.

Mr. PIKE. Are you aware that the Air Force is finding it necessary to put an afterburner on this plane in order to get it off the ground?

General GREENE. I have heard that report; yes, sir.

Mr. PIKE. Are you concerned about the Marine Corps' ability to fly a Navy version of the A-7A without an afterburner?

General GREENE. We have the SATS system, Mr. Pike.

Mr. PIKE. So in order for the Marines to use the A-7A they are going to have to catapult it off the land bases?

General GREENE. Well, we are prepared to do this at this point; yes.

Mr. PIKE. But this is what you are being obliged to do in order to utilize this aircraft, you have to use the SATS system; is that correct?

General GREENE. I would say no, we don't have to use it.

Mr. PIKE. You are not concerned about this problem which requires—you think the Air Force is wrong in putting this afterburner on?

General GREENE. Well, we haven't been faced directly with this problem ourselves. So I am unable to speak from my own personal experience or observation on this.

The CHAIRMAN. Let the record show I have seen the SATS operation in Spain. That is a part of the built-in velocity of the SATS, you can catapult just about everything loaded off there, don't you, Admiral McDonald?

Admiral McDONALD. Yes. Mr. Pike has a point here, Mr. Chairman. One of the beauties of the A-7 is not having this afterburner. This is one of the beauties as far as the Navy is concerned. It doesn't have the afterburner, and we take care of that by means of catapult.

When the Marines use the Navy version of the A-7, they will either use their catapult or they will use a long runway.

Now, when they operate it ashore, they do not get the same benefit that the Navy does unless they have the catapult.

The CHAIRMAN. I have seen them catapult a 130, everything off. That is part of the SATS system?

Admiral McDONALD. Right.

Mr. PIKE. Admiral McDonald, the Marines don't have any longer runways than the Air Force has, do they?

General GREENE. No.

Admiral McDONALD. No.

Mr. PIKE. So where the Air Force is going to use an afterburner and require an afterburner, even with their long runways, the Marines are going to have to use the SATS system; isn't that a pretty expensive way to get the planes off the ground?

Admiral McDONALD. Yes; but in areas it is an essential way, and it is a way we wish we had more of in Vietnam right now.

Mr. PIKE. It is an essential way if the Marines can't get off the ground without it.

But when the Navy came to us to buy these A-7A's in the first place, do you recall that one of the essential requirements of the aircraft was that it be a nonafterburning version of the TF-30 engine.

Admiral McDONALD. That was one of the beauties of the Navy's version of this airplane, Mr. Pike, that is what made it as good as it was—one of the outstanding features.

Mr. PIKE. You know it is amazing to me about how you can talk about how good an aircraft is which has never seen combat, is only barely in production, and you haven't got any of yet, if you want to buy. But it is not so hot if you don't want to buy it.

I can't see, quite frankly, why the Marines, or how the Marines can be happy with an airplane which is going to require the use of SATS systems, where the Air Force has got to put an afterburner on the engine.

General GREENE. The advantage, Mr. Pike, if I may speak up at this point, the SATS system is designed, as you know, for a short takeoff of about 4,000 feet. In order to handle this type of takeoff, it is necessary to have a catapult, and that is what we are actually installing at the present time [deleted]. All of our SATS installations will have at least one or two catapults of this type.

Mr. PIKE. What type of runways do you have at [deleted]?

General GREENE. We have 8,000 feet at the present time. That was put in there originally because we had no catapult installation.

Mr. PIKE. In other words, what are you going to do, abandon 4,000 feet of your runway and use a catapult?

General GREENE. No. When the catapult is installed we could, as far as the Marine Corps is concerned, get along with 4,000 feet. However, we have other aircraft from both the Army and the Air Force that are using this field.

Mr. PIKE. Well, wait a minute. You've got the aircraft from the Army and Air Force using the field, and that requires an 8,000-foot runway. What is the advantage of your putting the catapult in there for you to use?

General GREENE. Well, the SATS installation is designed primarily for an amphibious-type operation, involving Marine Corps aircraft.

Mr. PIKE. I know that. But you don't need this if you have 8,000 feet of runway, do you?

General GREENE. Well, the only reason we put in the 8,000 feet, Mr. Pike, was we didn't have the catapult when we had to install the SATS at [deleted].

Mr. PIKE. You have the 8,000 feet now, why put in the catapult?

General GREENE. We will put in the catapult because with certain types of aircraft, with full loads and bad weather, we still have to use the JATO takeoff.

Mr. PIKE. Well, I give up on that one, Mr. Chairman.

The CHAIRMAN. Now we have Mr. Price, who lives in St. Louis.

Mr. Bates, do you want to ask the same question about procurement, changing from 1967 to 1966?

Mr. BATES. Mr. Chairman, I ask is this the same situation?

Admiral McDONALD. Yes.

The CHAIRMAN. Is this a fact it was transposed from 1967 to 1966—

Admiral McDONALD. Which one was that?

The CHAIRMAN. The 8-B?

Admiral McDONALD. Yes [deleted] of them—the F-4J.

The CHAIRMAN. That is the F-4J? What is the "J", Admiral McDonald?

Admiral McDONALD. Well, it is just a particular modification of the F-4, Mr. Chairman.

The CHAIRMAN. With some additional installations?

Admiral McDONALD. Yes, nothing basically changed.

Mr. HARDY. I notice you have [deleted] F-4's and B's. What are they going to be used for, what are they going to replace in the supplemental?

Admiral McDONALD. These were just for attrition. And we asked for more and got this, because the attrition rate on this particular airplane went down frequently.

Mr. HARDY. Was this in the 1967 budget previously?

Admiral McDONALD. I don't believe so, Mr. Hardy.

Mr. HARDY. Let's talk about the F-4J a minute. Do you have any F-4's in the 1967 budget now?

Admiral McDONALD. No, sir.

Mr. HARDY. But the [deleted] F-4J is in excess of what you previously had in the 1967 budget?

[Deleted.]

Admiral McDONALD. Yes, sir.

Mr. HARDY. What does this procurement and the elimination of your 1967 procurement do to your planned F-4 operational picture?

Admiral McDONALD. I believe this closes the Navy's particular buy out at this time, Mr. Hardy, unless the Air Force takes all of the production at that time.

Mr. HARDY. Well, now, that means that the planning that you have done for procurement of F-4's [deleted] you have now ordered the limit?

Admiral McDONALD. It is what, sir?

Mr. HARDY. You don't have it on your books any more.

Admiral McDONALD. That is right for the time being. And this is primarily because of the Air Force requirements.

Mr. HARDY. Well, what is the Navy going to replace them with? Are you waiting for the TFX?

Here you have a program that was an awfully important program last year, or the year before last. You had a planned program for F-4's running on through [deleted]. Mr. McNamara saved \$32.4 million, included in his cost reduction program, by cutting down on some of your F-4's, which you were not permitted to buy last year.

Now you are eliminating all of your 1967 [deleted] buys that you had in your planned program, which has been firm apparently for several years.

Admiral McDONALD. All I can say, Mr. Hardy, is, in the supplemental and the 1967, the Navy is getting what we requested in the F-4J. We are getting all [deleted] in the supplemental instead of the [deleted]. So over the same period of 2 years we are getting this amount.

Mr. HARDY. Is that the same objective that you had over a considerable period of time? Didn't you have programed a total of [deleted] F-4's in operation by fiscal 1968?

Admiral McDONALD. I am not sure of this.

Mr. HARDY. Do you want citation to the document?

Admiral McDONALD. If we do need them, I see nothing today why we couldn't put something back in, in 1968.

Mr. HARDY. But you won't get them in fiscal 1968, if you put them in the fiscal 1968 program. You had an urgent program. Mr. McNamara saved us \$32 million, you had an urgent requirement by the Secretary, as I recall. It was a very appealing statement. Still

Mr. McNamara overrode the thing. But you had a projected program there of having [deleted] F-4H's in operation by fiscal 1968. Now, I take it you have thrown that out the window, and I want to know what you are going to replace them with. I am concerned about the same thing Mr. Bates was concerned about a while ago.

Admiral McDONALD. We have nothing coming on to replace that with unless it is the 111-B.

The CHAIRMAN. We have 111's.

Mr. HARDY. You have 111, the 111 is going to replace the F-4. Do you have the 111 down in a category where the Navy can even use it?

Admiral McDONALD. We hope so, but we aren't sure yet.

Mr. HARDY. You are pretty sure you can't, isn't that right? Hasn't the Navy virtually said they cannot use this thing on a carrier?

Admiral McDONALD. No, we haven't, Mr. Hardy.

Mr. HARDY. One or two others, Mr. Chairman, I will try to get rid of this as quick as I can.

On the F-4's you got [deleted] F-4J's, which is slightly modified F-4H, it is an F-4H, with a letter on it. You have [deleted] in your supplemental, which is [deleted] more than you had in your 1967 program. What are those? Does that take care of attrition also?

Admiral McDONALD. This was the end of a particular buy, Mr. Hardy. [Deleted] instead of leaving them the way they were in the supplemental, and the [deleted] in the 1967, they closed that out by moving the [deleted] into the supplemental, so the Air Force can get the full production in 1967.

Mr. HARDY. When you get the [deleted] will be finished with the whole Air Force program. How many will you have in operation?

Admiral McDONALD. I do not like to say we will be finished, Mr. Hardy. After all, we can put more in the 1968, if we had to have them.

Mr. HARDY. Admiral, you have been making your plans on a 5-year period. I am looking at one here now that terminated in [deleted] which was approved by your office, approved by the Secretary. As a matter of fact, the Secretary at that time wanted to increase it, but now you are telling us you haven't got any program beyond the supplemental part that you are getting in fiscal 1966, and that that is the best aircraft that you have had?

Admiral McDONALD. But I am also trying to say, I am not closing the door completely. I said we could put some in later. We thought we would—

Mr. HARDY. You could put some in if you got Mr. McNamara's agreement to it. But he cut off \$32 million of them last year. He cut them off, and he alleged it was a savings, it is included in his savings, it is just as phony to me as anything I have seen—but, anyway, how many do you need for a squadron? How many F-4's do you need for a squadron?

Admiral McDONALD. [Deleted.]

Mr. HARDY. [Deleted] is that what you said?

Admiral McDONALD. Yes.

Mr. HARDY. When did you reach that decision?

Admiral McDONALD. That is what we have now.

Mr. HARDY. That is what you have now, because that is what Mr. McNamara told you that is all you could get. The then Chief of

Naval Operations agreed with the figure—I do not know whether you were there at that time, or not—but you asked for [deleted] and you had always had [deleted] until Mr. McNamara said “No, you cannot have [deleted].”

Mr. Chairman, I am not going to pursue this now. I am going to pursue it further in my subcommittee.

Are you going to get these [deleted] on time?

Admiral McDONALD. Yes, sir; I hope so.

Mr. HARDY. I am glad to have that hope so. It is nice to have hope. If you said “wish,” I think it would be more accurate.

The CHAIRMAN. Do you understand Mr. Hardy's position?

Admiral McDONALD. Very clearly, Mr. Chairman.

The CHAIRMAN. That takes care of that.

Mr. Schweiker has something he wants to bring up.

Mr. SCHWEIKER. I have a policy question which I think is rather important.

I would like to ask General Greene, I have a photostatic copy of a letter from a Marine veteran in Vietnam, I would like to read a paragraph from it:

“What I mean is, we have an order in our battalion that states we cannot shoot until after they shoot at us. To me this is silly and I for one of many have been told we would be given office hours if we ever fired a rifle at anything. Please excuse the way I write this letter, but when I was in Korea we won our turn, why not here.”

This is from the 1st Marine Battalion over there. Are there orders like that in battalions such as that, that they cannot fire until fired upon.

General GREENE. No, there are not any orders that prohibit a man from firing, unless he is fired upon.

Mr. SCHWEIKER. Would you have any idea why a Marine veteran would say something like this? He has been in service some time. He is not a recruit. He seemed under the impression they would get ostracized if they fired the rifle. There certainly must be something to it.

General GREENE. Well, I would say if he willfully fired the rifle, without a reason for firing it, he might be remanded to office hours, but as far as using his weapon at any time he is required to use it, he certainly has the authority to do so.

I have read a number of those letters that have come through the newspapers, and several that have come through the congressional channels. I have been out there in South Vietnam three times, myself, and while I was on the ground talking to scores of marines I never ran into any objection of this type. In fact, I saw a good many marines going and coming from patrols. I covered all of the perimeters in all three of our own enclaves in South Vietnam, and I have run into no problem such as you outlined in that letter.

Mr. SCHWEIKER. What is the purpose of the 1st Marine Battalion over there? What is their function right now?

General GREENE. I believe you are referring to the 1st Marine Division?

Mr. SCHWEIKER. The 1st Marine Battalion, the 12th Division, over there.

General GREENE. The 12th Marines is an artillery outfit.

Mr. SCHWEIKER. Right. Do you mean they don't have an order like that?

General GREENE. The 12th Marines is an artillery unit which provides combat support to the infantry units operating in South Vietnam. I would be very happy if you will give me the man's name, and his complaint, to provide you with any information that I can get.

Mr. SCHWEIKER. I would like some assurance we don't reprimand a man like this. This letter didn't come to me, it was given to me from another source. He was complaining to his backers.

General GREENE. It is rather difficult to reply specifically to your question unless I can have the name of the individual who says he received the order. I will be very happy to look into it, if you want to provide me with the man's name. You will have to take my word for the statement that the marines out there are in no way inhibited in using their weapons if it becomes necessary to do so.

Mr. SCHWEIKER. Well, would you give me your word, General, he won't be reprimanded or penalized in any way for writing such a letter?

General GREENE. I don't even know who the man is.

Mr. SCHWEIKER. How can I give you the letter if you won't give me that assurance, General? Either we are interested in getting to the bottom of this thing or we aren't.

General GREENE. I will be happy to look into the matter. The man will not be reprimanded or punished in any way that he wrote a letter to you or a colleague.

Mr. SCHWEIKER. He wrote it to someone else who passed it to me. It wasn't intended to come to me at all.

General GREENE. I will be very happy to look into the item specifically on the basis of the 1st Battalion, 12th Marines, if that will help you any.

Mr. SCHWEIKER. Will you assure he will not be reprimanded or penalized?

General GREENE. I can run a check for you without even having the man's name.

The CHAIRMAN. We will meet tomorrow at 10 o'clock. I think we can finish the things in the black book.

We will recess until tomorrow morning at 10 o'clock.

(Whereupon, at 12 noon, the committee adjourned until Tuesday, February 8, 1966, at 10 a.m.)

HOUSE OF REPRESENTATIVES,

COMMITTEE ON ARMED SERVICES,

Washington, D.C., Tuesday, February 8, 1966.

The committee met at 10:08 a.m., the Honorable L. Mendel Rivers, chairman, presiding.

The CHAIRMAN. Let the committee come to order.

When we recessed yesterday we had gotten down in the black book to some of the things our witnesses weren't familiar with. Do you know about the black book this morning?

Secretary NITZE. Mr. Chairman, we have the black book before us. The CHAIRMAN. We had gotten down to the CH-46A/D, which is the helicopter. You have asked for [deleted].

Mr. KELLEHER. [Deleted.]

The CHAIRMAN. [Deleted.] In the supplemental. That would give you in 1966 [deleted].

Secretary NITZE. I think it is [deleted] netted out after the losses that we will have in the interim.

The CHAIRMAN. There is no objection to that. Let us go to the next.

Do you want to ask the same questions?

Mr. PIKE. Yes, sir; I would like to ask the same questions on every one of these items.

Have any of these [deleted] Mr. Secretary, been taken from the regular 1967—fiscal 1967 procurement and put in the 1966 budget?

Secretary NITZE. No, they have not.

Mr. PIKE. Are you procuring any of these helicopters in the 1967 procurement?

Secretary NITZE. Yes, we are procuring [deleted] for \$93 million.

Mr. PIKE. The [deleted] is what has been scheduled for a long time for procurement in 1967, so all of these [deleted] are an additional buy?

Secretary NITZE. That is correct.

Mr. PIKE. Fine.

The CHAIRMAN. Thank you, Mr. Pike.

Now, we go to the CH-53A. You are asking for how many of that?

Secretary NITZE. We are asking for [deleted] Mr. Chairman.

The CHAIRMAN. You are asking for [deleted].

Mr. Pike, will you ask the same questions? Go ahead and ask them.

Mr. PIKE. Yes, sir.

Have any of these Sea Stallions been taken out of the regular 1967 procurement?

Secretary NITZE. I believe not. We are asking for [deleted] Sea Stallions, for \$27 million in 1967.

Mr. PIKE. You are asking for how many?

Secretary NITZE. [Deleted.]

Mr. PIKE. [Deleted] additional in the 1967 procurement. The 1967 procurement had not been dropped from [deleted] it had been scheduled for [deleted] all along?

Secretary NITZE. We asked for even more than that. The Navy asked for [deleted] and we got [deleted] in the 1966 supplemental.

Mr. PIKE. Well, the Navy asked for [deleted] they are getting [deleted] altogether?

Secretary NITZE. We asked for [deleted] in 1966, and we asked for [deleted] in 1967.

Mr. PIKE. [Deleted.]

Secretary NITZE. Yes.

The CHAIRMAN. Mr. Kelleher.

Mr. KELLEHER. Mr. Secretary, I see you have [deleted] of those Sea Stallions at a little over [deleted] dollars a piece, but your total amount of money appears to be only about [deleted] million dollars. In other words, it should be something on the order of [deleted].

Secretary NITZE. We have some advance procurement money in last year's budget, which is a deduction against the [deleted] per plane.

Mr. KELLEHER. That same thing must be true of the previous airplane, too, because the arithmetic did not work out there.

Secretary NITZE. I think that is correct.

Mr. KELLEHER. Thank you.

The CHAIRMAN. Go to I. You have the Iroquois, UH-1E [deleted] Mr. Kelleher?

Mr. KELLEHER. That is right.

The CHAIRMAN. Is that correct?

Mr. KELLEHER. Yes, sir; that is correct.

The CHAIRMAN. Mr. Pike.

Mr. PIKE. Mr. Secretary, is this the improved version of the Iroquois helicopter?

Secretary NITZE. General Greene?

General GREENE. Yes; this is the UH-1E, the improved version.

Mr. PIKE. Didn't General Westmoreland roughly a year ago request something in the nature of an interim helicopter between the existing helicopters and the AAFSS?

General GREENE. I cannot provide that information, Mr. Pike.

Mr. PIKE. What capacity does this particular helicopter have which the prior one did not have?

General GREENE. This UH-1E, Mr. Pike, can lift [deleted] pounds for a radius of over [deleted] nautical miles. It also has more power and can take off much more quickly and efficiently than the UH-1B.

Mr. PIKE. Does it have enough power to be armored?

General GREENE. It has enough power to be armored to the extent that the fuel system and the pilots can be protected.

Mr. PIKE. Mr. Secretary, I will get back to you with my usual question.

Are any of these [deleted] helicopters, or have any of these [deleted] helicopters in the supplement been subtracted from the regular 1967 procurement?

Secretary NITZE. I am sure about [deleted] of them. None have been subtracted, Mr. Pike.

Mr. PIKE. There will be a 1967 procurement of UH-1E's?

Secretary NITZE. No; there will not.

Mr. PIKE. There hasn't been any plans for procurement of UH-1E's in 1967?

Secretary NITZE. There have been no plans for procurement. At one time I think we asked for some, but I do not think they have been planned.

Mr. PIKE. Can you tell me how this particular buy came about, if you hadn't planned to buy any in 1967?

Secretary NITZE. The Marine Corps was in very great need of helicopters. I think this amount was finally worked out.

Mr. PIKE. The Marine Corps had not asked for any in fiscal 1967?

Secretary NITZE. The Marine Corps, I believe, asked for [deleted].

Mr. PIKE. I cannot understand how they happen to be getting [deleted] if they hadn't asked for—if they only asked for [deleted] and they were in great need of it?

Secretary NITZE. I am wrong. The figure is [deleted] \$8 million.

Mr. PIKE. They had asked for [deleted].

Secretary NITZE. For \$8 million; that is correct.

Mr. PIKE. Was that in the 1967 procurement that they asked for them?

Secretary NITZE. In 1967 they asked for [deleted] of them.

Mr. PIKE. What happened to give them [deleted] when they only asked for [deleted].

Secretary NITZE. They asked for many more than 59 in 1966. They asked for [deleted] in 1966.

Mr. PIKE. When was the [deleted]—when and where were the [deleted] the Marines asked for in 1966 chopped down?

Secretary NITZE. General Greene, do you want to answer that?

It is my recollection, Mr. Pike, this was involved in the question of the Army needs. The Marine Corps need for UH's, the availability of the OV-10, and when it was all worked out this seemed to be the best allocation for the Marine Corps.

Mr. PIKE. That is awfully generalized language, Mr. Secretary. I am trying to get at the roots of who chopped down the [deleted] helicopters they asked for that caused them to ask for [deleted] in 1967 and now they are getting [deleted] in the supplemental 1966.

The CHAIRMAN. That came out of Mr. McNamara's office; DOD is where it was cut down.

Secretary NITZE. This was carefully worked out with the Marine Corps present and McNamara's people present.

Mr. PIKE. When?

Secretary NITZE. I haven't got the date here. Do you have it?

General GREENE. We actually asked for [deleted] in this deal.

Secretary NITZE. Can we supply for the record the date when the change was made?

(The information is classified and was furnished separately to the committee.)

Mr. PIKE. Yes; but I want to pursue this a little further.

General Greene, you asked for [deleted]. Did you ask for [deleted] in the regular 1967 procurement?

General GREENE. Yes; we did.

Mr. PIKE. Are you still asking for [deleted] in the regular 1967 procurement?

General GREENE. No; we are not.

Mr. PIKE. So the [deleted] helicopters which you were asking for in the 1967 procurement can now be found in the 1966 supplement; is that correct?

General GREENE. This adjustment, Mr. Pike, also involved the procurement of the OV-10A.

Mr. PIKE. Well, I am sure of that. We will get to that. But are you not asking for the helicopters in the 1967 procurement because you are getting [deleted] of them in the 1966?

General GREENE. I will have to provide that information, Mr. Pike.

(The information is classified and was furnished separately to the committee.)

Mr. PIKE. Mr. Chairman, I think this is obviously another example of [deleted] helicopters having been moved from the 1967 procurement to the 1966 supplement.

Secretary NITZE. Mr. Chairman, no; I don't believe it is, because the Marine Corps asked for [deleted] in 1966, and we got as many—

Mr. PIKE. This happens all the time.

Secretary NITZE. We got as many as could be procured within the time period.

Mr. PIKE. Oh, no, Mr. Secretary. The Bell helicopter, I believe, was the one that last year they were talking about stretching out the program on, and I remember asking whether they were going to save money by stretching out the program on the Bell helicopter, and they certainly weren't getting them as fast as Bell could produce them.

Secretary NITZE. I believe the Army is.

Mr. PIKE. I do not know who is getting them that fast, but I know they were stretching out the program a year ago.

Secretary NITZE. I do not believe this is correct at this time. The Marine Corps originally would have liked to have [deleted] in 1966. This was cut back to [deleted] and also the [deleted] eliminated from 1967.

The CHAIRMAN. General Greene, can you shed some light on the situation?

General GREENE. In regard to the [deleted] originally requested in the fiscal year 1966 supplement, this—

Mr. PIKE. They were originally requested in the supplement?

General GREENE. Yes; that is correct.

Mr. PIKE. This current supplement here?

General GREENE. For the fiscal year 1966 supplement.

Mr. PIKE. This is the second one. We had \$1.7 billion awhile back, but they requested that for this supplement?

General GREENE. That is correct, [deleted].

Mr. PIKE. And it was chopped down?

General GREENE. This [deleted] was to be allocated as follows: We were going to put [deleted] in the 4th Wing, [deleted] for attrition in southeast Asia, and [deleted].

Mr. PIKE. When and where was that approval manifested, and by whom?

General GREENE. This was approved by the Office of the Secretary of Defense.

Mr. PIKE. And at that time did you take your request for [deleted] out of the 1967 procurement?

General GREENE. We asked actually for fiscal year 1967—we asked for [deleted]. As far as the Marine Corps is concerned, we asked for [deleted] and this was adjusted so that we got [deleted] in 1966 in the supplement, and zero in fiscal year 1967.

Mr. PIKE. Then the information you gave us earlier about asking for [deleted] in the 1967 procurement is not correct?

General GREENE. As far as the Marine Corps is concerned in fiscal year 1967 we asked for [deleted], Mr. Pike.

The CHAIRMAN. You asked for [deleted] helicopters?

Mr. PIKE. Let's get back to where the [deleted] were.

The CHAIRMAN. What was your response, did you say you asked for [deleted] in 1967?

General GREENE. [Deleted] in 1967, that is correct.

The CHAIRMAN. Just [deleted] helicopters?

General GREENE. Yes; and we asked for [deleted] in the fiscal year 1966 supplement.

The CHAIRMAN. That is a moderate request for [deleted].

General GREENE. This was to fill out our program through fiscal year 1967.

The CHAIRMAN. Did you get the [deleted].

General GREENE. No; we got [deleted], Mr. Chairman, in fiscal year 1966, in the supplement.

The CHAIRMAN. But none in 1967?

General GREENE. That is correct.

Mr. PIKE. Who asked for the [deleted] in the 1967 procurement?

Secretary NITZE. Navy records show we asked for [deleted] in 1967 on behalf of the Marine Corps.

Mr. PIKE. The Navy records show you asked for [deleted] on behalf of the Marine Corps. The Marine Corps records shows they only asked for [deleted].

Mr. Chairman, I think the record is sufficiently confused at this point so we might as well go on to the next item.

General GREENE. I can supply the complete data on that.

The CHAIRMAN. Let us go to the J series.

Mr. HARDY. Mr. Chairman, could I ask one question?

In this discussion there has been reference made to the OV-10A. I do not see that listed. What is the OV-10A? What does it have to do with this? If there are none in this particular procurement what does it have to do with this? That is not ready yet, is that right?

Secretary NITZE. We have net advance procurement in this 1966 of \$11 million, which is connected with the OV-10A.

Mr. HARDY. When will the first one be available?

Admiral McDONALD. We are asking for [deleted] in the 1967 budget.

Mr. HARDY. Yes; but when are you going to get the first one?

The CHAIRMAN. That is made by North American?

Mr. BLANDFORD. North American; yes.

The CHAIRMAN. When are they going to start flying that airplane?

Admiral McDONALD. They have already flown two of them, Mr. Chairman.

The CHAIRMAN. Get that for Mr. Hardy.

Mr. HARDY. I don't want to delay it, Mr. Chairman, but it seems to me if we are talking about a procurement of a helicopter that is now available and coming off the line, and adjusting for something we aren't going to get, it looks to me like we are out of sorts. That was the purpose of the question.

The CHAIRMAN. Let us go to the next one.

Secretary NITZE. The first production is in [deleted], Mr. Chairman.

Mr. HARDY. You don't know how firm that is?

Secretary NITZE. I think this has been well tested out.

The CHAIRMAN. It has been accepted by the Navy, hasn't it, Admiral McDonald?

Admiral McDONALD. Yes, sir.

The CHAIRMAN. Now, under J, we have the Skyhawk, the TA-4E [deleted], Mr. Kelleher.

Mr. KELLEHER. Correct, sir.

The CHAIRMAN. Are any of these transposed from 1967 to 1966?

Secretary NITZE. None of these are transposed.

Mr. HARDY. We can get these through reprograming, Mr. Chairman.

Secretary NITZE. Thank goodness we did get the approval of this committee to reprogram or we would be in trouble with the TA-4E.

Mr. PIKE. You are already in trouble with that.

The CHAIRMAN. This is made by Douglas Aircraft.

Mr. PIKE. This is that obsolete one we were talking about.

The CHAIRMAN. Mr. Blandford has reminded me of a question that I wanted to ask that I almost overlooked.

Do we have the assurance, Mr. Secretary, that contracts will be let for all of this urgent money for which you are asking authorization before the 1967—beginning of fiscal 1967?

Do we have any assurance you are going to commit this money or are you going to let it hang over and hang over and hang over to the end of 1967?

Secretary NITZE. I do not think we can give you the assurance of every last penny.

The CHAIRMAN. Everything we are talking about here now, you certainly can obligate tomorrow, if you had the money.

Mr. BLANDFORD. The point, Mr. Chairman, is if this is a supplemental for fiscal 1966, I presume the urgency is that the money be committed in fiscal 1966, or else you can put it in the fiscal 1967, and I think the committee should have some indication as to the extent to which you are going to commit the fiscal 1966 funds in fiscal 1966. If not, then why not put them in fiscal 1967? It is as simple as that.

The CHAIRMAN. You come to us with all this urgency. We work day and night. Then you go and do it in an 8-hour day. We want to know how much leeway you are going to have, to get somebody in the DOD to get the urge to get urgent?

Secretary NITZE. I don't anticipate any of this money will be deferred. We would have the authority to commit this. When you commit money you have to negotiate specifics with the contractor.

The CHAIRMAN. This is just a follow on, most of this stuff.

Secretary NITZE. It is hard for me to be sure each contract won't run into some contractual difficulty.

The CHAIRMAN. You are going to get this money probably in 3 or 4 weeks. It will be approved. Haven't you already testified before the House on appropriations?

Admiral McDONALD. No.

Secretary NITZE. We have not.

Admiral McDONALD. We testified before the Senate, Mr. Chairman; but not the House.

The CHAIRMAN. I think they have already started with Mr. Mahon.

If you are going to get this money we want to know how urgent it is when you get it to the bank. It isn't right for us to lose sleep and lose everything else, and have the deferral of committee commitments, if you are not going to be in a hurry why should we?

Secretary NITZE. I am going to say we would not ask for this money unless we would commit this prior to July 1. That is a different thing than giving a firm guarantee that every penny is going to be committed.

Mr. BLANDFORD. Mr. Chairman, may I suggest—

The CHAIRMAN. Let me follow this, then you ask that. Are you going to ask for all the money we authorize here? Are you asking for every nickel of moneys we are authorizing?

Secretary NITZE. We are asking for every nickel that is before you.

The CHAIRMAN. I am talking about the Appropriations Committee.

Secretary NITZE. Yes.

The CHAIRMAN. Mr. Blandford, you go ahead.

Mr. BLANDFORD. I was going to merely suggest I think the situation the Secretary visualizes, I can appreciate he can't say every penny will be awarded between now and July 1, or contracts will be entered into because there might possibly be some reason why they should not. But certainly I think the committee has every reason to expect the Navy and other services to advise the committee, advise by July 1, of the amount of the authorization and appropriation that has been committed prior to July 1, 1966, and then we would have a way of judging the extent to which this money was committed, and I would like to ask that the Secretary be requested to do that, Mr. Chairman.

The CHAIRMAN. Yes, sir; you do that, Mr. Secretary.

Mr. HARDY. In that connection, Mr. Chairman, could I make an inquiry?

These line items we are discussing here right now, are identical with what you are planning to fund after you get the appropriations?

Secretary NITZE. Yes, they are.

Mr. HARDY. Does the total of these line items add up to the totals in this bill?

Secretary NITZE. Yes, they do.

Mr. HARDY. That is not true with respect to your construction bill?

Secretary NITZE. That is not—wait a minute, we are asking for 254 million, as I remember it, or 245—

Mr. HARDY. The question in my mind, Mr. Secretary, is just this: Can we depend on these line items as being the actual line items you are going to procure, or are you coming back in here with some reprogramming, or do you have some latitude here that you do not have to stick to what you are telling us now?

Secretary NITZE. These are the line items we propose to procure.

Now, with respect to the MIL-CON I think a more complicated answer is necessary.

Mr. HARDY. I know there is a more complicated answer there. I wanted to be sure we weren't talking about the same situation here.

Secretary NITZE. No, we are not.

Mr. HARDY. All right. Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Hardy.

Mr. Pike.

Mr. PIKE. Mr. Chairman.

Mr. Secretary, the TA-4E is in production at the present time at Douglas; is that correct?

Secretary NITZE. Yes.

Mr. PIKE. And you are now about to buy some TA-4E's, and aren't they coming off the same production line?

The CHAIRMAN. Can you help us, Admiral McDonald?

Secretary NITZE. It is the same production line.

Mr. PIKE. Will not the procurement of the A-4E's slow down rather than speed up the procurement of the TA-4E's?

Secretary NITZE. I think they are competitive for space, but the TA-4E will go into our training and will thereby release A-4's, and the TA-4E is a more efficient plane in the training function and therefore we are better off getting the TA-4E's than we would be getting the A-4's.

Mr. PIKE. We are concerned about when these things are being funded. Is the production line being speeded up in order to turn out these planes so fast that you could use this money, or need this money in this 1966 supplement?

Secretary NITZE. Yes, I believe so. The answer is "Yes."

Mr. PIKE. What production rate were you scheduled for before this supplement came along, and what production rate are you scheduled for with this supplement?

Secretary NITZE. Can we supply that for the record, Mr. Pike?

The CHAIRMAN. Get that for the record if you haven't got it. If you haven't got it, you haven't got it, but get it for the record. You understand the question?

Secretary NITZE. Yes, I do.

(The information requested is classified and was furnished separately to the committee.)

The CHAIRMAN. Thank you, Mr. Pike. Is that all, Mr. Pike?

Mr. PIKE. Yes, sir.

The CHAIRMAN. Now, let's go to the T-28-C Trojan. That is another trainer. That is made by AVCO.

Mr. KELLEHER. North American.

The CHAIRMAN. AVCO puts out the engine. This is a Lycoming engine, tell us where the Lycoming engine is made; Williamsport, Pa., is where it is made.

Now, the same question about that. This is a new buy; isn't it?

Secretary NITZE. Yes.

The CHAIRMAN. No; I don't think it is.

Admiral McDONALD. It is an increased buy, Mr. Chairman, brought about by the fact that we received authorization to increase our training of aviators, the overall load, from about 1,800 a year to 2,200 a year.

The CHAIRMAN. Admiral McDonald, I am worried about that. I talked to Mr. Blandford this morning about it. I think your training has been cut back unnecessarily. You just are not getting training. You are not training the quality of pilots, and turning out the quality of pilots you would like to turn out?

Admiral McDONALD. We are not turning out as many pilots as we would like to turn out, that is granted. I wish we had moved ahead a little earlier, but this is enabling us to get caught up.

The CHAIRMAN. This is one of the serious mistakes Mr. McNamara has made, cutting back on this training.

One Member of Congress told me he rode on a plane in southeast Asia, in one of the services, and they tried to hit some bridges, they dropped stuff all over the place; when they finished the bridge was standing out there, they missed the mark. The boys are just not trained. This is a serious thing, and it shows up in time of emergency, this calculated risk. That is one of the worst mistakes that the Secretary has made, in my opinion. It worries me. We used to always boast about the Navy spending \$100,000 or half a million or a million taking the boys out to San Diego, and lower California, and giving them pinpoint training. They cut back on it; you know that, yourself. It must worry you, Admiral McDonald, to turn out these boys when you know they are not ready.

Secretary NITZE. I think it is true that the number of sorties required to take out a bridge has been less than the planning factor.

The CHAIRMAN. That is right.

Mr. BLANDFORD. Less or more?

Secretary NITZE. Has been less—less sorties to take out a bridge than the planning factors.

The CHAIRMAN. They ought to do better, they cannot do any worse.

You told us yesterday you couldn't digest the A-7A. That is a shame. It is a shame our services ask for something you cannot use. It is tragic, and it worries me.

I am not blaming the services, because it is not your fault. Mr. Pike developed that thing yesterday. It worried me all night. I came in this morning, and Mr. Blandford and I discussed it this morning.

Mr. PIKE. Mr. Chairman, may I ask a couple of questions?

Are there any T-28C's in your 1967 procurement, Admiral?

Admiral McDONALD. Yes, sir.

Mr. PIKE. How many in the 1967 procurement?

Admiral McDONALD. [Deleted.]

Mr. PIKE. How long have you planned to have [deleted] in the 1967 procurement?

Admiral McDONALD. I think probably for quite some time, Mr. Pike. You know, after all, we hadn't planned on a 1966 supplemental until not too long ago. So I expect—I am not sure of this, but I think we probably had this many in the 1967 allocation, and then when we got authority to increase our pilot training from 1,800 to 2,200 then we needed more training planes, and we tried to push as many in as early as possible. That is my version of it anyway.

Mr. PIKE. Do you know how many that you asked for in your 1967 procurement when you first started preparing your 1967 procurement?

Admiral McDONALD. I don't believe we ever asked for but [deleted] Mr. Pike.

Mr. PIKE. When did you decide to ask for the additional [deleted].

Admiral McDONALD. I believe that was about October.

The CHAIRMAN. Thank you, Mr. Pike.

Now, let's go to this other.

Admiral McDonald, have you checked the figures on these fact sheets as far as the speed and the range? Yesterday we had some questions.

Admiral McDONALD. Mr. Chairman, I would be delighted to make a comment for the record, if I may.

The CHAIRMAN. I wish you would.

Admiral McDONALD. Yesterday, on the A-7 there was on the paper that this plane had a combat radius of [deleted] nautical miles. I said that I felt that was wrong. I didn't believe this plane could go that far.

I was wrong. This was taken from what we call a fact sheet, and it is a fact that the A-7 can carry [deleted]. Now, what made this particular bit of information you received I think wrong was that people could use this fact sheet to compare it with other planes, and if you did that it made—in some cases—a better plane look worse.

Now, to compare the planes that we were talking about yesterday. I said that you would have to use the same kind of a profile with the same load, so here is I think a good comparison of the A-4, the A-7,

and the A-6A when conducting close air support, each plane taking [deleted] Mark 82 Snakeeye bombs, which are 500 pounds.

The A-4 can take them for [deleted] miles. The A-7 can take them for [deleted] miles. The A-6A can take them for [deleted] miles.

Now, yesterday the figures indicated that the A-7A was better than the A-6A. Well, we all know that is wrong and this indicates quite properly that for all practical purposes the A-6A can go about [deleted] farther.

Now, for interdiction, which is of course different from close air support, you can get similar figures which will show that the A-4 can go [deleted] miles. The A-7 can go [deleted] miles, and the A-6A can go a little over [deleted].

The CHAIRMAN. Well, that clears the record a little.

Mr. PIKE. Mr. Chairman, not quite.

When you say that the A-7A can carry this—what did you say it can do at [deleted] miles, was it with [deleted] gallon tanks?

Admiral McDONALD. I said the A-7A with full internal fuel, and [deleted] gallon external fuel tanks, can take [deleted].

Mr. PIKE. When you say take it there?

Admiral McDONALD. And drop it. It can take it there [deleted].

Mr. PIKE. And return to its base?

Admiral McDONALD. That is right, [deleted] and come back to its base.

Mr. PIKE. Now, with the [deleted] gallon tanks, and the Mark whatever it is store, and the full internal fuel, can it get off the ground?

Admiral McDONALD. Mr. Pike, can it get off the ground?

Mr. PIKE. Get off the ground, in Vietnam, yes.

Admiral McDONALD. It can get off the carrier. That is where I am operating my A-7's.

Mr. PIKE. That is not where General Greene is operating his. Can it get off the ground?

Admiral McDONALD. Do you want me to answer that?

Mr. PIKE. Yes.

Admiral McDONALD. I don't know whether it can or not. It would probably take it [deleted] feet if it did.

Mr. PIKE. Thank you, sir.

General GREENE. Mr. Chairman, may I add a comment to yesterday's testimony in regard to the A-7A aircraft afterburner?

The CHAIRMAN. Go ahead.

General GREENE. The question asked by Mr. Pike.

The CHAIRMAN. Go ahead.

General GREENE. Actually, the Marine Corps has been looking into this matter of the simple duct afterburner, Mr. Pike. We have been working with the Navy on this. It seems the afterburner concept for application to Marine Corps aircraft would be feasible. When we have asked that action be taken to increase the performance of the A-7A engine fitted to Marine Corps aircraft, we have asked Secretary of Defense to fund for the development of the afterburner for the A-7A, and we estimate that the development fund will be about \$25 million.

Mr. PIKE. In other words, the Navy version of the A-7A would not be adequate for the Marines, but the Air Force version would be?

General GREENE. Would not be adequate unless we used a catapult, as I told you yesterday.

The CHAIRMAN. Are you finished, Mr. Pike?

Mr. PIKE. Yes, sir.

The CHAIRMAN. I have to go before another committee. Mr. Philbin will take over.

Mr. PHILBIN (presiding). Do you want to make some comments about the next item, Mr. Secretary? Let the committee know what your thinking is.

Secretary NITZE. I think the important point here is we are asking for [deleted] BULLPUPS for \$9 million. None is included in the 1967 budget, and none was ever contemplated for the 1967 budget.

Mr. PHILBIN. This represents an appropriation for the first time?

Secretary NITZE. That is correct.

Mr. PHILBIN. You don't have any problems concerning it? You are going to evaluate it? What is your decision on this?

Admiral McDONALD. We are getting them, Mr. Chairman—we are getting now, we expect to get [deleted].

Mr. PHILBIN. So that will accelerate the program; is that right?

Admiral McDONALD. It will accelerate it. [Deleted.]

Mr. PHILBIN. It is very helpful?

Admiral McDONALD. It is very helpful.

Mr. PHILBIN. You will get delivery some time the [deleted].

Admiral McDONALD. That is correct.

Mr. PHILBIN. But not before?

Admiral McDONALD. Not on this buy, no.

Mr. PHILBIN. What will you be using it for, the same purposes?

Admiral McDONALD. We are going to get some from prior year funding, Mr. Chairman.

Mr. PHILBIN. You are going to get some that were funded before?

Admiral McDONALD. That is correct.

Mr. PHILBIN. Do you have an adequate supply?

Admiral McDONALD. We now have about [deleted] and we expect that after this particular buy we will have about [deleted].

Mr. PHILBIN. I see.

Admiral McDONALD. This is for the Navy portion. The Air Force also uses this same weapon.

Mr. PHILBIN. The Air Force uses the same weapon. In any event, you will have these on order [deleted].

Admiral McDONALD. That is true.

Mr. PHILBIN. Have you had any shortages, though?

Admiral McDONALD. Yes, these come in different sizes, too, Mr. Chairman. This is the [deleted] pound. We have some that are smaller that we use at times.

Mr. PHILBIN. What is the general picture with regard to the weapons you are using out there of similar nature? Do you have on the whole an adequate supply?

Admiral McDONALD. Yes, sir; we do have on the whole adequate supplies, although we are still using some, we call them "bat" bombs. In other words, they are the high drag bombs. When you put those on jet aircraft you cannot take as large a load. Perhaps this is a break in a way, because we are used to utilizing the older bombs. We are using those that we do not have—

Mr. PHILBIN. Do you have any questions, Mr. Pike?

Mr. PIKE. No, sir.

Mr. PHILBIN. Does anyone have any questions?

Mr. PIRNIE. Thank you, Mr. Chairman.

Just one question, you don't intend to buy any more at any time; is that correct?

Admiral McDONALD. No, sir; that is not correct, Mr. Pirnie. We are buying a lot of these, and the Air Force is using a lot of these, too, and I think in some cases you will find on our budget request it is somewhat similar to the helicopters. We will be cut back because somebody else is getting them. We do intend to continue to buy them.

Mr. PIRNIE. Admiral, I was just wondering what was the significance of line 6, where it says yours total anticipated requirement for fiscal year 1971 will be the same as at the end of this supplemental buy.

Mr. KELLEHER. Five and six.

Admiral McDONALD. I think all that means is that we haven't asked for any funds beyond these right here now. It is my personal opinion we will ask for more.

Mr. PIRNIE. Your anticipation is a little inaccurate, don't you think?

Admiral McDONALD. I was anticipating getting more.

Mr. PIRNIE. That is what I thought.

Mr. PHILBIN. We will get to the [deleted]. Would you give us the rundown on that, Mr. Secretary?

Secretary NITZE. I beg your pardon?

Mr. PHILBIN. Will you address yourself to the [deleted].

Secretary NITZE. Yes. We are asking for—

Mr. PHILBIN. Tell us just what the situation is.

Secretary NITZE. [Deleted.]

Mr. PHILBIN. This is a separate request from the 1967 budget?

Secretary NITZE. That is correct.

Mr. PHILBIN. [Deleted.]

What problems do you have with regard to these?

Secretary NITZE. Admiral McDonald will reply.

Mr. PHILBIN. Do you have them now, or is it something you are doing and, if so, how are you doing it at the present time?

Admiral McDONALD. [Deleted.]

Mr. PHILBIN. Are there any questions?

If not, we will proceed. The M-103A2, the 120-millimeter gun tank.

Secretary NITZE. I think General Greene might better address himself to this, Mr. Chairman.

Mr. PHILBIN. General Greene.

General GREENE. The purpose of this request, Mr. Chairman, is to provide at the earliest possible date an economical substitute support stock item for the M-48A3 tank utilized in the initial equipment and required combat support for the 5th Division.

Now, basically, the requirement is for the M-48A3 but by using the M-103A2, which has a 120-millimeter gun, instead of the 90 millimeter, and modifying the engine, and some other items in the tank, we can substitute this satisfactorily as a tank with which to equip the 5th Division. That calls for [deleted] tanks to be modernized at a unit cost of [deleted] or a total request of \$5,490,000.

Mr. PHILBIN. Is that the total?

General GREENE. Yes, sir.

Mr. PHILBIN. How long do you think it will take to have that job done, the modernization program?

General GREENE. I would say to finish the entire program, I estimate about [deleted].

Mr. PHILBIN. Will you have it available before that time?

General GREENE. Well, we have some coming off of the line, but the total is [deleted] tanks.

Mr. PHILBIN. This represents some acceleration also from your 1967 proposal, doesn't it?

General GREENE. Yes. If we don't get an approval on this item for the fiscal year 1966 supplemental, it simply means we will delay the initial modernization for at least 6 months.

Mr. PHILBIN. In other words, it enables you to accelerate the operation by about 6 months?

General GREENE. Yes, sir.

Mr. PHILBIN. That is the purpose of it. That is all there is to this particular item.

Mr. KELLEHER. Mr. Chairman, I might note this is in the bill this year as the result of an amendment of last year. This is the first time we have been called upon to authorize a track combat vehicle.

Mr. PIRNIE. Mr. Chairman.

Mr. PHILBIN. Mr. Pirnie.

Mr. PIRNIE. Before we leave that, is there no item for this in the 1967 request?

General GREENE. We hadn't planned for an item of this type in the 1967 budget, Mr. Pirnie. The reason it is here is that we had this additional infantry division authorized for the Marine Corps, and these tanks are to equip that division.

Mr. PIRNIE. So there hasn't been any request considered either in 1966 or 1967?

General GREENE. No, sir.

Mr. PIRNIE. Thank you.

Mr. STAFFORD. How much would it cost to replace these, if you weren't going to modernize the ones you had?

General GREENE. I am unable to give you the unit cost. I will have to provide that for the record. But I would say it would cost considerably more to provide a new tank.

(The following information was submitted for the record:)

The M-48 tank is not currently in production. The M-60A1 is currently under production. Its unit cost is approximately [deleted] as compared to a modernization unit cost of [deleted] for the M-48, and would require the acquisition and entry into the system of items peculiar to that tracked combat vehicle which are not compatible with the current family of tanks.

Mr. STAFFORD. This is the most expeditious way of equipping your new division with tanks you consider adequate for the present circumstances?

General GREENE. Yes, sir.

Mr. PHILBIN. That will be provided for the record so you may have your answer.

Mr. STAFFORD. General, are you having any trouble in getting tanks and other equipment to your troops that are now on the field in Vietnam, in terms of shipping?

General GREENE. No; we have had no serious difficulties there, Mr. Stafford.

Mr. STAFFORD. Thank you very much.

Mr. PHILBIN. Mr. Evans.

Mr. EVANS. Mr. Chairman, I have one question of General Greene. Is the modernization peculiar to the demands of Vietnam, or is this a general modernization?

General GREENE. This is a typical modernization. Actually we modernized the M-48A3 by putting in a diesel engine. We want to do the same thing with this tank, put in a diesel, which will give us a much longer operating range than we would have with a gasoline tank. This is really the cheapest and most economical way to provide these tanks.

Mr. HARDY. Could I just ask how old these tanks are?

General GREENE. I would estimate 12 to 13 years, Mr. Hardy.

Mr. HARDY. I thought they were at least that old.

General GREENE. They are good tanks, though, and they will do the job we estimate we will have to do.

Mr. CHARLES WILSON. In Vietnam?

General GREENE. In Vietnam, or wherever the tank has to be employed.

[Deleted.]

Mr. CHARLES WILSON. Can you use a tank this heavy in the type of terrain you are committed to in Vietnam?

General GREENE. We are using the M-48 tank out there, which is a lighter tank. We have some difficulties with that tank if we attempt to move inland at any considerable distance, but we have a coastal plain of 8 to 14 miles in our particular area, and we are using these tanks in a good many different types of jobs. For example, we are using them on patrols, along roads in which we have no bridge disability as far as capability to move the tank across the bridge. We are also using them in combat strong points.

[Deleted.]

Mr. CHARLES WILSON. It weighs 128,000 pounds. It is pretty heavy?

General GREENE. Yes, they are heavy, and they would be limited if we were to move them to southeast Asia.

Mr. PHILBIN. Are there any further questions?

We will go to the next item, M-67A2, the flame tank.

General GREENE. Here, again, we have a requirement, gentlemen, to provide flame tanks for the 5th Division. We have a requirement of [deleted] and we are asking for funds in this fiscal year 1966 supplemental request to modernize [deleted] of these tanks. The unit cost is [deleted]. Total request in the supplemental is \$1,100,000.

Mr. PHILBIN. You will get them faster by modernizing them?

General GREENE. Yes, sir; they will be adequate and satisfactory.

Mr. PHILBIN. Are there any questions?

That is all. If there are no questions, we will take the next item.

Mr. KELLEHER. REDEYE is the one we are skipping, sir. We go now behind that to the next item, the LVTH 6-A1.

Mr. PHILBIN. What is the situation on this one, General?

General GREENE. Here again, Mr. Chairman, we have a requirement for a track vehicle, one fitted with little armor and mounting a 105-

millimeter howitzer in the turret. We require [deleted] of these in order to outfit the 5th Division. We are asking for a total of \$1,648,000 in order to do this job.

Mr. PHILBIN. This is a modernization job, too?

General GREENE. Yes, sir; it is.

Mr. PHILBIN. Then you have some other expenditures in the 1966 supplemental of about \$33 million.

General GREENE. The total funding that we asked for was \$1,648,000.

Mr. PHILBIN. I was now thinking of the prior investment you have today. You have the item shown in here.

General GREENE. Our investment to date through the supplemental is \$33,168,000.

Mr. PHILBIN. This provides armored fire support, and so forth. Is this needed urgently?

General GREENE. Sir?

Mr. PHILBIN. Is this something you need quite urgently?

General GREENE. Yes.

Mr. PHILBIN. How long will it take you to get these?

General GREENE. I would make an estimate, Mr. Chairman, of [deleted] for the total job. I can provide the exact data for the record.

(The following information was received for the record:)

Delivery of the first LVTH 6-A1 will commence [deleted] after funding is authorized with a production rate of approximately [deleted] vehicles per month. Modernization of these vehicles will be completed in approximately [deleted] after funding is authorized. Further, additional funds are being requested in the fiscal year 1967 budget to modernize [deleted] more LVTH 6's. Modernization of this final increment of LVTH 6's will be completed in [deleted] giving a total completion time of approximately [deleted] for the entire program.

Mr. PHILBIN. It will be helpful if we know the expected and anticipated delivery date.

Are there any questions?

If there are no questions, we will move along to the next one.

Mr. KELLEHER. The HAWK missile weapons systems.

Mr. PHILBIN. The HAWK missile weapons system. Would you run through that briefly for us, General?

General GREENE. The reason for this request, Mr. Chairman, is, as you know, these missiles and the ground equipment connected with them are very complex electronic equipments, and we want a contract for [deleted]. If we do this, the minimum equipment to activate a fifth HAWK battalion, which has been authorized [deleted] could be met. If this particular item is not approved this would result in a slippage [deleted] for the activation of this fifth HAWK battalion.

Mr. HARDY. May I ask a question, Mr. Chairman?

Mr. PHILBIN. Mr. Hardy.

Mr. HARDY. Did I understand, then, these were originally in the 1967 budget?

General GREENE. No, they are not.

Mr. HARDY. I don't understand where your slippage is going to occur. Had you not anticipated requesting them at all?

General GREENE. Originally, no. Originally, Mr. Hardy, we had only planned on a total of four HAWK battalions. Three in active service and one with the 4th Division wing team. This is an addi-

tional battalion that has been authorized because of the emergency in southeast Asia.

Mr. HARDY. When was the original request for this made, General Greene?

General GREENE. It was made in the 1966 supplemental, Mr. Hardy.

Mr. HARDY. Can you tell me when it was made? It must have been generated back some time ago. This is not brand new; is it?

General GREENE. Well, this was authorized, I would say, in October or November. That is when we originated the request.

Mr. HARDY. All right, it was then in time to go in the 1967 budget.

General GREENE. It would have gone into the 1967 budget if the 1966 supplemental hadn't developed. I mean this is a way of expediting the delivery of this equipment.

Mr. HARDY. Well, actually when you first generated this requirement in October, you were working on your 1967 budget, not on the 1966 supplemental; weren't you?

General GREENE. I have some additional background here which may be of help to you.

On the 6th of November 1965, I addressed a memorandum to the Secretary of the Navy, and pointed out the possibility of a shortage of HAWK missiles in the event that the enemy air effort should accelerate. This memorandum I forwarded pointed out three possible solutions to this problem, one of which was emergency replacement if necessary from Army stock.

The Secretary of the Navy forwarded the memorandum on the 24th of the same month to the Secretary of Defense, and then on December 13, 1965, we received a reply from the Office of the Secretary which asked the Secretary of the Army to join with the Secretary of the Navy in the preparation of a plan for a temporary drawdown or redistribution of Army HAWK missiles in the event such actions were required.

Mr. HARDY. Did the Army agree to that?

General GREENE. Well, a draft of this plan has been prepared, and has been staffed with the Army.

Mr. HARDY. That was back in November of last year?

General GREENE. Well, the plan was finally approved, or concurred in by the Army, on January 28, 1966. The plan is now being formalized by the Department of the Army.

Mr. HARDY. So the Army is going to help out to make these—to fix the Marine Corps up temporarily, so you can get some; is that right?

General GREENE. Yes, sir.

Mr. HARDY. Well, now, the thing that impressed me in the discussion is you are going to save some time.

Then do I understand that you are prepared to contract for these as soon as you get money?

General GREENE. We are; yes, sir.

Mr. HARDY. Do I further understand actually you are going to accelerate the production level? I was looking at the list of subcontractors here. I just wonder whether you do have definitely worked out that this is going to get you your missiles faster than it would if it were in the 1967 period?

General GREENE. We estimate it will result in a faster production, because we can complete the contract with the Raytheon Corp. so that the additional missiles and equipment could commence production on or about [deleted].

Mr. HARDY. Is this acceleration in production going to cost any more?

General GREENE. I will have to provide that answer for the record.

The unit cost of missiles under this planned procurement was originally established at [deleted] each by the Army Materiel Command. The missile unit cost computed from the most recently completed procurement was [deleted]. The difference is due to the reestablishment of the production lines and the fact that a smaller quantity of missiles would be procured. Hence, the greater unit cost. The associated HAWK battery ground equipment will also increase in price, for the same reasons as noted above.

Mr. HARDY. In view of the fact that the Army has agreed to take care of the Marine Corps emergency in this item, is the Army in such a fix you couldn't wait for your normal procurement?

General GREENE. Of course, the agreement with the Army had to do with the missile itself, Mr. Hardy.

Mr. HARDY. And not with the battery?

General GREENE. Not with associated equipment connected with the [deleted] firing batteries and the maintenance flow.

Mr. HARDY. You are going to get them quicker?

General GREENE. We are going to get them quicker; yes, sir.

Mr. HARDY. Thank you, Mr. Chairman.

Mr. NEDZI. Mr. Chairman.

General, I would like to inquire about some of these figures that you had here, and how the total is arrived at.

The record should be a little more clear on that point.

You have [deleted] missiles as of January 1, and [deleted] in the supplemental. Your total comes to [deleted].

Actually, if you add the figures you get [deleted].

General GREENE. We had a note there that there was no subtraction for expenditures attached to this.

Mr. NEDZI. That is all the more reason your figure should be higher.

General GREENE. I believe that difference between the total of [deleted] can be accounted for by the missiles that will actually be expended in training.

Mr. NEDZI. I see.

Here you have also [deleted] missiles, five battery sets, and an [deleted] battery sets. The proportions aren't the same in the two figures.

Would you clarify the record on that point?

General GREENE. Yes, sir; I will. I will have to provide that for the record.

(The following information was received for the record:)

The Marine Corps inventory objective of HAWK missiles is [deleted] for four, four battery battalions. This is based on [deleted] of support for each battalion.

The provisions of missiles for the 5th Marine HAWK Battalion was based on [deleted] support; [deleted] at assault rates, [deleted] at sustaining, for a total of [deleted] missiles.

Therefore, in this instance, an increase of the battery sets by 25 percent (one additional battalion) was not followed by an increase of missiles by 25 percent. Thus the difference in the proportions of battery sets to missiles.

Mr. NEDZI. I have no further questions.

Mr. PHILBIN. If that is provided for the record, do you have any further questions, Mr. Nedzi?

Mr. NEDZI. No further questions.

Mr. PHILBIN. Mr. Wilson?

Mr. HALL. My question is very simple, it is a request for information. Is the horizontal range generally of [deleted] nautical miles for the HAWK missile? Is that [deleted] feet up and [deleted] feet down, which equals [deleted] miles if you multiply it out?

General GREENE. That is correct. The range of [deleted].

Mr. HALL. In other words, you are interested only in altitude, not really in lateral range, is that correct?

General GREENE. We are primarily interested in altitude, although the HAWK is a good weapon for low angles of fire.

Mr. HALL. Then it does go out [deleted] miles at low angle, slant range horizontally before it expends its thrust, is that correct?

General GREENE. That is correct, yes, sir.

Mr. HALL. So it is then [deleted] nautical miles laterally, or horizontal, not just [deleted].

General GREENE. That is correct. If you were firing at a low angle that is the range you could expect.

Mr. HALL. Thank you, Mr. Chairman.

Mr. PHILBIN. Mr. Wilson.

Mr. BOB WILSON. My question refers to an item not in the black book, dealing with the OV-10A.

Mr. Secretary, I wonder if we could have a little bit of a reading as to the progress of the OV-10A? I notice you are asking for \$11 million more for advanced procurement. I understood by this time, at least by the time of the 1967 budget, that we would be actually in production on this item.

What is the progress on the OV-10A?

Admiral McDONALD. The first production is in April of 1967, Mr. Wilson.

Mr. BOB WILSON. Is there an item in the 1967 budget for OV-10A?

Admiral McDONALD. [Deleted] yes, sir.

Mr. BOB WILSON. [Deleted.]

Admiral McDONALD. That is correct.

Mr. BOB WILSON. This is really an advanced supplemental procurement?

Admiral McDONALD. That is right.

Mr. BOB WILSON. Let me ask you: At the hearings last year the Navy agreed to run a test, or run comparative tests with Convairs, comparable models, which they would produce at their own expense. As you know, they ran considerable tests, and then had an unfortunate crash with a Navy test pilot. I wonder if any evaluation of comparative capabilities of those two aircraft has been made based on the tests that were made prior to the crash?

Admiral McDONALD. I can't answer that. I don't think they were complete, but we must have made some up to that point.

Mr. BOB WILSON. Is the Marine Corps satisfied that [deleted] OV-10's are ready to go into—actually you are asking for procurement of them—I guess it is far enough along to determine it is a good type airplane to be used over in that area.

I wonder if General Greene could comment on the Marine Corps attitude toward the OV-10A's?

General GREENE. We are enthusiastic about the prospects of this aircraft, and we are looking forward to receiving it as soon as possible, because we want to place the OV-10A in our VMO squadrons, our observation squadrons. We intend to have a mix of the UH-1E helicopter and this type of aircraft. And we feel with the helicopter, the OV-10A, and our fixed wing we will have a perfect close support combination.

Mr. BOB WILSON. Then by April next year your first ones will be rolling off the production line, or will you have the first ones actually in combat?

Admiral McDONALD. No; will be roll off them.

Mr. BOB WILSON. I see. I think that is a slippage of some several months, though, to what was originally anticipated, isn't it?

Admiral McDONALD. I think it is 3 or 4 months, Mr. Wilson.

Mr. BOB WILSON. All right. Let me ask you, has the Navy been evaluating, or the Marine Corps been evaluating the F-5's that were sent over there for some tests, or is that an Air Force evaluation?

Secretary NITZE. I believe that is an Air Force evaluation, Mr. Wilson.

Mr. BOB WILSON. One further question, and this is all, Mr. Chairman.

You mentioned the SAM sites, Admiral McDonald, and the problems that are created there by our airplanes going into North Vietnam.

What SAM sites are actually targets? Can our pilots shoot any particular SAM site they want, or are some off limits because of their location [deleted]?

What I am trying to find out is who really makes the final determination of what SAM sites are the targets for our airplanes?

Admiral McDONALD. I guess I should answer that by saying the highest authority.

Mr. BOB WILSON. The reason I ask, I would think that would be the case. General Wheeler told us that Admiral Sharp determined which SAM sites were going to be hit in this area. I think it would be a little different, final authority, than what we would normally think of as the prime target in North Vietnam. Does it go beyond Admiral Sharp, do you know?

Admiral McDONALD. Admiral Sharp has authority to authorize attack upon SAM sites if they are in certain specified areas.

Mr. BOB WILSON. I see.

Admiral McDONALD. Under the conditions which exist today, he does not have authority to attack SAM sites in all areas.

Mr. BOB WILSON. The reason I am asking the questions, I was aboard a carrier that just got back from operations out there a little while ago, and I talked to some of the pilots of the airplanes going into North Vietnam. There was a great deal of bitterness on the part of some of them because in one instance one of their buddies was the No. 2 man in the graduating class, and was shot down by a SAM site. The buddies weren't allowed to go back and hit the SAM site. It is really fighting with one hand behind your back when you face up to it. I know you don't like that particular situation, but I think it is a real criticism that we ought to try to solve, because if there is anything that

can destroy the morale of our men, it must be the fact they are being shot at by weapons that they can't even try to eliminate.

Thank you, Mr. Chairman.

Mr. SCHWEIKER. Mr. Chairman.

General Greene, I got your statement here which you gave me on the policy question I had the other day. I wondered if there were any additional remarks you would like to make, particularly whether there was any local regulation or order that might possibly have been misconstrued or misinterpreted?

General GREENE. Well, there is a possibility, of course, of someone misconstruing a regulation. I actually talked with General Walt during the night about your question, and the information I gave you in the memo in substance is the result of our discussion.

Now, this particular outfit, the 1st Battalion, the 12th Marines, is located immediately in front of his headquarters area. It is within the perimeter, and there is a regulation, or instruction, as I outlined in that memo to you, which says that the rifle, for example, will not be loaded unless you anticipate using it. Well, for example, on an interior position like that, if the individual who wrote you the letter, or wrote the letter that you have, the man might conceivably be on an interior guidepost, where although he would have the ammunition in his belt he wouldn't actually have it loaded in his rifle.

Furthermore, he might, if he was in an internal position, such as this battalion is located in, he might also be instructed that he is not to fire on civilians who might be living in the area unless he has some clear indication he is about to be fired on or is fired on.

Mr. SCHWEIKER. OK, thank you very much, General.

Mr. PHILBIN. Mr. Pirnie.

Mr. PIRNIE. We have the question which ties in, as I see it with the answer just given by the general.

Do I understand a SAM site which is known to have fired on our forces cannot be attacked?

Admiral McDONALD. I didn't say that, but that is true in some cases.

Mr. PIRNIE. It is true.

Let me say Admiral, first, doesn't it concern you that our American public is evaluating our Military Establishment in this situation in Vietnam, and may gain an inaccurate impression of our ability to defend ourselves and to prosecute the war by virtue of this limitation?

Admiral McDONALD. I am rather inclined to believe that most of the American public realize that we are involved in action under relatively peculiar circumstances, and certainly heretofore unheard of restrictions.

Mr. PIRNIE. We have been concerned here by the psychological impact of action which is taken militarily upon the enemy.

What I am just wondering is about the psychological impact of inaction on our own people.

Admiral McDONALD. [Deleted.]

Mr. PIRNIE. Thank you.

Mr. HALL. Mr. Chairman, on that point.

Mr. PHILBIN. Dr. Hall.

Mr. HALL. Let me ask the admiral just one additional point.

