FOREWORD

This compilation of materials relating to the Universal Military Training and Service Act has been prepared for the use of the members of the House Committee on Armed Services and its professional staff.

The compilation reflects all statutory changes enacted prior to January 10, 1966.

The materials in this print are arranged in the following order:

I. The Universal Military Training and Service Act as amended to August 30, 1965 (Effective statutory language of the "Draft Law" (p. 5253).

II. An analysis and explanation of the Universal Military Training and Service Act, as amended (p. 5293).

III. A brief description of the Selective Service System and its administration (p. 5305).

(iii)

Provisions of the

**UNIVERSAL MILITARY TRAINING AND SERVICE
ACT**

(With amendments to August 30, 1965)

Some of the former provisions of this act have been codified in title 10 of the United States Code and are not shown.

Sec. 1. Policy and intent of Congress.—(a) This Act may be cited as the “Universal Military Training and Service Act.”

(b) The Congress hereby declares that an adequate armed strength must be achieved and maintained to insure the security of this Nation.

(c) The Congress further declares that in a free society the obligations and privileges of serving in the armed forces and the reserve components thereof should be shared generally, in accordance with a system of selection which is fair and just, and which is consistent with the maintenance of an effective national economy.

(d) The Congress further declares, in accordance with our traditional military policy as expressed in the National Defense Act of 1916, as amended, that it is essential that the strength and organization of the National Guard, both Ground and Air, as an integral part of the first line defenses of this Nation, be at all times maintained and assured.

To this end, it is the intent of the Congress that whenever Congress shall determine that units and organizations are needed for the national security in excess of those of the Regular components of the Ground Forces and the Air Forces, and those in active service under this title, the National Guard of the United States, both Ground and Air, or such part thereof as may be necessary, together with such units of the Reserve components as are necessary for a balanced force, shall be ordered to active Federal service and continued therein so long as such necessity exists.

(e) The Congress further declares that adequate provision for national security requires maximum effort in the fields of scientific research and development, and the fullest possible utilization of the Nation’s technological, scientific, and other critical manpower resources.

AUTHORIZED PERSONNEL STRENGTHS

Sec. 2. (Repealed)

REGISTRATION

Sec. 3. Registration.—Except as otherwise provided in this title, it shall be the duty of every male citizen of the United States, and every other male person now or hereafter in the United States, who,

on the day or days fixed for the first or any subsequent registration, is between the ages of eighteen and twenty-six, to present himself for and submit to registration at such time or times and place or places, and in such manner, as shall be determined by proclamation of the President and by rules and regulations prescribed hereunder.

TRAINING AND SERVICE

Sec. 4. (a) Training and service in general.—Except as otherwise provided in this title, every male citizen of the United States and every male alien admitted for permanent residence, who is between the ages of 18 years and 6 months and 26 years, at the time fixed for his registration, or who attains the age of 18 years and 6 months after having been required to register pursuant to section 3 of this title, or who is otherwise liable as provided in section 6(h) of this title, shall be liable for training and service in the Armed Forces of the United States: *Provided*, That each registrant shall be immediately liable for classification and examination, and shall, as soon as practicable following his registration, be so classified and examined, both physically and mentally, in order to determine his availability for induction for training and service in the Armed Forces: *Provided further*, That any male alien who is between the ages of 18 years and 6 months and 26 years, at the time fixed for registration, or who attains the age of 18 years and 6 months after having been required to register pursuant to section 3 of this title, or who is otherwise liable as provided in section 6(h) of this title, who has remained in the United States in a status other than that of a permanent resident for a period exceeding one year (other than an alien exempted from registration under this title and regulations prescribed thereunder) shall be liable for training and service in the Armed Forces of the United States, except that any such alien shall be relieved from liability for training and service under this title if, prior to his induction into the Armed Forces he has made application to be relieved from such liability in the manner prescribed by and in accordance with rules and regulations prescribed by the President; but any alien who makes such application shall thereafter be debarred from becoming a citizen of the United States. The President is authorized, from time to time, whether or not a state of war exists, to select and induct into the Armed Forces of the United States for training and service in the manner provided in this title (including but not limited to selection and induction by age group or age groups) such number of persons as may be required to provide and maintain the strength of the Armed Forces.

At such time as the period of active service in the Armed Forces required under this title of persons who have not attained the nineteenth anniversary of the day of their birth has been reduced or eliminated pursuant to the provisions of section 4(k) of this title, and except as otherwise provided in this title, every male citizen of the United States who is required to register under this title and who has not attained the nineteenth anniversary of the day of his birth on the date such period of active service is reduced or eliminated, or who is otherwise liable as provided in section 6(h) of this title, and every male alien admitted for permanent residence who is required to register under this title and who has not attained the nineteenth anniversary

of the day of his birth on the date such period of active service is reduced or eliminated, or who is otherwise liable as provided in section 6(h) of this title, shall be liable for training in the National Security Training Corps: *Provided*, That any male alien who is required to register under the provisions of this title and who has not reached the nineteenth anniversary of the date of his birth on the date such period of active service is reduced or eliminated, or who is otherwise liable as provided in section 6(h) of this title, who has remained in the United States in a status other than that of a permanent resident for a period exceeding one year shall be liable for training in the National Security Training Corps except that any such alien shall be relieved from such training under this title if, prior to his induction into the National Security Training Corps he has made application to be relieved from such liability in the manner prescribed by and in accordance with rules and regulations prescribed by the President, but any alien who makes such application shall thereafter be debarred from becoming a citizen of the United States: *Provided further*, That persons deferred under the provisions of section 6 of this title shall not be relieved from liability for induction into the National Security Training Corps solely by reason of having exceeded the age of 19 years during the period of such deferment. The President is authorized, from time to time, whether or not a state of war exists, to select and induct for training in the National Security Training Corps as hereinafter provided such number of persons as may be required to further the purposes of this title.

No person shall be inducted into the Armed Forces for training and service or shall be inducted for training in the National Security Training Corps under this title until his acceptability in all respects, including his physical and mental fitness, has been satisfactorily determined under standards prescribed by the Secretary of Defense: *Provided*, That the minimum standards for physical acceptability established pursuant to this subsection shall not be higher than those applied to persons inducted between the ages of 18 and 26 in January 1945: *Provided further*, That the passing requirement for the Armed Forces Qualification Test shall be fixed at a percentile score of 10 points: *And provided further*, That except in time of war or national emergency declared by the Congress the standards and requirements fixed by the preceding two provisos may be modified by the President under such rules and regulations as he may prescribe.

No persons shall be inducted for such training and service until adequate provision shall have been made for such shelter, sanitary facilities, water supplies, heating and lighting arrangements, medical care, and hospital accommodations for such persons as may be determined by the Secretary of Defense or the Secretary of the Treasury to be essential to the public and personal health.

The persons inducted into the Armed Forces for training and service under this title shall be assigned to stations or units of such forces. Persons inducted into the land forces of the United States pursuant to this title shall be deemed to be members of the Army of the United States; persons inducted into the naval forces of the United States pursuant to this title shall be deemed to be members of the United States Navy or the United States Marine Corps or the United States Coast Guard, as appropriate; and persons inducted into the air forces

of the United States pursuant to this title shall be deemed to be members of the Air Force of the United States.

Every person inducted into the Armed Forces pursuant to the authority of this subsection after the date of enactment of the 1951 Amendments to the Universal Military Training and Service Act shall, following his induction, be given full and adequate military training for service in the armed force into which he is inducted for a period of not less than four months, and no such person shall, during this four months period, be assigned for duty at any installation located on land outside the United States, its Territories and possessions (including the Canal Zone): *Provided*, That no funds appropriated by the Congress shall be used for the purpose of transporting or maintaining in violation of the provisions of this paragraph any person inducted into, or enlisted, appointed, or ordered to active duty in, the Armed Forces under the provisions of this title.

No person in the medical, dental, and allied specialist categories shall be inducted under the provisions of this subsection if he applies or has applied for an appointment as a Reserve officer in one of the Armed Forces in any of such categories and is or has been rejected for such appointment on the sole ground of a physical disqualification.

No person, without his consent, shall be inducted for training and service in the Armed Forces or for training in the National Security Training Corps under this title, except as otherwise provided herein, after he has attained the twenty-sixth anniversary of the day of his birth.

(b) Length of service.—Each person inducted into the Armed Forces under the provisions of subsection (a) of this section shall serve on active training and service for a period of twenty-four consecutive months, unless sooner released, transferred, or discharged in accordance with procedures prescribed by the Secretary of Defense (or the Secretary of the Treasury with respect to the United States Coast Guard) or as otherwise prescribed by subsection (d) of section 4 of this title. The Secretaries of the Army, Navy, and Air Force, with the approval of the Secretary of Defense (and the Secretary of the Treasury with respect to the United States Coast Guard), may provide, by regulations which shall be as nearly uniform as practicable, for the release from training and service in the armed forces prior to serving the periods required by this subsection of individuals who volunteered for and are accepted into organized units of the Army National Guard and Air National Guard and other reserve components.

(c) Enlistment; Reservists' active duty; Volunteers for induction; N.S.T.C.—(1) Under the provisions of applicable laws and regulations any person between the ages of eighteen years and six months and twenty-six years shall be offered an opportunity to enlist in the regular army for a period of service equal to that prescribed in subsection (b) of this section: *Provided*, That, notwithstanding the provisions of this or any other Act, any person so enlisted shall not have his enlistment extended without his consent until after a declaration of war or national emergency by the Congress after the date of enactment of the 1951 amendments to the Universal Military Training and Service Act.

(2) Any enlisted member of any reserve component of the Armed Forces may, during the effective period of this Act, apply for a period of service equal to that prescribed in subsection (b) of this section and his application shall be accepted: *Provided*, That his services can be effectively utilized and that his physical and mental fitness for such service meet the standards prescribed by the head of the department concerned: *Provided further*, That active service performed pursuant to this section shall not prejudice his status as such member of such reserve component: *And provided further*, That any person who was a member of a reserve component on June 25, 1950, and who thereafter continued to serve satisfactorily in such reserve component, shall, if his application for active duty made pursuant to this paragraph is denied, be deferred from induction under this title until such time as he is ordered to active duty or ceases to serve satisfactorily in such reserve component.

(3) Within the limits of the quota determined under section 5 (b) for the subdivision in which he resides, any person, between the ages of eighteen and twenty-six, shall be afforded an opportunity to volunteer for induction into the Armed Forces of the United States for the training and service prescribed in subsection (b), but no person who so volunteers shall be inducted for such training and service so long as he is deferred after classification.

(4) Within the limits of the quota determined under section 5 (b) for the subdivision in which he resides, any person after attaining the age of seventeen shall with the written consent of his parents or guardian be afforded an opportunity to volunteer for induction into the Armed Forces of the United States for the training and service prescribed in subsection (b).

(5) Within the limits of the quota determined under section 5 (b) for the subdivision in which he resides, at such time as induction into the National Security Training Corps is authorized pursuant to the provisions of this title, any person after attaining the age of seventeen shall with the written consent of his parents or guardian be afforded an opportunity to volunteer for induction into the National Security Training Corps for the training prescribed in subsection (k) of section 4 of this title.

(d) Transfer to Reserves; N.S.T.C.—(1) Each person who hereafter and prior to the enactment of the 1951 Amendments to the Universal Military Training and Service Act is inducted, enlisted, or appointed (except a person enlisted under subsection (g) of this section) and serves for a period of less than three years in one of the armed forces and meets the qualifications for enlistment or appointment in a reserve component of the armed force in which he serves, shall be transferred to a reserve component of such armed force, and until the expiration of a period of five years after such transfer, or until he is discharged from such reserve component, whichever occurs first, shall be deemed to be a member of such reserve component and shall be subject to such additional training and service as may now or hereafter be prescribed by law for such reserve component: *Provided*, That any such person who completes at least twenty-one months of service in the armed forces and who thereafter serves satisfactorily (1) on active duty in the armed forces under a voluntary extension for a period of

at least one year, which extension is hereby authorized, or (2) in an organized unit of any reserve component of any of the armed forces for a period of at least thirty-six consecutive months, shall, except in time of war or national emergency declared by the Congress, be relieved from any further liability under this subsection to serve in any reserve component of the armed forces of the United States, but nothing in this subsection shall be construed to prevent any such person, while in a reserve component of such forces, from being ordered or called to active duty in such forces.

(2) Each person who hereafter and prior to the enactment of the 1951 Amendments to the Universal Military Training and Service Act is enlisted under the provisions of subsection (g) of this section and who meets the qualifications for enlistment or appointment in a reserve component of the armed forces shall, upon discharge from such enlistment under honorable conditions, be transferred to a reserve component of the armed forces of the United States and shall serve therein for a period of six years or until sooner discharged. Each such person shall, so long as he is a member of such reserve component, be liable to be ordered to active duty, but except in time of war or national emergency declared by the Congress no such person shall be ordered to active duty, without his consent and except as hereinafter provided, for more than one month in any year. In case the Secretary of the Army, the Secretary of the Navy, or the Secretary of the Air Force determines that enlistment, enrollment, or appointment in, or assignment to, an organized unit of a reserve component or an officers' training program of the armed force in which he served is available to, and can without undue hardship be filled by, any such person, it shall be the duty of such person to enlist, enroll, or accept appointment in, or accept assignment to, such organized unit or officers' training program and to serve satisfactorily therein for a period of four years. Any such person who fails or refuses to perform such duty may be ordered to active duty, without his consent, for an additional period of not more than twelve consecutive months. Any such person who enlists or accepts appointment in any such organized unit and serves satisfactorily therein for a period of four years shall, except in time of war or national emergency declared by the Congress, be relieved from any further liability under this subsection to serve in any reserve component of the armed forces of the United States, but nothing in this subsection shall be construed to prevent any such person, while in a reserve component of such forces, from being ordered or called to active duty in such forces. The Secretary of Defense is authorized to prescribe regulations governing the transfer of such persons within and between reserve components of the armed forces and determining, for the purpose of the requirements of the foregoing provisions of this paragraph, the credit to be allowed any person so transferring for his previous service in one or more reserve components.

(3) Each person who, subsequent to June 9, 1951, and on or before August 9, 1955, is inducted, enlisted, or appointed, under any provision of law, in the Armed Forces, including the reserve components thereof, or in the National Security Training Corps prior to attaining the twenty-sixth anniversary of his birth, shall be required to serve on active training and service in the Armed Forces or in training in the National Security Training Corps, and in a reserve

component, for a total period of eight years, unless sooner discharged on the grounds of personal hardship, in accordance with regulations and standards prescribed by the Secretary of Defense (or the Secretary of the Treasury with respect to the United States Coast Guard). Each such person, on release from active training and service in the Armed Forces or from training in the National Security Training Corps, if physically and mentally qualified, shall be transferred to a reserve component of the Armed Forces, and shall serve therein for the remainder of the period which he is required to serve under this paragraph and shall be deemed to be a member of the reserve component during that period. If the Secretary of the Army, the Secretary of the Navy, or the Secretary of the Air Force, or the Secretary of the Treasury with respect to the United States Coast Guard, determines that enlistment, enrollment, or appointment in, or assignment to, an organized unit of a reserve component or an officers' training program of the armed force in which he served is available to, and can, without undue personal hardship, be filled by such a person, that person shall enlist, enroll, or accept appointment in, or accept assignment to, the organized unit or officers' training program, and serve satisfactorily therein.

(e) Pay and allowances.—With respect to the persons inducted for training and service under this title there shall be paid, allowed, and extended the same pay, allowances, pensions, disability and death compensation, and other benefits as are provided by law in the case of other enlisted men of like grades and length of service of that component of the armed forces to which they are assigned. Section 3 of the Act of July 25, 1947 (Public Law 239, Eightieth Congress), is hereby amended by deleting therefrom the following: "Act of March 7, 1942 (56 Stat. 143–148, ch. 166), as amended". The Act of March 7, 1942 (56 Stat. 143–148), as amended, is hereby made applicable to persons inducted into the armed forces pursuant to this title.

(f) Civilian compensation.—Notwithstanding any other provision of law, any person who is inducted into the armed forces under this Act and who before being inducted, was receiving compensation from any person may, while serving under that induction, receive compensation from that person.

(g) (Repealed)

(h) (Repealed)

(i) (Terminated)

(j) National Advisory Committee.—The President shall establish a National Advisory Committee which shall advise the Selective Service System and shall coordinate the work of such State and local volunteer advisory committees as may be established to cooperate with the National Advisory Committee, with respect to the selection of needed medical and dental and allied specialist categories of persons. The members of the National Advisory Committee shall be selected from among individuals who are outstanding in medicine, dentistry, and the sciences allied thereto, but except for the professions of medicine and dentistry, it shall not be mandatory that all such fields of endeavor be represented on the committee.

In the performance of their functions, the National Advisory Committee and the State and local volunteer advisory committees shall

give appropriate consideration to the respective needs of the Armed Forces and of the civilian population for the services of medical, dental, and allied specialist personnel; and, in determining the medical, dental, and allied specialist personnel available to serve the needs of any community, such committees shall give appropriate consideration to the availability in such community of medical, dental, and allied specialist personnel who have attained the thirty-fifth anniversary of their birth.

It shall be the duty of the National Advisory Committee in conjunction with the State and local volunteer advisory committees to make determinations with respect to persons in residency training programs who shall be recommended for deferment for the purpose of completing such residency programs, and in making such determinations shall give appropriate consideration to the respective needs of the Armed Forces and the civilian population. The National Advisory Committee in conjunction with the State and local volunteer advisory committees are further authorized to make appropriate recommendations with respect to members of the facilities of medical, dental, veterinary, and allied specialists schools, schools of public health, and with respect to physicians, dentists and veterinarians engaged in essential laboratory and clinical research, having due regard to the respective needs of the Armed Forces and the civilian population.

(k) Decrease in period of service; Operation of National Security Training Commission and Corps.—(1) Upon a finding by him that such action is justified by the strength of the Armed Forces in the light of international conditions, the President, upon recommendation of the Secretary of Defense, is authorized, by Executive order, which shall be uniform in its application to all persons inducted under this title but which may vary as to age groups, to provide for (A) decreasing periods of service under this title but in no case to a lesser period of time than can be economically utilized, or (B) eliminating periods of service required under this title.

(2) Whenever the Congress shall by concurrent resolution declare—

(A) that the period of active service required of any age group or groups of persons inducted under this title should be decreased to any period less than twenty-four months which may be designated in such resolution; or

(B) that the period of active service required of any age group or groups of persons inducted under this title should be eliminated,

the period of active service in the Armed Forces of the age group or groups designated in any such resolution shall be so decreased or eliminated, as the case may be. Whenever the period of active service required under this title of persons who have not attained the nineteenth anniversary of the day of their birth has been reduced or eliminated by the President or as a result of the adoption of a concurrent resolution of the Congress in accordance with the foregoing provisions of this section, all individuals then or thereafter liable for registration under this title who on that date have not attained the nineteenth anniversary of the day of their birth and have not been inducted into the Armed Forces shall be liable, effective on such date, for induction into the National Security Training Corps

as hereinafter established for initial military training for a period of six months.