Does this restriction—I am using that word loosely—maybe I should say direction from highest authority—also limit our strikes to [deleted].

Admiral McDONALD. Not without having specific authority, no.

Mr. HALL. Thank you.

Mr. CHARLES WILSON. Mr. Chairman.

I wonder if I could ask what the status of the Condor program is, Admiral McDonald?

Secretary NITZE. I think everybody is very enthusiastic about the Condor program.

Mr. CHARLES WILSON. Where is it now?

Secretary NITZE. It is in research and development.

Mr. CHARLES WILSON. Do you anticipate buying some or letting some contracts out?

Secretary NITZE. I don't think we are at that stage yet for production. It is still in the engineering-development phase.

Admiral McDONALD. Phase 2 development. We expect that contract to be awarded the third quarter of this fiscal year.

Mr. CHARLES WILSON. It will be that long?

Admiral McDONALD. I think it is way down the road before we can use it.

Secretary NITZE. But if it turns out the way it looks as though it will, it will be a first-class weapon.

Mr. CHARLES WILSON. You are talking about the third quarter of fiscal year 1966: is that right?

Admiral McDONALD. That is correct.

Mr. CHARLES WILSON. We are in that now.

Mr. PHILBIN. Are there any further questions?

If not, we come to the next item, which is the last one in the book, General, on the howitzer—the heavy howitzer. Do you have that one?

General GREENE. Actually, Mr. Chairman, this particular sheet in the black book should show two howitzers involved in the requests in the fiscal year 1966 supplemental.

Now, the first one is the howitzer 8-inch M-110, self-propelled. We need [deleted] of these howitzers in order to equip the 5th Division. Any delay in funding in fiscal year 1966 will just result in a corresponding delay in equipping the 5th Division, which we would hope would be provided with these howitzers by [deleted].

This particular howitzer, self-propelled, replaces an older model, the M-55, 8 inch.

The second weapon is the howitzer medium self-propelled 155 millimeter, the M-109. This weapon provides general support artillery, organic to the marine division, and we need [deleted] of these in order to meet the requirements of the 5th Division. Here again any disapproval of this item would just result in a corresponding delay in outfitting the 5th Division which we would hope could be provided with this weapon by [deleted].

Mr. PHILBIN. Is this the first time this has been included in this bill?

General GREENE. The first time, sir, for the authority to activating the 5th Division.

Mr. PHILBIN. You want to get these items as quickly as you can?

General GREENE. Yes, sir.

Mr. PHILBIN. How much time do you anticipate it will take?

General GREENE. In the case of these weapons we hope to have them available by [deleted].

Mr. PHILBIN. Mr. Price.

Mr. PRICE. General Greene, how many howitzers is this type of division usually equipped with?

General GREENE. They are equipped with the number I outlined here. [Deleted] of the M-109's, and a total of [deleted] of the M-110's. [Deleted] of the 8 inch, and [deleted] of the 155.

Mr. PRICE. How many do you have in inventory right at the present time of the 110's?

General GREENE. We have assets on hand which have been funded and undelivered, a total of [deleted].

Mr. PRICE. Why would you order so few, even though this does take care of the division? You order [deleted] howitzers. Why don't you get enough in the event you expand the Marine Corps [deleted] or put another one into combat, you would have plenty of weapons available. Why do you limit it to such a few number?

General GREENE. Well, the allocation of the 8 inch, for example, would be as follows: We would have [deleted] of these weapons for the four division wing teams, including the reserve division wing team. That is a total of [deleted].

We would have [deleted] assigned various schools and training facilities.

We would have [deleted] allocated to the 5th Division, and in general combat support for all of our units. That is a total requirement of [deleted]. As I said, we have [deleted] on hand, and this requires a supplemental request of [deleted].

Mr. PRICE. We are in a shooting war right now, nobody knows where it is going to lead to. Don't you think we are cutting this awfully close, dealing in such small numbers, in such an essential weapon as this type?

General GREENE. This is our total known requirement, Mr. Price, and I would say—

Mr. PRICE. It seems to me like you are cutting it awfully close, going to the trouble of ordering just [deleted] howitzers to take care of one division's needs. It looks to me like you should play on the safe side and get at least [deleted] or so.

General GREENE. Of course, we are asking for this number in the supplemental budget, and if we see we need more—

Mr. PRICE. If you ask for it in the supplemental, I am not arguing about the [deleted]. I am just concerned about the reluctance to get more than you need, particularly when we are in a shooting war right now. No one knows where it is going to lead, and if it does take time to get these weapons it would seem to me you want to be sure you have sufficient to meet any needs.

I am not arguing about the fact that you need them. As a matter of fact I think the fact that you do need them causes you to order a sufficient amount that you think you will need.

General GREENE. This is an economical buy. Of course, the thing we want to bear in mind is that as of now we have two divisions actually committed. We have the third division which hasn't been committed on the east coast, and then we have the reserve division. Those guns are not being used right now.

The fifth division, when it is activated, will require these guns and then in an emergency, of course, we could pull up to [deleted] addi-

tional guns away from our training establishment in an emergency.

Mr. PRICE. I am not quarreling with the fact you need them, I think you need more.

General GREENE. Yes. Well, this is —

Mr. PRICE. You could lose a few of them in shipment, then you are in a tight squeeze.

I am not quarreling with the fact that you need them, I think you need more. It is such a small item, I would think you could order three times the figure you have in here.

General GREENE. Well, I will reexamine the numbers there. However, my recommendation at this point, sir, would be that for the fiscal year 1966 supplemental that we just confine it to the number that I recommended to you.

Mr. HARDY. Mr. Chairman.

Mr. PHILBIN. Mr. Hardy.

Mr. HARDY. Could I inquire? You spoke about the M-109, 6 inches. Where are they?

General GREENE. The allocation?

Mr. HARDY. Yes. I don't see it referred to here. It is not in here.

General GREENE. I can give you that data right now, sir.

Mr. HARDY. Is it going to go into the book?

Mr. KELLEHER. It should be in there, Mr. Hardy, and it is not.

General GREENE. It was not included —

Mr. HARDY. You ought to have some testimony about it, then.

Mr. HALL. He testified about it.

Mr. HARDY. I understood you said you needed it. But what is the amount involved, General, I think that is all I am interested in at this point.

General GREENE. Do you mean the amount of money?

Mr. HARDY. Yes. You said there were [deleted] required.

General GREENE. In your black book you do not have any sheet covering the 109. We have a cost here, a unit cost, of [deleted] Mr. Hardy.

Mr. HARDY. What is the total?

General GREENE. We are ordering [deleted], so the total cost would be \$2,500,000.

Mr. HARDY. Is that figure taken into account in the figure we have in the bill, or does that mean we are going to have to amend the bill to include this?

General GREENE. That is additional. It is additional to the sheet you have here, but it is in the bill.

Mr. HARDY. It is in the bill?

General GREENE. Yes, sir.

Mr. HARDY. Thank you.

Mr. NEDZI. Mr. Chairman.

General, when do you anticipate delivery of the M-110's?

General GREENE. We would anticipate delivery of the M-110's not later than [deleted].

Mr. NEDZI. When did you find out they were not included in the supplemental?

General GREENE. If they weren't, we would have a delay of at least 3 months.

The point is we want to get the fifth division ready to go, ready to activate on [deleted].

Mr. NEDZI. This would in effect constitute a delay?

General GREENE. Yes, it would; yes, sir.

Mr. NEDZI. Thank you.

Mr. PHILBIN. Are there further questions?

Like Mr. Price, I am somewhat disturbed by the fact the request for the howitzers is so small. I know you have evaluated the situation, and you will reevaluate that as to your needs, but as Mr. Price pointed out we have a difficult situation facing us in the Far East. We don't know where it is going to lead us.

May I ask you in the event now this expanded tomorrow, next week, or next month, which we hope is not going to happen, but would be entirely possible, would you still want to hold to that request for that particular basic weapon, the howitzer, or would you consider it to be adequate?

After you answer that question, General, I would like to ask you to comment on your supplies of other basic weapons, the rifles, or what not, if it is adequate in the kind of engagement we are involved in now, and (b) an expanded engagement that might possibly occur soon. I would like you to comment briefly on those points, if you would, General.

General GREENE. Our estimate of our logistics situation, including weapons, and all other equipment and ammunition, is that we are in acceptable shape for any emergency that may arise as we see it now involving the commitment of the planned forces of the Marine Corps. Actually, the only problem that is facing us right now, Mr. Chairman, is the matter of clothing. We do have a problem here which we are going to meet by a decreased individual allowance, initial allowance of clothing.

Our second problem has to do with prepositioned war reserves. This matter is under study now. The Marine Corps, the Navy Department, and the Secretary of Defense office are studying this now. These are really the only two problems we see now that we have, clothing and prepositioned war reserves.

Mr. PHILBIN. As to the other problem of the howitzers—

General GREENE. I feel they are adequate.

Mr. PHILBIN. Rifles and everything else of that nature, do you have all you want, whether you are considering this engagement or any other type, or don't you need any further?

General GREENE. As of this time, we do not.

Mr. PHILBIN. I believe Mr. Blandford has some questions he would like you to respond to concerning some equipment.

Mr. BLANDFORD. General Greene, we have had some information to the effect you are going to reduce the clothing issued to recruits by one-half or you have reduced the clothing issued by one-half to recruits; is that correct?

General GREENE. We are reducing the issue of clothing to recruits, but in our opinion this is not going to have any immediate serious effect.

Mr. BLANDFORD. Well, for example, on fatigues, and on underclothing, what will the issue be, do you happen to know?

General GREENE. The issue on utilities is three now, and there will be no change on that.

Mr. BLANDFORD. They will get three. How about clothing?

General GREENE. There will be a reduction in other articles of clothing. I have the list right here. There will be a reduction in green uniforms, from two to one.

Mr. BLANDFORD. Two to one in green uniforms. How about the khakis?

General GREENE. Khakis, there will be a reduction in the number of cotton shirts, and also trousers

Mr. BLANDFORD. How about sox?

General GREENE. We are going to substitute brown for black sox.

Mr. BLANDFORD. You are going back to brown. You have excess brown?

General GREENE. We have excess brown, we are going to use those.

Mr. BLANDFORD. How about belt buckles?

General GREENE. I don't think we will run out of those.

Mr. BLANDFORD. There has been some question, General, about the amount of availability of small arms ammunition for recruit training, and for the infantry divisions for practice purposes. Have you had any shortage of small arms ammunition?

Has there been any indication in the reduction of availability of small arms production, as far as recruit training?

General GREENE. We have not had any problem as far as quantity goes. We have had trouble with certain lots in that they were defective, and we had to throw them out and substitute them otherwise.

Mr. BLANDFORD. How about bombs for your pilot training? It is my understanding there has been a reduction in the availability of bombs for pilot training; is that correct?

General GREENE. I have no specific knowledge of that shortage. I would be glad to provide that for the record.

(The following material was received for the record:)

There is no shortage of the training ordnance required for Marine pilots to develop the required level of proficiency in air-to-ground ordnance delivery tactics. [Deleted.]

Mr. BLANDFORD. You are not aware of any other?

How about 105 ammunition, proximity fuse ammunition, proximity fuses, and 8-inch howitzer ammunition? Has there been any reduction in that for practice purposes?

General GREENE. We have had some shortages in 105-millimeter illuminating ammunitions. I checked on that specifically when I was out this last time in South Vietnam. However, although we don't have the levels that we would like, our operations at night using this ammunition have not been restricted. We still had enough on hand. I would say that 105-millimeter illuminating would have to necessarily be used carefully in training.

Mr. BLANDFORD. Well, actually, am I correct that there has been a reduction in the availability of this type of ammunition for training purposes?

General GREENE. That would depend, of course, upon the division commanders. I cannot give you the specific answer.

Mr. BLANDFORD. How about 4.2 mortar ammunition?

General GREENE. We have had a problem there again in 4.2 illuminating projectors.

Mr. BLANDFORD. Where are the other places where we have problems?

General GREENE. I believe the committee in their visits and examination of this problem, as I recall, found six different types of ammunition in which there were indications of shortages. The Marine Corps has not been hampered or crippled in actual operations in South Vietnam in any of these areas.

Mr. BLANDFORD. No, I prefaced it by talking about training. I don't believe the actual operations in Vietnam have been affected. It is my understanding training has been affected. Now, the chairman earlier this morning indicated that he had been told by a Member of Congress who had seen some bombing runs on some targets in southeast Asia that they were all over the lot, and there are some people who attribute this to the fact there are an inadequate number of bombs available for pilots to use for training purposes to learn how to drop them. Whether that is correct, or not, I don't know, but this is the inference.

General GREENE. Well, I would say from my own personal observation of training in our aviation units, as well as ground units, that no one is going out to southeast Asia now, either in an air or ground unit, that isn't adequately trained to use the weapons and ammunition with which the Marine Corps is fitted.

Mr. BLANDFORD. When was this shortage of ammunition first brought to the attention of higher authorities, General?

General GREENE. I will have to provide that date.

(The information referred to follows:)

Marine Corps ground ammunition requirements were first submitted to OSD on July 22, 1965, for inclusion in an amendment to the fiscal year 1966 budget request. An additional list of ammunition needs, [deleted] was submitted on November 28, 1965. Monthly report of selected items of ammunition [deleted] showing current and projected inventory status, have been provided to ASD (I. & L.) beginning with the August 1965 report.

Mr. BLANDFORD. I have no further questions, Mr. Chairman.

Mr. PHILBIN. Thank you, Mr. Blandford.

Thank you very much, General; thank you, Mr. Secretary, and Admiral. Thank you for your testimony.

Are there any further questions?

Mr. HALL. Mr. Chairman, I didn't understand what counsel said about tab B, on the REDEYE.

Mr. KELLEHER. None are being procured at this time, Doctor. No REDEYES are being procured. The sheet shouldn't be in there at all, actually.

Mr. HALL. Thank you.

[Deleted.]

Mr. PHILBIN. The committee will go over until 2 o'clock. At that time we will take up research and development.

Thank you very much, gentlemen.

(Whereupon, at 11:51 a.m., a recess was taken until 2 p.m. of the same day.)

AFTERNOON SESSION

The CHAIRMAN. We can't wait any longer. Let us get started.

Mr. MORGAN. Mr. Chairman, the Navy R.D.T. & E. supplemental totals \$52,570,000.

Dr. MORSE I see is here to justify this request. I would suggest that the members turn to book No. 2, the yellow book in front of them, which is entitled "Supporting Data and Project Listing for Fiscal Year 1966, Southeast Asia Support Supplemental Submitted to Congress," and "Justification of Estimates for Fiscal Year 1966."

Secretary NITZE. I think Dr. Morse can state these items.

The CHAIRMAN. Go ahead, Doctor.

Dr. MORSE. I would be very happy.

The first item on page 1 is the [deleted] aircraft. The request in the supplemental is for \$26.7 million. This will be added to \$5 million which was provided in 1965 from the emergency fund, \$14.7 in 1966 which was derived from our original submission in 1966 plus some reprogramming, which was referred to this committee earlier.

The [deleted] aircraft, I will be very happy to describe just very briefly its missions.

The CHAIRMAN. This is the experimental aircraft, [deleted] on it, that is what it really is; isn't it?

Dr. MORSE. Yes, sir; [deleted].

The CHAIRMAN. Let us take them out of 1967 and put them in 1966, Mr. Secretary.

Secretary NITZE. Our original request was for an additional \$6 million in addition to the \$14.7 in 1966. With some \$24 million in the 1967 budget. We greatly prefer this way of doing it. This will enable us to let the R. & D. contract, I believe in March of this year.

The CHAIRMAN. You will commit for this, is that right?

Secretary NITZE. This we will commit in March of this year.

Mr. MORGAN. Mr. Chairman.

Is this aircraft being used in southeast Asia today, or is it programmed for use during the next fiscal year in southeast Asia?

Secretary NITZE. It is not being used today because these items are still in research and development. [Deleted.]

The CHAIRMAN. You don't have any part of this equipment in your inventory at all?

Secretary NITZE. We have equipment which is not to any degree as sophisticated as the equipment which is being designed under this program.

The CHAIRMAN. Is this right?

Dr. MORSE. Yes, sir. [Deleted.]

The CHAIRMAN. You don't have any trouble operating them?

Dr. MORSE. No, sir; not at the moment.

Mr. BLANDFORD. You do have this onboard aircraft problem?

Dr. MORSE. Yes, we have much of the equipment—

The CHAIRMAN. But you only have one operator?

Dr. MORSE. We have one operator, or else we have it so unintegrated, so to speak, that it is very difficult at this point.

The CHAIRMAN. This will have three operators?

Dr. MORSE. Yes.

The CHAIRMAN. Along with more sophisticated equipment?

Dr. MORSE. Yes, sir; and a much more sophisticated way of interpreting the data.

Mr. MORGAN. May I ask one question, Mr. Chairman?

The CHAIRMAN. Yes.

Mr. MORGAN. [Deleted.]

The CHAIRMAN. You are all talking about the same flying machine?

Mr. MORGAN. That is what I am trying to find out, Mr. Chairman.

The CHAIRMAN. Are you talking about the same equipment?

Dr. MORSE. I think so, yes.

Mr. MORGAN. That is all I have.

The CHAIRMAN. Now, the next thing is, on page 2.

Mr. MORGAN. UH-2A helicopter program.

Dr. MORSE. This is in booklet No. 2, which is the supporting data.

The CHAIRMAN. The UH-2A?

Dr. MORSE. UH-2A is \$400,000 requested. The UH-2A is a helicopter that is now in the fleet, that is used for rescue.

This helicopter is subjected to some very demanding missions, as you know, at night, far from the carrier. We have decided that it would be useful to install a second engine in this. The accident rate early in the deployment of this helicopter was higher than anticipated. The weight of the helicopter, and what it had been asked to do, was more demanding than had been anticipated. This \$400,000 will allow an engineering installation of a second engine in two helicopters, and fully test it. The engines for this back fit, and it will be a back fit in existing helicopters, are already in the inventory from re-engining of other helicopters, and this sum is purely for the engineering of that helicopter.

The CHAIRMAN. You have bought a lot of these helicopters, haven't you?

Dr. MORSE. I think there are about [deleted] in the inventory.

The CHAIRMAN. Why wouldn't the manufacturer spend his own funds to improve the product?

Dr. MORSE. It is my distinct understanding he is spending a good deal of his own funds in this program.

Mr. MORGAN. Mr. Chairman.

The CHAIRMAN. Yes.

Mr. MORGAN. Mr. Secretary, you describe this as a 1-year program to install these two engines, or the additional engines.

Dr. MORSE. The engineering is a 1-year program.

Mr. MORGAN. What about the cost of the installation of the additional engines? Will you require further funds for the installation of the additional engine? In other words, are you seeking funds in addition to this \$400,000 to complete the program, or is this the extent of the program?

Dr. MORSE. The funds are not being sought in the supplemental. That is, the supplemental is to complete the engineering test.

Mr. MORGAN. Are the funds included in the fiscal year 1967 budget?

Dr. MORSE. I assume there are 1967 funds for the backup of these helicopters. I understand the back-fit kit is in the order of \$100,000 or so per helicopter. It is my understanding the program is in the 1967 budget.

Secretary NITZE. An improvement item in the 1967 budget.

The CHAIRMAN. Let us get to the next one on page 3, three missiles, and related equipment. What is this?

Dr. MORSE. Page 3, this is a general support item in our R. & D. budget, air launched guided missile fleet support. We are asking for \$1 million to supplement the program we now have. This includes a great many quick fix items at laboratories, both in airborne, problems that arise in the fleet where we want to send some one directly to a laboratory to work immediately with the fleet, on some improvement. There has been a great increase in this in the past year, and we have developed a very quick response in getting fleet support.

The CHAIRMAN. All you did was expand the existing facilities, didn't you?

Dr. MORSE. Sir?

The CHAIRMAN. Did you expand the existing facilities?

Dr. MORSE. Yes. It really is increased work on the facilities. This is in-house support.

The CHAIRMAN. The SPARROW III, page 4.

Dr. MORSE. The next page is for improvements in the SPARROW III missile, which are listed here. These are in the areas of making the system more reliable, improving its behavior in a very humid environment [deleted], and to put structural mechanisms into the latest model.

The CHAIRMAN. You have contracts on that?

Dr. MORSE. Yes, sir; the basic contractor on this is Raytheon.

Mr. MORGAN. Mr. Chairman, may I ask if this is related to the PHOENIX program, and the problems they have encountered in the PHOENIX missile?

Dr. MORSE. No, sir; this is quite independent of that. These are improvements in the present SPARROW that is now in the fleet.

Mr. MORGAN. There have been reports the SPARROW was under consideration as the missile system for the F-111B.

Dr. MORSE. As a supplement, sir.

Mr. MORGAN. This is not a part of that program?

Dr. MORSE. This is not related to that whatsoever.

Mr. BATES. Not as a substitute?

Dr. MORSE. No, sir.

Mr. BATES. Just as a supplement?

Dr. MORSE. As a supplement.

Mr. HARDY. I raise this one question in connection with it. I notice the supplemental request is almost as big as the original 1966 request. Now, when did the \$200,000 get into your 1967 budget?

Dr. MORSE. You are referring to the SPARROW. Of course, the SPARROW is an existing missile in the fleet, and in rather substantial inventory. These are problems where we see needs of fixes due to the actual increased knowledge of what has happened in southeast Asia.

Mr. HARDY. Well, have you changed the purpose of this particular research? Certainly you had the program standing for some little while. You had \$5 million in 1965. You came in for \$3.8 million in fiscal 1966. And then only \$200,000 in fiscal 1967.

I have a little trouble understanding why you should be almost 100-percent wrong in your estimate on your requirements for fiscal 1966.

Dr. MORSE. Well, I can justify it only by saying that there have

been a great many problems uncovered due to much more intensive testing of the missile because it has been and is being used operationally.

Mr. HARDY. What does the \$200,000 in fiscal 1967 amount to? What is that doing in there? That doesn't amount to anything to speak of. It must have been programed before your \$3 million were put in your supplemental.

Dr. MORSE. I am afraid I cannot comment on that.

Mr. HARDY. Do you know what the \$200,000 is in the regular 1967 budget for?

Dr. MORSE. No, sir; not at this time, I cannot tell you.

Mr. HARDY. I would like, Mr. Chairman, a little better explanation of why are we almost 100-percent wrong on our original estimates for fiscal 1966. I don't think that is unreasonable.

The CHAIRMAN. See if you can answer that question for Mr. Hardy.

Dr. MORSE. Yes, sir.

(The information is classified and was furnished separately to the committee.)

The CHAIRMAN. Let us get to [deleted]. I want to read something about [deleted].

Secretary McNamara's statement to this committee marked "Secret," among the items to be supported, would be the additional funds on the [deleted]. That is a classic example of doubletalk, classic example of doubletalk.

[Deleted.]

Dr. MORSE. I would like to—may I elaborate somewhat?

The CHAIRMAN. That is what I am asking you to do.

Dr. MORSE. [Deleted.]

The CHAIRMAN. Mr. Blandford, you take it from there.

Mr. BLANDFORD. All right, sir.

Dr. MORSE. [Deleted.]

The CHAIRMAN. If you don't have any better story next year I am going to turn you over to Mr. Hardy.

Mr. HARDY. I have a question now on that.

The CHAIRMAN. Go ahead, Mr. Hardy.

Mr. HARDY. How much money do you still have in the 1967 budget for this particular item?

Dr. MORSE. [Deleted.]

Mr. HARDY. That is right.

Dr. MORSE. [Deleted.]

Dr. MORSE. Dollars in the [deleted] program?

Mr. HARDY. Yes.

Dr. MORSE. \$7.1 million; yes.

Mr. HARDY. That is what I want to find out. Is that amount still in the 1967 budget?

Dr. MORSE. Yes, sir.

Mr. HARDY. When did it get in there?

Dr. MORSE. This —

Mr. HARDY. Mr. Secretary, do you know?

Dr. MORSE. To my knowledge, it was in October.

Secretary NITZE. That is what I was going to answer. I thought it was in October.

Mr. HARDY. When did the \$5 million for this supplemental program get in there? I am trying to distinguish between these two facts.

Dr. MORSE. Yes, sir.

Mr. HARDY. You have a \$7 million item in your regular program which presumably has been a more or less continuing thing over a period of time. You had \$7 million last year, \$7 million this year, \$7 million next year. All of a sudden you come in with \$5 million in the supplemental.

What I am trying to understand is, how did the \$5 million get in there extra, and where are you going to get the work done?

Dr. MORSE. All right, sir, I think perhaps I should try to answer first by describing how we have approached the whole R.D.T. & E. question with respect to southeast Asia. There have been many meetings between the services and between the Director of Defense Research and Engineering, and our people, which has gone on for many months—and there are really four different places where we reacted in the budget. One has been in reprogramming internally for the Navy. This has been going on now for a year as we identify urgent needs if we can find means of handling them ourselves.

The other is in emergency funds. In the project proposed, in which the Navy received—

Mr. HARDY. Doctor, you are talking in generalities.

Dr. MORSE. Yes, sir.

Mr. HARDY. You are talking in generalities, and I am talking in specifics. I am trying to understand with respect to this particular one item, when this money got in there, and why it got in there. If you have a regular program going on, and my guess would be that it has been projected over a considerable period of time, your planning is reasonably firm on these things. You have \$7 million a year for 1965, 1966, and 1967. Now you throw a \$5 million additional in there for the supplemental this year. Are you going to really get that in the works in fiscal 1966?

Dr. MORSE. Yes, sir.

Mr. HARDY. Are you going to reduce what you had in fiscal 1967, or are you putting this into a reprogram for something else? Just boil it down to right where we are.

Dr. MORSE. Well, sir, I think one has to answer it as a question of a balance between all of these things. This item is here, and every item in the supplemental was brought up in the context that it had an urgent need; it was a question of priority, and many different items were weighed. That is why it is very hard to say why any given item was put in. It was put in the context of many competing items.

Mr. HARDY. Mr. Chairman, I don't want to pursue this, but this is one thing we are not learning a thing on earth about. It doesn't add up to any sense at all unless we can get a little bit better understanding on this; I don't know how we can act on this.

The CHAIRMAN. You are just going on with your program.

Secretary NITZE. I believe it is perfectly—

Mr. HARDY. If you can tell us what you are doing so it will make a little sense, so we can understand it, instead of generalizing all over creation.

Secretary NITZE. [Deleted.]

You cannot do these things without money. This is money that is being spent. I think the question that Dr. Morse was addressing himself to was the question of why the various parts were put into this 1967 supplemental, because we need the money now, prior to the 1967 budget.

The CHAIRMAN. 1966.

Secretary NITZE. 1966 supplemental, because we need the money and are spending it prior to the 1967 supplemental. This is in addition to the program which was foreseen beforehand. So I think it is a perfectly legitimate thing to have in the 1966 supplemental.

The CHAIRMAN. All right. Could you spend more than this \$5 million?

Secretary NITZE. This is the amount that has been estimated as being the amount that we need. [Deleted.]

The CHAIRMAN. Do you need any more money, or is this enough?

Dr. MORSE. In terms of money that can be spent now, I think this is the ground rule in which this was framed.

The CHAIRMAN. This is all you can suggest at this time?

Dr. MORSE. At this time.

Mr. HARDY. I think what the Secretary has said, after a little bit I understand it, but it still leaves some questions in my mind. For instance, [deleted], maybe you won't need the \$7 million you have programmed for next year [deleted]. Maybe you cannot forecast that.

Secretary NITZE. [Deleted.]

The CHAIRMAN. I think you will find that out, too.

Secretary NITZE. [Deleted.]

Mr. BLANDFORD. Mr. Secretary, this raises a very interesting question with respect to the entire supplemental authorization, and that is, What were the guidelines that were given to you with respect to the development of the 1966 supplemental authorization? And I would like this answer both from you and from General Greene, since Admiral McDonald isn't here.

What kind of guidelines did we use? Was this to fight the war in Vietnam? Is this the extent of the money you feel you need at this time, or just what kind of guidelines did you get from the Secretary of Defense in developing the Navy portion of this supplemental?

Secretary NITZE. My recollection of the guidelines is that this was to cover items where we needed money prior to June 30, 1966, and where it really was urgent that we get the money. Most of it is related to southeast Asia, but not all of it.

Mr. BLANDFORD. No, that is the point. How much of this is southeast Asia, how much of this is not related to southeast Asia; how much of it do you feel you should have more of, who made this decision, and who gave you the guideline?

Secretary NITZE. My recollection of the guideline was as simple as I stated. This is money which we needed urgently to commit prior to June 30, 1966.

Mr. BLANDFORD. Well, now, we raised that subject this morning, and you were a little cautious in answering, properly so, with respect to the money urgently needed before the 1st of July to commit. And you indicated you could not assure the committee you would award the contract. We understand that, because of the negotiation problems you would have. But the implication is all of this money will

be obligated in one form or another between now and the 1st of July, perhaps not to the extent you will actually enter into a firm binding contract where you get into the negotiation problem, but there had to be some guidelines.

Do we understand this to be a supplemental authorization to the war in Vietnam, or is this a supplemental authorization to take care, for example, of 1968 fiscal needs?

Secretary NITZE. No, I think it is not for 1968 fiscal needs. [Deleted.] So not all of that money is necessarily going to be committed prior to June 30, 1966.

Mr. BLANDFORD. I am trying to develop whether these guidelines that were given to you were on the basis of continuing and fighting the war in South Vietnam, or whether there are funds in here that are for purposes other than for the war in South Vietnam.

Secretary NITZE. There are certain funds in here for other purposes.

Mr. BLANDFORD. What portion of the funds would you say are contained in the Navy part of this that are not for the war in South Vietnam?

Secretary NITZE. The only item I can think of is the FDL, \$10 million.

Mr. BLANDFORD. This is the only single item you know of that is not in connection with the war in South Vietnam?

Secretary NITZE. That is my recollection.

The CHAIRMAN. When you have to get underway—

Secretary NITZE. If you improve a weapon system useful in South Vietnam it will be useful elsewhere.

Mr. BLANDFORD. Did the Secretary of Defense, or anyone else, give you guidelines with respect to determining what your requirements were to develop the supplemental authorization and the supplemental appropriation for the remainder of fiscal 1966? Someone must have given you some kind of guideline.

Secretary NITZE. My recollection is it was just as I have stated.

Mr. BLANDFORD. In other words, you name what you need, and we will give it to you?

Secretary NITZE. We come before you with the things which we think we need urgently and you will review it and see which ones of those we can justify.

Mr. BLANDFORD. General Greene, were you given any guidelines?

General GREENE. In our fiscal year 1966 southeast supplemental, no funding is requested in fiscal year 1966 that could be deferred until fiscal year 1967 if planned consumption is to be reported for the Marine Corps. If Marine Corps units are to be adequately equipped. And if an adequate reserve stock for the Marine Corps is to be maintained.

Now, our procurement requirements were computed through fiscal year 1967 based on the best monthly consumption information which was available to us, and requirements for outfitting new units to be activated.

The determination of the fiscal year 1966 funding requirements for the Marine Corps was based upon leadtimes furnished by the contracting agency which in most cases was the Army. And these timing estimates that were made by us were coordinated at the OSD level with defensewide production allocation plans.

Mr. BLANDFORD. I would assume from that answer, General, and Mr. Pike was developing this the other day, that everything you asked for here envisions a procurement schedule based upon a force strength which will be in existence by July 1, 1966, which will pursue the request you submitted as a part of this supplemental?

General GREENE. That is correct. Specifically we are speaking about R. & D. at this time, and I can give you—

Mr. BLANDFORD. I am talking now about the entire supplemental authorization. I am merely trying to establish or trying to determine for the committee what guidelines you received. How did you distinguish between putting this in the 1967 budget and putting it in the 1966 supplemental? That basically is what I am asking you.

General GREENE. It wasn't very hard for us to do that. We simply said to ourselves, we have certain new units that have been authorized and we want to activate them. We need certain equipment. We should get this equipment in fiscal year 1966. And how much is it going to cost? And we put that in our supplemental request based on these computations which I outlined for you and which also included our reserve stock.

The CHAIRMAN. You just wanted to get it as quickly as you could.

General GREENE. Yes; and we didn't put anything in here that we didn't actually feel we needed in southeast Asia in fiscal year 1966.

Mr. HARDY. Well, now, Mr. Chairman, in that connection, a good bit of the things you've got in this procurement bill, General, to equip your 5th Division, is that right?

General GREENE. That is right.

Mr. HARDY. Your 5th Division is going to become activated and be equipped by [deleted], is that right?

General GREENE. That is correct.

Mr. HARDY. Now, then, the procurements that you make, particularly in this area, you are telling us could not be procured in time to equip that division in [deleted] if you didn't have your money prior to July 1 of 1966.

General GREENE. I am saying that the money we have asked for here for items for the 5th Division are items that we should get as rapidly as we can in order to start providing the 5th Division with these items and to make sure they will be ready by [deleted].

Mr. HARDY. Except for scheduling, if they are available by July 1, and could be provided on some sort of a schedule after the 1st of July 1966, wouldn't you be just as well off as to start your procurement in fiscal 1966?

General GREENE. We would, if there were any items in here in that category.

Mr. HARDY. Well, you had the howitzers, the self-propelled howitzers, you had a couple items of those. They were for the 5th Division.

Frankly, I don't know what your delivery schedules are, but since you don't expect to have your division equipped until [deleted] it strikes me as being a little unusual that you have to have your money authorized and available in this supplemental rather than in your regular 1967 budget.

General GREENE. The Congress has authorized the 5th Division, Mr. Hardy, and one of the things we want to do is to start the activation as soon as practical, that is No. 1.

No. 2, the elements within the division have to be trained.

Mr. HARDY. I am in complete agreement that you need to get your division equipped, and equipped on time.

But when was the decision made to activate this division?

General GREENE. The authority was given to us in November of 1965.

Mr. HARDY. Well, the authority was given you by what, the Presidential directive?

General GREENE. That is right; yes, sir.

Mr. HARDY. So this was not a specific authorization by the Congress?

General GREENE. It was an authorization that came to us from the President.

Mr. HARDY. It came to you from the President in November.

Now, your planning indicates you can't get this division activated and equipped until [deleted] is that right?

General GREENE. That would be one that will be activated, organized, trained, and ready to go.

Mr. HARDY. Well, as far as training is concerned, in your backup inventory, I am thinking now about the howitzers, I am using your testimony of earlier today, you have backup supplies that could provide the equipment that you need for this unit for training purposes, provided you had this equipment delivered by [deleted] when the division was supposed to be fully equipped and activated; isn't that right?

General GREENE. Well, if we took the equipment allocated to other units, we could transfer it to the 5th Division, but then the other unit, for example, a school, or training unit, wouldn't have the weapon available.

Mr. HARDY. I don't want to pursue this too far, Mr. Chairman, but I am a little bit concerned about the discussions we had on a good many of the aircraft earlier, and there was a pretty good indication they are putting these funds in the 1966 supplemental rather than in the 1967 regular appropriation—I am not convinced unless we had some actual time schedules that indicated what the production and procurement schedules were—I just have a little trouble, General, in following this line of argument.

The CHAIRMAN. The fact remains we have got barely enough stuff for the divisions we have.

Mr. HARDY. I agree with that, Mr. Chairman.

The CHAIRMAN. That is all we have.

Mr. HARDY. I agree with that.

The CHAIRMAN. Let's just stop right there. That is a fact of life. We just don't have the stuff. We are living off the shelf. We have our staff program. If you are going to have another division, you have to start from scratch and equip it. That is the situation, isn't it, General Greene, isn't that putting it in very simple words?

General GREENE. Actually I would like to give Mr. Hardy any information here I can.

Actually we planned for four divisions. That is what our war planning called for.

The CHAIRMAN. You didn't have any equipment for it.

General GREENE. Then we were suddenly given the authority because of the rising emergency in southeast Asia for another division.

Mr. HARDY. General, the thing that bothered me—I completely agree you ought to have the equipment, and I am somewhat inclined to go along with Mr. Price's argument this morning, maybe you are a little too modest in what you are asking for. I haven't seen anything really to substantiate any real requirement for a good many of these funds, I haven't gotten into the specific items you are concerned with, but I have not seen any indication these in the supplemental wouldn't serve as good if they were in the regular appropriation.

The CHAIRMAN. In preparing estimates for financial requirements for the balance of 1966, we have assumed that combat operations will continue through the end of 1967, thus the entire requirement for the longer leadtime items through that date is included in this supplemental. So you see that is why we are all mixed up.

Mr. BLANDFORD. June 30.

The CHAIRMAN. End of June 1967, that is what the statement says.

General GREENE. Mr. Chairman, as a matter for the record, I would like to make this statement, that every single thing that the Marine Corps has asked for in its fiscal year 1966 supplement was requested by the Marine Corps in good faith to be used in fiscal year 1966 and fiscal year 1967 to meet valid military requirements in southeast Asia, and that there has been no attempt on our part whatsoever to create or set up a subterfuge of any kind as far as the transfer of funds from the fiscal year 1967 budget to the fiscal year 1966 supplement.

Mr. HARDY. I certainly wouldn't want to suggest you did that.

The CHAIRMAN. Nobody did.

Mr. HARDY. The only question in my mind would be, though, whether you had guidelines that had that effect. That is the thing that I can't tell. And I can't tell that from the other testimony that we have had from the Secretary, or from General McConnell either.

General GREENE. The guidelines we went on, sir, were essentially just what I outlined. In other words, they were for items that we needed to fund for in fiscal year 1967.

The CHAIRMAN. Certainly if you don't get this you can't provide the division with what you need; isn't that a fact?

General GREENE. That is right; yes, sir.

The CHAIRMAN. That is why you are asking for it. As a matter of fact you need it all right now. You should have the whole business instead of these little old dribbles.

Mr. Bates has something he wants to bring to the attention of the Secretary.

Mr. BATES. Mr. Secretary, there is a story emanating from India to the effect Ho Chi Minh has requested the Government of India to intercede and establish some sort of a peaceful negotiation with the United States. The Vice President of the United States is flying to Saigon, apparently in relation to this whole problem. Do you have anything, or any comment to make with respect to this?

Secretary NITZE. No. I am not aware of the ticker or any background contributed.

The CHAIRMAN. You haven't heard that?

Secretary NITZE. I have not heard it.

The CHAIRMAN. Mr. Morgan has asked me to state this question on the record.

Mr. BATES. I was going to ask a sequel to that. Of course, if there is anything to it, and we should be able to bring about an honorable situation over there, what then would be our position with respect to this bill here?

The CHAIRMAN. Put it all in the 1967 budget.

Mr. HARDY. Move it to 1968.

The CHAIRMAN. Just transfer it to 1967.

Secretary NITZE. As one recollects the problems we had in Korea, negotiating an armistice—

The CHAIRMAN. That is one thing about the Communists, if they are going to keep an agreement, you don't know that is a fact, so you can bring the marines on.

Secretary NITZE. It was clear in the Korean situation it was absolutely essential to fight on and fight on hard during the period of the negotiations. It seems to me it would be wholly unwise to make any other assumption. Our job in the Navy and the Marine Corps would be to be in fully as good a position during any such negotiation.

Mr. BATES. If we had followed that kind of a thing in China, instead of stopping China every time to bring about a military victory, perhaps we wouldn't have all the problems we have in Asia today.

The CHAIRMAN. Have you finished?

Mr. BATES. Yes.

The CHAIRMAN. Mr. Morgan wants to ask a question.

Mr. BATES. Could you put in the record the answer to my question, of what we don't need in this particular proposal if the armistice goes through?

Secretary NITZE. My answer is clearly there is nothing in here which we wouldn't need under even that hypothesis.

Mr. BATES. Even now.

Mr. MORGAN. Mr. Chairman, Mr. Blandford asked the question about [deleted]. I would like to ask the question whether or not any of the TV guided missiles, such as the WALLEYE, have been used in Vietnam and, if so, what was the effectiveness of those missiles?

Secretary NITZE. The WALLEYE is not yet in operational readiness.

Mr. MORGAN. Mr. Chairman, we have the R. & D. program, or are about to enter the R. & D. program, two additional surface-to-air missiles. One which Secretary Morse mentioned earlier, the [deleted] and the CONDOR, which was mentioned earlier this morning by Admiral McDonald. What is the relationship of these two programs to the [deleted].

Secretary NITZE. The WALLEYE—

Mr. MORGAN. I didn't say the WALLEYE, I said [deleted] and the CONDOR.

Secretary NITZE. Let me go on. The WALLEYE is a TV guided missile we have great hopes for, which would home onto any given object, including a radar installation if once we get it into the television sight.

The CONDOR is a more complicated missile. Would you describe the CONDOR?

Dr. MORSE. The WALLEYE is a glide bomb, sir, so it has a fairly limited range. The CONDOR is essentially the same homing technique, but one where the missile can be launched from the aircraft at

some distance, say [deleted] miles, and the TV picture transmitted back to the aircraft, so that the pilot sees what the missile is seeing. This is unique practically, not only for the fact that it locks on a target [deleted].

The CHAIRMAN. I see.

Dr. MORSE. The CONDOR should be far more effective in that it can attack a bridge, or a building, or an oil storage tank.

The CHAIRMAN. [Deleted.]

Dr. MORSE. The CONDOR—I think the CONDOR should be much more effective because it is a far more general purpose weapon.

The CHAIRMAN. It is substantially in the state of the art, isn't it?

Dr. MORSE. Yes, sir; we are quite convinced it can be built, and it has been tested quite thoroughly, and we hope to go to contract as soon as we can, which is within—the initial part of this you will recall was authorized and appropriated last year.

The CHAIRMAN. Do you have any money yet in the CONDOR?

Dr. MORSE. No, sir; we have 1966 money. In 1966 we will start the contractor going. We will come in in 1967 for the money.

The CHAIRMAN. You have all the money you need at this point?

Dr. MORSE. Yes, sir; in the CONDOR.

Mr. MORGAN. He didn't comment on the [deleted].

Dr. MORSE. [Deleted.]

So this is not in the same state as the CONDOR, in the sense that we know what we want, we know how to do it.

We are now considering what improvement will be made [deleted].

Mr. BATES. What is the CONDOR arrangement operation?

Dr. MORSE. Because we have done our homework extremely well, we will have CONDOR in an operational state in somewhat less than [deleted].

The CHAIRMAN. Who is your contractor?

Dr. MORSE. I am afraid—it has not yet been announced.

The CHAIRMAN. You have to start off.

Dr. MORSE. We will be starting within a month, on the contract.

Secretary NITZE. [Deleted.]

Mr. BATES. Is that to be built at Phoenix?

Dr. MORSE. No, sir.

Mr. BATES. This document with missiles and rockets says it is intended to be used on the F-111B.

Dr. MORSE. I am sorry, what weapon are you talking about?

Mr. BLANDFORD. CONDOR.

Mr. BATES. CONDOR.

Dr. MORSE. In the F-111B we will have a secondary attack mission, and will go on several airplanes. It is not designed especially for any given airplane.

The CHAIRMAN. Have you cured that weight problem on the 111? The Navy is going to use that missile. Wasn't that PHOENIX?

Secretary NITZE. F-111B, the PHOENIX missile.

The CHAIRMAN. The PHOENIX was what you were going to put on the 111?

Secretary NITZE. Yes.

The CHAIRMAN. How far down the road have you gotten on this?

Secretary NITZE. On the PHOENIX?

The CHAIRMAN. Yes.

Secretary NITZE. The research and development is underway. We don't yet have a missile that is flying from a plane.

The CHAIRMAN. You have two problems, you have problems with the PHOENIX, haven't you?

Dr. MORSE. Yes.

The CHAIRMAN. Have you cured the problem in the PHOENIX?

Dr. MORSE. Yes; I think the PHOENIX problems are cured.

The CHAIRMAN. The F-111 is still a problem?

Secretary NITZE. It is still a problem. It simply isn't a weight problem, there are things one can do to account for the weight.

The CHAIRMAN. You have not cured the 111 yet, have you?

Secretary NITZE. [Deleted.]

The CHAIRMAN. When you get by yourself at home at night, both of you gentlemen, do you wish you had some other plane rather than working on the 111, to work aboard the carriers? If you had your way, wouldn't you rather have something else?

Mr. HARDY. Mr. Secretary—

The CHAIRMAN. Let me get an answer to my question.

Secretary NITZE. Mr. Chairman, the F-111B, PHOENIX system, includes a lot of different things. It includes a swept wing, and we are clear that the Navy should have a swept-wing plane. This really gives the carrier a great deal of benefit if you can have that swept wing.

Certainly we feel that the Navy ought to have an aircraft which includes a [deleted] type of engine which is in the F-111B. We also believe we ought to have a plane which does have a smooth transition from military power, and afterburner power, which this engine does have, and which our other engines do not have. We also think we ought to have a plane which has automatic stability control, which this plane has. We also think we ought to have a plane which has the range in its missile system which the PHOENIX system has, and has the capability for [deleted] track while scan, which none of our other missile systems have.

When you combine all of these various things in one system, the F-111B, PHOENIX system, you are combining a great many very forward-looking difficult developments concurrently. Certainly we are having problems, but if anybody were to say the Navy shouldn't exploit any one of these things, or all of them together, I would think they would be telling us not to try to get the best kind of system for the Navy that we can get.

The CHAIRMAN. This is really an answer to the Secretary's prayers?

Secretary NITZE. We are doing our level best to make it work.

Mr. BATES. You are still praying.

How about the intake, did you get that all worked out now?

Secretary NITZE. Not quite, but we think the contractor is on the way getting that licked.

The CHAIRMAN. Who is the contractor?

Secretary NITZE. Pratt & Whitney is the contractor for the engine. He has had a lot of problems. But one by one the problems seem to be getting licked.

Mr. BATES. How about down the road?

Secretary NITZE. We have had two Navy type R. & D. planes delivered to us, those two do not include the SWIP program; in other words, the superweight improvement, and the high lift to drag devices. Those we won't get until planes Nos. 4 and 5.

The CHAIRMAN. Is Dr. Morse in on this operation?

Dr. MORSE. Yes, sir.

The CHAIRMAN. Sir?

Dr. MORSE. Yes, sir.

The CHAIRMAN. When do you two gentlemen think we will get an operational plane as things are now progressing, 1 year, 2 years, 3 years?

Dr. MORSE. An operational plane in the fleet, operating in the fleet?

The CHAIRMAN. Yes.

Dr. MORSE. I would say it would be about [deleted].

The CHAIRMAN. [Deleted.]

Dr. MORSE. Yes.

Mr. BATES. What is the anticipated weight now, around [deleted]?

Secretary NITZE. Those are quite different figures.

Mr. BATES. I understand the difference. What is the loaded figure now [deleted].

Secretary NITZE. That is an entirely different thing. That is the full loaded takeoff weight which doesn't compare with the [deleted] at all.

Mr. BATES. I understand that. What is that figure?

Secretary NITZE. The takeoff weight fully loaded is estimated at [deleted].

Mr. BATES. I have heard more figures for that, anywhere from that low, which you just gave, to up around [deleted].

The CHAIRMAN. You can develop a brandnew plane between now and [deleted]?

Dr. MORSE. Well, sir, I think the basic element is the engine development on an airplane. What has made the F-111 possible is the F-30 engine that Pratt & Whitney built.

The CHAIRMAN. The F-30 engine, Mr. Blandford, Captain Meyer told—where is Captain Meyer, is he here—he told the Price subcommittee that the final reprogramming action in 66-62 reports the reprogramming of \$52 million from the appropriation "Procurement of aircraft, missiles, Navy," to the appropriation "Research and development, Navy," for funding additional costs, related to the development of the F-111B aircraft.

So you are still fighting that engine, at a cost of \$34 million, for modification of the design of the F-30. And later modification of the airframe was to accommodate and improve this; \$8 million for the cost of the ongoing aircraft development. You are still fighting the whole problem, aren't you?

Secretary NITZE. Not fighting it, we are working on the problem. We have lots of problems.

The CHAIRMAN. This money causes you to say what you said to me that you just about have the problem licked, is that a fact?

Secretary NITZE. I am not saying we just about have got the problem licked, no. What I am saying is, we hope that we can get the problem licked. We haven't got it licked.

The CHAIRMAN. This is the time of year when hope springs eternal in the human breast.

Secretary NITZE. We have had lots and lots of problems. One by one we have gotten a lot of them licked. We haven't got them all licked yet.

Mr. BATES. You are confident this plane will fly, and is the best you can produce at this time for the money you spent; would you make that statement?

Secretary NITZE. Yes; I will make that.

Mr. BATES. If you started all over again, this is what you would have done?

Secretary NITZE. I wouldn't make that statement.

Mr. BATES. What would you have done?

Secretary NITZE. I don't know. That is awfully hard to say.

The CHAIRMAN. In your heart do you believe, Mr. Secretary—

Secretary NITZE. I wasn't in the program at the beginning.

The CHAIRMAN. In your heart, do you believe that plane is a jack-of-all-trades? This has not ever happened in the history of the state of the art. You have been around a long time. It is pretty hard for me to envision—and I have been hanging around the Navy all my life—I am a Navy man, as you know.

Secretary NITZE. [Deleted.]

This is quite an aircraft. If we have another plane which has this much of its thrust in the afterburner, sure, today it is sluggish, on normal military power. If you put it on afterburner, it isn't sluggish. So this plane will have capabilities which no plane that we now have in design or development can have.

Mr. BATES. The other day I heard a statement to this effect—

The CHAIRMAN. Let me say this. You have no development. So that is the only thing you have been permitted to tamper with. The manned systems have been neglected?

Secretary NITZE. I do not think they have been neglected in the Navy.

Mr. BATES. A statement has been made to the effect that the Navy would like to abandon this plane at this time, and ultimately it probably will. You give no credence at all to such a statement as that?

Secretary NITZE. I wouldn't say there weren't people in the Navy who feel discouraged about the problems we have had.

Mr. BATES. I am talking about now, at this time, Mr. Secretary.

Secretary NITZE. There still may be some people discouraged about the plane. I frankly am not. I know we have lots of problems, but I think they can be licked.

Mr. BATES. Are you an expert in this field, so that we should take your advice over these other people who I presume are technicians, or are they not technicians?

Secretary NITZE. I think my view would be reflecting the view of Admiral Sweeney, who is the man in charge of the program. He is the man who is really working on it.

Mr. BATES. He is the man who ought to make it go.

Secretary NITZE. He is also aware of all of the difficulties, because he is the person fixing it.

Mr. BATES. This comment was by someone named Sweeney.

Secretary NITZE. I am not sure it is the same Sweeney.

The CHAIRMAN. Go ahead, Mr. Pike.

Mr. PIKE. On this same subject, Mr. Secretary, how much money has the Navy now spent in modifying the PF-30 engine?

Secretary NITZE. We have contracted for a modification which will cost \$25 million.

Mr. PIKE. Which modification is that?

Secretary NITZE. This is a modification. I forget the exact number; isn't it 27?

Dr. MORSE. A-27.

Secretary NITZE. The A-27.

Mr. PIKE. The A-27.

Secretary NITZE. The A-27 modification of the PF-30 engine.

Mr. PIKE. Do you know how many modifications there have been of the PF-30 engine?

Secretary NITZE. I will supply that for the record, Mr. Pike.

(The following material was submitted for the record:)

There have been a total of five modifications to the basic TF30-P-1 engine; two modifications to the engine to be used in the F-111 aircraft, and three modifications to the engine to be used in Navy and Air Force A-7 aircraft.

Mr. PIKE. I am very curious about this.

The PF-30 engine was initially an afterburner engine, was it not?

Secretary NITZE. It was initially. The A-7A—

Mr. PIKE. Then the Navy came along and they built a nonafterburner version for the A-7A. How much did that modification cost?

Secretary NITZE. I will supply that for the record.

(The following information was received for the record:)

The modification cost \$5 million.

Mr. PIKE. Now, is the afterburner version which the Marines are now talking about for their version of the A-7A, the same afterburner version you have in your F-111?

Secretary NITZE. I believe not.

Mr. PIKE. That is three different PF-30 engines. Do you have any more PF-30 engines?

Secretary NITZE. Yes, we do. I think the B-111 will take a different or require a different kind of an engine.

Mr. PIKE. Doesn't the Air Force version of the PF-30 engine, with the afterburner, differ from the Marine Corps version of the PF-30 engine with an afterburner?

Secretary NITZE. I do not believe so. I am not sure.

Mr. PIKE. The Air Force has put in \$26 million to modify the PF-30 engine to put the afterburner back on it. Now, the Marines told us this morning they want \$25 million to put the afterburner back on it. It is not the same engine, but one looking for \$25 million and one looking for \$26 million.

Secretary NITZE. General Greene.

General GREENE. We have been talking with the CNO about the development of a suitable afterburner. As I told you this morning, we asked for \$24 million.

Mr. PIKE. Twenty-four?

General GREENE. Twenty-four to develop the afterburner.

Mr. PIKE. You knew the Air Force had already asked for \$26 to develop the afterburner for this plane, didn't you, General Greene?

General GREENE. Yes, I did. The Air Force has indicated an interest in the afterburner for the A-7A.

Mr. PIKE. I believe it is a \$26-million interest. Is your afterburner version of the PF-30 engine going to differ from the Air Force's version—afterburner version of the PF-30 engine; and, if so, why, because they are not both going into the A-7A?

General GREENE. I cannot answer specifically; I hope they will be the same, Mr. Pike.

Mr. PIKE. If that is the case, I wonder why the Marines and Air Force are asking for \$25 million a piece to put the afterburner on. If you will supply that for the record, General Greene—I know you are not responsible for what the Air Force is doing, but it does seem to me if both the Marines and the Air Force are interested in putting an afterburner on the PF-30 engine so they can get the A-7A off the ground, we ought to know whether it is the same engine that is going to go in it, and, if so, whether we aren't duplicating a lot of effort putting the afterburner on it?

General GREENE. Mr. Pike, I would say the Secretary of Defense would coordinate this between the Air Force and the Marine Corps. We have sent forward to him via the Secretary of the Navy a request for \$25 million. Now, if the Air Force is interested in this development, too, I would say that an effort would certainly be made in OSD to develop a single-type afterburner.

Mr. PIKE. I would hope so, myself, but I am not sure, when you consider the mission of the Marine Corps plane, whether that is the same as the mission of the Air Force plane. They might want some different performance.

The CHAIRMAN. When did the A-7A make its first flight?

Secretary NITZE. It made its first flight—I was there at the time—I think it was in November.

Mr. BLANDFORD. 1965.

Secretary NITZE. This last year.

The CHAIRMAN. Admiral Martin told our committee last year the first flight would be made in October.

Secretary NITZE. It was in October. The first flight was ahead of schedule as a matter of fact.

The CHAIRMAN. I wanted to be sure. You had no slippage, really, and no problem with your estimate?

Secretary NITZE. No, we haven't. We have had some engine trouble in getting enough engines. When I said earlier, you remember yesterday, I believe, the bottleneck in the accelerating production of the A-7A, beyond what is now scheduled, is really [deleted].

The CHAIRMAN. Of course, this is not the first time, Mr. Pike, we have had trouble with engines.

Mr. PIKE. I know that, Mr. Chairman, but we talk about the PF-30 engine as if it were an engine. At this point it is at least four different engines.

I think there has been an awful lot of duplication of effort in modifying the engine for different jobs. We started with an afterburning engine, modified it to make an A-7A without an afterburner, and now are spending apparently \$50 million to put the afterburner on the A-7A.

The CHAIRMAN. Is this a fact?

Secretary NITZE. No; is is not.

Mr. PIKE. What is wrong, Mr. Secretary.

Secretary NITZE. The first point is you said there is a lot of duplication making models of the PF-30. I think you do need different forms of the PF-30 for the different roles of the B-111, which has a different mission. The engine has to be optimized for quite different characteristics than it does for the F-111B.

Mr. PIKE. Didn't they take the afterburner off the PF-30 engine to put in the A-7A?

Secretary NITZE. I also would insist it does make sense to take the afterburner off for the role that the Navy and the Marine Corps want it for the A-7A, particularly for the Navy version, ex the afterburner, it is better for the role the Navy wanted the A-7A for, so it seemed perfectly good sense to design it without an afterburner for the A-7A. It has to be optimized with quite different conditions than the F-111B.

The CHAIRMAN. Didn't General Greene tell us this morning he wanted the afterburner back on?

Secretary NITZE. That is again a Marine problem, which is different than the Navy problem on a carrier. I think Mr. Pike raises a very good question as to whether there really is any difference in the mission requirement of the Air Force A-7A, and the Marine A-7A, from land bases, and as General Greene said this is one which will be coordinated. We won't duplicate development of an engine for the same requirements.

Mr. PIKE. Mr. Secretary, when you talk about the philosophy of it, is there any difference between the mission requirements for the Navy A-7A and the Marine A-7A?

Secretary NITZE. Yes; because the Navy A-7A is going to fly solely from carriers. The Marines' A-7A will fly both from carriers and from land fields.

Mr. PIKE. You are talking the Marine A-7A will do what?

Secretary NITZE. Both from carriers and from land fields.

Mr. PIKE. How long has it been the philosophy of the Navy to build aircraft which can only fly from carriers?

Secretary NITZE. I didn't say can only fly from carriers, but the Navy mission is to fly from carriers. Obviously they fly from land—any plane that can fly from a carrier can also fly from a land field.

Mr. PIKE. I am very concerned about this, because the Marines obviously don't think this can fly from the land field.

General GREENE. It will fly from a land field, provided the land field is a SATS installation, and the catapult is used, Mr. Pike.

Secretary NITZE. Or if it isn't fully loaded.

Mr. PIKE. Has it really been the philosophy of the Navy and the Marines to build aircraft which can only fly from the land if you used the catapult?

General GREENE. Actually, what we would like to have in the A-7A is the ability to make an unassisted takeoff from a 4,000-foot runway, with an ordnance load of [deleted]. That is why we want the afterburner.

Mr. PIKE. Can you do that with the afterburner, without either a catapult or JATO?

General GREENE. If you have the afterburner you could do it, yes, but you would have to have 4,000 feet of runway to do it.

Mr. PIKE. But you wouldn't need JATO if you did it that way?

General GREENE. No, you would not, if you had the afterburner.

Mr. PIKE. Mr. Chairman, that is all right. I am frankly, however, concerned about the Navy building a great many aircraft—they propose to procure over [deleted] A-7A's—which cannot really operate off land bases. They can operate off carriers, but they cannot really operate off land bases.

The CHAIRMAN. Oh, yes, they can because they have these catapults, built in on all of them. The catapult is very simple.

Mr. PIKE. The catapult is built in on all of what?

The CHAIRMAN. On a SATS runway.

Mr. PIKE. Yes, if you have a SATS base, but we have five bases in Vietnam at the moment, and only one has the SATS installation, and if you drop a mortar shell on it, your planes are grounded.

General GREENE. Actually, as I understand it, Mr. Pike, the A-7A in its present configuration, if it had a ground run of 8,200 feet, could take off with a full load.

Mr. PIKE. Yes, but an 8,200-foot runway is a heck of a big runway. I don't know how many of those we have in Vietnam.

General GREENE. Without a jet burner you would either have to have 8,200 feet, or else you would have to use a catapult.

Mr. PIKE. Mr. Chairman, I want to ask one additional question.

Half of all of this R. & D. budget is contained in one item, the one item being the [deleted] aircraft. I notice there is no money for that in the fiscal 1967 procurement. There is \$26,700,000 for it in the 1966 supplement. How much of that \$26,700,000 is taken out of the 1967 procurement?

Secretary NITZE. As I already testified earlier this afternoon, the original Navy request was for \$6 million, in the supplemental for 1966, and \$24 million in 1967.

Mr. PIKE. So the entire \$24 million for fiscal 1967 has been taken out?

Secretary NITZE. The amount was reduced from \$30 million to \$26.7 million, and moved up to 1966. It makes a good deal of difference to us. In any case, we wanted the \$6 million, but even that would have required incremental funding of this development. By putting the full \$26.7 million into 1966 it is possible for us to execute the development contract in full without resorting to incremental funding; by avoiding incremental funding it then is possible for the contractor to make long term, the long leadtime items to contract for them early. We think, as a result, in moving this forward we will achieve a 2-month earlier operational date in the fleet than we would have if we had to stick to our original \$6 million in this budget, and the remainder in the 1967.

Mr. PIKE. What communications have gone from the Navy to the manufacturer telling him to expedite the development of the [deleted].

Secretary NITZE. I think the contract was negotiated in March.

Mr. PIKE. But as of this date no communication has gone to the contractor asking him to accelerate the development?

Dr. MORSE. There have been an enormous number of communications between the Navy and the contractor.

Mr. PIKE. I am sure of that, it has been going on since 1965.

Dr. MORSE. It started, as you recall, with the \$5 million contract to Grumman for the project definition—that is, to define the characteristics of the air foil.

This has been a most high priority item, which has been made very clear to the contractor. This is going as fast as the program is being put together.

Mr. PIKE. It is awfully easy to say we can develop this faster. I am trying to find out what, if anything, has gone from the Navy to the

contractor telling them to accelerate the development of this plane based on this fiscal 1966? You have to have some communication with them, get back some figures on what it would cost to accelerate. This is the way you come up with numbers.

Dr. MORSE. The program from the beginning was an accelerated program. We wanted the procurement of this airplane as fast as we can get it. This has been clear to the contractor from the beginning.

Mr. PIKE. You had the \$24 million in the 1967 procurement, and it is gone, it has all been moved into the 1966 supplemental.

Secretary NITZE. And if this committee and the other committees give us this 1966 supplemental, we will negotiate a contract with the contractor in March. And we will thereby achieve, we believe, the 2 months' earlier production.

Mr. PIKE. Are you saying, Mr. Secretary, the contract would not have been negotiated in March otherwise?

Secretary NITZE. If we didn't have any money it wouldn't have been.

Mr. PIKE. You had some money. It is a question of how much money, and at what time.

Secretary NITZE. We would have to incrementally fund the contract, and as I said, incremental funding would not have permitted the contractor to buy the long leadtime items as rapidly as he will be able to under this form of financing.

The CHAIRMAN. I think that is about all we can get out of that. We will leave that.

I want to finish this R.D.T. & E. this afternoon, because we have six more projects.

The FDL, I think we are all in agreement on that.

Dr. MORSE. Yes, sir.

The CHAIRMAN. That is on page 7.

I think you are all in agreement on the FDL.

Dr. MORSE. Eight is a small item.

The CHAIRMAN. Approve ammunition, that is a small item.

Dr. MORSE. Page 9, this is an item similar to the other one which is the matter of quick fix in the field for direct support of the fleet.

Mr. HARDY. Mr. Chairman, could I ask this question about the FDL? No work had previously been performed. Who do you expect to do this?

Secretary NITZE. I beg your pardon?

Mr. HARDY. Who do you expect to do this work?

Secretary NITZE. We expect to go to program definition and ask a number of people to bid on this.

The CHAIRMAN. FDL?

Secretary NITZE. Yes.

The CHAIRMAN. What is this [deleted] air-launched, surface-launched, ordnance fleet support?

Dr. MORSE. On page what, sir?

The CHAIRMAN. Page 9.

Dr. MORSE. I discussed one earlier that was related to air-launched missiles. This is air-launched ordnance; that is, bombs and—

The CHAIRMAN. Oh, I see, a part of the overall.

Dr. MORSE. It is equivalent to the other one, although this is non-missile ordnance.

The CHAIRMAN. This is Marine Corps?

Dr. MORSE. This is Marine Corps.

The CHAIRMAN. Is this an improved plane, General Greene?

General GREENE. If we can develop it as we expect within 12 months after funding, it will be a tremendous contribution to our combat operations. Up until now we have had to use this heavy flamethrowing equipment, which is very difficult, comparatively speaking, to move forward and has to be recharged.

[Deleted.]

The CHAIRMAN. Let's go to the next item.

Dr. MORSE. The next item is an advanced medical development on a frozen-blood project. This is being moved into the field in order to expedite the actual experience in operation.

The CHAIRMAN. You are telling us these will be obligated soon?

Dr. MORSE. Yes, sir; the program started. It is a most promising one. This can get it to the field sooner.

The CHAIRMAN. What is the next item?

Dr. MORSE. The next one is related to the Marine air wing on the SATS support. This is for the lighter battery, which is important in the logistics part of the operation.

General, do you want to comment?

General GREENE. What we are hoping to do under this project is to reduce the weight by 20 percent. The present matting weight of the M-2 is 6 pounds per square foot, or 144 pounds per mat. Twenty percent reduction would obviously permit us to carry more, and also what is more important to construct the field much more quickly than we can do it now.

The CHAIRMAN. This is just an advanced development of the present method by which this thing is utilized?

General GREENE. Yes. And in view of the importance of the SATS system as demonstrated already in southeast Asia, if the war continues there, this type of field, and this type of matting will become even more important than it is now.

The CHAIRMAN. I think it has been quite successful.

I was very much impressed with the demonstration I saw.

The last one is on page 13.

Dr. MORSE. This is another Marine Corps item, General.

The CHAIRMAN. That is another advanced electronic—

Dr. MORSE. No; this is supportable communications in the field, I believe, Mr. Chairman.

General GREENE. This particular item, Mr. Chairman, has to do with the radio, the AM-PRC-41.

This current radio is mounted—is a ground-to-air type radio used by forward air controllers. And it is equipped with tubes. What we want to do is change it over to transistors in order to bring the weight from 45.1 pounds down to 35 pounds.

The CHAIRMAN. It is an improvement in the existing equipment?

General GREENE. Yes; it is.

The CHAIRMAN. That is all for the R.D.T. & E.

Mr. HALL. Mr. Chairman.

The CHAIRMAN. Yes.

Mr. HALL. I have had considerable experience with that AM-DRC-41. I would like to know if that is a common item with the Army in which research is commonly being developed?

Dr. MORSE. Yes, sir; I am quite positive it is being done with the Army. All of our southeast Asia items were developed jointly with the three services.

Mr. HALL. I think General Greene knows the answer to this question. You will recall, when we had the first period of the particular item, it was a workable pack.

General GREENE. I recall that.

Mr. HALL. At that time there was research going ahead to use many circuitries with multilaminated modules, which were weightless, and remove the tubes and use transistors in order to lighten this pack, and still have the number of frequencies and ranges we needed for field communication on the special weapons battlefield, or other places. I do want to be sure this particular pack, with or without antennas, is being commonly developed by both of our major field forces, the Marines and the Army.

General GREENE. This particular development has been handled by joint research and development assistance team for communications, and so it has been coordinated.

Mr. HALL. Good.

Mr. Chairman, while we are on the subject of R. & D. We have been R. & D'ing some sort of mobile self-contained hospitals for some time. Is there anything, Mr. Secretary, or Dr. Morse, in any of this accelerated R. & D., or funding in the supplemental budget, for the new portable self-contained hospitals?

Dr. MORSE. There is nothing in the R. & D. budget in the supplemental.

Mr. HALL. Is that beyond the stage of R. & D?

Dr. MORSE. I think so; Yes, sir. I do know of some——

The CHAIRMAN. I think, Dr. Hall, that is an Army project.

Mr. HALL. No; I don't think so, Mr. Chairman, excuse me. But I understand there have been 100 units procured for final testing, evaluation, or field trials, or whatever this stage of vertical building block research is. I think some of them are for the Navy and Marine Corps.

Knowing the conditions we are in, as far as our field hospitals——

The CHAIRMAN. This is in the Army supplement, Doctor. Mr. Morgan has it, Dr. Hall.

Mr. HALL. Good.

The CHAIRMAN. We will explore that. We told Admiral Neighbors we wouldn't need him.

Mr. HALL. Mr. Chairman, I am sorry, I have one more question.

The CHAIRMAN. Excuse me, Doctor.

Mr. HALL. While the Secretary is here, and General Greene, I don't think this applies to Dr. Morse, I hesitate to go back to it, but it involves [deleted].

You both heard the Chief of Naval Operations this morning say it would require highest authority for a direct strike, or retaliatory strikes at the missile sites around the Hanoi-Haiphong area.

In your opinion, Mr. Secretary, or Mr. Commandant of the Marine Corps, is this being withheld pending the development of the [deleted]?

Secretary NITZE. I believe that has not been considered.

Mr. HALL. General?

General GREENE. No; it has not.

Mr. HALL. Thank you.

Mr. LENNON. Mr. Chairman, I would like to return to the F.D. & L. for a second.

The CHAIRMAN. Go ahead.

Mr. LENNON. Mr. Secretary, there has been a recognized need, certainly in the last couple of years, for the F.D. & L., has there not?

Secretary NITZE. Yes; we believe there has been.

Mr. LENNON. Beg pardon?

Secretary NITZE. We believe there has been a recognized—we have been clear about the fact that this will be a useful addition to the canopy of things we have in our Defense Establishment.

Mr. LENNON. It has been a recognized need, certainly in the past 2 years. I was wondering why nothing was included in fiscal 1965, or fiscal 1966 budget, for the F.D. & L.?

Secretary NITZE. I think this is a long-term requirement. This is not an immediate requirement, for instance, associated with southeast Asia.

Mr. LENNON. You don't think so?

Secretary NITZE. I do not think so.

Mr. LENNON. Let me ask you, Mr. Secretary. I was privileged to see this morning a so-called confidential classified documentary film that was taken allegedly in mid-October this last year. It was shown by the Maritime Administration, but furnished to me by DOD. That was one of the things that was discussed at this other meeting of the Maritime Administration Committee.

Did the Navy participate in the making of this documentary film which was most interesting?

Secretary NITZE. I am sorry, I don't know. I am not aware of the film.

Mr. LENNON. It was approximately 52 minutes, and it pointed out, I thought, at least it was indicated to the members of the Merchant Marine Committee, that there has been a recognized long-term need for the so-called F.D. & L.

The CHAIRMAN. I think that is a fact.

Mr. LENNON. Mr. Chairman, I was so much impressed with it, I think it would be so helpful to the members of this committee—I mentioned it to Mr. Hardy as he walked over here today—I would like very much for this committee to see that film, because it does give you a picture of what the problems are in the so-called port, if you can call them port facilities, in South Vietnam, and the problems we face there.

Now, it would be most helpful to this committee, and I urge you to consider the possibility of having the full committee see this film.

The CHAIRMAN. I think I am familiar with that film. I think it is a very fine film. If we ever need anything, just as F.D. & L., they have everything.

Mr. Pirnie has a question. We will see if we can get it, Mr. Lennon. Have you finished, Mr. Lennon?

Mr. LENNON. Yes, I have.

The CHAIRMAN. Mr. Pirnie.

Mr. PIRNIE. Thank you, Mr. Chairman.

Mr. Secretary, I listened to your response to the question as to the guidelines which prompted the submission of the latest portion before the subcommittee.

In view of the situation at Vietnam, and our interest in its successful conclusion, is there any item which you consider a consequence to be needed, which is not being recognized in this?

Secretary NITZE. There are items, Mr. Pirnie, which I would like to see funded in this, yes.

I think if we can, through other means, do reprogramming, devices of that kind, we can ameliorate the problem. The particular problem I have in mind is [deleted] equipment for southeast Asia. I think we could have used an additional approximately \$72 million for [deleted] equipment. The developments out in southeast Asia [deleted] are very rapid. You learn from your experience out there—and it was not until some time in December that the request for these funds came to me, and by that time we were late in getting them considered in the supplemental. We got some of them in, but we couldn't justify the full amount. So this is on my mind. I think that is in answer to your question.

The CHAIRMAN. If we took that \$72 million in here, would you be happy?

Secretary NITZE. I would be happy.

The CHAIRMAN. You give us the information and bring it up here, and we will let Mr. Pirnie consider making an amendment to this bill to cover this item.

Secretary NITZE. As I said, we will try to do this through reprogramming as best we can.

The CHAIRMAN. We want to get away from all that reprogramming. It makes Mr. Hardy's blood pressure go up every time he sees it done. It makes mine go up, too, I might say.

Mr. PIRNIE. We would like to avoid that. I would like to avoid that also.

The CHAIRMAN. I don't think you are needed tomorrow, Mr. Secretary.

I don't think we need you either, General Greene.

We don't need Dr. Morse tomorrow.

We have Admiral Husband tomorrow and Admiral Hull. We let him go this afternoon to attend a meeting. Is that a fact, Mr. Cook?

Mr. COOK. That is correct, sir.

The CHAIRMAN. We won't need them.

Mr. COOK. No, sir. I think Admiral Hull and Admiral Husband can answer all the questions.

Mr. PIRNIE. I think my question addressed to the Secretary, would that raise any consideration that would involve you General, or would you like to reply to that?

General GREENE. Our principal problems are there, Mr. Pirnie.

The first one was our clothing problem, which we are coping with right now. The second one was our pre-position war reserve stocks, and this is being analyzed with the people in the Office of the Secretary of Defense with the expectation that we will find some solution to it. And the third item which actually isn't in the fiscal year 1966 supplemental budget because it is just under study now, is the matter of [deleted].

The CHAIRMAN. Mr. Blandford was going to ask you that very question.

Mr. BLANDFORD. I was going to ask you if the MILCOM supplemental contains all the requirements of the Navy for the southeast Asia area?

General GREENE. It doesn't contain any money for [deleted].

Mr. BLANDFORD. Would the Marine Corps object to that? If that is that important it ought to be in the supplemental.

General GREENE. In my opinion it ought to be.

Mr. BLANDFORD. Mr. Secretary, do you agree with that?

Secretary NITZE. In my mind it is a question of the urgency of the item. I think it is clearly a desirable item. I think the reason it wasn't in this supplemental was that at the time the supplemental request was formulated, the Joint Chiefs of Staff hadn't yet certified its desire—

Mr. BLANDFORD. How much are we talking about in terms of money?

Secretary NITZE. I think \$18 million.

General GREENE. The first increment would be \$39.7 million.

Mr. BLANDFORD. How much would you pick up, then, 3 or 4 months' leadtime authorized in the supplemental?

The CHAIRMAN. You, Mr. Secretary, get that \$72 million and tell us what it contains and send it up here, and, General Greene, you get it for this airfield. We will decide on that. We are pretty glad to express ourselves.

General GREENE. The reason the airfield didn't appear here the Chiefs didn't approve this project until January 27.

The CHAIRMAN. That was late coming. We cannot criticize you for that. We will put it in because you all developed to be pretty good witnesses. You had kind of a slow start, but I thank all of you.

Secretary NITZE. Thank you very much, Mr. Chairman.

The CHAIRMAN. Thank all of you very much.

(Whereupon, at 3:48 p.m., the committee adjourned until Wednesday, February 9, 1966, at 10 a.m.)

HOUSE OF REPRESENTATIVES,
Committee on Armed Services,

Washington, D.C., Wednesday, February 9, 1966.

The committee met at 10:10 a.m., Hon. L. Mendel Rivers, chairman, presiding.

The CHAIRMAN. The committee will come to order.

This morning we will take up H.R. 12335, the bill authorizing construction in support of the military program in southeast Asia, and for other purposes.

As I made a statement on this at the beginning of the hearing, I will make my remarks rather brief.

Unlike the usual military construction bills, this supplemental authorization contains no line items. However, a backup book has been provided which in a very general way justifies each item proposed to be constructed.

I call your attention to the fact that these are only estimates. I suggest that we turn now to page 2 and see what is listed for Vietnam and then skip to page 12 for total justifications.

We have this morning Adm. Harry Hull, Director of Shore Activities, Office of the CNO, accompanied by Admiral Husband, Chief, Bureau of Yards and Docks; Adm. Cecil D. Riggs, Assistant Chief for Planning and Logistics, Bureau of Medicine and Surgery, and Gen. W. J. Van Ryzan, Assistant Chief of Staff, G-4, Logistics, Headquarters, Marine Corps.

Let us turn to page 2 and see what is listed there, and then we will go to page 12 and see how we can make out on that. You will note the locations there. Danang, Chu Lai, Phu Bai, Cam Ranh, and various communications facilities, \$207 million.

Then we have [deleted] 16 million.

Then the [deleted] we have—how much for the [deleted]?

Mr. COOK. 28.2 million.

The CHAIRMAN. 28.2 million.

Then we have [deleted].

Mr. COOK. 3.6 million.

The CHAIRMAN. [Deleted.]

Mr. COOK. 2.3 million.

The CHAIRMAN. And Guam.

Mr. COOK. 5.7 million.

The CHAIRMAN. And other places.

These are kind of backups for all the Vietnam activities, aren't they? You will see that on page 9. That has 26 million.

I see Port Hueneme in there, that was moved in World War II. That was our main port.

Admiral HUSBAND. Yes, sir; that is the port from which our Seabees are shipped out.

The CHAIRMAN. Now, let's go to page 12.

Admiral Hull, you will speak to this?

Admiral HULL. Yes, sir; I will.

The CHAIRMAN. This is 207 million. This is Vietnam. And I notice Cam Ranh Bay. I have seen Cam Ranh Bay, and I think all of you ought to be proud of what you are doing there. That is a magnificent job you are doing there. I saw the admiral who used to be in Charleston.

Admiral HUSBAND. Admiral Bill Heman, sir.

The manning has worked out very well, sir.

The CHAIRMAN. It is a magnificent port. I want other members of the committee to see that. Mr. Hardy was on that trip with me. He is a specialist in construction. We were quite impressed with it. It is a magnificent port.

The Secretary ought to be congratulated on selecting that place to develop. It really is a beautiful thing.

You are using it pretty much now, Admiral?

Admiral HUSBAND. Yes, sir.

Cam Ranh Bay is the really only good harbor on the coast of Vietnam.

The CHAIRMAN. You don't have anything at [deleted].

Admiral HUSBAND. That is right, [deleted].

The CHAIRMAN. You don't have too much money for that?

Admiral HUSBAND. There are Air Force and Army funds for [deleted] as well, sir.

The CHAIRMAN. I see. Does anybody have any questions?

Mr. HARDY. Mr. Chairman, we are talking now about page 12, Vietnam. I think this question applies all the way through. This is a pretty big item, \$207 million without any breakdown of what this is made up.

It is pretty hard for us to evaluate what you are doing without any more detail than this provides. Don't you have any more information before you so the committee will know what you are talking about?

Admiral HULL. Yes, sir; this total sum has been generated by a series of individual line items submitted by the Commander in Chief of the Pacific Fleet. We have learned, and I am sure you will understand this, the work we are doing in Vietnam is not planned 2 and 3 years ahead as our regular military construction programs are, so that we hope we won't be held to the specific things that we may say about a specific line item. Because the situation is going to change.

Mr. HARDY. Admiral, we all appreciate the problems that you have in Vietnam. As Mr. Rivers told you, I was with him at Cam Ranh Bay, and I had an opportunity to look at that whole thing, and I think it is a magnificent port, and undoubtedly what you are doing needs to be done. But when you come to the committee and ask us for \$207 million, and about all you say is we are going to develop the port of Cam Ranh Bay, it doesn't help me very much to go down on the floor and talk about what the sam hill you are providing. I don't think this is the right way to legislate.

The CHAIRMAN. Well, some of this is for Da Nang.

Admiral HULL. Yes, sir. I can go into any amount of detail you would like, but the people on the site still require flexibility under the existing hostile conditions.

Suppose I start off by trying to give you the sort of breakdown that I tried for myself on this.

The CHAIRMAN. Give us as much as you can.

Mr. HARDY. I appreciate, Mr. Chairman, the fact you haven't been planning this over a long period of time, but you have been planning it for some months, now.

Admiral HULL. Yes, sir.

Mr. HARDY. Certainly, as far as Cam Ranh Bay is concerned, I don't know how much of this is for Cam Ranh Bay. As far as that is concerned, if you don't have some pretty good detailed plans with respect to what you are going to do in Cam Ranh Bay then you are not the engineers we think you are. Why don't you tell us what they are, instead of putting a big hunk down here.

Admiral HULL. On page 2, you will see under Cam Ranh Bay, 22.1 million. The description we give there is airfield support facilities, communications facilities, waterfront facilities, maintenance facilities, POL, and ammunition storage, troop housing, and community facilities, and utilities.

Mr. HARDY. Admiral, you might be able to convince this Congress they ought to authorize your funds in this kind of an explanation, but you are not going to do it through me. It is just that simple. If I don't know any more about this I am just not going to vote for it.

The CHAIRMAN. How much are you going to put on the airfield support facilities? Do you know that?

Mr. HARDY. If this is the way we are going to legislate, we might as well tell Mr. McNamara you told the Army, Navy, and Air Force

what they could have, now just give us a blank check and we will go ahead, and within Mr. McNamara's guidelines we will spend it.

I don't think this is the right way to do it.

The CHAIRMAN. That has been the testimony so far.

Mr. HARDY. It sure has.

The CHAIRMAN. Everybody has been talking about the guidelines of DOD.

Mr. HARDY. There isn't a blessed thing here that gives us the kind of information we ought to have for the committee to pass on.

The CHAIRMAN. Go ahead and see what you can develop, Admiral. See what you can develop.

Mr. HARDY. I would like to know what he is going to spend it for.

Admiral HULL. Mr. Chairman, I do have a sort of rudimentary 1391 form, an information sheet, on every one of these things.

Now, at Cam Ranh Bay, this is a particular spot that Mr. Hardy has chosen, where I think our plans are not as firm as they are at Da-nang, Chu Lai, and places like that. But this is what I can tell you for the moment.

Mr. HARDY. Actually, Admiral, I am not just choosing Cam Ranh Bay. That one was mentioned. I think we ought to have this information on every one of them.

The CHAIRMAN. Give us what you can on this, and give us the ones where your plans are more specific, for instance Danang, or Chu Lai. You are not in Chu Lai?

Admiral HULL. No. Relative to Cam Ranh Bay—I have before me the 1391 sheet [deleted]. This totals 3.9 million of that 22 million.

The CHAIRMAN. Let Mr. Blandford ask you a question on the record.

Mr. BLANDFORD. I think this might help, Admiral, if you say who submitted the requests. I understand it was CINCPAC that did it.

Admiral HULL. CINCPAC Fleet, with the approval of CINCPAC.

Mr. BLANDFORD. They submitted the requests. Who prepared the cost estimates?

Admiral HULL. Admiral Husband's people in Pearl Harbor.

Mr. BLANDFORD. Of the requests submitted by CINCPAC, how many did DOD approve and how many did they disapprove? What is not in here that they asked for?

Admiral HULL. We requested \$352 million, and we are receiving \$254.6 million.

Mr. BLANDFORD. Who made the decision as to what you would get and what you would not get? If this came from CINCPAC, they are on the scene; they know what they need. Who passed on what you are going to get?

The CHAIRMAN. They probably cut \$100 million.

Admiral HULL. No, sir. May I finish this, because it is a very confusing situation that takes us awhile to understand. We are listing \$304.6 million in this submission to you.

The CHAIRMAN. Is the rest of it contained in the regular?

Admiral HULL. No, sir; it is not. All military construction is in the supplemental, but in addition to this we are asking for \$50 million which will go into a DOD contingency fund.

Mr. BLANDFORD. That is the \$200 million that the Secretary has asked for?

Admiral HULL. Yes, sir; so that you will see on page 1 of our submission today the total there is \$304.6 million. This is the \$254.6, plus the \$50.

The Air Force, I think, is asking for \$50 in the same system, and the Army for \$100 million. Those put together will form the \$200 million contingency fund.

Mr. HARDY. Mr. Chairman, these are key questions that Mr. Blandford asked, but taken by themselves they still don't provide us with enough information to really know what we are doing. You are just asking us to give you a blanket authorization, Admiral.

We have been up the steps and down it so many times, it looks to me like you ought to know when you come in here. Someone on the committee ought to know the answers to these questions.

It seems to me what we ought to have is an itemization of what CINCPAC asked for. We ought to have every step that it goes through before you finally got to this. I am not just talking about total dollars. I am talking about itemization, so we would know what the operating forces thought they ought to have, and each step of where it was altered, so we will know the detail of what alterations were made.

I don't know why you can't give us that.

Mr. Chairman, I will say one reason I am so thoroughly convinced we ought to get this kind of information, and one of the things you have been fussing at me a little bit, is the slowness of stuff coming out of my subcommittee, which is due to the fact we can't get the documentation from the Department of Defense we ought to get. Unless we get it right now, we are not going to get this.

You folks will go ahead under Mr. McNamara's direction, spend all of this money, and we won't ever be able to find out where it went. You come back up here and say we are sorry, but this is the internal weapon paper.

We haven't been able to find out the rationale which caused the reduction from [deleted] F-4's per squadron. You don't give us the facts. If you don't think I am going to try to get this information before we give you this authorization, then you are wrong.

The CHAIRMAN. Can't you bring that chart of what you asked for, and what they gave you?

Admiral HULL. Yes, sir. I have the line items here, and I can recite them if you want them.

The CHAIRMAN. Go ahead and recite them.

Admiral HULL. [Deleted.]

Mr. HARDY. If you are, you can go back as far as I am concerned.

Admiral HULL. Our projects have been developed principally by CINCPAC Fleet. [Deleted.]

We are closely in agreement with DOD on this program.

The CHAIRMAN. Go ahead, Admiral.

The only representative the DOD has is this fellow sitting over here at the table. He will carry it back if anybody carries it.

Mr. HARDY. Mr. Chairman, actually I don't know how to proceed on this, but I think we ought to have the documentation right from the very beginning of their original request.

The CHAIRMAN. Why don't we take one base?

Mr. HARDY. Take one base and get them to submit the other.

The CHAIRMAN. Take one base, and then submit the others.

Admiral HULL. Shall we talk about Danang, sir?

Mr. HARDY. Danang is all right.

The CHAIRMAN. That is a small package. That is about as far north as you go, isn't it?

Admiral HULL. Yes, sir. Well, there is a small detachment up at Phu Bai, which is really supported out of Danang, but Danang again is our principal harbor.

The CHAIRMAN. They are satellites?

Admiral HULL. In the First Corps area.

The CHAIRMAN. Go right ahead and give us that information.

Mr. Hardy, you pay attention.

Mr. HARDY. I am listening very intently, Mr. Chairman.

The CHAIRMAN. Go right ahead.

I think we ought to have Admiral Riggs sitting at that table.

Admiral, you have made an interesting study. Sit up here at the table.

Admiral RIGGS. All right.

The CHAIRMAN. After all, you have some hospitals you want to build, don't you?

Admiral RIGGS. Yes, sir.

The CHAIRMAN. Sit right down there and make yourself at home.

Go ahead, Admiral.

Admiral HULL. Our first item at Danang is the Marine Air Wing operational facility which is a second increment for \$2 million.

The CHAIRMAN. We have been at Danang, too; we are quite familiar with it. It is pretty well congested, isn't it?

Admiral HULL. Yes, sir; it is, and it is expanding.

Mr. HARDY. You still own everything on the side—

Admiral HULL. Yes, sir.

The Da Nang project may be broken down into about four categories. First, there is the port, and we want a number of port facility developments there [deleted].

The CHAIRMAN. I tell you what will help us to understand this.

We recognize, Admiral Husband, the comparable cost of construction in different areas are way of line with what it is in this country. For instance, the contractors have problems with their personnel. So indicate to Mr. Hardy just how much more things cost there than they cost here. I know you made your estimates, because that is about five or six times as much, isn't it?

Admiral HUSBAND. No, sir; the cost ranges are between two and four times what the same facilities would cost in the Washington area, and the range depends on the kind of facilities and the remoteness of the site.

The CHAIRMAN. That is right. That is another problem, the long logistic problems you have getting the materials there.

Admiral HUSBAND. Yes, sir; almost all of the materials going into Vietnam are being outloaded from the United States.

Mr. HARDY. What specific construction are we talking about now, what item?

Admiral HULL. I started off with the high priority item that has not been funded so far [deleted].

Mr. HARDY. How much does it cost?

Admiral HULL. This is at \$2 million.

Mr. HARDY. That is \$2 million. Now, this is a concrete construction proposition, and all your material has got to be carried in?

Admiral HULL. Yes.

Mr. HARDY. Are they producing any kind of concrete over there?

Mr. BLANDFORD. You can get it from Formosa?

Admiral HUSBAND. We are able to buy cement from Taiwan and Japan, sir.

Mr. HARDY. I was thinking Japan actually has been a cheaper source of cement than a lot of other places?

Admiral HUSBAND. Yes, sir.

Mr. HARDY. Is your cubic yard cost greater there now, using that cement, than it is in this country?

Admiral HUSBAND. Yes, sir.

Mr. HARDY. What runs that up?

Admiral HUSBAND. We have tremendous transportation costs, even to get the relatively cheap Japanese cement into the ports.

Mr. HARDY. The bulk of that cost is the handling of the cargo, rather than in the movement of it. Certainly your handling in Japan is not unusually high, and your distance by ship is not so far, but if you have got to unload the stuff in these barks to get it ashore, I can see how that would run the cost up.

Admiral HUSBAND. Right, sir. The contractor needs to mobilize on these remote sites initially. He has got to have a warehouse to put down his cement, for example. So that it is not like in the United States where the telephones and the transit outfit brings the concrete the next morning. He has got to have all of the batching equipment, the transporting equipment, that he has, under his control, at Da Nang in this instance.

Mr. HARDY. Hasn't he got it there?

Admiral HUSBAND. Yes, sir. In the case of Da Nang, he has been operating there since about 1963.

Mr. HARDY. The same is true of Cam Ranh?

Admiral HUSBAND. No, sir. We do not yet have the construction equipment in Cam Ranh Bay that is equal to the construction task there.

Mr. HARDY. On a comparative basis, what is your cost ratio there?

The CHAIRMAN. Four to one.

Mr. HARDY. Four to one, on concrete?

The CHAIRMAN. On the construction, I mean.

Admiral HUSBAND. On air fields—

Mr. HARDY. On air fields it is 4 to 1?

Admiral HUSBAND. At Da Nang we use a factor of 3.4 to 1, sir.

Mr. HARDY. That is what you are asking for, that is what you use?

Admiral HUSBAND. This has been our recent experience, sir.

The CHAIRMAN. Have you computerized that straight down—or whatever way you did it?

Admiral HUSBAND. Yes, sir; these are well calculated cost factors.

Mr. HARDY. All right. Let's have the rest of the items on this one.

The CHAIRMAN. This is the kind of information Mr. Hardy wants. Go right ahead from that page. What is the next one?

Admiral HULL. The next one is ammunition storage, \$1.1 million. This is for barracades around open storage pads; seven 250 by 200 feet, eight 125 by 100 feet, six 135 by 100 feet, and with 40- by 100-foot prefabricated buildings.

Mr. HARDY. Where do those metal buildings come from?

Admiral HULL. This comes out of our PWRS, prepositioned war reserve stock.

Mr. HARDY. That is already there in these ships?

Admiral HULL. Well, these may be on the way, because of our authorization to ship long leadtime items.

Admiral HUSBAND. We have been procuring prefabricated steel buildings in the United States for this.

Mr. HARDY. Is that cost included in this 1.1?

Admiral HULL. Yes, sir.

Mr. HARDY. The value of these buildings?

Admiral HUSBAND. Yes, sir.

Mr. HARDY. Go ahead.

Admiral HULL. The next item is "Division operations facility." This includes a 40- by 100-foot building for use as covered storage, and 16 40- by 100-foot buildings for use of shop facilities.

Mr. HARDY. What type of construction is that?

Admiral HULL. That is \$672,000.

Admiral HUSBAND. These are all prefabricated steel buildings, sir.

Mr. HARDY. These are all coming out of the Voorheesville stock you have?

Admiral HUSBAND. No, sir; we are buying additional prefabricated buildings.

Mr. HARDY. Where are you buying them? Can you get them in Japan?

Admiral HUSBAND. No, sir; we are buying those in the United States.

Mr. HARDY. All right, go ahead.

Admiral HULL. The next item is for "Utilities," \$3.3 million. This includes electric power for our Marine amphibious force service, now serving the tactical generators, the central powerplant [deleted] with associated distribution equipment, distribution lines, and this will replace the field wire that is now in use.

Mr. HARDY. What is the cost ratio on that?

Admiral HUSBAND. Our power is estimated at \$345 per kilowatt, sir.

Mr. HARDY. How does that compare with domestic?

Admiral HUSBAND. It doesn't, really, because this is all diesel generators—individual diesel generators.

Mr. HARDY. You have diesel generators over here, too, haven't you?

Admiral HUSBAND. Yes, sir. It would be higher because we have built in the additional cost of transporting the equipment from stateside.

Mr. HARDY. I have no problem understanding that.

The CHAIRMAN. Do you utilize, in the interest of saving money, the advantage of buying this stuff from countries adjacent to that part of the world?

Admiral HUSBAND. Yes, sir. We found in Vietnam there is almost no material left to be procured from Vietnam sources. [Deleted.]

The CHAIRMAN. You don't have anything from the Philippines, do you?

Admiral HUSBAND. We have bought some lumber from the Philippines.

The CHAIRMAN. I see.

Go ahead.

Mr. HARDY. Let's get the other items.

Admiral HULL. Iceplants for Danang. That is an iceplant, supporting facilities, \$240,000.

Troop cantonment, this is \$981,000. That is normally running around \$1,000 per man, so that should be for the naval support activity.

Mr. HARDY. Why don't we have the kind of sheets you have in front of you, Admiral?

Admiral HULL. This is a 1391 sheet prepared in Pearl Harbor, that I am reading from.

Mr. HARDY. I say, why don't we have copies of them?

Admiral HULL. I can provide them, sir, if necessary.

Mr. HARDY. Isn't that somewhat the line item listing that we normally have for construction bills?

Admiral HULL. Yes, sir. These have never been asked for before; I suppose that is why we never gave them to you this time.

Mr. HARDY. Never have been asked for before?

Admiral HULL. In the supplemental appropriations.

Mr. HARDY. In the supplemental appropriations, I know. But we have a supplemental authorization here now, Admiral. This is bigger than some of the regular ones you come in here with. You have these things.

The CHAIRMAN. Mr. Cook, you get those things from the next group of witnesses. Tell them to give us a copy of the things Admiral Hull has.

Mr. COOK. Yes, sir.

The CHAIRMAN. What do we ask of the other departments, 1391?

Admiral HULL. That is a DOD form; yes, sir; a 1391 form.

The CHAIRMAN. If we get that we can understand better.

Mr. HARDY. If we have those before us we certainly can expedite these things, and know a little more about what we are doing.

The CHAIRMAN. You don't have another copy for Mr. Hardy now, do you?

Commander MOYER. No, sir.

The CHAIRMAN. Maybe he can do a better job that you do.

Admiral HULL. We got these copies from the people in Pearl Harbor. These are the only copies in Washington, aren't they?

Admiral HUSBAND. We have a set.

Mr. HARDY. Let us finish Danang.

Admiral HULL. Yes, sir.

The next item is "Communication," 1.374 million. Erect an intra-base mobile communication phase station, including one hut, 100 feet by 48 feet, and one 30-foot tower. These are advanced base functional components. A station operating base. Erect one 21- to 48-foot hut for the radio station, for the harbor, and ship-offshore communications service. Provide specially designated communications facility, in-

cluding antenna, farm, buildings, car supply, supplied to the fleet, to support naval activities for long-haul communications.

The CHAIRMAN. What is the next one?

Mr. HALL. Mr. Chairman.

Let me ask the Admiral, has that intrabase communications that you talk about, complete with antenna farm, et cetera, is that part of DCA, and, if not, have they approved it? How is it coordinated with their general overall mission of a supervisory role, with the Air Force?

Admiral HULL. I doubt if it has been, sir. I would have to get the communications people to back me up on this. But I think this is purely a local communications setup which is not of interest to DCA.

(This was later confirmed.)

Admiral HULL. This takes care of Danang's external communications with Saigon to the Philippines, and also local communications with the ships and boats, and the harbor control circuits, and so on.

Mr. HALL. Admiral, when you say "intrabase," I can understand that, if you even say "intratheater," I can understand your communications with offshore boats and facilities, with Saigon, and so forth and so on, but when you say "Pearl Harbor," the Supreme Court would sure say that was intertheater, or interstate, or interoperational, and certainly according to definition that DOD gives us—I am not talking about your lower end or offshore or fleet facilities you require over and above, especially in addition to DCA—but this committee has seen on many occasions during the time that our microwave net out in the Far East, to say nothing of the other types bouncing off the satellites, then DCA has come along and knocked over the wall, and set up another action agency in charge of it.

Actually, this happened at Clark and the Philippines, both, if you will just simply read the record. So I think my question is important, Mr. Chairman.

If it is even intratheater, or your communications is being enhanced between you and Pearl Harbor—

Admiral HULL. I should not have said Pearl Harbor. I was wrong on that. It is the Philippines. Their long haul is to the Philippines, which is intratheater. This connects them with Subic, and then from Subic to Pearl Harbor they go to DCA communications.

So this is to bring them in on the branch to Subic.

(The following information has been furnished by the Navy:)

The [deleted] U.S. Navy communication facilities in Vietnam will provide local/tactical communications. Long-haul, point-to-point communications will be via DCS facilities as a part of the integrated wideband communication system (IWCS); the Navy requirements for the IWCS were submitted to the DCA. The possibility of colocating DCA and Navy facilities at one location was discussed and rejected by the DCA. The DCA is aware of the plans for the [deleted] Navy communication facilities and has voiced no objections, but DCA clearance, per se, was not obtained since local/tactical communications are the responsibility of the Navy.

The [deleted] Navy communication facilities were approved by COMUSMACV and CINCPAC. There is no duplication of DCA and Navy communications at either location. There will be no frequency interference problems with DCA because the DCA communications at the [deleted] locations will not employ radio frequency propagation.

Mr. HALL. What is the total amount of communications in Danang alone, in dollars?

Admiral HULL. This particular project is \$1.37 million, and I think that is our only communications item.

Mr. HALL. At Chu Lai, Cam Ranh, and others, you do not have communications on them?

Admiral HULL. Yes, sir; there will be communications on each of those. This is just Danang.

Mr. HALL. Are they for the same purposes?

Admiral HULL. Essentially for the same purposes; yes. The objective of each one of these small port areas is to provide control of local communications, and also to give the installation communications with Saigon, where they tie into DCA worldwide net.

Mr. HALL. Your regular communications, not counting Saigon, or microwave, or any of these other facilities, the nets we have out there, who designed the frequencies for these communications?

Admiral HULL. I am sure that the same group that established these worldwide would do it. It would be done by our branch of the office of CNO, who handles communications, but they would do it in conjunction with the frequency control agency.

Mr. HALL. They get it from DCA, do they not?

Admiral HULL. Yes, sir; I am sure they would.

Mr. HALL. DCA has the necessary clearance with the Republic of Vietnam, and these are coordinated, and so forth?

Admiral HULL. Yes, sir.

The CHAIRMAN. Go ahead.

Mr. HALL. Mr. Chairman, I realize the Admiral isn't a communicator, and I certainly don't want him to dig out the amounts of communications at each one of these bases, but I do want you to let me know whether or not this has been coordinated with and approved by the Defense Communications Agency or not.

Admiral HULL. Surely.

The CHAIRMAN. Go ahead. Thank you, Admiral.

What is the next one?

Admiral HULL. Naval support facilities [deleted]. This is \$7.6 million.

The CHAIRMAN. What is your next one?

Admiral HULL. Aircraft shelters, \$1.4 million.

The CHAIRMAN. Does this protect the aircraft against—

Admiral HULL. Primarily against sabotage.

The CHAIRMAN. Sabotage and also attack?

Admiral HULL. It would make it also more difficult in the case of an air attack.

The CHAIRMAN. Do you have some kind of a—

Admiral HULL. We are principally using sandbags at the moment.

The CHAIRMAN. Did you have a metal thing?

Admiral HUSBAND. The Air Force is using ARMCO steel sheets which they are filling with earth; yes, sir.

The CHAIRMAN. It is a prefabricated article?

Admiral HUSBAND. Yes, sir.

The CHAIRMAN. We saw that.

What about your hospitals in there? What are you doing out there?

Admiral Riggs. At Da Nang we have the collecting and clearing company, which is organic to the Marine division. We have the ad-

ditional three, at other locations, in the First Corps area. These are all classed as C. & C. hospitals. They are mobile. They are supposed to move out with a battalion or a division.

With the battalion we will split the 60-bed into a 30-bed unit to send with the battalion on a forward movement. The additional beds in Da Nang proper are in addition to this collecting and clearing company of 60 beds. So that they are more or less living in garrisons. In addition to this we have a component, designed for 400 beds, but at the present time they have only 60 beds operating, and, if you will recall, in October, when Da Nang was attacked by infiltration, and the satchel bombs [deleted] hospital bed construction [deleted].

The CHAIRMAN. So that is the hospital picture.

Dr. Hall, I want you to follow up this mobile hospital that you saw down in Texas. Do you want to ask questions on that?

Mr. HALL. Well, Mr. Chairman, I think first of all for the query, and secondly because of time, let me say as a result of what we started a year and a half ago here, all the services are relatively, for the information of the committee, usually supported by what I certainly consider—and I do not intend to pose as any kind of an authority on this over and above the admiral or the Surgeon General at all in modern-day warfare—but certainly the service support of hospitalization and medical care has increased if anything in greater proportion than any other needed dream of support facility could be.

I think everyone from the Deputy Secretary of Defense on down, has come to realize the thing that we have to learn again in every war, one of the greatest morale factors for combatant troops is the fact if a man is wounded or hit out there, and he survives this situation, he not only has a ticket to an evacuation base, and more duty, or maybe in some instances a ticket home, which is welcome from that jungle, because they are actually working on a mortality rate now of less than 1 percent for the first time in the history of any warfare.

The CHAIRMAN. That is right.

Mr. HALL. This is going to even get better. But this is because the services have put in installations like Admiral Riggs described in there, since even a year ago.

As I understand it from testimony just now, he was talking only about the First Corps in the Da Nang area, is that correct?

Admiral RIGGS. Yes.

The CHAIRMAN. That is correct.

Mr. HALL. Are you not in addition to that supporting with one hospital ship now, and another one on the way, or getting ready to go there, Admiral, as far as the general theater is concerned?

Admiral RIGGS. At the present time we have the U.S.S. *Repose*, which is en route, and should have reported there on the 7th of February. However, it is interesting to note that we have the frozen blood aboard this ship. These are in minus 80° reefers, and one of the reefers I installed in the ship broke down en route from Pearl Harbor to the Philippines. So I am not sure they are not still in the Philippines trying to get this special reefer refurbished. But it should arrive on station, certainly today or tomorrow at the very latest.

We need that ship, because we do have 755 beds on the hospital ship.

Your question as to the second hospital ship, I was notified yesterday morning that the second hospital ship—namely, the *Sanctuary*—was approved by Mr. Vance, as of yesterday morning [deleted].

Mr. HALL. You see, Mr. Chairman, my intelligence is pretty good, too.

Now, then, getting to the question that was raised here yesterday, and that the Chairman brought up again, do you plan to use with your mobile auxiliary surgical units, or your counterpart of the field hospitals, or your C. & C. companies, or your ABC installations, the Must concept of the self-inflatable portable transportable units, so, if they are satisfactory with the Army and Marine Corps?

Admiral RIGGS. We have been working with the Army on the Must equipment, namely, Colonel Crendall, and at the present time we are trying to make a buy which can be delivered to us so the company states by September of this year.

The CHAIRMAN. Who makes that?

Admiral RIGGS. The Garrett Co.

The CHAIRMAN. Garrett?

Admiral RIGGS. Yes, sir. We are going to buy two. I believe the Army indicated they want to buy approximately eight in the first buy. If we can buy in numbers, and in this country, we feel the Garrett Co. will give us a \$1.9 million, for a 400-bed unit, but we are not buying the full unit. So that we will reduce that cost to about \$900,000, because what we need for the support of the Marines is a 40-bed unit. We will only use part of the utility units, part of the inflatable units, and a part of the expandable units.

The CHAIRMAN. You are impressed with the possibilities of this Must concept, aren't you?

Admiral RIGGS. I am impressed actually, because you can set this thing up in a matter of a couple of hours. I am impressed that we won't have to use as many as 10 C-124's to transport a 60-bed hospital, as it is now done. We can transport the Must with two C-124's. This is a lot of difference in plane requirements.

The CHAIRMAN. Thank you.

Admiral RIGGS. What will happen when it is hit with shrapnel—of course, there are going to be punctures in it, but we can repair those. We don't anticipate there will be enough perforations to knock down the inflatable unit.

The CHAIRMAN. This is compartmentalized, isn't it?

Admiral RIGGS. It is compartmentalized in ribs. There are ribs that go over the unit to keep it up in position and keep it in shape.

The CHAIRMAN. It can stand a lot of shelling, can't it?

What about the impact of an air missile, mortar shell?

Admiral RIGGS. We haven't had that experience yet, Mr. Rivers. I do not know what would happen, really. They seem to feel we can take multiple perforations without collapsing the unit. [Deleted.]

The CHAIRMAN. You would give that special security, wouldn't you?

Admiral RIGGS. Yes, sir.

The CHAIRMAN. That is a vital part of it?

Admiral RIGGS. I am hoping the Marines will give us special security, sir.

Mr. HALL. Mr. Chairman, the only other comment I have to make as to the tactical medical support out there, which has developed because it has lifted the medical care, up to the U.S. level, rather than to drag it down to the low levels of the EASTCOM units, told by highest authorities, by what the Navy said and the State Department

said they were doing, and I intended to go through this item by item in advance.

There are three temporary splinter village quonset-type huts, what we call wartime general hospitals, in here, one at Subic, one at Guam, and one at [deleted]. The understatement of the year is that the monetary allocation, and the type of construction, is austere. I think things ought to be austere, but I think this committee at the same time ought to know in setting up the 3,000 general hospital beds we are doing it on an austere basis for very few millions of dollars in three different places and dispersing them in these areas, and they are all intratheater, but, brother, they are going to be austere. They are going to be covered and uncovered ramps between quonset huts, 40 by 70 temporary construction, splinter-village type of hospital.

There is some feeling on my part, Mr. Chairman, that I think, although I have not discussed this with the General, and others, that there is real concern on my part, but that maybe we are doing too little in this. If they receive hospitalization at Guam, and [deleted] in addition to what we have now, and if this is a moral factor with the troops, that it has evolved into being a gain, in this outfit, in this theater, I just don't quite know why we don't go first class.

I understand the Secretary wants to build big magnificent towers of celestial knowledge, gilded dung heaps of medical care, we are going to have to give later to the Guamanians, the Philippines, and our other allies, and so forth, but I think we are a little bit austere in what we are planning for this.

In the risk of some kind of harassment we had yesterday, of saying, well, we are watching you very closely, because you don't line this out, and give us the basis for justifying the expenditure, and then, on the other hand, or at the other end of the stick, saying, you ought to buy twice as much, you didn't order enough while you were ordering, which is the essence of inconsistency this committee holds under its own breasts and prerogatives.

I will repeat once again the emphasis is too austere as far as the best possible care of the American people, in my opinion.

The CHAIRMAN. Don't you find the casualties coming out of that Far East theater are taxing your facilities here at home?

Admiral Riggs. They are not taxing our facilities, Mr. Rivers. We have, at the present time—I have augmented all hospitals in the United States, so I now have 22,000 beds. But actually on December 31 we had 758 Vietnamese-source casualties adding to our burden in the States. But this has to be looked at from the standpoint of the beds we have in the theater.

Mr. HALL. Who made that decision about the extra burden in continental United States?

The CHAIRMAN. Let me say this, before you say that: The wounded man comes first—always first?

Admiral Riggs. Yes, sir.

The CHAIRMAN. When you stack up beds in hospitals with wounded, that cuts down on what you can do for the dependents back home these boys are fighting for?

Admiral Riggs. That is correct.

The CHAIRMAN. I know of the one at Charleston. The Air Force at Charleston uses the Navy hospital?

Admiral RIGGS. Yes, sir.

The CHAIRMAN. It has been overrun. I think you had a project in there last January to alleviate that. That is one I happen to know about. I went over to Great Lakes some time ago and I saw a lot of casualties over there.

Admiral RIGGS. Yes, sir.

The CHAIRMAN. So in planning they cut down on what you are able to do for the people—those who authorize for this service, and it compounds it.

I think the staff has the word for it, this is across the board, even in the theater. Isn't that a fact?

Admiral RIGGS. If I may go on with the intratheater problem, we have been running around 400 beds filled with Vietnamese-source hazards. At Guam, at the moment, we are running about 138, but we have been running about 235 to almost 300.

The CHAIRMAN. Out at Clark Air Force Base, we went there, we surprised everybody, I think, at the hospital, but they had just occupied that fine hospital. Yet they were using the one that they had just vacated, too.

Admiral RIGGS. Yes, sir. They would have to. They only had 350 beds in the new building, they have 750 in the old one.

The CHAIRMAN. That is another case of it, Dr. Hall. [Deleted.]

Admiral RIGGS. Yes, sir; that is what I was leading up to. I was leading up to the fact that our good hospital beds, where they get real splendid care in a fairly good environment, in Guam [deleted]. But now with the arrival of the hospital ship on-station I would like to point out that this is a hospital ship that is comparable to practically any hospital in the United States. We can give definitive care in excellent environment.

To go back to Dr. Hall's statement about the type of construction, and so forth, this is true that the environment is not as good as it would be in a better facility that is built for it. But at the same time I might point out, too, personnel counts considerably in the care of patients, even though it is the Quonset-hut type of hospital. For instance, with our support for the Marine Corps, in Vietnam, which is the 3d and the 1st Division, up in the Da Nang area, we have 104 doctors there at the present moment, of which 24 are specialists. So we are giving good definitive care, even though the environment is not of the best.

MR. HALL. Mr. Chairman, let it be clearly understood my remark about reducing the level of care to burial type, referred not to uniformed military service, in care of military personnel, but to the care to the civilians in South Vietnam.

The CHAIRMAN. Now, Mr. Hardy, you go ahead.

MR. HARDY. Yes; thank you, Mr. Chairman.

I would like, Mr. Chairman, if we could go ahead and complete this Danang business, so we can have these items before us, and then see what we can do toward expediting this.

MR. HALL. Before we do that, Mr. Chairman, let's have the answer to the one other question, about the 758 South Vietnamese people that have been thrown into our Continental U.S. system.

When was that decision made?

Admiral RIGGS. When was that decision made?

MR. HALL. Yes.

Admiral RIGGS. We have the 15-bed evacuation policy for Vietnam. We have a 60-day bed evacuation policy in theater. So any case that is adjudged to require more than 60 days would be evacuated to the United States.

Mr. HALL. We understand that, Admiral, that is not the point. We are talking about the preconstructive work of the South Vietnamese casualties. Didn't you say there were 750 of them thrown into our chain of evacuation for treatment in the continental United States?

My question is simply, Who made that decision?

Admiral RIGGS. No; these are not Vietnamese persons. These are our troops that have their source of casualty in Vietnam, and were evacuated as a result of the casualty. These are not Vietnamese people.

Mr. HALL. You do have some Vietnamese troops in our U.S. naval hospitals for reconstructive and other purposes, do you not?

Admiral RIGGS. I don't know of any, Dr. Hall. It is possible we could have some for the amputee center at Oakland and Philadelphia—more likely Oakland; that is possible.

The CHAIRMAN. But this is not a policy, is it?

Mr. HALL. Yes; it is, Mr. Chairman.

Admiral RIGGS. Yes; we will take care of them actually, if we get a request from the Ambassador, and so forth, we will take care of these people.

The CHAIRMAN. This is not a run of the mill?

Admiral RIGGS. Run of the mill, no. In the country we would give humanitarian care.

Mr. HALL. I think the committee ought to know there is more to it than that. The Navy may or may not be involved, Mr. Chairman, but from highest authority, again, Chief of Naval Operations' statement of yesterday, and I want this to be clear, there was something thrown into our line of evacuation, and our capabilities of treatment of military personnel, stateside, many additional casualties. I personally don't find any fault with this, except in the period of staff coordination, and whether or not we were prepared for it. I think the committee ought to know what he referred to a while ago when he said there were 750 additional in the Navy being cared for, and being reconstructed and rehabilitated, under the processes, whether they are amputees, whether they are this, that, or the other, over and above U.S. military servicemen now in the continental United States.

The CHAIRMAN. I guess you mean the Bureau of Management Service recommended to Mr. McNamara a cutback on this construction of the hospitals we authorized last January. Did you recommend that?

Admiral RIGGS. In the States, are you talking about?

The CHAIRMAN. Yes, in the States. You all recommended cuts in the hospitals we authorized last year?

Admiral RIGGS. I made no recommendations to that effect.

The CHAIRMAN. We thought you did. Who made the recommendations?

Admiral RIGGS. These were reduced by higher authority. However, if you are talking about the 1966 program, we did not lose any hospital beds, they were all personnel support facilities. They were not hospital beds.

The CHAIRMAN. You recommended that?

Admiral RIGGS. Very definitely; yes, sir.

Mr. HALL. Mr. Chairman, you hit a very, very vital point.

The CHAIRMAN. You heard what he said.

Mr. HALL. I heard what he said, but I am not sure he appreciated your satire.

The CHAIRMAN. Did you understand my question?

Admiral RIGGS. Out of the 1966 program we did not—

The CHAIRMAN. Did you recommend any reduction in your program?

Admiral RIGGS. No, sir.

The CHAIRMAN. You didn't answer my question right.

Admiral RIGGS. I requested no reduction.

The CHAIRMAN. Are you complete, Mr. Hardy?

Mr. HARDY. Yes, Mr. Chairman.

The CHAIRMAN. I wanted to get this on the record. This is very vital.

Mr. HARDY. I am glad to get that information, too.

The CHAIRMAN. Go ahead, Mr. Hardy.

Mr. HARDY. Go ahead with your items.

Admiral HULL. Our next item is "Marine operational facilities," two 200- by 200-foot metal hangars on concrete foundations with floor slabs, and two 400-square-foot prefabricated metal operations buildings, \$1.6 million.

The next is also Marine air wing operations and support facilities, parking apron, 680 feet by 1,200 feet, with access taxiway. Extend the runway 1,500 feet. Prefabricated metal hangars, four of them, 150 by 120, prefab base operations building, 40 by 100; barricaded ammunition pads, utilities, security fence, electrical facilities, and roads, 3.6 million.

Mr. HARDY. In that one you have a lot of things including a runway extension. Isn't that unusual to lump all that stuff into one line action?

Admiral HULL. You know we have a bit of a problem in this. I was regretting that we had broken these down into such small categories, and here is one where Commander in Chief Pacific Fleet has tried to bring together a large group. I think it would be preferable for you if we had more of these larger groups instead of so many small ones. I must have 15 or 20 of these to read to you.

Mr. HARDY. Well, as a matter of fact, I sort of hoped you would have picked one that you didn't have the biggest one in the batch to read, but as long as we started on this—I see what he has got.

Now, if you will supply—

The CHAIRMAN. Let me say this, do you see now it is most essential to have this information?

Mr. HARDY. I knew, Mr. Chairman, they had to have some definitions, themselves, but they weren't giving it to us. I think we ought to have it. If we can have a copy of these justification sheets, which are similar to the ones that we normally take up when we go through a construction bill, I think it will be helpful. And I will say right now I plan to review them. They ought to be in the committee office. I don't know we need one to go all the way around.

The CHAIRMAN. You file one with the committee. The reason Mr. Hardy is acting as the devil's advocate, we have to have some knowledge of these questions on the floor.

Admiral HUSBAND. Mr. Chairman, could I speak to this issue?

The CHAIRMAN. Yes.

Admiral HUSBAND. I think the reason we find ourselves before you in such broad generalities is our hope we will be able to transfer the responsibility for precise execution of the program to General Westmoreland, and not be bound by decisions here in Washington, whether in Defense or in the Congress, so that he cannot change the program to what he conceives to be the needs of the combat operations at the time.

Mr. HARDY. Yes, Admiral. What you are saying is, just give us \$500 million, and let us spend it the way we want to, and I don't think the Congress is supposed to do that. That is not the way I consider my responsibility.

Admiral HUSBAND. Well, we have been living with this program since last spring, and one of the things that has been most frustrating to the field commander is his inability to get the base facilities that he needs authorized and appropriated on a timely basis.

Mr. HARDY. Well, of course, you can carry this to extremes. I suppose if you let Mr. McNamara have his way, he would say let me run the entire show. Just open up the Treasury and I will spend what I think I ought to spend, and to heck with you people in Congress.

The CHAIRMAN. Don't make the admiral answer that question.

Mr. HARDY. No, I don't want him to answer that.

The CHAIRMAN. He just got the job.

Mr. HARDY. I don't want him to answer that. Just give us the itemization of each of these programs. I want to study it, and study it quickly. If this is the only copy you have, run off another copy.

Admiral HULL. Yes.

Mr. HARDY. I would like to pursue another avenue, Mr. Chairman, because I think we need to understand how these figures are arrived at.

Where were these sheets prepared?

Admiral HUSBAND. Can I answer that, Admiral Hull?

Admiral HULL. Yes.

Admiral HUSBAND. These sheets begin under General Walt, under the I Corps Headquarters; he is the Navy component commander in the country. He must then get approval of his projects from the theater commander, General Westmoreland. They are reviewed in Pearl Harbor by the commander in chief, Pacific Fleet, the commander in chief, Pacific, and then come in here to Washington.

Mr. HARDY. When they come into Washington where do they go, CNO?

Admiral HUSBAND. Yes, sir; Navy projects go to CNO.

Mr. HARDY. What does CNO do with them?

Admiral HULL. We have been looking these over and talking frequently with CINCPAC people trying to refine the submissions and being sure we can put Admiral McDonald's blessing on them for CNO. Then we submit them.

The CHAIRMAN. Whom did you succeed?

Admiral HULL. Admiral George Pressey.

The CHAIRMAN. So construction is your job, isn't it?

Admiral HULL. Yes, sir; it is part of my job.

The CHAIRMAN. One of your principal jobs. You learn to know these?

Admiral HULL. I do; yes, sir.

The CHAIRMAN. Then you confer with Admiral Husband?

Admiral HULL. We say generally, the CNO determines the requirements, and Admiral Husband's job is to turn the requirements into brick and mortar.

Mr. HARDY. Mr. Chairman, if I can get back, I want to complete this flow, I want to see how this thing works.

When you get through reviewing—and reviewing means a lot of different things to different people—and you finally put Admiral McDonald's blessing on it, I believe that is your term, what happens to it then?

Admiral HULL. Then it went to DOD as part of the Navy submission for the fiscal year 1966 supplemental appropriation.

Mr. HARDY. Who did it go to, the Secretary of the Navy? Does it have to have his blessing on it, too?

Admiral HULL. Yes, sir.

Mr. HARDY. Does he change it?

Admiral HULL. No, sir.

Mr. HARDY. He doesn't have to prove—

Admiral HULL. I must have misunderstood your word. I thought you said he did not.

Mr. HARDY. He did not?

Admiral HULL. No.

Mr. HARDY. Did he change anything from CINCPAC?

Admiral HULL. No, sir; not really. We added a few things.

Mr. HARDY. You added a few things?

Admiral HULL. Yes.

Mr. HARDY. All right, CNO, to all intents and purposes, is the Secretary of the Navy in this particular function?

Admiral HULL. Yes.

Mr. HARDY. After you got Admiral McDonald's blessing and Mr. Nitze's blessing, where did it go then?

Admiral HULL. It went to the Office of the Secretary of Defense.

Mr. HARDY. It went to the Assistant Secretary of Logistics?

Admiral HULL. I am sure it was examined thoroughly by both ASD (I. & L.) and ASD (Comptroller). Actually, the formality in Navy is when Mr. Nitze finally approves a package like this, it is submitted by our Comptroller shops. I think presumably it goes—

Mr. HARDY. To the Secretary of Defense?

Admiral HULL. To the Secretary of Defense.

The CHAIRMAN. Who is the Comptroller?

Admiral HULL. Mr. Baird is the Comptroller of the Navy.

Mr. HARDY. Well, what I wanted to get, and I think it is important, Mr. Chairman, that we have this, I would like to get a picture of what happened at each of these little way stations that this package went to. I would like to see what CINCPAC requested, what CNO did to it, and that takes in the Secretary of the Navy. Then I want to find out what the Assistant Secretary of Defense did to it, what the Assistant Secretary of Defense, Comptroller, did to it, and then what Mr. McNamara did to it further, because after that you get these sheets you have before you now; is that right?

Admiral HULL. No, sir. These sheets represent the intercommunications really between CINCPAC fleet and my group. This is

why it would be difficult to tell you exactly, for example, what CNO did to the CINCPAC fleet list. This is a continuing process. Commander Moyer has just been out there for about 2 weeks working with their people. They come in and sit with us for a while, so these things develop on a day-by-day basis between CINCPAC fleet and CNO.

Mr. HARDY. But you have to have a cutoff somewhere, haven't you?

Admiral HULL. This is it. This is where we can give you a definition. We can tell you what the Navy submissions to OSD was.

Mr. HARDY. You can't tell us what CINCPAC submitted to you?

Admiral HULL. Yes, sir; I can.

Mr. HARDY. That is what I asked you for.

Admiral HULL. But it would be—it is a historic document——

Mr. HARDY. It might be historical. Maybe we ought to get a little history.

Admiral HULL. It would be changing almost every week.

Mr. HARDY. I am not talking about every week. I am talking about what you had before you when you put Admiral McDonald's blessing on part of it.

Admiral HULL. At that point, what we submitted represented everything CINCPAC fleet wanted at that point.

Mr. HARDY. Because you talked them out of what else they asked for?

Admiral HULL. Not really. Actually we talked them into a couple of things.

Mr. HARDY. All right, let us know what you talked them into.

The CHAIRMAN. When you finished that package you sent that to Mr. McNamara, didn't you?

Admiral HULL. Yes, sir.

The CHAIRMAN. It didn't stop alongside the road for someone else to take a whack at it?

Admiral HULL. It is submitted by our comptroller with Mr. Nitze's signature to OSD. I don't know how it is handled from there on.

The CHAIRMAN. You don't know how it is handled?

Admiral HULL. Only in the conversations we have back and forth.

The CHAIRMAN. Was it reduced?

Admiral HULL. It was reduced somewhere between \$50 and \$100 million, depending on how you define the terms.

Mr. HARDY. Now, that is the thing we want. We want to see exactly what happened to it.

(The following information was furnished by the Navy :

EVOLUTION OF MILITARY CONSTRUCTION (NAVY) PROJECT SUBMISSIONS TO THE CONGRESS TO MEET REQUIREMENTS IN DIRECT SUPPORT OF SOUTHEAST ASIA OPERATIONS, FISCAL YEAR 1966 SUPPLEMENTAL MILCON PROGRAM

SOURCE OF REQUIREMENT

Commanders and commanding officers of field activities, e.g. :

Naval Support Activity, Danang.

Commanding officer, Naval Station, Subic Bay.

Commanding officer, Naval Air Facility, Naha.

Action: Justify requirement by 1391 form with cost estimate and forward to area commander.

PROCESSING AND REVIEW OF REQUIREMENTS

Step 1: By the appropriate first echelon commander, comprising—
 Navy component commander, Republic Vietnam.
 Commander naval forces, Philippines.
 Commander naval forces, Japan.
 Commander naval forces, Marianas.
 Commander fleet activities, Ryukyus.

Actions: Coordination, consolidation and endorse operational need.

Step 2: By commander in chief Pacific Fleet.

Action: Compiles a list of construction requirements in support SEASIA operations. Obtain cost refinement by Director Pacific Division, BUDOCKS. Forwards list to commander in chief, Pacific, with copy to CNO and BUDOCKS (for further cost refinement).

Step 3: By commander in chief, Pacific.

Action: Approves or disapproves projects. Forwards list to Joint Chiefs of Staff with copy to CNO.

Step 4: By Joint Chiefs of Staff.

Action: Coordinates with Office, Secretary of Defense. Approves or disapproves projects. Forwards to Chief of Naval Operations.

Step 5: By Chief of Naval Operations.

Action:

1. Coordinates overall logistic requirements within approved plans and policy.
2. Approves or disapproves or adds projects.
3. Obtains further cost refinements from BUDOCKS.
4. Forwards to Comptroller of the Navy.

Step 6: By Comptroller of the Navy.

Action:

1. Processes list in format for budget submission.
2. Acts for Secretary of Navy in project approval, disapproval, or addition.
3. Forwards to Secretary of Navy.

Step 7: By the Secretary of the Navy.

Action:

1. Signs the official MILCON program submission.
2. Forwards submission to the Secretary of Defense.

Step 8: By the Secretary of Defense.

Action:

1. Approves, disapproves, or adds projects.
2. Submits integrated DOD MILCON submission to the Congress.

DISCUSSION

1. In execution of step 2, commander in chief Pacific Fleet forwarded lists of projects during the period September 16, 1965, to December 4, 1965, totaling \$325.4 million.

2. In execution of step 3, commander in chief, Pacific forwarded lists of projects during the period September 24, 1965, to December 4, 1965, totaling \$325.4 million.

3. In execution of step 5, the Chief of Naval Operations adjusted the integrated list of projects submitted for fiscal year 1966 supplemental funding to reflect appropriations of \$42.9 million received for projects duplicated in the fiscal year 1966 MILCON budget amendment; added \$59.8 million of new projects beyond the purview of the field commanders; added \$22.4 million for general planning funds; added \$37.2 million for cost escalation of currently submitted projects and forwarded lists of projects totaling \$390.5 million.

4. In execution of step 7, the Secretary of the Navy forwarded lists of projects during the period October 1, 1965 to December 14, 1965, totaling \$390.5 million.

5. In execution of step 8, the Secretary of Defense gave the Navy authority to reprogram \$22.7 million in fiscal year 1966 regular MILCON funds for SEASIA construction, and submitted to the Congress the fiscal year 1966 supplemental military construction (Navy) program which provided \$254.6 million for which he requested authorization and appropriations, Navy, and \$50 million for which he requested authorization and appropriations within a \$200 million contingency fund to be allocated to the Secretary of Defense; totaling, \$304.6 million.

6. Against a total Navy submission of \$390.5 million, the following defense agency approval has been obtained to date.

	<i>Millions</i>
Authorization and program funding, Navy-----	\$254. 6
Authorization and funding, DOD-----	50. 0
Reprogramming authority from prior appropriations-----	22. 7
Contanment for Korean marines (project transferred to military aid program for funding)-----	4. 5
Items funded under sec. 403 authority (fiscal year 1966)-----	13. 1
Miscellaneous items funded from other type appropriations-----	8. 2
Total -----	353. 1

The total program dropout is \$390.5 million minus \$353.1 million; the difference, \$37.4 million.

The dropouts represent:

	<i>Millions</i>
Jet field in [deleted] deferred pending JCS decision and recommendation, 1st increment-----	\$18. 3
2d and 3d increment for Naval Ship Repair Facility (SRF), Subic Bay, Philippines-----	9. 4
Items deferred to a later submission-----	9. 7
Total -----	37. 4

The CHAIRMAN. Do you know who did that to you?

Admiral HULL. What individual; no, sir. I think it was done by Mr. McNamara and Mr. Vance.

Mr. HARDY. You tell us what was done; we will find out who did it.

The CHAIRMAN. Then they whacked it off saying you didn't need it. After you went through the rigamarole, you tell us, Cincpac said they needed it, you said you needed it, and they said you didn't need it, so you don't get it. That is all that was done.

Admiral HULL. I don't think they do it quite in those terms.

Mr. HARDY. You don't need to start sticking up for them.

The CHAIRMAN. You didn't get it. You lost \$100 million somewhere down the line, didn't you?

Admiral HULL. I have to subtract \$50 million from that because if we get \$50 million of this \$200 million contingency fund I am short only \$47 million.

Mr. HARDY. Well, anyway, you know what we want. I want to know what they cut off, what the Secretary of Defense cut off. We want to have these so we can see what happened there. I think we need to see just how this thing worked out.

The CHAIRMAN. If you got everything you asked for, the "reduction" department would be out of a job.

Mr. HARDY. That is right, they wouldn't need all the people they have up there. As a matter of fact, they don't need all of them anyway.

Admiral HULL. I should point out there are a couple of items in this 47 million which Cincpac agrees we can defer for the time being. [Deleted.] He is perfectly willing to wait on those two line items.

Mr. BLANDFORD. Admiral Hull, you still haven't responded to the question. The committee wants to know if there are any omissions from this program which will interfere with the Navy's doing its job in southeast Asia.

Admiral HULL. Sir, General Greene testified earlier on the Marines' need for certain facilities [deleted]. We also feel that the completion of the second and third increments of the project at the ship repair facility at Subic Bay is most important for the maintenance of the 7th Fleet. Subic is our closest base to the 7th Fleet's operating area and should have this capability for fleet support. These additional facilities would cost about \$10 million more than we now have in the program.

Mr. HARDY. Mr. Chairman, I have just one other question that is of a general nature related to this.

As a matter of fact, I have two questions—but how much of this total that you have here, 207 million, did you previously have in the 1967 budget?

Admiral HULL. None, sir.

Mr. HARDY. None?

Admiral HULL. None.

Mr. HARDY. That is because you weren't given the information to develop the 1967 budget?

Admiral HULL. No, sir; we have been carrying southeast Asia in a separate budget all along.

Mr. HARDY. Did you expect all along it would be in the supplemental?

Admiral HULL. We hoped so. We would like to have this well in advance of the 1967 program.