(3) There is hereby established a National Security Training Commission (herein called the Commission), which shall be composed of five members, three of whom shall be civilians and two of whom shall be active or retired members of the Regular components of any of the Armed Forces. Of the three civilian members, not more than two shall be of the same political party. Members of the Commission shall be appointed by the President by and with the advice and consent of the Senate, from among persons of outstanding national reputation. The President shall select the Chairman of the Commission from among its civilian members. No person who has been on active duty as a commissioned officer in a regular component of the Armed Forces shall be eligible for appointment as a civilian member of the Commission. The Commission shall have a seal which shall be judicially noted. At such time as the Commission shall be appointed, in accordance with this paragraph, there shall be established a National Security Training Corps.

(4) The term of office of each member of the Commission shall be five years, except that (A) the terms of office of the members first taking office shall expire, as designated by the President at the time of appointment, two at the end of two years, one at the end of three years, one at the end of four years, and one at the end of five years, after the date of enactment of this paragraph; and (B) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term. Members of the Commission, other than active members of the Regular components of the Armed Forces, while actually serving with the Commission, shall receive a per diem of not to exceed \$50 for each day engaged in the business of the Commission and shall be allowed transportation and a per diem in lieu of subsistence of \$9 while away from their homes or places of business pursuant to such business.

(5) The Commission shall, subject to the direction of the President, exercise general supervision over the training of the National Security Training Corps, which training shall be basic military training. The Commission shall establish such policies and standards with respect to the conduct of the training of members of the National Security Training Corps as are necessary to carry out the purposes of this Act. The Commission shall make adequate provisions for the moral and spiritual welfare of members of the National Security Training Corps. The Secretary of Defense shall designate the military departments to carry out such training. Each military department so designated shall carry out such military training in accordance with the policies and standards of the Commission. The military department or departments so designated to carry out such military training shall, subject to the approval of the Secretary of Defense, and subject to the policies and standards established by the Commission, determine the type or types of basic military training to be given to members of the National Security Training Corps.

(6) The Commission is authorized, subject to the civil-service laws and the Classification Act of 1949, to employ and fix the compensation

of such officers and employees as it deems necessary to enable it to perform its functions.

(7) Not later than four months following confirmation of the members of the Commission, the Commission shall submit to the Congress legislative recommendations which shall include, but not be limited to—

(A) a broad outline for a program deemed by the Commission and approved by the Secretary of Defense to be appropriate to assure that the training carried out under the provisions of this Act shall be of a military nature, but nothing contained in this paragraph shall be construed to grant to the Commission the authority to prescribe the basic type or types of military training to be given members of the National Security Training Corps;

(B) measures for the personal safety, health, welfare and morals of members of the National Security Training Corps;

(C) a code of conduct, together with penalties for violation thereof;

(D) measures deemed necessary to implement the policies and standards established under the provisions of paragraph (5) of this subsection; and

(E) disability and death benefits and other benefits, and the obligations, duties, liabilities, and responsibilities, to be granted to or imposed upon members of the National Security Training Corps.

All legislative recommendations submitted under this paragraph shall be referred to the Committees on Armed Services of the two Houses, and each of such committees shall, not later than the expiration of the first period of 45 calendar days of continuous sessions of the Congress, following the date on which the recommendations provided for in this paragraph are transmitted to the Congress, report thereon to its House: *Provided*, That any bill or resolution reported with respect to such recommendations shall be privileged and may be called up by any member of either House but shall be subject to amendment as if it were not so privileged.

(8) No person shall be inducted into the National Security Training Corps until after—

(A) a code of conduct, together with penalties for violation thereof, and measures providing for disability and death benefits have been enacted into law; and

(B) such other legislative recommendations as are provided for in paragraph (7) shall have been considered and such recommendations or any portion thereof shall have been enacted with or without amendments into law; and

(C) the period of service required under this title of persons who have not attained the nineteenth anniversary of the day of their birth has been reduced or eliminated by the President or as a result of the adoption of a concurrent resolution of the Congress in accordance with paragraph (2) of this subsection.

(9) Six months following the commencement of induction of persons into the National Security Training Corps, and semiannually thereafter, the Commission shall submit to the Congress a comprehensive report describing in detail the operation of the National Security Training Corps, including the number of persons inducted therein, a

list of camps and stations at which training is being conducted, a report on the number of deaths and injuries occurring during such training and the causes thereof, an estimate of the performance of the persons inducted therein, including an analysis of the disciplinary problems encountered during the preceding six months, the number of civilian employees of the Commission and the administrative costs of the Commission. Simultaneously, there shall be submitted to the Congress by the Secretary of Defense a report setting forth an estimate of the value of the training conducted during the preceding six months, the cost of the training program chargeable to the appropriations made to the Department of Defense, and the number of personnel of the Armed Forces directly engaged in the conduct of such training.

(10) Each person inducted into the National Security Training Corps shall be compensated at the monthly rate of \$30: *Provided, however,* That each such person, having a dependent or dependents as such terms are defined in the Career Compensation Act of 1949, shall be entitled to receive a dependency allowance equal to the sum of the basic allowance for quarters provided for persons in pay grade E-1 by section 302 (f) of the Career Compensation Act of 1949 as amended by section 3 of the Dependents' Assistance Act of 1950 as may be extended or amended plus \$40 so long as such person has in effect an allotment equal to the amount of such dependency allowance for the support of the dependent or dependents on whose account the allowance is claimed.

(11) No person inducted into the National Security Training Corps shall be assigned for training at an installation located on land outside the continental United States, except that residents of Territories and possessions of the United States may be trained in the Territory or possession from which they were inducted.

(I) Active duty and commission of medical, dental, and allied specialists.—(1) The President may order to active duty (other than for training), as defined in section 101 (22) of title 10, United States Code, for a period of not more than twenty-four consecutive months, with or without his consent, any member of a reserve component of the Armed Forces of the United States who is in a medical, dental, or allied specialist category, who has not attained the thirty-fifth anniversary of the date of his birth, and has not performed at least one year of active duty (other than for training). This subsection does not affect or limit the authority to order members of the reserve components to active duty contained in section 672 of title 10, United States Code.

(2) For the purposes of computation of the periods of active duty (other than for training) referred to in subsection (1), credit shall be given for all periods of one day or more performed under competent orders, except that no credit shall be allowed for periods spent in student programs prior to receipt of the appropriate professional degree or in intern training.

(3) Any person who is called or ordered to active duty (other than for training) from a reserve component of the Armed Forces of the United States after September 5, 1950, and thereafter serves on active duty (other than for training) as a medical, dental, or allied specialist for a period of twelve months or more shall, upon release from active

duty or within six months thereafter, be afforded an opportunity to resign his commission from the reserve component of which he is a member unless he is otherwise obligated to serve on active military training and service in the Armed Forces or in training in a reserve component by law or contract.

(4) Any physician or dentist who meets the qualifications for a Reserve commission in the respective military department shall, so long as there is a need for the services of such a physician or dentist, be afforded an opportunity to volunteer for a period of active duty (other than for training) of not less than twenty-four months. Any physician or dentist who so volunteers his service, and meets the qualifications for a Reserve commission shall be ordered to active duty (other than for training) for not less than twenty-four months, notwithstanding the grade or rank to which such physician or dentist is entitled.

SELECTION

Sec. 5(a). Selection.—The selection of persons for training and service under section 4 shall be made in an impartial manner, under such rules and regulations as the President may prescribe, from the persons who are liable for such training and service and who at the time of selection are registered and classified, but not deferred or exempted: *Provided*, That in the selection of persons for training and service under this title, and in the interpretation and execution of the provisions of this title, there shall be no discrimination against any person on account of race or color: *Provided further*, That in the classification of registrants within the jurisdiction of any local board, the registrants of any particular registration may be classified, in the manner prescribed by and in accordance with rules and regulations prescribed by the President, before, together with, or after the registrants of any prior registration or registrations; and in the selection for induction of persons within the jurisdiction of any local board and within any particular classification, persons who were registered at any particular registration may be selected, in the manner prescribed by and in accordance with rules and regulations prescribed by the President, before, together with, or after persons who were registered at any prior registration or registrations: *Provided further*, That nothing herein shall be construed to prohibit the President, under such rules and regulations as he may prescribe, from providing for the selection or induction of persons by age group or groups or from providing for the selection or induction of persons qualified in needed medical, dental, or allied specialist categories pursuant to requisitions submitted by the Secretary of Defense: *And provided further*, That, notwithstanding any other provision of law, except section 314 of the Immigration and Nationality Act (8 U.S.C. 1425), no person who is qualified in a needed medical, dental, or allied specialist category, and who is liable for induction under section 4 of this title, shall be held to be ineligible for appointment as a commissioned officer of an Armed Force of the United States on the sole ground that he is not a citizen of the United States or has not made a declaration of intent to become a citizen thereof, and any such person who is not a citizen of the United States and who is appointed as a commissioned officer may, in lieu of the oath prescribed by section 1757 of the Revised Statutes,

as amended (5 U.S.C. 16), take such oath of service and obedience as the Secretary of Defense may prescribe: *And provided further*, That—

(1) no local board shall order for induction for training and service in the Armed Forces of the United States any person who has not attained the age of nineteen unless there is not within the jurisdiction of such local board a sufficient number of persons who are deemed by such local board to be available for induction and who have attained the age of nineteen to enable such local board to meet a call for men which it has been ordered to furnish for induction; and

(2) no local board shall order for induction for training and service in the Armed Forces of the United States any person who has not attained the age of nineteen, if there is any person within the jurisdiction of such local board who (i) is as much as ninety days older, (ii) has not attained the age of nineteen, and (iii) is deemed by the local board to be available for induction.

(b) Quotas.—Quotas of men to be inducted for training and service under this title shall be determined for each State, Territory, possession, and the District of Columbia, and for subdivisions thereof, on the basis of the actual number of men in the several States, Territories, possessions, and the District of Columbia, and the subdivisions thereof, who are liable for such training and service but who are not deferred after classification, except that credits shall be given in fixing such quotas for residents of such subdivisions who are in the armed forces of the United States on the date fixed for determining such quotas. After such quotas are fixed, credits shall be given in filling such quotas for residents of such subdivisions who subsequently become members of such forces. Until the actual numbers necessary for determining the quotas are known, the quotas may be based on estimates, and subsequent adjustments therein shall be made when such actual numbers are known. All computations under this subsection shall be made in accordance with such rules and regulations as the President may prescribe.

(c) Grade or rank in Armed Forces of medical, dental, and allied specialists.—Notwithstanding any other provision of law, any qualified person who—

(1) is liable for induction; or

(2) as a member of a Reserve component is ordered to active duty,

as a physician, or dentist, or in an allied specialist category in the Armed Forces of the United States, shall, under regulations prescribed by the President, be appointed, reappointed, or promoted to such grade or rank as may be commensurate with his professional education, experience, or ability: *Provided*, That any person in a needed medical, dental, or allied specialist category who fails to qualify for or who does not accept, a commission, or whose commission has been terminated, may be used in his professional capacity in an enlisted grade.

DEFERMENT AND EXEMPTIONS

Sec. 6. (a) Exemptions from registration and service.—Commissioned officers, warrant officers, pay clerks, enlisted men, and aviation cadets of the Regular Army, the Navy, the Air Force, the Marine

Corps, the Coast Guard, the Coast and Geodetic Survey, and the Public Health Service; cadets, United States Military Academy; midshipmen, United States Navy; cadets, United States Coast Guard Academy; midshipmen, Merchant Marine Reserve, United States Naval Reserves; students enrolled in an officer procurement program at military colleges the curriculum of which is approved by the Secretary of Defense; members of the reserve components of the Armed Forces, the Coast Guard, and the Public Health Service, while on active duty; and foreign diplomatic representatives, technical attachés of foreign embassies and legations, consuls general, consuls, vice consuls and other consular agents of foreign countries who are not citizens of the United States, and members of their families, and persons in other categories to be specified by the President who are not citizens of the United States, shall not be required to be registered under section 3 and shall be relieved from liability for training and service under section 4, except that aliens admitted for permanent residence in the United States shall not be so exempted. Any person who subsequent to June 24, 1948, serves on active duty for a period of not less than eighteen months in the armed forces of a nation with which the United States is associated in mutual defense activities as defined by the President, may be exempted from training and service, but not from registration, in accordance with regulations prescribed by the President, except that no such exemption shall be granted to any person who is a national of a country which does not grant reciprocal privileges to citizens of the United States: *Provided*, That any active duty performed prior to June 24, 1948, by a person in the armed forces of a country allied with the United States during World War II and with which the United States is associated in such mutual defense activities, shall be credited in the computation of such eighteen-month period.

(b) **Veterans' exemptions.**—(1) No person who served honorably on active duty between September 16, 1940, and the date of enactment of this title for a period of twelve months or more, or between December 7, 1941, and September 2, 1945, for a period in excess of ninety days, in the Army, the Air Force, the Navy, the Marine Corps, the Coast Guard, the Public Health Service, or the armed forces of any country allied with the United States in World War II prior to September 2, 1945, shall be liable for induction for training and service under this title, except after a declaration of war or national emergency made by the Congress subsequent to the date of enactment of this title.

(2) No person who served honorably on active duty between September 16, 1940, and the date of enactment of this title for a period of ninety days or more but less than twelve months in the Army, the Air Force, the Navy, the Marine Corps, the Coast Guard, the Public Health Service, or the armed forces of any country allied with the United States in World War II prior to September 2, 1945, shall be liable for induction for training and service under this title, except after a declaration of war or national emergency made by the Congress subsequent to the date of enactment of this title, if—

(A) the local board determines that he is regularly enlisted or commissioned in any organized unit of a reserve component of the armed force in which he served, provided such unit is reason-

ably accessible to such person without unduly interrupting his normal pursuits and activities (including attendance at a college or university in which he is regularly enrolled), or in a reserve component (other than in an organized unit) of such armed force in any case in which enlistment or commission in an organized unit of a reserve component of such armed force is not available to him; or

(B) the local board determines that enlistment or commission in a reserve component of such armed force is not available to him or that he has voluntarily enlisted or accepted appointment in an organized unit of a reserve component of an armed force other than the armed force in which he served.

Nothing in this paragraph shall be deemed to be applicable to any person to whom paragraph (1) of this subsection is applicable.

(3) Except as provided in section 4 (i) of this Act, and notwithstanding any other provision of this Act, no person who (A) has served honorably on active duty after September 16, 1940, for a period of not less than one year in the Army, the Air Force, the Navy, the Marine Corps, or the Coast Guard, or (B) subsequent to September 16, 1940, was discharged for the convenience of the Government after having served honorably on active duty for a period of not less than six months in the Army, the Air Force, the Navy, the Marine Corps, or the Coast Guard, or (C) has served for a period of not less than twenty-four months (i) as a commissioned officer in the Public Health Service or (ii) as a commissioned officer in the Coast and Geodetic Survey, shall be liable for induction for training and service under this Act, except after a declaration of war or national emergency made by the Congress subsequent to the date of enactment of this title.

(4) No person who is honorably discharged upon the completion of an enlistment pursuant to section 4 (c) or section 4 (g) shall be liable for induction for training and service under this title, except after a declaration of war or national emergency made by the Congress subsequent to the date of enactment of this title.

(5) For the purposes of computation of the periods of active duty referred to in paragraphs (1), (2), or (3) of this subsection, no credit shall be allowed for—

(A) periods of active duty training performed as a member of a reserve component pursuant to an order or call to active duty solely for training purposes;

(B) periods of active duty in which the service consisted solely of training under the Army specialized training program, the Army Air Force college training program, or any similar program under the jurisdiction of the Navy, Marine Corps, or Coast Guard;

(C) periods of active duty as a cadet at the United States Military Academy or United States Coast Guard Academy, or as a midshipman at the United States Naval Academy, or in a preparatory school after nomination as a principal, alternate, or candidate for admission to any of such academies;

(D) periods of active duty in any of the armed forces while being processed for entry into or separation from any educational program or institution referred to in paragraphs (B) or (C); or

(E) periods of active duty performed by medical, dental, or allied specialists in student programs prior to receipt of the appropriate professional degree or in intern training.

(c) Reserve components exemptions.—(1) Persons who, on February 1, 1951, were members of organized units of the federally recognized National Guard, the federally recognized Air National Guard, the Officers' Reserve Corps, the Regular Army Reserve, the Air Force Reserve, the Enlisted Reserve Corps, the Naval Reserve, the Marine Corps Reserve, the Coast Guard Reserve, or the Public Health Service Reserve, shall, so long as they continue to be such members and satisfactorily participate in scheduled drills and training periods as prescribed by the Secretary of Defense, be exempt from training and service by induction under the provisions of this title, but shall not be exempt from registration unless on active duty.

(2) (A) Any person, other than a person referred to in subsection (d) hereof, who, prior to attaining the age of twenty-six years and prior to the issuance of orders for him to report for induction, enlists or accepts appointment in the Ready Reserve of any reserve component of the Armed Forces, the Army National Guard, or the Air National Guard, shall be deferred from training and service under this Act so long as he serves satisfactorily as a member of an organized unit of such Ready Reserve or National Guard in accordance with section 270 of title 10 or section 502 of title 32, United States Code, as the case may be, or satisfactorily performs such other Ready Reserve service as may be prescribed by the Secretary of Defense. Notwithstanding the provisions of subsection (h) hereof, no person deferred under this clause who has completed six years of such satisfactory service as a member of the Ready Reserve or National Guard, and who during such service has performed active duty for training with an armed force for not less than four consecutive months, shall be liable for induction for training and service under this Act, except after a declaration of war or national emergency made by the Congress after August 9, 1955.

(B) A person who, under any provision of law, is exempt or deferred from training and service under this Act by reason of membership in a reserve component, the Army National Guard, or the Air National Guard, as the case may be, shall, if he becomes a member of another reserve component, the Army National Guard, or the Air National Guard, as the case may be, continue to be exempt or deferred to the same extent as if he had not become a member of another reserve component, the Army National Guard, or the Air National Guard, as the case may be, so long as he continues to serve satisfactorily.

(C) Except as provided in subsection (b) and the provisions of this subsection, no person who becomes a member of a reserve component after February 1, 1951, shall thereby be exempt from registration or training and service by induction under the provisions of this Act.

(D) Notwithstanding any other provision of this Act, the President, under such rules and regulations as he may prescribe, may provide that any person enlisted or appointed after October 4, 1961, in the Ready Reserve of any reserve component of the Armed Forces (other than under section 511(b) of title 10, United States Code), the Army National Guard, or the Air National Guard, prior to attaining age of twenty-six years, or any person enlisted or appointed in the Army Na-

tional Guard or the Air National Guard or enlisted in the Ready Reserve of any reserve component prior to attaining the age of eighteen years and six months and deferred under the prior provisions of this paragraph as amended by the Act of October 4, 1961, Public Law 87-378 (75 Stat. 807), or under section 262 of the Armed Forces Reserve Act of 1952, as amended, who fails to serve satisfactorily during his obligated period of service as a member of such Ready Reserve or National Guard or the Ready Reserve of another reserve component or the National Guard of which he becomes a member, may be selected for training and service and inducted into the armed force of which such reserve component is a part, prior to the selection and induction of other persons liable therefor.

(d) Officers' training; Deferment of students authorized.—

(1) Within such numbers as may be prescribed by the Secretary of Defense, any person who (A) has been or may hereafter be selected for enrollment or continuance in the senior division, Reserve Officers' Training Corps, or the Air Reserve Officers' Training Corps, or the Naval Reserve Officers' Training Corps, or the naval and Marine Corps officer candidate training program established by the Act of August 13, 1946 (60 Stat. 1057), as amended, or the Reserve officers' candidate program of the Navy, or the platoon leaders' class of the Marine Corps, or the officer procurement programs of the Coast Guard and the Coast Guard Reserve, or appointed an ensign, United States Naval Reserve, while undergoing professional training; (B) agrees, in writing, to accept a commission, if tendered, and to serve, subject to order of the Secretary of the military department having jurisdiction over him (or the Secretary of the Treasury with respect to the United States Coast Guard), not less than two years on active duty after receipt of a commission; and (C) agrees to remain a member of a regular or reserve component until the eighth anniversary of the receipt of a commission in accordance with his obligation under the first sentence of section 4 (d) (3) of this Act, or until the sixth anniversary of the receipt of a commission in accordance with his obligation under the second sentence of section 4 (d) (3) of this Act, shall be deferred from induction under this title until after completion or termination of the course of instruction and so long as he continues in a regular or reserve status upon being commissioned, but shall not be exempt from registration. Such persons, except those persons who have previously completed an initial period of military training or an equivalent period of active military training and service, shall be required while enrolled in such programs to complete a period of training equal (as determined under regulations approved by the Secretary of Defense or the Secretary of the Treasury with respect to the United States Coast Guard) in duration and type of training to an initial period of military training. There shall be added to the obligated active commissioned service of any person who has agreed to perform such obligatory service in return for financial assistance while attending a civilian college under any such training program a period of not to exceed one year. Upon the successful completion by any person of the required course of instruction under any program listed in clause (A) of the first sentence of this paragraph, such person shall be tendered a commission in the appropriate reserve component of the Armed Forces if he is otherwise qualified for such appointment.

If, at the time of such appointment, the armed force in which such person is commissioned does not require his service on active duty in fulfillment of the obligation undertaken by him in compliance with clause (B) of the first sentence of this paragraph, such person shall be ordered to active duty for training with such armed force in the grade in which he was commissioned for a period of six months. Upon completion of such period of active duty for training, such person shall be returned to inactive duty and shall be assigned to an appropriate reserve unit until the eighth anniversary of the receipt of a commission pursuant to the provisions of this section. So long as such person performs satisfactory service in such unit, as determined under regulations prescribed by the Secretary of Defense, he shall be deferred from training and service under the provisions of this Act. If such person fails to perform satisfactory service in such unit, and such failure is not excused under regulations prescribed by the Secretary of Defense, his commission may be revoked by the Secretary of the military department concerned.

(2) In addition to the training programs enumerated in paragraph (1) of this subsection, and under such regulations as the Secretary of Defense (or the Secretary of the Treasury with respect to the United States Coast Guard) may approve, the Secretaries of the military departments and the Secretary of the Treasury are authorized to establish officer candidate programs leading to the commissioning of persons on active duty. Any person heretofore or hereafter enlisted in the Army Reserve, the Naval Reserve, the Marine Corps Reserve, the Air Force Reserve, or the Coast Guard Reserve who thereafter has been or may be commissioned therein upon graduation from an Officers' Candidate School of such Armed Force shall, if not ordered to active duty as a commissioned officer, be deferred from training and service under the provisions of this Act so long as he performs satisfactory service as a commissioned officer in an appropriate unit of the Ready Reserve, as determined under regulations prescribed by the Secretary of the department concerned. If such person fails to perform satisfactory service in such unit, and such failure is not excused under such regulations, his commission may be revoked by such Secretary.

(3) Nothing in this subsection shall be deemed to preclude the President from providing, by regulations prescribed under subsection (h) of this section, for the deferment from training and service of any category or categories of students for such periods of time as he may deem appropriate.

(4) It is the sense of the Congress that the President shall provide for the annual deferment from training and service under this title of the numbers of optometry students and premedical, preosteopathic, preveterinary, preoptometry, and predental students at least equal to the numbers of male optometry, premedical, preosteopathic, preveterinary, preoptometry, and predental students at colleges and universities in the United States at the present levels as determined by the Director herein.

(5) Notwithstanding paragraph (1), upon the successful completion by any person of the required course of instruction under any Reserve Officers' Training Corps program listed in clause (A)

of the first sentence of paragraph (1) and subject to the approval of the Secretary of the military department having jurisdiction over him, such person may, without being relieved of his obligation under that sentence, be tendered, and accept, a commission in the Coast and Geodetic Survey instead of a commission in the appropriate reserve component of the Armed Forces. If he does not serve on active duty as a commissioned officer of the Coast and Geodetic Survey for at least six years, he shall, upon discharge therefrom, be tendered a commission in the appropriate reserve component of the Armed Forces, if he is otherwise qualified for such appointment, and, in fulfillment of his obligation under the first sentence of paragraph (1), remain a member of a reserve component until the sixth anniversary of the receipt of his commission in the Coast and Geodetic Survey. While a member of a reserve component he may, in addition to as otherwise provided by law, be ordered to active duty for such period that, when added to the period he served on active duty as a commissioned officer of the Coast and Geodetic Survey, equals two years.

(e) Aviation cadet applicants.—Fully qualified and accepted aviation cadet applicants of the Army, Navy, or Air Force who have signed an agreement of service shall, in such numbers as may be designated by the Secretary of Defense, be deferred, during the period covered by the agreement but not to exceed four months, from induction for training and service under this title but shall not be exempt from registration.

(f) Officials.—The Vice President of the United States; the governors of the several States, Territories, and possessions, and all other officials chosen by the voters of the entire State, Territory, or possession; members of the legislative bodies of the United States and of the several States, Territories, and possessions; judges of the courts of record of the United States and of the several States, Territories, possessions, and the District of Columbia shall, while holding such offices, be deferred from training and service under this title in the armed forces of the United States.

(g) Ministers of religion.—Regular or duly ordained ministers of religion, as defined in this title, and students preparing for the ministry under the direction of recognized churches or religious organizations, who are satisfactorily pursuing full-time courses of instruction in recognized theological or divinity schools, or who are satisfactorily pursuing full-time courses of instruction leading to their entrance into recognized theological or divinity schools in which they have been pre-enrolled, shall be exempt from training and service (but not from registration) under this title.

(h) Occupations; Dependency; Fitness; Extension of age of liability; N.S.T.C.; Authority of Selective Service Boards.—The President is authorized, under such rules and regulations as he may prescribe, to provide for the deferment from training and service in the Armed Forces or from training in the National Security Training Corps of any or all categories of persons whose employment in industry, agriculture, or other occupations or employment, or whose continued service in an Office (other than an office described in subsection (f)) under the United States or any State, Territory, or possession, or the District of Columbia, or whose activity in study, research, or medi-

cal, dental, veterinary, optometric, osteopathic, scientific, pharmaceutical, chiropractic, chiropodial, or other endeavors is found to be necessary to the maintenance of the national health, safety, or interest: *Provided*, That no person within any such category shall be deferred except upon the basis of his individual status: *Provided further*, That the existence of a shortage or a surplus of any agricultural commodity shall not be considered in determining the deferment of any individual on the grounds that his employment in agriculture is necessary to the maintenance of the national health, safety, or interest: *And provided further*, That persons who are or may be deferred under the provisions of this section shall remain liable for training and service in the Armed Forces or for training in the National Security Training Corps under the provisions of section 4 (a) of this Act until the thirty-fifth anniversary of the date of their birth. This proviso shall not be construed to prevent the continued deferment of such persons if otherwise deferable under any other provisions of this Act. The President is also authorized, under such rules and regulations as he may prescribe, to provide for the deferment from training and service in the Armed Forces or from training in the National Security Training Corps (1) of any or all categories of persons in a status with respect to persons (other than wives alone, except in cases of extreme hardship) dependent upon them for support which renders their deferment advisable, and (2) of any or all categories of those persons found to be physically, mentally, or morally deficient or defective. For the purpose of determining whether or not the deferment of any person is advisable, because of his status with respect to persons dependent upon him for support, any payments of allowances which are payable by the United States to the dependent of persons serving in the Armed Forces of the United States or undergoing training in the National Security Training Corps shall be taken into consideration, but the fact that such payments of allowances are payable shall not be deemed conclusively to remove the grounds for deferment when the dependency is based upon financial considerations and shall not be deemed to remove the ground for deferment when the dependency is based upon other than financial considerations and cannot be eliminated by financial assistance to the dependents. The President is also authorized, under such rules and regulations as he may prescribe, to provide for the deferment from training and service in the Armed Forces or training in the National Security Training Corps of any or all categories of persons who have children, or wives and children, with whom they maintain a bona fide family relationship in their homes. No deferment from such training and service in the Armed Forces or training in the National Security Training Corps shall be made in the case of any individual except upon the basis of the status of such individual. There shall be posted in a conspicuous place at the office of each local board a list setting forth the names and classifications of those persons who have been classified by such local board. Notwithstanding any provisions of this Act, no local board, appeal board, or other agency of appeal of the Selective Service System shall be required to postpone or defer any person by reason of his activity in study, research, or medical, dental, veterinary, optometric, osteopathic, scientific, pharmaceutical, chiropractic, chiropodial, or other endeavors found to be necessary to the maintenance of the national health, safety, or interest

solely on the basis of any test, examination, selection system, class standing, or any other means conducted, sponsored, administered, or prepared by any agency or department of the Federal Government or any private institution, corporation, association, partnership, or individual employed by an agency or department of the Federal Government.

(i) Deferral of students.—(1) Any person who is satisfactorily pursuing a full-time course of instruction at a high school or similar institution of learning shall, upon the facts being presented to the local board, be deferred (A) until the time of his graduation therefrom, or (B) until he attains the twentieth anniversary of his birth, or (C) until he ceases satisfactorily to pursue such course of instruction, whichever is the earliest.

(2) Any person who while satisfactorily pursuing a full-time course of instruction at a college, university, or similar institution is ordered to report for induction under this title, shall, upon the facts being presented to the local board, be deferred (A) until the end of such academic year, or (B) until he ceases satisfactorily to pursue such course of instruction, whichever is the earlier: *Provided*, That any person who has heretofore had his induction postponed under the provisions of section 6 (i) (2) of the Selective Service Act of 1948; or any person who has heretofore been deferred as a student under section 6 (h) of such Act; or any person who hereafter is deferred under the provision of this subsection, shall not be further deferred by reason of pursuit of a course of instruction at a college, university, or similar institution of learning except as may be provided by regulations prescribed by the President pursuant to the provisions of subsection (h) of this section. Nothing in this paragraph shall be deemed to preclude the President from providing, by regulations prescribed under subsection (h) of this section, for the deferment from training and service in the Armed Forces or training in the National Security Training Corps of any category or categories of students for such periods of time as he may deem appropriate.

(j) Conscientious objectors.—Nothing contained in this title shall be construed to require any person to be subject to combatant training and service in the armed forces of the United States who, by reason of religious training and belief, is conscientiously opposed to participation in war in any form. Religious training and belief in this connection means an individual's belief in a relation to a Supreme Being involving duties superior to those arising from any human relation, but does not include essentially political, sociological, or philosophical views or a merely personal moral code. Any person claiming exemption from combatant training and service because of such conscientious objections whose claim is sustained by the local board shall, if he is inducted into the armed forces under this title, be assigned to non-combatant service as defined by the President, or shall, if he is found to be conscientiously opposed to participation in such noncombatant service, in lieu of such induction, be ordered by his local board, subject to such regulations as the President may prescribe, to perform for a period equal to the period prescribed in section 4 (b) such civilian work contributing to the maintenance of the national health, safety, or interest as the local board may deem appropriate and any such person who knowingly fails or neglects to obey any such order from

his local board shall be deemed, for the purposes of section 12 of this title, to have knowingly failed or neglected to perform a duty required of him under this title. Any person claiming exemption from combatant training and service because of such conscientious objections shall, if such claim is not sustained by the local board, be entitled to an appeal to the appropriate appeal board. Upon the filing of such appeal, the appeal board shall refer any such claim to the Department of Justice for inquiry and hearing. The Department of Justice, after appropriate inquiry, shall hold a hearing with respect to the character and good faith of the objections of the person concerned, and such person shall be notified of the time and place of such hearing. The Department of Justice shall, after such hearing, if the objections are found to be sustained, recommend to the appeal board that (1) if the objector is inducted into the armed forces under this title, he shall be assigned to noncombatant service as defined by the President, or (2) if the objector is found to be conscientiously opposed to participation in such noncombatant service, he shall in lieu of such induction be ordered by his local board, subject to such regulations as the President may prescribe, to perform for a period equal to the period prescribed in section 4 (b) such civilian work contributing to the maintenance of the national health, safety, or interest as the local board may deem appropriate and any such person who knowingly fails or neglects to obey any such order from his local board shall be deemed, for the purposes of section 12 of this title, to have knowingly failed or neglected to perform a duty required of him under this title. If after such hearing the Department of Justice finds that his objections are not sustained, it shall recommend to the appeal board that such objections be not sustained. The appeal board shall, in making its decision, give consideration to, but shall not be bound to follow, the recommendation of the Department of Justice together with the record on appeal from the local board. Each person whose claim for exemption from combatant training and service because of conscientious objections is sustained shall be listed by the local board on a register of conscientious objectors.

(k) Duration of exemption.—No exception from registration, or exemption or deferment from training and service, under this title, shall continue after the cause therefor ceases to exist.

(l) Minority discharges.—Notwithstanding any other provisions of law, no person between the ages of eighteen and twenty-one shall be discharged from service in the armed forces of the United States while this title is in effect because such person entered such service without the consent of his parent or guardian.

(m) Moral standards.—No person shall be relieved from training and service under this title by reason of conviction of a criminal offense, except where the offense of which he has been convicted may be punished by death, or by imprisonment for a term exceeding one year.

(n) Appeals; Occupational deferments.—In the case of any registrant whose principal place of employment is located outside the appeal board area in which the local board having jurisdiction over the registrant is located, any occupational deferment made under subsection (h) of this section may, within five days after such deferment is made, be submitted for review and decision to the appeal

board having jurisdiction over the area in which is located the principal place of employment of the registrant. Such decision of the appeal board shall be final unless modified or changed by the President, and such decision shall be made public.

(o) **Sole surviving son.**—Except during the period of a war or a national emergency declared by the Congress after the date of the enactment of the 1964 amendment to this subsection, where the father or one or more sons or daughters of a family were killed in action or died in line of duty while serving in the armed forces of the United States, or subsequently died as a result of injuries received or disease incurred during such service, the sole surviving son of such family shall not be inducted for service under the terms of this title unless he volunteers for induction.

ACTIVE DUTY FOR CERTAIN MEMBERS OF RESERVE COMPONENTS

Sec. 7. (Repealed)

BOUNTIES; SUBSTITUTES; PURCHASES OF RELEASE

Sec. 8. Bounties; Substitutes; Purchases of release.—No bounty may be paid to induce any person to be inducted into an armed force. A clothing allowance authorized by law is not a bounty for the purposes of this section. No person liable for training and service under this Act may furnish a substitute for that training or service. No person may be enlisted, inducted, or appointed in an armed force as a substitute for another. No person liable for training and service under section 4 may escape that training and service or be discharged before the end of his period of training and service by paying money or any other valuable thing as consideration for his release from that training and service or liability therefor.

SEPARATION FROM SERVICE; REEMPLOYMENT RIGHTS

Sec. 9. Reemployment.—(a) Any person inducted into the armed forces under this title for training and service, who, in the judgment of those in authority over him, satisfactorily completes his period of training and service under section 4(b) shall be entitled to a certificate to that effect upon the completion of such period of training and service, which shall include a record of any special proficiency or merit attained. In addition, each such person who is inducted into the armed forces under this title for training and service shall be given a physical examination at the beginning of such training and service, and upon the completion of his period of training and service under this title, each such person shall be given another physical examination and, upon his written request, shall be given a statement of physical condition by the Secretary concerned: *Provided*, That such statement shall not contain any reference to mental or other conditions which in the judgment of the Secretary concerned would prove injurious to the physical or mental health of the person to whom it pertains: *Provided further*, That, if upon completion of training and service under this title, such person continues on active duty without an interruption of more than seventy-two hours as a member of the Armed Forces of the

United States, a physical examination upon completion of such training and service shall not be required unless it is requested by such person, or the medical authorities of the Armed Force concerned determine that the physical examination is warranted.

(b) In the case of any such person who, in order to perform such training and service, has left or leaves a position (other than a temporary position) in the employ of any employer and who (1) receives such certificate, and (2) makes application for reemployment within ninety days after he is relieved from such training and service or from hospitalization continuing after discharge for a period of not more than one year—

(A) if such position was in the employ of the United States Government, its Territories, or possessions, or political subdivisions thereof, or the District of Columbia, such person shall—

(i) if still qualified to perform the duties of such position, be restored to such position or to a position of like seniority, status, and pay; or

(ii) if not qualified to perform the duties of such position by reason of disability sustained during such service but qualified to perform the duties of any other position in the employ of the employer, be restored to such other position the duties of which he is qualified to perform as will provide him like seniority, status, and pay, or the nearest approximation thereof consistent with the circumstances in his case:

(B) if such position was in the employ of a private employer, such person shall—

(i) if still qualified to perform the duties of such position, be restored by such employer or his successor in interest to such position or to a position of like seniority, status, and pay; or

(ii) if not qualified to perform the duties of such position by reason of disability sustained during such service but qualified to perform the duties of any other position in the employ of such employer or his successor in interest, be restored by such employer or his successor in interest to such other position the duties of which he is qualified to perform as will provide him like seniority, status, and pay, or the nearest approximation thereof consistent with the circumstances in his case,

unless the employer's circumstances have so changed as to make it impossible or unreasonable to do so;

(C) if such position was in the employ of any State or political subdivision thereof, it is hereby declared to be the sense of the Congress that such person should—

(i) if still qualified to perform the duties of such position, be restored to such position or to a position of like seniority, status, and pay; or

(ii) if not qualified to perform the duties of such position by reason of disability sustained during such service but qualified to perform the duties of any other position in the employ of the employer, be restored to such other position the duties of which he is qualified to perform as will provide

him like seniority, status, and pay, or the nearest approximation thereof consistent with the circumstances in his case.