Mr. HARDY. Are you going to be able to contract all of this, and have it obligated between now and July 1?

Admiral HUSBAND. If we get the money by the 15th of March, sir.

Mr. HARDY. You will have it all obligated by July 1?

Admiral HUSBAND. Yes, sir.

The CHAIRMAN. You have the contractors. What are the fellows' names?

Admiral HUSBAND. There are four contractors in the joint venture, sir. They are Raymond International, Morrison-Knudson, J. A. Jones, and Brown & Root.

The CHAIRMAN. Brown is there; you know why, don't you?

Admiral HUSBAND. Yes, sir.

Mr. HARDY. What is your total amount that these projects add up to?

Admiral HULL. 200—304.6 million.

Mr. HARDY. In this whole theater?

Admiral HULL. Yes.

Mr. HARDY. That is what this book before us adds up to?

Admiral HULL. Yes.

Mr. HARDY. What is the total amount you have in the bill?

Admiral HULL. Well, now, of that 304.6 million, 254.6 million are for Navy. The other 50 million go to the Secretary of Defense, and then he determines whether he will fund our projects from there on.

Mr. HARDY. I understood from Mr. McNamara the other day that your total projects added up to more than you had in here.

Admiral HULL. I think this probably is the question of the \$50 million, Mr. Hardy.

On page 1 you will see our summary, which adds up to 304.6 million.

Mr. HARDY. And in the bill you have 254?

Admiral HULL. 254.6. The difference is the 50 million, which goes into the OSD contingency fund.

Mr. HARDY. That is a part of the 200 million that is in section 2 of the bill?

Admiral HULL. Yes, sir; it is.

The CHAIRMAN. You recommend that contingency fund, don't you?

Admiral HULL. We certainly did. I hope I get my 50 million.

Mr. HARDY. You don't know whether you are going to get your 50 million out of that, or not; he can put that anywhere he wants to?

Admiral HULL. Yes, sir.

Mr. HARDY. I don't object to giving him an element of leeway, but I want to know what we are giving him.

Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Hardy.

That takes care of that.

Are there any other questions?

I have read every project in here. Mr. Cook, do you have any questions?

Mr. COOK. No, sir.

The CHAIRMAN. 207 million for Vietnam, 16 million for [deleted] 28 million for the [deleted] 3 million for [deleted] 2.3 million [deleted] 5.7 for Guam, and the other islands, Taiwan, Midway, Hawaii, 26.5, and planning, 14.9.

Are there any other questions of any other committee members, because we can finish this thing this morning.

Mr. HARDY. Mr. Chairman, could I make this one inquiry?

What are you going to have in your 1967 construction request, anything?

Admiral HULL. I hope so; yes, sir. However, there is nothing for southeast Asia.

Mr. HARDY. Nothing for southeast Asia?

Admiral HULL. No, sir.

The CHAIRMAN. I think we have a pretty good idea how this was done.

You file this with the committee, Admiral Hull, and Admiral Husband, for the record so we can refer to it—Mr. Hardy, this document is going to be made available, and do that right away.

Mr. PHILBIN. Mr. Chairman, that is all the information Mr. Hardy has requested.

The CHAIRMAN. That is right.

We recognize—

Mr. BATES. The Navy is all finished with the appropriations?

Admiral HULL. Yes, sir.

Mr. BATES. You are all done. I understand you are all done now at Danang?

Admiral HULL. Yes.

The CHAIRMAN. I think they temporarily got out of the filibuster over there. They have already had the hearings. You have been before the Senate, have you?

Admiral HULL. No, sir; I don't think we are going to be called before the Senate. That is the information I have at the moment.

Mr. HARDY. Did they give you what you asked for?

The CHAIRMAN. You have been pretty responsive in your testimony to Mr. Hardy and Dr. Hall.

Mr. HARDY. I would like to compliment him on the testimony this morning.

The CHAIRMAN. It was a great deal better than yesterday. You know since you last came here we have a three-star admiral now as your boss.

Admiral RIGGS. I am aware of that. Thank you very much.

The CHAIRMAN. That is the brain child of this committee; you know that, don't you?

Admiral RIGGS. Thank you very much.

The CHAIRMAN. General Bohannon, and I used to call it the Bohannon relief bill.

Admiral RIGGS. Yes.

The CHAIRMAN. This is a well-deserved recognition of the magnificent job you are doing. When you get to be Chief of the Bureau you will have four stars?

Admiral RIGGS. I will retire, Mr. Chairman.

The CHAIRMAN. Thank you very much.

If there are no other questions—

Admiral HULL. Mr. Chairman, may I say something?

The CHAIRMAN. Something good about the committee?

Admiral HULL. I know the committee is used to our normal 1391's. I want to point out these 1391's are not going to be in the style and shape you are used to. I want to invite your attention to the fact that they are prepared starting in the field in Vietnam, and then they are polished up in Pearl Harbor, and they do not go through the normal sponsors who have been doing this for years and years and years. So they are rough in the first place, and many of them will change from week to week or month to month.

I hope they are going to be, let's say, 90 percent accurate, Mr. Hardy, but they may not be more than that.

The CHAIRMAN. If they are not, if we can get Mr. Hardy to—

Mr. HARDY. If they raise questions I will be asking you to answer them.

Admiral HULL. We will be here, sir.

The CHAIRMAN. I think that is all for this morning.

Mr. Blandford, Mr. Cook, do you have any questions?

Mr. COOK. Sir, I think maybe we ought to have on the record an explanation of why we have deferred so many barracks and officers' quarters, and other things, and yet in the supplemental we are building some additional ones here in the United States.

The CHAIRMAN. That is a good point. What is the reason for that?

Mr. HULL. The only permanent barracks and BOQ's that we are building in the States, under this bill, in fact the only permanent barracks and BOQ's we are building under this bill, are in the Naval Air Training Command, and this is directly associated with the increase in the pilot training rate from 1,800 to 2,200. Now, this is not exclusively an item that is associated with South Vietnam. We want to do this anyway, and we are doing it at permanent stations, and we think the proper thing to do is build permanent facilities there.

The CHAIRMAN. Particularly if the Marines get that new wing, you will need a lot of training facilities, wherever you train them, at Pensacola—or where?

General VAN RYZAN. This is all part of the Naval Training Command.

Admiral HULL. It is all pilot training.

Mr. BATES. Isn't any of this at Glenview?

Admiral HULL. No, sir; I don't think so.

Admiral RIGGS. No, sir.

Admiral HUSBAND. Glenview is a Naval Air Reserve Station.

Mr. BATES. I thought he said Naval Reserve?

Admiral HULL. Not Reserve, Naval Pilot Training, at our permanent stations.

The CHAIRMAN. Reserve is not a very good word at DOD any more.

Admiral HULL. These are on page 43, and page 44. It is Chase Field, Corpus Christi—

The CHAIRMAN. We have that.

Admiral HULL (continuing). Ellyson Field, Kingsville, Meridian, Pensacola, Saufley, Whiting, and that is it.

Mr. HARDY. You know it is hard to understand why you would be putting these things in the supplemental, after knocking all the business you did out of the 1966 construction program.

The CHAIRMAN. Well, we at least can get started on it. We want to get started on this thing as fast as we can. These things are so urgent.

Mr. HARDY. When I get these line items it may stimulate some more questions.

Mr. BATES. Do you have any policy at all on the family housing?

Admiral HULL. We are not prepared to talk about that, Mr. Bates, until it is submitted to you. I should say I don't know.

Mr. BATES. Everybody knows it is not in there.

The CHAIRMAN. You haven't got that authority yet?

Admiral HULL. No, sir.

The CHAIRMAN. We are not sure we are going to give it to you.

Mr. HARDY. When are we going to get these sheets up here?

Admiral HULL. On this particular submission?

Mr. HARDY. Yes.

Admiral HULL. Tomorrow morning, sir.

The CHAIRMAN. When I read the President's speech, he made a magnificent speech to Congress about the state of our economy, and all the plans we had for all these things here, this year; but he didn't mention military housing. We can go out here and do all these things with the poverty program that I read about, if they do that I want a little something for you fellows.

Yesterday I introduced another paper, did you know that?

Admiral HULL. No, sir.

The CHAIRMAN. And Mr. Bates did, too, and other members of the committee did, too.

Mr. BLANDFORD. It is a very simple bill that says whatever the civil service pay increase is going to be will automatically apply to the military although it will be 1-month retroactive to the military, to make sure the military gets it first.

The CHAIRMAN. That is right, it is as simple as that. We see every day the Star's authority, and I think his name is Young, and the fellow who writes for the Post, and the other fellow who writes in the tabloid paper that has no news on it, they always refer to civil

service employees, that is all they refer to. Never once have they talked about you fellows. And the funny part about it, we are going to do something about it. That is how funny it is.

Admiral Hull. It is always a pleasure to be with this committee, Mr. Chairman, and all services appreciate your understanding of our problems.

The CHAIRMAN. We just are not going to stand for it. Right at the very moment the civil service gets their pay, we will put this on the floor before that, if I have anything to do with it.

Mr. BLANDFORD. If it hits the floor before the civil service bill hits the floor, it could be passed by consent, and it wouldn't cost a penny. You could pass it ahead of the civil service bill, because there wouldn't be any cost involved.

The CHAIRMAN. We are not going to argue the legal point.

Now, the committee will be in recess until Tuesday at 10 o'clock, at which time we will take up the Air Force, and all you gentlemen who have made contributions, and you, too, General Van Ryzan, you made a fine statement—everybody made a fine statement. We will see you Tuesday.

(Whereupon, at 11:40 a.m., the committee adjourned until Tuesday, Feb. 15, 1966, at 10 a.m.)

HOUSE OF REPRESENTATIVES,
Committee on Armed Services,
Washington, D.C., Tuesday, February 15, 1966.

The committee met at 10:15 a.m., Hon. L. Mendel Rivers, chairman, presiding.

The CHAIRMAN. Let the committee come to order.

Like everybody else, I have contracted the same kind of cold that has been attacking everybody else, so I will cut my conversation down to the minimum.

Mr. Secretary, this is your first appearance before the full committee as Secretary of the Air Force, I think.

Secretary BROWN. I believe that is right, Mr. Chairman.

The CHAIRMAN. You made a profound impression, a very permanent and favorable impression on the committee, as under Secretary of Research and Development and Technical Evaluation, and your sincerity of your convictions and your honesty as a witness, as I said, has made a very fine impression on us. We are sure as Secretary of the Air Force, you will continue this fine image, because the committee has been quite impressed and the subcommittees before whom you have appeared have been impressed with your desire to serve your country, cooperate with this committee and with the Congress, and do the best job you can.

It is a pleasure to welcome you here as the new Secretary of the Air Force, and give you assurance our committee will give you our full cooperation in every undertaking involved in your responsibilities.

We are very glad to welcome you here and want you to know we have a very high regard for you, and we are sure you will fulfill your job in a very commendable manner.

Let's get—do you have a prepared statement, Mr. Secretary?

Secretary BROWN. Yes, sir, Mr. Chairman, I do.

The CHAIRMAN. You go ahead and read.

Mr. Blandford, has everybody got a copy of it?

Mr. KELLEHER. Yes.

The CHAIRMAN. All right.

Mr. Secretary, you may proceed.

(The biographical sketch of Dr. Harold Brown, Secretary of the Air Force, is as follows:)

BIOGRAPHICAL SKETCH OF DR. HAROLD BROWN, SECRETARY OF THE AIR FORCE

Dr. Harold Brown, Secretary of the Air Force since October 1, 1965 (416 Argyle Drive, Alexandria, Va.). Born in New York on September 19, 1927; Columbia University, B.A., 1945, M.A., 1946, Ph. D. (physics), 1949. Columbia University Medal of Excellence, 1963; honorary doctor of engineering, Stevens Institute of Technology, 1964; honorary doctor of laws, Long Island University, 1966.

Lecturer in physics and a member of the scientific staff at Columbia, 1947-50. Lydig Fellowship, 1948-49; lecturer in physics at Stevens Institute of Technology, 1949-50. Postdoctoral research at Columbia, 1950. Research scientist. University of California Radiation Laboratory at Berkeley, 1950-52. Staff member, Livermore Site of the Radiation Laboratory, 1952; group leader, 1953; division leader, 1955; associate director, 1958; deputy director, 1959; director of the Lawrence Laboratory at Livermore, 1960.

Adviser to the U.S. Delegation to the Conference of Experts on the Detection of Nuclear Weapons Tests in Geneva, summer of 1958; and senior scientific adviser to the U.S. Delegation to the Conference on Discontinuance of Nuclear Weapons Tests, November 1958 to February 1959. Member of the Polaris Steering Committee, 1956-58. Consultant to the Air Force Scientific Advisory Board, 1956-57; member of the SAB, 1958 to 1961; also member of the Scientific Advisory Committee on Ballistic Missiles to the Secretary of Defense, 1958-61; consultant to several panels of the President's Science Advisory Committee, 1958-60; and member of the President's Science Advisory Committee, 1961. Navy Distinguished Public Service Award, 1961; Director of Defense Research and Engineering, May 1961 to October 1965.

Member of the American Physical Society; Sigma Xi and Phi Beta Kappa. Married the former Colene D. McDowell of San Francisco; two children.

STATEMENT OF HON. HAROLD BROWN, SECRETARY OF THE AIR FORCE

Secretary BROWN. Thank you, Mr. Chairman.

Let me begin by saying I will do everything I can to try to retain the good opinion of the committee which I value very highly, and I believe very strongly that cooperation by the Department of Defense and its components with the Congress is vital to the security of the country.

In his recent appearance Secretary McNamara provided your committee a summary of the total Department of Defense request for authorization for the proposed fiscal year 1966 supplemental budget. I will cover the Air Force portion of this request in somewhat more detail.

Secretary McNamara explained to you that when he appeared before you last August with the amendment to the fiscal year 1966 Defense budget there had not been time to work out detailed personnel plans, the movement of troops and materiel, and operational and maintenance costs, and that it was proposed to finance the additional personnel costs under the provision of section 612 of the fiscal year 1966 Defense Appropriation Act.

Similarly, because there had not been time to develop detailed estimates for the additional materiel and facilities required, a \$1.7 billion "Emergency fund, southeast Asia" was proposed and appropriated. These funds were subsequently transferred to the individual services and their use has been reported to you as "programing actions."

Of the total \$1.7 billion, \$581.3 million was transferred to the Air Force. It has been used to accelerate the delivery of items in production, and to construct the most urgently needed facilities.

The proposed fiscal year 1966 supplemental for the Air Force contains the additional funds required for the balance of fiscal year 1966 for personnel, O. & M., procurement, R. & D., and construction requirements in a total amount of \$3.8 billion. Authorization is requested as follows:

	<i>Millions</i>
Aircraft procurement-----	\$1,585.7
Missile procurement-----	63.7
Research, development, test, and evaluation-----	71.7
Military construction-----	274.1
Total-----	1,994.6

Before addressing these requirements in detail I will highlight Air Force actions to support the conflict in southeast Asia. Secretary McNamara indicated to you last August that planned augmentation for the Air Force included an increase in the utilization rates of airlift aircraft. This plan included additional personnel to round out the manning of units to be deployed in Vietnam and for increased training and support. It also included increased readiness for selected Guard and Reserve units.

Further augmentation of the Regular Air Force is now planned through the fourth quarter of fiscal year 1967 primarily for additional deployments to southeast Asia. In addition, we plan the retention of some B-57's and F-102 aircraft previously scheduled for phaseout. Increased logistics support is required and a major expansion is needed in the rotation and training base of our tactical forces.

Other significant items include:

Tactical forces: Last August we had several jet tactical fighter squadrons in southeast Asia. In addition, we also had B-57's and A-1E's. Now we plan an increase of jet tactical fighters with a capability for further increase, if necessary by late this year.

The CHAIRMAN. Mr. Secretary, I don't want to break into your statement, but sometime during the hearing I want you to explain to the committee—you or General McConnell—why the B-47's couldn't be used to do the things the B-52's have been doing now.

Has there been any consideration of that?

Secretary BROWN. I think General McConnell is best qualified.

The CHAIRMAN. You are flying B-52's over an area where there is no antiaircraft. If you could just use something with this, it would be good planning.

Secretary BROWN. I think General McConnell can answer it for you right now.

General McCONNELL. The reason is the B-47 is not capable of being modified to the extent the B-52 is, so you cannot get enough of a conventional payload to make the B-47 worthwhile to operate.

The CHAIRMAN. All right, sir. Go ahead.

Secretary BROWN. One of the most significant items for the tactical forces is a planned increase of some aircraft in the training base in the United States. This increase, plus a planned increase in aircraft utilization to 40 hours or more per month for each aircraft, more than doubles the training base and gives us a capability to provide continuing support for the forces in southeast Asia and elsewhere.

Troop carrier squadrons.—We now have a number of air commando C-123 squadrons in South Vietnam and C-130 squadrons at various PACAF bases to provide theater airlift support. [Deleted.] The rest are out in the islands, although some of them move to bases on the mainland from time to time.

Airlift utilization rates.—We are gradually increasing utilization from peacetime daily rates for TAC airlift from 1.5 to 5.0 hours in C-130E aircraft and 2.5 hours in C-130A/B's and for Military Airlift Command aircraft from 5.0 to 8.0 hours in C-135, C-141, and C-130E's. We expect to achieve this increase by [deleted]. This will give us a significant increase in gross ton-mile capability.

The CHAIRMAN. 8 hours' utilization is what you get out of the planes?

Secretary BROWN. On a continuing basis. If you had to do it for just the 1 month, you probably could use them for 10 hours.

The CHAIRMAN. This is a pretty high rate?

Secretary BROWN. Well, it is approaching the commercial rates, which is about all you can get out of an aircraft. I think that is about right. [Deleted.] A total increase in the strength in the Air Force of some 63,000 is required in military personnel. An increase of some 23,000 civilian personnel will also be required. In other words, 63 and 23 are the numbers attributable to the southeast Asia war. These, of course, are principally in ZI support, that is of the civilian personnel.

I will now address the detail of the authorization request. First, aircraft: The total request is \$1,585,700,000 and is shown in detail on table 1.

We are requesting additional F-4 aircraft, some of which are specifically for attrition replacement with the remainder to expedite force conversion; that is, converting older aircraft squadrons to F-4's

Through December 30, 1965, we lost 96 jet fighter aircraft to hostile action and another [deleted] for other causes with a total loss of [deleted]. Projected further losses of tactical jet fighter aircraft through June 1967; that is, during the following 18 months, are about [deleted] estimates of this kind are necessarily imprecise and, later, if we find we have been too conservative we can continue production at increased rates that we are accelerating to.

We used \$137.6 million from the fiscal year 1966 budget amendment of last August and an additional \$177.3 million from a reprogramming action which your committee recently cleared to take preparatory action by procuring long leadtime items to accelerate production of F-4D aircraft from a previously planned rate [deleted] so that there will have been an increase over the previous schedule [deleted] by June 30 of next year.

The second aircraft item is the planned procurement of an initial increment of [deleted] A-7 aircraft at a cost of \$23.5 million. This represents the introduction of a new aircraft into the Air Force inventory. No single aircraft can efficiently and economically perform the

tasks of counter air, close air support, and interdiction in the variety of conflict environments we are likely to face in the rest of the 1960's and 1970's.

Consequently, there is a need for a family of tactical fighter aircraft, each designed to do extremely well in one task and creditably well in one or more others. The F-4 and F-111 aircraft will meet our needs for high performance aircraft.

General McConnell and I both, however, agree that we need immediately an aircraft which can provide effective close air support in a relatively permissive environment—made so either by absence of enemy interceptor capability or by our own overall counterair capabilities. After careful study we have agreed that the impressive payload, range, and loiter time of the A-7 make it the most logical choice for this role.

In addition to the funds for these aircraft, \$32.8 million is required in the supplemental authorization for advance procurement for additional, A-7's in the 1967 budget. Fiscal year 1966 and 1967 procurement will give us first delivery about a year and a half from now [deleted].

The next item in the supplemental table also represents the introduction of a new aircraft to the Air Force inventory. We are requesting the procurement of [deleted] OV-10A tactical air control aircraft at a cost of \$12.7 million. These, together with the quantity [deleted] requested in the 1967 budget, will permit us to replace the O-1's we are now using in Vietnam as forward air control aircraft. Note that we are requesting \$2.9 million for advance buy in the 1966 supplemental against the planned 1967 procurement.

In a recent action your committee approved our getting ready for OV-10A procurement by authorizing the purchase of long leadtime items.

The next item is \$13.3 million for advance procurement of long leadtime items for a planned procurement of [deleted] RF-4C aircraft in the 1967 budget. This procurement will complete the equipping of the planned forces and will also provide attrition replacement.

The next two items are [deleted] CH-3E and [deleted] HH-3E helicopters. Previously, we applied \$2.7 million from the fiscal year 1966 budget amendment for long leadtime items for the CH-3E's. These funds, together with the additional \$12 million now requested will fund our request for CH-3E's. \$6.7 million is requested for the [deleted] HH-3E's. We have also accelerated the fiscal year 1965 program [deleted]. We will complete 1965 deliveries a full quarter earlier than previously planned. The procurement planned with 1966 supplemental funds meshes with this acceleration and permits uninterrupted production until the fiscal year 1967 programs for [deleted] additional [deleted] CH-3E's and [deleted] HH-3E's are approved.

These vehicles have proved to be extremely versatile. We plan to use the CH-3E in a variety of roles, including the transport of forward air control equipment into locations inaccessible by road.

The HH-3E is our best all-around rescue vehicle. Fitted with protective armor and with its ability to land on open water, it is ideal for rescue work in Vietnam. I am sure that all of you have read of the dramatic rescues which our helicopters have performed.

The next item in aircraft procurement is an additional U-10 light utility aircraft at a total cost of \$2.4 million. These small aircraft are extremely useful for a wide variety of utility missions, such as medic paradrop, emergency supply, courier and liaison.

Needed for aircraft modifications is \$133.9 million, principally the B-52's, F-4's, and C-123's. An increased conventional weapons capability for some models of the B-52 is planned, as well as a modification of ECM equipment and the addition of a LORAN navigation system.

Improved electronic countermeasures and navigation systems are provided for the F-4's. The C-123's are being modified to give them an improved short-field capability. The modifications include strengthening the landing gear and installing small jet engines for added power at takeoff.

Required for spare parts is \$554.6 million. Of this amount \$85.6 million is required as initial spares for the planned aircraft procurement and modifications which I have already described.

For instance, \$57.9 million is required for F-4 initial spares. The remaining \$168.8 million is required for replenishment spares. They are needed principally for the following:

(a) To support the increased utilization of cargo aircraft which I described earlier.

(b) To preposition stocks [deleted] in southeast Asia. [deleted.]

(c) To support increased consumption attributed to aircraft operating under adverse conditions. For instance, the C-123 and C-130 aircraft, utilizing assault landing and takeoff techniques from unprepared runways in many cases are consuming tires at more than double the peacetime rate.

The remainder in aircraft procurement, \$59.9 million, will provide, in part, common aerospace ground equipment for [deleted] bases lacking such equipment and will replace equipment which is experiencing a higher than normal wear-out rate because of operating conditions in southeast Asia.

Specific items covered include common ground servicing equipment, common maintenance and repair shop equipment, and common instruments and test equipment. Provision is made for a "quick reaction capability" to provide timely engineering, production, installation and modification of electronic warfare and intelligence equipments. [Deleted.]

The total for aircraft procurement is, thus, \$1,585.7 million, to procure [deleted] aircraft and various supporting items.

The CHAIRMAN. Mr. Secretary, the FC-47, that is the former aircraft?

Secretary BROWN. It has a number of miniguns, 3 of them in 1 aircraft, each of which can fire 6,000 rounds a minute. The pilot controls this from his seat, and if you are spraying something the size of a football field with bullets, you can discourage the people on the ground very quickly.

The CHAIRMAN. When do you use them, when you have nothing else to do the job?

Secretary BROWN. We use any aircraft which can help. These have a long loiter time, which makes them particularly good for going out and circling over a village that is under attack. I have seen some of

the aircraft, I have seen pictures of them in action, and they have saved a number of villages from attack.

Do you want to say more?

General McCONNELL. The Vietcong say that is the ray gun. The bullets come out of the three guns, at 18,000 rounds per minute. The reason we use that aircraft is because we can store a lot of ammunition in it. You can have operators behind each gun so you can reload them and as the Secretary says, you can fly it a long time—for 10 hours. At night you can also carry, a large supply of flares, and you can operate at night with it—and up very close to our own troops.

The CHAIRMAN. Is this the same flare that was developed in the 123?

Secretary BROWN. I think these are Mark-24 flares.

General McCONNELL. Yes, they are Mark-24 flares.

The CHAIRMAN. Didn't Tom Crandall develop a light that would illuminate a football field?

Secretary BROWN. That is a new one.

General McCONNELL. That is being tested.

Secretary BROWN. These are Mark-24's.

The CHAIRMAN. 123's I am talking about.

General McCONNELL. Yes, sir, I said the Mark-24 flares are not as big as that.

The CHAIRMAN. It is a big light, a plane can light up a very large area.

General McCONNELL. That is right, sir. It is under test now.

The CHAIRMAN. Yes.

Secretary BROWN. You may be thinking of the MLU-32 B-99 aircraft flare. [Deleted.] The Mark-24 is 2 million candlepower, and 2 minutes. So I think that could be the one you are thinking about.

The CHAIRMAN. Yes.

Go ahead.

Secretary BROWN. For missile procurement shown in table II we are requesting authorization of \$63.7 million. This will provide for the procurement of missiles, target drones, and other items in support of current southeast Asia operations.

[Deleted.]

In R.D.T. & E. shown in table III, which is at the bottom of the last page, we request authorization for \$71.1 million. Principal items are:

The amount of \$26.3 million for the A-7 to cover engine afterburner development, engineering for conversion of some aircraft from single-to two-place models, subsystem integration, and flight test.

The sum of \$10 million to initiate development of a tactical strike fighter (TSF) version called TFF of the F-4 aircraft. Because positive target identification is a problem it sometimes becomes difficult to attain a missile firing position in certain air-to-air combat situations. This places a real premium on close in maneuvering capability, aircraft performance, and the availability of discriminatory weapons such as a gun. We should improve this capability in our tactical fighters. [Deleted.]

There is \$1.6 million in advanced development for development and test of a low-altitude proximity fuse for conventional munitions. This would go into the 750-pound bomb, and it goes off some distance before it hits the ground, making it a more effective antipersonnel weapon.

Then there is \$8 million in engineering development for a variety of projects which include [deleted] a fire bomb igniter, incendiary munitions, improved TAC night capability, bare base support, [deleted].

For military construction we request authorization for \$274.1 million to provide facilities needed to support forces directly committed to the war in Vietnam. The current program estimate is \$324.1 million. We are, however, requesting authorization for the Air Force of only \$274.1 million. Authorization and funding of the difference will be provided, we anticipate, by transfer by DOD from the account "Military construction, Defense agencies." This arrangement has been proposed to permit some flexibility in construction to meet changing requirements, as Secretary McNamara explained in his statement.

The authorization requested, together with that previously approved, will provide facilities at [deleted] bases in [deleted]. It will enlarge and improve facilities [deleted] to support our increased operations. It will provide additional C-130 facilities [deleted] and limited improvements at other bases [deleted].

There is also included \$3.1 million for airfield pavement and POL facilities at Norton Air Force Base, Calif., to provide initially needed facilities to support more airlift from the west coast.

By category, \$202 million, over one-half of the requested construction authorization is for operation and maintenance facilities for aircraft, about \$34 million for storage and supply operations, about \$37 million for housing and community support for personnel, with some \$26 million for utilities and the balance, \$25 million, for other support facilities and planning costs.

The total funds in this supplemental authorization should be considered complementary to those previously approved. They are needed principally for long leadtime items which cannot await fiscal year 1967 funding. In one sense, these funds bridge the gap between now and the time the fiscal year 1967 budget is acted upon.

Timing, therefore, is extremely important.

There is one item aside from the fiscal year 1966 supplemental which I would like to address briefly at this time. It is the prior approval reprogramming action on the C-141 which you have before you. This action proposes the reprogramming of \$81.2 million for the procurement of an additional C-141 aircraft. This will give us an additional C-141 squadron.

As I indicated earlier in my statement, we are increasing airlift utilization rates as one means to provide increased airlift capability. The procurement of this additional squadron will give to us further urgently needed capability.

As in the case of the F-4's and OV-10 we have used some funds from the fiscal year 1966 budget amendment for long leadtime procurement to permit us to accelerate the C-141 production. These funds in the amount of \$3.5 million, plus the \$81.2 million for which we are reprogramming will fund the procurement of the 16 planned aircraft.

We are increasing the production rate [deleted]. We will have 34 increased deliveries—a total delivery of [deleted] versus [deleted] previously scheduled.

Funds for this reprogramming are being obtained by reduction in the spares and modification program and by an increase in reimbursable sales which do not require replacement in kind.

I recognize that in this brief statement I have not been able to provide all the detail which you might desire. We will, however, cover far more detail in our regular fiscal year 1967 authorization hearings. As in the past, General Gerrity will cover procurement, General Ferguson R. & D., and General Curtin construction.

I made a trip to Vietnam, Thailand, Okinawa, and Guam during the first week of January, and before closing I would like to report briefly the situation there, as I saw it.

First, our people are outstanding. Their morale is high. They know why they are there, and they are working a 12-hour day, 7 days a week, doing a truly professional job.

Second, logistics are good. Our equipment is good, and it is working. Certainly, we have some problems, as to be expected, but essential items are getting through. Deployment schedules have been met. Our aircraft are flying the planned number of missions and doing their job.

Third, construction is a difficult task [deleted]. We have taken steps to improve the situation [deleted].

Fourth, air operations are effective. Whatever you may have heard in the past about Air Force disinterest in, or inadequate performance of the support role, today in southeast Asia the Air Force is doing a superb job. I made my visit together with Army Secretary Resor. He and I both found that Army field commanders in South Vietnam enthusiastically endorse the job the Air Force is doing.

Finally, to repeat, our personnel are doing a superb job that we can all be justly proud of, and they are being well supported. The funds requested in the fiscal year 1966 supplemental will continue that support.

Thank you, Mr. Chairman.

The CHAIRMAN. Those are reprogramming now, Mr. Blandford?

Mr. BLANDFORD. Yes, sir. With the quorum present, we can approve the reprogramming for the 141's.

The CHAIRMAN. Is there any objection to the reprogramming of 141's?

Mr. HARDY. The only question I have, Mr. Chairman, the problem of pulling the funds out of these particular sources.

Secretary BROWN. They do come from B-52 MOD's that are are now not going to be necessary because of the phasedown of the B-52's. That is part. The rest come from spares.

You will notice we are asking for spares money in the fiscal 1966 supplemental, but some of that is to replace this money. The reprogramming money we have got, some of it we will have to replace.

Mr. HARDY. That was the point particularly. So what this means is you are just deferring the procurement of these spares, and are going to get them in next year's funds?

Secretary BROWN. We will get some of them with the fiscal 1966 supplemental, but the money is available now from the old 1966 funds.

Mr. HARDY. But the funds then to replace these funds that you are going to use here are included in the supplemental?

Secretary BROWN. That is right; yes, sir, in general. I can't identify individual things, but that is correct in principle.

Mr. HARDY. Now, then, the B-52's, this is just the step in the direction of reducing our B-52's which we have been told in the program will go out anyway?

Secretary BROWN. It is a consequence of that decision that makes the money available; yes, sir.

Mr. HARDY. That is a decision some of us are not too happy with.

Secretary BROWN. I think it is a decision the Air Force not only supports, Mr. Hardy, but the Air Force proposed.

The CHAIRMAN. Is there objection?

Mr. PIKE. I don't have an objection, but I want to ask a question.

You have an increase in the amount and a decrease in the amount. Where do you get the other \$35 million?

Secretary BROWN. The rest of the money comes from reimbursements from MAP, for assets that we have given them, and which now don't have to be replaced.

Mr. PIKE. When do you get that?

Secretary BROWN. I think we have it. It is a matter of drawing down the MAP fund, isn't it, Pete?

General CROW. It is from drawing down the MAP funds. The point in time at which we anticipate where we will be for total funding is at the end of each fiscal year. What this really says is that at the end of fiscal year 1966 we anticipate that from this source we will have \$35 million more than we previously anticipated when we put together the 1966 budget.

Mr. PIKE. That will be in fiscal 1967, then, that this \$35 million will be available?

General CROW. No, sir, now, and at the end of the accounting period for fiscal year 1966 we will have in hand \$35 million more than we previously anticipated that we would have.

The CHAIRMAN. Without objection this is approved by the committee.

Are there any other questions by any other members of the committee on the statement?

Mr. HARDY. Yes, Mr. Chairman.

The CHAIRMAN. Go ahead, Mr. Hardy.

Mr. HARDY. Mr. Secretary, on page 2 of your statement at the bottom, accelerating delivery of items. You are talking about the amount in the \$1.7 million.

Do we have an itemization of that?

Secretary BROWN. I don't think we have line items on the \$581 million.

General CROW. We have a complete breakout of how the \$581 million was used.

As a matter of fact, these have been reported to the committee as "programing actions" accounting for the use of that money. If you will recall in the Secretary's statement, he indicated that we used \$3.5 million for instance to accelerate C-141. We used, I believe the figure is 2.7, to accelerate the OV-10. So the general pattern of this financing is that the amendment of last August was used to warm up the production lines.

A total itemization is not before the committee, sir, but separately there has been reported to you the programing actions in the procurement accounts.

Mr. HARDY. Would those add up?

General CROW. Those would not add up, because some items are not in the procurement accounts.

We can give you a list of the \$581 million.

Mr. HARDY. I think the committee ought to have a list, so we can check and see exactly what the money is used for.

General Crow. We can make that available.

(The following material was received for the record:)

Breakdown of \$581 million

Appropriation Item:

Aircraft procurement:

	Millions
F-4D-----	\$137.6
C-141A-----	3.5
CH-3E-----	2.7
Common ground equipment-----	5.0
War consumables-----	10.0

Subtotal----- 158.8

Missile procurement: classified project----- 4.0

Other procurement:

Munitions and associated equipment:

Rockets-----	19.3
Cartridges-----	35.7
Bombs-----	124.5
Other items-----	86.8
Modifications-----	2.5

Vehicular equipment----- 2.4

Electronics and telecommunications equipment----- 13.5

Other base maintenance and support equipment:

Landing mats-----	30.4
Logistic support shelters-----	5.1
Classified program-----	40.0
Modifications-----	.4

Subtotal----- 360.6

Military construction:

Operations training-----	40.6
Maintenance and production-----	4.3
Supply-----	1.9
Administrative-----	.2
Housing and community-----	1.1
Utilities and grounds-----	2.9
Construction support-----	6.9

Subtotal----- 57.9

Total----- 581.3

Mr. HARDY. I am a little concerned with some of the other transfers of funds we have to this supplemental.

Secretary BROWN. We haven't transferred any money that I have been able to identify from the 1967 budget to the 1966 budget—to the 1966 supplemental, except for the purpose of doing something fast.

Mr. HARDY. And are you able to increase the production, for instance, of F-4's so that there will be timely delivery not only of Air Force requirements, but of the later requirements for that aircraft?

Secretary BROWN. Yes, sir; the production is being increased [deleted]. Ours is being increased [deleted]. So that there is a big increase there.

Mr. HARDY. There may be a big increase, but you have got a pretty big procurement, too.

Secretary BROWN. Surely, but I think some of these figures again will indicate what the effect is. [Deleted.] So that is a very substantial acceleration.

Mr. HARDY. Did you scale your requirements to conform to the maximum increase in production that you could get?

Secretary BROWN. This is about the maximum increase the contractor said he could make in the protection.

Mr. HARDY. So that you could not go, even if you had a bigger requirement, which I don't know whether you have or not—you could not have achieved it because that is as far as he could go?

Secretary BROWN. That is right. I think it is hard to predict exactly how many we are going to need, but the maximum that he could produce is about the right number that we need.

[Deleted.]

Mr. HARDY. Was there any curtailment in the Air Force's requirement or proposed procurement of that aircraft in the 1966 budget?

Secretary BROWN. No; there was not. In fact, it was accelerated over what we had originally proposed for fiscal year 1966.

Mr. HARDY. 1966?

Secretary BROWN. Yes.

Mr. HARDY. How about in 1965? Did you have to cut back in 1965?

The Navy had an item that was cut back, I believe it was the 1965 budget, and was included in one of Mr. McNamara's savings.

Do you have any of that same kind of thing?

Secretary BROWN. No, there is nothing like that in this case.

Mr. HARDY. Now, Mr. Secretary, on another subject, on page 17 you are discussing military construction.

And in the last sentence in the first paragraph there you say:

This arrangement has been proposed to permit some flexibility in construction to meet changing requirements, as Secretary McNamara explained in his statement.

Can I then understand from that that your \$274 million—274.1, which is the amount specified in the bill before us, plus the \$50 million which is included in his Defense agency's request, makes up your total requirement for construction programs?

Secretary BROWN. That is our total program that we can see as a requirement for the fiscal year 1966 supplemental; yes, sir.

Mr. HARDY. Now, then, since you have provided for \$50 million worth of flexibility by including that in the Defense agency's request, I take it that all of your line items are reasonably firm, and you expect to proceed with your construction as your line items are set forth?

Secretary BROWN. Well, I think we have to recognize, Mr. Hardy, that construction in a situation like this cannot be as firmly predicted as it can be in peacetime, and in the United States. [Deleted.]

Mr. HARDY. As to location I think all of us recognize you have an unusual situation in Vietnam, not only as to location, but as to requirements, I suppose they will be changed.

But the thing that I am concerned with is, if you are going to have a \$50 million flexibility provided in the funds set out for defense agencies, I don't want to particularly get enthusiastic over your having \$274 million flexibility in the full amount—unless you have given

us something that is reasonably firm in the way of your outline of your construction proposals; that is what it amounts to. You have flexibility with the entire amount.

Secretary BROWN. I think we have indicated to the committee what we really propose as of this time will add up to this \$274 million. It is extremely important, I believe, that the services, each of the services within the PACAF area [deleted] have the flexibility to move money from one airfield to another, or from a runway on one airfield to a parking apron on another airfield. The total dollars for the things, that we indicate in that great big thick book which we provided you, add up to \$324 million. I am sure it won't be spent in line item detail in the same way.

Mr. HARDY. Mr. Secretary, this thing bothers me, because for one thing, apparently the military services have now taken a page from the foreign aid bill. They came in year after year with so-called illustrative programs, and they said "We want so much money, and this is the kind of thing we are going to spend it for."

Now the military comes in here with the same thing. If we are going to start providing authorization and funds for this kind of an operation, where you can do as you please, we might just as well give a blanket amount of money and say "Don't bother to tell us."

Secretary BROWN. Mr. Hardy, I think we can give you various degrees of specificity in the program, but the more specific we make it, the less likely that is to be the actual case.

We can tell you that we are going to put, for example, [deleted] into Bienhoa for [deleted]. We can tell you we are going to put [deleted] more into, for example—and these are just examples, the numbers aren't precisely right—into Camranh Bay for [deleted] and that is what is going to happen. But the dollar estimates may not be exactly right.

Mr. HARDY. I can recognize, Mr. Secretary, the difference in this kind of a situation from a lot of the others that we have. But I am trying to see how do we safeguard the responsibility that we have, and how do we keep some sort of a balance between these two departments; if we are just going to give you a blanket authorization to spend \$271 million, I get a little worried about it, unless we can find a procedure. I am not suggesting you are trying to avoid a procedure, but I am groping for a procedure that will give us some control, at least some exercise of responsibility that we are supposed to exercise.

Secretary BROWN. We have broken out amounts by country in the numbers that have been supplied to you.

Also, I think we have gone one step further, and indicated in each country the base breakdown. As this evolves, it will be not too hard, I think, for the committee to keep track of what happens.

Mr. HARDY. Well, it is pretty hard when you consider the facilities that we have for doing it. But anyway, I think perhaps this is the only way we can proceed.

But now one other thing: I haven't, of course, had a chance to look at your book, your line-item book that you have got here. But I wonder, No. 1, were these projects, or proposals, based on actual cost estimates of carrying out these construction projects after having determined what was required, or is this something that was pulled out of a hat, based on the number of people you expect to have over there?

Secretary BROWN. These were done by examining what would be done at each of the number of bases in the way of construction, and then making an estimate of how much that would cost.

Now, those cost estimates have not been very good, because the costs have tended to escalate. There is a big strain on the local economy there. And as time goes by, these costs change.

What you see here is the best estimate of the cost as of the time that the budget was submitted.

Mr. HARDY. Well, I am not going to pursue this further now, but I am going to want to have a breakdown of just exactly how your cost factors are arrived at with respect to each of these different items of construction.

I took a look this morning at the Navy's—

Secretary BROWN. Yes, sir.

Mr. HARDY. I haven't seen yours, but there isn't one earthly thing in there that gives us any information we can tie to at all. I hope that yours is in better shape than that one.

Secretary BROWN. Since most of the construction is done by others for us, it is not likely to be very much better.

(The following material was received for the record:)

Costs employed in development of the fiscal year 1966 supplemental were based on current contract costs. Cost indexes are influenced significantly by remoteness of location, availability of transportation, contractor mobilization costs, inflationary labor costs, increased material costs for items purchased in-country, enemy opposition, and other delaying factors. Across-the-board application of a country factor is impractical. The construction cost factor for southeast Asia ranges from 2 to 4 overall. The construction agency is currently developing definitive factors for response to earlier questions by the committee and for application in future budgetary and planning purposes.

Mr. BLANDFORD. This is with respect to military construction authorization in southeast Asia.

During the hearings last week on the Navy's segment of the fiscal year 1966 supplemental, pertaining to military construction, the committee was disturbed by the lack of detailed line item sheets which usually accompany military construction program requests. Navy witnesses agreed to provide such details and have since complied, but pointed out that the information submitted could only be considered tentative because of the unusual construction conditions in southeast Asia, the evolving nature of the military situation, and the limited opportunity for preparing engineering estimates compared to normal programming cycles.

The committee fully understands these abnormal conditions, but must insist nevertheless in knowing how the program was developed and what engineering evaluation was made before being placed in the position of approving over \$1 million in new work. It is my understanding that the Air Force and the Army will comply with the committee's wishes in this regard.

In reviewing the military construction requirements submitted by the Department of Defense under H.R. 12335, I should like to ask the committee to consider carefully certain conditions in South Vietnam which mitigate against normal programming.

South Vietnam is primarily an agricultural country; the only major port is Saigon. The deployment of large U.S. military forces, in a country of this sort, requires the construction of an entire base complex beginning with new ports, improvements to highways, troop facilities, hospitals, airfields, communication facilities, etc.

The rapid buildup of U.S. forces in South Vietnam in calendar year 1965 did not provide time for advance development of detailed facilities plans on which individual construction project estimates could be based. Initial decisions on missions and locations of combat and support units were changed in accordance with the actual combat situation, the size of the U.S. effort, and as more detailed tactical and logistic support plans were developed.

The types of additional troop units that might be deployed, when required and approved, have not been completed determined. Neither have specific tasks or locations within South Vietnam been assigned to these units. The requirements for additional troop units, the development of support concepts, and changing tactical and logistical support concepts to aggressively pursue the active combat situation are continually under review by the commander, U.S. Military Assistance Command, Vietnam.

The location of major ports, airfields, and depots can be established with relative ease and construction can proceed. However, the scope and location of troop housing and logistic facilities such as hospitals and direct support supply and maintenance units, size of major ports and depots, requires detailed development of tactical and logistic support plans.

From the above, I believe the committee must conclude that the regular project-by-project definition of the program in South Vietnam at this time is not possible, and that the data, now being presented by the military departments, is as complete as reasonably can be expected at this time. Accordingly, I believe we must recognize that the specifics of the program can only be determined by the military departments as the U.S. role evolves in southeast Asia, and I urge the committee not to consider the present program as final.

By this approach, I am trying to insure that each member of the committee receive sufficient backup material which will outline the general nature of the program and program objectives so that you are not, in essence, signing a blank check and yet, at the same time, providing to the Defense Department and the services sufficient flexibility to accomplish their objectives.

The fact that 1391 forms have been provided does not necessarily mean that each of the items shown on the 1391's will be constructed. Generally speaking, however, this is typical of the types of construction that will be made when the locations are decided upon.

When the Secretary of Defense appeared before the committee, in response to a question by Mr. Hardy, he stated that he would be delighted to furnish the line item and the rationale behind each construction project to the Armed Services Committee at the time of contract execution. This, in my opinion, should be sufficient to keep the committee fully advised of the military construction program.

The construction program will be determined by the military objectives and assignments which will be decided upon at a later date or as the military situation dictates.

It is my sincere belief that a substantial portion of the construction will be built in accordance with the 1391's which have been provided to you. But, at the same time, it must be recognized that changing military requirements may cause a change in the construction plans.

The CHAIRMAN. I want that in the record.

Mr. HARDY. I think it is a very fine statement. I think it puts this thing in proper perspective. There are still, however, one or two things that still bother me about the overall picture.

No. 1, we don't know how these cost figures were arrived at. Now, the amount of money that is involved here may be enough to provide all these things they are talking about; it may not.

That is why I wondered whether it might be a figure that was just pulled out of a hat, this one-tenth million that is stuck on the end might be one of these things you know that just sort of leads you down a blind alley.

I don't know whether it is or not, and I don't know whether you can do any better at this time.

However, Mr. Chairman, I do think since allegedly this is based on somebody's actual calculations, I think we ought to have an outline of the factors that went into determining these cost factors that are used over there, because without that, then these things are totally meaningless.

I do disagree, Mr. Chairman, with one statement that you had in your statement, when you said that these things are probably as com-

plete as reasonably can be determined now. I think that may be true with respect to the Air Force, I haven't looked at it, I don't want to criticize that, but I don't believe it is true with respect to the Navy, that I have looked at. I think they could have done a lot better job. They certainly haven't given us a thing in the world we can tell—and I am having a little analysis made of that for myself.

The CHAIRMAN. We are going to insist for more detail in the fiscal 1967 figures, Mr. Secretary.

Secretary BROWN. Yes, sir. These construction requirements were carefully processed by the Air Staff, the Military Construction Board and the Air Staff Board. They were scrubbed down individually. Estimates were made at that time of how much each thing would cost—each runway, each parking apron, each POL facility. Based on the experience as of that time and that experience may prove to be misleading—but that was done. We will endeavor to provide you with that background.

Mr. HARDY. If you have an experience basis for it that is one thing. But if you just reach in a hat and just use somebody's ideas, that is another.

Mr. Chairman, I have only one other brief question, and that has to do, Mr. Secretary, with your 1967 budget.

Have you got a firm construction budget already prepared for 1967?

Secretary BROWN. The 1967 budget does include a construction budget. It includes almost nothing for southeast Asia. In fact, I think it includes only one small item which we inherited from MAP.

The reason for this is that the fiscal 1966 supplemental and 1967 budget were made up on the assumption—you have to make assumptions that the war ends at the end of fiscal 1967 in southeast Asia.

The leadtime on military construction is such that, if that is the case, the money all has to be in the fiscal 1966 budget.

Mr. HARDY. Then you have enough money in this budget before us right now to do all the construction that you are going to need, and you are not going to need anything else in 1966?

Secretary BROWN. Mr. Hardy, I should repeat that that is on the assumption that the war ends at the end of fiscal 1967. If at the beginning of fiscal 1967, or even halfway through fiscal 1966—I am sorry, we are past the halfway through fiscal 1966—toward the end of fiscal 1966, it looks as if the war is likely to continue past that point, then this could very well change.

Mr. HARDY. The real question that is bothering me right now is are we approaching an era when we are going to be authorizing construction strictly on the basis of supplemental requests?

Secretary BROWN. No; I don't think we are. There is some \$250 million or so in the Air Force military construction budget for 1967, which doesn't have to do with the southeast Asia conflict, and that is going to be authorized, I hope, in the regular budget, and on a line-item basis with all the usual detail.

Mr. HARDY. Thank you, Mr. Secretary.

The CHAIRMAN. Now, Mr. Arends.

Mr. ARENDS. Mr. Secretary, if I were to sum up your testimony at this point, you have said there is an emergency about everything you requested here this morning; is that right?

Secretary BROWN. Yes, sir.

This money was arrived at on that basis.

Mr. ARENDS. Fine.

Let me ask you a question or two in a general way, and I speak somewhat as a man off the street this morning, and possibly General McConnell will want to provide part of the answers to these questions.

How much were we dropping in the way of tonnage, and how many sorties were we flying, say as of December 1965—Air Force; do you know?

Secretary BROWN. 1965?

Mr. ARENDS. Yes, 1965.

Secretary BROWN. It was about 20,000 tons a month, if I remember correctly.

Mr. ARENDS. You think about 20,000?

Secretary BROWN. I have the exact numbers here. Let's look it up.

Mr. ARENDS. Yes.

What were you dropping in entirety?

Secretary BROWN. We have got July through December, that is 6 months, and it was 113,000 during those 6 months, so it works out to just about what I said, about 20,000 a month in the last half of last year.

The number of sorties probably was about, 8,000 or so a month.

Mr. ARENDS. Then it can be expected there will be a step-up in this activity because of these additional requirements?

Secretary BROWN. It depends, of course, on how the war goes.

Mr. ARENDS. Yes.

Secretary BROWN. The plans are this will step up to [deleted].

Mr. ARENDS. Then again as a man on the curbstone, and as the man on the street asks Members of Congress on occasion, "How effective do you think our bombing has been over there, in view of the history in the past, and can we expect something different? Has a pattern been established which will develop as time goes on which will prove more effective?"

I am just a guy on the street today. I am asking these questions. Someone is asking me the same questions. I have some doubt in my mind as to the effectiveness of the thing, not in a critical way, General, not at all; this is beside the point. There are patterns established today. Are there changes in the patterns for the future, or what are we facing?

General McCONNELL. The answer as to whether or not it has been effective: Let me go into three areas we are working in, Mr. Arends.

We will first take the area in North Vietnam. The effectiveness up there is very difficult to measure, because they will be able to transport some supplies [deleted] into South Vietnam, regardless of how much bombing we do.

However, [deleted] that we have had a very profound effect upon the way that they have to go about doing the things which they normally do.

It takes a lot more people, and it takes many more hours. So we have made it very difficult for them out of North Vietnam to supply the Vietcong in South Vietnam, except under the most severe working conditions and circumstances.

The second area is the interdiction of road nets [deleted].

We put considerable amounts of bombs on those road nets to interdict them [deleted]. We now know that it is impossible not to have had a considerable effect on them, because we certainly have torn up their lines of communications, and we have forced them to build new roadways, and when they get those built, then we tear them up, too.

Now, then, the third area is close support of the Army ground forces, the RVN ground forces, and in some cases the Marines. This is done by both the Air Force and the Navy, and also by the Marines.

We know that this has been effective because the people on the ground are able to assess the results in terms of what has been done to the supplies and the facilities that we are able to bomb. Also they have been able to count the bodies of those killed, and we have killed thousands of Vietcong by air action alone.

I think the bombing is effective. We have all kinds of evidence that it is. We have, also, evidence that it is not completely effective in terms of keeping them from moving supplies and some tonnages. [Deleted.]

Secretary BROWN. If I can elaborate a little bit on a couple of these things, Mr. Arends; I think the chief has summarized it very well.

I will add, although we have not prevented the North Vietnamese from supplying regiments in South Vietnam [deleted] we are imposing some limit. Without these attacks on the supply routes, I believe that they would have virtually unlimited ability to resupply.

It has cost them quite a lot to keep up the supply, even at the level that they have, because the estimate is that some tens of thousands of people, 50,000 perhaps, have had to be devoted to keeping the road network up. If those people weren't devoted to that effort a good many of them are military, and might very well be down in South Vietnam now fighting on the ground.

A third point having to do with close support in South Vietnam: Not only do we have testimony from Army commanders as to the effectiveness of the bombing attacks with TAC aircraft and with B-52's, if their endorsements are considered questionable, we also have some evidence from what captured Vietcong say. There has been a team out analyzing the statements made by captured VC and PAVN members, as to what has happened during the last year.

Conditions have been made very much harder for them. Their casualties have gone up. They have to move around. They credit this to a number of things. They credit it to fear and effectiveness of artillery, which is coming in in increasing numbers, and to armed helicopters. But they always mention aircraft first. Aircraft have obviously had a very very large effect on them.

Mr. ARENDS. Mr. Secretary, is there a pattern established whereby this will be a stepped-up activity in North Vietnam now, or are we to believe the papers that little change in bombing patterns are being brought about?

Secretary BROWN. [Deleted] the number of attacks that have taken place since the resumption of bombing of North Vietnam is about the same. They are limited at the moment mostly by weather.

Mr. ARENDS. Of course some of us, as nonmilitary experts we ask ourselves the question once in a while, "Why in the hell don't we go up and bomb out some of these electrical plants and so on and so forth

up in that part of the country, which wouldn't necessitate killing men, women, and children and so on and so forth."

This is hard for the man on the street to understand, too.

Secretary BROWN. [Deleted.]

The CHAIRMAN. Your objective is to kill their interest in aggression?

Secretary BROWN. That is certainly an extremely important objective, Mr. Chairman.

The CHAIRMAN. [Deleted.]

Secretary BROWN. There is a strong feeling on the part of many military people—General McConnell can speak to this—that that would be advantageous.

[Deleted.]

The CHAIRMAN. You have the same things around in your hand, when you recommended that, didn't you?

General McCONNELL. Yes, sir. [Deleted.]

The CHAIRMAN. That is right.

General McCONNELL. And in certain other areas [deleted.]

Mr. ARENDS. Mr. Secretary, could I ask one more question? [Deleted.]

The CHAIRMAN. Let me ask you a question: Listen to this, Mr. Blandford—are your replenishment inventories based on peacetime consumption rates?

Secretary BROWN. No. This supplemental asks for spares and replenishment supplies at a rate commensurate with what we expect to expend during these combat activities.

The CHAIRMAN. So it is not peacetime?

Secretary BROWN. No. The flying hours are higher, and so on.

The CHAIRMAN. All right.

Mr. BATES. What is that in that it is not peacetime, but it is what?

Secretary BROWN. It is based on the actual experience of consumption during these combat operations.

Mr. BATES. What does that mean?

Does that mean they would have to change the pattern again, do you mean the average, the latest or what you anticipate a month from now, or what?

Secretary BROWN. It is based on our prediction of what the consumption will be, as an extrapolation of our past experience.

Mr. BATES. How does that vary from the present rate?

Secretary BROWN. Well, in the case of munitions consumption, for example, we expect ammunition will be consumed at about [deleted].

Mr. BATES. All right. How about in other areas?

The CHAIRMAN. What about black boxes?

General McCONNELL. Well, the thing is, if I might address that, the normal peacetime operation has been in the past for fighter-bomber-type of aircraft to fly 25 hours per aircraft, per month. The more you fly an aircraft, of course, the more maintenance it takes, and the more things wear out.

By increasing the operational rate to [deleted] you still would not be up to what your actual expenditures in terms of attrition and spares would be, because you are operating in an entirely different environment. A lot of the safety factors, for example, over there are not like peacetime factors. We have taken advantage of our ex-

perience. We have applied that to what we anticipate will happen on the average through fiscal 1967. That is how we arrived at our requirements.

Mr. BLANDFORD. Mr. Chairman, I would like to clarify a statement here. You state, "For instance, the C-123 and C-130 aircraft utilizing assault landing and takeoff techniques from unprepared runways in many cases are consuming tires at more than double the peacetime rate."

Now, I will ask General McConnell, since it is strictly a military question, what are your replenishment rates based upon; peacetime consumption?

General McCONNELL. Not any more, sir.

Mr. BLANDFORD. [Deleted.]

General McCONNELL. [Deleted.]

I think that is about right, plus the \$1.7 million which we received earlier.

General CROW. Plus our share of the \$1.7 billion.

Mr. BLANDFORD. There is a big item in here for spare parts. What was your normal inventory in spare parts based upon, the assumption we would go to war—was that the basis?

Don't you always maintain an inventory rate based upon going to war?

General McCONNELL. Yes; we had an inventory rate which was based because I think it was [deleted].

Secretary BROWN. It was [deleted.] It has now been raised to [deleted] tactical sorties.

But the purpose of the inventory is to carry you until the production can catch up with the consumption, and that is what we have done.

Mr. BLANDFORD. That is the point. In other words, you have had a 90- or 120-day, or depending upon what the item is, it has varied from 90 to 120 days, or even 180 in some cases. You have been living off inventories.

Have you had any reduction in your stock funds—prior to this?

Secretary BROWN. Do you mean the WRM?

Mr. BLANDFORD. What happened to your stock funds? How much have they been reduced, for example, in spare parts?

General CROW. We don't run our aircraft spares through the stock fund, Mr. Blandford.

I think probably the best way to get directly at what you are probing into is to address total aircraft spare amounts. In previous years, for instance, 1964 and 1965, before we moved into this buildup, our total spares in the annual budget was on an order of \$600 million. That was toward planning to meet current consumption as well as to establish a WRM.

Now, when we moved into the era of increased consumption in southeast Asia, we approached it from the point of view that in the 1966 budget amendment, in the 1966 budget supplemental, and then in the 1967 budget, we should buy enough items, not only to meet the requirements in southeast Asia, but also to assure that our WRM objectives were met.

Mr. BLANDFORD. That is exactly the point, General.

Let me ask this question, then, to pin it right down. If the North Koreans moved into South Korea tomorrow, and you had to supply

airpower in North Korea to the same extent that you have to apply it today in North Vietnam, would you have adequate supplies on hand for your 130's and your F-4's, including tires, according to this statement?

General CROW. In a general sense I would say "Yes." As to specifics, we might have some difficulties.

Mr. BLANDFORD. Could the aircraft fly? This is really the key to it.

Secretary BROWN. I think the answer is "Yes."

Mr. BLANDFORD. How long could it sustain this rate?

Secretary BROWN. It depends on how long you would want to do it. [Deleted.]

Mr. BLANDFORD. [Deleted.]

Secretary BROWN. We are already using strike sorties in southeast Asia at a greater rate than we ever did during the Korean war, [deleted].

Mr. BLANDFORD. My only point in raising this, Mr. Secretary, is to determine whether this is an adequate amount of money that you are asking for now to carry you into a war that you figure will go to June 30, 1967, and it must be based on the assumption you may also have some problems in other parts of the world.

Secretary BROWN. It is. [Deleted.]

Mr. BLANDFORD. You refer to peacetime consumption rates here. This is what raises the whole issue.

Secretary BROWN. I see.

The CHAIRMAN. Are there any other questions of any other members of the committee?

Mr. Bennett?

Mr. BENNETT. Mr. Secretary, I have not heard this before from you, and very little from anybody else. I heard you say that you wanted—the Air Force position was to phase out the 52's. What is the follow-on bomber that is coming on after this?

Secretary BROWN. The Air Force position is to phase out the B-52's, C's through F's, and replace them with the FB-111A.

The B-52G's and H's will stay in through 1975.

Mr. BENNETT. Is this new plane you referred to essentially the TFX?

Secretary BROWN. TFX, modified with longer wingtips, heavier landing gear, and new avionics equipment.

Mr. BENNETT. Is that the best bomber you are working toward at the present time?

Secretary BROWN. It is the best one we can have by the early 1970's. It is not the only one that is being worked on. We are doing some component work toward a heavy bomber that might replace the B-52G's and H's.

The CHAIRMAN. May I interrupt here?

Mr. BENNETT. Yes.

The CHAIRMAN. That is a very important question.

Therefore, your recommendations, listen to this, General McConnell, to use the TFX as a replacement as a follow-on for the B-52 is only interim and not permanent?

General McCONNELL. It is a satisfactory substitute for the older B-52's, but not a satisfactory substitute for the B-52G's and H's, and not a satisfactory substitute for the AMSA, which is to replace the

B-52G's and H's. What the AMSA will be, I don't know. It will be a newer bomber and undoubtedly will be heavier.

Secretary BROWN. There has been no replacement approved for the B-52G's and H's. The AMSA has not been approved as the replacement.

The CHAIRMAN. Go ahead.

Mr. BENNETT. Is this new plane, this modified TFX, a modified B-52 in all its versions, plane for plane?

Secretary BROWN. The Air Force concluded it would do a better job, plane for plane, than the old B-52's, if they were kept.

Mr. BENNETT. Speaking now if you should build new 52's?

General McCONNELL. No.

The CHAIRMAN. Wait a minute.

I don't want to interrupt, but, Mr. Bennett, it is not better than the one you started building in 1962, I believe.

General McCONNELL. We stopped building the B-52H's in 1962.

Mr. BENNETT. Is it better than those?

General McCONNELL. No, it is not a better aircraft than those. It hasn't got the range, it doesn't have the payload capacity.

Secretary BROWN. It does have advantages and disadvantages compared to the G's and H's. It has a shorter range, a smaller payload capacity, it has higher speed and more maneuverability, and of course, it costs a little bit less. It costs perhaps [deleted] less than those costs when we turned off the B-52 line. How much it would cost compared to new B-52 G's and H's, I don't know.

Mr. BENNETT. We were told it was not a problem. The Great Society was trying to get what was best for our national defense.

Secretary BROWN. You asked on a plane-to-plane basis. I think naturally, under those circumstances, one very expensive plane is better than one much cheaper aircraft. But if you are talking about equal amounts of money—

Mr. BENNETT. I was not talking about money at all; you injected money. I think money has a part to play in it, and I think this is essentially inevitable when you spend a large amount on new social programs, that you can't spend everything you want to on national defense.

I think that is what you are saying.

Secretary BROWN. I didn't say that, Mr. Bennett.

Mr. BENNETT. That is what I interpreted you said, and other things that have been said in this hearing.

Plane for plane you feel like it is a cheaper plane, but it doesn't have all the good qualities of the plan which has been rejected.

In the aggregate, are you going to have enough of these to have an overall striking capability which is better—attack capacity which is better?

Secretary BROWN. Better than what?

Mr. BENNETT. Better than what you now have.

Secretary BROWN. If you take all the aircraft and all the missiles—

Mr. BENNETT. I am not talking about missiles. I am talking only about aircraft, only about bombers now.

Secretary BROWN. I don't think they can easily be separated.

Mr. BENNETT. I can ask the question that way; you are a very highly intelligent individual, and you can answer it and qualify it later, but I

am talking about bombers. I am coming to the conclusion you might not use the missiles. I might come to the conclusion that atomic bombs, gas, and missiles might, because of some political consideration, such as holding back attacks to North Vietnam, would be out of the question. You would have to be back to conventional type bombers. I have the right to ask the question, because these political considerations do come into bearing and they are in the present war.

Secretary BROWN. Yes, indeed, Mr. Bennett. I would say on the whole our bomber strength will be less in 1975 than it was in 1965, and—

General McCONNELL. 1960.

Secretary BROWN. Well, or in 1960.

The effect of this, of course, has to be considered in terms of whether bombers are likely to be used in a nuclear role, or whether they are likely to be used in a nonnuclear strategic war. I think we had very extensive discussion on this with Mr. Hébert's committee. The point you raised was raised there.

Mr. BENNETT. What would be the substitute in a nonnuclear war?

Secretary BROWN. Tactical aircraft, for example, would be a substitute in a nonnuclear war. [Deleted.]

Mr. BENNETT. Maybe I am not thinking of a nonnuclear war with the Soviet Union. I might be thinking about a war in South America, Cuba, or the Dominican Republic. We are not fighting a war with Russia at the moment. We are fighting a very expensive and very blood-consuming war right now.

I am interested in the wars that we fight as much as I am the wars we might fight.

Secretary BROWN. I think that is very well taken, Mr. Bennett. We are fighting such a nonnuclear war now. We are fighting it principally with tactical aircraft. I think we would probably fight any future war of this kind principally with tactical aircraft. I think there may be advantages to having long-range heavy payload bombers that can carry nonnuclear ordnance as well, for use in such wars. I think that is something we are considering very carefully.

Mr. BENNETT. Well, as one Member of Congress, I might say this is one of the most disturbing parts of our national defense. I don't feel any great sense of security when I hear the testimony with regard to the future of the bomber. This gives me a lot of pause, and, frankly, I think decisions are being made improperly.

I am no great authority on the matter, but I think I should express my opinion, because it is my opinion.

To close out, I would like to ask you something about an article I recently read.

The CHAIRMAN. Why don't you ask General McConnell whether he thinks the AMSA is indispensable?

Mr. BENNETT. What is indispensable?

The CHAIRMAN. Whether the AMSA was indispensable.

Mr. BENNETT. I didn't get the word—but is it?