(c)(1) Any person who is restored to a position in accordance with the provisions of paragraph (A) or (B) of subsection (b) shall be considered as having been on furlough or leave of absence during his period of training and service in the armed forces, shall be so restored without loss of seniority, shall be entitled to participate in insurance or other benefits offered by the employer pursuant to established rules and practices relating to employees on furlough or leave of absence in effect with the employer at the time such person was inducted into such forces, and shall not be discharged from such position without cause within one year after such restoration.

(2) It is hereby declared to be the sense of the Congress that any person who is restored to a position in accordance with the provisions of paragraph (A) or (B) of subsection (b) should be so restored in such manner as to give him such status in his employment as he would have enjoyed if he had continued in such employment continuously from the time of his entering the armed forces until the time of his restoration to such employment.

(d) In case any private employer fails or refuses to comply with the provisions of subsection (b), subsection (c)(1) or subsection (g) the district court of the United States for the district in which such private employer maintains a place of business shall have power, upon the filing of a motion, petition, or other appropriate pleading by the person entitled to the benefits of such provisions, specifically to require such employer to comply with such provisions and to compensate such person for any loss of wages or benefits suffered by reason of such employer's unlawful action: *Provided*, That any such compensation shall be in addition to and shall not be deemed to diminish any of the benefits of such provisions. The court shall order speedy hearing in any such case and shall advance it on the calendar. Upon application to the United States Attorney or comparable official for the district in which such private employer maintains a place of business, by any person claiming to be entitled to the benefits of such provisions, such United States Attorney or official, if reasonably satisfied that the person so applying is entitled to such benefits, shall appear and act as attorney for such person in the amicable adjustment of the claim or in the filing of any motion, petition, or other appropriate pleading and the prosecution thereof specifically to require such employer to comply with such provisions: *Provided*, That no fees or court costs shall be taxed against any person who may apply for such benefits: *Provided further*, That only the employer shall be deemed a necessary party respondent to any such action.

(e)(1) Any person who is entitled to be restored to a position in accordance with the provisions of paragraph (a) of subsection (b) and who was employed, immediately before entering the armed forces, by any agency in the executive branch of the Government or by any Territory or possession, or political subdivision thereof, or by the District of Columbia, shall be so restored by such agency or the successor to its functions, or by such Territory, possession, political subdivision, or the District of Columbia. In any case in which, upon appeal of

any person who was employed immediately before entering the armed forces by any agency in the executive branch of the Government or by the District of Columbia, the United States Civil Service Commission finds that—

(A) such agency is no longer in existence and its functions have not been transferred to any other agency; or

(B) for any reason it is not feasible for such person to be restored to employment by such agency or by the District of Columbia,

the Commission shall determine whether or not there is a position in any other agency in the executive branch of the Government or in the government of the District of Columbia for which such person is qualified and which is either vacant or held by a person having a temporary appointment thereto. In any case in which the Commission determines that there is such a position, such person shall be restored to such position by the agency in which such position exists or by the government of the District of Columbia, as the case may be. The Commission is authorized and directed to issue regulations giving full force and effect to the provisions of this section insofar as they relate to persons entitled to be restored to positions in the executive branch of the Government or in the government of the District of Columbia, including persons entitled to be restored under the last sentence of paragraph (2) of this subsection. The agencies in the executive branch of the Government and the government of the District of Columbia shall comply with such rules and regulations and orders issued by the Commission pursuant to this subsection. The Commission is authorized and directed whenever it finds, upon appeal of the person concerned, that any agency in the executive branch of the Government or the government of the District of Columbia has failed or refuses to comply with the provisions of this section, to issue an order specifically requiring such agency or the government of the District of Columbia to comply with such provisions and to compensate such person for any loss of salary or wages suffered by reason of failure to comply with such provisions, less any amounts received by him through other employment, unemployment compensation, or readjustment allowances: *Provided*, That any such compensation ordered to be paid by the Commission shall be in addition to and shall not be deemed to diminish any of the benefits of such provisions, and shall be paid by the head of the agency concerned or by the government of the District of Columbia out of appropriations currently available for salary and expenses of such agency or government, and such appropriations shall be available for such purpose. As used in this paragraph, the term "agency in the executive branch of the Government" means any department, independent establishment, agency, or corporation in the executive branch of the United States Government.

(2) Any person who is entitled to be restored to a position in accordance with the provisions of paragraph (A) of subsection (b), and who was employed, immediately before entering the armed forces, in the legislative branch of the Government, shall be so restored by the officer who appointed him to the position which he held immediately before entering the armed forces. In any case in which it is not possible for any such person to be restored to a position in the legisla-

tive branch of the Government and he is otherwise eligible to acquire a status for transfer to a position in the classified (competitive) civil service in accordance with section 2(b) of the Act of November 26, 1940 (54 Stat. 1212), the United States Civil Service Commission shall, upon appeal of such person, determine whether or not there is a position in the executive branch of the Government for which he is qualified and which is either vacant or held by a person having a temporary appointment thereto. In any case in which the Commission determines that there is such a position such person shall be restored to such position by the agency in which such position exists.

(3) Any person who is entitled to be restored to a position in accordance with the provisions of paragraph (A) of subsection (b) and who was employed, immediately before entering the armed forces, in the judicial branch of the Government, shall be so restored by the officer who appointed him to the position which he held immediately before entering the armed forces.

(f) In any case in which two or more persons who are entitled to be restored to a position under the provisions of this section or of any other law relating to similar reemployment benefits left the same position in order to enter the armed forces, the person who left such position first shall have the prior right to be restored thereto, without prejudice to the reemployment rights of the other person or persons to be restored.

(g) (1) Any person who after entering the employment to which he claims restoration, enlists in the Armed Forces of the United States (other than a reserve component) shall be entitled upon release from service under honorable conditions to all the reemployment rights and other benefits provided for by this section in the case of persons inducted under the provisions of this title, if the total of his service performed between June 24, 1948, and August 1, 1961, did not exceed four years, and the total of any service, additional or otherwise, performed by him after August 1, 1961, does not exceed four years (plus in each case any period of additional service imposed pursuant to law).

(2) Any person who, after entering the employment to which he claims restoration, enters upon active duty (other than for the purpose of determining his physical fitness and other than for training), whether or not voluntarily, in the Armed Forces of the United States or the Public Health Service in response to an order or call to active duty shall, upon his relief from active duty under honorable conditions, be entitled to all of the reemployment rights and benefits provided by this section in the case of persons inducted under the provisions of this title, if the total of such active duty performed between June 24, 1948, and August 1, 1961, did not exceed four years, and the total of any such active duty, additional or otherwise, performed after August 1, 1961, does not exceed four years (plus in each case any additional period in which he was unable to obtain orders relieving him from active duty).

(3) Any member of a reserve component of the Armed Forces of the United States who is ordered to an initial period of active duty for training of not less than three consecutive months shall, upon application for reemployment within thirty-one days after (A) his release from that active duty for training after satisfactory service, or (B) his discharge from hospitalization incident to that active duty

for training, or one year after his scheduled release from that training, whichever is earlier, be entitled to all reemployment rights and benefits provided by this section for persons inducted under the provisions of this title, except that (A) any person restored to a position in accordance with the provisions of this paragraph shall not be discharged from such position without cause within six months after that restoration, and (B) no reemployment rights granted by this paragraph shall entitle any person to retention, preference, or displacement rights over any veteran with a superior claim under the Veterans' Preference Act of 1944, as amended (5 U.S.C. 851 and the following).

(4) Any employee not covered by paragraph (3) of this subsection who holds a position described in paragraph (A) or (B) of subsection (b) of this section shall upon request be granted a leave of absence by his employer for the period required to perform active duty for training or inactive duty training in the Armed Forces of the United States. Upon his release from a period of such active duty for training or inactive duty training, or upon his discharge from hospitalization incident to that training, such employee shall be permitted to return to his position with such seniority, status, pay, and vacation as he would have had if he had not been absent for such purposes. He shall report for work at the beginning of his next regularly scheduled working period after expiration of the last calendar day necessary to travel from the place of training to the place of employment following his release, or within a reasonable time thereafter if delayed return is due to factors beyond the employee's control. Failure to report for work at such next regularly scheduled working period shall make the employee subject to the conduct rules of the employer pertaining to explanations and discipline with respect to absence from scheduled work. If that employee is hospitalized incident to active duty for training or inactive duty training, he shall be required to report for work at the beginning of his next regularly scheduled work period after expiration of the time necessary to travel from the place of discharge from hospitalization to the place of employment, or within a reasonable time thereafter if delayed return is due to factors beyond the employee's control, or within one year after his release from active duty for training or inactive duty training, whichever is earlier. If an employee covered by this paragraph is not qualified to perform the duties of his position by reason of disability sustained during active duty for training or inactive duty training, but is qualified to perform the duties of any other position in the employ of the employer or his successor in interest, he shall be restored by that employer or his successor in interest to such other position the duties of which he is qualified to perform as will provide him like seniority, status, and pay, or the nearest approximation thereof consistent with the circumstances in his case.

(5) Any employee not covered by paragraph (3) of this subsection who holds a position described in paragraph (A) or (B) of subsection (b) of this section shall be considered as having been on leave of absence during the period required to report for the purpose of being inducted into, entering or determining by a pre-induction or other examination his physical fitness to enter the Armed Forces of the United States. Upon his rejection, upon completion of

his preinduction or other examination, or upon his discharge from hospitalization incident to that rejection or examination, such employee shall be permitted to return to his position in accordance with the provisions of paragraph (4) of this subsection.

(6) For the purposes of paragraphs (3) and (4), full-time training or other full-time duty performed by a member of the National Guard under section 316, 503, 504, or 505 of title 32, United States Code, is considered active duty for training; and for the purpose of paragraph (4), inactive duty training performed by that member under section 502 of title 32, or section 301 of title 37, United States Code, is considered inactive duty training.

(h) The Secretary of Labor, through the Bureau of Veterans' Re-employment Rights, shall render aid in the replacement in their former positions of persons who have satisfactorily completed any period of active duty in the armed forces of the United States or the Public Health Service. In rendering such aid, the Secretary shall use the then existing Federal and State agencies engaged in similar or related activities and shall utilize the assistance of volunteers.

(i) **Right to vote; Poll tax.**—Any person inducted into the armed forces for training and service under this title shall, during the period of such service, be permitted to vote in person or by absentee ballot in any general, special, or primary election occurring in the State of which he is a resident, whether he is within or outside such State at the time of such election, if under the laws of such State he is otherwise entitled so to vote in such election; but nothing in this subsection shall be construed to require granting to any such person a leave of absence or furlough for longer than one day in order to permit him to vote in person in any such election. No person inducted into, or enlisted in, the armed forces for training and service under this title shall, during the period of such service, as a condition of voting in any election for President, Vice President, electors for President or Vice President, or for Senator or Member of the House of Representatives, be required to pay any poll tax or other tax or make any other payment to any State or political subdivision thereof.

(j) **Reports of separation.**—The Secretaries of Army, Navy, Air Force, or Treasury shall furnish to the Selective Service System hereafter established a report of separation for each person separated from active duty.

THE SELECTIVE SERVICE SYSTEM: CONSTRUCTION: CIVILIAN EMPLOYEES

Sec. 10 (a) Selective Service System; O.S.S.R.—(1) There is hereby established in the executive branch of the Government an agency to be known as the Selective Service System, and a Director of Selective Service who shall be the head thereof.

(2) The Selective Service System shall include a national headquarters, at least one State headquarters in each State, Territory, and possession of the United States, and in the District of Columbia, and the local boards, appeal boards, and other agencies provided for in subsection (b) (3) of this section.

(3) The Director shall be appointed by the President, by and with the advice and consent of the Senate. The Director shall receive compensation at the rate of \$12,500 per year.

(4) The functions of the Office of Selective Service Records (established by the Act of March 31, 1947) and of the Director of the Office of Selective Service Records are hereby transferred to the Selective Service System and the Director of Selective Service, respectively. The personnel, property, records, and unexpended balances (available or to be made available) of appropriations, allocations, and other funds of the Office of Selective Service Records are hereby transferred to the Selective Service System. The Office of Selective Service Records shall cease to exist upon the taking of effect of the provisions of this title: *Provided*, That, effective upon the termination of this title and notwithstanding such termination in other respects, (A) the said Office of Selective Service Records is hereby reestablished on the same basis and with the same functions as obtained prior to the effective date of this title, (B) said reestablished Office shall be responsible for liquidating any other outstanding affairs of the Selective Service System, and (C) the personnel, property, records, and unexpended balances (available or to be made available) of appropriations, allocations, and other funds of the Selective Service System shall be transferred to such reestablished Office of Selective Service Records.

(b) Officials, employees, and boards; Printing; Paroles; Leases.—The President is authorized—

(1) to prescribe the necessary rules and regulations to carry out the provisions of this title;

(2) to appoint, upon recommendation of the respective governor or comparable executive official, a State director of the Selective Service System for each headquarters in each State, Territory, and possession of the United States and for the District of Columbia, who shall represent the governor and be in immediate charge of the State headquarters of the Selective Service System; to employ such number of civilians, and to order to active duty with their consent and to assign to the Selective Service System such officers of the selective-service section of the State headquarters and headquarters detachments and such other officers of the federally recognized National Guard of the United States or other armed forces personnel (including personnel of the reserve components thereof), as may be necessary for the administration of the national and of the several State headquarters of the Selective Service System;

(3) to create and establish within the Selective Service System civilian local boards, civilian appeal boards, and such other civilian agencies, including agencies of appeal, as may be necessary to carry out its functions with respect to the registration, examination, classification, selection, assignment, delivery for induction, and maintenance of records of persons registered under this title, together with such other duties as may be assigned under this title. He shall create and establish one or more local boards in each county or political subdivision corresponding thereto of each State, Territory, and possession of the United States, and in the District of Columbia. Each local board shall consist of three or more members to be appointed by the President from recommendations made by the respective governors or comparable executive officials: *Provided*, That an inter-county local board consisting of at least one member from each component county or corresponding subdivision may be established for

an area not exceeding five counties or political subdivisions corresponding thereto within a State or comparable jurisdiction when the President determines, after considering the public interest involved and the recommendation of the governor or comparable executive official or officials, that the establishment of such local board area will result in a more efficient and economical operation. Any such intercounty local board shall have within its area the same power and jurisdiction as a local board has in its area. No member of any local board shall be a member of the armed forces of the United States, but each member of any local board shall be a civilian who is a citizen of the United States residing in the county or political subdivision corresponding thereto in which such local board has jurisdiction, and each intercounty local board shall have at least one member from each county or political subdivision corresponding thereto included within the intercounty local board area. Such local boards, or separate panels thereof each consisting of three or more members, shall, under rules and regulations prescribed by the President, have the power within the respective jurisdictions of such local boards to hear and determine, subject to the right of appeal to the appeal boards herein authorized, all questions or claims with respect to inclusion for, or exemption or deferment from, training and service under this title, of all individuals within the jurisdiction of such local boards. The decisions of such local board shall be final, except where an appeal is authorized and is taken in accordance with such rules and regulations as the President may prescribe. There shall be not less than one appeal board located within the area of each Federal judicial district in the United States and within each territory and possession of the United States, and such additional separate panels thereof, as may be prescribed by the President. Appeal boards within the Selective Service System shall be composed of civilians who are citizens of the United States and who are not members of the armed forces. The decision of such appeal boards shall be final in cases before them on appeal unless modified or changed by the President. The President, upon appeal or upon his own motion, shall have power to determine all claims or questions with respect to inclusion for, or exemption or deferment from training and service under this title, and the determination of the President shall be final. No person who is a civilian officer, member, agent, or employee of the Office of Selective Service Records, or the Selective Service System, or of any local board or appeal board or other agency of such Office or System, shall be excepted from registration or deferred or exempted from training and service, as provided for in this title, by reason of his status as such civilian officer, member, agent, or employee;

(4) to appoint, and to fix, in accordance with the Classification Act of 1949, the compensation of such officers, agents, and employees as he may deem necessary to carry out the provisions of this title: *Provided*, That the compensation of employees of local boards and appeal boards may be fixed without regard to the Classification Act of 1949: *Provided further*, That any officer on the active or retired list of the armed forces, or any reserve component thereof with his consent, or any officer or employee of any department or agency of the United States who may be assigned or detailed to any office or position to

carry out the provisions of this title (except to offices or positions on local boards or appeal boards established or created pursuant to section 10(b)(3)) may serve in and perform the functions of such office or position without loss of or prejudice to his status as such officer in the armed forces or reserve component thereof, or as such officer or employee in any department or agency of the United States;

(5) to utilize the services of any or all departments and any and all officers or agents of the United States, and to accept the services of all officers and agents of the several States, Territories, and possessions, and subdivisions thereof, and the District of Columbia, and of private welfare organizations, in the execution of this title;

(6) to purchase such printing, binding, and blank-book work from public, commercial, or private printing establishments or binderies upon orders placed by the Public Printer or upon waivers issued in accordance with section 12 of the Printing Act approved January 12, 1895, as amended, and to obtain by purchase, loan, or gift such equipment and supplies for the Selective Service System, as he may deem necessary to carry out the provisions of this title, with or without advertising or formal contract;

(7) to prescribe eligibility, rules, and regulations governing the parole for service in the armed forces, or for any other special service established pursuant to this title, of any person convicted of a violation of any of the provisions of this title;

(8) subject to the availability of funds appropriated for such purpose, to procure such space as he may deem necessary to carry out the provisions of this title and Public Law 26, Eightieth Congress, approved March 31, 1947, by lease pursuant to existing statutes, except that the provisions of the Act of June 30, 1932 (47 Stat. 412), as amended by section 15 of the Act of March 3, 1933 (47 Stat. 1517; 40 U.S.C. 278a), shall not apply to any lease entered into under the authority of this title:

(9) subject to the availability of funds appropriated for such purposes, to determine the location of such additional temporary installations as he may deem essential; to utilize and enlarge such existing installations; to construct, install, and equip, and to complete the construction, installation, and equipment of such buildings, structures, utilities, and appurtenances (including the necessary grading and removal, repair or remodeling of existing structures and installations), as may be necessary to carry out the provisions of this title; and, in order to accomplish the purpose of this title, to acquire lands, and rights pertaining thereto, or other interests therein, for temporary use thereof, by donation or lease, and to prosecute construction thereon prior to the approval of the title by the Attorney General as required by section 355, Revised Statutes, as amended:

(10) subject to the availability of funds appropriated for such purposes, to utilize, in order to provide and furnish such services as may be deemed necessary or expedient to accomplish the purposes of this title, such personnel of the armed forces and of Reserve components thereof with the consent, and such civilian personnel, as may be necessary. For the purposes of this title, the provisions of section 14 of the Federal Employees' Pay Act of 1946 (Public Law 390, Seventy-ninth Congress) with respect to the maximum limitations

as to the number of civilian employees shall not be applicable to the Department of the Army, the Department of the Navy, or the Department of the Air Force.

(c) **Delegation of authority.**—The President is authorized to delegate any authority vested in him under this title, and to provide for the subdelegation of any such authority.

(d) **Gifts.**—In the administration of this title, gifts of supplies, equipment, and voluntary services may be accepted.

(e) **Fiscal agent.**—The Chief of Finance, United States Army, is authorized to act as the fiscal, disbursing, and accounting agent of the Director in carrying out the provisions of this title.

(f) **Settlement of claims.**—The Director is authorized to make final settlement of individual claims, for amounts not exceeding \$50 for travel and other expenses of uncompensated personnel of the Office of Selective Service Records, or the Selective Service System, incurred while in the performance of official duties, without regard to other provisions of law governing the travel of civilian employees of the Federal Government.

(g) **Director's report to Congress.**—The Director of Selective Service shall submit to the Congress, on or before the 3d day of January of each year, a written report covering the operation of the Selective Service System and such report shall include, by States, information as to the number of persons registered under this Act; the number of persons inducted into the military service under this Act; and the number of deferments granted under this Act and the basis for such deferments.

EMERGENCY MEDICAL CARE

Sec. 11. Emergency medical care.—Under such rules and regulations as may be prescribed by the President, funds available to carry out the provisions of this title shall also be available for the payment of actual and reasonable expenses of emergency medical care, including hospitalization, of registrants who suffer illness or injury, and the transportation, and burial, of the remains of registrants who suffer death, while acting under orders issued under the provisions of this title, but such burial expenses shall not exceed \$150 in any one case.

PENALTIES

Sec. 12. Penalties.—(a) Any member of the Selective Service System or any other person charged as herein provided with the duty of carrying out any of the provisions of this title, or the rules or regulations made or directions given thereunder, who shall knowingly fail or neglect to perform such duty, and any person charged with such duty, or having and exercising any authority under said title, rules, regulations, or directions who shall knowingly make, or be a party to the making, of any false, improper, or incorrect registration, classification, physical or mental examination, deferment, induction, enrollment, or muster, and any person who shall knowingly, make, or be a party to the making of, any false statement or certificate regarding or bearing upon a classification or in support of any request for a particular classification, for service under the provisions of this title,

or rules, regulations, or directions made pursuant thereto, or who otherwise evades or refuses registration or service in the armed forces or any of the requirements of this title, or who knowingly counsels, aids, or abets another to refuse or evade registration or service in the armed forces or any of the requirements of this title, or of said rules, regulations, or directions, or who in any manner shall knowingly fail or neglect or refuse to perform any duty required of him under or in the execution of this title, or rules, regulations, or directions made pursuant to this title, or any person or persons who shall knowingly hinder or interfere or attempt to do so in any way, by force or violence or otherwise, with the administration of this title or the rules or regulations made pursuant thereto, or who conspires to commit any one or more of such offenses, shall, upon conviction in any district court of the United States of competent jurisdiction, be punished by imprisonment for not more than five years or a fine of not more than \$10,000, or by both such fine and imprisonment, or if subject to military or naval law may be tried by court martial, and, on conviction, shall suffer such punishment as a court martial may direct. No person shall be tried by court martial in any case arising under this title unless such person has been actually inducted for the training and service prescribed under this title or unless he is subject to trial by court martial under laws in force prior to the enactment of this title. Precedence shall be given by courts to the trial of cases arising under this title, and such cases shall, upon request of the Attorney General, be advanced on the docket for immediate hearing.

(b) Any person (1) who knowingly transfers or delivers to another for the purpose of aiding or abetting the making of any false identification or representation, any registration certificate, alien's certificate of nonresidence, or any other certificate issued pursuant to or prescribed by the provisions of this title, or rules or regulations promulgated hereunder; or (2) who, with intent that it be used for any purpose of false identification or representation, has in his possession any such certificate not duly issued to him; or (3) who forges, alters, knowingly destroys, knowingly mutilates, or in any manner changes any such certificate or any notation duly and validly inscribed thereon; or (4) who, with intent that it be used for any purpose of false identification or representation, photographs, prints, or in any manner makes or executes any engraving, photograph, print, or impression in the likeness of any such certificate, or any colorable imitation thereof; or (5) who has in his possession any certificate purporting to be a certificate issued pursuant to this title, or rules and regulations promulgated hereunder, which he knows to be falsely made, reproduced, forged, counterfeited, or altered; or (6) who knowingly violates or evades any of the provisions of this title or rules and regulations promulgated pursuant thereto relating to the issuance, transfer, or possession of such certificate, shall, upon conviction, be fined not to exceed \$10,000 or be imprisoned for not more than five years, or both. Whenever on trial for a violation of this subsection the defendant is shown to have or to have had possession of any certificate not duly issued to him, such possession shall be deemed sufficient evidence to establish an intent to use such certificate for purposes of false identification or representation unless the defendant explains such possession to the satisfaction of the jury.

NONAPPLICABILITY OF CERTAIN LAWS

Sec. 13. Nonapplicability of certain laws.—(a) Nothing in sections 203, 205, or 207 of title 18 of the United States Code, or in the second sentence of subsection (a) of section 9 of the Act of August 2, 1939 (53 Stat. 1148), entitled “An Act to prevent pernicious political activities”, as amended, shall be deemed to apply to any person because of his appointment under authority of this title or the regulations made pursuant thereto as an uncompensated official of the Selective Service System, or as an individual to conduct hearings on appeals of persons claiming exemption from combatant or noncombatant training because of conscientious objections, or as a member of the National Selective Service Appeal Board.

(b) All functions performed under this title shall be excluded from the operation of the Administrative Procedure Act (60 Stat. 237) except as to the requirements of section 3 of such Act.

(c) In computing the lump-sum payments made to Air Force reserve officers under the provisions of section 2 of the Act of June 16, 1936, as amended (U.S.C., title 10, sec. 300a), and to reserve officers of the Navy or to their beneficiaries under section 12 of the Act of August 4, 1942, as amended (U.S.C., title 34, sec. 850k), no credit shall be allowed for any period of active service performed from the effective date of this title to the date on which this title shall cease to be effective. Each such lump-sum payment shall be prorated for a fractional part of a year of active service in the case of any reserve officer subject to the provisions of either such section, if such reserve officer performs continuous active service for one or more years (inclusive of such service performed during the period in which this title is effective) and such active service includes a fractional part of a year immediately prior to the effective date of this title, or immediately following the date on which this title shall cease to be effective, or both.

CIVIL RELIEF

Sec. 14. Civil relief.—Notwithstanding the provisions of section 604 of the Act of October 17, 1940 (54 Stat. 1191), and the provisions of section 4 of the Act of July 25, 1947 (Public Law 239, Eightieth Congress), all of the provisions of the Soldiers' and Sailors' Civil Relief Act of 1940, as amended, including specifically article IV thereof, shall be applicable to all persons in the armed forces of the United States, including all persons inducted into the armed forces pursuant to this title or the Public Health Service, until such time as the Soldiers' and Sailors' Civil Relief Act of 1940, as amended, is repealed or otherwise terminated by subsequent Act of Congress: *Provided*, That, with respect to persons inducted into the armed forces while this title is in effect, wherever under any section or provision of the Soldiers' and Sailors' Civil Relief Act of 1940, as amended, a proceeding, remedy, privilege, stay, limitation, accounting, or other transaction has been authorized or provided with respect to military service performed while such Act is in force, such section or provision shall be deemed to continue in full force and effect so

long as may be necessary to the exercise or enjoyment of such proceeding, remedy, privilege, stay, limitation, accounting, or other transaction.

NOTICE OF TITLE; VOLUNTARY ENLISTMENTS

Sec. 15. Notice of title; Voluntary enlistments.—(a) Every person shall be deemed to have notice of the requirements of this title upon publication by the President of a proclamation or other public notice fixing a time for any registration under section 3.

(b) It shall be the duty of every registrant to keep his local board informed as to his current address and changes in status as required by such rules and regulations as may be prescribed by the President.

(c) If any provision of this title, or the application thereof to any person or circumstance, is held invalid, the remainder of the title, and the application of such provision to other persons or circumstances, shall not be affected thereby.

(d) Except as provided in section 4(c) or section 4(g), nothing contained in this title shall be construed to repeal, amend, or suspend the laws now in force authorizing voluntary enlistment or reenlistment in the armed forces of the United States, including the reserve components thereof, except that no person shall be accepted for enlistment after he has received orders to report for induction and except that, whenever the Congress or the President has declared that the national interest is imperiled, voluntary enlistment or reenlistment in such forces, and their reserve components, may be suspended by the President to such extent as he may deem necessary in the interest of national defense.

DEFINITIONS

Sec. 16. Definitions.—When used in this title—

(a) The term “between the ages of eighteen and twenty-six” shall refer to men who have attained the eighteenth anniversary of the day of their birth and who have not attained the twenty-sixth anniversary of the day of their birth; and other terms designating different age groups shall be construed in a similar manner.

(b) The term “United States,” when used in a geographical sense, shall be deemed to mean the several States, the District of Columbia, Puerto Rico, the Virgin Islands, and Guam.

(c) The term “armed forces” shall be deemed to include the Army, the Navy, the Marine Corps, the Air Force, and the Coast Guard.

(d) The term “district court of the United States” shall be deemed to include the courts of the United States for the Territories and possessions of the United States.

(e) The term “local board” shall be deemed to include an inter-county local board in the case of any registrant who is subject to the jurisdiction of an intercounty local board.

(f) The term “Director” shall be deemed to mean the Director of the Selective Service System.

(g)(1) The term “duly ordained minister of religion” means a person who has been ordained, in accordance with the ceremonial ritual, or discipline of a church, religious sect, or organization established on the basis of a community of faith and belief, doctrines and

practices of a religious character, to preach and to teach the doctrines of such church, sect, or organization and to administer the rites and ceremonies thereof in public worship, and who as his regular and customary vocation preaches and teaches the principles of religion and administers the ordinances of public worship as embodied in the creed or principles of such church, sect, or organization.

(2) The term "regular minister of religion" means one who as his customary vocation preaches and teaches the principles of religion of a church, a religious sect, or organization of which he is a member, without having been formally ordained as a minister of religion, and who is recognized by such church, sect, or organization as a regular minister.

(3) The term "regular or duly-ordained minister of religion" does not include a person who irregularly or incidentally preaches and teaches the principles of religion of a church, religious sect, or organization and does not include any person who may have been duly ordained a minister in accordance with the ceremonial, rite, or discipline of a church, religious sect or organization, but who does not regularly, as a vocation, teach and preach the principles of religion and administer the ordinances of public worship as embodied in the creed or principles of his church, sect, or organization.

(h) The term "organized unit", when used with respect to a reserve component, shall be deemed to mean a unit in which the members thereof are required satisfactorily to participate in scheduled drills and training periods as prescribed by the Secretary of Defense.

(i) The term "reserve component of the armed forces" shall, unless the context otherwise requires, be deemed to include the federally recognized National Guard of the United States, the federally recognized Air National Guard of the United States, the Officers' Reserve Corps, the Regular Army Reserve, the Air Force Reserve, the Enlisted Reserve Corps, the Naval Reserve, the Marine Corps Reserve, and the Coast Guard Reserve, and shall include, in addition to the foregoing, the Public Health Service Reserve when serving with the armed forces.

TERMINATION OF TITLE

Sec. 17. Repeal of conflicting laws; Appropriations; Termination of induction.—(a) Except as provided in this title all laws or any parts of laws in conflict with the provisions of this title are hereby repealed to the extent of such conflict.

(b) There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this title. All funds appropriated for the administrative expenses of the National Security Training Commission shall be appropriated directly to the Commission and all funds appropriated to pay the expenses of training carried out by the military departments designated by the Commission shall be appropriated directly to the Department of Defense.

(c) Notwithstanding any other provisions of this title, no person shall be inducted for training and service in the Armed Forces after July 1, 1967, except persons now or hereafter deferred under section 6 of this title after the basis for such deferment ceases to exist.

UTILIZATION OF INDUSTRY

Sec. 18. Utilization of industry.—(a) Whenever the President after consultation with and receiving advice from the National Security Resources Board determines that it is in the interest of the national security for the Government to obtain prompt delivery of any articles or materials the procurement of which has been authorized by the Congress exclusively for the use of the armed forces of the United States, or for the use of the Atomic Energy Commission, he is authorized, through the head of any Government agency, to place with any person operating a plant, mine, or other facility capable of producing such articles or materials an order for such quantity of such articles or materials as the President deems appropriate. Any person with whom an order is placed pursuant to the provisions of this section shall be advised that such order is placed pursuant to the provisions of this section. Under any such program of national procurement, the President shall recognize the valid claim of American small business to participate in such contracts, in such manufactures, and in such distribution of materials, and small business shall be granted a fair share of the orders placed, exclusively for the use of the armed forces or for other Federal agencies now or hereafter designated in this section. For the purposes of this section, a business enterprise shall be determined to be "small business" if (1) its position in the trade or industry of which it is a part is not dominant, (2) the number of its employees does not exceed 500, and (3) it is independently owned and operated.

(b) It shall be the duty of any person with whom an order is placed pursuant to the provisions of subsection (a), (1) to give such order such precedence with respect to all other orders (Government or private) theretofore or thereafter placed with such person as the President may prescribe, and (2) to fill such order within the period of time prescribed by the President or as soon thereafter as possible.

(c) In case any person with whom an order is placed pursuant to the provisions of subsection (a) refuses or fails—

(1) to give such order such precedence with respect to all other orders (Government or private) theretofore or thereafter placed with such person as the President may have prescribed;

(2) to fill such order within the period of time prescribed by the President or as soon thereafter as possible as determined by the President;

(3) to produce the kind of quality of articles or materials ordered; or

(4) to furnish the quantity, kind, and quality of articles or materials ordered at such price as shall be negotiated between such person and the Government agency concerned; or in the event of failure to negotiate a price, to furnish the quantity, kind, and quality of articles or materials ordered at such price as he may subsequently be determined to be entitled to receive under subsection (d);

the President is authorized to take immediate possession of any plant, mine, or other facility of such person and to operate it, through any Government agency, for the production of such articles or materials as may be required by the Government.

(d) Fair and just compensation shall be paid by the United States (1) for any articles or materials furnished pursuant to an order placed under subsection (a), or (2) as rental for any plant, mine, or other facility of which possession is taken under subsection (c).

(e) Nothing contained in this section shall be deemed to render inapplicable to any plant, mine, or facility of which possession is taken pursuant to subsection (c) any State or Federal laws concerning the health, safety, security, or employment standards of employees.

(f) Any person, or any officer of any person as defined in this section, who willfully fails or refuses to carry out any duty imposed upon him by subsection (b) of this section shall be guilty of a felony and, upon conviction thereof, shall be punished by imprisonment for not more than three years, or by a fine of not more than \$50,000, or by both such imprisonment and fine.

(g) (1) As used in this section—

(A) The term "person" means any individual, firm, company, association, corporation, or other form of business organization.

(B) The term "Government agency" means any department agency, independent establishment, or corporation in the Executive branch of the United States Government.

(2) For the purposes of this section, a plant, mine, or other facility shall be deemed capable of producing any articles or materials if it is then producing or furnishing such articles or materials or if the President after consultation with and receiving advice from the National Security Resources Board determines that it can be readily converted to the production or furnishing of such articles or materials.

(h) (1) The President is empowered, through the Secretary of Defense, to require all producers of steel in the United States to make available, to individuals, firms, associations, companies, corporations, or organized manufacturing industries having orders for steel products or steel materials required by the armed forces, such percentages of the steel production of such producers, in equal proportion deemed necessary for the expeditious execution of orders for such products or materials. Compliance with such requirement shall be obligatory on all such producers of steel and such requirement shall take precedence over all orders and contracts theretofore placed with such producers. If any such producer of steel or the responsible head or heads thereof refuses to comply with such requirement, the President, through the Secretary of Defense, is authorized to take immediate possession of the plant or plants of such producer and, through the appropriate branch, bureau, or department of the armed forces, to insure compliance with such requirement. Any such producer of steel or the responsible head or heads thereof refusing to comply with such requirements shall be deemed guilty of a felony and upon conviction thereof shall be punished by imprisonment for not more than three years and a fine not exceeding \$50,000.

(2) The President shall report to the Congress on the final day of each six-month period following the date of enactment of this Act the percentage figure, or if such information is not available, the approximate percentage figure, of the total steel production in the United States required to be made available during such period for the execution of orders for steel products and steel materials

required by the armed forces, if such percentage figure is in excess of 10 percentum.

SAVING PROVISION

Sec. 19. Saving provision.—Nothing in this title shall be deemed to amend any provision of the National Security Act of 1947 (61 Stat. 495).

EFFECTIVE DATE

Sec. 20. Effective date.—This title shall become effective immediately; except that unless the President, or the Congress by concurrent resolution, declares a national emergency after the date of enactment of this Act, no person shall be inducted or ordered into active service without his consent under this title within ninety days after the date of its enactment.

AUTHORITY TO ORDER RESERVE COMPONENTS TO ACTIVE FEDERAL SERVICE

Sec. 21. Authority to order reserve components to active Federal service.—Until July 1, 1953, and subject to the limitations imposed by section 2 of the Selective Service Act of 1948, as amended, the President shall be authorized to order into the active military or naval service of the United States for a period of not to exceed twenty-four consecutive months, with or without their consent, any or all members and units of any or all Reserve components of the Armed Forces of the United States and retired personnel of the Regular Armed Forces. Unless he is sooner released under regulations prescribed by the Secretary of the military department concerned, any member of the inactive or volunteer reserve who served on active duty for a period of 12 months or more in any branch of the Armed Forces between the period December 7, 1941, and September 2, 1945, inclusive, who is now or may hereafter be ordered to active duty pursuant to this section, shall upon completion of 17 or more months of active duty since June 25, 1950, if he makes application therefor to the Secretary of the branch of service in which he is serving, be released from active duty and shall not thereafter be ordered to active duty for periods in excess of 30 days without his consent except in time of war or national emergency hereafter declared by the Congress: *Provided*, That the foregoing shall not apply to any member of the inactive or volunteer reserve ordered to active duty whose rating or specialty is found by the Secretary of the military department concerned to be critical and whose release to inactive duty prior to the period for which he was ordered to active duty would impair the efficiency of the military department concerned.