General McCONNELL. What the chairman is referring to is the sometimes controversial bomber which we have named the AMSA, which means Advanced Manned Strategic Aircraft. Our conception of it is that it would be a piece of equipment which could replace, and not only replace, but improve the capability of the last B-52's that we

have in the inventory which in my opinion can serve until 1975, with some work done on them.

When those are gone, or as they go, we should replace them with another long-range high-payload bomber capable of penetrating the enemy's defenses at either high or low altitude, with relative impunity. Therefore, I would say it is indispensable. Exactly how much it is going to weigh, and how many bombs it is going to carry and things of that nature, have not yet been determined. But by the time the B-52G's and H's go out, we should certainly be in a position to replace that inventory with another long-range heavy bomber.

Mr. BENNETT. Wouldn't it be better to go in that direction right now, rather than have a TFX crate put together?

General McCONNELL. You couldn't go in that direction right now, because you could not get an aircraft in time.

Let me explain our position on that, Mr. Bennett.

The position which I took as Chief of Staff, and which the Secretary agreed with, was that we must replace the B-52C through F series, because they are wearing out and we would have had to spend half a billion dollars on them in order to make them capable of lasting up through 1970. I would much prefer to take that money and put it in a piece of equipment that is available and which we can get off the line now.

So I recommended to the Secretary of Defense that he replace these aircraft with the FB-111, to which he agreed.

Now, I also recommended to the Secretary of Defense that we proceed with the development of another aircraft.

The CHAIRMAN. Program definition?

General McCONNELL. Called program definition; yes, sir, contract definition I think it is now, but it means the same thing as you understand it to be, Mr. Chairman.

So what we would have in the inventory a reasonable operating force by 1975. It takes anywhere from 9 to 11 years after you start on an aircraft—we should start on this one now in my opinion—before you have an operating force that is really capable of doing any serious actual damage to the enemy.

You can have some few aircraft in the inventory earlier, but you cannot have an operating force that is capable of real damage assurance against the enemy.

The Secretary of Defense's position is to the effect that we are not yet ready to go into contract definition phase, because we have not exhausted the studies to such an extent that we know exactly what we want.

Those are the only two differences. That is the only difference, as far as I know, between me as Chief of Staff of the Air Force and the position of the Secretary of Defense.

Mr. BENNETT. In other words, you feel we should be going on more aggressively toward this ultimate bomber right now?

General McCONNELL. That is right. I have recommended this to the Secretary of Defense. He has determined we will not at this time. That is, he would not recommend it at this time.

Mr. BENNETT. I would like to address a question to the Secretary: Your statement, I believe, indicates increase in B-52 bombers in

southeast Asia [deleted]. Doesn't this indicate a real need for such aircraft in nonnuclear war?

Secretary BROWN. I think it does indicate that they will be useful in nonnuclear war, and, of course, we plan to maintain 255 G's and H's in the force through 1975. I think the use of the B-52's in the southeast Asia war is a good argument for believing there should be a heavy payload conventional bomber.

Mr. BENNETT. Now, finally I read, and I presume you read in a magazine which has never been called to my attention before, called Ramparts, an article about the experience of special services men, an infantryman, in which he said, in the particular battle that he outlined, he went in great detail about it, that the Air Force thoroughly alerted the hundreds of enemy who were there by their frequent sorties of reconnaissance after their location had been pinpointed by the infantry to the extent that the enemy crowded in on the friendly forces and they all hid there in the woods while they bombed the empty facilities, whereupon the Air Force claimed 250 deaths, and this man said there couldn't have been more than 6 at all, and his own men were terribly in danger.

I presume that article has been looked into.

This man was so disgusted that he quit the Army as a result of this, as I understand it. Has that been looked into, and is this typical?

Secretary BROWN. I have not seen the article, Mr. Bennett, but I have seen accounts of it.

I think this is the same gentleman who said the Special Forces were trained to commit atrocities. I believe that as much as I believe the rest of his story, which is not at all.

Mr. BENNETT. Oh.

I thought myself when I read the story—and I read the story—I didn't read about the story; I read it. When I read it, I thought there were many things in it that were probably untrue, or stretched considerably, but I am not a person that believes just because a man tells an untruth once, he is going to tell entire untruths, and he did go into quite a bit of detail about how they alerted these forces, and it was a total fluke on account of the fact the reconnaissance planes flew over before.

I think you can learn from your enemies. This man is not an enemy of our country—I don't think he is—he may have stretched things here and there. But I was interested in not a sweeping condemnation of him, but an answer as to whether it had been looked into to see whether there was anything to this challenge?

Secretary BROWN. I have not looked into the specific incident. I am not sure it is well enough identified in the story to be able to track it down. I think we should, and we will. I will be very glad to forward you an account of the incident if we can identify it.

Mr. BENNETT. I am chiefly interested in the aspect of whether or not—I am not trying to get anybody court-martialed or get the stripes taken away from them or anything—but I am interested in knowing whether anything like this actually did occur.

A lot of us have been in combat. We ourselves realize we have made our share of errors, and everybody makes mistakes and it is not for the purpose of condemning that I ask this question. I ask only to find

out if it were true, and whether any precautionary efforts have been made against its repetition.

That is all the questions I have.

The CHAIRMAN. Thank you.

We will recognize Mr. Wilson for two short questions.

Mr. BOB WILSON. Thank you, Mr. Chairman.

I was pleased to see you were going ahead with the OV-10; in the 1967 budget you are asking for a considerable quantity. I note you say they are going to take the place of the O-1's, and are you planning to use this airplane not only for spotting but for actual attack?

Secretary BROWN. Well, its principal use will be as a forward air control aircraft.

Now, of course, the initial version carries less ordnance. And in cases where the people who it spots are about to disappear in the woods, it will use that ordnance while waiting for the attack aircraft which it calls in to arrive. Its name is light armed reconnaissance aircraft. That is what it is for, it is for armed reconnaissance. I think it can be useful in a counterinsurgency attack role where the ground defenses are relatively permissive. In other words it would have been useful in South Vietnam in an attack role 2 years ago when the ground-to-air capability of the enemy was much less than it is now. But I think at the moment, right now, it is very limited in its capability for that purpose. Nevertheless, it will sometimes operate that way.

Mr. BOB WILSON. Well, wouldn't it be able to actually carry more ordnance than an armed helicopter could—and you are talking about great reliance on the armed helicopter. This is an airplane that has two missions as well.

Secretary BROWN. I agree with you, this has more ordnance capability than an armed helicopter. My remarks have been directed toward the initial version of the OV-10. We are looking at followon versions for our special air warfare forces that will have increased capabilities.

Mr. BOB WILSON. All right.

The second question is, I notice in your procurement of combat aircraft, you list \$367 million for the SR-71, but these were funds previously available.

Were those available in the regular 1966 appropriation?

Secretary BROWN. That is right. There is no additional money asked for the SR-71 in this supplemental.

Mr. BOB WILSON. You have no numbers in mind at all. This is still development?

Secretary BROWN. No. [Deleted] is the approved force for the SR-71's. And that is paid for largely in the fiscal 1964, 1965, 1966, and I don't think there is much acquisition money in fiscal 1967.

Mr. BOB WILSON. Last year there was great testimony, in fact, just prior to the hearings last year there were statements about the YF-12, which was a terrific new interceptor. We were told last year it had greater range and greater speed than the F-111, and so forth, and then, as you remember, it became an instant bomber, and had great range as a bomber.

Is this the outgrowth of that, the SR-71 is the only thing we are going to build that resembled that original U-2?

Secretary BROWN. The SR-71 is the only mach 3 aircraft based on that technology which is approved for the force. The Air Force has

requested procurement of F-12's, but Secretary of Defense McNamara has not seen fit to approve those. It stays in development status.

Mr. BOB WILSON. Does it actually carry a bomb load, or is it a reconnaissance aircraft?

Secretary BROWN. It is a reconnaissance aircraft.

There is an interceptor based on similar technology and similar design, of which we have three test aircraft. That is still in development. No procurement has been yet decided upon. With respect to a bomber version, a bomber version is feasible. It has not been advocated particularly by the Air Force, nor has it been included in the new inventory.

Mr. BOB WILSON. Thank you.

Mr. Chairman, these were nonprovincial questions; they are not made in my district.

The CHAIRMAN. We are going to meet this afternoon at 2 o'clock, so why don't we recess right now?

I see three things up there. What is wrong with that clock? Why are those three things up there?

That is a 5-minute warning. We have 10 minutes to get over on the floor.

We will be back promptly at 2 o'clock this afternoon, Mr. Secretary.

Secretary BROWN. Yes, sir.

(Whereupon, at 11:50 a.m., the committee was recessed, to reconvene at 2 p.m., of the same day.)

AFTERNOON SESSION

The CHAIRMAN. Let the committee come to order.

Mr. BYRNE, do you have any questions?

Mr. BYRNE. Yes.

This is off the record.

(Discussion off the record.)

The CHAIRMAN. Back on the record.

Mr. BYRNE. General, I have been plagued with these people who have been marching around here in Washington and back home, especially Saturday and Sunday I sat in my office, by the Strike for Peace.

One of the questions they asked was, when we had the moratorium for 37 days, why did we immediately start bombing after the 37 days, when the President was trying to send representatives all over the world securing someplace, sometime, somewhere to get some peace?

I would like to know, in that 37 days, were these people sabotaging, damaging, killing our boys, and who recommended the bombing after the 37 days, the Chiefs of Staff, or the President?

General McCONNELL. The moratorium on bombing for 37 days was against North Vietnam. Our troops were not in contact in North Vietnam. The fighting was still going on in South Vietnam, however. Of course they were receiving supplies over those roads, and the lines of communications which were not being bombed.

The President made the decision to renew the bombing at the end of 37 days. [Deleted.]

The President himself made the decision to resume the bombing.

Mr. BYRNE. Thank you, General.

The CHAIRMAN. Are there any other questions?

Mr. CLANCY. I would like to ask of the jet fighters that have been lost, how many have been lost as a result of the missile firing?

Secretary BROWN. I believe it is five Air Force aircraft.

General McCONNELL. Five Air Force, six Navy, [deleted.]

Mr. CLANCY. How were the others, then, say the 91—how were they lost?

Secretary BROWN. All but about two of those were lost to ground fire, either automatic weapons or antiaircraft weapons. Two of them were shot down by enemy aircraft.

Mr. CLANCY. Now, General, I would like to ask you: What has been your recommendation as far as bombing or not bombing the existing SAM sites in North Vietnam?

General McCONNELL. [Deleted.]

Mr. CLANCY. All right.

Now, has this proved to be effective? [Deleted.]

General McCONNELL. Yes, sir. We have been able to do that. We have had to knock out a few SAM sites, but in most of the instances, [deleted] we haven't had any serious difficulty with the SAM's.

Actually, the SAM's have fired at us over 200 times, and they knocked down a total of about 11 aircraft.

As you know, there are about [deleted] SAM sites now that have been located. We estimate there are [deleted] that have equipment in them at any one time.

Mr. CLANCY. Well, now, are you saying [deleted] are operational, or [deleted]?

Mr. McCONNELL. [Deleted] are operational at any one time. That is the intelligence opinion.

Mr. CLANCY. How far removed is the farthest SAM site from Hanoi, that you know of?

General McCONNELL. I would say the site is a [deleted] miles away from Hanoi.

Mr. CLANCY. All right.

Does this—

General McCONNELL. [Deleted.]

Mr. CLANCY. Do they serve as a deterrent as far as military targets are concerned?

General McCONNELL. [Deleted.]

Mr. CLANCY. That is all, Mr. Chairman.

The CHAIRMAN. Any other questions?

Mr. Stratton.

Mr. STRATTON. Mr. Secretary, or General, I have a couple of questions here.

One question is something that perhaps is not specifically in your bailiwick, but maybe you can give me your slant on this, and that is the question of Chinese participation in this conflict, either overtly or covertly.

To what extent is there Chinese participation in North Hanoi, to what extent is there actual Chinese participation in the operations of the Vietcong, as far as you are aware of it?

Secretary BROWN. [Deleted.] There is a railway that runs from Lo Ki to Hanoi, and another one from Hanoi up to the northeast, to a city whose name I don't remember.

Mr. STRATTON. Kumming?

General McCONNELL. No.

Mr. STRATTON. Kumming is the other way?

Secretary BROWN. The northwest—I am sorry.

There are two rail spurs, and the Chinese apparently have engineer troops helping maintain the railways, and the bridges, in order to run things between southwest China and southeast China—actually the main transportation route runs through Hanoi.

[Deleted.]

Mr. STRATTON. On another subject, Mr. Secretary: There has been an announcement recently that one of the Reserve, Air Reserve squadrons in New York State which has been flying C-97 cargo aircraft on missions as I understand it to Vietnam is being phased out. We had discussion here earlier, I think with the Secretary of Defense, with regard to the C-119's.

Secretary BROWN. Yes.

Mr. STRATTON. I think Mr. McNamara's position was that the aircraft was obsolete, and therefore, for not entirely understandable reasons the whole Air Reserve unit was going to be phased out.

The C-97 squadron operating in White Plains, N.Y. is being phased out. We still have one located in Schenectady, which is engaged in regular missions to Vietnam, and yet we continue to hear rumors that this is going to be phased out.

This to me seems just incredible, how we could eliminate a unit which is undertaking actual airlift missions to Vietnam. I hope you can assure me that this is not going to happen, and that this is all a horrible mistake.

Secretary BROWN. Well, Mr. Stratton, as I mentioned in the letter that I signed out to you but which you haven't gotten yet on this subject, the program is for the C-97's to be phased out. However, the particular unit you mentioned, if I remember correctly, won't be phased out until end fiscal 1968. If it is still operating in support of Vietnam by that time, I think we will either have to find a substitute for it or keep it in.

But in fact, what will happen is, that by 1968, we are going to have so many C-141's and such a much larger strategic lift capability than we now have that all these 121's and 97's which are in the Reserve Forces will supply very, very little in the way of percentage additions to the strategic lift force, so by that time I believe they can be safely phased out.

I wouldn't do it now. I certainly wouldn't do it while they are transporting things to Vietnam.

Mr. STRATTON. Fine. That is what disturbed me.

Now, isn't this true also of the White Plains unit, which is the one that has created the immediate hub-bub, of course.

Secretary BROWN. The total lift capability is what I think we have to look at, Mr. Stratton. The total lift capability is going up very rapidly. And the best way to do that, the best way to augment that, is to take efficient aircraft, 141's, and 130's right now, the C-5's when they come in, and buy a substantial number of them and operate them at a high number of hours per day, rather than keeping in old aircraft which are very much less productive per dollar.

Mr. STRATTON. Well, but my question was, Isn't the unit that you

have phased out also engaged in missions to Vietnam as is the one located in Schenectady?

Secretary BROWN. I am not sure of the specific unit. I know many of these units have done good work. Some of them are being converted to 124's, which will produce a larger capability. But we can't convert all of them. We don't intend to convert all of them to 124's.

The CHAIRMAN. You still have a lot of requirements for 124's, don't you?

Secretary BROWN. Yes, sir.

Mr. STRATTON. In other words, Mr. Secretary, I will accept your testimony that this unit in Schenectady, I think it is the 105, will not be phased out on your plan until the end of fiscal 1968, and if they are still transporting to Vietnam, they won't be phased out then; is that correct?

Secretary BROWN. I will have to check for the record to see whether the 1968 date is right. I remember it just because I happened to sign out the letter a couple of days ago, sir.

(The following information was received for the record:)

PHASEOUT OF THE 109TH ANG AIRLIFT GROUP

The 109th ANG Military Airlift Group at Schenectady, N.Y., is scheduled to be phased out in the fourth quarter of fiscal year 1968.

Mr. STRATTON. May I ask one further question, Mr. Chairman?

Does that mean that the unit itself will then be phased out, or will an effort be made to retain these people in some other capacity?

Secretary BROWN. I think in every case we will try to make room for the people whose units are phased out in the Reserve Forces, but I can't guarantee specific places for them.

Mr. STRATTON. May I ask one more question, Mr. Chairman, of General McConnell?

What is the capability of the Air Force, as you see it, for interdicting the Ho Chi Minh Trail routes [deleted].

General McCONNELL. Yes, sir.

[Deleted.]

We attempt to keep them interdicted, day and night. We operate at night over those roads the same as we do in the daytime, not the same number of sorties, but enough to keep their heads down, so to speak, and prevent any large-scale movements.

When you say we interdicted, Mr. Stratton, we can't interdict it to the extent that they are not capable of getting some supplies through, but we can certainly interdict it, and do, to the extent that it is impossible for them to move large amounts of supplies.

Mr. STRATTON. Thank you, General.

Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Hicks.

Mr. HICKS. I have been advised starting about the 1st of July the airbase at McChord will start receiving the C-141's. Is that aircraft to be used solely going to Korea, or does it go to Vietnam, too?

Secretary BROWN. I believe it will go to Vietnam.

Mr. HICKS. The reason I inquire, I notice in the supplemental you have budgeted for improvements for the C-141 at Norton, and originally I understood there were improvements to be made at McChord to take care of the C-141. I do not notice that in the supple-

mental, and I understood there was nothing in the fiscal 1967 budget either.

Secretary BROWN. I believe McChord can take 141's, and I believe actually two squadrons are ultimately programed for McChord, with the first one going in this summer.

General McCONNELL. It is already budgeted for.

Mr. HICKS. That was deferred, was it not?

Secretary BROWN. There was money in the regular fiscal year 1966 budget.

Mr. HICKS. That was not on the deferred or stretchout?

Secretary BROWN. I don't believe so.

General McCONNELL. No, sir.

Secretary BROWN. I believe that construction has already been done.

General McCONNELL. It hasn't been completed yet.

Mr. HICKS. I know it has not been completed.

General McCONNELL. C-141 required construction was not on the deferred list.

Mr. HICKS. Thank you; thank you, Mr. Chairman.

The CHAIRMAN. Mr. Stafford.

Mr. STAFFORD. I notice in your supplemental request for development, if I read it correctly I notice you have \$27 million in for the A-7A afterburner development.

Secretary BROWN. It is not all for an afterburner development. Governor Stafford, I believe \$7 million of that is for afterburner development. I take it back \$10 million for afterburner development; \$3 million for engineering for a two-place aircraft; \$3 million for flight test for the two-place aircraft; and \$7 million for subsystem change integration.

Mr. STAFFORD. Thank you, Mr. Secretary, for clarifying that. I brought the matter up because the Marine Corps is also asking for money for afterburner development for the same aircraft. I understand, and I wondered if you could assure us that if an effort is being made for an afterburner by both services, if their efforts are being coordinated.

Secretary BROWN. I believe the Marine Corps is asking money for an afterburner version of the A-7A's, but we are the ones that are going to develop the afterburner. They are going to have to do some flight testing with their own instruments, their own avionics, and so on. Without having looked at their request, all I can say is I think the money that they show is for that purpose, rather than for the development of the afterburner itself, which is in our budget. But it is only \$10 million of this \$26.3.

Mr. STAFFORD. Thank you for clearing that up.

The CHAIRMAN. Thank you. Mr. Pike.

Mr. PIKE. Thank you, Mr. Chairman.

Mr. Secretary, what is your personnel view on the desirability of bombing the POL facilities in North Vietnam at this time?

Secretary BROWN. [Deleted.]

Mr. PIKE. Well, has anybody asked you for your opinion on whether this should be done or not?

Secretary BROWN. I talked to the Secretary of Defense about it.

Mr. PIKE. Well, do you recommend it be done or that it not be done?

Secretary BROWN. [Deleted.]

[Deleted.]

Mr. PIKE. Mr. Secretary, this particular procurement is an authorization of about \$2 billion. You got \$581 million in the August supplemental. Have you obligated all of the \$581 million that you got in the August supplement?

Secretary BROWN. I can't guarantee the last percent of it, but I think the answer is "Yes."

Mr. PIKE. When do you contemplate obligating the last percent of this particular supplement?

Secretary BROWN. You mean the fiscal 1966 supplement?

Mr. PIKE. This one we have before us.

Secretary BROWN. We would expect to obligate the very large preponderance of it by the end of this fiscal year. As you know, there is always some carryover. There is in the regular appropriation, too. Not all of the regular appropriation is obligated by the end of the fiscal year.

If we knew which individual items weren't going to be obligated by the end of the fiscal year, we would not ask for them, but it is not possible at this time to know that. I would expect, as I say, for all practical purposes, just about all of this will be contracted for or obligated by the end of this fiscal year.

Mr. PIKE. I will ask a question which I am sure you are very well alerted for. Have any of the items in this procurement been taken out of the regular 1967 procurement?

Secretary BROWN. No, none of them have—except for the purpose of accelerating deliveries. In other words, there were some things in 1967 that are now in the fiscal 1966 supplemental for the purpose of producing the corresponding materiel earlier.

Mr. PIKE. How many of the F-4's were originally—or the F-4's generally, I don't want to fall down on a designation—how many of the F-4's were originally in the fiscal 1967 procurement?

Secretary BROWN. This is a fairly complicated issue. There were 99 F-4E's already in 1966, and they stayed in 1966. There are a certain number of F-4E's in 1967 that have stayed in 1967. What has been accelerated in the F-4D's. Let me try to find the number. The revised procurement has increased fiscal 1966 by [deleted] F-4's and decreased 1967 by [deleted] F-4's.

Mr. PIKE. Now, the [deleted] that you have taken out of the fiscal 1967, are they going to be achieved any earlier?

Secretary BROWN. Yes. In fact, we moved them into fiscal 1966.

Mr. PIKE. I know that you are funding them in 1966, but you've got a question of how many McDonald can produce at any given time, haven't you?

Secretary BROWN. Yes. We have increased the number produced from [deleted] per month to [deleted] per month, so that something like the following will happen: We will have [deleted] more than scheduled of F-4D's by the end of fiscal 1967. [Deleted.]

Let me make this point, Mr. Pike, that moving the money from 1967 to 1966 does not in every case—in fact, in many cases it won't produce the airplanes in inventory before the end of fiscal 1966, but it will produce them earlier in fiscal 1967 than they would have been produced.

Mr. PIKE. Earlier than they would have been produced if they had been left in the 1967 procurement?

Secretary BROWN. That is right.

Mr. PIKE. You are going to get [deleted] out of—of these planes in fiscal 1966, is that correct?

Secretary BROWN. That is right. Actually, of course, that is partly the result of money that we have already committed because an aircraft takes roughly 18 months from the time you obligate the money.

Mr. PIKE. Mr. Secretary, I have a little difficulty understanding this particular ground rule by which you assume that the war is going to end at the end of fiscal 1967. Is that a ground rule for this supplemental procurement only?

Secretary BROWN. It is a ground rule for the fiscal 1966 supplement and the 1967 budget. And you have to assume some ground rule. This ground rule enables us to buy all the long lead time items which will be necessary if things continue that long or longer, and it also enables us to buy the short leadtime items and munitions, to see us through the end of fiscal 1967 period. By the end of this year, if it is concluded that the war is going to last beyond that point, or if it is concluded that there will be a step-up—further step-up beyond what is now projected in the intensity of the war, then additional funds might be required.

Mr. PIKE. Well, is there any real question in your mind that that additional fund will be required?

Secretary BROWN. My opinion is they are likely to be, but that depends on events that haven't taken place yet, and we do have enough time to make that decision later on.

Mr. PIKE. Are you satisfied with a fiscal 1967 procurement that is \$1.299 million less than your fiscal 1966 procurement?

Secretary BROWN. The answer is "Yes," at this point. A lot of the things are being prefunded. For example, attrition aircraft are being prefunded, some of them with the fiscal 1966 budget. Those [deleted] increase that we talked about in F-4's is funded with the fiscal 1966 supplement. But it is to take care of 1967 attrition as well.

Mr. PIKE. When you start talking about their being prefunded, I have a little difficulty reconciling this and with the statement that they are being accelerated.

Are they being accelerated or are they being prefunded?

Secretary BROWN. The fiscal 1966 supplement will allow us to spend the money to buy them at an earlier time. They will be delivered, some of them, during fiscal 1967, when they will be needed as attrition aircraft.

Mr. PIKE. Well—

Secretary BROWN. We calculated the fiscal 1967 attrition, Mr. Pike. We do not want to wait until the end of fiscal 1967 to have those aircraft come into the inventory. Therefore we funded them in fiscal 1966.

Mr. PIKE. Let me ask you this question. If you really believed the war would end at the end of fiscal 1967, would you buy these F-4's?

Secretary BROWN. Yes, I would have to. If not, we would be short on our approved force. Some adjustment might be possible.

Mr. PIKE. You jockey the approved force around from time to time, don't you, Mr. Secretary?

Secretary BROWN. Yes, but we work toward the approved force.

Mr. PIKE. You always work toward this month's approved force. What was your approved force of F-4's in fiscal 1965, say for 1971?

Secretary BROWN. I think it was [deleted].

Mr. PIKE. I was advised, Mr. Secretary, in 1965 you were programming [deleted] F-4 squadrons for 1971. Is that correct or is that wrong in 1965, last year?

Secretary BROWN. Let me try to verify this.

Mr. PIKE. Didn't you in fiscal 1965, cut down the number of F-4 squadrons that you were programming from [deleted].

Secretary BROWN. [Deleted.]

PROGRAMING OF F-4 SQUADRONS

In January 1965 when the fiscal year 1966 budget was submitted to Congress the Air Force had programed [deleted] squadrons of F-4 aircraft during the fiscal year 1971 time period.

Mr. PIKE. So last year you reduced your program of F-4's. Last year what was your program for F-111's?

Secretary BROWN. Ten wings.

Mr. PIKE. Ten wings?

Secretary BROWN. Yes.

Mr. PIKE. Has your program changed on F-111's?

Secretary BROWN. Yes. [Deleted.] That is to balance the increase in F-4 wings, which is to balance the decrease in F-105 and F-100 wings, as a result of attrition. The total number of wings, Mr. Pike, programed for 1971, has not changed, I believe, in the past 2 years. The balance has changed. But if aircraft are attrited, they have to be replaced.

Mr. PIKE. What was your program number of wings for F-111's a year ago?

Secretary BROWN. It was as I said, 10.

Mr. PIKE. What is it today?

Secretary BROWN. It is now [deleted].

Mr. PIKE. Would you translate that into squadrons for me? I have my figures in squadrons.

Secretary BROWN. Well, unfortunately, there is a difference in wing organization, some have four squadrons and some three squadrons, depending on whether they are overseas or here. Do you have it in aircraft? We have it in aircraft. From [deleted].

Mr. PIKE. So you have reduced the number of F-111's programed from [deleted] down to what?

Secretary BROWN. [Deleted.]

Mr. PIKE. And last year you also reduced the number of F-4's programed from [deleted] squadrons to [deleted] squadrons, didn't you?

Secretary BROWN. Well the numbers we have are [deleted] to [deleted] wings, and now we are bring them up to [deleted] wings.

Mr. PIKE. So the increase in procurement rate from [deleted] to [deleted] is necessary in part because last year you cut down the procurement rate, did you not?

Secretary BROWN. No, I don't believe that is so at all. I think only [deleted] of these [deleted] are for force modernization, that is, for

conversion. [Deleted] of the [deleted] are for attrition. And I should point out again, Mr. Pike, that the total number of aircraft in the approved above-the-line force; that is, aside from training aircraft, which are very fortunately going to be increased by [deleted] is [deleted] in 1971. Last year and this year, no change.

Mr. PIKE. Total number of aircraft?

Secretary BROWN. Total number of above-the-line aircraft, yes, sir.

Mr. PIKE. All right. But last year when he was talking to us, Mr. McNamara said the F-111 was twice as effective as the F-4, and they were going to replace them on a [deleted] basis.

Secretary BROWN. You are thinking of the aircraft carrier version, Mr. Pike. He never said it about TAC, Tactical Air Command Forces. I think the only statement that has ever been made of that kind is in the Point Defense rolloff of an aircraft carrier.

Mr. PIKE. Then you are saying that the Air Force deems the F-4 and the F-111 equal?

Secretary BROWN. No, I didn't say anything of the sort. I said the total number of aircraft in the force has remained constant.

Now what has happened is that we believe that a mix of more F-4's, some A-7's, and fewer F-111's are on the whole a more cost-effective force.

Mr. PIKE. You are moving your procurement of F-111's down and your procurement of F-4's up?

Secretary BROWN. And A-7's up. But we are making one further change which I mentioned but should mention again because I think in many ways it is the most important. We are increasing the percentage of training and support aircraft from 12 percent of the above-the-line force to 25 percent of the above-the-line force. This makes the difference between being able to fight a conventional war over an extended period of time and not being able to do so.

Mr. PIKE. Mr. Secretary, in connection with this cost effectiveness, the Air Force has just conducted a project or an investigation known as Project Sparrowhawk, in which they have compared, I don't know how much the cost got into this, but the effectiveness got into it pretty well. They compared the F-5 and the F-4 and the A-4. What was the result of that study?

Secretary BROWN. I am not aware of the result, Mr. Pike, and I am not sure it has been finished.

Mr. PIKE. I am told there are three volume's worth of paper.

Secretary BROWN. If I remember the project correctly, Mr. Pike, it had to do with the use of these things in an air-to-ground role.

Mr. PIKE. An A-4 in an air-to-air role?

Secretary BROWN. That is why I am not sure the A-4 is in it, Mr. Pike.

Mr. PIKE. Well there is something about it in our R. & D. backup book. I thought that the A-4 was in it.

Secretary BROWN. Let me look at it.

Mr. PIKE. But you are not familiar with any—

Secretary BROWN. I am not sufficiently familiar to make any statement about it.

Mr. PIKE. All right. Are you familiar with the request from your predecessor for the purchase of [deleted] F-5's back in June?

Secretary BROWN. Yes; I believe that such a document may have been sent. But I think it was really a part of a more general question of adding to the tactical force. There were a large number of proposals, of which the F-5 was one, F-4 was proposed at one time or another.

The CHAIRMAN. The F-5 is made by Northrop?

Secretary BROWN. By Northrop, Mr. Chairman.

Mr. PIKE. Didn't Mr. Zuckert request the procurement of [deleted] F-5's for South Vietnam?

Secretary BROWN. I know there was an air staff request for this, but I am not sure whether the Secretary of the Air Force sent it forward.

General McCONNELL. I can answer that question, Mr. Secretary.

Secretary BROWN. Go ahead.

General McCONNELL. We made a proposal to the Secretary of Defense in which there were several different aircraft and amongst them was a recommendation for [deleted] of F-5's I think, which would be [deleted] plus attrition.

Mr. PIKE. Not F-105's.

General McCONNELL. Not 105's, F-5's.

Mr. PIKE. Believe me, it wouldn't have been 105's.

General McCONNELL. The whole exercise was returned by the Secretary of Defense. He said our rationale behind the procurement of all of this equipment was not satisfactory to him and for us to do it over again.

Mr. PIKE. When you did it over again, General McConnell, did you use it in connection with a—or was it framed in context with a war in Vietnam, or did they make you do it in context with a 10-year war in Europe with something like [deleted] worth of combat in it?

General McCONNELL. No. We did it in the context of what we should have as an objective force considering the contingencies we might have to face [deleted] and the situation which we already face in Vietnam.

Mr. PIKE. So in June of last year it was the conclusion of the Air Force that they should have these F-5's, and the Secretary of Defense said he disagreed with them; is that correct?

General McCONNELL. He disagreed with the whole study. He didn't agree with any of it, including all the other equipment we had in it. The study was sent back to us; we had to do it over again. As a result of doing it over again, we came up with a different force structure.

Mr. PIKE. When you had to do your study over again, when the Secretary of Defense told the Air Force to do their study over again, did they tell you how to do your study?

General McCONNELL. No, sir; they did not tell us how to do it. We established our own parameters.

Mr. PIKE. Did they tell you how to do it the first time?

General McCONNELL. No.

Mr. PIKE. How did you know how to change it in order to come up with the right results?

Secretary BROWN. We didn't change it to come out with any preconceived result, Mr. Pike. We redid the study; we examined the effect of ground-to-air, air-to-air, and air-to-ground attrition. We examined a large number of different aircraft. We measured the re-

sults in terms of ordnance delivered, aircraft shot down, targets killed.

Mr. PIKE. Did you include in the latter study any cost for the attrition replacement?

General McCONNELL. Sure.

Secretary BROWN. In the sense that the attrition aircraft were measured and were one of the outputs of the study, yes.

Mr. PIKE. But did you put into the study—was one of the items in the study the cost of replacing the aircraft which were lost?

Secretary BROWN. No. The answer is, "No," because the model by which the study was done, Mr. Pike, included [deleted] of combat, and therefore—

Mr. PIKE. It was [deleted] of combat, and it was a 10-year model, was it not?

Secretary BROWN. No. No. No. I think what has confused you is, it was a 10-year costing. That is, it was to buy the force and keep it for 10 years, and then fight it for [deleted.]

[Deleted.]

General McCONNELL. Under heavy attrition.

Secretary BROWN. The attrition was quite heavy.

Mr. PIKE. I was advised the attrition was heavy, and there was not any cost put in for replacing it.

Secretary BROWN. The number of aircraft that you could buy during [deleted] would be rather small. It would not be a particularly realistic way of doing the study to do what you imply we should have done.

Mr. PIKE. Well, of course, the number of aircraft you can buy in 1 year really is very small, because it takes [deleted] months to get them going.

Secretary BROWN. Right.

Mr. PIKE. To produce them.

Secretary BROWN. Right.

Mr. PIKE. But that doesn't mean you don't have to replace the aircraft which are lost in that [deleted].

Secretary BROWN. Of course not. And the purpose of the study was not to decide how many aircraft to buy for attrition replacement. The purpose of the study was to compare the aircraft in a combat situation.

Mr. PIKE. Mr. Secretary, in the backup books for the R.D.T. & E. for the Air Force, it says this:

Project Sparrowhawk was conducted to evaluate and compare performance of Air Force F-5's, F-4's, and Navy A-4's, and to develop data for potential modifications.

I am a little surprised that you can't tell us anything about the results of that study.

Secretary BROWN. It is not in the fiscal 1966 supplement backup book. Is that the fiscal 1966 budget?

Mr. PIKE. This is the 1967 one, but this talks about a project which is all done.

General McCONNELL. I don't remember ever comparing those three.

Secretary BROWN. I don't remember the Navy A-4 in this context—(Special study on performance of F-4's, F-5's and A-4's).

Mr. PIKE. Here is what they are talking about in their fiscal 1967 R.D.T. & E. They say fiscal year 1965, and prior accomplishments, under the title of "Close Support Fighter."

This program is an outgrowth of an emergency modification program initiated in March 1965 to improve tactical support in the south-east Asia area. Project Sparrowhawk was conducted to evaluate and compare performance of Air Force F-5's, F-4's and Navy A-4's, and to develop data for potential modifications.

Now, if they have gone through all this, and they listed—if the Air Force lists it as one of its accomplishments, in 1965, I think the committee should be able to get some information on what this study showed.

Secretary BROWN. We will be glad to supply it to you, Mr. Pike.

The CHAIRMAN. You know something about it, don't you?

General McCONNELL. I remember a study which we did, Mr. Chairman. We took the F-5, the F-4C, the A-7, and the A-6. I don't specifically remember the A-4 in it at all. Those are the four that I do remember. We made excursions to determine which would come out as being the most cost effective aircraft. Whether we would have to modify an aircraft we already had in production, or whether it would be best for us to get a new aircraft.

The CHAIRMAN. You just let us know the result of this thing. What Mr. Pike is reading is supposed to be fait accompli.

Secretary BROWN. It is. I am quite sure it is a different thing from what General McConnell and I have been talking about. It sounds to me as if what Mr. Pike is talking about was a study, and perhaps some experiments made at Eglin Field to determine what changes might be made in each of these aircraft to make the delivery more accurate and so on. We will be glad to supply the results.

(The following information was received for the record:)

SPECIAL STUDY ON PERFORMANCE OF F-4's, F-5's, AND A-4's

The Sparrow Hawk test was performed to obtain comprehensive qualitative data on the capabilities of the F-4C, F-5A, and A-4C aircraft to perform the tactical air missions of close air support and interdiction in a permissive environment. The test was not designed to compare one type of aircraft against another.

A classified résumé is being furnished the committee.

Mr. PIKE. Part of the study as I understand it involved shipping, I think, a dozen F-5's out to Vietnam.

Secretary BROWN. They are still out there. That is the Skoshi Tiger.

Mr. PIKE. That is the Skoshi Tiger and that was a followup to it?

Secretary BROWN. That is right.

Mr. PIKE. When we go into this procurement, where we are procuring all kinds of airplanes, I should think you would be able to tell us something about the results of a study designed to tell us which airplanes were effective.

Secretary BROWN. I am sure we can, Mr. Pike, and I am sure we will. The results obtained in Sparrow Hawk, as I now read it, and the results that will be obtained in Skoshi Tiger, are really inputs into the kind of study that we did in order to make a force structure decision. They will tell you how often you can sortie the aircraft, what the accuracy of delivery is, what their attrition is likely to be, and so on. We can provide those results to you.

Mr. PIKE. General McConnell, on May 3 last year you sent out a paper on the subject of air superiority to almost everybody in the

Air Force, as I read the list of addressees. Have you ever done a similar paper on the subject of close air support?

General McCONNELL. I do not recall whether we sent one out to all the addresses or not, but we have done a similar study on close air support.

Mr. PIKE. You recall this document on the subject of air superiority that bore your signature?

General McCONNELL. Yes, sir; I remember it.

Mr. PIKE. In it you said this:

If political sanctuaries are permitted in the air battle, a large share of combat will be air to air, at times and places of the enemy's choosing. Thus, depending upon the effectiveness of air cover, aircraft on strike missions near a sanctuary will require the ability to drop their external ordnance and survive in air-to-air combat.

How do you reconcile that statement with the procurement of A-7's? Do they have the ability to survive in air-to-air combat?

General McCONNELL. The study we made with respect to the A-7's and all of the other fighters we were looking at that time, was for the specific purpose of coming up with a ground support capability in a permissive environment which had either been gained by air superiority or a permissive environment such as we have now in southeast Asia because of the political situation which obtains. In that study the survivability of the A-7's was just about the same as the F-5. I think the F-5 survived just a little bit better than the A-7 did. But in terms of ordnance deliverability in close support of ground forces the F-5 did not have the capability of the A-7.

Therefore, we composed a force so that we would have the capability to gain superiority in the air with aircraft such as F-4's, F-11's, and while achieving that superiority we would be able to give close ground support to our troops with the A-7, which was the best aircraft we looked at for that purpose in a permissive environment. In making this study which constituted [deleted] with several parameters about it, survivability of the A-7 was very little less than that of the F-5. It was considerably less than the F-4 model.

Mr. PIKE. You have gone back to the study between the F-5 and the A-7.

General McCONNELL. A-7 and A-6 and other aircraft.

Mr. PIKE. I am asking you whether the A-7 has this ability which you say will be required to drop ordnance and survive in an air-to-air combat.

General McCONNELL. It can't survive in an air-to-air combat such as a more modern aircraft can, such as the F-4C or the F-111.

Mr. PIKE. Can it survive?

General McCONNELL. It can survive by getting on the deck and running.

Mr. PIKE. All right. I would like to direct this again to General McConnell. What experience do we have with F-4's in air-to-air combat against the Migs?

General McCONNELL. We shot two down with F-4's.

Mr. PIKE. Have you ever shot any F-4's down with F-4's?

General McCONNELL. Not that I know of.

Mr. PIKE. Wasn't a SIDEWINDER missile launched from an F-4 which shot down another F-4?

General McCONNELL. I can't answer that question. It was not an Air Force airplane involved in the alleged incident.

Mr. PIKE. All right. [Laughter.]

That gets me back to the Secretary's statement. When you say that you have found, Mr. Secretary—I want to get your exact language here—you have in your R.D.T. & E. \$10 million to initiate development of a tactical strike fighter version of F-4 aircraft, because positive target identification is a problem. It sometimes becomes difficult to attain a missile firing position in certain air-to-air combat situations. When did you learn this?

Secretary BROWN. Are you asking about me personally?

Mr. PIKE. Well, when did the Air Force come to this conclusion?

Secretary BROWN. Oh, I think we have known this for several years. [Deleted.]

Mr. PIKE. Well, at the moment you say, you go on to say, this places a real premium on close-in maneuvering capability, aircraft performance, and the availability of discriminatory weapons, such as a gun.

Are you telling us that you built your air-to-air superiority plane without having a gun on it?

Secretary BROWN. Well, we put guns on the F-4's. [Deleted.]

Mr. PIKE. When you say you put the guns on the F-4's, you are saying that they were built not to carry guns?

Secretary BROWN. That is right, the original Navy design didn't have a gun, Mr. Pike.

[Deleted.]

Mr. PIKE. One last question, Mr. Chairman.

General McConnell, would you give us a comparison between the availability of A-7A's and of F-5's for Vietnam?

General McCONNELL. We do not have A-7A's yet available. We won't have any A-7A's until [deleted]. The availability of the F-5's, if we wanted to increase the production line and/or take them out of the production line which we now have for MAP—as you know, they are coming off at the rate of about [deleted] a month. So obviously they are certainly more available at the present time for operations in Vietnam.

Mr. PIKE. Mr. Chairman, I apologize. May I have 2 more minutes?

The CHAIRMAN. Go ahead, 2 more minutes won't hurt.

Mr. PIKE. Mr. Secretary, you say we have conducted more—we are conducting more sorties in South Vietnam than we conducted in Korea?

Secretary BROWN. Yes, sir. It is close, but I think we have more attack sorties in Vietnam than Korea.

Mr. PIKE. Are we dropping more bombs—tonnage?

Secretary BROWN. Yes.

Mr. PIKE. Is it actually true we have dropped a ton of bombs for every Vietcong?

Secretary BROWN. Let me see—we have probably dropped 200,000—yes, I think it is close. Maybe we have only dropped half a ton, but, as you know, we probably also fired 100 bullets for every Vietcong. I don't know how many—

Mr. PIKE. Are you talking about the Air Force?

Secretary BROWN. I am talking about the ground forces in the case of bullets.

Mr. PIKE. How many bullets do you suppose the Air Force has fired to every Vietcong?

Secretary BROWN. One thing is clear: neither the Army nor the Air Force has hit them all.

Mr. PIKE. With an approximate droppage of a ton of bombs for every Vietcong that there is, you still feel that our air support operations over there have been superb?

Secretary BROWN. Yes, sir.

Mr. PIKE. That is all.

Secretary BROWN. And I believe our ground operations have also been very good.

The CHAIRMAN. Are there any other questions?

We want to get to this Milcon. Are there any other questions?

I want to finish the front row first.

Mr. Walker?

Mr. WALKER. No questions.

The CHAIRMAN. Wait a minute, Mr. Ichord. Go ahead, Mr. Ichord.

Mr. ICHORD. I get a big kick, General McConnell, when I see you high-time pilots, see the beaming smile of affection that comes over your face when you talk about finding a new use for the old C-47, because all of you have probably spent some time in a C-47. You have a great deal of affection for it. Aren't these C-47's, though, when you put the Gatling gun on it, and use it for—what exactly is the use of it, the C-47?

General McCONNELL. On the C-47 we stick three Gatling guns out of the windows on the left-hand side. They are fired simultaneously by the pilot who looks through a sight which we have made out of an old fighter sight. We used to have optical sights in the fighter aircraft. Those guns can shoot 6,000 rounds per minute each. They have gunners behind them so they can be reloaded immediately.

The pilot of the aircraft can, by putting his wing down on what we used to do as a "pylon 8," he has very accurate control of that fire. He can put it practically wherever he wants it. It has turned into a terrific weapon for the purpose of killing Vietcong, if you can find them.

Mr. ICHORD. How many missions of the C-47's have gone out?

General McCONNELL. How many have gone out?

Mr. ICHORD. Yes.

General McCONNELL. [Deleted.]

Mr. ICHORD. How many planes have you lost?

General McCONNELL. Two; one shot down and one crashed.

Mr. ICHORD. Of course this is a pretty permissive environment over there?

General McCONNELL. That is right.

Mr. ICHORD. You don't have any enemy air, and you have very little antiaircraft fire?

General McCONNELL. In South Vietnam?

Mr. ICHORD. In South Vietnam I am speaking of.

General McCONNELL. Yes.

The CHAIRMAN. We can sure use the Wright brothers now, if we could get them?

General McCONNELL. Yes, we sure could. I have no apologies to make for our use of the C-47's; I think they have done a good job over there and are still doing a good job by [deleted].

The CHAIRMAN. I am glad you do not have any apologies, you can't tell what will happen in warfare, can you?

General McCONNELL. That is right, sir.

The CHAIRMAN. Go ahead, Mr. Ichord—is your production schedule keeping up to what you expect to use them for?

General McCONNELL. [Deleted.]

The CHAIRMAN. The production line of the planes is no bottleneck.

General McCONNELL. No bottleneck on the planes.

Mr. STAFFORD. Will the gentleman yield?

Mr. ICHORD. I yield to the gentleman briefly.

Mr. STAFFORD. Northeast Airlines is about to dispose of 18 DC-3's. That will take care of the production line bottleneck.

The CHAIRMAN. Let's go.

Mr. ICHORD. General—

The CHAIRMAN. Did you ever think about using the C-46's?

General McCONNELL. We don't have many more C-46's.

The CHAIRMAN. You are doing contracts with them?

General McCONNELL. I beg your pardon?

The CHAIRMAN. You are doing contracts with them?

General McCONNELL. Yes, we are contracting for airlift with them within the United States.

The CHAIRMAN. Command Airlift?

General McCONNELL. The contracts under the Log Air program include C-46 aircraft.

Mr. ICHORD. This morning, General, you testified as to your views as to the need for a follow-on bomber. I don't want to call up any old "sleeping dogs," but a number of years ago several people in the Air Force were trumpeting the B-70 as the follow-on bomber. I don't hear anything about that plane any more. Is it true, General, that after taking a look at the B-70, that this just "ain't" the plane you have in mind?

General McCONNELL. The B-70, in my opinion, was too far ahead of the state of the art to make it at that time, or possibly even to make now, if you are going to use it in numbers in warfare. It is too complicated a piece of equipment. I just don't think that it had—I don't believe the state of the art was up to making an aircraft in numbers that you could put in the inventory and operate within a degree of reliability. In addition to that it had no low level capability.

Mr. ICHORD. What exactly do you have in mind as a follow-on bomber?

General McCONNELL. Well, we don't have in mind a 3.0 mach, which means it would have to be made out of titanium—We are proposing an aircraft built with current manufacturing techniques. That is one of the problems we had with the B-70. It was the first one we tried to make with titanium and honeycomb steel. We had quite a problem with it. I have in mind an airplane that would do about 2.5 mach that has intercontinental range unrefueled, that will carry an extremely high payload in terms of nuclear weapons, and can be used also to carry a good payload in terms of conventional weapons.

It will be able to penetrate the defenses we think will be there in 1975 to 1985.

Mr. ICHORD. That was the recommendation that you made to the Secretary of Defense?

General McCONNELL. Yes, sir; that is right.

Mr. ICHORD. And you haven't gotten any action, he hasn't acted upon that recommendation?

General McCONNELL. The Secretary of Defense says that in the event it should be his opinion we are required to replace the B-52G's and H's that we could still get this replacement without going into a contract definition phase this year.

Mr. ICHORD. Thank you, Mr. Chairman.

The CHAIRMAN. Thank you.

Now, any questions down this way?

Mr. SCHWEIKER. No.

The CHAIRMAN. Excuse me, Mr. Bates.

Mr. BATES. I have just a couple of questions, Mr. Chairman.

Mr. Chairman, I must say again this information that has been related to us this year and last year in these hearings in respect to airplanes is pretty distressing when we consider in this advanced stage in time that we have got to use airplanes that were outdated years ago, or in the case of the TFX, to use a plane that is not as good as one in which we discontinued the lines in 1962.

So we had to have recourse to the Sky Raider, because we had nothing else to use.

Now, Mr. Chairman, one of these days we might have to fight an enemy that is bringing his stuff up to date. And it is this kind of stuff that really disturbs me. Sure, we can use it. General McConnell, you are going to do the best you can with what you have. You are a good soldier. Maybe we won't always have this kind of an environment in which we find ourselves today so any jury-rig affair can be used. I don't like to send our men out there either today in the C-47, even with a Gatling gun out the window. Many other planes have been around here for years, to take the very place for this purpose for which the C-47 is now being used today. But it is still in R. & D., or a decision has not been made on it, like the AMSA.

Do you want to say something, Secretary Brown?

Secretary BROWN. The AMSA is not going to do the C-47 job, Mr. Bates.

Mr. BATES. Nor is the B-52?

Secretary BROWN. No.

Mr. BATES. I am talking about the three planes I mentioned. All of them are throwbacks to developments of two decades ago and here we are today—with the C-47, sure.

Secretary BROWN. I can't think of anything in design that could do better what the AC-47 is doing. It is so specialized for the use that I don't think it is worth developing another airplane for that purpose. You use what you have for a special use.

Mr. BATES. We are talking about a wide variety of things that could give support, either from an armed helicopter or something. We have been talking about it for years in this committee. We were talking about, if you want to bring it up to date, referring to your AMSA. We have been trying to get something along that line. Gen-

eral McConnell said this morning, if you want to get into an argument about this, this is what we want, we can provide this. But all I am saying is it is distressing to see today we are committing men to battle, using things that were developed 20 years ago or 30 years ago practically in some cases. Sure, it is the best. And we will get along with the TFX.

Secretary BROWN. Again about the AC-47, Mr. Bates, it is up there as a platform. It is a convenient platform——

Mr. BATES. It is a platform I am glad I am not on.

Secretary BROWN. I would rather be on it as a platform above, where they couldn't reach me with guns, than any platform I can think of, because it is a safe platform. The new development actually is the introduction of the machineguns.

Mr. BATES. I understand that.

Secretary BROWN. I wouldn't be put on any other platform. I don't think you could do this job—as you say, you couldn't do it with a B-52 or an AMSA. A C-130 would do it.

Mr. BATES. I wasn't trying to relate these things in terms of utilization. I was relating them in terms of antiquity. This is the point I was trying to make.

Secretary BROWN. What is old is not necessarily bad, Mr. Bates. I am enough of a conservative to believe that.

Mr. BATES. What is that?

Secretary BROWN. I am enough of a conservative that I believe that.

Mr. BATES. Let's get off that subject for a minute.

Now this morning you indicated the TFX is going to be cheaper than the B-52?

Secretary BROWN. Well, a prorated share of the R. & D.

Mr. BATES. Is this going to be your actual cost out of the production line, or is this going to involve the allocation of R. & D. costs, et cetera?

Secretary BROWN. No; this is the total program cost.

Mr. BATES. When you say "total program," do you mean all of your R. & D.?

Secretary BROWN. Yes, but not very much.

Mr. BATES. You are spreading all of these initial costs of your TFX into your Navy, into your Air Force, into your bomber, et cetera?

Secretary BROWN. Yes. One can compare the two things also just by taking the average production cost, and again I think——

Mr. BATES. What would you expect that to be eventually?

Secretary BROWN. For which, the F-111, Mr. Bates?

Mr. BATES. Yes.

Secretary BROWN. The bomber would be about [deleted] million dollars. The number that I remember as being about [deleted] million dollars is the airframe plus the engines plus the avionics—the flyaway cost is about [deleted] million dollars.

Mr. BATES. Exclusive of R. & D.?

Secretary BROWN. Yes.

Mr. BATES. What was the B-52, what was that, 8 million?

General McCONNELL. \$9.7.

Secretary BROWN. Is that flyaway?

General CROW. That is comparable.

The CHAIRMAN. If you added into that cost the delivery of a bomb from Guam [deleted] taking into consideration the refueling and the inventory required for that—how much would that cost?

Secretary BROWN. You might need two tankers for the F-111. You might only need one for the B-52.

The CHAIRMAN. So the delivery cost would be higher than the TFX?

Secretary BROWN. I am not sure it would higher, but it would be close.

Mr. BATES. Do I understand the figures a moment ago were comparative costs for flyaway off the line, not inclusive of R. & D.?

Secretary BROWN. Not inclusive of R. & D.

Mr. BATES. Are these comparative?

Secretary BROWN. Those are comparable; yes, sir.

Mr. BATES. We might sell some of these to the British?

Secretary BROWN. We have a sales agreement with the Australians already. [Deleted.]

Mr. BATES. Mr. Healy will tell you about that. Is this a [deleted] dollar price tag on those?

Secretary BROWN. It is actual cost?

Mr. BATES. This is straight, no loans, no grants, no nothing?

Secretary BROWN. I am not sure of that. I think there is a credit involved.

Mr. BATES. There usually is. I will get off that for a moment. The next question I have is this: Does this supplemental submission here add up to your total needs and requests as of now, taking into consideration, of course, fiscal year 1967 requests? Do you have anything else in addition, or does this fill your needs as you see them now through fiscal year 1967—this plus what is coming up?

Secretary BROWN. This plus fiscal 1967 fulfills the needs that we can foresee, but this is according to certain ground rules which I should repeat. One is that if the war continues past fiscal 1967 we are going to need some money in fiscal 1967 beyond what we have programed—additional attrition aircraft, for example.

If the intensity of conflict increases, so that we force deployments beyond what we have here, and they are required, then we will need additional money—that is, beyond what we have programed.

Mr. BATES. Your programing is in excess of your present level?

Secretary BROWN. Yes. [Deleted.]

A third thing that could change things is we may not have calculated the consumption of munitions exactly right. We could be off by 10 or 15 percent. You can't really calculate these precisely.

Mr. BATES. Let me ask you on that point with respect to what we are doing today. Is our military activity now in Vietnam being limited at all in any degree—serious degree—because of our inventory conditions?

Secretary BROWN. No.

General McCONNELL. Not in my opinion.

Secretary BROWN. The Chief was out there in October; I was out there in January, and although there are always local shortages of something that the people might prefer, they have always got something that can do the job and the missions have all gone and all been effective.

Mr. BATES. But there is no serious problem either with respect to the delivery system or the weapons?

Secretary BROWN. Not in my opinion.

Mr. BATES. The military operation is not being curtailed for that reason?

General McCONNELL. That is right, Mr. Bates. [Deleted.]

[Deleted.]

Mr. BATES. Are the 750-pound bombs used from bases in Vietnam?

Secretary BROWN. Yes, there are 750-pound bombs there.

Mr. BATES. Is it true you are flying those into Vietnam from the Philippines?

General McCONNELL. No, not to my knowledge. They are being delivered by ship.

Mr. BATES. I know they were. But are they at the present time being flown there? Will you check that for the record?

Secretary BROWN. Yes. I know of no such example, but I will check that.

Mr. BATES. Mr. Secretary, one of the things that disturbs us here is the same problem that arose a year ago, and that is the question just where are we going. Now a year ago we talked about 23,000, that was our level. All of a sudden we find out we have mushroomed up, overnight [deleted]. Now we picked up this secret document here, supporting the information you have in this presentation and [deleted].

General McCONNELL. Yes.

Secretary BROWN. Yes, sir.

Mr. BATES. So here we are not only going from 23,000 or 500 advisers in Vietnam, up to 200,000, [deleted] ground air troops. [Deleted.] I haven't had any of this discussed with me. We start out with just a small advisory mission over there, and all of a sudden it blossoms up, and here we are today—I never had the slightest idea in the world that we were going to go to this kind of a degree [deleted].

[Deleted.]

Mr. BATES. [Deleted.] This is not for operation; this is for construction.

Secretary BROWN. You can't operate the aircraft without the airbases.

Mr. BATES. I am talking about dollars, Dr. Brown. I understand that statement you just made. I understand that.

Secretary BROWN. Yes.

Mr. BATES. I will repeat my statement. This is not for operations.

Secretary BROWN. Right.

Mr. BATES. This is just for construction [deleted]. This is an awful lot of money. It represents a projected effort of considerable size.

Secretary BROWN. You are right. The total, of course, we are asking for is \$324 million for construction.

Mr. BATES. How much?

Secretary BROWN. \$324 million. We are actually asking for \$274 million in Air Force military construction, but we are counting on getting \$50 million out of the \$200 million for the Defense agencies.

Mr. BATES. I understand that. [Deleted.]

Secretary BROWN. Well, in my opinion putting much more money in fiscal 1966 than is in there is not going to get us anything quicker, because there are limitations on the number of people who you can move in.

Mr. BATES. All right. But that doesn't mean it is not needed, nor does it mean eventually that is where we are going. That is what I am talking about at the moment.

Secretary BROWN. I wouldn't rule out that possibility at all, Mr. Bates. I think this is our estimate of what we see now as required to do the job.

Mr. BATES. [Deleted.]

Secretary BROWN. I think that this really is something that goes far beyond my responsibility, Mr. Bates.

Mr. BATES. [Deleted.] Is this the road we are going down now?

Secretary BROWN. [Deleted.]

Mr. BATES. As I indicated a moment ago, Mr. Chairman, my interest is trying to determine just what responsibility we have assumed, and how far we are going to go, so that we have an appreciation of the problems that confront us. A year ago, as I say, our problems over there, were what we assumed were very small, and we were to go no further than just 23,000. That was the figure given to us specifically, even when we advocated more. We were told this is as far as we were going to go.

That is the reason why I am asking the question now. Here we are coming up with a quarter of a billion more dollars just for construction alone. [Deleted.]

Secretary BROWN. Well, Mr. Bates, these large amounts of money, large deployments of troops and of aircraft and the Naval Forces are in the present judgment of the Secretary of Defense, the Secretary of State, and the President what is necessary to meet the increased threat. The threat, of course, has increased enormously during the past year. Additional deployments of Vietcong regiment, hard-core regiments, of regular forces of the North Vietnamese have put much more pressure on South Vietnam. [Deleted.]

The CHAIRMAN. [Deleted.]

Secretary BROWN. These are responses to those things.

As you know, there is a large variety of opinions in this country as to whether their responses are much too large, or much too small. They are the responses that the President has chosen in his judgment as being the correct level of response, and I support that program, and I support that judgment.

Mr. BATES. Yes, but what I am trying to find out as far as I can, specifically what that judgment is. How far does that judgment go?

We can understand it just in a classical concept, fighting against communism, but if we are going to defend all of this territory over there, and to what degree we are going to commit troops, this is information I think this committee ought to have, so as we embark upon a new program of a quarter of a billion dollars in construction alone, I think this committee ought to have that information to the Nth degree we can have it. That is all I am trying to say.

General McConnell, do you feel [deleted] that the B-52 will be sound enough as far as long-range bombers are concerned until the FB-111 comes off the line, or if we come through with an AMSA by 1975 or so, that the gap will be filled, there will be no holes left in there?

General McCONNELL. I believe it will, sir [deleted]. I think the bomber gap will be filled if the FB-111's are produced on schedule, and

if we have an aircraft which will supplant the B-52 at the end of its useful life.

Mr. BATES. This is the last question, Mr. Chairman: Is it true there are Chinese or Russian fishing boats off the Philippine coast who send word to Vietnam every time our B-52's take off.

General McCONNELL. [Deleted.]

[Deleted.]

Mr. BATES. That is all I have. Thank you.

The CHAIRMAN. You know it is a sad commentary. Originally we had a separate Air Force. I was never in thorough accord with a unification. I favored a separate Navy, separate Air Force, and separate Army, originally, because I thought you ought to all do your own business. But it is a sad commentary, here it is the 15th of February 1966, and every plane that you are using, or ordering, was developed by somebody other than the Air Force. You haven't got a plane you developed that you are ordering here, the F-4, the F-5, the 7; somebody else developed it. That is why Mr. Hébert and I raised the very devil here some few years ago you weren't developing an IMI.

General McCONNELL. We developed the F-111 and the F-105.

The CHAIRMAN. You are not ordering any of them though?

Secretary BROWN. We are ordering F-111's.

The CHAIRMAN. You didn't develop the F-111. The Navy had as much to do with that as you did.

General McCONNELL. It was a joint development.

Secretary BROWN. Off the record, Mr. Chairman.

(Discussion off the record.)

The CHAIRMAN. Back on the record.

What I want to see, as my Air Force of which I am very proud, I want to see you get out here and do what you are capable of doing, instead of going the expedient routes. This worries me.

Mr. BATES. That is what I said a few moments ago, Mr. Chairman.

General McCONNELL. That is what I want to see, too, Mr. Chairman.

Secretary BROWN. We all do, Mr. Chairman.

The CHAIRMAN. We may take up this AMSA program. From my past performance, somebody ought to realize I don't talk through my hat—if you catch the point.

Secretary BROWN. I do, indeed, Mr. Chairman, but we can't have the AMSA under any circumstances before 1975.

The CHAIRMAN. You can't have anything if you don't start.

Secretary BROWN. No matter what we do, no matter what happens we can't have it before 1975.

The CHAIRMAN. Mr. Secretary, you don't realize how unpopular this war is becoming. We've got to do something. It worries me. This war is getting very unpopular the way we are conducting it. These sanctuaries, all these things—Haiphong—the American people just don't believe in waiting and waiting and waiting; this is a Communist game. That wouldn't faze the Communists to wait 10 years over in Vietnam. They would wait 100 years. That is their business. And furthermore they are orientals, add another 100 years for orientals, they will wait you out. The American people want this thing over yesterday.

You get out in the crossroads and the grassroots, this thing is getting hard to take. And certainly a crowd of people in this country are making mileage on it. I want to see us get busy and do something. I recognize right now you have problems, and we have to get this over to the American people, your logistic problems. This thing right here, that is why I want to get it out as fast as I can, the construction problems. [Deleted] you have no recreation. In one of those bases, there is only one restaurant in town where a party could eat. Mr. Hardy, myself, and Mr. Long went on the base, nothing but mud. These morale problems are very hard to conquer. That is why we are going to rush this bill as fast as we can.

General McCONNELL. We have recreational funds in the bill.

The CHAIRMAN. The American people are not going to take a long-drawn-out war; they just aren't going to do it. Don't you think I'm right?

General McCONNELL. I think you are right, Mr. Chairman. You have a much better feeling of course of the thoughts of the American people than I do, but I think the war over there is going to last for quite awhile.

The CHAIRMAN. It will last quite awhile, but our bombing has got to be escalated in certain areas; don't you think so?

General McCONNELL. [Deleted.]

The CHAIRMAN. Yes. And these sanctuaries have got to be——

General McCONNELL. [Deleted.]

The CHAIRMAN. Mr. Nedzi.

Mr. NEDZI. I have just one question, Mr. Secretary, or General McConnell. What is the relationship between the attrition rate of aircraft in Vietnam and the inputs at the present time—that is aircraft and pilots?

General McCONNELL. I don't quite understand your questions.

Mr. NEDZI. Are we putting more? Are we increasing the number of aircraft which we have?

General McCONNELL. Yes, sir, we are increasing the number of aircraft which we have over there.

Mr. NEDZI. By how much?

General McCONNELL. [Deleted.]

Mr. NEDZI. Are these being transferred from other parts of the world, or are we also increasing at a more rapid rate our production of aircraft?

General McCONNELL. We are increasing the production at a more rapid rate, but that is for attrition of aircraft that have already been shot up. [Deleted.]

Mr. NEDZI. Is our total inventory of aircraft increasing?

General McCONNELL. [Deleted.]

Mr. NEDZI. [Deleted.]

General McCONNELL. Again it depends on attrition.

Mr. NEDZI. [Deleted.]

General McCONNELL. Oh, no, that is when it will be finished.

Secretary BROWN. [Deleted.] At the same time, we will be in the process of adding about [deleted] aircraft to our training base.

Mr. NEDZI. Does this concern you at all?

Secretary BROWN. Well, we are going to end up better off than we were when we started.

Mr. NEDZI. In the meantime?

Secretary BROWN. [Deleted.]

Mr. NEDZI. Is the situation with respect to pilots related to the aircraft, the same situation prevails for both pilots and aircraft?

General McCONNELL. We don't anticipate any shortage of pilots as a result of being able to increase our training rate [deleted].

I don't anticipate any shortages of pilots.

Secretary BROWN. We are going to have to train almost an extra thousand pilots a year, but we are going to be able to do that. This is a consequence of the mission tour, either 100 missions in North Vietnam or a year in southeast Asia. You are going to have to replace those people with additional pilots.

Mr. NEDZI. Is there any shortage of observation aircraft in the Air Force? I had word come to me last week that at some base just south of the 17th parallel we have nine pilots and only one plane, and they draw straws to see who is going to take the plane up.

General McCONNELL. Well, I am certain that is not a true statement.

Secretary BROWN. We have 30 aircraft, 30 O-1's in each of the IV Corps area, so we have 120 altogether. We may put in more, but I do not think we have that many pilots.

Mr. NEDZI. One final question, General McConnell, and this is provoked by your response to Mr. Ichord in the B-70.