The President may retain the unit organizations and the equipment thereof, exclusive of the individual members thereof, in the active Federal service for a total period of five consecutive years, and upon being relieved by the appropriate Secretary from active Federal service, National Guard, or Air National Guard units, shall, insofar as practicable, be returned to their National Guard or Air National Guard status in their respective States, Territories, the District of Columbia, and Puerto Rico, with pertinent records, colors, histories, trophies, and other historical impedimenta.

Analysis of the UNIVERSAL MILITARY TRAINING AND SERVICE ACT, AS AMENDED, CONTAINING THE LAW IN EFFECT ON JANUARY 1, 1966

Certain provisions of law that were originally contained in the Universal Military Training and Service Act have either been terminated, repealed, or repealed and then codified in title 10 of the United States Code.

SECTION 1. POLICY AND INTENT OF CONGRESS

Section 1. Policy and intent of Congress

Section 1 deals with the policy and intent of Congress. Among other things, it states that the obligation and privilege of serving in the Armed Forces and the Reserve components should be shared generally in accordance with a system of selection which is fair and just. The policy statement further provides that it is essential that the strength and organization of the National Guard "as an integral part of the first line defenses of this Nation, be at all times maintained and assured."

SECTION 2. AUTHORIZED PERSONNEL STRENGTHS

Section 2. Authorized personnel strengths

Section 2 contained provisions establishing the authorized active duty personnel strengths of the several Armed Forces. Section 2 was repealed by section 53 of Public Law 1028, 84th Congress, approved August 10, 1956, and section 1 of that act codified certain former provisions of this section in title 10 of the United States Code. The present active duty strength ceilings are: Army, 837,000 (10 U.S.C. 3201); Air Force, 502,000 (10 U.S.C. 8201); Navy, 500,000 enlisted men, plus the authorized number of line and staff corps officers (10 U.S.C. 5401); and the Marine Corps, 400,000 (10 U.S.C. 5402). These strength ceilings are suspended until July 1, 1967, by the act of August 3, 1950 (64 Stat. 408), as amended, which act also provides that during the period of suspension the active duty personnel strength of the Armed Forces shall not exceed a total of 5 million persons.

SECTION 3. REGISTRATION

Section 3. Registration

Section 3 requires that all male persons in the United States register with their local boards at age 18.

SECTION 4. TRAINING AND SERVICE

Section 4(a). Training and service in general

Section 4(a) places liability for training and service on every male citizen of the United States and every male alien admitted for permanent residence who is between the ages of 18½ and 26 years. Male aliens who remain in the United States in a status other than that of a permanent resident for a period exceeding 1 year are also liable for induction, unless they make application to be relieved of such liability. If an alien makes such application, he is thereafter barred from becoming a citizen of the United States.

Section 4(a) also provides physical and mental standards for induction. Under this section the minimum standards for physical acceptability may not be higher than those applied to persons inducted between the ages of 18 and 26 in January of 1945. This was the date the lowest physical standards were in effect during World War II. In addition, the passing requirement for the Armed Forces qualification test is fixed by section 4(a) at a percentile score of 10 points. However, in the 85th Congress a further proviso was added to this section which permits the President to modify these two standards, except in time of war or national emergency declared by the Congress. Under this authority the President has made no modification in physical standards but has modified mental requirements. This was done by requiring qualified registrants with a percentile score of less than 31 to take an Army classification battery which is a multiphased aptitude test. Failure to meet specified standards in this test results in nonacceptance. This modification was relaxed November 1, 1965, to provide that a high school graduate who scored 16 or higher on the Air Force qualification test would be deemed qualified aside from his score on the classification battery test.

Section 4(a) also provides that inductees shall be given full and adequate military training for a period of not less than 4 months and precludes the assignment of individuals for duty outside the United States unless they have had 4 months of training.

Section 4(a) also provides protection for physicians and dentists who applied for appointment as Reserve officers and who were rejected for such appointments on the sole ground of a physical disqualification. Such individuals may not be inducted under the special provisions with respect to physicians and dentists.

Section 4(b). Length of service

Section 4(b) provides that persons inducted into the Armed Forces shall serve on active duty for a period of 24 consecutive months, unless sooner discharged, or transferred to the Reserve.

Section 4(c). Enlistment; Reservists' active duty; volunteers for induction; NSTC

Section 4(c) permits a registrant to enlist in the Regular Army for a period of 2 years in lieu of being inducted if he meets the physical and mental requirements.

Section 4(c) also permits individuals between the ages of 18 and 26 to volunteer for induction within the limits of the quotas established for their local boards. Persons 17 years of age may also volunteer,

with parental consent. This provision permits an individual to complete his military service without waiting until such time as he is reached for induction. Depending on the size of the draft call, volunteers for induction account for varying percentages of each month's induction. Over the past 10 years, 30 to 35 percent of all inductions have been volunteers for induction.

Section 4(d). Transfer to Reserves; NSTC

Section 4(d) established the total period of obligated service, Active and Reserve, for persons who are inducted, enlisted, or appointed, in the Armed Forces. The provisions of this section which provided that persons entering the Armed Forces after August 9, 1955, are required to serve on active duty and in a Reserve component for a total of 6 years were repealed on September 2, 1958, but codified and restated in section 651(a), title 10, of the United States Code.

Section 4(e). Pay and allowances

Section 4(e) grants to inductees pay and allowances equal to those provided for regular members of equivalent rank and service.

Section 4(f). Civilian compensation

Section 4(f) authorizes continuation of civilian pay during the period of military service if an employer should so elect.

Section 4(g). One-year enlistee program

Repealed.

Section 4(h). Limitations on assignment of 1-year enlistees

Repealed.

Section 4(i). Original doctors draft law

Terminated. Provision for the special call and induction of physicians and dentists is now contained in section 5(a).

Section 4(j). National Advisory Committee

Section 4(j) provides for a National Advisory Committee to advise the Selective Service System on the selection of physicians and dentists for induction.

Section 4(k). Decrease in period of service; Operation of National Security Training Commission and Corps

Section 4(k) authorized the creation of the National Security Training Commission and the National Security Training Corps. No authority for induction into the corps was enacted into law.

Section 4(l). Active duty and commissions of medical, dental, and allied specialists

Section 4(l) permits physicians and dentists who are Reserve officers to be ordered, with or without their consent, to active duty for a period of not more than 24 months if they have not attained the 35th anniversary of the date of their birth and have not performed at least 1 year of active duty.

Section 4(l) further affords a physician or dentist who has served on active duty for a period of 12 months since September 5, 1950, to resign his commission from the Reserve component of which he is a member unless he is otherwise obligated to serve.

Section 4(1) further affords any physician who meets the qualifications for a Reserve commission to volunteer for a period of active duty for not less than 24 months, notwithstanding the grade or rank to which such physician or dentist is entitled.

SECTION 5. SELECTION

Section 5(a). Selection

Section 5(a) deals with the selection of individuals for induction under the provisions of the Universal Military Training and Service Act. This section, among other things, specifically authorizes the President to select and induct persons by age group or groups and to select and induct physicians and dentists. Pursuant to Presidential regulations prescribed under this provision, men who are in class I-A, available for service, are selected and inducted by category. There are at present six categories: first, delinquents; second, volunteers; third, men 19 to 26 who are not married, or who were married after August 26, 1965, and who are without children; fourth, men 19 to 26 married on or before August 26, 1965, and who are without children; fifth, men over 26 years of age; sixth, men between 18½ and 19 years of age. In filling calls, local boards select and induct I-A available men by category, beginning with the first category and proceeding through categories sufficient to fill their calls. With the higher calls beginning in the latter half of calendar year 1965, local boards by December 1965, were calling from the first four categories to fill their quotas.

Fathers were made eligible for deferment in class III-A by an amendment to Selective Service Regulations in March 1963.

This section affords the necessary flexibility to the President to change the order of selection to meet rapidly changing national and world conditions.

Section 5(a) also permits the commissioning of alien doctors.

Section 5(a) also provides that no person may be inducted under the age of 19 if there are individuals available for induction within the jurisdiction of the local board who have attained age 19.

Section 5(b). Quotas

Section 5(b) provides for quotas to be established for each State, Territory, possession, and the District of Columbia, based upon the actual number of men in such States, Territories, possessions, and subdivisions thereof who are classified as available for service. This section also establishes the credits to be given in the filling of such quotas for registrants for such subdivisions who are members of the Armed Forces.

Section 5(c). Grade or rank in Armed Forces of medical, dental, and allied specialists

Section 5(c) assures physicians and dentists of a commissioned grade commensurate with their education, experience, and ability, but also permits an individual who is inducted (an individual who refuses to accept a commission) to be utilized in his professional capacity in an enlisted grade. There are no such individuals now serving on active duty.

SECTION 6. DEFERMENT AND EXEMPTIONS

Section 6(a). Exemptions from registration and service

Section 6(a) exempts from registration and service members of the regular Armed Forces, as well as cadets and midshipmen of the service academies, students enrolled in military colleges approved by the Secretary of Defense, commissioned officers of the Coast and Geodetic Survey and Public Health Service, foreign diplomatic and consular representatives, and persons in other categories specified by the President who are not citizens of the United States.

Section 6(a) also provides that a person who serves on active duty for not less than 18 months after June 24, 1948, in the armed forces of a nation with which the United States is associated in mutual defense activities, as defined by the President, may be exempted from training and service but not from registration. This exemption shall not be granted to any person who is a national of a country which does not grant reciprocal privileges to citizens of the United States. Credit for service performed prior to June 24, 1948, is limited to that performed in the armed forces of countries allied with the United States during World War II.

Section 6(b). Veteran's exemptions

Section 6(b) provides that any person who has served honorably on active duty in the Armed Forces for a period of 1 year or longer is not liable for induction except in time of war or national emergency declared by the Congress. Persons who have so served for at least 6 months and have been discharged for convenience of the Government are also exempted. Also persons who have served 2 years as commissioned officers of the Public Health Service or Coast and Geodetic Survey are likewise exempt.

Section 6(b) also defines what constitutes active duty for purposes of the veteran's exemption.

Section 6(c). Reserve components exemptions

Section 6(c) provides exemption from induction (but not registration) for persons who have continued to serve satisfactorily as members of the Organized Reserve since February 1, 1951.

Section 6(c)(2)(A) provides deferment for persons who are enlisted or appointed in the Ready Reserve prior to attaining age 26, so long as they continue to serve satisfactorily. This subsection also provides exemption except in time of war or national emergency declared by the Congress for persons who complete 6 years of such satisfactory service including not less than 4 consecutive months of active duty for training.

Section 6(c) also preserves the deferment of a satisfactory reservist or guardsman who transfers to another unit where he continues to serve satisfactorily.

Section 6(c) also authorizes the priority induction of unsatisfactory reservists.

Section 6(d). Officers' training; deferment of students authorized

Section 6(d) authorizes deferments for students in officer training programs. This is commonly referred to as the "ROTC section," but also deals with similar officer procurement programs.

Under section 6(d) officers who are commissioned in the Armed Forces may be ordered to active duty for 2 years and have a total service obligation of 6 years. They may also be ordered to active duty for training for a period of 3 to 6 months, in which case they may not be inducted but their total service obligation is increased to 8 years.

Section 6(e). Aviation cadet applicants

Section 6(e) permits aviation cadet applicants to be deferred for 4 months while their applications are being considered for acceptance.

Section 6(f). Officials

Section 6(f) defers certain officials of Federal and State Governments.

Section 6(g). Ministers of religion

Section 6(g) exempts ministers of religion and students preparing for the ministry.

Section 6(h). Occupations; dependency; fitness; extension of age of liability; NSTC; authority of Selective Service boards

Section 6(h) confers broad authority upon the President to prescribe rules and regulations to provide deferment from service of persons engaged in essential or critical occupations, or in study or preparation therefor, and also for dependency reasons.

It is under this section that the President provided for the deferment of essential workers in industry, agriculture, or other employment and in research and other activities of critical importance to the Nation.

It is also under this section that provision has been made for the deferment of college students where the local board finds the individual registrant's activity in study necessary to the national interest. Under the broad authority given local boards by law and regulation, student deferment policies may be liberalized or tightened in response to the need for military manpower. Generally, full-time students who make normal progress and do well in their studies may be deferred to complete undergraduate work, and if the quality of this academic work is high, they may be deferred for graduate study. There are numerous Regular and Reserve enlistment programs for those who wish to complete their current military obligation before pursuing their education.

Section 6(h) also insures to local and appeal Selective Service boards independence of determination in student deferment cases, by providing that no criteria based upon a test or class standing shall serve as a sole basis for making such determinations.

Section 6(h) further authorizes the President to provide for the deferment of fathers or of registrants with other dependents, but prohibits such deferment where the only dependent is a wife, unless extreme hardship would result.

Section 6(h) further provides for the extension of liability for induction for training and service to age 35 of persons who are deferred from service prior to reaching age 26. This is a most significant provision upon which is based other portions of the act authorizing the President to make special calls for physicians and dentists. This provision made it possible to terminate the former doctors draft law and provides the means to insure an adequate supply of physicians

and dentists in the armed services from those who have a regular liability under the act.

Section 6(i). Deferment of students

Section 6(i) provides deferment for college students to permit them to complete their academic year when they have been ordered to report for induction during an academic year. It also provides deferment for high school students until graduation, or until age 20, or until such time as they cease to satisfactorily pursue high school courses of instruction, whichever first occurs.

Section 6(j). Conscientious objectors

Section 6(j) provides that persons found by their local boards to be opposed to both combatant and noncombatant military service shall perform 2 years of civilian work contributing to the maintenance of the national health, safety, or interest in lieu of induction into the Armed Forces. Those opposed only to combatant military service are inducted for performance of noncombatant service.

Section 6(k). Duration of exemption

Section 6(k) provides that exemption from registration and training and service shall cease when the cause therefor ceases to exist.

Section 6(l). Minority discharges

Section 6(l) prohibits the discharge from the Armed Forces of individuals between the ages of 18 and 21 who entered service without the consent of parents or guardian.

Section 6(m). Moral standards

Section 6(m) provides that no person shall be relieved from training and service by reason of conviction of a criminal offense except when the offense of which he has been convicted may be punishable by death, or by imprisonment for a term exceeding 1 year.

Section 6(n). Appeals; occupational deferments

Section 6(n) authorizes the transfer of an appeal with respect to an occupational deferment to the appeal board having jurisdiction of the area in which the registrant is employed when his local board is located in another area.

Section 6(o). Sole surviving son

Section 6(o) provides exemption for sole surviving sons.

SECTION 7. ACTIVE DUTY FOR CERTAIN MEMBERS OF RESERVE COMPONENTS

Section 7

Repealed.

Section 7 authorized the President to order members of the Reserve components to active duty without their consent. It was repealed on June 19, 1951.

SECTION 8. BOUNTIES; SUBSTITUTES; PURCHASES OF RELEASE

Section 8 prohibits the payment of bounties, and the use of substitutes, as well as the purchase of the release of persons liable for induction.

SECTION 9. SEPARATION FROM SERVICE; REEMPLOYMENT RIGHTS

Section 9. Reemployment rights

Section 9 establishes reemployment rights for persons inducted into the Armed Forces under this act or who otherwise enter upon active duty, and places upon the Secretary of Labor the responsibility of aiding such persons in securing their rights. Section 9 is comparable to a similar section that was contained in the World War II Selective Training and Service Act.

Section 9(i). Right to vote; poll tax

Section 9(i) provides that any person serving in the Armed Forces shall have the right to vote in person or by absentee ballot in any general, special, or primary election occurring in the State of which he is a resident if, under the laws of such State, he is otherwise entitled to so vote in such election. Section 9(i) further provides that a person in the Armed Forces shall not be required to pay a poll tax in order to vote in an election for national officials.

Section 9(j). Reports of separation

Section 9(j) requires the Secretaries of the armed services to furnish the Selective Service System a report of separation for each person separated from active duty.

SECTION 10. THE SELECTIVE SERVICE SYSTEM; CONSTRUCTION; CIVILIAN EMPLOYEES

Section 10(a). Selective Service System; Office of Selective Service Records

Section 10(a) establishes the Selective Service System headed by the Director of Selective Service appointed by the President by and with the advice and consent of the Senate. As so established, the Selective Service System includes a national headquarters, at least one State headquarters in each State, Territory, and possession, and in the District of Columbia, together with local boards, appeal boards, and other necessary agencies established by the President.

Section 10(a) also transferred the Office of Selective Service Records to the Selective Service System.

Section 10(b). Officials, employees, and boards; printing; paroles; leases

Section 10(b) authorizes the President to prescribe regulations necessary to carry out the provisions of the act, to appoint the officers and employees of the Selective Service System, and to procure supplies, printing, and space for the System. A State director of selective service is appointed for each State headquarters by the President upon the recommendation of the Governor. The State director is responsible for the administration of the Selective Service System within his State and represents the Governor who is the nominal head of the System in the State.

Section 10(c) also authorizes the President to create and establish within the System local boards and appeal boards. There must be one or more local boards in each county or comparable subdivision, except that an intercounty local board may be established for not more than five counties to provide a more economical operation in

areas of sparse population. Four thousand local boards have been established throughout the Nation, operated by members who are citizens of the communities and serve without compensation. There must be at least one appeal board in each Federal judicial district.

Section 10(b) empowers local boards to determine all questions and claims respecting the exemption, deferment, or inclusion for induction of registrants in their areas. The determinations of local boards are final unless an appeal is taken to the appeal board. The decisions of appeal boards are final unless modified or changed by the President who is empowered to finally determine all questions or claims with respect to inclusion for, or exemption or deferment from, service under the act.

Section 10(b) also authorizes the President to provide for the parole for service in the Armed Forces or for other special service of persons convicted of violating the provision of the act.

Section 10(c). Delegation of authority

Section 10(c) authorizes the President to delegate the authority vested in him under the act and to provide for the subdelegation of any such authority.

Section 10(d). Gifts

Section 10(d) authorizes the acceptance of gifts of supplies and equipment, as well as voluntary services (the work performed by the uncompensated citizens on a voluntary basis represents more than 90 percent of all of the services performed by the System).

Section 10(e). Fiscal agent

Section 10(e) authorizes the Chief of Finance, U.S. Army, to act as the fiscal disbursing and accounting agent of the Director in carrying out the provisions of the act.

Section 10(f). Settlement of claims

Section 10(f) authorizes the Director of Selective Service to make final settlement of individual claims for amounts not to exceed \$50 for travel and other expenses of uncompensated persons of the System without regard to other provisions of law governing the travel of civilian employees of the Federal Government.

Section 10(g). Director's report to Congress

Section 10(g) requires the Director of Selective Service to submit an annual written report to the Congress covering the operation of the System.

SECTION 11. EMERGENCY MEDICAL CARE

Section 11. Emergency medical care

Section 11 authorizes emergency medical care, hospitalization, and burial benefits for a registrant who suffers illness, injury, or death while acting under orders issued under the provisions of the act.