Two or three weeks ago when General LeMay appeared before Mr. Hébert's subcommittee, he stated that in his judgment the B-70 was an old airplane, and that the state of the art had passed it by. This sort of conflicts with your statement today. Have you any idea what he meant by it, or can the two be reconciled?

General McCONNELL. Maybe we weren't talking about the same state of the art. In tactics the B-70 is outdated in some technologies. I think it was well ahead of its time. I do not believe we could make a B-70 aircraft, even at the present time; with the complicated problems that it has had. I think we have a lot of things, of course, that have been improved, such as avionics and engines, and materials, and things of that nature, but I think that the—

Mr. NEDZI. You disagree, then, with General LeMay's statement that it is an old airplane?

General McCONNELL. I don't believe the state of the art has passed it by overall—in tactics, yes.

Mr. NEDZI. I don't know what the answer is. I am still trying to determine if you disagree with General LeMay's statement when he says the B-70 is an old airplane.

General McCONNELL. Of course, it is an old airplane, but that relative to the state of the art technology has passed the airplane by.

Mr. NEDZI. I have no other questions, Mr. Chairman.

General McCONNELL. We are now in the business of attempting to make a supersonic transport, and it is apparently going to be a very tremendous task to get it built. So if the state of the art had passed the B-70 by, it would appear to me we wouldn't have any problem making a supersonic transport, because the B-70 can do 3.0 mach at 80,000 feet or 90,000 feet.

Mr. NEDZI. I have no further questions.

The CHAIRMAN. Let me say this before you start.

We told the Secretary of the Navy to let us know by July 1 what he had done by way of committing these funds, and we would make the same request to you, Mr. Secretary, and please keep the committee advised just how far you have gone by way of obligating these funds at the beginning of the fiscal year.

Secretary BROWN. All right, Mr. Chairman; we will be glad to do that.

Mr. LENNON. General, is it your understanding the POL facilities in South Vietnam are in tight security—I am talking about in South Vietnam.

General McCONNELL. Are under what kind of security?

Mr. LENNON. The question was, is it your understanding the POL storage facilities in South Vietnam are under tight securities?

General McCONNELL. You mean our POL security?

Mr. LENNON. Yes.

General McCONNELL. They are not under as tight security as they should be; the Vietcong have lobbed mortars into Dha Nhang.

Mr. LENNON. They mortared them?

General McCONNELL. They did put mortars in there.

Mr. LENNON. I asked that question because last week we heard testimony from the Secretary of Defense, and the Chairman of the Joint Chiefs, to the effect that 90 percent of the POL that was used in North Vietnam came through the port of Haiphong [deleted]. This was on the question of the striking of those facilities. [Deleted.] So I asked the Secretary the question.

[Deleted.]

General McCONNELL. [Deleted.]

Mr. LENNON. [Deleted.] That is the reason I wanted your statement with respect to that matter.

Now, what is the basic objective of the limited bombing that we are doing now in North Vietnam [deleted]. What is the basic objective that you are seeking?

General McCONNELL. The basic objective is to interdict all of the lines of supply and the equipment that rolls on those lines of supply so that we can reduce to an absolute minimum the amount of supplies they are able to put into South Vietnam [deleted].

Mr. LENNON. General, if it is a fact—and both the Secretary and the Chairman of the Joint Chiefs agreed—90 percent of the POL that was used in the country there went through the port of Haiphong [deleted]—that petroleum and lubricants and oil is used in the industrial complex, in the manufacturing plants of North Vietnam, I would think, wouldn't that be true?

General McCONNELL. That is right.

Mr. LENNON. In fact, some of your powerplants are run, too?

General McCONNELL. They are run by electricity.

Secretary BROWN. Hydro.

General McCONNELL. Yes.

Mr. LENNON. All hydro?

General McCONNELL. Some of them.

Mr. LENNON. Some are not hydro?

General McCONNELL. Some are not. A great majority of them are. [Deleted.]

Mr. LENNON. [Deleted.] I suppose this question should be directed to the Secretary, because of his relationship to the Secretary of Defense:

[Deleted.]

Secretary BROWN. I am sure that is a factor, Mr. Lennon [deleted].

Mr. LENNON. [Deleted.]

Secretary BROWN. Well, let me try to put forth his analysis with much of which I agree. Of course it is better for him to give it to you, himself, but let me go through it.

The purposes are as you and General McConnell have both said, in bombing North Vietnam, (a) to reduce the flow of goods and people and materiel into South Vietnam, (b) to improve the morale of South Vietnamese; (c) to indicate to the North Vietnamese that the war is going to cost them something if they insist on supporting it.

The effect of the first, which is the most immediate military effect, has not been negligible, but not enough to stop the flow. [Deleted.] So that as we apply more pressure in the south, the Vietcong and the North Vietnamese forces in the south will hurt more and more.

However, its effect, and the effect through the other two things, South Vietnamese morale, and pressure on the North Vietnamese to do less, has to be weighed very carefully [deleted].

[Deleted.]

Mr. LENNON. What is the feeling of the Secretary of the Army and the Secretary of the Navy with respect to this subject matter?

Secretary BROWN. I don't really want to represent their opinions.

Mr. LENNON. Have you heard them say?

Secretary BROWN. I have spoken with the Secretary of the Navy about this, not with the Secretary of the Army. [Deleted.]

[Deleted.]

Mr. LENNON. [Deleted.]

Secretary BROWN. That is a possibility. I can't really judge their motivation. [Deleted.]

Mr. LENNON. The chairman is so correct and accurate in his statement of the average man in the street, particularly about the striking of the in-port facilities from Haiphong. If you talk to them, they say, why don't we do this? [Deleted] they can't understand if we are there to destroy their morale and bring them to the conference table, if that is basic that is the thing we ought to do.

Secretary BROWN. I am afraid, Mr. Lennon, we may give a wrong impression if we let the American people think there is a cheap and easy way to win the war. [Deleted.]

[Deleted.]

The CHAIRMAN. Mr. Randall.

Mr. RANDALL. Mr. Chairman, Mr. Secretary. This question may have been answered, I have not been here all the time.

I am very much concerned. General, as I understood your testimony this morning, the B-52's, these advanced versions, G's and H's, and so forth, you said something about 1970. What is it you plan to do in 1970 with them?

General McCONNELL. I said the G's and H's, in my opinion, with some modifications to them—

Mr. RANDALL. Would be good until then?

General McCONNELL. Would be good until 1975.

Mr. RANDALL. Oh, until 1975.

General McCONNELL. I said with the program modification to the C's through F's aircraft we probably could have retained them in the inventory until 1970, but by that time they would have to go out, in my opinion, because they would be wornout aircraft.

Mr. RANDALL. Then, in any event, whether it was 1970 or 1975, there was a 5-year gap there, wasn't there, some place?

General McCONNELL. No, sir; the B-111's will come in.

Mr. RANDALL. Would you address yourself to the characteristics of the A-111, or whatever you call them, or 112. You said they don't have the range. What is their range now?

General McCONNELL. They have the same refueled range by the use of one tanker that the B-52 does. Now that doesn't mean that you just refuel just once. That means you refuel the FB-111 as it goes arcross to the target area. The tanker is on a 1-to-1 basis. It stays with the FB-111 to be sure it gets enough fuel to go in as far as the B-52. For the B-52, all you do is hit him once with a tanker, because you offload practically everything at one time. You can't offload everything at one time onto the FB-111. It doesn't take any more of a ratio of one tanker to one bomber to get the same range, approximately.

Mr. RANDALL. It is true the payload of the two is very different. What is the difference?

General McCONNELL. The B-52 will carry a bigger payload than the B-111 will.

Mr. RANDALL. What is that ratio, General?

General McCONNELL. The B-52—you are talking about the B-52C's through F's?

Mr. RANDALL. Yes, sir.

General McCONNELL. Those are the only ones we are comparing with the B-111. [Deleted.]

Mr. RANDALL. To simplify it, General, I think we are down to the point Mr. Bennett was talking about this morning, may be for political or diplomatic reasons, what ever you call it, we may not be talking nuclear. Can you translate that into ordinary ordnance? What is the ratio of the B-52 and the others, in other words?

General McCONNELL. I can translate it to conventional bombs.

Mr. RANDALL. What is it, [deleted] or what is it?

General McCONNELL. [Deleted.]

Mr. RANDALL. That is the thing I was trying to get at there.

General McCONNELL. Yes.

Mr. RANDALL. Then, if that is true, what is the thesis, or what is the thinking, what is the theory back of this sudden changeover to this other? [Deleted.] What caused all this departure from the old B-52, if you can tell us?

General McCONNELL. The B-52.

Mr. RANDALL. Is it maneuverability or range—you say it isn't range. Just what is it? Where are we?

General McCONNELL. It is a newer airplane. It is not going to break up on us without the expenditure of a lot of dough.

The F-111 was not designed originally to be a bomber. It was planned primarily as a fighter. The B-52 was not originally designed

for conventional ordnance. The B-111 is planned and the B-52 was built for the purpose primarily of carrying nuclear ordnance. And in the nuclear ordnance role the B-111 can carry a very good ordnance load [deleted].

Mr. RANDALL. Now, the thing that really concerns me, and I think we have absorbed all of our attention down there, and of course there is no question but what as time goes on this is going to become more unpopular, but what I would like you to address yourself to—and you certainly know—suppose somewhere along the line somebody decides to heat up an area somewhere else, where are we as far as our commitments in Europe? Have we taken things away from over there to use in southeast Asia?

General McCONNELL. We are not taking anything away from Europe at this time to use in southeast Asia. [Deleted.] We can meet all of our commitments. [Deleted.]

Mr. RANDALL. The chairman a moment ago made an innuendo that I know that he planned to carry on. We might not actually be in a declared war, but somewhere along the line there is surely some way that if the pressure is put on heavily enough we can do something to accelerated some plans here for this follow-on on this aircraft. As I understood the Secretary to say, we can't do anything, no matter what happens, or comes along, until when was it, 19—

Secretary BROWN. 1974 or 1975.

Mr. RANDALL. 1975.

I had a little tiny part in the effort in World War II. I know we got pretty busy when the fire was built under us. Haven't we reached that point yet; is that what we are saying?

General McCONNELL. It is my personal opinion when you start building a modern piece of equipment, such as a follow-on bomber for the B-52, you will not have it in the operational inventory in substantial numbers until 10 years after you start with the project definition or contract definition phase, as a minimum. It took 11 years to get the B-52 in.

Mr. RANDALL. What is the reason for that, General? Is it on the planning board? Or is it a matter of funding or what is the cause for all that lag in there?

General McCONNELL. The matter of design, and the matter of getting it funded. It is a matter of getting it tooled up. It is a matter of running the necessary test on it. And then getting it into the operation inventory in numbers so that the crews can operate it. It took us 11 years, I believe, on the B-58. It took us, I believe, 9 years on the B-52. When you go back to the B-17, which was a relatively simple airplane, or the B-29, which was also a relatively simple airplane, it only took us about 4 or 5 years. But our experience has been when you introduce a modern piece of equipment into the force, before you get it operational in substantial numbers, so you have reliability with it, and can depend upon it, the crews know how to operate it, and how to maintain it, it is 10 years.

Secretary BROWN. It is partly a consequence of our insistence on the best.

Mr. RANDALL. You were in charge of the development?

Secretary BROWN. That is right. This is my conclusion. I am not saying it is a bad thing to insist on things being large, fast, compli-

cated, and versatile. It is a good thing perhaps, sometimes, because it allows you to use them for different purposes, but it takes a long time.

The CHAIRMAN. You want to take that money and reprogram it.

Secretary BROWN. No; we have never done that.

General McCONNELL. We used all the money we got.

The CHAIRMAN. Some of them wanted to reprogram some of it, didn't they, Russ?

Mr. BLANDFORD. As a matter of fact we indicated to them, if they requested that we would not approve it.

Secretary BROWN. All the money appropriated for the AMSA has been release to us, Mr. Chairman, and we are in the process of putting it out to work on the AMSA.

The CHAIRMAN. I am glad to hear that.

Mr. RANDALL. Just one or two, Mr. Chairman.

This newspaper report we had lately about our planes being able to dodge SAM's, is that pretty accurate? There has been some yak-yak, but there are newspaper accounts that we have a technique worked out that the SAM's are not hitting us, is that right?

General McCONNELL. When we first started encountering these SAM's, we actually had never encountered them before in battle, so we didn't exactly know how to handle them. We have learned pretty much now about tactics which we can use to reduce our attrition by SAM's; the use of these tactics reduces our concern.

Mr. RANDALL. I see. Then really some of our worrying is gone about these concentrations of SAM's. That is some encouragement.

General McCONNELL. They are a nuisance, Mr. Randall [deleted] they are not prohibiting us from doing our mission.

Mr. RANDALL. We heard the story from others about the effectiveness or lack of effectiveness of a target. It seems nearly everyone went down there during the recess, but as I read the summation of all those accounts and reports there is pretty much agreement on [deleted]. But the third thing we cannot seem to get anybody to agree on now is the [deleted]. We have heard other versions, I would simply like your statement on it.

General McCONNELL. The troops in South Vietnam, mostly eat off the South Vietnamese economy.

Mr. RANDALL. That is Vietcong?

General McCONNELL. Vietcong, and PAVN, too. [Deleted.]

Mr. RANDALL. Is that right?

General McCONNELL. [Deleted.]

Mr. RANDALL. I am glad to know that, because it seems to me it would certainly affect the morale of the Vietnamese that way. That is the one thing we could do [deleted].

Thank you very much, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Randall.

Now, without objection we approve the money for the R-4D.

Mr. LENNON. Could I ask Dr. Brown one question?

The CHAIRMAN. Yes, sir; go ahead.

Mr. LENNON. Dr. Brown, did you as the Secretary of the Air Force, or as Assistant Secretary of Defense for R.D.T. & E., recommend the phasing out of the B-58's?

Secretary BROWN. No; I didn't recommend that.

Mr. LENNON. Then, Mr. Chairman, we have the situation where the Secretary of the Air Force didn't recommend it, the Chief of Staff of the Air Force didn't recommend it, and the three officers who have the prime responsibility who testified before the subcommittee all say they didn't recommend it, yet the Secretary, on his own initiative, ordered it done.

The CHAIRMAN. In that connection, I wish you would put in the record the things you requested, Mr. Secretary, of OSD, that were knocked out in this supplemental. Put that in the record.

Secretary BROWN. Yes, sir; we can arrange to do that.

(The following information was received for the record:)

[In millions of dollars]

Adjustments by office, Secretary of Defense, fiscal year 1966 supplemental requirements for southeast Asia

[In millions of dollars]

Appropriation and item:

	<i>Amount</i>
Operation and maintenance, Air Force:	
Depot maintenance.....	-27.2
Training.....	-4.2
Miscellaneous.....	-3.7
Missile procurement: Bullpup B (AGM-12C) [deleted].....	-18.0
Other procurement: Electronics and telecommunications equipment.....	-15.0
R.D.T. & E.:	
Conventional munitions.....	-4.8
Aircraft operational support.....	+10.2
Other operational support.....	-25.7
F-4.....	+10.0
Miscellaneous.....	-15.2
Military construction:	
Clark Air Force Base.....	-7.2
Clark-Subic Bay POL pipeline.....	-3.1
Miscellaneous.....	-5.9

The CHAIRMAN. Now, without objection—I am going to finish with you this afternoon—right now, I am about ready to finish with you.

We approve the money for the appropriation, "Aircraft Procurement, Air Force."

Summary

[In millions of dollars]

	<i>Amount</i>
Combat aircraft:	
F-4D.....	+731.0
A-7A.....	+50.3
OV-10A.....	+15.6
RF-4C.....	+13.3
Other aircraft:	
CH-3F.....	+12.0
HH-3E.....	+6.7
U-10.....	+2.4
Modification of inservice aircraft.....	+133.9
Aircraft spares and repair parts.....	+554.6
Common AGE.....	+27.2
Other charges.....	+25.7
Classified projects.....	+7.0
Total program.....	+1,587.5
New obligational authority required.....	+1,585.7

Summary

	<i>Amount</i>
Program system:	
AGM-12C Bullpup B.....	+\$19,500,000
BQG-34A FIREBEE drone.....	+10,000,000
Other support.....	+34,200,000
Total.....	+63,700,000

The CHAIRMAN. Now, without objection, the committee approves those, let's get to the other project.

We have explored all of, as far as we could, the construction. I think we know all about it, all we will ever learn, [deleted]. We know all about that. We have gone into this thing very fully for quite some time now. I have seen just about everything [deleted] in Taiwan, [deleted] the Philippines, and everybody on the committee has seen everything in the United States, so I don't know why we can't approve this construction as it is, and, Mr. Secretary, keep the committee advised on your obligations and put in these things you asked for, and, Mr. Secretary, you made a fine witness, you have been responsive, you have been honest in your answers, and your first appearance before this committee you have made a fine impression. I wish to congratulate you.

Mr. BLANDFORD. We approve of the R.D.T. & E. of \$71 million and the missiles, and also the Secretary put the justification in for the construction items in accordance with the memorandum read today.

Secretary BROWN. The R.D.T. & E. money is for the A-7 modification. For the TSF version of the F-4, for a low altitude fuse. For various small items [deleted].

The CHAIRMAN. Without objection, I want you to spend that money and do what you have been doing, and keep the committee fully informed. You won't have any trouble with this committee if you follow the course you have been following by keeping us closely advised.

Mr. Secretary, I want to congratulate you, you have done that.

General McConnell, you are doing a fine job, we want to help you. That is the reason for these questions we have been asking.

Secretary BROWN. Thank you, Mr. Chairman.

General McCONNELL. Thank you, Mr. Chairman.

The CHAIRMAN. Your responses have been very satisfactory.

Mr. LENNON. I haven't seen any action by anybody about this October thing.

The CHAIRMAN. Mr. Hagan, did you have any questions?

Mr. HAGAN. No, Mr. Chairman.

The CHAIRMAN. Tomorrow we are going to take up the Army. I have to go to Mr. Thomas' funeral, a great American. We will meet all day tomorrow. Mr. Hébert or somebody will be in charge of the committee until I get back.

We will excuse the Air Force. We want to finish this week and get this thing on the floor. We have the same sense of urgency that you have. We have been working under handicaps, too. Half of us ought to be in bed with the flu. We are all trying to work out this problem here, but we will do the best we can, and thank you very much.

(Whereupon, at 4:18 p.m., the committee adjourned until Wednesday, February 16, 1966, at 10 a.m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., February 16, 1966.

The committee met at 10:10 a.m., the Honorable L. Mendel Rivers, chairman, presiding.

The CHAIRMAN. Let the committee come to order.

We will start this morning with the Honorable Stanley R. Resor, Secretary of the Army, and, Mr. Secretary, we have been quite impressed with the way you have gone at your job and the fine cooperation you have given the committee, and the attitude toward Congress has been very encouraging.

I would like to say to you that you made a fine impression on the committee, and, I understand, Congress in general. This is very gratifying to us, and we can assure you that you will have our closest cooperation on anything in which we can be helpful to you, because you have a very difficult undertaking and we recognize this. We must work in close unity, and I am sure this condition will improve even more.

Our relations with the DOD must be of the highest order of cooperation. We urge you to keep us closely advised at all times. This is the best way I know to get the cooperation which is so vital to the successful procession of anything the Army undertakes.

You have another claim to fame. Mr. Blandford tells me that you and he were classmates at Yale. That is not any disability before this committee. We are glad to know that.

It hasn't hurt Mr. Vance before this committee, either. I believe between you, Mr. Blandford, and Mr. Vance, you should have a pretty good standing before this committee. Just keep it up.

I am going to turn the Chair over to Mr. Hébert. I have to go to Mr. Thomas' funeral. Mr. Hébert will conduct the committee with greater dispatch than even I do, and I am sure he will proceed very rapidly to the points involved in the testimony, and I will be back for this afternoon's session, but I doubt I will get back for this morning.

So, Mr. Secretary, you may begin. I will turn the gavel over to Mr. Hébert.

Mr. HÉBERT (presiding). Mr. Secretary, you have a prepared statement?

Secretary RESOR. Yes, I do; but first, before the chairman leaves, I want to thank him very much for his generous remarks and to reciprocate the feeling that I hope we can work closely and well with this committee. It is essential.

Mr. HÉBERT. You have a prepared statement; you may read it.

(The biographical sketch of the Honorable Stanley R. Resor, Secretary of the Army, is as follows:)

STANLEY R. RESOR, SECRETARY OF THE ARMY

Stanley R. Resor was born in New York City on December 5, 1917. He is a graduate of Groton School, Yale University, and the Yale Law School. He majored in government at Yale, where he received a B.A. degree in 1939 along with a commission as a second lieutenant in the Field Artillery Reserve.

During World War II, Mr. Resor interrupted his studies at the Yale Law School to serve with the Army from February 1942 to January 1946. Entering on duty as a second lieutenant, he attended the battery officers' course and the officers' advanced course at the Field Artillery School, Fort Sill, Okla., before going overseas with the 10th Armored Division in 1944. He served in the European theater of operations, participating in the defense of Bastogne during the Battle of the Bulge. He was awarded the Silver Star, Bronze Star, and Purple Heart; and his unit received the Distinguished Unit Citation.

Returning to the United States in October 1945, Mr. Resor reverted to inactive status on January 16, 1946. He returned to the Yale Law School and received his bachelor of law degree in June 1946.

Since 1946, Mr. Resor has practiced law in New York City with the firm of Debevoise, Plimpton, Lyons & Gates, becoming a partner in the firm in 1955. Mr. Resor has specialized in corporate law. He is a member of the American Bar Association, the Association of the Bar of New York City, and the Yale, Links, New Canaan Country and New Canaan Winter Clubs.

On April 5, 1965, Mr. Resor assumed the office of Under Secretary of the Army. He was sworn into office as Secretary of the Army on July 7, 1965.

Mr. Resor is married to the former Jane Lawler Pillsbury of Wayzata, Minn. They have seven sons.

STATEMENT OF HON. STANLEY R. RESOR, SECRETARY OF THE ARMY

Secretary RESOR. Mr. Chairman and members of the committee, I welcome this opportunity to appear before your committee to discuss the fiscal year 1966 supplemental budget. I will limit my remarks to 5 minutes, and look forward to presenting a more comprehensive statement on Army matters during the fiscal year 1967 budget hearings.

I have recently returned from a visit to southeast Asia. I found a prevailing "can do" attitude and a sense of purpose and dedication that was extremely reassuring. The officers and the men are fully aware of why they are there. To be sure, there are logistical problems, but they are, to a large extent, inherent in a situation where roads are interdicted and port facilities are in the process of expansion. The fact is that these problems have imposed no significant persistent limitations on the operations of our combat units. When one considers [deleted] the buildup [deleted] the achievements [deleted] are remarkable.

You are all aware of the recent increases in our commitments in Vietnam. Beginning last May with the commitment of the 173d Airborne Brigade and a total Army in-country strength of only 16,000, we have increased to a total of 3½ division force equivalents and an in-country strength today of 131,500—that is Army. We have accomplished this buildup without a callup of the Reserves, which attests to the flexibility of the Army. To accomplish this, it has been necessary to activate over 500 new units and to program the activation of some 600 additional units beginning in early 1966. We have been author-

ized a strength increase in fiscal year 1966 from 953,000 to 1,159,000 to provide manpower for this expansion. Our training base is being expanded from an average training load of about 105,600 in fiscal year 1965 to a capacity of about 178,000 by June 1966. We are increasing monthly output of aviators from 125 to 315 per month, and we are currently looking at an even further increase. The 315 rate will be reached by September of 1966.

To cover possible emergency requirements for additional forces during the buildup period, we have intensified the training of three divisions, six brigades, and supporting forces of the Reserve components.

The total obligational authority contained in the Army fiscal year 1966 supplemental budget is \$4.79 billion, of which 51 percent is for the procurement of materiel items. In addition, the Army requires \$210 million in lieu of the transfer of a similar amount of money from stock funds to the MPA account.

As Secretary McNamara explained, we had anticipated last year that money from stock funds would be available to offset MPA requirements, but Vietnam requirements have precluded this.

The materiel appropriation contained in the fiscal year 1966 supplemental budget provides basically for combat consumption and initial issue for new unit activations. More specifically, it includes provisions for combat consumption for Vietnam through June 30, 1967. It also includes the initiation of procurement of equipment for one infantry division force, additional combat and service support forces, and long leadtime aircraft components to maintain the option to form a second airmobile division.

Major items included in the supplemental funding are \$826 million for aircraft, including utility, transport, heavy lift and observation helicopters; \$329 million for vehicles; \$241 million for communications and electronics equipment; and \$671 million for ammunition. High-dollar value ammunition items requested are \$176 million for 2.75-inch rockets; \$76 million for 5.56-millimeter, \$59 million for 40-millimeter, and \$51 million for 7.62-millimeter cartridges; and \$34 million for facility reactivation and expansion for ammunition production.

The resources which this supplemental budget will provide are essential to the buildup and conduct of operations in Vietnam. As a result of our continuing review of force requirements, it may be necessary to make further program changes as the year progresses. This budget has my full support, and I recommend favorable consideration by this committee.

Sir, that completes my statement.

Mr. HÉBERT. Thank you very much, Mr. Secretary.

I have one or two questions that I would like to ask at this time in connection with personnel.

The figure estimated to supply the additional 300,000 personnel is what?

Secretary RESOR. You are referring to the end strength?

Mr. HÉBERT. Building your personnel up, as I understand, 900,000-plus to 1 million-plus.

Secretary RESOR. That is right. We will build up to a figure in the budget of 1,159,000 for the fiscal year 1966 end strength.

However, the Secretary of Defense has authorized us to continue to use our training centers to their full capacity and to conduct train and retain activities in some of the units. So it is quite probable we will actually go beyond that figure.

Mr. HÉBERT. But is there money included in the supplemental to supply the funds to accelerate this training? That is what I am trying to find out.

Secretary RESOR. There isn't money expressly in MPA for this. It would take reprogramming or some other action to take care of the cost of the additional manpower.

Mr. HÉBERT. You will have to come back here and ask for either programming or additional funds to increase your personnel?

Secretary RESOR. Yes; if, as we hope and expect, we can increase our end strength beyond this figure. We don't know exactly now what we can get to, but we are going full-steam ahead.

Mr. HÉBERT. Now, what relationship does this increase in manpower have to the count of 22 division concept which we discussed last year in the Guard-Reserve hearings? Have you gone beyond the 22-division concept, in your build-up?

Secretary RESOR. This 22-division concept includes both Reserves and Active Army.

These figures relate only to the Active Army, and this would be enough for the previously existing 16 divisions, the new 9th Infantry Division which we activated in February, and the three brigade forces which are equivalent essentially to an 18th division.

Mr. HÉBERT. Well, in other words, you are holding to the 22-division concept?

Secretary RESOR. Actually, it is a $27\frac{1}{2}$ -division force equivalent concept; if you count the Reserves you have the equivalent of $27\frac{1}{2}$ -division force equivalents.

Mr. HÉBERT. What I am trying to develop, Mr. Secretary, is, we heard a lot of conversation during the so-called merger hearings as related to the contingency war plans.

Secretary RESOR. Yes.

Mr. HÉBERT. That was strictly based on the 22-division concept, 6 reserves, 16 regulars, I think. Isn't that right, General?

General JOHNSON. We added two, Mr. Chairman, you will recall. We added the two so-called theater reinforcing divisions. You are really talking about a 24-division concept.

Mr. HÉBERT. Twenty-four concept?

Secretary RESOR. We have had one more added (the 9th Infantry Division Force), so that makes it 25. Then we have 7 independent brigade forces, 4 in the Active Army (3 new separate brigades and the 173d) and 3 in the Reserves for a total of $21\frac{1}{2}$ division force equivalents. The 173d brigade which is an independent brigade—you know it is in Vietnam already, and it is the kind of brigade that can support itself in combat. It is slightly larger.

Mr. HÉBERT. So we are up to 27, then, is it?

Secretary RESOR. Twenty-seven and one-third.

Mr. HÉBERT. The slice remains the same as in our original discussion, I think it was 25,000 slice—division slice?

General JOHNSON. No. Over the course of the last year we have had a number of developments with regard to the way that we structure both the Active Army and the Reserve, and I think it would be well to lay out the changes that have evolved.

We used three basic building blocks. The first building block is the division, and the division we carry in round numbers at about 16,000.

Mr. HÉBERT. Where did I get the figure of 24 or 25?

General JOHNSON. I am not through, sir.

Then, in order to accompany that division into combat, some units go concurrently with the division. Others follow up immediately behind it. We call the first increment behind the division an initial support increment. This support increment is designed to support that division for a period that we use for planning purposes as 60 days.

However, if the intensity of combat is very high, it might be as little as 30. If it is very slow, or low, it might be as high as 75 or 90.

We select 60 days as the middle ground.

Then in order to sustain that division for an indeterminate period of time, we add what we call sustaining support increment. Now, the initial support increment we have established as somewhere between 16,000 and 20,000, depending on the geographical area, and for the sustaining support increment we have established somewhere between 13,000 and 16,000 again.

So that we then get a total division force, both in the theater, in the area of combat, and in the area immediately adjacent, for southeast Asia for example [deleted] would be considered as a part of the theater.

We have a total division force that will vary from around 45,000 to 52,000 depending on the area for which planned.

We have a division an initial support increment, and a sustaining support increment, with the total force in the neighborhood of 50,000.

Now, the difference between the initial support increment and the sustaining support increment is substantially one of timing of introduction of the force. And the kinds of units and detachments in these two increments are substantially the same. There are between 85 and 90 percent of the units in the detachments, which are the same kinds of units.

For example, in the initial support increment you will have engineer construction battalions. You will have ordnance maintenance units in both.

Mr. HÉBERT. General, in connection with that, in supporting units that we are discussing now, in the discussion with regard to the Guard-Reserve program, Secretary Ailes was here at that time. We had much discussion on the adequacy of the merger as related to the contingency war plans. You will recall that.

Now, was this build-up considered or in evidence during the discussion of those so-called contingency war plans, or is this something new and added in the necessary build-up strength of—this 300,000 more people now?

General JOHNSON. I can't answer the question without knowing the date to which we refer. Are we referring now to a period before July, or after July?

I will answer the question this way, Mr. Chairman: The buildup in the Active Forces was decided in a very brief period of time during the last 2 weeks in July. During the period prior to about the 24th of July, the Army staff was busily engaged in planning for a Reserve callup. About the 24th of July a determination was made that there would be no Reserve callup, and that we would use Active Forces instead, and it was at that time the Army was given an increase of 235,000 men over and above approximately 960,000 that it had then.

Subsequent to that time there have been small increments of manpower added.

The Reserve realinement was discussed, as I recall, in the sessions here in the months preceding July—I believe in April and June. If my memory is correct, the specific answer to your question is that at the time we were discussing Reserve realinement there was no consideration of a further buildup of the Active Forces.

Mr. HÉBERT. Well, of course, what I am trying to develop here for the committee to understand, General, is the fact that you are right in your time frames. So when we were discussing the matter of the Guard-Reserve realinement, we were discussing it on the premise there would be a callup of Reserves, in discussing the contingency war plan, and the 22-concept division which we use as a general term would have been sufficient to supply our needs at that time.

However, having abandoned the callup of the Reserves, then you had to reappraise your situation as far as personnel were concerned, and in discussing then the contingency war plans you had to come up with this figure of 300,000 additional; is that accurate?

General JOHNSON. Yes, sir. The addition of manpower to the Active Army is a direct result of the decision not to call the Reserves. Had a decision been made to call the Reserves, we could have met the current requirement with regard to the buildup in the Active Army.

Mr. HÉBERT. That is what I am actually trying to find out so the committee will fully understand what we are discussing to date.

We were discussing the other proposition with reference to the contingency war plans; we were then discussing on the basis of the callup of the Reserves. That having been abandoned, you took a reappraisal of your situation, personnelwise. You needed 300,000-plus more men, and you are not regarding the Reserves in this connection at all, and I am to assume from that you do not need the Reserves in this present plan you are presenting today?

General JOHNSON. That is correct. The Reserves are not considered in the supplemental, with one exception. The exception is that concurrently with the buildup there was initiated an accelerated training program for what we term a Selected Reserve Force, and there is a modest amount of money in here to underwrite that Selected Reserve Force.

Mr. HÉBERT. However, to activate that accelerated force it will be necessary to federalize the Guard and ask the Reserves to be called up. You couldn't utilize that training unless the Guard was federalized and the authority to call the Reserves up was given?

General JOHNSON. Yes, sir. It requires either a declaration of an emergency by the President, or it requires a congressional resolution in order to call the Reserves to Federal service.

Mr. HÉBERT. We are still not discussing that matter this morning—the callup of extra people?

General JOHNSON. No, sir.

Mr. HÉBERT. Can you support this added strength without using the Reserves in support? In other words, do you have enough Regulars in this program to support this accelerated program, your 300,000 more people?

General JOHNSON. In terms of building the force, we can. In terms of the employment of the force within any given time frame, the timing of deployments will determine this. [Deleted.]

Mr. HÉBERT. But you cannot deploy them without assistance—without support from the Reserves?

General JOHNSON. We can deploy this force without any further assistance, providing [deleted].

Mr. HÉBERT. Do any of the members of the committee have questions on the Secretary's statement?

Let's finish the statement first.

No questions on the statement?

Mr. Pike.

Mr. PIKE. Mr. Secretary, along the lines that Mr. Hébert was questioning you on, would you tell us what is happening to the demand for positions in the Reserve forces?

The Reserves, are they having difficulty filling their slots or are they finding it a little easier than they did, say, a year or two ago?

Secretary RESOR. No, we do not anticipate any difficulty in reaching the program figure. As you know, we are programed to go to 270,000 by the end of fiscal year 1966, and we are on schedule to reach that figure.

Mr. PIKE. How does this situation of filling your slots in the Reserves compare to what it was 2 years ago?

Secretary RESOR. I am afraid I can't answer that, except to say, as I think is common knowledge, it is easier to get enlistees in the Reserve units when we have high draft calls. And also, we have been helped by the inactivation of the units that were inactivated last fall because we have the trained personnel from those units who can be used in the remaining force.

Mr. PIKE. Obviously the thing which concerns many of us, I think, is the fact or the allegation that in view of the policy which has been promulgated and followed that the Reserves have become a place to go if you don't want to go to Vietnam.

I would like to have your comments on this. We see pictures of the baseball stars and the football stars signing up with the Reserve units, and the policy has been made fairly well known that this is a good place to be if you don't want to go to Vietnam.

Would you care to comment on that?

Secretary RESOR. Yes, I will try.

First, when signing up with that in mind, they run the risk that if there is a callup of the Reserves, that they made a mistake.

Secondly, it is essential that we have this Selected Reserve Force in a high state of readiness. To do that we must take in REP's, as we call them—Reserve enlisted program people. We are currently programed to send all of the REP's to the Selected Reserve Force into

the training centers by the end of June 1966. That is roughly 58,000 people.

We are giving priority in the training centers to our active Army because there is a more immediate need.

Mr. PIKE. Well, are you concerned about the image which the Reserves appear to be getting under the current policy as to whether they will or will not be called up? I mean, in a Berlin crisis they were called up.

Secretary RESOR. That is right.

Mr. PIKE. In a Cuban crisis they were called up.

Now, here is a war which seems to me to exceed in intensity and demands and seriousness both the Berlin crisis and the Cuban crisis, and we appear to have a new policy.

Aren't you a little concerned about what is going to happen to the picture in the public mind of the Reserves?

Secretary RESOR. I don't think so, because there are various distinctions between this war and the two crises you referred to. For one thing—this is my personal opinion—unless we could get authority to call the Reserves for at least 18 months—and as you recall in both of those other instances Congress limited the call to 12 months—it is really doubtful how much good they would do us, because it takes roughly 4 months to get them called and get them in. Then it takes a month to get them over to Vietnam, and then we like to have the units, once they get into Vietnam, spend about a month to get acclimated; then we must allow them time to come back. If you deduct all of that, it is hardly worthwhile to call units for a 12-month period.

Mr. PIKE. If this is the problem, couldn't that be solved rather readily by the President declaring a national emergency?

Secretary RESOR. I am not—

General JOHNSON. Let me take this question, if you will, Mr. Pike.

Mr. PIKE. Would you answer that question first?

What would happen to the authority to call up the Reserves as far as time is concerned if the President declared a national emergency? Couldn't they call them up for 24 months, then?

General JOHNSON. They could call them up for any period of time that the Congress prescribes for calling them up.

Mr. PIKE. I am no expert—

General JOHNSON. Up to 2 years.

Mr. PIKE. I am advised it could be for 24 months. You certainly ought to know more about that than I do, General, so I will drop that. Go ahead.

General JOHNSON. This is the legal limit now. I think the Congress could extend that period of time if they so desired. This is under the existing law.

Mr. PIKE. If the President declared an emergency, they can call them up for 24 months?

General JOHNSON. Yes, sir.

Mr. PIKE. Go ahead. I didn't mean to interrupt you.

General JOHNSON. I think you have to put this into context of going back to the early part of 1965, and the policy that was being pursued at that time, and to which an appreciable extent, is continuing to be pursued.

In early 1965, first, there was a deteriorating situation in Vietnam. No one knows what is in the mind of the people in Hanoi and in the minds of the people in Peiping at the present time. But we do know that over the course of the last 20 years, as we have stood firm and given evidence of determination, that they have fallen back on the classic Marxist doctrine of strategic withdrawal, a doctrine of two steps forward and one step back.

As we increased pressure slowly in a very restrained way in the period between February 1965, and the end of the year, there was no change in the outlook of Hanoi and the Communist Chinese insofar as it could be detected.

Now, concurrently, the readiness of the Active Army Forces was such that by some internal reorganizations we could meet from active resources the requirements that were imposed by Vietnam, and we have continued to do that.

Since the tempo of activity in Vietnam is really a two-way street in part, but which can be controlled in part by the allied side, it is possible to phase forces in in such a way that you can continue to rely on Active Forces if this is what the administration desires.

Mr. PIKE. Was the decision made in July not to call up the Reserves made upon the recommendation of the Army?

General JOHNSON. No, sir.

Mr. PIKE. That is all I have, Mr. Chairman.

Mr. HÉBERT. Are there any further questions?

Mr. STRATTON. Mr. Chairman, may I ask a question either of the Secretary or the General?

In view of this impression which Mr. Pike has referred to, and which I think is probably somewhat current, has there been any attempt on the part of the Army to slow down the opportunity for young men to get into this 6 months' Reserve program as a means of avoiding the draft?

Secretary RESOR. I can answer that. We are under a congressional mandate to have an Army Reserve at the end of this year, of 270,000 men. So we have to go to that figure. I take it we have no choice.

As far as the Guard is concerned, the Guard is substantially full at this point—perhaps 1,000 spaces understrength.

Mr. STRATTON. I have had a number of young men that have written to me, their parents have written to me, saying they wanted to get into the 6-month program, and there are no vacancies, or they aren't taking them at the moment, or something of that kind.

Are you getting so overwhelmed with applicants that you can space them like this?

Secretary RESOR. We can be selective, which is in the interests of the Reserve Components.

Mr. STRATTON. Well, what is the situation? Are you being overwhelmed with applicants in terms of the number of spaces available or what?

General JOHNSON. No, sir. There is a different cause.

In our training centers we plan for a given load during the year, and we phase in a certain number of individuals that we are going to use for replacements for the Active Army. Every day that goes by we lose approximately 1,000 people from the Active Army. We don't separate anyone on Sunday, and we don't separate normally on

Saturdays, so this means that somewhere on the order of between 5,000 and 6,000 people a week are leaving the Army. So we phase people into the training centers so they will come out of advanced individual training, additional school training, to replace our losses as best we can predict them.

Then, on top of that, we plan each year for a certain number of individuals to enter the training centers under the 6-month program. This is what we call the Reserve enlisted program.

With the increase in the active establishment we have used the training spaces in our training centers for the Active Army augmentation, and have deferred the training of the individuals in the 6-month program.

We have given a priority in the training centers to approximately 58,000 individuals in the Reserve enlisted program who are required to fill the Selected Reserve Force to a strength of 100 percent.

The people you hear from are probably the parents of boys who have been recruited by Reserve units not a part of the Selected Reserve Force, and whose training in the training centers we have deferred.

Mr. STRATTON. Well, in other words, the limitation, then, is a limitation on your ability to train, because of the priority on the Active Forces you are emphasizing the training of those and the training of the Reserves is secondary, is that correct?

Secretary RESOR. Yes, sir.

Mr. PIKE. In that circumstance, General, why hasn't there been any interest in, for example, calling to active duty the training Reserve divisions that we have?

We have in my State, for example, the 98, which is a training division, specifically set up for training purposes.

Many of the members of that division are a little concerned that at a time when we are apparently slow, when we are apparently short on training personnel, that there seems to be no interest whatsoever in activating those who are specifically qualified in this particular field?

General JOHNSON. [Deleted.]

We can ask for volunteers to come in, but an individual is reluctant to volunteer because this does not give him any job rights when his tour is over. It also doesn't give him much stature with his family without the necessity to go.

So there is some reluctance to come in on a volunteer basis, although many people have said informally, "If you order us, we are ready," but there is no order. So I think that is the answer to the question.

Mr. STRATTON. I think I get the message.

In other words, if it weren't for that policy it is possible that the Army might be interested in activating a division that is specifically directed toward training operations?

Secretary RESOR. Well, of course this is in a large sense a very short-term problem. We are programming for fiscal 1967, 130,250 REP's into the training centers, and that could well increase. I think it is really too early at this point to tell whether it would be worthwhile to call an individual training division. Because there is a timelag before it gets in operation and can start training.

Mr. STRATTON. I would think if you had a division with a specific MOS of training, and training was the thing that you needed, that now would be the time to call them if any time made sense. And to say

even though we are short on training personnel that it would take too long to train the training division, to train those that need to be trained, raises some question about just how sensibly we are using this particular part of our Reserves.

That is all I have, Mr. Chairman.

Mr. HÉBERT. Mr. Hardy.

Mr. HARDY. See if I understand that correctly, General. You said as a decision or orders from the echelon higher than the Army not a single reservist may be called to the Active Army, is that right?

General JOHNSON. In the absence of a declaration of an emergency.

Mr. HARDY. I am talking about under the present situation.

Secretary RESOR. This is a matter of law. There is no authority.

Mr. HARDY. All right, there is no authority now because you haven't got a declaration of an emergency?

General JOHNSON. Yes, sir.

Mr. HARDY. The only thing you can do, then, is to permit volunteers to come in from the Reserve. That is the only way you can get a Reserve in the Active Army?

General JOHNSON. We have had a number of them come in as individuals.

Mr. HARDY. What kind of a shape were you in on this mandate, Mr. Secretary, that you referred to a minute ago—I was real pleased to hear you say you had a mandate to have 270,000 in the USAR camp within a year. We have had trouble getting mandates at the time they were carried out down at the other end of the avenue. I am glad to hear you indicate it is your intention to carry this out.

Secretary RESOR. We have this one very carefully programed. We are on schedule. And I don't think we are going to have any trouble meeting the 270,000 strength.

Mr. HARDY. I don't think you will have any trouble meeting it if you want to meet it, but sometimes down from that end of the avenue we are told up here, you make the law, and we carry them out. I am glad you are not doing that on this particular one.

Secretary RESOR. No; we want to meet it and will meet it.

Mr. HARDY. Then, with respect—let's talk for a second about the 6-month training program. I had experiences similar to the one Mr. Stratton referred to. As far as I can determine, it is virtually impossible for anybody to get in the 6-month training program any more.

General, does that come about from the fact you have limited the number you have put in there to such an extent to all intents and purposes the 6-month training program is out of the window?

General JOHNSON. Generally speaking, Mr. Hardy, we limit enlistments in the Reserve Forces, either the Guard or the U.S. Army Reserve, when we are unable to accommodate the individuals within a reasonable period of time into our training centers.

In other words, we don't want an individual who has not had an opportunity to undergo basic and advanced individual training in a training center in a Reserve unit for a period of a year, simply because he doesn't get the requisite initial training in that Reserve unit on a weekly basis.

Mr. HARDY. You haven't got anywhere you can use him, either, after you get him in there, have you?

General JOHNSON. We wouldn't be able to deploy him if he were in the unit under that circumstance, because he wouldn't really be qualified to enter combat if the Reserve unit were called up.

Mr. HARDY. Well, you've got no authority to call him up.

General JOHNSON. No; but if authority were granted to call him up in a Reserve unit, if an emergency were declared, then the unit would be called up.

Mr. HARDY. Can you give us a figure as to the current rate in which the 6-month trainees are being taken in?

Secretary RESOR. Yes; I have the figure right here. In the Reserves they are coming in at the rate of about 5,000 a month.

Mr. HARDY. 5,000 a month. How does that compare with the rate that came in a year ago?

Secretary RESOR. I will have to supply that for you. I believe the rate is higher. I do know this; that we have a higher rate than what we originally programed for in fiscal 1966.

Mr. HARDY. I think it might be interesting. I believe, Mr. Chairman, we ought to have just for the record, so we see what is really happening—I think we ought to have a comparison of the last several years—the current rate with what came in to this program during the last several years. I think it would be helpful to understand the situation.

Maybe the Secretary has a figure coming up down there.
(The information requested follows:)

Average enlistments per month

Fiscal year	ARNG	USAR	Total
1963.....	4,936	2,408	7,344
1964.....	8,959	3,675	12,634
1965.....	5,682	2,279	7,961
1966 ¹	13,905	4,183	18,088

¹ Based on enlistments July through December 1965.

Secretary RESOR. What I have here is 1965. We took in 27,000 men into the USAR. I don't have the total we will take in this year for the USAR, but, for instance, our program this year for December was to take in 3,500. We actually got 5,100. We programed 3,600 in November; we actually got 6,400. We programed 3,000 in October and we actually got 5,000.

Mr. HARDY. During the last few months of the year you accomplished your 27,000. If you had only 27,000 in 1965, your previous rate before those last few months was very low, then, I would take it?

Secretary RESOR. Our rate this year has varied from 2,000 up to the current rate of about 5,000.

Mr. HÉBERT. Mr. Secretary, may I ask a question if Mr. Hardy will allow me?

As I understood you in the beginning, you said you are building up to the mandated strength in the Reserve Forces through the utilization of the 6-month trainees, and I detected an inference in the way you presented it that you really didn't want to do it this way—I mean, you didn't want to use those 6-month trainees, except you had to carry out the mandate of the Congress; is that correct?

Secretary RESOR. No. We are happy to go ahead and program to and attain the 270,000 rate. I thought someone was raising the question as to whether we shouldn't shut off enlistments in the Reserves because it was characterized as a draft haven.

Mr. HÉBERT. Where are these people trained? Do you have training facilities?

Secretary RESOR. We will train all enlistees in the selected Reserve Force—something over 58,000 men this year—in the Regular Army training centers.

Mr. HÉBERT. You have the facilities available?

Secretary RESOR. Yes, sir. As to the people that are deferred in the non-Selected Reserve Force and have to go over to next year, we have instituted in the actual units themselves self-training programs. The unit conducts the training program.

General JOHNSON. To go back to Mr. Hardy's question again, if I may, Mr. Chairman. In fiscal 1965 we programed 144,700 REP trainees. We enlisted 95,540. That is the year ending last June 30.

Mr. HARDY. What is the 27,000 figure we had a while ago?

General JOHNSON. The 27,000 was the USAR enlisted during fiscal 1965.

We also enlisted 68,000 National Guardsmen for a total of 95,540.

Mr. HARDY. That was in this effort to build up the National Guard and knock off the Reserves?

General JOHNSON. No, sir; not in fiscal 1965, sir.

Mr. HARDY. Well, maybe you didn't want to do it, but you certainly had that effort going on in fiscal 1965.

You started out with that in mind certainly prior to calendar 1965.

Maybe you didn't, but certainly up in the DOD they did. I don't remember now what your discussion was on this particular point.

General JOHNSON. I support the realignment, sir, but I would like to point out that the 1965 budget would have been presented to the Congress—

Mr. HARDY. 1966 budget?

General JOHNSON. No, sir. I am talking about the 1965. This is the 1965 program. We would have been over here in the early part of 1964, and the program itself would have evolved in 1963. So the figures I am talking about are for a year before the realignment program was advanced.

Now, why didn't we get the program?

We didn't get the program basically because there were not enough volunteers at that time. We had the capacity in fiscal 1965 to have trained all that were in the program, had they been available for training.

Mr. HARDY. They didn't start becoming available in larger numbers until the Vietnam situation got bad, and the draft began going up?

General JOHNSON. I think it would be fair to say there is a direct relationship between the size of the draft and the number of volunteers for the 6-month program.

Mr. HÉBERT. Mr. Bennett.

Mr. BENNETT. General, I heard your reply to Mr. Stratton. I would like to follow up a little bit on this line of questioning.

As I understand it, you are not calling the Reserves because you don't have power to call the Reserves under the present situation; is that correct?

General JOHNSON. We are not calling the Reserves because there has been no decision by our superiors to take action that would permit calling on the Reserves.

Mr. BENNETT. Well, I thought there was some testimony here that without the declaration of an emergency—I thought there was testimony to this effect—I don't know which is right.

Mr. HÉBERT. Without an emergency, or an act of Congress?

General JOHNSON. We have no authority to call them in the absence of a declaration of emergency by an authority superior to the Army.

Mr. BENNETT. So you don't at the present moment have the power to call them?

General JOHNSON. No, sir; we do not.

Mr. BENNETT. That is what I thought it was. I am laying the predicate. I am asking the man in charge of running our Army, do you think that we should use the Reserves?

General JOHNSON. The question must be predicated on our longer range commitments to South Vietnam. [Deleted.]

I can say this: There would be less turbulence in the Army today if we were to call the Reserves.

Mr. BENNETT. On the assumption the war would last, then, probably a year or two, wouldn't it be wise to call the Reserves today?

General JOHNSON. Not necessarily. If there is a significant increase in the number of people deployed, and a requirement to sustain those forces for an appreciable period of time, then I think it would be desirable to call the Reserves.

Mr. BENNETT. Isn't one of the great problems of maintaining the Reserve force of the Army or any branch of the armed services, to give sufficient activity and useful utilization periodically during the period of the reservist's tenure, or the Reserve units' tenure?

Secretary RESOR. I would like to make a comment on that.

Mr. BENNETT. I would love you to make it, but I am talking to the general right now, if you don't mind.

Secretary RESOR. Excuse me.

General JOHNSON. I expect you would get a divided opinion on that, Mr. Bennett, among the reservists themselves, as to whether or not—

Mr. BENNETT. It really isn't a decision for the reservists themselves; it is a decision for the military brains of our country. This is not necessarily the reservists themselves. That is like asking whether or not a man wants to have chipped beef for supper in the Army. That is not necessarily a decision he makes.

General JOHNSON. No, but the decision as to whether he eats it is one he makes. This is, I think, the point we are discussing. Does he eat that chipped beef?

Mr. BENNETT. I couldn't hear you.

General JOHNSON. The decision whether he eats that chipped beef is one that he makes.

I think that really is the subject that we are discussing.

Mr. BENNETT. The reservist should have an opportunity to go in if he actually wants to go in, because you told me he is not going to be called; he can individually volunteer, I presume; but they are trained to be units of reservists, and I presume they would want to go in that way if they went in.

I think the reservists feel that would be a logical thing.

So then you feel not necessarily, if the thing is going to last a year or two, would the reservists be logically to be called up?

Can you give me the reason underlying this "not necessarily," because I don't understand it in view of the fact I thought reservists would be greatly enhanced in their ability to aid our country in time of duress, if they had an opportunity occasionally to serve in a military capacity other than just training—

General JOHNSON. On an inactive status.

Mr. BENNETT. So I am mystified by the question of why it would not necessarily be to the advantage of our defense to call the Reserves.

General JOHNSON. Traditionally when the Reserve units are called, both the Guard and the U.S. Army Reserves, and as they come to active duty, there are individuals who have been members of the unit for one reason or another who request the deferment or request that they not be called. In many instances these are granted for fair and equitable reasons.

Immediately they are called there begins to be a change in the composition of the unit; for example, there are instances of sickness or an individual sees an opportunity in some other area for which he feels he is qualified, and he asks for transfer to that other area. In addition, we begin to phase-in a number of replacements, so that the character and the identity of the unit over a period of 6 months to a year changes significantly.

The duration of the callup has a significant impact as well. Is it a year, or is it 2 years? There is also the matter of useful employment, as described by Secretary Resor.

Mr. BENNETT. Well, offhand it seems to me the thing you refer to, which I am very familiar with, because, after all, many of these people contact Members of Congress and say, "I have been serving as a man, as a platoon leader, but I am actually a practicing lawyer, and I think it is now time for me to practice law."

We are familiar with this sort of thing. But isn't the calling up of the Reserves at a vital time in the national defense of our country a good way to come to grips with this very problem, because otherwise, wouldn't this potential lawyer be sitting there for 20 years, and eventually retire as a man who has been a platoon leader, theoretically, but actually when it came time to serve, may have been about to serve as a lawyer?

So isn't it good for the national defense standpoint to occasionally call Reserves for this very reason alone, to see to it that the units are, in fact, vital military organizations prepared to perform their function, which they have been paid for, and which they volunteered to do?

General JOHNSON. I would not be prepared to say so. I think that is a rather harsh judgment to make, because what you are saying substantially is that periodically all of the Reserve units should be called to Federal service, and shaken out hard. That is substantially, I believe, what you are saying.

Mr. BENNETT. I wouldn't say "periodically," but I would say in time of war like we have today, it might be a wise thing to do.

You are doing a lot to destroy the morale of the Reserves today—not you personally, but I mean the country is—by implying to them they are not really wanted. And you even said here today you don't see any reason, you can't anticipate any use for them, even if the war lasts

a year or two. You don't see any real use, but you have a mandate from Congress to do it.

General JOHNSON. No, sir. I haven't said that, and I don't believe that the Secretary has said that.

Mr. HÉBERT. Gentlemen—

Mr. BENNETT. In courtesy to the Secretary, I would like to say—courtesy to both of you—I thought that is what you said. I am sorry if it is not what you said. I will read the testimony later and see if I made a mistake.

In courtesy to the Secretary, I didn't mean to cut him off; I was just pursuing this thought with the general. Any observation you wish to make—

Secretary RESOR. I apologize for appearing to interrupt.

The experience after the callup of the Reserves in the past has been that, when you return the unit to Reserve status, it is in a much poorer condition than when you had it. A Reserve, in a sense, is a wasting or perishable asset. If you use it, then you don't have it, it takes a long time to build up again.

I think that is a factor that we have to consider there, and it really relates to the length of the war. If it is going to be a long war, then really you are better off, in my opinion, using active Army—active and newly activated units. I say that because we would have Reserve units over there under a 12-month rule, we would have them over there for 7 months; they come home and we would no longer have that division. The Reserves would have been depleted. And we would have depleted what we need very much today, which is this Reserve force to fall back on in case there is a major escalation, which we hope there will not be.

Mr. HÉBERT. That is of vital interest, I think, in this program.

There are many questions I am sure members of the committee would like to ask.

However, we want to get along with the supplemental. Without asking the Secretary and general to say in the record at this point, all the figures and data on the Reserve callup—I mean the training program which you discussed in general here, how many callups, in line with the questioning, so we will have it in front of us. I am sure coming events do cast their shadows before them. You two gentlemen know what is ahead of you. We will discuss the National Reserve-National Guard realignment later on. This is the indication of the great concern the committee has.

However, I think in the interest of moving along with the business at hand, we will start on the book now, Mr. Secretary.

Mr. LENNON. Mr. Chairman, are you suggesting there be no more questions along the line that has been asked this morning?

Mr. Chairman, may I make an inquiry, please, respectfully?

Mr. HÉBERT. Yes.

Mr. LENNON. Are you suggesting there should be no more questioning of these witnesses on the subject matter that has been kicked around here for the last 30 minutes?

Mr. HÉBERT. I recognize, Mr. Lennon, your desire.

We kicked it around for an hour. We kicked it around 2 or 3 months ourselves; you know that.

I recognize you to pursue it, because I don't want to cut anybody off, because this subject matter, as evidenced by the questioning taking

place here this morning, is right on the top of the list of concern in this committee. We are going to have quite a problem on it, as Mr. Lennon and the members of the subcommittee on which he serves know. That is the reason why I have allowed the latitude this morning in the questioning of this thing.

So go ahead, Mr. Lennon.

Mr. LENNON. Thank you, Mr. Chairman.

General, I believe you stated in early July the decision was made at the higher echelon that the reservists would not be called?

General JOHNSON. Late in July.

Mr. LENNON. Late in July.

Was your opinion solicited or asked as to whether or not the President should declare an emergency which would authorize calling up the Reserves?

General JOHNSON. Not at that time.

Mr. LENNON. Was it subsequently asked?

General JOHNSON. Yes, sir.

Mr. LENNON. Approximately at what date?

General JOHNSON. In December, and again in January.

Mr. LENNON. In December of last year?

General JOHNSON. 1965, and January of 1966.

Mr. LENNON. What was your response in December of last year as to whether or not in your judgment the President should declare an emergency which would authorize the calling up of the reservists?

General JOHNSON. I recommended that the Reserves be called.

Mr. LENNON. And again, in January of this year, General, what was your recommendation?

General JOHNSON. The same.

Mr. LENNON. The same.

Now, the Secretary has indicated, by inference at least, that one of the factors in the decision not to declare the emergency by which the authority would come to call up the Reserves was a possible extension over a long period of the conflict in southeast Asia.

Do I understand that correctly, Mr. Secretary?

Secretary RESOR. Yes.

Mr. LENNON. So, it was a factor in the President's decision not to declare an emergency?

Secretary RESOR. No. No, I don't know what went on in the President's mind. I am just saying that is a factor which occurs to me, and which I know has been discussed—I had no discussions with the President on the subject.

Mr. LENNON. Yes, I understand, but you do think it was a factor in the final decision of the President not to declare an emergency?

Secretary RESOR. I think it was a factor in the recommendation of the Defense Department.

Mr. LENNON. So—

General JOHNSON. I don't think, Mr. Lennon, that we can attribute anything to the President, as to the factors in his mind, sir.

Mr. LENNON. I understand.

This is indicative to us, the administration, the Commander in Chief, the President, does anticipate a rather long conflict in southeast Asia.

That brings me to the 1967, fiscal 1967 budget. I am not talking about the supplemental that is before us today.

But that would indicate, in glancing over it rather casually, and a little bit to a greater degree of casual attitude, that you are projecting the hope or the belief in that budget—I am talking about the Department of Defense, and especially for the Army—you expect hostilities to end sometime in late 1967, isn't that true?

Secretary RESOR. No. We have merely been directed to budget for combat consumption through June 30, 1967, as a planning date. That does not imply that anyone thinks the war will end on that date. But for budget purposes we have to agree on some planning date. This was the system that was actually used in the Korean war, and appears to be a workable system. And it gives us time so that we can come back to Congress if we need to—before the leadtimes run out—to discuss again what the additional requirements are, based on the assumption that the war will continue, say another 6 or 12 months.

Mr. LENNON. I gathered, Mr. Secretary, from the response that you gave to at least two questions asked of you by the members of the committee here this morning, that if substantial more forces were needed in southeastern Asia, then the question of calling up the Reserve would become a very critical one?

Secretary RESOR. It is not only the question of the number of forces you deploy, it is question of the phasing or the rate of deployment. If the phasing and rate is slower, then the Active Army with the activations is in better position to handle it.

Mr. LENNON. I think you statement indicated you had an in-country strength of 131,000-plus Army?

Secretary RESOR. That is correct.

Mr. LENNON. The news media, just last month, I believe, indicated in a news article that we could reasonably expect escalation of forces in Vietnam and Thailand by late fall, or certainly early winter, of at least 400,000 combat troops.

Is there any substance in that statement?

[Deleted.] I would like to know what your thinking is now. What do you project for the Army's strength in southeastern Asia by November 1 of this calendar year?

Secretary RESOR. I don't think I am in a position at this time, really to predict that.

[Deleted.]

The figure I was speaking of currently is Army strength.

Mr. LENNON. I am sorry—

Secretary RESOR. I was just saying that I don't think I am in a position to actually make a useful, intelligent prediction as to the yearend strength.

Of course, as we all know, it depends to a considerable extent on what Hanoi does, and what their rate of infiltration is. It is a subject that is under discussion, but it hasn't really gotten any further than that. I wouldn't be in a position to say.

Mr. LENNON. Mr. Secretary, your 1966 supplemental budget, as related to public works, or construction [deleted].

Secretary RESOR. Of how many?

Mr. LENNON. [Deleted.]

Secretary RESOR. I am not sure it does predict the figure. [Deleted.]

Mr. LENNON. [Deleted.] Thank you, Mr. Chairman.

Mr. HÉBERT. Mr. Ichord.

Mr. ICHORD. General, you or the Secretary, one, stated you are losing 1,000 men a day out of the armed services.

General JOHNSON. Out of the Army.

Mr. ICHORD. Out of the Army, right.

You, of course, would like to have probably most of those men reenlist.

You do have a reenlistment problem.

I am wondering if you have given any thought to the possible adverse effect of the GI bill we passed a few days ago by a vote of 369 to nothing in the House will have upon your reenlistment problem. Are you concerned about any possible adverse effect?

General JOHNSON. Not at the present time. We had evidenced some concern in the hearings last year that this was a possibility, but we found that we have some difficulty predicting what people are going to do.

For example, despite the fact that the Active Army is carrying the burden in Vietnam, our first term Regular Army reenlistment rate over the course of the past 6 months has increased.

Mr. ICHORD. It has improved? I am glad to hear that.

General JOHNSON. It has improved.

I don't know by what rate, but we have gone up some.

We had in 1962 a 23.8 percent rate; in 1963, a 22.2 percent rate; and for the first 5 months of 1966—fiscal 1966, we had a 26.7 percent rate.

Mr. ICHORD. Yes. I know it is difficult to predict what people are going to do, but you feel, then, probably it won't be too serious a problem, that it wouldn't affect your reenlistment rates to definitely?

General JOHNSON. I don't believe it will have a significant impact. We have a lot of programs in the Army that offer a man an opportunity to improve his education, so that many of the individuals who want to make a career of the Army can, over the course of the years, attain substantially the same benefits as they would by getting out.

Mr. ICHORD. Thank you very much, Mr. Chairman.

Mr. BATES. Mr. Secretary, on page 2 of your statement, the last paragraph, you said, in addition that the Army requires \$200 million—\$210 million in lieu of the transfer of a similar amount of money from the stock funds for the MPA account.

Would you explain that, please?

Secretary RESOR. I will be candid. This is a very complicated subject.

Mr. BATES. I will be candid, that is the reason I asked the question.

Secretary RESOR. The stock fund, as I understand it, is essentially a revolving fund.

Mr. BATES. It is unless you disturb it. That is the reason I am asking the question.

Secretary RESOR. Right.

The prediction was, when the basic budget was made, that we wouldn't need that much working capital in the stock fund.

Now, as you can see, as your business expands, and you have more sales, you need more working capital. Essentially that is what happened here.

Mr. BATES. Yes; but this talks about a transfer from stock funds to the MPA account.

Secretary RESOR. Well, as I understand it, the plan was to assume we had \$210 million-excess working capital in our stock funds, and that we could transfer to meet part of our projected MPA obligations. When the rate of the buildup increased, we had to carry larger inventories and we needed more working capital. Therefore it became quite clear that the \$210 million was no longer excess capital funds, but would have to be retained in the stock fund.

Mr. BATES. I would presume that that would be a judgment that would have been exercised ahead of time, that you didn't in fact have an excess amount in your stock fund, because everything has been building up in recent years.

Your account payables would be more, your demand upon the account would be more, and therefore, the drawing down from the stock fund account would appear to be something contrary to the general trend we have been following.

Secretary RESOR. I am familiar with the problem we have today. The drawdown part came up at the time the basic budget was prepared, which was over a year ago. I am not familiar with the computations on which they reached the projection that we could actually save \$210 million.

Perhaps there is someone here who knows. I don't believe we brought anyone who is completely familiar with the history of this. General Taylor will be the man. General Taylor will later appear before you. Or I can supply that.

Would you like to know why we originally thought we could take \$210 million out of the stock fund?

Mr. BATES. Yes, because it is a very convenient budget arrangement to take money out of a stock account, rather than ask for appropriations in the same amount. This is a very nice thing. It is a windfall. But it depletes the amount of goods that are available on the shelf.

Secretary RESOR. Precisely. Precisely, sir.

General JOHNSON. Not necessarily, Mr. Bates.

We have a continuing change in the type of vehicles, for example, or the type of weapons that we have. To give you an example, we converted the artillery in the divisions in the 7th Army from 105 millimeter to 155 millimeter a couple of years ago. When we did that, we then automatically created a surplus in 105 millimeter ammunition. While this example does not bear directly on a stock fund transaction, it is indicative.