SECTION 12. PENALTIES

Section 12. Penalties

Section 12 is the penal section and establishes penalties for persons who violate the provisions of the act.

SECTION 13. NONAPPLICABILITY OF CERTAIN LAWS

Section 13. Nonapplicability of certain laws

Section 13(a) relieves the uncompensated citizens who serve on or with local boards and appeal boards from the provisions of the Hatch Act and the conflict-of-interest statutes.

Section 13(b) removes the functions of the System from certain requirements of the Administrative Procedure Act.

Section 13(c) relates to the lump-sum payment to certain Air Force and Navy Reserve officers.

SECTION 14. CIVIL RELIEF

Section 14. Civil relief

Section 14 extends to all persons in the Armed Forces, including those inducted under the act, all of the provisions of the Soldiers' and Sailors' Civil Relief Act of 1940, as amended.

SECTION 15. NOTICE OF TITLE; VOLUNTARY ENLISTMENTS

Section 15. Notice of title; voluntary enlistments

Section 15 provides that all persons shall be deemed to have notice of the requirements of the act upon publication of a registration proclamation. Section 15 further requires each registrant to keep his local board informed as to his current address and changes of status as may be required by the President. Section 15 also contains a separability clause.

Section 15 also provides that none of the provisions of the act shall be construed to repeal, amend, or suspend the laws in force authorizing voluntary enlistment or reenlistment in the active or reserve Armed Forces and provides that no person shall be accepted for enlistment after he has received his order to report for induction. Section 15 further provides that the President may suspend enlistments whenever the Congress or the President has declared that the national interest is imperiled.

SECTION 16. DEFINITIONS

Section 16. Definitions

Section 16 defines the terms used in the act. Among others, it includes definitions of the terms "duly ordained minister of religion" and "regular minister of religion."

SECTION 17. TERMINATION OF TITLE

Section 17. Repeal of conflicting laws; appropriations; termination of induction

Section 17 provides for the repeal of conflicting laws; authorizes appropriations to carry out the purposes of the act; and in subsection (c) contains the following termination clause:

(c) Notwithstanding any other provisions of this title, no person shall be inducted for training and service in the Armed Forces after July 1, 1967, except persons now or here-

after deferred under section 6 of this title after the basis for such deferment ceases to exist.

SECTION 18. UTILIZATION OF INDUSTRY

Section 18. Utilization of industry

Section 18 prescribes a procedure whereby the President can require the utilization of industry when it has been determined that such is required in the interest of the national security.

SECTION 19. SAVING PROVISION

Section 19. Saving provision

Section 19 provides that nothing in the act shall be deemed to amend any provision of the National Security Act of 1947.

SECTION 20. EFFECTIVE DATE

Section 20. Effective date

Section 20 established the effective date of the act.

SECTION 21. AUTHORITY TO ORDER RESERVE COMPONENTS TO ACTIVE FEDERAL SERVICE

Section 21. Authority to order Reserve components to active Federal service

No longer in effect. (Expired July 1, 1953.)

SELECTIVE SERVICE SYSTEM

[For regulations codified under this heading, see Code of Federal Regulations,
Title 32, Chapter XVI]

CREATION AND AUTHORITY

The Selective Service System was established by the Universal Military Training and Service Act (62 Stat. 604; 50 U.S.C. App. 451-471), as amended, which also transferred to the Selective Service System the functions of the Office of Selective Service Records, which was established by the act of March 31, 1947 (61 Stat. 31; 50 U.S.C. App. 321-329).

The Universal Military Training and Service Act, as amended, requires the registration of male citizens of the United States and all other male persons who are in the United States who are between the ages of 18 and 26 years. Aliens who enter the United States and who were born after September 15, 1925, must register within 6 months after entry or within 5 days after their eighteenth birthday. The act imposes liability for training and service in the Armed Forces upon such of these persons who are between the ages of 18 years and 6 months and 26 years except that aliens not admitted to the United States for permanent residence are not liable for training and service until they have remained in the United States for more than 1 year. Some persons who have been deferred remain liable for training and service until age 28 and others remain liable until age 35. Conscientious objectors who are found to be opposed to any service in the Armed Forces are required to perform civilian work in lieu of induction into the Armed Forces.

The President is authorized to select and induct into the Armed Forces such numbers of persons as may be required to maintain the strengths of the forces and also to provide for the selection and induction into the Armed Forces of persons qualified in needed medical, dental, or allied specialist categories pursuant to special requisitions submitted by the Secretary of Defense.

The act exempts members of the active Armed Forces and foreign diplomatic and consular personnel from registration and liability for training and service. Likewise exempted are categories of aliens, as specified by the President, who are not admitted to the United States for permanent residence. Other exemptions or deferments from training and service are provided by the act, and the President is authorized to provide, by rules and regulations, for deferments involving occupations, dependency, and fitness.

Pursuant to the provisions of section 672(a) of title 10 of the United States Code (72 Stat. 1440), the Selective Service System determines the availability of members of the Standby Reserve of the Armed Forces for order to active duty in time of war or national emergency declared by Congress.

PURPOSE

The purpose of the Selective Service System is to assure the Armed Forces a supply of manpower adequate to insure the security of the United States, with concomitant regard for the maintenance of an effective national economy.

ORGANIZATION AND ACTIVITIES

Director of Selective Service

The Selective Service System is headed by the Director of Selective Service, who is appointed by the President with the consent of the Senate. The Director is responsible directly to the President for carrying out the functions of the System. The Director decides appeals from the determinations of appeal boards as to the availability of members of the Standby Reserve for order to active duty.

National headquarters

As the operations of the Selective Service System are largely decentralized, the national headquarters functions under the supervision of the Director primarily as a coordinating agency for the State headquarters for selective service in the several States, Puerto Rico, the Virgin Islands, Guam, the Canal Zone, and the District of Columbia.

Within national headquarters are the following divisions: Office of the Director, Administrative Division, Communications and Records Division, Field Division, Fiscal and Procurement Division, Manpower Division, and the Research and Statistics Division. Within the Office of the Director are the Deputy Director, the Assistant Director, the Assistants to the Director, the Office of the General Counsel, the Office of Legislation, Liaison, and Public Information, the Office of the Chief Medical Officer, the Office of Emergency Planning and Interagency Relations, and the Office of the Adjutant General.

State headquarters

Each State headquarters is in the immediate charge of a State director of selective service, who is appointed by the President upon recommendation of the Governor. The State director represents the Governor in all selective service matters, and is responsible for carrying out the functions of the Selective Service System within his area of jurisdiction. The State headquarters is responsible for the coordination and general supervision of the activities of the local boards, appeal boards, and other selective service agencies under its jurisdiction. Members of local boards and appeal boards, medical advisers to the State directors, medical advisers to the local boards, Government appeal agents, and advisers to registrants serve without compensation.

Local boards

At least one local board has been established in each county or political subdivision corresponding thereto except where, upon recommendation of the respective Governors, intercounty local boards have been established for areas not exceeding five counties. A local board consists of three or more civilian members, residents of a county in the local board area. A special local board, with jurisdiction over all

persons registered who do not have a place of residence within the United States, has been established in the District of Columbia.

Each local board has the power to determine all questions or claims with respect to inclusion for, or exemption or deferment from, training and service of all men registered in, or subject to registration in, the local board area. The decisions of a local board are final, except where an appeal to the appeal board is authorized and is taken. Each local board is responsible for the registration, examination, classification, selection, delivery to the Armed Forces for induction, ordering to perform civilian work in lieu of induction, and maintenance of the records of men who are required to register and who are within its area of jurisdiction.

Appeal boards

Appeal boards have been established for each Federal judicial district in each of the States and in Puerto Rico, the Virgin Islands, Guam, the Canal Zone, and the District of Columbia. Members of appeal boards are civilians resident in the appeal board area and are appointed by the President upon recommendation of the Governor. The functions of an appeal board are to review the cases of registrants and members of the Standby Reserve appealed to it and to affirm or change any decision of the local board.

National Advisory Committee on the Selection of Physicians, Dentists, and Allied Specialists

The National Advisory Committee on the Selection of Physicians, Dentists, and Allied Specialists is located at national headquarters. The members of this Committee are appointed by the President. The functions of the National Committee are to advise the Selective Service System and to coordinate the work of State and local volunteer advisory committees established to cooperate with the National Committee, with respect to the selection of needed medical, dental, and allied specialist categories of persons for service in the Armed Forces. The National Committee is independent of the Selective Service System.

National Selective Service Scientific Advisory Group

The National Selective Service Scientific Advisory Group has been established by the Director of Selective Service. The members of this group, both individually and collectively, advise the Director regarding problems which arise concerning manpower in the scientific fields. Approved.

LEWIS B. HERSHEY,
Director of Selective Service.

SUMMARY OF ORGANIZATION AND OPERATION OF THE SELECTIVE SERVICE SYSTEM

An Independent Agency Directly Under the President

ORGANIZATION

National headquarters.—National supervision and policy guidance.

State headquarters.—State supervision and policy guidance. Governor is ex officio head and recommends individual to be State direc-

tor and members of local and appeal boards and other uncompensated positions.

Local boards.—Volunteer civilians in each community. Under the law, the local board makes all classification determinations which are final subject to appeal where authorized and taken as provided by law and regulations.

Appeal boards.—Volunteer civilian members; one in each Federal judicial district. One national selective service appeal board of three members appointed by the President to carry out his statutory function of finally determining classifications in cases duly appealed to the President.

OPERATIONS

Registration.—Within 5 days after 18th birthday.

Age of liability.—18½ to 26, except the men deferred before age 26 acquire extended liability to age 28 or 35.

Induction.—Men not deferred or exempt, and found qualified after an Armed Forces examination, are reached for induction in the order of their dates of birth in a sequence of priority groups.

Sequence of selection.—Men not deferred or exempt are reached for induction in the following sequence:

1. Delinquents over 19, oldest first.
2. Volunteers 17 to 26 in order of volunteering.
3. Single and married since August 26, 1965, 19 to 26, oldest first.
4. Married on or before August 26, 1965, 19 to 26, oldest first.
5. Over 26, youngest first.
6. 18½ to 19, oldest first.

(In early 1966, local boards were filling calls from the first four categories.)

MAJOR AREAS OF DEFERMENT

1. For satisfactory Reserve participation.
2. For occupation, including study and apprenticeship.
3. For fatherhood and hardship to dependents.
4. For mental, moral, and physical disqualification by the Armed Forces.

Military obligation.—Every person who enters the Armed Forces by any means acquires an obligation for a total of 6 years of service. Active and Reserve.

Inductees: 24 months of active duty, balance in Reserve.

Enlistees (Regular): 3 to 6 years active duty, balance in Reserve. (The law provides for a 2-year Regular Army enlistment.)

Enlistees (Reserve): 6 years including either a minimum of 4 months of active duty for training, or 2 years or more of active duty.

Veterans' exemption.—Discharge after 6 months of honorable active duty for the convenience of the Government, or after 12 months for any reason; and after 6 years of satisfactory Reserve service are the bases for classification by the local board in class IV-A, exempt from induction except in time of war or emergency declared by the Congress.

[No. 47]

SUBCOMMITTEE NO. 3 CONSIDERATION OF H.R. 11509, TO AMEND AND CLARIFY THE REEMPLOYMENT PROVISIONS OF THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT, AND FOR OTHER PURPOSES

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE No. 3 OF THE
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Wednesday, February 23, 1966.

The subcommittee met at 10:15 a.m., in room 2216, Rayburn House Office Building, Washington, D.C., Hon. Melvin Price (chairman of the subcommittee) presiding.

Mr. PRICE. The committee will come to order.

First, I want to apologize for being late, but I had another committee meeting at 9:30, Joint Committee on Atomic Energy, and since they had the klieg lights on I thought it would be well for me to attend.

This morning we will begin hearings with respect to H.R. 11509, a bill designed to clarify the reemployment provisions of the Universal Military Training and Service Act.

(H.R. 11509 reads as follows:)

[H.R. 11509, 89th Cong., 1st sess.]

A BILL To amend and clarify the reemployment provisions of the Universal Military Training and Service Act, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 9 of the Universal Military Training and Service Act, as amended (50 U.S.C. App. 459), is amended as follows:

(1) Amend section 9(c) by adding the following paragraph immediately after paragraph (2):

"(3) Any person who holds a position described in paragraph (A) or (B) of subsection (b) shall not be denied retention in employment or any promotion or other incident or advantage of employment because of any obligation as a member of a reserve component of the Armed Forces of the United States."

(2) Amend section 9(d) by deleting the numeral "(1)" immediately following "subsection (c)."

(3) Amend section 9(g) (1) to read as follows: "Any person who, after entering the employment to which he claims restoration, enlists in the Armed Forces of the United States (other than in a reserve component) shall be entitled upon release from service under honorable conditions to all the reemployment rights and other benefits provided for by this section in the case of persons inducted under the provisions of this title, if the total of his service performed between June 24, 1948, and August 1, 1961, did not exceed four years, and the total of any service, additional or otherwise, performed by him after August 1, 1961, does not exceed five years, provided that the service in excess of four years after August 1, 1961, is at the request and for the convenience of the Federal Government (plus in each case any period of additional service imposed pursuant to law)."

(4) Amend section 9(g) (2) to read as follows: "Any person who, after entering the employment to which he claims restoration enters upon active duty (other than for the purpose of determining his physical fitness and other than for training), whether or not voluntarily, in the Armed Forces of the United States or the Public Health Service in response to an order or call to active duty shall, upon his relief from active duty under honorable conditions, be entitled to

all of the reemployment rights and benefits provided by this section in the case of persons inducted under the provisions of this title, if the total of such active duty performed between June 24, 1948, and August 1, 1961, did not exceed four years, and the total of any such active duty, additional or otherwise, performed after August 1, 1961, does not exceed five years, provided that the active duty performed in excess of four years after August 1, 1961, is at the request and for the convenience of the Federal Government (plus in each case any additional period in which he was unable to obtain orders relieving him from active duty)."

As the members of the subcommittee are aware, the Congress has included in the Universal Military Training and Service Act, as amended, provisions which are designed to guarantee to active and inactive duty service personnel alike, reemployment rights and job protection.

The underlying purpose of these statutory enactments is to preclude penalizing these young men for having entered upon and discharged their military obligation to their country.

Generally speaking, individuals who enter on active duty either voluntary or involuntarily and serve for a period not to exceed 4 years will, upon their return to civilian life, be entitled to return to their previous position of employment without having been penalized in the interim because of their military absence.

The bill before us today proposes to continue that reemployment and job protection by making three changes in existing law.

The first change, as provided by paragraph 1 of the bill, is to clearly establish the intent of Congress that employees with Reserve obligations who are members of a Reserve component of the Armed Forces of the United States shall not, by virtue of such Reserve status, be denied retention in employment or other incident or advantage of employment because of such Reserve status.

The second purpose of the bill is to clarify those provisions of the Universal Military Training and Service Act which provide for court enforcement of reemployment rights and representation by the U.S. attorney in enforcement proceedings.

The final purpose of the bill is to provide that a serviceman may serve up to 5 years on active duty without losing his reemployment rights providing that the service in excess of 4 years is at the request and for the convenience of the Government.

This latter change is particularly pertinent at this time because of the action taken by the Department of the Navy and Marine Corps in urging personnel to voluntarily extend their enlistments during the present Vietnamese crisis.

The law, as amended, now does provide a continuation of reemployment rights for those personnel who are involuntarily extended past the 4-year service point. (Public Law 86-632 and Public Law 87-391). However, no similar provision applies to those young men who have voluntarily responded to the Secretary of the Navy's request that they help meet the Navy's critical manpower requirements by voluntarily extending their period of service beyond their 4-year enlistment. As a consequence, many naval personnel today have unwittingly lost their reemployment rights by voluntarily extending their enlistment beyond the 4-year point of service. This legislation will correct this situation.

For the information of the members, I have attached to this statement a table outlining in summary form the provisions of existing law in respect to reemployment rights and job protection together with those changes proposed by this bill.

(The table referred to is as follows:)

Reemployment rights and job protection

Duty period provided in orders	Category of personnel	Section granting protection under UNT&SA	Present law		Proposed law	
			Maximum periods of military service	Job protection	Additional military service	Job protection
Extended active duty for training and service	Inductee..... Enlistee..... Reservist..... National Guard.....	9(b)..... 9(g)(1)..... 9(g)(2)..... 9(g)(3).....	4 years between June 24, 1948, and Aug. 1, 1961, and 4 years after Aug. 1, 1961. Not applicable..... do..... do.....	1 year..... do..... do..... do..... 6 months..... do..... None..... do.....	1 year if at the request of and for the convenience of Federal Government. No change..... do..... do..... Not applicable..... do.....	No change. Do. Do. Do. Do. Do. Discharge from or discrimination in employment because of membership in Reserve or National Guard prohibited.
Initial active duty for training of not less than 3 consecutive months.	Reservist..... National Guard.....	9(g)(2)..... 9(g)(3).....				
Other types of active duty for training or inactive duty training (drills).	Reservist..... National Guard.....	9(g)(4)..... 9(g)(4).....				

NOTE.—In addition to the above, any person who leaves a position to report for induction into, entering or determining his fitness to enter the Armed Forces, or who is rejected, is entitled to reemployment under sec. 9(g)(5) of the Universal Military Training and Service Act.

This legislation is strongly supported by the executive branch as will be reflected in the testimony we are now to receive from departmental witnesses. The first witness to appear before the subcommittee is Mr. Hugh W. Bradley, Chief of the Bureau of Reemployment Rights, Department of Labor. At the conclusion of Mr. Bradley's testimony we will also receive a statement from Rear Adm. Burton H. Shupper, U.S. Navy, who will appear on behalf of the Department of Defense.

If there is no objection, we will hear testimony from Mr. Bradley.

Mr. Bradley, will you come around, please?

Each member has a copy of Mr. Bradley's statement, of course.

Mr. BRADLEY. Thank you, Mr. Chairman.

Perhaps I should read my prepared statement into the record.

Mr. PRICE. Yes. You may proceed.

Mr. BRADLEY. Thank you, sir.

(The statement of Mr. Bradley is as follows:)

STATEMENT OF HUGH W. BRADLEY, CHIEF OF THE BUREAU OF REEMPLOYMENT RIGHTS, DEPARTMENT OF LABOR

Mr. BRADLEY. Mr. Chairman and members of the committee, it has been my privilege to appear before you on other occasions to present the views of the Department of Labor on proposed amendments to the reemployment rights provisions of the Universal Military Training and Service Act. I appreciate this opportunity to appear before you again for the same purpose.