Now, that 105 millimeter ammunition, then, is eligible for military assistance programs. So a part of what you term a "windfall" results from modernization practices, where stocks that are funded by the stock fund become excess to Army requirements. So you get some money back.

Over the years this has been a—

Mr. BATES. Yes, but you take that out of your inventory. You either have a stock balance in items or you have it in cash to fill up the entire stock fund.

Now, you can take something out of that, it is reimbursed in cash under the present appropriations. This is what happens.

So in any event, if you take out some old equipment, it is a windfall, then, as far as the account is concerned because then you put new money

in there, and you are unloading some of your old stuff under your military assistance program. That is actually what you are doing.

But this is not really the question I am asking. What I am concerned about is whether or not we are cutting down on the size of the stock count, and therefore not replenishing it so we have that much to draw upon in the future.

Now, if we just absorb so much of the stock count, and spend it for other purposes, that is a windfall, whether for the MPA account or something else.

General CHESAREK. Over the past several years the stock fund has generated funds which have been applied to the MPA program. These are generated from two sources:

(1) The pricing policy: In other words, you buy a lot of spare parts, you sell them, then, to the customers, which reimburse the fund. Any difference in pricing between the procurement price and selling price we try to keep as close as possible.

Mr. BATES. You average them out, don't you?

You don't try to make a profit for the stock account?

General CHESAREK. No, you don't make a profit, but there is always a variant between the prices as published in the field and the latest price you get from a competitive procurement. This generates some money.

The other source is long stocks. This is the point that you were talking about.

As the structure of the Army constantly changes, long stocks in the stock fund are generated, and as these are used, over a period of time. This too generates money that you don't need for replacement of these long stocks.

Mr. BATES. No, but you have a replacement generally of something else to take its place.

General CHESAREK. Just as we are doing right now for this emergency, we have injected substantial additional sums of money into the stock fund obligation authority to buy new parts as required for Vietnam.

Mr. BATES. I understand that. But the only concern I am expressing is that we have a certain amount of money in a stock—in a revolving fund. What I don't want to see happen is to deplete the stock, and use these funds, or stocks, for some other purpose, so we won't have to request appropriation for it.

Now, that is my concern.

Are we doing that in this case, or was that our intent?

General CHESAREK. As the Secretary indicated, we are not doing that.

Mr. BATES. I know you are not doing it. That is indicated. But what was the intent?

General CHESAREK. The intent was, in the estimates by the fiscal analysts, we would, in fact, have generated that sum as excess in this fiscal year. We are now saying "Not so."

Mr. BATES. I don't understand how you generate excesses.

You have some differences in prices, that is true, but how do you generate anything to amount to any money, at all?

General CHESAREK. Well, you take—

Mr. BATES. You don't make a profit?

General CHESAREK. No, you don't try to make a profit, sir.

You have to publish the price to the field agencies that buy spare parts the price, so that they know how much consumer money they can apply—you know, they have limited amounts.

Mr. BATES. By specific appropriations?

General CHESAREK. These prices are published in a bulletin form. When an inventory control point buys spare parts it does this now under competition, largely. We achieve a very fair price, and sometimes the reduction in price is substantial.

By the time you can get the field bulletin changed to reflect new price, and distributed worldwide, 6 or 9 months pass.

Mr. BATES. If you guess about right, you are not going to have a change either way.

General CHESAREK. It has proved over time to generate——

Mr. BATES. Then you just overcharge your stock fund in the first instance.

General JOHNSON. We are overcharging the customer.

Mr. BATES. The customer in your estimate.

General JOHNSON. Yes, sir. But I think there are two answers to your question.

The first is that we historically have shown what amounts to a profit from the stock fund.

For example, we buy 100 helicopters. We buy parts for 100 helicopter blades—rotor blade assemblies. At the time that helicopter passes out of the system, perhaps we have 20 or those left.

Mr. BATES. Right.

General JOHNSON. That we overbought.

We sell those helicopter blade parts, but we don't have to buy any replacements of that particular type.

Mr. BATES. For something else. That is right.

General JOHNSON. Yes.

There is a continual generation of funds this way.

The second thing that happens is, each time we come over here to ask for our annual appropriation, we always show the Congress what transfers will be made between appropriations, such as a transfer from stock fund to military personnel, Army.

As for the question that I think is really troubling you: Yes, we have differences of opinion as to whether this money should come from the stock fund or not.

These are internal, sometimes to the Army, sometimes between the Army and the OSD analysts, but generally speaking, we have had an adequate obligational authority to maintain our stock fund with the parts that are required. Generally speaking this is the case.

Mr. BATES. General, I have no objection to these guestimates, and the fact you might have overages or underages. These are matters of judgment.

But what I don't want to see happen is the utilization of a stock fund for operating purposes in lieu of asking for new money. This is what I don't think we should be doing.

General JOHNSON. Yes, sir.

This is precisely what we are doing here; we are coming to you and saying that we had made an estimate that we could use stock funds for pay, but we now find that we cannot do that. We would like to have the \$210 million for military pay.

Mr. BATES. That I understand.

The question was raised, and I thought we ought to get the thing solved.

Mr. HÉBERT. Members of the committee, we will take the black book and turn to tab A.

Mr. Kelleher will proceed.

Mr. KELLEHER. Mr. Chairman, immediately behind the Secretary's statement is an index of all of the tabs, and they are tied directly into the individual items.

The first involves the CH-47A helicopter, the Chinook. The Army is requesting [deleted] of them at a price of \$114.9 million.

The second item—

Mr. SCHWEIKER. I would like to ask either the general or the Secretary are there any armored Chinooks in this buy?

Secretary RESOR. No, that is experimental still.

General JOHNSON. Out of the Chinooks we already have, we have equipped [deleted] on an experimental basis, [deleted] to see just what kind of an armed ship the Chinook will make.

We have made no determination to purchase armed Chinooks as yet. We have to run some experiments to determine whether or not we in fact should continue to arm them.

Mr. SCHWEIKER. You had one here down testing it at your proving ground for some time, didn't you?

What have been your preliminary results on that?

General JOHNSON. I can't say.

What we were checking out there was the practicality of the armament systems that we had on it. According to the reports that I have had, which had been very general in nature, they said they have been meeting their test objectives. In other words, they are able to fire their weapons, and to engage targets satisfactorily, in that particular environment, [deleted].

Mr. SCHWEIKER. Why are we so late in testing equipment of this type? In other words, just from a logical point of view we know that we have lost a lot of airplanes because of small arms and antiaircraft fire. We know we lost a lot of helicopters because of this. And here it is this late in the game that we are testing something which it seems to be obvious we should have been testing a year back.

General JOHNSON. I would take the opposite view. The Chinook has been fielded at least a year ahead of the normal time we would field the Chinook. At the time it participated in the air assault test in what is now the 1st Cavalry Division, we were having an availability rate on that machine of about [deleted] percent, entirely unsatisfactory.

The reason that we did it was because it was the kind of machine that we wanted, and we were willing to accept this rate for test purposes.

Since going to Vietnam—and this is only in the course of the last 6 months—the availability rate on that machine in Vietnam has now gone up to between [deleted] percent.

Mr. SCHWEIKER. What do you mean by "availability"?

General JOHNSON. When we want to fly it, it is ready to fly, it is not down for repairs or it is not down because there are no parts to put it in a flyable condition.

Mr. SCHWEIKER. Maybe my question should be a little more basic—General JOHNSON. Let me finish, Mr. Schweiker, if I may, please.

Mr. SCHWEIKER. All right.

General JOHNSON. So we have moved out exceptionally fast in arming this Chinook, we feel, to explore all possibilities for providing higher support for our forces.

We think that we have been exceptionally aggressive in this area of the armed helicopter.

Mr. SCHWEIKER. Well, General, you may be right, but I have been informed the Army waited anywhere from 4 to 6 months after getting a proposal to build an armored Chinook before they gave the green light to do it. This was right in the middle of our buildup at the time. So this is what I am getting at. In other words, it seems to me this is the type of thing you would be experimenting with. And I understood that the Army, or the Pentagon—maybe I shouldn't say the Army—waited anywhere from 4 to 6 months when we were escalating over there before they agreed to go ahead with this whole idea.

General JOHNSON. Mr. Schweiker, I got a briefing from General Besson, who advanced this concept to the Army Materiel Command, and on the day I received the briefing I said, you take off [deleted]. There wasn't anything written or anything else. He sent his team [deleted] to work out the details of the test with the people [deleted].

I don't believe that there has been any delay whatsoever, although it takes a little bit of time to process papers. I would also point out that the helicopters we have diverted for this test are the same helicopters that we require to place in units [deleted].

So we have placed this program in a higher priority than [deleted].

Mr. SCHWEIKER. I don't have all the facts at my disposal, but I would appreciate it, General, if you would supply me the date the manufacturer supplied you folks with the proposal on these [deleted] experimental units and then the date you folks gave them an OK. I sure would like to have that for a record.

General JOHNSON. Any time a manufacturer gives us a proposal we have to recognize there is a modest amount of self-interest on the part of the manufacturer. We have to check his proposals pretty carefully, because it is sometimes hard to distinguish between fact and fiction in some of the things that a manufacturer tells you.

Mr. SCHWEIKER. Well, this I agree with, General, and I realize, as you say, this is a comparatively new piece of equipment. I concede that.

But maybe the more basic question I am getting at is, it seems to me, with our helicopter buildup over there, and the losses we have been sustaining in the air war, maybe we should have been looking—I am not saying Chinook—any type of armored helicopter equipment a few years back. This is what I am looking at.

General JOHNSON. We started looking, sir, back in 1956, and have been progressing since that time on armed helicopters.

Mr. SCHWEIKER. I just would leave the point to show I think this is a badly needed weapon. I regret that it is in the middle of the war before we are bringing it in. Our plane losses and our helicopter losses are a rather sad tributary to the fact we have not counteracted the ground in an effective way. I certainly hope, and I am not pushing

for this particular model, but I certainly hope we will keep pushing this concept, and I would like to have for the record the Army's time schedule of when they got the proposal and when they decided to go ahead with it, Mr. Chairman.

General JOHNSON. You give me a golden opportunity, Mr. Schweiker. I would like to give you some statistics on our helicopter losses. We are enormously proud of what the helicopter has done—all of our helicopters. They have demonstrated remarkable resiliency in Vietnam.

I have got some figures from the 1st of January 1962—and you will recall we had then the old HC-21, a very old helicopter—through the 31st of December 1965. In that period of time we have flown 867,876 combat sorties, and by a "combat sortie" I mean one in which the helicopter and its pilot and crew and load have been exposed to hostile fire. In that period of time we have lost 64 to ground fire.

This is 4 years that I am talking about. We had 146 knocked down. The difference between 146 and 64 is the aircraft that were recovered.

What that means is that we lost 1 helicopter for every 12,561 combat sorties. We had 1 knocked down for every 5,944.

We had a lot of them hit—many, many hit—1 for every 326 combat sorties.

Mr. SCHWEIKER. Yes.

General JOHNSON. When you put it in total sorties you get an even bigger figure. We lost 1 for every 19,508, as a combat loss.

Mr. SCHWEIKER. I won't dispute that, General. My point is a little broader in that when you go in with a helicopter landing the point is how many men do you lose at this point, and if you had an armored helicopter come in and clear out the area it seems to me rather logical you are going to save α percent lives because you can clear an area, and also our fixed-wing aircraft. I just wonder how many—I understand we lost something like a billion dollars' worth of fixed-wing aircraft. My point is, I wonder if we fully exploited a weapon like this, and I am not particularly addressing it necessarily to the Army, in some of the areas it is not necessarily the Army's concern. That is all.

Mr. KELLEHER. Tab B, Mr. Chairman, is the Iroquois [deleted] for \$386.3 million.

Mr. HÉBERT. Without objection it is approved.

Mr. KELLEHER. Tab C [deleted] Pawnees for \$17 million.

Mr. HÉBERT. Without exception we will move to the next item.

Mr. KELLEHER. [Deleted] Flying Cranes for \$26.6 million.

Mr. HÉBERT. Without exception, go to the next item.

Mr. SCHWEIKER. What is the basic of this? In other words, what can the Flying Crane do that the Chinook couldn't, just briefly? I see their loads are about the same, that is why I ask the question.

Secretary RESOR. It can carry much more. And it can lift and recover a Chinook. It is very hard for a Chinook to recover a Chinook. The Flying Crane can recover a Chinook very easily. I think the current figure is that we have recovered \$19.4 million worth of aircraft with the four Flying Cranes we have out there now in the Air Mobile Division—or had, we lost one.

Mr. SCHWEIKER. Your own data sheets here show they both have a mission load of 10,000 pounds. Maybe I am confused. But your own statistics say their loads are the same.

Secretary RESOR. I think it is partly a question of how—

Mr. SCHWEIKER. Yet one costs [deleted] the price of the other. That is what I would like to have cleared up.

General CHESAREK. The Flying Crane external load can go up to 20,000 pounds.

Mr. SCHWEIKER. It can go up to 20,000?

General CHESAREK. It can go up to 20,000 pounds.

The configuration of the aircraft is such that you can carry a wide variety of loads.

Mr. SCHWEIKER. Why don't you put that in your data sheet, then?

General JOHNSON. If you will look under paragraph 8, under "Range," you will notice in the parenthetical expression "30-mile nautical radius with 20,000-pound mission load."

Mr. SCHWEIKER. What is the 10,000 pounds based on that you have in the mission load figure, then?

General JOHNSON. That is the mission range, 270 nautical miles, you will notice; 260 nautical miles is shown up above.

There is a direct tradeoff, of course, between these.

Mr. SCHWEIKER. Thank you, Mr. Chairman.

Mr. KELLEHER. Tab E, Mr. Chairman [deleted], \$100,000.

Mr. HÉBERT. Without objection it is approved.

Mr. KELLEHER. Tab F [deleted], OV-1 airplane, \$26.5 million.

Mr. HÉBERT. Without objection it is approved.

Mr. KELLEHER. Tab G, follow-on airplane [deleted], \$13.2 million.

Mr. HÉBERT. Mr. Wilson.

Mr. WILSON. I would like an explanation of the type of airplane you are recommending in the utility followon. Is that in any way like the OV-10 that has been under consideration by the Army and the Air Force?

General JOHNSON. We can't really tell you what the followon is going to be, because we are running some tests. It will have some of the same characteristics as the OV-10.

Mr. WILSON. I notice you have a stowing characteristic, you have a passenger-carrying characteristic. In cargo this is almost the same requirement as the OV-10.

Let me ask you a little further, do you have any requirement, either—obviously you don't in this—but do you have it in the fiscal 1967 for the OV-10, which the Air Force is ordering?

General CHESAREK. The transport version of the OV-10 does not have a good STOL capability.

Mr. WILSON. The OV-10 I have seen has a very definite STOL capability.

General CHESAREK. The primary configuration of the OV-10 is a two-passenger carrier. Of course, they do have a cargo version.

Mr. WILSON. I am talking about the Coin, the Lara, or the OV-10A, or whatever you want to call it. It is capable of carrying 8 or 10 people depending on the configuration. It carries about the same load.

I wonder if maybe your requirements aren't really quite similar to what you listed as requirements for the Coin-Lara?

General JOHNSON. Are you talking about the OV-1 here now?

Mr. WILSON. You have a requirement here for airplane utility followon as you call it.

Secretary RESOR. Tab G.

Mr. WILSON. According to the mission, it is very similar to the OV-10A mission. I am wondering why all of a sudden we decide we don't need the OV-10's, and they are going to come in with another airplane of similar characteristics.

General JOHNSON. We are looking at the OV-10 as one of the candidates to see whether or not it will meet this mission requirement. We have contributed to the development of the OV-10, as well. I think we put up \$2 million.

Mr. WILSON. That was the reason for my question. I was wondering perhaps if you were thinking about it because the mission is so much similar to the Air Force's OV-10.

General JOHNSON. We are thinking about it, Mr. Wilson. The reason we have not specified the type of aircraft here is we are running a competition to determine what aircraft it ought to be. One of the candidates is the OV-10.

Mr. WILSON. Yes.

General, let me ask you: Have you personally read the report of the close air support hearing—

General JOHNSON. The Pike report?

Mr. WILSON. The Pike report.

General JOHNSON. Yes, sir.

Mr. BOB WILSON. Do you find great disagreement in the criticisms of that report? Maybe this is—

General JOHNSON. As I read your report, Mr. Wilson, you stated that the report was not intended to be critical, it was intended to be a help.

I don't want to associate myself with the criticism.

Mr. BOB WILSON. You accepted it in the manner in which it was presented?

General JOHNSON. Yes; I thought many of the points brought out there were fine points, and we would continue to work on them. As a matter of fact, some of the things you raised in there, we have already taken some action on.

For example, last April General McConnell and I signed an agreement on forward air controllers. We don't have the same number as the Marines, but we have one per battalion; the Marines have three.

However, the Marines have four rifle companies, where we only have three in our battalions. We get a liaison officer at the battalion who can also act as a FAC; thus giving us a capability for two FAC's.

Mr. BOB WILSON. Did you sign an agreement they communicate with the helicopters, rather than going through an airborne liaison man?

I think this is one of the most critical points that we brought up, the fact that forward air controllers couldn't communicate with the airplanes that are dropping the ordnance, and I hope the Army is showing some concern. I know Dr. Cheatham indicated great concern from his standpoint on the problem area. The Marines and the Navy can talk to each other. The forward air controller can actually direct the course of the airplane coming in. I wondered if the Army

is paying enough attention to this problem, because, believe me, your Army people who came in are concerned about it, that are working there on the frontline, the fact that they have to depend on a little observation airplane flying around to carry their communication to the airplane that is dropping the bombs, or the napalm, whatever it is.

Mr. BLANDFORD. The Air Force testified they are going to use the OV-10A basically as a replacement for the O-1X.

They are going to continue to use the OV-10A for the forward air controller observation aircraft to bring in aircraft, but in addition, indicated that it would also have ordnance, and that could be called in. So when they get the OV-10A this will probably be the first time they will have the loiter aircraft on station, that your forward air controller can talk to directly.

If he can identify the target, this aircraft would then be able to deliver a limited amount of ordnance.

So the Marine Corps is going to use it basically as a Lara, the Air Force-Army are going to use it basically as an observation airplane, but with an ordnance capability. Isn't that correct, General?

General JOHNSON. Yes; as it applies to Army personnel using Army radios communicating with Air Force aircraft. However, the Air Force FAC's use Air Force radios to contact the aircraft directly. Our new family of radios with which we are presently equipping the force, the AN/VRC-12 and AN/PRC-25, have a greater range spectrum, and we have provided these radios to the Air Force so that they can communicate directly with our troops.

Mr. BOB WILSON. The problem was not the range, but the fact you are working on different bands and different wave lengths.

General JOHNSON. That is what I say. Our new radio has a broader radio spectrum, which permits us to do that.

Mr. BOB WILSON. You are conscious of the need?

General JOHNSON. Yes, sir. And we are also solving the problem, I might add.

Mr. BOB WILSON. Thank you.

Mr. ICHORD. I understand the boys out in the field in Vietnam, armed the Mohawk, the OV-1, with guns, some time ago. Is that correct?

General JOHNSON. The first Mohawks that we sent over there were armed with guns and with rockets.

Mr. ICHORD. I understand that they have now taken the guns off the Mohawk, and the rockets.

General JOHNSON. In December I didn't check, but last March—and I put out the order that they be taken off, because it is directly competitive with the function of the Air Force—but last—

Mr. ICHORD. General, I didn't quite understand that. You said you got an order. I understand they have been ordered to take the guns off, and they have taken the guns off, is that correct?

General JOHNSON. No; it is not correct.

In March of last year I visited the field at Vung Tau where the Mohawks were maintained at that time, and with my own eyes I saw a Mohawk armed. I had had an order put out sometime before, I might add, to not arm them, because they are a reconnaissance aircraft. They take pictures, they carry a side-looking radar in one version, or an infrared sensor in a third version.

Somebody who is supposed to be in a reconnaissance outfit that is armed is inevitably, just by the nature of man, going off looking for a fight. We have people that can do the fighting; but we haven't got people that can do the looking. The purpose of the Mohawk is to look.

Mr. ICHORD. Yes; it is basically a reconnaissance airplane.

You originated the order, the order originated with you, and you issued the order to remove the armaments from the Mohawk?

General JOHNSON. Yes.

I did not issue an order at the time to disarm at Vung Tau. For those that were armed I said, "All right, leave them as they are."

Mr. ICHORD. They have been taken off, then?

General JOHNSON. I don't know about the ones initially armed in Vietnam.

Mr. HÉBERT. Mr. Byrne.

Mr. BYRNE. Mr. Secretary and General Johnson, when Secretary McNamara was here I asked him why Piasecki didn't get some of this work, and he said he believed in competition, too.

Every time I come here I never see Piasecki getting anything.

Coming from Philadelphia, I have people working there, and first of all is the nature of self-preservation. I want to know what do we have to do to get a bite out of this apple.

General JOHNSON. Bring the bids down below the price of the winners, sir.

Mr. BYRNE. Did you ever see any Piasecki helicopters in Vietnam?

General JOHNSON. I am not familiar with all the models of Piasecki, but I did not see a Piasecki that I was aware of.

Mr. BYRNE. Any of the other gentlemen there see any of them?

Secretary RESOR. Do you know, Mr. Byrne, which competitions they have been in? The name is quite familiar with me, but I don't recognize it vis-a-vis some of our aircraft competition.

General JOHNSON. They were in on the AAFSS, for example.

Mr. BYRNE. The point that annoys me, General, is we allowed these other outfits money to extend their facilities and raise their production from [deleted] a month. There is Piasecki, practically waiting for the undertaker to pick him up. He is starving; dying on the grapevine.

General JOHNSON. Yes, sir; but I would point out that in the areas where we permitted an extensive mix of different models of equipment, we run into enormous maintenance problems.

In the aircraft field, particularly in the helicopter field, we have one of the most complicated machines that the Army mans, and if we were to get into a great mixture of different types of machines, we would have an awful time keeping any of them flying.

Mr. BYRNE. Did you ever test any Piasecki's?

General JOHNSON. Yes, sir.

Mr. BYRNE. What do you think about him? He is a pioneer.

General JOHNSON. Piasecki participated in the competition for the armed helicopter.

Secretary RESOR. Yes. Piasecki is on the Aviation Materiel Laboratory's mailing list of aviation firms, and has been sent a request for proposal on all previous aviation requirements and any procurements involving research and development and design competition.

For instance, they submitted a proposal in response to the Aviation Materiel Laboratory solicitation for the contract definition phase of AAFSS procurement.

Their proposal was evaluated by a contractor selection board. It was not accepted, since the technical proposals submitted by Sikorsky and Lockheed were considered to be superior.

Piasecki has done extensive research and development for the Army in the field of the development of an aerial jeep, and is currently performing research and development work for flight test of the 167-H1 helicopter.

I certainly can assure you, Mr. Byrne, if we could have gotten that UH-1B/D rate up faster by going to Piasecki, without getting into a parts problem, we would have done it.

Mr. BYRNE. Well, again, let me repeat: I am really interested in Piasecki, because my people work there. If it wasn't for them, I wouldn't be here. He is dying on the vine. I am going to see a little bit of work that I might have, that he gets a try, at least try to get a bite out of the apple.

General JOHNSON. I think we can assure you, Mr. Byrne, when Piasecki has a winning entry, they will get the contract.

Mr. BYRNE. You call me up and let me know.

General JOHNSON. Yes, sir.

Mr. HÉBERT. Going to missiles, Mr. Secretary—

Mr. BYRNE. Mr. Chairman, just a minute.

The statement reminds me of an Irishman who had a horse in the winter. He had no feed. He said, "Wait until the spring; he will eat grass."

So far Piasecki didn't get any grass to eat from you people.

Mr. HÉBERT. Without objection, the next item.

Mr. KELLEHER. Tab H. [deleted] battery sets for the HAWK missile, \$35.5 million.

Mr. BATES. Is there any in the 1967 budget?

Secretary RESOR. I can tell you in just 1 second.

General CHESAREK. No; no missiles in 1967.

Mr. BATES. This is ground launch?

General JOHNSON. [Deleted.]

At the present time, our level of HAWK has not increased. We have got it under a pretty careful review at the present time to see whether or not we should, because [deleted] our HAWKS are deployed overseas, so we have a rotation base problem.

Mr. BATES. General, it seems the threat has been running through these entire hearings, which is that we have been living terribly close on our inventories. Nobody knows what is down the road tomorrow. And I think when it comes to things like this—I don't mean HAWK particularly—but across the board, whether it be aircraft of whatever it may be—I think we are at this time tightening our belts a little more than we should.

I don't mind all these other programs in Government. We can tighten those belts real good, but when it comes to the defense of this country, I don't like to see this come up short. And borrowing from here to fill in there militarily, I just don't like it. That is the reason even in the pay bill the other day, the chairman and I put in one for military, yet the civilians are going to get it. But why the military pay, we are going to be short. I don't understand it.

General JOHNSON. No; I think there is another way to look at this. We have maintained a reserve in the United States to employ as required. We are now employing that reserve. And as we employ the reserve, or deploy it, we are reconstituting those elements of it that we think require reconstitution.

Mr. BATES. You are borrowing from one place——

General JOHNSON. That is not a borrowing. The reserve in the United States is designed to be employed wherever it might be required. So it is not a borrowing. It is employing it now where it is required.

Secretary RESOR. Perhaps, Mr. Bates, it might reassure you to know that in our 1966 and 1967 budgets, combined, we are buying out the Army's authorization objective, generally speaking, in substantial items.

Mr. BATES. Well, I hope so, because we are depending on your people for information, and we don't want to see us come up short. We don't know what is down the road. A lot of things could happen in the next year. And if we are planning this as to past experience, the recent past is not good enough. If we are going to double as we have in some cases in recent experience, maybe this will do the job. But let's not keep this thing to close.

Mr. HARDY. May I ask a question about that?

Are those all deployed?

General JOHNSON. No, sir; not at the present time.

Mr. HARDY. Will you tell us how many of them are?

Secretary RESOR. As of the end of 1965, there were [deleted].

Mr. HARDY. I am thinking about the [deleted]. Where did the rest of them go? What happened to the rest of them?

General JOHNSON. Of the [deleted] sets, there are [deleted] of them in Europe, [deleted] of them in the Pacific. [Deleted.]

[Deleted] sets are in Panama. [Deleted] sets are in what we call the STRAF from which we provide forces for Strike Command. [Deleted.]

We have [deleted] sets in Florida, belonging to our Army Air Defense Command. They were put down there at the time of the Cuban crisis.

Mr. HARDY. Are they in place?

General JOHNSON. They are in place.

Then there are [deleted] that we have in general support used as training sets for schools. A maintenance float is included in the number within commands.

These are sets used to provide a replacement if something happens to a set, which we then repair.

Mr. HARDY. The total backup, out of your entire [deleted] is [deleted] sets?

General JOHNSON. [Deleted] which includes [deleted] maintenance float and [deleted] nonunit training sets.

Mr. HARDY. [Deleted.]

General JOHNSON. [Deleted] in training and [deleted] maintenance floats in depot.

Our maintenance float depending upon the kind of equipment, may be [deleted].

Mr. HARDY. What is the time requirement on these?

General JOHNSON. I can't answer that question.

Maybe I can get the answer.

General CHESAREK. General leadtime, sir, is [deleted] months, total.

Mr. HARDY. [Deleted] months?

General CHESAREK. [Deleted] months.

Mr. HARDY. It is going to take you a long time to get these you are going after now. [Deleted.] This bears out the point Mr. Bates was raising a while ago. [Deleted.]

Have you got any on—apparently you have [deleted]—on order, under procurement now, if I read these figures right; is that right?

Mr. KELLEHER. In the 1966.

General CHESAREK. In the 1966 supplemental?

Excuse me, the 1966 supplemental has [deleted] sets.

Mr. HARDY. You have an undelivered figure of [deleted].

General CHESAREK. Right.

Mr. HARDY. I don't know where that [deleted] is, what your time of delivery on them is; even if you had them you would only have [deleted] that would be usable within [deleted].

General CHESAREK. That is right.

Mr. HARDY. That is a sad sort of situation.

Now, without—would you explain where the other [deleted] sets are—of course you say, net after the 1966 supplemental [deleted] are delivered, you will have [deleted] plus [deleted] adds up to [deleted]. Where are the other [deleted].

General JOHNSON. No, sir; the [deleted] I believe, are included in the [deleted].

Mr. HARDY. Yes, sir, I understand that.

If you add [deleted] to [deleted] I get [deleted].

General JOHNSON. Yes sir. I can't explain it.

Mr. HARDY. Maybe we lost [deleted] of the [deleted]; maybe that is wrong, which would mean that [deleted].

General JOHNSON. I can't explain it, sir.

Mr. BATES. All of these figures, even yesterday, were about the same. I presume it was because of losses, et cetera, or malfunctions?

General JOHNSON. It could be attrition, but I don't know. This should not be that heavy.

General CHESAREK. There are [deleted] sets in Europe and [deleted] sets in the depots.

Mr. HARDY. That would reduce the [deleted]. You are still missing [deleted].

General CHESAREK. We are still missing [deleted].

(Information requested is classified and was furnished to committee.)

Mr. HARDY. You better go ahead and change the inventory from [deleted].

There is only one other question, Mr. Chairman:

Did you have any of this procurement funded originally in your 1967 budget?

General CHESAREK. In the 1967 budget, sir, we have a total of \$39.7 million for HAWK.

Mr. HARDY. Is that in addition——

General CHESAREK. That is in addition to the 1966 supplemental.

Mr. HARDY. Is that the figure that has been in the 1967 budget right along?

General JOHNSON. To answer your question specifically, was this item transferred from the 1967 budget to the 1966 supplemental, the answer is "No."

Mr. HARDY. The answer is "No."

This is in addition to what had been originally programed in the 1967 budget?

General JOHNSON. Yes.

Mr. HARDY. All right.

Mr. HÉBERT. The committee will stand in recess until 2 o'clock. (Whereupon, at 12:03 p.m., the committee was recessed, to reconvene at 2 p.m., of the same day.)

AFTERNOON SESSION

The CHAIRMAN. Let the committee come to order.

I am all fired up now, ready to go.

We will start right along with the Hardy amendment vehicle.

Mr. HARDY. I haven't written the amendment yet. I don't have the testimony yet.

The CHAIRMAN. This is the result of the Hardy amendment last year, that we put the tracked vehicles in here.

So we will take tab I. How many are there?

Mr. KELLEHER. [Deleted] cargo carriers for \$3.5 million.

The CHAIRMAN. Without objection——

Mr. HARDY. Is this a brandnew item? You don't have any in the inventory?

General CHESAREK. This is our second year buy. It is a member of the 113 family.

Mr. HARDY. I recognize that by the contract.

General, how much has this contract amounted to in dollars of FMC since you started under the negotiated single-source procurement?

General CHESAREK. I only have a breakdown with me, sir, on unit price. It was a 3-year, multiyear price.

Mr. HARDY. I happened to see you started out with about the MM-113. It was a sole-source procurement, and it is still a sole-source contract.

I am just curious to know what is the total amount of this contract for the FMC since it was initiated with the 113-S and all the whole family that enters into it?

Secretary RESOR. I can provide that for the record.

Mr. HARDY. I think we ought to have that.

The CHAIRMAN. Put that in the record. Let's go to the next one. (Information requested follows:)

The last contract for the M-113 vehicle family was awarded to FMC Corporation as a result of a 2-step formally advertised multiyear procurement in which 32 bidders were solicited and 2 bids were received. The next chart shows production by FMC Corporation through the April 26, 1965, procurement.

M-113 vehicle family

Production by FMC Corporation

¹ Includes spare parts, tooling, E.O.'s, kits, and miscellaneous.² A 2-step IFB was published for this requirement but FMC was the only firm sub-

mitting a step 1 proposal; therefore contract was negotiated on a sole source basis.

³ Year contract amount, 1st-year increment \$38,442,075.

Mr. KELLEHER. Tab J, Mr. Chairman, [deleted] 155-millimeter howitzer's for \$9.5 million.

The CHAIRMAN. Without objection.

Mr. KELLEHER. Tab K, [deleted] mortar carriers for \$100,000.

The CHAIRMAN. Without objection.

Mr. KELLEHER. Tab L, [deleted] recovery vehicles for \$2.2 million.

The CHAIRMAN. Without objection.

Mr. HARDY. Which one are we on; L or M?

Mr. KELLEHER. Tab M, command post carrier, [deleted] of them, for \$3.3 million.

The CHAIRMAN. Let me get caught up with you, now. This is what?

Mr. KELLEHER. Tab M, command post carriers, [deleted] of them for \$3.3 million.

The CHAIRMAN. Without objection.

Mr. KELLEHER. Tab N, [deleted] field artillery guns, \$8.2 million.

Mr. HARDY. Mr. Chairman, before we get into that one, could I make this inquiry in connection with the others? Have we concluded all of the MC procurement?

Mr. KELLEHER. There is one more.

Mr. HARDY. I notice we don't have one here.

Is there any possibility of getting any sort of competition to these procurements?

General CHESAREK. There was competition, sir.

Mr. HARDY. One about 3 or 4 years ago.

General CHESAREK. No, sir, last year, between Chrysler and FMC FMC won it. The difference between prices on the multi-year buy was something in the order of \$30 million.

Mr. HARDY. I doubt it was legitimate competition, but anyway we will go ahead.

The CHAIRMAN. Without objection.

Now, the next one.

Mr. KELLEHER. Tab O, [deleted] heavy howitzers, self-propelled, \$3.3 million.

The CHAIRMAN. That takes us down to the last one.

Mr. KELLEHER. Tab P, the last one [deleted] mortar carriers, \$1.7 million, a total of \$75.8 million.

The CHAIRMAN. Without objection.

That takes care of that book.

Mr. BLANDFORD. R.D.T. & E.

The CHAIRMAN. Just a minute, I want to ask some questions on things they asked for that they didn't get.

Now, Mr. Blandford.

Mr. BLANDFORD. I would like to ask General Johnson with respect to procurement, if you would indicate the request that you submitted to OSD on this supplemental that you did not get.

The CHAIRMAN. That you consider vital to the prosecution of the war in Vietnam, or southeast Asia.

General JOHNSON. I asked for two specific items of hardware that we do not have.

One is the [deleted].

This is still, however, in the requirements stage. The Secretary and I, on the 21st of January, I believe, forwarded a paper back to Defense, and it has been in the debate stage there.

We feel, from all of the indications that we can get, that this will be approved. However, there is no money involved here in the budget, because there will be an internal programing.

Mr. BLANDFORD. May I ask General Johnson, when was the last request you had from General Westmoreland for this [deleted].

General JOHNSON. He reaffirmed his request in early January, but I must say that I solicited a comment on it.

Mr. BLANDFORD. Westmoreland has indicated again he wants [deleted] and that he has again reaffirmed his request for this.

When can it be made available, as far as you know?

If you had the money today and could award a contract, when could it be made available?

General CHESAREK. The first one will come off the line in [deleted].

Mr. BLANDFORD. It would still be [deleted] then, that you could have these [deleted] available.

How much money is involved in such a request?

Secretary RESOR. Well, there is about \$35 million involved in 1966, but there is a tradeoff in 1967.

Mr. BLANDFORD. Yes. You would [deleted].

Secretary RESOR. Precisely.

Mr. BLANDFORD. What you would actually be getting would be [deleted].

Secretary RESOR. Yes, if we are correct in our assumption as to what is a valid tradeoff.

General JOHNSON. The record should be clear on that, Mr. Blandford, because we also have [deleted]. It has almost entire compatibility of parts.

Mr. BLANDFORD. You are talking about [deleted].

General JOHNSON. No. We are presently buying [deleted].

The CHAIRMAN. The trade-off will be on what model?

General JOHNSON. We will trade off the [deleted].

The CHAIRMAN. You will trade off on that one?

General JOHNSON. That is right.

Mr. BLANDFORD. Can you do that within the funds available in this supplemental? That is the key to it.

General JOHNSON. With the [deleted] funds that we presently have available, we will be able to reprogram internally on the basis of the straight tradeoff.

Mr. BLANDFORD. What you are advising the committee is you may very well come up here with a reprograming very shortly which in effect would be taking money from the [deleted].

General JOHNSON. Right.

Secretary RESOR. And that might be money out of the 1967 budget into the—

General JOHNSON. No.

Secretary RESOR. The saving is in 1967. We perhaps can do the reprograming in 1966.

Mr. BLANDFORD. This was a competitive contract—it hasn't been awarded, but there has been competition in this area?

General JOHNSON. No, there has not.

Secretary RESOR. Let's go back now, it was competitive between [deleted]. The real advantage [deleted] is that there is 85 percent commonality of parts [deleted].

General JOHNSON. And they are supporting.

Mr. BLANDFORD. So what you are indicating to the committee so the committee can understand this, if you get the approval to go ahead with [deleted] this can be done without additional funds at this point, but it will require reprogramming approval by the committee. Is that the substance of it?

General JOHNSON. I believe this is correct.

General CHESAREK. We asked for about \$6 million.

The CHAIRMAN. How much do we have to add to this bill so you can make that arrangement, should the other parties who are holding it up decide to give it to you?

General JOHNSON. I think, Mr. Chairman, we will get it, so that I don't think anything need be added here.

The CHAIRMAN. Mr. Pike.

Mr. PIKE. Mr. Chairman, on this price business. You show a unit cost for this light observation helicopter of [deleted] apiece.

Would you tell us what that contract was originally awarded to Hughes for, for the production of those light observation helicopters?

Secretary RESOR. You are talking about the LOH—point E?

General JOHNSON. "C." May I defer to General Chesarek, please?

Mr. PIKE. Absolutely.

General CHESAREK. The Hughes price which was won on competition between it and the Hiller Corp., was for something in a little in excess of [deleted] for the airframe.

Mr. PIKE. That is what I thought.

General CHESAREK. That is just the airframe; not the motor.

Mr. PIKE. So we are talking about eggs and eggs, instead of eggs and chickens. What are you now paying Hughes for the airframe?

General CHESAREK. That is the contract price.

Mr. PIKE. Now, but the price is at —

General JOHNSON. To answer your question, Mr. Pike, in this particular request we are buying [deleted] in the original 1966 submission, and in the supplemental buy of [deleted] we are buying [deleted] which are within our option on the original contract, at the contract price of [deleted] per airframe. We are paying approximately [deleted] an airframe for the remaining [deleted].

Mr. PIKE. That is the figure I was after.

How did the price get from [deleted] per airframe to [deleted] per airframe?

General JOHNSON. As I understand the problem, when the contract is set up, the company agrees to commit a certain proportion of its production line to military deliveries. The remaining proportion of the production line goes for civilian sales, if they are able to sell this machine.

We are buying the civilian portion of the line during this particular period of time, and the price for the civilian portion is at the higher price.

Mr. PIKE. What do you mean you are buying the civilian portion? Do you have to buy the civilian portion at [deleted] a frame to get the same helicopter you were getting for [deleted] a frame?

General JOHNSON. We have to buy the civilian portion if we are going to get earlier delivery of the helicopter. Otherwise, we will not be able to replace the OH-13 and the OH-23 in the time frame that we want to replace them. We get a significantly better helicopter here than we do out of the current one we have deployed now in Vietnam.

Mr. PIKE. I know that, but you are getting the same helicopter you were getting for [deleted] and you are paying [deleted] times as much for it. I just can't understand how you can justify it.

General JOHNSON. Well, at the time we entered into the contract we didn't anticipate the scale of deliveries that we wanted. This contract was entered into, I believe, in May 1965.

Mr. PIKE. Well, since when do greater deliveries result in higher unit prices?

General JOHNSON. When you get the greater deliveries earlier, and you've got to add to your work force and increase the cost of your production in order to speed up your deliveries.

Mr. PIKE. I find that very hard to swallow, General. Are they working around the clock at Hughes?

General JOHNSON. I don't know, sir. I believe they are on a 21½ shift basis.

Mr. PIKE. Are we paying double time?

General JOHNSON. I take that back.

Mr. PIKE. What are you saying?

General JOHNSON. I take that back. I think that refers to Bell. I don't know what they are doing.

General CHESAREK. They are just setting up.

Mr. PIKE. They haven't produced any of them at all?

General CHESAREK. The regular 1966 buy was scheduled to come into inventory beginning in [deleted]. By taking off their line those OH-6A's which they had scheduled for commercial production we start getting deliveries in [deleted] and we actually will receive [deleted] of them before the first one would be available on the regular contract. It is this acceleration that we are having to pay for.

General JOHNSON. In this connection, Mr. Pike—

Mr. PIKE. I beg your pardon?

General JOHNSON. I say in this connection we estimate in our procurement that any time we get accelerated deliveries, the premium price you pay is somewhere on the order of 15 percent.

Mr. PIKE. Yes, but you are paying [deleted] percent premium here, General.

General JOHNSON. Of the total contract.

Mr. PIKE. You are paying a [deleted] percent increase in the cost of this bird. From [deleted] to [deleted] a copy.

Did you go back to the other competitor and ask them what they could do in this regard?

General CHESAREK. This is not a feasible alternative.

Mr. PIKE. Did you ask them, General?

General CHESAREK. No, sir.

Mr. PIKE. That is all, Mr. Chairman.

General CHESAREK. May I clarify this point, Mr. Pike?

Mr. PIKE. Yes.

General CHESAREK. Hughes has prepared to start selling these aircraft commercially, and his commercial schedule began, as I indicated, in September of 19—in October or November of 1966. The price Hughes established on the market was about [deleted] for the airframe.

Mr. PIKE. But he hadn't sold one of them?

General CHESAREK. He doesn't have any of them yet.

Mr. PIKE. He hasn't sold one.

General CHESAREK. I don't know how many orders he has, we didn't ask him. We come along and say we want all of that production. Instead of taking half of your plant production we want it all in the initial stages. He said, OK, if you pay me what I can get from a civilian customer I will let you have it.

What the price will be is under negotiation, and I don't know what it is going to be. Neither does anyone else at this point.

Mr. PIKE. Well, when you say it is "under negotiation," what is this [deleted] figure here?

General CHESAREK. That was an estimate at the time of the budget preparation, because that was roughly the price that he had indicated he was going to advertise these aircraft for commercial consumption.

Mr. PIKE. Well, it seems to me when you go to a company which has agreed to sell you a helicopter for [deleted] and you say, "We will give you [deleted] for the same helicopter because that is what you tell us you may sell it to some civilians for, and you haven't sold any yet," I think you are going hog wild.

General CHESAREK. You haven't changed the price he has contracted to sell you, plus the option quantity. That remains at [deleted]. You are asking him to sell his other production at the same price, and I don't think he will do it.

The CHAIRMAN. See if I understand what this thing is about. You don't even have any figure on your accelerated production, or any kind of an agreement on that even?

General CHESAREK. No, sir. In the original contract the specified times for delivery were laid out. They were scheduled to come in in [deleted].

The CHAIRMAN. I can't imagine.

General JOHNSON. Let's clarify the chairman's position here.

We entered into a contract with Hughes with our regular fiscal 1966 budget, and that regular fiscal 1966 budget called for him to start making deliveries to us in [deleted].

The CHAIRMAN. All right.

General JOHNSON. Now, then, we are coming to the Congress at this particular time asking for funds to get earlier deliveries from Hughes on machines that he had intended to sell on the civilian market.

Now, he can deliver these machines to us beginning in [deleted].

The CHAIRMAN. You don't know what he is going to charge you for them?

General JOHNSON. We can't enter into a final negotiation until the Congress authorizes the money to go ahead and negotiate. We would hope that we can bring this down significantly lower than the [deleted] Mr. Pike, but whether or not we can, is anybody's guess.

The CHAIRMAN. Mr. Pike.

Mr. PIKE. Mr. Chairman, I am all through. I just think that this particular procurement, where the price jumps from [deleted] on the same model, because you are trying to get more of them, is something that perhaps Mr. Hardy's subcommittee ought to look into. That is all.

Mr. HARDY. Mr. Chairman, I can't help but agree with Mr. Pike's thought about it. How in the world Mr. McNamara's cost effectiveness has gone all to pot with this kind of an operation. My goodness, you've negotiated a contract on the basis of [deleted] then you come back and say, give us an initial production, and you are going to spend [deleted] for them. General, somebody is just not doing their job right. If you can negotiate one contract on the basis of [deleted] and then when you ask them to speed the thing up you have to pay them [deleted] something is wrong.

General JOHNSON. One thing should be clear, that the contract we have still is at [deleted] and there is no change in the contract terms there.

Mr. HARDY. He could make those on the basis of [deleted] then is going to hold you up for [deleted] now, somebody in your operation is not doing his job.

The CHAIRMAN. It might not be as bad as that.

Mr. HARDY. On the surface, Mr. Chairman, it looks lousy.

The CHAIRMAN. It looks pretty bad now, but there is overtime and all of that going into this.

Mr. HARDY. [Deleted] times as much.

If we don't get a better report on this pretty soon, I am going to look at it.

Mr. PIKE. There are some other ramifications of this I think really would justify Mr. Hardy to go into this.

The CHAIRMAN. We will see about it.

Mr. PIKE. The Hughes Corp. is fairly privately owned. The profits go to an individual, and if he can show a loss instead of a profit, this frequently turns out to his advantage. There are all kinds of ramifications on this price. And the Government is taking a shellacking on it.

The CHAIRMAN. Mr. Secretary, you look into that thing a little more and give us a better explanation.

Secretary RESOR. We will. We will give you a fuller report on it.

The CHAIRMAN. You said there was another area you asked for something you didn't get.

General JOHNSON. The other is in the CV-2 or the CV-7, the Buffalo, DeHaviland, made in Canada.

Here we just have a difference of view with regard to the statement of the requirement. It must be recognized that there are many people who believe that the C-130, for example, can do the job that the CV-2 or the CV-7 can do. The CV-2 is the Caribou.

There are people who say the 123 can do this job. We are using the Otter as a substitute in some of the companies in Vietnam.

The CHAIRMAN. What?

General JOHNSON. The Otter.

The CHAIRMAN. That is another DeHaviland?

General JOHNSON. That is another DeHaviland, yes. This is one, again, on which we have replanned. It is just a case of resolving dif-

fering views. I don't believe that if the committee were to give us money that we would be authorized to spend it anyway, I would prefer to continue to argue the case within Defense channels, because I find again that if we argue our case within our own house, we do better in the long run.

The CHAIRMAN. I imagine you do.

Mr. BATES. What do you mean, General, by your "own house?"

General JOHNSON. Within the Department of Defense.

Mr. BATES. DOD, not within the Army?

General JOHNSON. No, sir.

Mr. BATES. The Army has made a recommendation for the procurement of some of these Buffaloes?

The CHAIRMAN. Yes; he has?

General JOHNSON. Yes; he has, and it has been turned down.

The CHAIRMAN. Did General Westmoreland want these planes?

General JOHNSON. General Westmoreland is a little bit in doubt as to the specific plane, actually.

He has a requirement for [deleted] companies of this type of aircraft that we do not have available. It was for this purpose we are asking for them.

The CHAIRMAN. He has a requirement for an airplane, and the DOD is not providing an airplane, so you, in your responsibility, have selected one, and this is it?

Secretary RESOR. I think they plan to provide an airplane. I think the issue really is which airplane, whether they can use some of the C-123's they've got. We would prefer to use the CV-2 and CV-7.

The CHAIRMAN. They have a brandnew fighter now you know, C-47. I understand it is a very fine fighter—FC-47.

Mr. BATES. Do you want me to yield to you? or what? who has the floor?

The CHAIRMAN. I never yielded to you. I want to read to you about the new kind of plane we are going to have. We have a plane, too, that we might recommend to you.

Off the record.

(Discussion off the record.)

The CHAIRMAN. Back on the record.

Mr. BATES. How about the CV-7A-111.

How many times have you asked for this, General Johnson? It seems to me you have been talking about this for quite a while.

General JOHNSON. We have two in Vietnam now. I believe that our total inventory of them is four that are R.D.T. & E. models. We ask, then, for aircraft to phase in as a follow on aircraft for the CV-2. I believe we asked for this phase in beginning 2 years ago. We asked for it last year and we asked for it again this year.

But the number of tests that were run in this country prior to the time our forces were deployed to Vietnam have created a divided opinion. This isn't something necessarily between OSD and the Army. Also there is an argument between the Army and the Air Force as to what will do the job. There is an argument for example with General Adams who is one of our senior and most respected Army officers who says this isn't really required in the logistics chain. He believes, for example, the best combination is the C-130, the heavier aircraft, and

that retail delivery should be picked up with the CH-47 helicopter.

Mr. BATES. Well, we were talking about this 2 years ago.

General JOHNSON. Yes, sir.

Mr. BATES. You still haven't come to any resolution?

General JOHNSON. No, sir.

Mr. BATES. The Army has considered, reconsidered, and reclamaed. So you are still at dead center?

General JOHNSON. I wouldn't say you are dead center, sir. Every time you butt your head you make a little more of a dent.

Mr. BATES. You are afloat. This is not a question of the Army—

General JOHNSON. We are still alive, I think.

The CHAIRMAN. It looks like you are not getting anywhere fast.

General JOHNSON. We are not getting anywhere fast, but I still think we are making just a little bit of progress.

The CHAIRMAN. You don't want us to fool with this thing?

General JOHNSON. No, sir. I would rather argue it out within my chain of command.

The CHAIRMAN. You think in the long run it would be better for you if we didn't give it to you?

General JOHNSON. No, sir; not for me. I think it would be better for the Army if we argue it out with OSD. I am expendable.

The CHAIRMAN. All right. We want to finish this afternoon.

Mr. BATES. Excuse me, Mr. Chairman. You will put in the record. General Johnson, the relative advantages of these choices?

General JOHNSON. Yes, sir.

Mr. BATES. You have that available so the committee can weigh the weight, the takeoff, and the various elements that go into making a decision, and the purpose for which you want to use it?

General JOHNSON. Yes, sir. I might add we did provide this for the Price subcommittee report. I think Mr. Morgan has it.

Mr. BATES. It would be very easy, then, to put it in again.

General JOHNSON. OK, sir.

(The information requested follows:)

The Army proposal for procurement of [deleted] CV-7A aircraft in fiscal year 1966 and [deleted] aircraft in fiscal year 1967 although recognized was deferred by OSD decision on December 11, 1965.

The OSD rationale for deferring the Army's procurement proposal was to allow further study of the requirement. The development of the Army's CV-7A aircraft requirement was based on detailed logistics support analyses which took into account C-130 and C-123 assets of the Air Force. The Army requirement established as a result of these analyses fills the gap between the capabilities of existing Air Force aircraft and Army helicopters.

The Army completed the service test of the CV-7A on September 30, 1965, while the engineering test was completed at Edwards Air Force Base, Calif., on November 26, 1965. Following these tests a 1,000-hour logistical evaluation was to be conducted at Fort Rucker to determine the consumption of spare parts and maintenance requirements.

In lieu of conducting the 1,000-hour logistical evaluation at Fort Rucker the Army arranged with MACV for the test aircraft to be deployed to Vietnam for [deleted] field evaluation. The first aircraft was deployed via the Pacific route on November 15, 1965, with the second following on December 20, 1965. The trans-Pacific deployment was highly successful and total elapsed times for the crossings were 44 hours and 41 hours, respectively. In order to obtain a field operational comparison with the CV-2B (Caribou) aircraft, the CV-7A aircraft are operating as a part of the 14th Aviation Battalion. To date, the evaluation in Vietnam has been highly successful and indications are that the CV-7A has twice the productive capacity of the CV-2B with corresponding decreased operating costs.

The Army plans to request the Secretary of Defense to reconsider the December 11, 1965, deferral of the CV-7A aircraft procurement.

COMPARISON WITH USAF TRANSPORTS

The Army CV-7A aircraft is designed for short takeoff and landing (STOL) performance in rough, forward-area strips. This capability is critical to the effectiveness of any aircraft assigned to movement of supplies, equipment and combat troops to and within the forward area of the battlefield. The following paragraphs compare the CV-7A with two standard USAF transports.

Characteristics	Army Aircraft CV-7A	USAF Aircraft	
		C-123B	C-130B
Cargo compartment:			
Height.....inches.....	82	98	109
Length.....do.....	377	420	496

The CHAIRMAN. Before we go to the R.D.T. & E., I want to ask you Mr. Secretary, and you, General Johnson, about this meningitis epidemic we are hearing about.

I understand it is at Fort Knox, Fort Gordon, Fort Polk. It doesn't affect this bill, but I wish you would bring us up to date on what you are doing to isolate the people who have contracted this disease that has caused quite—I think it closed Lackland in the Air Force down in Texas.

General JOHNSON. They haven't closed it. They have suspended the introduction of any new trainees.

The CHAIRMAN. They do not take in any new recruits in there, that is what they have done.

Give us a report from the Army on what your problem is.

General JOHNSON. You will recall that we had difficulty in 1964, out at Fort Ord.

The CHAIRMAN. Yes.

General JOHNSON. In October of that year we suspended all basic combat training there, and did not reopen until April of 1965, I think.

We have had remarkable success at Fort Ord since then with passive measures until yesterday, when we had a death at Fort Ord.

This individual, however, had come in from Fort Polk where he had taken his basic training. He was in advanced individual training at Fort Ord, and had failed some part of the course, so that he had started over again when he got sick and went in the hospital.

Since the Fort Ord problem we have had a very aggressive, passive campaign against the meningitis, because there is no specific treatment for it that is a sure preventive.

For example, at Fort Ord, when an individual comes in, he is kept with his platoon, a very small group of people, and given sulfadiazine for 3 days.

At training sessions, people sit on alternate seats, and there is one row of chairs reserved between platoons, because the incidence of this disease occurs in relatively close quarters, when people are grouped together too closely. It also occurs when they are permitted to over-exercise and get too hot, and cool off rapidly.

The young men coming into the Army just happen to be susceptible to this kind of upper respiratory infection.

We established a panel of the most prominent people in the country who are studying and researching as actively as they can some kind of a cure, some kind of a treatment for it.

We have the same kind of passive measures, although they will vary with commanders at each of our training centers. I have had a continuing campaign with those center commanders since November of 1964.

I get a weekly report from the Surgeon General of the Army on the incidence of meningitis, the new cases all over the country, and a comparison with the United States as a whole.

We have been under the countrywide rate as a whole this last year, and we have been significantly under the west coast, which traditionally has the largest incidence in the country.

It has been only during about the last 3 or 4 weeks that the number of cases has increased. Fort Knox, Fort Polk, and Fort Gordon have shown increases. As for this death yesterday at Fort Ord, we have put a team on the road. They have already been at Fort Knox, and they are down in the southeastern part of the United States this week, again examining into any additional measures that we might take.

The CHAIRMAN. That comes from congestion?

General JOHNSON. It comes from crowding.

The CHAIRMAN. Doesn't this point up the need for these additional barracks that you need at these places?

You know we authorized—

General JOHNSON. Curiously, sir, a man in a tent is probably better off than a man in a barracks.

I don't like to say that, but that is what the doctors tell me.

Mr. BATES. You mean healthier; not better, comfortably.

General JOHNSON. He is healthier with respect to meningitis.

The CHAIRMAN. He may be better off after he gets a little training under his belt, but you can't take a boy out of a steam heated apartment in New York and put him out on the ground in Timbuktu—

General JOHNSON. He is not on the ground. He is in a tent. It has a floor in it. It has a cot in it. He is not sleeping on the ground.

I would say this, sir, that in our training centers we are still maintaining 72 square feet per man for sleeping space for the basic individual trainees.

The CHAIRMAN. You better insist on that. We don't want any of these epidemics to get out of hand. It would be a serious thing.

General JOHNSON. We don't want them out of hand, either, sir. We are very concerned and watchful in this regard.

The CHAIRMAN. Let us turn to the little green book, Mr. Hardy.

General JOHNSON. Before we leave PEMA items, I wonder if I might just get one thing into the record that Mr. Schweiker asked me for this morning.

He indicated that there was about a 4-month timelag between the time a proposal had been advanced by industry for the armed Chinook and the time the Army took action.

I have here the industry proposal which is dated the 21st of June, 1965.

On that same date, the commander, General Besson, of our Army Materiel Command, to whom this proposal was submitted, met with the Assistant Secretary of the Army for Research and Development, and they discussed it.

On the 30th of June, 9 days later, the company was authorized by letter order to go ahead, and to arm some of these armed helicopters. I was briefed on the 18th of July, and approved the action taken that same date. But I would just like the record to show that rather than 4 months, we moved out promptly.

The CHAIRMAN. All right.

Now, on page 2 of this, Mr. Kelleher, are you ready? Will you read it, please, what the R.D.T. & E. is—or Mr. Morgan, you have it?

Mr. MORGAN. Mr. Chairman, the total requested amount in the supplemental for R.D.T. & E. is \$27,995,000.

The four budget activities in which this is included are as follows:

Military sciences, \$4,848,000. This is primarily to combat malaria in southeast Asia, as I understand it.

General Dick is here to expand upon this, or answer any questions that the members of the committee may have.

The next budget activity is aircraft and related equipment——

Mr. HARDY. That is like the report on the malaria situation, where you are making any progress on it.

The CHAIRMAN. We can ask General Johnson for that. We don't have to ask General Dick for that.

Mr. HARDY. Mr. Chairman, we saw a good many of these boys that were experiencing a lot of difficulty with this.

As I understood it then, you are having some problem in really combating it. I think we ought to have this information.

The CHAIRMAN. Does this thing mean the continuation of your program money to keep the program going?

General JOHNSON. More than that, sir, it means an acceleration of the research program into some kind of a cure of what is called plasmodium falciparum malaria.

Our incident rate began to go up significantly in October. It increased again in November. This is the result of 1st Cavalry Division action north of their base camp at Bong Son, and out in the Chu Pong Mountain-Ia Drang Valley area.

In December, when there wasn't as much activity, and they were in their base camp most of the time, the incident rate dropped down.

Also, in December, we sent out General Blount, who is the foremost malariologist in the Army, to look at what might be done. We had noted from other experiments that a drug used to treat leprosy resulted in the individual taking that drug not getting this strain of malaria.

So on the first of January, a controlled test was initiated in the 1st Cavalry Division to see what the results would be.

We have not had a reading yet on the results of that test. This will require some months of continued treatment. This is a daily pill, rather than the weekly chloroquin-primaquine pill, which is the normal thing.

The CHAIRMAN. You let the committee know if you don't mind, as soon as you get a reading on it.

General JOHNSON. As soon as we get a reading we will inform you. We are pursuing this aggressively.

Mr. HARDY. This item we are talking about is to provide additional research in this area?

General JOHNSON. Yes, sir. Searching for a direct suppressant of this plasmodium falciparum malaria.

The CHAIRMAN. The next item, Mr. Morgan.

Mr. MORGAN. Aircraft and related equipment, \$4,600,000.

One of the important subsystems in this budget activity, Mr. Chairman, is the development of the 30-millimeter automatic gun. [Deleted.]

The CHAIRMAN. Without objection.

What is the next one? Ordnance, \$2,800,000?

Mr. MORGAN. \$2,800,000; yes, sir.

The CHAIRMAN. What is that?

Mr. MORGAN. The major item in that is the development of a tracked vehicle, tracked or special vehicle for adverse terrain and remote areas.

The CHAIRMAN. Without objection.

Mr. HARDY. Is that going to be contracted?

The CHAIRMAN. That is in-house, or is this going to be contracted?

General DICK. In-house to date, at the Army Tank Automotive Center. They are now evaluating bids for production contract award.

The CHAIRMAN. I see.

This is in-house R.D.T. & E.?

General DICK. That is in-house development.

The CHAIRMAN. What is the next one?

Mr. MORGAN. The next one budget activity, other equipment. \$15,747,000. The major item in that category is Project MUST. This is the mobile hospital that some members of the committee viewed the demonstration on down in San Antonio.

The CHAIRMAN. We all favor that. That is one of the finest developments we have.

I sent a committee down to Texas to see that.

Mr. HARDY. Is that pretty well along?

The CHAIRMAN. It is operational, isn't it?

General DICK. They only have prototype models. The effort for this year is to continue the engineering, finish it, and put the prototypes actually into the field.

The CHAIRMAN. I see.

That is what we want you to do.

Now, that is all for that, isn't it?

Mr. MORGAN. That is all for R.D.T. & E., Mr. Chairman.

The CHAIRMAN. That is a very modest request.

What is our next item?

Let's get to the construction, we will take General Shuler. We are always glad to have General Shuler around before our committee. He is a very cooperative witness.

What do we take?

Mr. COOK. The big blue book contains 1391, the other blue book contains the general summary.

The CHAIRMAN. The general summary?

Mr. COOK. Yes.

The CHAIRMAN. Is General Shuler going to respond to this, or is he going to be a backup to you?

General JOHNSON. It depends on the nature of the questions, sir.

The CHAIRMAN. You are doing pretty well yourself.

You don't have any institutional restraint, do you?

General JOHNSON. No, sir.

The CHAIRMAN. For your information, we don't release these transcripts until we decide to release them, General.

That is a new program on the Hill.

Now, for [deleted] it is \$4,600,000.

Mr. Hardy, do you want to take a typical installation [deleted].

Mr. HARDY. I tried to find a typical installation. I glanced through this, and went through the Navy's book, and I can't find anything in any of them.

The CHAIRMAN. I don't see how we can really—it is pretty full as far as the sheets are concerned.

Mr. HARDY. Well, it is. I don't know how you can really analyze this thing. I think the thing that will be most helpful is if we can understand a few generalities that want into this thing.

The CHAIRMAN. Why don't we take [deleted].

We took Cam Rahn Bay, and we took Da Nang for the Navy, and we have seen both of them.

Why don't we take, let you tell us what is going on [deleted]. You have that new [deleted] you are developing there. I guess the engineers are in on that, General Shuler. That new [deleted] you are getting ready to develop [deleted].

General JOHNSON. Yes, sir. I can talk to that, sir. [Deleted.] toward improving the line of communications [deleted].

The CHAIRMAN. This will be to supply [deleted].

General JOHNSON. This is to supply [deleted].

The CHAIRMAN. Isn't [deleted] that [deleted] you have up there where you have an airfield?

General JOHNSON. Yes, sir; there is an airfield there.

The CHAIRMAN. Where we had lunch.

General JOHNSON. Yes.

The CHAIRMAN. That is a [deleted] place.

General JOHNSON. Yes, sir. [Deleted.]

The CHAIRMAN. Yes, sir; we understand that.

General JOHNSON. [Deleted.]

Mr. BATES. General Johnson, talking about LOC's. About 10 or 12 years ago we were [deleted] concerned in Europe about LOC's, so we built up the pipeline over there from France, developed the ports on the channel. Now I understand that these ports, our ports, have been closed over there, and we are moving in through Bremerhaven, operating in a north-south position as we were some 12 years ago when we were all alarmed about that situation.

Do you want to comment on that, General?

General JOHNSON. Well, that is not entirely so.

We established the depot system across France into western Germany, and the depot system, with stocks in the depots, is still there. [Deleted.] But all of the time that we were moving supplies into Germany we have always used the northern ports simply as an economic matter. It is considerably cheaper on the tonnages that are moved to move through Bremerhaven and Rotterdam. Much of it has gone into Rotterdam and then gone down in the canal system; others into Bremerhaven, and then gone down the railroad.

We have shipped in recent years on the order of about [deleted] percent of the tonnage moving into Europe through Bremerhaven and Rotterdam—mostly through Bremerhaven.

We still move [deleted] material over and through the French ports and into the depots which are located in France and into western West Germany—the depots west of the Rhine.

Mr. BATES. We were very much alarmed, and General Eisenhower when he was over there in NATO back in 1951-52, so we just had to get a new LOC. Mr. Hardy was on the trip with us. We were paying the French Government 25 percent extra in taxes for everything we built over there, whether the airfield or the pipeline or whatever it might be.

So we got in the pipeline. Now that is there now and operating. that is correct.

Now, we developed these ports. Now, are these essentially closed now?

General JOHNSON. Substantially closed; yes, sir.

Mr. BATES. Are these the same ports that were so vital in those days?

General JOHNSON. Yes, sir.

Mr. BATES. Why were they so important then and so insignificant today?

General JOHNSON. At the time the construction was undertaken we had in Europe, in 1950, if you will recall, the 1st Division, that was spread from its headquarters at Badtoltz all the way up to Giessen, north of Frankfurt. We had a constabulary. But we had less than two division's worth of forces in Germany. One real division, and the rest of it was the equivalent of our armored cavalry units today.

Since that time, first, all of Europe has recovered. Throughout Europe there has been a restoration of combat power within the countries there. Germany, you will recall, didn't start until 1956 to rebuild armed forces, and she now is just completing the last of 12 divisions. She still has some deficiencies with respect to the support forces that she has.

The same thing is true of France. They had very little in the way of armed forces in 1950, as did Belgium and the Netherlands. Now those countries do have forces.

The second thing is that the overt belligerency of the Russians, since 1961, has not been of the same order that it was in 1949 and 1950.

Mr. BATES. That is why we have to be more careful.

General JOHNSON. This has a certain merit.

The CHAIRMAN. Of course your airlift has improved, too.

General JOHNSON. Pardon, sir?

The CHAIRMAN. Your airlift has improved, too.

Mr. HARDY. This is another important element I would suspect, the belligerency of General de Gaulle has sort of offset the decline in belligerency of the Russians. We went into this thoroughly, Mr. Chairman, when my subcommittee was over there, and our report is going to have something to say about this proposition as soon as I can get it out.

Mr. Bates went with us.

Mr. BATES. Yes.

Mr. HARDY. You didn't get down to Orléans.

The CHAIRMAN. To Orléans?

Mr. HARDY. We didn't get to Orléans. The folks in Orléans came over to Heidelberg. That was a sad experience.

The CHAIRMAN. All of them had quarters, this was when I was down there.

General JOHNSON. It is still the headquarters of the communication zone, yes.

Mr. BATES. Why don't you button this up for me, General? Why don't you need them today? Are they still available in the event you need them? Are they there and still available?

General JOHNSON. The depots and the ports?

Mr. BATES. The ports.

General JOHNSON. The physical facilities that we think we need are still available to us.

Mr. BATES. How long would it take you to get them operational?

General JOHNSON. This is a matter of judgment. The judgment will vary from [deleted] to begin to issue a limited quantity of supplies to [deleted] until you have a complete flow.

The CHAIRMAN. Well, your ports were Bayonne, La Rochelle, St. Nazaire, then you had the complexes coming up, the Wadia, and I forget the other, you had a big installation at Guadia, and then your headquarters at Orléans.

General JOHNSON. Forward to Verdun and Nancy.

The CHAIRMAN. Nancy, yes.

Well, in response to Mr. Bates, what is your response, they would be available?

General JOHNSON. The physical facilities would be available [deleted].

The CHAIRMAN. Those hospitals the people live in, they walk out one day, and you turn them into a hospital the next, those big installations.

General JOHNSON. At Nancy that is what we planned, yes.

The CHAIRMAN. At La Rochelle, too.

General JOHNSON. At Orléans, too.

The CHAIRMAN. At Orléans, too.

Mr. BATES. The concern was expressed to us in 1952. We did something about it, we got these things in operation. Are you satisfied now, General Johnson, that these are closed, and we are operating the way we are, or do you think we ought to restore them to the condition they were—I am talking about the ports now.

General JOHNSON. The basic question that has to be answered in a case like this is the extent to which you are going to maintain, on a continuing basis, a level of effort to be prepared for war tomorrow. A judgment has to be made: Is war going to come tomorrow, or are you going to get a strategic warning that will permit you to reopen some facilities and start some supplies flowing? [Deleted.]

On top of that, in Germany itself, [deleted] you again have the level of supplies that will initiate the flow.

What this means is that you have a reservoir upon which you can draw, and the question is getting the flow started to replenish some of the reservoir. You don't have to replenish it all.

Mr. BATES. My question is, Are you satisfied with the status quo?

General JOHNSON. I would prefer we had a little bit more activity in the line of communications.

Mr. BATES. That means opening up the port to some degree?

General JOHNSON. Not necessarily opening the port, but we would exercise it periodically [deleted]. But we had a little bit better planning in some of the installations in France.

The CHAIRMAN. Thank you, Mr. Bates.

Are you finished?

Mr. BATES. Well, I don't want to take too much time on it, Mr. Chairman. I can go into this rather extensively. Mr. Hardy and I will get into it a little bit further I think later.

The CHAIRMAN. Mr. Hardy, what do you want to ask?

Mr. HARDY. Mr. Chairman, I would like to get back to the [deleted] situation. There are one or two items there specifically.

The CHAIRMAN. Are you on page 10, Mr. Hardy?

Mr. HARDY. Mr. Chairman, I am not sure what page I am on.

Secretary RESOR. What facility, sir?

Mr. HARDY. I wanted to follow one book here and find it in another.

The CHAIRMAN. Turn to page 10, that is what I am looking at, air-field facilities, the big book, port development, road development—

Mr. HARDY. First of all let me ask this: How firm are your estimates [deleted]? Is that a pretty good yardstick to tie these figures down to?

General JOHNSON. I would say on the estimates [deleted] based on my discussions [deleted] in December, the estimates that he has are reasonably close. He was talking to me in terms of the [deleted] million dollars that we have here.

Mr. HARDY. Is your construction over there sufficiently similar to construction here that we can apply a cost factor to, that we can understand?

General JOHNSON. I can't answer that question.

General SHULER. I would like to add to what General Johnson just said. There is one exception to the firmness of the cost estimates, and that is at [deleted].

We already have a rise in the cost [deleted], which is a [deleted] million dollar rise as against [deleted] million we have in our request

here. The original estimate was made in the field by field engineers, without taking [deleted] and so forth, and when the architect-engineer got finished with his design, this is what it is going to cost.

So you will have those kind of rises, sir—

Mr. HARDY. I didn't know the Corps of Engineers didn't make any estimate of [deleted].

General SHULER. This was done under the Navy, who has the contract.

Mr. HARDY. I was going to ask you in a few minutes to relate these items in here to what the Navy is doing. So now what you are saying is the Navy gave you lousy information?

General SHULER. I didn't say that, sir, you conclude it.

I would like to say, Mr. Hardy, that the cost index in the area over there, [deleted] averages 2.5 to 1, and goes as high as 4 to 1. And it has risen. It has been going up all the time.

Mr. HARDY. Isn't your supply of indigenous labor [deleted] reasonably adequate?

General SHULER. [Deleted.] In Vietnam it is not.

Mr. HARDY. I understand Vietnam. [Deleted.] I do not understand why your cost factors would be comparable [deleted].

General SHULER. They are not exactly comparable, sir, but they are much more than in the United States [deleted].

Mr. HARDY. Let me talk about [deleted] just a little bit.

We are building quite a thing [deleted] there, and I saw the model of it. It is really quite an operation.

Now you already have the [deleted] there; is that [deleted] installation being expanded?

General JOHNSON. Being abandoned, sir?

Mr. HARDY. Expanded. In addition, are you putting in some [deleted] facilities as well? I take it the Corps of Engineers is also building the [deleted] facilities, is that right?

General JOHNSON. The [deleted] facilities are [deleted]. Whether or not that [deleted] installation [deleted] there is being expanded, I don't know, sir.

Mr. HARDY. These airfield facilities that you've got in here, is that strictly Army, or does that have anything to do with the Air Force?

General SHULER. Everything in our request, sir, is for Army.

Mr. HARDY. How far is your Army installation going to be from the Air Force installation? [Deleted.]

General SHULER. Sir, it is [deleted] miles [deleted]. We have a road going in there which will take normal Army traffic. It is [deleted] miles from the same location to [deleted].

Mr. HARDY. What I am trying to understand, General, is just this: You have airfield facilities in here, a relatively small item, \$51½ million, it doesn't amount to very much, but how close is that to this [deleted] airfield the Air Force [deleted]. Or is that to serve something else?

General JOHNSON. The one at [deleted] is quite close, but what we are talking about here—

Mr. HARDY. The Air Force won't let you use their facilities [deleted] for your operation?

General JOHNSON. The point is, sir, you have to have a maintenance hangar; you have to have some place where your tools are.

Mr. HARDY. I understand that. As a matter of fact, if that is done in a lot of other places, even sometimes the military has those located in the same area where civilian operations exist. The only thing I am trying to understand here right now is why the Army needs an airfield that close to a [deleted] installation that the Air Force [deleted].

General SHULER. Sir, this is to support our rotary aircraft, and also to support [deleted] troops and cargo aircraft [deleted].

Mr. HARDY. [Deleted.]

General SHULER. Yes, sir.

Mr. HARDY. With all the facilities [deleted].

The CHAIRMAN. You mean at [deleted].

Mr. HARDY. Yes. The Army is putting one right there beside it. I have just a little trouble understanding that. I thought we had unification. As a matter of fact, I thought Mr. McNamara was knocking your two heads together.

General SHULER. May I tell you where we are putting these two facilities, sir?

Mr. HARDY. I just asked you, I understood General Johnson said right close together.

General JOHNSON. One facility was nearby.

General SHULER. The \$5 million is at a point [deleted] miles away from the area we are talking about [deleted].

Mr. HARDY. That was the first question I asked you as to how close they were.

The CHAIRMAN. You just found out.

Mr. HARDY. I still don't know because we have a little disagreement down there, and the conflict is going to be in the record.

General SHULER. I don't believe General Johnson answered the question on this particular line item, sir.

Mr. HARDY. Let me ask you something else. Is the Navy doing any port development?

The CHAIRMAN. Why don't you ask the Navy?

Mr. HARDY. I haven't got the Navy here now; I've got the Army. I want to see if it is duplicated.

General SHULER. The items in here are for the Army. It is port development for the Army. I do not know what the Navy is doing in the way of port development.

Mr. HARDY. Is the Army going to build [deleted] facility [deleted] there, or is the Navy going to build it?

General SHULER. The only [deleted] facility we have is the item described, sir, which is [deleted] miles out from the area we are talking about.

Mr. HARDY. [Deleted.]

General SHULER. Yes, sir.

Mr. HARDY. I am trying to understand where these things are. I thought you said this was at or near [deleted].

General SHULER. No, sir; it is not.

Mr. HARDY. I would like to ask you one other question here in connection with cantonment facilities.

The CHAIRMAN. What is the name of that [deleted].

General JOHNSON. That is [deleted].

The CHAIRMAN. That is the one we are talking about?

General SHULER. That is right; yes, sir.

The CHAIRMAN. They are in agreement on it, Mr. Hardy.

Mr. HARDY. Yes; I think they are, that is what I am trying to understand. I don't know why we are duplicating any facilities.

General JOHNSON. I don't believe we are duplicating any facilities here, Mr. Hardy. [Deleted.] He has tied this together, so it is my understanding there is no duplication.

The CHAIRMAN. It is in the engineering stage anyway now.

Mr. HARDY. This is quite a thing. I think it is going to be a real fine installation.

The CHAIRMAN. I'm sure. This is the same as [deleted].

Secretary RESOR. It is the same principle. It is [deleted]. Now we are trying to get one that is not [deleted].

Mr. HARDY. Mr. Chairman, I don't want to pursue these things very long, but I would like to just get an understanding on one or two others.

In connection with your cantonments, construction [deleted].

General JOHNSON. [Deleted.]

Mr. HARDY. You have \$500-a-man unit on there. Is that similar to the kind of thing you are going to build [deleted] also?

General SHULER. Yes, sir. This is a little complicated. We have to move with a fast moving express train, as far as changes over there, so we start out with a man in a pup tent, then we will put a slab on the ground and put a tent on it. The slab will be built so it fits a prefab building later on. Finally we get him into the prefab building on the concrete slab. This takes time; it is an evolution.

Mr. HARDY. Are you getting all of this for \$500 a man?

General SHULER. Yes, sir. This is [deleted].

Mr. HARDY. I think the cost [deleted] is a little more, General. As I recall it, it is \$1,500 a man.

General JOHNSON. He is on page 15 of this.

General SHULER. Do you have the large or small book, sir?

Mr. HARDY. I have both of them. I'm trying to use them both at the same time.

General SHULER. All right, sir, I've got you. That is \$500 per man [deleted].

Mr. HARDY. That is right; that is [deleted].

General SHULER. That is right, sir.

Mr. HARDY. What I'm trying to understand is what kind of thing you are going to do there. They had quite some interesting troop housing arrangements [deleted] also.

Now, is this going to be the same kind of thing you are going to build here [deleted].

General SHULER. Yes, sir; it should be the same type. The fact of the matter is the construction boss who has [deleted] been installed over there has now got specific instructions out [deleted]. If you travel over there you will find all different kinds [deleted] put in up to now. This practice is going to be stopped. It is going to be one kind, and the cheapest kind we can get along with.

Mr. HARDY. I don't know what kind that will be.

If I can ask you, turn to the [deleted] housing—if I can get these items, I will be through.

On your [deleted] housing, I had the page on it a minute ago.

General SHULER. Page 23, in the last book.

The CHAIRMAN. Page 23.

Mr. HARDY. You've got an item of \$1,215 a man, plus \$175. And in this you are not getting the kind of housing that you are getting [deleted] at all. This is strictly a tent proposition, isn't it?

General SHULER. Yes.

Mr. HARDY. I was wondering first, about your cost factor here, in view—in fact I don't suppose you have anything here except the frames and the slabs?

General SHULER. No, sir. I hope you are on the same page I am.

Mr. HARDY. Page 23.

General SHULER. If you will read, sir, in the description, this is not just the troop housing, that is, the tent slabs, this is all the supporting facilities. This has to do with—with storage, drainage, corrections, developing roads, administrative facilities, supply facilities, and all that.

Mr. HARDY. How reliable is this figure, General?

General SHULER. Sir, I will make a general statement on all the figures in Vietnam. I wouldn't say they are very reliable, because, as I say, we've got a moving combat situation. Prices are rising over there. We may not even build some of these things; we might build something else after telling the committee. We can't look into the future that accurately.

Mr. HARDY. How many units have you already built?

How many men will you take care of in the ones already constructed?

General SHULER. You will notice the quantity of [deleted] on here [deleted].

Mr. HARDY. I didn't ask you that; I am asking about what you already have.

General SHULER. All right, sir, I'm going to arrive at that figure. The figure that [deleted] this construction in this bill supports, is [deleted] for the Army, so the difference is roughly what we have built for and what we are building under contract or troop effort now.

Mr. HARDY. In other words, you already have [deleted] already provided for?

General SHULER. No, sir; I didn't say that.

Mr. HARDY. You said the difference between these two figures, I just tried to do a little arithmetic.

General SHULER. I didn't say that, sir. They are either in-place or being built under contracts.

Mr. HARDY. They are already funded?

General SHULER. Yes, sir; previously funded.

Mr. HARDY. Is your experience such that you can get a good feel on the cost?

General SHULER. I think this particular estimate here, sir, is probably more accurate than some of these other items, except, as I said before, we may not build all these [deleted]. The combat situation may dictate a change. I can't say this is an accurate estimate.

Mr. HARDY. Just one other question and I'm through, Mr. Chairman: on port facilities in Vietnam you have [deleted] million dollars, and they are at [deleted] locations. I have tried to compare some costs here, but I haven't been able to get anywhere with it because

apparently they are on different yardsticks, or different specifications, so it is hard to tell what they mean.

But I presume that at all of these same locations the Navy is going to build facilities, also. Are you aware of the accuracy of that?

General SHULER. I am not aware of it, sir. By looking at the names I'm sure they are doing it at some of them.

Mr. HARDY. You have Cam Ranh Bay on here, a right good-sized operation; I know the Navy has a tremendous operation there.

General SHULER. I can't say for all, though, sir.

Mr. HARDY. You don't know whether it applies to all of them?

General SHULER. One point here. The Navy doesn't have an operation, a significant operation, at Cam Ranh Bay.

Mr. HARDY. They don't?

General JOHNSON. No, sir. The Navy responsibility for port operations is limited to Chu Lai and Da Nang. They are up in the north.

The CHAIRMAN. The Navy has an airstrip, I know that.

General JOHNSON. The Navy and the Air Force share in the strip at Cam Ranh Bay. There are a number of things there with respect to air fields but not with regard to the port facilities.

Mr. HARDY. One other general question and I'm going to quit, and that is this: How firm are these line items?

General SHULER. Well, sir—

General JOHNSON. Let me answer the question. Very unfirm, sir, and we are going to have to come back, I would say, repeatedly when there is more definitive information available and plans are more firm.

The CHAIRMAN. I would think Cam Ranh Bay would be kind of firm.

General JOHNSON. Not when you get into construction costs. One example that I can give from the top of my head is that about last July we asked for costs on a brigade cantonment in the Bien Hoa area for the 173d Airborne Brigade which went in there in May. The first cost we got from the contractor—and he was about 60 percent through his design—was \$6 million. In September the cost had gone up to \$8 million. Well, we said we can't stand this. He chopped back and went to slabs and tent frames. By the time this project was completed—and of course this includes utilities and water and that type of thing—costs then were at \$10 million. I don't know just what they are going to do about it. I'm sure they won't build a facility at that cost. It had gone up from 6 to 10 and standards had been lowered. That is why I say this is very, very soft. That is why General Dunn is out there trying to pull this together.

Mr. HARDY. What about the land acquisition? Who provides for that?

General JOHNSON. It is provided through a very tortuous and slow process.

The CHAIRMAN. Have you finished, Mr. Hardy?

Mr. HARDY. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Pike.

Mr. PIKE. General Shuler, how many line items, or what total funding of line items for southeast Asia do you have in your military construction program for fiscal 1967?

General SHULER. Nothing.

Mr. PIKE. So the entire military construction for fiscal 1967, in the southeast Asia area, has been moved to the 1966 supplement?

General SHULER. No, sir. There is an item for military assistance—I believe it is [deleted] million in there, which is a new system of programing for military assistance.

Mr. PIKE. That is the new military assistance program, you are leaving that in the 1967 procurement?

General SHULER. That is right.

Mr. PIKE. All of the construction has been moved from the 1967 into the 1966 supplement?

General SHULER. Sir, the total items that were moved from the 1967 program to this supplement is \$19 million worth. Seventeen line items at 10 stations.

This was done to gain 7 months in the time that it would take to get these facilities constructed. And this is the only reason for moving them.

Mr. PIKE. How can you gain 7 months when it is now February and the 1967 money would be available in July?

General SHULER. No, sir. The money, sir, and the authorization—and we need both of them—in my program, the MCA program, is about October.

Mr. PIKE. What about this POL line in Alaska? Was that in the 1967 procurement originally?

General SHULER. No, sir. That was in the 1966 program, last year.

Mr. PIKE. I remember that.

General SHULER. This committee approved it, but it didn't survive the Congress.

Mr. PIKE. But didn't you have it in your 1967 procurement originally? Hadn't you planned to put that in there?

General SHULER. This is one of the 17 line items I'm referring to, Mr. Pike, that was moved up to gain leadtime.

Mr. PIKE. Is this leadtime in this POL in Alaska that important?

General SHULER. Oh, yes, sir. This is an extremely important project to the Air Force, specifically at Elmendorf.

Mr. PIKE. Are all of these programs, which are in here, going to be completed by the end of fiscal 1967?

General SHULER. The target date, sir, is the [deleted].

Now, I would be very frank—

Mr. PIKE. Let's talk about this [deleted] facility at [deleted]. Is that going to be completed by [deleted].

General SHULER. Yes, sir, this is all figured to be completed by that time. But I want to be frank about this thing. In my personal opinion, as an engineer, there are going to be a lot of slippages in this. But it is all going to be underway, that is the point.

Mr. PIKE. Well, General. I want to say this is going to come as a shock to you, but I want to say I have seen some of this construction that you have been doing [deleted] in particular, and I think frankly you have done a fabulous job over there. I really do. This [deleted] type construction, and the length of time they have gotten it up in, I recognize you are going to have slippage in these things. I am concerned about this business of just lifting the whole thing out of the 1967 budget into 1966, and I think you slippage is going to more than compensate for any time you are going to save.

But I do recognize that you've got an awful job to do over there. I really think they have done a fabulous job [deleted].

The CHAIRMAN. Thank you, Mr. Pike. I join with him.

I think the only way we can approve this is to approve the whole southeast Asia. You see how hard it is to pin down anything?

General JOHNSON and General SHULER, and the Secretary have told us frankly they can't be any more firm than they have been.

Mr. BATES. That is as to figures. Do we have all of the items either in this or in the 1967 or do you have other items we don't know about in a different package that is coming down the road? Do you understand the question? Is this the whole package?

General SHULER. I understand the question, sir. I cited this rise in the [deleted].

Mr. BATES. Items now, I'm not talking about money.

The CHAIRMAN. Line items.

Mr. BATES. Do you have any more items under consideration that you have not submitted?

General SHULER. To be very frank, sir, we have a money amount of line items that are not in this program; yes, sir, that may in the future come up here, depending on what happens.

General JOHNSON. Wait a minute, are you addressing southeast Asia alone?

Mr. BATES. Yes.

General SHULER. There is no question, sir, we will probably be here again unless this thing levels off or stops.

Mr. BATES. I'm just trying to find out if you have items that have been eliminated here that you do expect to bring up maybe as a supplement to the 1967 budget. Is this what you anticipate?

General SHULER. Yes. We have some items eliminated, sir. I can't say we are coming back up with them, but in reviewing this particular request we have before this committee, it was cut by \$117 million. [Deleted] of that was for a third country forces, which we accepted without reclama because the statement was made it would be funded out of MAP funds. The rest of it we made a reclama on it, but we did not get the reclama honored. I can't say we will be back up here with these items.

The CHAIRMAN. It is a constant review, isn't it?

General JOHNSON. That is right. There are really [deleted] basic problems with which we are confronted.

The first one of these is the standard of living that we provide out there. We have items in here we have to look at again, such as bowling alleys, swimming pools, and basketball courts, and this type of thing.

The second thing is the cost of labor and materials. These have been relatively uncontrolled.

[Deleted.]

Now, in the deployment last summer we had a request from General Westmoreland to put troops one place, but some were diverted en route and landed someplace else. Obviously, we may be picking up units from a place where they have been living for perhaps a year, [deleted] and move them to some other location 100 miles away.

This we just can't predict.

The CHAIRMAN. Now, Mr. Lennon, did you have a question? Mr. Randall, I believe, had a question.

Mr. LENNON. General Shuler, just take [deleted] for illustration. Your total military construction under the 1966 supplemental I believe in round figures is [deleted] million?

General SHULER. That is right; yes, sir.

Mr. LENNON. That is in the big book.

Your counterpart in the Navy, and your counterpart in the Air Force, in arriving at their requests for military construction [deleted] I assume of course it is before these figures and booklets and backup statements are prepared, that you and your counterparts in the Navy and Air Force sit down and take a good hard look at military construction that you are projecting, the Navy is projecting, and the Air Force is projecting, before they prepare it, so there won't be any overlapping or repetition.

General SHULER. Sir, this starts right in General Westmoreland's headquarters. It goes up to CINCPAC where that is done, comes through the channels into the Pentagon, and we do it in the Pentagon. The Department of Defense does it in their review.

Mr. LENNON. Then your answer to my question is in the military construction supplemental for 1966, did you, your counterpart in the Navy and Air Force, coordinate it before these backup sheets were brought here with the recommendations as being included in the 1966 supplement?

General SHULER. Yes, sir, we did.

Mr. LENNON. One other question. The same thing would be true with respect to military construction by either the Army, the Air Force, or the Navy, in southeastern Asia, in the 1966 supplemental, right?

General SHULER. Yes, sir.

Mr. LENNON. Thank you very much.

The CHAIRMAN. Now, Mr. Randall.

Mr. RANDALL. Mr. Chairman, the question was asked, I was quite shocked when you said you didn't know about the port facilities [deleted] there. you didn't know what the Navy was doing, but the answer is you do not.

General SHULER. I don't know what they are doing, sir, but we did coordinate this together in the process. I do not recall right now what they are doing.

Mr. LENNON. Will the gentlemen yield at that point? But you know they are supposed not to overlap?

General SHULER. I know this was checked out, but I can't recall what they are doing in this location.

Mr. RANDALL. Mr. Chairman, I would like the general to tell us the cost index down there, there is one for 2.5. That is a combat area. This is a pretty shocking thing here. You said you went into it in a matter of months, and General Johnson said 6 million outstanding in 4 months. Where do we stop at? What is the answer?

General SHULER. In the first place we are sitting on an index of 1 here right now. About the highest you get in the United States is at West Point, N.Y., which will run you up to about 1.32. As you go around the world you can get up to 5 to 6 to 1. What I said was in Vietnam it is averaging 2.5 to 1, and going up as high as 4 to 1 in some cases. Sir, this is escalating over there. Materials have been

short; overtime of the contractor; he is on a cost-plus-fixed-fee in Vietnam, and things have just risen. These are the facts of life. And that is why we are pretty confident we are not asking for too much money, because we are going to need it.

Mr. RANDALL. Well, what sort of construction—I mean we know you have them listed here, troop housing and so forth, and port facilities of course are a different thing—but what is the contractor doing? Are we doing any construction ourselves?

General SHULER. Two efforts. One is the contracting effort under the Navy, the officer in charge of construction, he handles all the contractors [deleted] and the engineer troop units do troop construction to augment this effort, and then the Sea Bees have their own effort, and the Air Force has created some new units that do some of the base development.

Mr. RANDALL. Well, you mentioned a new figure here of 4.1 to 1. Mr. Pike thought you were doing a real good job [deleted].

General SHULER. [Deleted.]

Mr. RANDALL. Mr. Chairman, I am just not possessed of enough facts, but I certainly would like to have an opportunity to later on—we won't ask any more questions now.

The CHAIRMAN. They can't be any more definite than what they are. It is not possible.

Mr. RANDALL. Well, OK.

The CHAIRMAN. Here is a cost breakdown. At this point in the record we will put the cost factors which the Navy has submitted to give us some kind of a guideline. You have to just trust these men. That is all I know what to do.

(The cost factor referred to is as follows:)

ITEM: AREA COST FACTORS

DISCUSSION

Construction costs in South Vietnam are directly affected by major factors which are not normally encountered in CONUS construction. These factors are:

- (1) Expediency of construction.
- (2) Lack of local skilled labor.
- (3) Lack of local materials for semipermanent construction.
- (4) Lack of local construction capability.
- (5) No overland transportation.
- (6) Inadequate port facilities.

The manner in which each of these factors affect construction costs may be broken down as follows:

(1) Expediency of construction: The rate at which work must be put in place has direct bearing on the amount of construction equipment and material inventory required in addition to labor costs:

(a) Construction equipment is required to construct projects at all major sites concurrently. In addition, required operational dates require maximum production at the expense of optimum efficiency. The reduced construction period will result in an ending inventory of usable equipment having considerable value. This residual value must be amortized within the construction projects. The compressed time frame requires approximately four times normal equipment inventory.

(b) Construction material is procured in bulk quantities prior to determination of detail definition of scope in order that the effect of procurement leadtime on work in place will be lessened. This results in overbuying of many items and underbuying of others. We are establishing a reserve for demobilization including ending inventory. This reserve must be financed by the construction projects. The amount of this reserve is the subject of continuing review.

(c) Labor costs are also escalated due to the compressed time frame. Approximately 40 percent of labor costs are paid at overtime premium rates. The average workweek for Vietnamese laborers is 60 hours, with premium pay for work in excess of 48 hours. Premium pay for imported labor is earned after 40 hours of work.

(2) Lack of local skilled labor necessitates the importation of large numbers of skilled craftsmen and supervisors from outside South Vietnam. It is necessary to pay these imported personnel premium rates as incentive to work in South Vietnam. In addition, camp facilities must be provided for these imported personnel.

(3) Lack of local materials for semipermanent construction: The influx of U.S. forces into the Republic of Vietnam has completely outstripped the local resources of construction materials. Virtually all materials for semipermanent construction must be imported, with the overriding majority coming from the United States. Some bulk materials, such as cement and POL, are purchased in Asia to reduce shipping time but most of the material dollar is spent in the United States. The construction projects must bear the cost of ocean and airfreight for imported material and equipment.

(4) Lack of local construction capability: The local construction capability is negligible compared to the overall requirement for construction. Normal subcontracting capability is unavailable to a large extent. In addition the local construction capability is inadequate to do the minor alteration, rehabilitation, and repair type projects. These projects must then be accomplished by the Navy's contractor which competes with his efforts on new construction. The quality of work by local contractors is usually good; the inadequacy is in quantity.

(5) No overland transportation: The inability to use ground transportation to move personnel, equipment, and material to jobsites is the greatest single in-country hindrance to the construction program. The contractor is establishing three major depot sites at each of the present deepwater ports of Da Nang, Cam Ranh, and Saigon. From these depots, materials and equipment will be distributed to other sites.

(6) Inadequate port facilities: The three deepwater ports are so grossly overloaded that imported material must wait before it is unloaded in RVN. This adds to the procurement leadtime, and directly affects construction scheduling. Construction was delayed at Cam Ranh Bay literally for want of nails which had to be airlifted in. Additional port facilities have been programed and are under construction, but until they are usable we must continue to pay for this problem.

In summary, we estimate that \$30 million of material in the United States will cost us \$53 million delivered to the jobsites. We are seeking every available means to reduce this cost, but the outlook is not very bright.

An average cost index for our construction in South Vietnam compared to Washington, D.C., costs (1.0) is shown on the following table:

Vietnam area cost indexes for use in estimating fiscal year 1966 supplemental and subsequent programs—Area cost indexes (base Washington, D.C. (1.0))—Type of construction and percent of total program

Area	Horizontal construction, ¹ 22.8 percent	Vertical ² construction, 58.5 percent	Utility and waterfront construction (including dredging), ³ 18.7 percent
	<i>Percent</i>	<i>Percent</i>	<i>Percent</i>
Saigon area (including TSN and Bien Hoa).....	3.3	2.0	2.2
Da Nang, Cam Ranh, Nha Trang.....	3.4	2.1	2.4
Qui Nhon, Phan Rang, Can Tho, Base X.....	3.6	2.2	2.4
Inland sites.....	3.6	2.2	
All other.....	3.4	2.1	2.3

¹ Horizontal construction—Airfields, railways, trailways, aprons, roads.

² Vertical construction—Buildings, cantonments, ops facs, maintenance facs, administrative structures, warehouses, PCL, ammo storage.

³ Waterfront construction and utilities—Piers, wharves, dredging, power, water, sewers.

NOTE.—Weighted average, 2.45.

General SHULER. These are the same factors the Navy used. I heard them testify.

Mr. RANDALL. This is very disturbing. You start in Washington, D.C., which we thought was as high as any construction cost. Are you figuring to get up to this four, is that the cost of material, or is that the labor ratio?

General SHULER. You take a contractor, he has to go into an area of combat. He has to pay his people higher to do that, he has to pay overtime.

Mr. RANDALL. It is labor, then?

General SHULER. That is a big part of it. Maybe to get the construction materials costs him through the nose because it is scarce. It runs that up.

The CHAIRMAN. You had trouble getting that combine out there, Knudson, Brown, and J. A. Jones & Morrison.

General SHULER. [Deleted.]

The CHAIRMAN. You know some of those contractors' personnel have been kidnaped?

General SHULER. Three of them; yes, sir.

Mr. HARDY. We are talking about what has been done [deleted] particularly. We are not alking about the kind of construction you would build here in the United States to start with.

The CHAIRMAN. That is a good point. This really is not any comparable thing.

Mr. HARDY. I don't know whether on a per-man basis, I don't know what your costs run, actually as I understood many of the troop housing quarters had been built by your engineer troops themselves.

General SHULER. That is right.

Mr. HARDY. I don't know what your costs would run, but I would suppose practically all of the lumber used in them has to be brought in from somewhere else because I don't believe there was any available there. There was very little masonry construction involved. This is on open type of thing. Unless you had seen it you wouldn't recognize the difference. I don't know how you would compare that with construction here in the United States, because I don't know any where you would build it.

General SHULER. I can give you what our rule of thumb is. This is a rough rule of thumb checking the total sum against the total number of men it is [deleted] per man, and that is for everything. You take the total thing—ports, the works—it runs about [deleted] a man.

The CHAIRMAN. How did you arrive at that figure?

General SHULER. Sir, we took the total strength that this bill supports, plus the strength that previous bills that have been passed supports, and that totals up to [deleted] as I stated, and divided that into the total money and that is [deleted] a man.

The CHAIRMAN. Mr. Hardy, does that sound reasonable?

General SHULER. It is much cheaper in the United States.

Mr. HARDY. That would be costs in utilities, then, you couldn't spend anything like that amount in the kind of housing that you provided for your troops.

General SHULER. No.

The CHAIRMAN. Without objection, the items in this book are approved.

Tomorrow we are going to report out the bill and I want everybody here so we can have a rollcall vote. Then we are going to ask the staff to work as hard as you can over the weekend and get the report so we can go to the Rules Committee at the earliest possible date.

Mr. BLANDFORD. Mr. Chairman, tomorrow we will get permission to file a report sometime Friday. I think we can have the report ready Friday if the committee approves it early tomorrow. We can have it filed as late as midnight Friday.

The CHAIRMAN. We don't want to be in the position of not giving the most expeditious action to these items.

Mr. BLANDFORD. A lot of this depends on the departments supplying the transcripts and the inserts. They will have to work the weekend also.

The CHAIRMAN. You will give them the transcript today.

Mr. BLANDFORD. Yes, sir; we arranged for that.

The CHAIRMAN. How many of the membership here today are going to the prayer breakfast tomorrow?

We better call the briefing off, we won't be here.

Mr. BATES. Which do you need more?

The CHAIRMAN. Anytime I can go to prayer breakfast it is good for me. General Johnson will be there, the Secretary will be there.

Mr. BLANDFORD. Why don't we go ahead with the program, Mr. Chairman?

May I ask the Secretary whether you have been asked to supply to the committee the number of contracts that you have entered into, this particular period for construction, and all the contracts. Those contracts awarded between now and the first of July. Each of the Secretaries have indicated they would supply this information to the committee. The purpose obviously is to determine those that are so essential that they had to be awarded between now and the first of July. By reporting to us those you award between now and the first of July, we will be able to determine whether these were essential in 1966.

Secretary RESOR. All right. That is MCA, or what is it?

Mr. BLANDFORD. This is everything.

(Interim information regarding MCA follows:)

Assuming availability of military construction funds by April 1, 1966, we estimate that 75 percent of these funds will be obligated by June 30, 1966. The remainder will be substantially obligated shortly thereafter.

The CHAIRMAN. Mr. Blandford, I don't think we better have the briefing tomorrow, there will be nobody here. Let's have it Friday morning.

Mr. BLANDFORD. Friday morning, very well.

The CHAIRMAN. Who would like the briefing on Friday morning, raise your hands, because these are quite vital. This will do you good, you ought to be here, Mr. Lennon.

Mr. BLANDFORD. Nine o'clock Friday morning then for the briefing.

The CHAIRMAN. Nine o'clock Friday morning.

Wait a minute, Mr. Lennon has one question.

Mr. LENNON. General Johnson, early in December last year Mr. Frank Slatinshek of the committee staff contacted you with respect to the criticism that had developed in the method of the notification of the next of kin of casualties in Vietnam and the Dominican Republic.

And the Secretary assured us that the matter would be considered and be studied, and I wonder if you could at your convenience put in this record, and inasmuch as it is related to the total situation, what your final judgment was with respect to how we could avoid a recurrence of what happened in the Federal area where a taxicab driver stuck under the door the casualty notice of death, and things like that were happening, and it happens in my area more so than anywhere in the United States.

General JOHNSON. I can respond, I think, right now, Mr. Lennon, and I share your concern about this.

We can't really control what the taxicab driver does, because he is hired by Western Union. Our contract is with Western Union. They tell us that they cannot afford to maintain a messenger at every one of their Western Union offices. However, on the first of February I instituted a 60-day test in the 5th Army area, which encompasses the North-Central Plains States, of military notification to the first survivor, not a secondary next of kin. We will do this over a 60-day period to determine whether or not this is a practical method of notification. We, of course, feel that we must notify the next of kin prior to the time they receive notification through the news media.

Mr. LENNON. General, you know the distinction. If the serviceman is based at Fort Bragg, say, for instance, and his family lives there, then his next of kin is notified by Army personnel, but, if his family lives there, where a great many of them do, and his APO is in Saigon, then he is notified by Western Union, and it was this distinction which I hoped that you had read from the newspaper account that I sent to you, transmitted to you, that gave me some concern, and I am not disturbed, but I wish your new program could have been instituted in the 3d Army Command, where we have so many deaths in the Fort Bragg central North Carolina area.

General JOHNSON. If this is practical it will be instituted country-wide.

Mr. LENNON. You see the point the distinction is made. All the family lives there but he is an APO in Saigon. His widow gets the notice through a telegram sometime in the manner I spoke of, but if he is so-called attached to a unit at Fort Bragg, and he is somewhere else and gets killed, then the notification is brought by an army personnel, which appropriately it should be. They distinguish between that in the article I sent you, because these people were interviewed, and it so happens that I am bearing the burden of it in my area. I am very sympathetic to that problem there.

General JOHNSON. Then we have taken one additional step. We no longer notify between the hours of 10 o'clock at night and 6 o'clock in the morning.

Mr. LENNON. I am delighted to hear at least that change. Thank you very much. I hope your pilot program will work out.

The CHAIRMAN. You do not want us to help you with the Buffalo or the Cobra. You are getting along fine. You don't want any help at all.

General JOHNSON. I am not saying I am getting along fine—

The CHAIRMAN. We don't want any equivocation, that is not characteristic of you. You definitely don't want any help at this point?

General JOHNSON. No, sir; not at this point.

The CHAIRMAN. Don't blame us if you don't get it. We would put it in so fast it would make your head swim, if you batted an eye; you know that, don't you, sir?

General JOHNSON. Yes, sir.

The CHAIRMAN. The committee will be in recess until tomorrow morning at 10 o'clock, at which time they will report out the bill.

(Whereupon, at 3:50 p.m., the committee adjourned until Thursday, February 17, 1966, at 10 a.m.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Thursday, February 17, 1966.

The committee met at 10 a.m., in room 2118, Rayburn House Office Building, the Honorable L. Mendel Rivers (chairman) presiding.

Present: Messrs. Rivers, Bates, Arends, Hébert, Price, Bob Wilson, Hardy, Bennett, Chamberlain, Stratton, Pike, Clancy, Ichord, Stafford, Nedzi, Schweiker, Randall, Hagan, Charles Wilson, Leggett, Irwin, Johnson, Evans, Love, Hicks, Machen, Long, Walker, and Polanco-Abreu, committee members.

Also present: Messrs. Blandford, Kelleher, Slatinshek, Cook, Morgan and Marshall, professional staff.

The CHAIRMAN. Let the committee come to order.

I apologize for being late, I couldn't get away from the Shoreham Hotel; I couldn't get my coat.

Mr. Bates and I were right in line together. I guess he will be here.

A quorum is present, Mr. Blandford advises me, so we want to consider this bill today and see if we can't strengthen it, and report it out, and bring it up next week.

As I said earlier, we want to combine these bills, then we will get one rule and have one fight on the floor and that will be it. This is what I want to do. Do you want me to read it or do you want to read it?

Mr. KELLEHER. I will read it.

The CHAIRMAN. You read it. I want to conserve what is left of my voice.

Mr. KELLEHER. Right.

Members of the committee, it is my suggestions that we have a clean bill which will be a combination of H.R. 12334 and H.R. 12335 as they may be amended today.

AMENDMENTS

(1) To combine the two bills, I offer the following amendment:

On page 2, following line 23 of H.R. 12334, insert all of the language of H.R. 12335 following the enacting clause, and at the end of the language of H.R. 12335, insert the language which appears under title III of H.R. 12334.

Explanation:

This amendment will combine the two bills and will also move title III of H.R. 12334 to the end of the whole new bill.

That is the first amendment.

The CHAIRMAN. Without objection.

Don't stop us now.

Mr. HARDY. I won't stop you except for this one question.

The CHAIRMAN. You don't have an amendment here, though.

Mr. HARDY. No, I have an amendment to the substance of the bill. I think this is a fine approach but I want to be sure I get my amendment in.

The CHAIRMAN. You will get your amendment.

Mr. KELLEHER. (2) I will now offer an amendment to title III in its new position at the end of the whole bill, but I will refer to it in its present position in H.R. 12334.

On page 3, line 4, following the word "for" strike the word "the" and insert "their stated purposes in connection with".

Explanation:

As proposed by the Department of Defense the language in this section was susceptible of an interpretation that it constituted an unlimited transfer authority to the extent that Department of Defense appropriations for personnel functions could have been used for procurement or that procurement appropriations were authorized to be transferred to operations and maintenance-type expenditures in behalf of South Vietnam.

The amendment adding the words "their stated purposes in connection with" is intended to avoid any such result and to require that personnel-type expenditures be made from personnel appropriations, that procurement-type expenditures be made from procurement appropriations and so forth.

That language, Mr. Chairman, is in the Senate bill.

The CHAIRMAN. We just make it consonant with the Senate bill, and it makes it impossible of equivocal interpretation.

Mr. KELLEHER. Yes, to make sure transfer of funds from one appropriation account to another cannot be done.

The CHAIRMAN. Without objection.

Get to the next one.

Mr. KELLEHER. This next amendment is one which Mr. Hardy has a counteramendment for.

(3) In order that the committee can be kept informed of the use of authority and funds that may be made available under this, I offer the following amendment:

The CHAIRMAN. This is Mr. Hardy's?

Mr. KELLEHER. This is an amendment in the nature of Mr. Hardy's. This is in the Senate bill also.

The CHAIRMAN. Let's hear it.

Mr. HARDY. OK.

Mr. KELLEHER. On page 3 of H.R. 12334 following line 8, add a new subsection as follows:

(b) Within 30 days after the end of each quarter, the Secretary of Defense shall render to the Committees on Armed Services and Appropriations of the Senate and the House of Representatives a report with respect to the estimated value by country of support furnished from appropriations authorized to be made under this section.

Mr. HARDY. Mr. Chairman, I have a substitute for that one.

The CHAIRMAN. Go ahead.

Mr. HARDY. If Mr. Kelleher will read it.

The CHAIRMAN. Read Mr. Hardy's substitute amendment to this amendment.

Mr. HICKS. Where in the bill are we now, Mr. Kelleher?

Mr. KELLEHER. That would be on the last page of 12334, under "General provisions, title III."

What I read is the language that is in the Senate bill.

Mr. HARDY. S. 12335.

Mr. KELLEHER. 12334.

The CHAIRMAN. 12334. Go ahead and read it.

Mr. KELLEHER. Right.

SECTION 5

(a) The Secretary of Defense will furnish to the Armed Services Committees of the Senate and House of Representatives a description of each project, together with full and complete justification therefor, including a cost analysis thereof, prior to the execution of any contract for the establishment or development of a military installation or facility, whenever it pertains to the acquisition, construction, conversion, rehabilitation, or installation of permanent or temporary public works, including land acquisition, appurtenances, utilities, and equipment, the moneys for which are authorized to be appropriated by this Act.

(b) The Secretary of Defense will also furnish to the Armed Services Committees of the Senate and House of Representatives complete information regarding the alternative methods of adequately auditing contracts which he and the Comptroller General have agreed upon prior to the execution of any contract which would waive the provisions of section 2313(b) or title 10, United States Code.

Mr. HARDY. As I read the thing, that belongs in 12335, not 12334.

The CHAIRMAN. We are going to combine the bills.

Mr. HARDY. I understand that—you mean as combined. But it applies to what is now in 12334—I mean it applies to what is now in 12335.

Mr. KELLEHER. It would be at the end of both of them.

Mr. HARDY. All right, I think that is satisfactory.

The CHAIRMAN. I think Mr. Hardy's amendment has nailed it down more precisely than the Senate one.

Mr. HARDY. I think it does, Mr. Chairman. In addition, it is exactly what Mr. McNamara said he would do.

The CHAIRMAN. That is right, I think it is. He said he would be glad to do that. I don't know why we can't put it in the bill. I think the amendment is an improvement on the Senate amendment, Mr. Kelleher.

Mr. KELLEHER. All right, sir.

The CHAIRMAN. As many as favor the amendment of Mr. Hardy to the proposed amendment by me will say aye; opposed, no.

Mr. Hardy's amendment is agreed to. [Unanimously carried.]

The CHAIRMAN. That is exactly along the line of what Mr. McNamara said he was willing to do. I don't know why he shouldn't be. We can't give him these blank checks forever.

Mr. Hardy, that takes care of you, doesn't it?

Mr. HARDY. It does.

The CHAIRMAN. Now, Mr. Kelleher, you make it applicable to wherever it will go in each of the bills.

Mr. KELLEHER. Yes, sir; I will.

The CHAIRMAN. The combined bill will be what number?

Mr. KELLEHER. It will be a clean bill. We don't know the number.

The CHAIRMAN. So you will rewrite the whole bill.

Mr. KELLEHER. Right, and reintroduce it.

The CHAIRMAN. And reintroduce it.

Mr. HARDY. Mr. Chairman, I think we may need, if we are not going to have another meeting of the committee, to have a unanimous consent for the chairman to report.

The CHAIRMAN. We will get that.

Mr. BLANDFORD. We always get unanimous consent for the chairman to introduce a clean bill.

The CHAIRMAN. I have to get that.

Go ahead, Mr. Kelleher.

Mr. KELLEHER. One more amendment, Mr. Chairman.

Certain money figures would be changed to add \$49.7 million to the Navy construction authority for the first increment of a jet-capable Marine airfield in Okinawa, and for the second and third increments of a ship repair facility at Subic Bay.

These amendment are as follows:

(4) On page 2, line 1, strike "\$254,600,000" and insert in lieu thereof "\$304,300,000"; and

On page 3, line 18, strike "\$254,600,000" and insert in lieu thereof "\$304,300,000"; and

On page 3, line 20, strike "\$1,038,400,000" and insert in lieu thereof "\$1,088,100,000".

The CHAIRMAN. Explain that to the committee.

Mr. KELLEHER. The committee added \$49.7 million to the bill for the two items, the Marine airfield in Okinawa, and the second and third increments of a ship repair facility in Subic Bay. Therefore the money figures—

The CHAIRMAN. That is in the Philippines.

Mr. KELLEHER. Therefore the money figures applicable to the Navy military construction must be adjusted upward by that same amount, \$49.7 million.

The CHAIRMAN. Are there any questions on that? This is what they said they needed. It is agreeable, I think—

Mr. HARDY. Mr. Chairman, I don't remember the airfield thing. What was that? I remember the other one.

The CHAIRMAN. General Greene addressed himself to that.

Mr. BLANDFORD. This is an airfield northeast of Naha approximately 15 miles. It has been cleared with the Air Force insofar as air traffic is concerned. There is a strip there now, I understand the Government already owns the surrounding land, and that this will be approximately—

Mr. HARDY. It is an improvement?

Mr. BLANDFORD. There is a strip. It is to be a new airfield. I don't want to give you the idea this is an improvement.

Mr. HARDY. This is not something they can use in existing facilities?

Mr. BLANDFORD. No.

Mr. HARDY. I didn't remember.

Mr. PRICE. This doesn't call for the further acquisition of land?

Mr. BLANDFORD. I asked the Marine Corps about that and they said this is land they already have, and no farmland is involved.

The CHAIRMAN. Let's be sure and check that out. I don't want the committee to be misled on this.

Mr. BLANDFORD. I checked that myself. I asked that question, Mr. Chairman, because I recognize the problem.

The CHAIRMAN. Mr. Price held hearings on that Okinawa thing many years ago.

Mr. BATES. I remember that, too.

The CHAIRMAN. Mr. Hardy was there. I was supposed to conduct those hearings and Mr. Price did it and did it better than I could have done it. I still remember it. Without objection that amendment is agreed to.

What is the next thing?

Mr. KELLEHER. That is all, except for the minor changes within the bill that are made necessary by combining the two bills.

The CHAIRMAN. I want to ask unanimous consent—I want everybody to listen now—the title be appropriately changed, Mr. Kelleher, to include military construction; 2, that the staff be granted permission to make appropriate changes in section numbers and other details of this kind; and 3, that the vote on this bill be considered as a vote on the clean bill thereby obviating the need for another meeting, as Mr. Hardy observed, and as others have observed.

So without objection this will be agreed to.

Now, Mr. Blandford, we come to the point of voting on this bill which will be considered as a vote on the clean bill which I have already gotten permission to introduce by unanimous consent.

Mr. Blandford, you call the roll.

Mr. BLANDFORD. All right, sir.

Mr. MACHEN. Mr. Chairman, could I make one remark before we vote on it?

The CHAIRMAN. Yes, sir.

Mr. MACHEN. This deals with the air capability, and after the testimony the first part of last week, particularly with our colleague Congressman Pike, I had occasion to be concerned and did check out with some people, including one civilian, that had been sent over to be on the air carriers, due to the A-6's needing special technicians.

I am, however, deeply concerned with the air capability that we do have with the testimony that was developed, and I am hoping or suggesting that perhaps the committee will look into this aspect of the program further as this year goes on.

The CHAIRMAN. I think in response to you—I want Mr. Pike to hear this—I think when we get into the new authorizations we will go into this thing even more fully.

Mr. MACHEN. I wanted to put this in the record because I am deeply concerned with the air capability. I am not speaking of the Air Force, I am speaking of air capability, period.

Mr. PIKE. Mr. Chairman, the difficulty with that is according to the testimony of the Navy there aren't any of these planes in the 1967 procurement.

The CHAIRMAN. That is all right, we can write anything we want in that bill.

Mr. MACHEN. I think this subject ought to be explored, either by a committee that you might set up or by one of the existing subcommittees.

The CHAIRMAN. We will work something out along that. I have a lot of ideas on that. I will reveal them whenever we get to the permanent procurement.

Mr. Pike has already done a very good job on that subcommittee I put him on, the report of which I have authorized to be published. And I don't generally do this, because when we appoint special subcommittees, we appoint special subcommittees to advise the full committee.

But when such an outstanding job is done as was done by Mr. Pike and Mr. Price on both of their hearings, I have authorized them to be printed. Each of them did an outstanding job in their subcommittees.

Mr. MACHEN. I have none of these manufacturers in my district at all, I might add. It is a part of the capability involved.

The CHAIRMAN. We should be concerned.

Mr. Pike.

Mr. PIKE. Mr. Chairman, what I am concerned about with this bill is the problem of how much of it has been just lifted out of the regular 1967 procurement and put into the 1966 supplement for the purpose of making the regular 1967 procurement look good, and the 1967 budget look good. The one thing that I essentially asked for was that Mr. McNamara provide us with data as to what exactly was being accelerated in this budget, and what was not being accelerated. First he said that everything was being accelerated. Then we demonstrated fairly conclusively, I think, that a great many things were not being accelerated.

What I would like to know—and Mr. McNamara agreed he would provide us with this data—I would like to know whether we have been provided with this data. This is supposed to be for the acceleration and speedup of the war in Vietnam, and to a very large extent I don't think it is for that at all. I think it has just been a bookkeeping job to move expenses out of 1967 and put them into 1966. I would like to know whether we have gotten from Mr. McNamara information which tells us definitively what actually has been accelerated and what has not been accelerated.

The CHAIRMAN. Did you hear what Mr. Pike said?

Mr. BLANDFORD. Yes. We have not received the information, to my knowledge, Mr. Pike, from the Secretary, as to what items would actually be accelerated. I think it is perfectly obvious the Navy testimony left some doubt in the committee's mind as to what items were being accelerated.

I think it was also obvious when the Army and Air Force testified they were much more sure of their ground on accelerated production.

The CHAIRMAN. I think there has been some of each, Mr. Pike. There will be some acceleration, but some of it has been bodily lifted and put into this bill. I think what you have said is in a great measure true, but the country would not understand it if we didn't report this bill out, and fast.

Any time that we save on long lead time items will be helpful in the war effort, irrespective of the motive behind bodily lifting them out of 1967 and putting them into this supplemental 1966.

We are just in the position where we can't afford to hold it up.

Mr. PIKE. Mr. Chairman, I don't want to vote against this, and I don't think I am going to, but may we get some assurance that the report on this bill will raise this question, and will discuss this question?

The CHAIRMAN. I will not only do that, but I will ask you to assist in putting that language in the report.

Mr. HARDY. Mr. Chairman, I would like to express a feeling that ought to be done, too.

The CHAIRMAN. Let me say this now. Every member of this committee knows that the occupant of this chair is willing to uphold the dignity and the strength of this committee against all persons whomsoever. I will not tolerate any rubberstamping, or blank checking of any of our authority. I am willing to do anything to continue to keep our control in the areas where we must retain them. I am willing to do exactly what you have said. I think we should do it. That is why I want the sympathy and the participation of every one of you.

Mr. Bates wants to be heard.

Mr. BATES. I think Mr. Pike makes a good point. I think we ought to have as a part of the report the information which he just indicated. We ought to know exactly what we are doing here, and how much we are accelerating, and the facts pertaining thereto.

The CHAIRMAN. Mr. Blandford, you get busy on that.

Mr. BLANDFORD. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Ichord.

Mr. ICHORD. Mr. Chairman, I just wanted to state that I had some concern along the same line I think Mr. Hardy's amendment in part takes care of. But what I was concerned about was if we don't watch it, this is a peculiar situation, an emergency situation—we are going to get into the same position as the Foreign Affairs Committee, and to me it is just a laughing matter for the Congress to go through the yearly process of authorizing foreign aid, because there is really no control of Congress. They can obligate it, deobligate it, and reobligate it all in the same day. If we don't watch it we are going to be getting ourselves in the same position with regard to military matters.

Mr. HARDY. That is exactly right.

The CHAIRMAN. We are going to try to obviate that.

Mr. BLANDFORD. May I make a suggestion?

The CHAIRMAN. Yes.

Mr. BLANDFORD. I would suggest that the committee take a position that when Mr. McNamara appears here on the 7th of March for the beginning of the posture hearing, a letter over the chairman's signature go to Mr. McNamara and tell him the first order of business on the 7th of March will be for him to present to this committee an item by item statement on the accelerated production contained in the supplemental authorization.

Mr. PIKE. The trouble is this will have been on the floor and debated by the time that comes along.

Mr. BLANDFORD. Well, I am not going to get all of this by Monday, the information you want, on an item-by-item breakdown, because you are going to get so much explanation that even after I got it I would not know how to interpret it. I won't make a commitment I can get that. We will write a letter and ask the Secretary to come over here on the 7th day of March and explain it to the committee item by item.

Mr. ARENDS. Why can't you get this information by the time we write the report?

Mr. BLANDFORD. I can get you answers, but whether you will be able to understand them or not is questionable. They will give you lead-

time, they will give you this versus what they had proposed to do, and this will accelerate this kind of construction as opposed to what they had originally planned to do. By the time you get all through with this language you won't know any more than when you started.

The CHAIRMAN. You are talking about production and not construction, aren't you, Mr. Pike?

Mr. PIKE. I am talking essentially about production. They have all admitted, Mr. Chairman, that every item of construction for south-east Asia has been taken out of the 1967 budget. That doesn't make any sense. The construction items are all in this one. They are not going to construct them that much faster. They are not going to have them that much more available, and certainly these construction items don't fit within their own ground rules of having a war which ends on the 31st of July, 1967.

Mr. BLANDFORD. You are going to know the basis of it by the first of July anyway, because you are then going to find out the number of contracts actually awarded and entered into prior to the first of July.

Mr. HARDY. You will know exactly.

Mr. BLANDFORD. We will know what they didn't do.

The CHAIRMAN. Mr. Price.

Mr. PRICE. I am in favor of the expediting and accelerating of these projects if it is the need to do so.

This bill should be passed by the end of March. The appropriation should be passed by the end of March. Normally, we don't get the appropriation for these type of items until the very last thing in the session of Congress. It is possible—I don't know what they are going to do—none of us can tell definitely—but evidently they need this.

It is possible to at least accelerate as much as 1 year if we go through with this action.

The CHAIRMAN. Sure there will be some acceleration, there is bound to be acceleration. You will give the Secretary permission to obligate certain items. But it won't hurt us. We can watch this thing very closely, and we will.

But I do think there will be a lot of acceleration. I don't think we should impugn the motives of the Secretary in this area, because there is bound to be. The Army yesterday testified to this. So we have got to give him a chance. We can't hold it up. We can't hold it up.

Now, Mr. Arends, have you finished.

Mr. ARENDS. No. The only thing I was going to say, Mr. Chairman, is that I agree with Mr. Pike entirely. I think the committee is going to find itself in the position where once again we have acquiesced and gone along without getting the information to be furnished to this committee.

The CHAIRMAN. You will get it. We will get it.

Mr. ARENDS. You will get it, but it will be late.

The CHAIRMAN. Let's try it this way.

Mr. ARENDS. I am not excited about 1 or 2 days on the floor of the House in passing this bill, when the Senate gets done with it, and we change the language, there will be some delay involved. I would like to see a fairly accurate report come from the Secretary on this which could be incorporated in the report. Otherwise we are just right back to where we were again, here, boys, here it is, thank you for passing it.

Mr. BLANDFORD. How much of this could you put in the report?

Mr. KELLEHER. Well, you couldn't put numbers of aircraft, certainly.

Mr. BLANDFORD. Everything we have here is classified.

Mr. BATES. You can put dollars.

Mr. BLANDFORD. I don't know.

Mr. BATES. You can put totals.

Mr. BLANDFORD. We can put totals.

The CHAIRMAN. Why don't you look at it and see what you can do? We will do the best we can.

Now, the question is on the reporting out of this bill, as amended, a new bill, giving me authority to introduce a new bill, and this vote being considered as a vote on the new bill.

Mr. Blandford, call the roll, and also list the proxies.

Mr. BLANDFORD. I have them here.

Mr. Rivers.

The CHAIRMAN. Yes.

Mr. BLANDFORD. Mr. Bates.

Mr. BATES. Yes.

Mr. BLANDFORD. Mr. Philbin. Absent.

Mr. Arends.

Mr. ARENDS. Yes.

Mr. BLANDFORD. Mr. Hébert.

Mr. HÉBERT. Yes.

Mr. BLANDFORD. Mr. OKonski. Absent.

Mr. Price.

Mr. PRICE. Yes.

Mr. BLANDFORD. Mr. Bray. "Aye," by proxy.

Mr. Fisher. "Yes," by proxy.

Mr. Bob Wilson.

Mr. BOB WILSON. Yes.

Mr. BLANDFORD. Mr. Gubser. "Yes," by proxy.

Mr. HARDY. Yes.

Mr. BLANDFORD. Mr. Gubser. "Yes," by proxy.

Mr. Bennett.

Mr. BENNETT. Yes.

Mr. BLANDFORD. Mr. Chamberlain.

Mr. CHAMBERLAIN. Yes.

Mr. BLANDFORD. Mr. Byrne. "Yes," by proxy.

Mr. PIRNIE. "Yes," by proxy.

Mr. Stratton.

Mr. STRATTON. Yes.

Mr. BLANDFORD. Mr. Hall. "Yes," by proxy.

Mr. Pike.

Mr. PIKE. Yes.

Mr. BLANDFORD. Mr. Clancy.

Mr. CLANCY. Yes.

Mr. BLANDFORD. Mr. Ichord.

Mr. ICHORD. Yes.

Mr. BLANDFORD. Mr. Stafford.

Mr. STAFFORD. Yes.

Mr. BLANDFORD. Mr. Nedzi.

Mr. NEDZI. Yes.

Mr. BLANDFORD. Mr. Schweiker.

Mr. SCHWEIKER. Yes.

Mr. BLANDFORD. Mr. Lennon. "Yes," by proxy.

Mr. Randall.

Mr. RANDALL. Yes.

Mr. BLANDFORD. Mr. Hagan.

Mr. HAGAN. Yes.

Mr. BLANDFORD. Mr. Charles Wilson.

Mr. CHARLES WILSON. Yes.

Mr. BLANDFORD. Mr. Leggett.

Mr. LEGGETT. Yes.

Mr. BLANDFORD. Mr. Irwin.

Mr. IRWIN. Yes.

Mr. BLANDFORD. Mr. Johnson.

Mr. JOHNSON. Yes.

Mr. BLANDFORD. Mr. Evans.

Mr. EVANS. Yes.

Mr. BLANDFORD. Mr. Love.

Mr. LOVE. Yes.

Mr. BLANDFORD. Mr. Hicks.

Mr. HICKS. Yes.

Mr. BLANDFORD. Mr. Machen.

Mr. MACHEN. Yes.

Mr. BLANDFORD. Mr. Long.

Mr. LONG. Yes.

Mr. BLANDFORD. Mr. Walker.

Mr. WALKER. Yes.

Mr. BLANDFORD. Mr. Polanco-Abreu.

Mr. POLANCO-ABREU. Yes.

Mr. BLANDFORD. On this vote 35 ayes and no nays, Mr. Chairman.

The CHAIRMAN. Mr. Blandford, you can release that action of the committee to whoever asks about it from the press. Also explain those two amendments we incorporated.

Mr. BLANDFORD. All right, sir.

The CHAIRMAN. Off the record.

(Discussion off the record.)

The CHAIRMAN. Back on the record.

We will be in recess. I want the subcommittees to move as fast as you can.

I want to thank every one of you for the work you have done on this bill.

(Whereupon, at 10:52 a.m., the committee adjourned.)

APPENDIX

[H.R. 12334, 89th Cong., 2d sess.]

A BILL To authorize appropriations during the fiscal year 1966 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles and research, development, test, and evaluation for the Armed Forces and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I—PROCUREMENT

SEC. 101. In addition to the funds authorized to be appropriated under Public Law 89-37 there is hereby authorized to be appropriated during the fiscal year 1966 for the use of the Armed Forces of the United States for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles in amounts as follows:

AIRCRAFT

For aircraft: for the Army, \$825,600,000; for the Navy and the Marine Corps, \$738,300,000; for the Air Force, \$1,585,700,000.

MISSILES

For missiles: for the Army, \$64,000,000; for the Navy, \$26,200,000; for the Marine Corps, \$27,500,000; for the Air Force, \$63,700,000.

TRACKED COMBAT VEHICLES

For tracked combat vehicles: for the Army, \$75,800,000; for the Marine Corps, \$10,900,000.

TITLE II

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION

SEC. 201. In addition to the funds authorized to be appropriated under Public Law 89-37 there is hereby authorized to be appropriated during fiscal year 1966 for the use of the Armed Forces of the United States for research, development, test, and evaluation, as authorized by law, in amounts as follows:

For the Army, \$27,995,000;

For the Navy (including the Marine Corps), \$52,570,000;

For the Air Force, \$71,085,000.

TITLE III—GENERAL PROVISION

SEC. 301. Funds authorized for appropriation for the use of the Armed Forces of the United States under this or any other Act are authorized to be made available for the support of Vietnamese and other free world forces in Vietnam, and related costs, during the fiscal years 1966 and 1967, on such terms and conditions as the Secretary of Defense may determine.

[H.R. 12335, 89th Cong., 2d Sess.]

A BILL To authorize certain construction in support of military activities in southeast Asia, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. The Secretary of each military department may establish or develop military installations and facilities by acquiring, constructing, converting, reha-

bilitating, or installing permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment, which are necessary in connection with military activities in southeast Asia, or in support of such activities, in the total amount as follows:

Department of the Army, \$509,700,000;

Department of the Navy, \$254,600,000; and

Department of the Air Force, \$274,100,000.

SEC. 2. The Secretary of Defense may establish or develop installations and facilities which he determines to be vital to the security of the United States, and in connection therewith to acquire, construct, convert, rehabilitate, or install permanent or temporary public works, including land acquisition, site preparation, appurtenances, utilities, and equipment in the total amount of \$200,000,000.

SEC. 3. The Secretary of each military department may proceed to establish or develop installations and facilities under this Act without regard to section 3648 of the Revised Statutes, as amended (31 U.S.C. 529), and sections 4774(d) and 9774(d) of title 10, United States Code. The authority to place permanent or temporary improvements on land includes authority for surveys, administration, overhead, planning, and supervision incident to construction. That authority may be exercised before title to the land is approved under section 355 of the Revised Statutes, as amended (40 U.S.C. 255), and even though the land is held temporarily. The authority to acquire real estate or land includes authority to make surveys and to acquire land, and interests in land (including temporary use), by gift, purchase, exchange of Government-owned land, or otherwise.

SEC. 4. Whenever—

(1) the President determines that compliance with section 2313(b) of title 10, United States Code, for contracts made under this Act for the establishment or development of military installations and facilities in foreign countries would interfere with the carrying out of this Act; and

(2) the Secretary of Defense and the Comptroller General have agreed upon alternative methods of adequately auditing those contracts; the President may exempt those contracts from the requirements of that section.

SEC. 5. There are authorized to be appropriated such sums as may be necessary for the purposes of this Act, but the appropriations for public works authorized by sections 1 and 2 shall not exceed—

(1) for section 1: Department of the Army, \$509,700,000; Department of the Navy, \$254,600,000; Department of the Air Force, \$274,100,000, or a total of \$1,088,400,000.

(2) for section 2: a total of \$200,000,000.

SEC. 6. This Act may be cited as the "Supplemental Military Construction Authorization Act, 1966".