As you know, a bill identified as H.R. 11509 has been submitted to the Congress by the Department of Labor. It has been cleared by the Department of Defense, the Department of Commerce, the Civil Service Commission, the Selective Service System and the Office of Emergency Planning, and the Bureau of the Budget has advised that, from the standpoint of the administration's program, there was no objection to the submission of the bill to the Congress. The four major veterans organizations have endorsed similar proposals in the past and the American Legion, in its 1965 national convention, adopted resolutions urging the amendments proposed in this bill.

The first provision of the bill deals with a problem that has been increasingly difficult in the past few years. It is designed to enable reservists and guardsmen, who leave their jobs to perform training in the Armed Forces, to retain their employment and to enjoy all of the employment opportunities and benefits accorded their coworkers who do not have military training obligations. The law does not now protect them against discharge without cause as it does with inductees and enlistees, who have 1-year protection, and initial active duty for training reservists, who have 6 months' protection.

To give the reservist a specific period of protection after each tour of training duty would be to perpetuate him in his position indefinitely. The new section 9(c)(3), which the proposed amendments would add to the act, would not follow this approach but instead provides that an employee shall not be denied retention in his employment or any promotion or other incident or advantage of employment solely because of any obligation as a member of a Reserve component of the Armed Forces.

If these young men are essential to our national defense, then certainly our Government and employers have a moral obligation to see that their economic well-being is disrupted to the minimum extent possible. Approval of this amendment is one way of showing our appreciation to those on whom all of us must depend for our military strength in the uncertain years ahead.

The second provision of the bill amending section 9(d) of the act is technical. Deletion of the numeral "(1)" after the words "subsection (c)" makes it clear that the employer is subject to all of the provisions of this subsection.

The third and fourth provisions of the bill amending subsections 9(g)(1) and 9(g)(2) of the act are largely precautionary. The Navy has found it necessary to extend the tours of duty of certain officers and enlisted men to meet its manpower requirements. Conceivably, other branches of the service may find it necessary to encourage voluntary extension of service or voluntary return to active duty for limited periods.

While the Navy and Marine Corps have legal authority to involuntarily extend the service of certain personnel and those who extend under this authority for an aggregate of more than 4 years will have reemployment rights protection, no other branch of the service has this authority. Any extension would be voluntary and those extending for more than 4 years would forfeit their reemployment rights unless section 9(g)(1) of the law is amended. Also, reservists encouraged to voluntarily reenter on active duty in any branch of the service will forfeit their reemployment rights if the aggregate of their service after August 1, 1961, exceeds 4 years, unless section 9(g)(2) of the law is amended.

It is our recommendation that the reemployment rights provisions of the act should be amended to provide permanent flexibility in times of urgency. It should not be necessary to seek new legislation each time a branch of the armed services finds it to be in the national interest to request voluntary extension of service for a reasonable period or to encourage voluntary reentry on active duty for a reasonable period. The bill before you provides this flexibility.

Under the proposed bill, subsections 9(g)(1) and 9(g)(2) would retain the 4-year limitation but on the request and for the convenience of the Government, additional service or active duty not to exceed 12 months could be performed without forfeiting reemployment rights. A serviceman could not serve for more than 4 years solely for his own convenience nor could a reservist return to active duty solely for his own convenience and retain his reemployment rights if his active duty exceeds 4 years.

I thank you, Mr. Chairman and members of the committee, for the attention you have accorded me. I urge that H.R. 11509 be adopted to meet present and future manpower needs of the military without impairing the reemployment rights of servicemen and to provide more flexibility in administering the law.

Mr. PRICE. Thank you very much, Mr. Bradley.

I would suggest that Admiral Shupper come up and sit at the witness table. The members may then direct questions to both gentlemen.

Admiral Shupper might briefly give the position of the Department of Defense and the full statement will be included in the record.

Admiral SHUPPER. Yes, sir.

Mr. PRICE. Then we can direct questions to both of you at the same time if the members so desire.

Admiral SHUPPER. Yes, Mr. Chairman.

Shall I read my prepared statement?

Mr. PRICE. Yes. Is it a lengthy one?

Admiral SHUPPER. No, sir.

Mr. PRICE. Then I suggest that you read your statement. Go ahead, Admiral.

Admiral SHUPPER. Yes, sir.

STATEMENT OF REAR ADM. BURTON H. SHUPPER, U.S. NAVY

Admiral SHUPPER. Mr. Chairman and members of the committee, I am Rear Adm. Burton H. Shupper, Assistant Chief of Naval Personnel for Plans and Programs. I am representing the Department of Defense on this legislation and it is a pleasure for me to appear in support of H.R. 11509.

In the field of reemployment rights the Department of Defense recognizes the two major interests involved: That of the employer on the one hand, and that of the employee on the other. Injected into these two interests is that of the military. Since 1961 the world situation on three occasions has dictated a rapid buildup of our military forces to cope with an urgent military problem beyond our shores. In 1961 it was Berlin. In 1962 Cuba. Now it is Vietnam.

As I am sure you know, Navy manpower requirements directly related to the southeast Asia situation have necessitated an increase in current Navy strength. Our requirements had to be met in both quantity and quality. The Navy Recruiting Service, even with support from Selective Service, could meet these requirements only in quantity and at best by the end of this fiscal year.

To gain necessary petty officer quality in addition to quantity in a timely manner it became necessary for the Navy to institute involuntary extensions of Regular Navy enlistments for 4 months as a minimum measure.

This action was to enable the Navy to meet its manpower requirements during the interim period necessary for building up our manpower base in petty officers as well as our total manpower numbers. The 4 months involuntary extension for Regular Navy personnel was instituted only after a determination that other available resources were not able to meet our new requirements in numbers and experienced quality within the time frame available. We have no plans to impose additional obligations beyond the 4 months presently added to enlistments, and we plan to terminate the extensions at the earliest practicable date consistent with our ability to meet operational commitments. All that I have said here is equally applicable to the Marine Corps.

In our action to involuntarily extend enlistments we are continuing to accept extensions of enlistments. Naturally, we prefer to permit our people to go on record as serving voluntarily. We, of course, continue to hope for voluntary extensions in excess of 4 months to reduce the need for involuntary extensions and to see us through this period.

As we understand present law, periods of additional service imposed pursuant to law are excluded from aggregate service in determining eligibility for reemployment. Thus the man who is subjected to an

involuntary extension suffers no loss of reemployment rights as a result of service under that extension. The volunteer serving alongside the man who did not volunteer, however, may lose his reemployment rights as a result of his voluntary additional service.

Our position, simply stated, then, is that in these times of urgency short of full mobilization we prefer, insofar as possible, to encourage and rely on the volunteer, keeping our need for the nonvolunteer as low as possible. We do not like to see the volunteer penalized in any respect. Under present law on reemployment rights, however, the nonvolunteer receives a reemployment protection that is not afforded the volunteer. It is our understanding that this proposal will afford the protection needed by those who have chosen to extend their active duty obligations voluntarily to meet our pressing and urgent needs.

I might add that although the Navy and Marine Corps are the only services which have resorted to involuntary extensions of enlistments, all services are desperately trying to keep skilled manpower on active duty and to persuade certain skills in our reserve community to volunteer for active duty. It is entirely possible that the possibility of loss of reemployment benefits might discourage some personnel on active duty from extending their active duty or discourage the Reserve on inactive duty from volunteering for additional active duty. Inasmuch as this bill, with its extension of reemployment benefits for an additional year of service, would encourage such personnel to serve additional periods of active service, all services would be benefited.

The other aspect of H.R. 11509 is the provision that employees shall not be denied retention in employment or advantages of employment because of any obligation as a member of a Reserve component of the Armed Forces. After the Berlin and Cuba callups we received information from our Reserve community that a significant number of reservists were receiving indications that opportunities for advancement and retention in civilian employment would favor those who appear to offer their employers more continuity of services, namely those in the Standby Reserve or those with no Reserve status. In fairness, we must emphasize that this reaction on the part of employers appears to be the exception not the rule and, we believe, is generally not based upon unpatriotic motives but rather on the competitive spirit of business.

In the light of present-day world conditions this attitude, however understandable, is contrary to the public interest and is inconsistent with the ideals of patriotic service and traditional participation in national defense of which our reservists can be justly proud. We feel that the enactment of H.R. 11509 will be of great assistance in our efforts to educate and indoctrinate public opinion in the vital importance of a trained Reserve to the safety of our Nation.

That concludes my prepared statement, Mr. Chairman. I shall be happy to try to answer any questions you may have.

Mr. PRICE. Thank you very much, Admiral.

Mr. O'Konski, do you have any questions?

Mr. O'KONSKI. No.

Mr. PRICE. Mr. Ichord, any questions?

Mr. ICHORD. Mr. Chairman, it sounds like a very good bill to me. I am for it.

Mr. PRICE. Dr. Hall?

Mr. HALL. Mr. Chairman, I have been cognizant of this problem for a long time, both from the point of view of the committee and as a former personnel officer and specifically as a result of complaints of some of the reservists in my district. I think I could document many letters referring to what the admiral mentioned after the Berlin callup; corporations of national stature who happen to be located in the district that I represent were found easing out or dropping people in Ready Reserve status. This of course has flared into the open again as a result (a) of the Navy and Marine Corps involuntary or voluntary extensions and (b) because of the possibility of a general callup.

Now, I have two questions and I would just as soon both of you would comment on them, both Mr. Bradley and Admiral Shupper.

I think this committee is acutely aware of the fact that there have been people called up and Selective Training and Service Act used for individual filler-trainees and replacements in the line, not necessarily in just the Navy or the Marine Corps, but as you say, this backs up voluntary enlistments in the Navy and the Air Force; rather than calling up Ready Reserve units as indeed was done during the Berlin beefup.

Is this bill, if passed, H.R. 11509, in anywise an additional ruse—and I use the word advisedly—on the part of the Secretary of Defense to keep on active duty people other than petty officers for key, essential positions in the military, rather than resort to calling up the Ready Reserve, the trained Reserve or those that we have spent millions of dollars on in training, simply because the Reserve is being eliminated or dissolved or reassigned by the Secretary of Defense?

Admiral SHUPPER. No, sir, I don't think it is a ruse at all. I think that, naturally, the Department of Defense would like to have key personnel who are in the Reserve on active duty remain to tide us over this period. We do not—

Mr. HALL. If they need them that bad, Admiral, why don't they call up the other reservists and guardsmen that are trained and rotate those that have served 4 years or over in these key spots?

Admiral SHUPPER. Well, sir, it is a matter of having the bird in the hand and it is less disruptive to a man's life to have him voluntarily extend than to call somebody involuntarily who is in civil life and would have to disrupt his entire life to come on active duty.

Mr. HALL. It is also a matter—we didn't consider that in the Berlin beefup. It is also a matter, is it not, Admiral, of having made an unfortunate guesstimate 2 to 3 months before the escalation as a result of the Bay of Tonkin, that we would dissolve the Reserve and therefore embarrassing to have to call them up?

Admiral SHUPPER. Well, sir, I am not in a position to answer that question.

Mr. HALL. You are the personnel officer representing the Department of Defense, aren't you, manpower utilization officer?

Admiral SHUPPER. Yes, sir, but there was no decision made to dissolve the Naval Reserve and no decision made to dissolve the Marine Corps Reserve or the Air Force Reserve as far as I know.

Mr. HALL. Well, let me reframe the question, Admiral. And I want to reassure you again that I am not picking at you personally.

Admiral SHUPPER. Yes, sir, I understand.

Mr. HALL. I do think this point needs to be made in consideration of this legislation. And I want to go one step further and say that I will probably support this legislation because I do know the need for retaining beyond a stipulated time of active duty certain skilled people, electronics, even a good skilled boatswain's mate now and then, or particularly I should say a good skilled boatswain's mate and so forth. And I think I understand the purpose of this bill. But I think in all fairness you can see also that in the congressional responsibility and protecting of the individual and the public that this could get pretty hairy if such legislation is used to continue a policy that is based on internecine or interdepartmental politics or strongman's misstatement rather than equity and justice in callup and/or rotation of personnel. Isn't that a simple, fair statement?

Admiral SHUPPER. Yes, sir; but I don't think that there is any internecine conflict on this. I think all the services desire to try to meet the situation with volunteers if possible. If the situation develops to the point where we cannot, we will naturally have to call the Organized Reserve.

Mr. HALL. Exactly, and I would like very much for you to be able to do that.

I again want to make it clear that I have no sympathy with the employer who doesn't protect the reservist. I was protected for over 8 years when I was on active duty as a reservist by the organization that I left and returned to, despite other opportunities after World War II. And I don't have much respect for big national corporations that are weeding out reservists who participate in a Ready Reserve. This bill would help to correct that, that is why I am for it. But in another context, let me ask you this rather blunt question: Would a declared emergency, either presidential or congressional, solve this problem and preclude the necessity of such legislation as H.R. 11509, Admiral?

Admiral SHUPPER. No, sir, because a declared emergency would aim at something else. We would still desire to retain voluntarily anyone that we could in preference to having to involuntarily call reservists either in organized units or as augmentation.

Mr. BRADLEY. Maybe I should add to that.

Mr. HALL. Yes, I hoped you would comment on this.

Mr. BRADLEY. On the first part of your question, I should say these amendments originated in the Department of Labor, not in the Department of Defense. We requested the Department of Defense—

Mr. HALL. I understand it is your bill.

Mr. BRADLEY. It is our bill, submitted by us.

Mr. HALL. Submitted by the chairman.

Mr. BRADLEY. And not originating with the Department of Defense with the idea of attempting to keep people in that maybe did not need to be kept in.

With respect to the second question, even if you have a joint resolution and a callup of Reserves, a Reserve who has already served for as much as 4 years, if recalled, would not have reemployments rights under section 9(g)2 unless this bill is amended. So it is very important that this amendment go through, whether you call up or whether you do not.

If a reservist is called up who has not completed 4 years of service, he would be protected. But if he has already completed his 4 years of service for an absence from a single employer during that period of time, a callup, this legislation would be necessary to protect him.

Mr. HALL. I think that is a very excellent point and I thank you. Mr. Chairman, I think I have no other questions.

Mr. PRICE. Thank you.

Any other questions, any member of the committee?

Mr. HICKS. Mr. Chairman.

Mr. PRICE. Mr. Hicks.

Mr. HICKS. This chart that you included here, does this all boil down to the fact that you are adding 1 year and that is all?

Mr. BRADLEY. Not to exceed 1 year.

Mr. HICKS. Over the present law.

Mr. BRADLEY. Not to exceed 1 year, but it cannot be at the convenience of the individual, it must be at the convenience of the Government.

Mr. HICKS. Thank you.

Mr. LOVE. In that connection, what is the total time of protection?

Mr. BRADLEY. Four years in the law. This would give an additional 12 months where it was at the convenience of the Government.

Mr. LOVE. That is a total of 5 years.

Mr. BRADLEY. A total of not to exceed 5 years.

Mr. LOVE. Not to exceed five.

Mr. PRICE. They are already protected up to four.

Mr. BRADLEY. We are dealing here with anything that took place after 1961. In 1961 we added an additional 4 years, which terminated in 1965, now you go back to 1961 with this.

Mr. LOVE. It would be a total of 9 years.

Mr. BRADLEY. With the 1961 amendment actually a person could serve 8 years and still be protected under that type of amendment. This is different. This adds only 1 additional year.

Mr. PRICE. Governor Stafford.

Mr. STAFFORD. I have no questions, Mr. Chairman.

Mr. PRICE. I think counsel has one or two questions.

Mr. SLATINSHEK. In connection with the latter subject, the protection of reservists who are perhaps involuntarily called or voluntarily enlist, can you define for purposes of the record what "convenience of the Government" means?

In other words, let's assume I am a reservist in the Army, I volunteer for a period of 1 year because of the Vietnamese crisis, would I be covered?

Mr. BRADLEY. Repeat that, please.

Mr. SLATINSHEK. I am a reservist on inactive duty in the Army Reserve and I feel that my services are necessary and apparently there is a critical skill shortage in my MOS and I decide to volunteer for 1 year's service. Would I be protected?

Mr. BRADLEY. You would be protected.

Mr. SLATINSHEK. And for the legislative record here, what determinant would be "at the convenience of the Government"? Does this require some sort of statement on the part of the Department of Defense? At what point will extensions of enlistments for up to 12

months be covered by this provision of law, if you understand what I am trying to say?

Mr. BRADLEY. It would have to be at the request of the military that the additional service be performed and somewhere on the DD-214 or the individual's records it would show that he was requested by the military to voluntarily extend. That is all we would need.

Mr. PRICE. In connection with that, then the mere orders of the military to extend his service for 4 months, for instance, would be——

Mr. BRADLEY. We would construe that——

Mr. PRICE (continuing). For convenience of the Government?

Mr. BRADLEY. We would construe it as for the convenience of the Government.

Mr. SLATINSHEK. Would this apply retroactively to those in the Army or Air Force who voluntarily extended for 12 months if this is enacted?

Mr. BRADLEY. If this is enacted I think it could be construed as retroactive to cover those who have already extended their service 4 months.

Mr. SLATINSHEK. I have reference to those who passed the 4-year active duty point but due to the Vietnamese crisis and persuasion of their superiors they decide to extend for a year.

Mr. BRADLEY. This would cover them up to the 1 year.

Mr. SLATINSHEK. That also would apply to the Navy, all those naval personnel who voluntarily extended in response to the request of the Secretary?

Mr. BRADLEY. Yes, sir.

Mr. SLATINSHEK. Do you have any idea of the number of Navy personnel who might be extended, that is, those who voluntarily extended and those who in the absence of this legislation would be adversely affected?

Admiral SHUPPER. Yes, sir, it is a little difficult to pin them down because the involuntary extension was put on in September. But between the 10th of May, which was the date that the Secretary sent his message requesting voluntary extensions and the 15th of September which was the date that the involuntary extensions were put on, we had 1,031 enlisted voluntary extensions in response to the Secretary's request and 251 officers. After the 15th of September to the present date we have had 7,403 voluntary extensions. However, these are not broken down as to whether they were in response to the Secretary's request or for other reasons.

Mr. SLATINSHEK. Thank you, Admiral.

To further clarify the record, the term "extension for convenience of the Government" can in other words be very liberally construed. Any evidence which indicates that the member had voluntarily extended due to a request from the military would constitute satisfaction of this criteria which is contained in the law?

Mr. BRADLEY. That is right. We would need something from the military in writing in his record and that would be sufficient for our purposes in the reemployment rights.

Mr. SLATINSHEK. I have one other question concerning the language in the first change that you propose in the bill, and this relates to the term "obligation" of a member of a Reserve component. This is the change that you propose to provide job retention rights to reservists

who are presumably on inactive duty and who participate in drills and who participate in training operations and this is to preclude the employer from arbitrarily discharging them because of their Reserve affiliation.

Now the expression that you use in the law here, and I will read it for the benefit of the members of the committee:

Any person who holds a position described in paragraph (A) or (B) of subsection (b) shall not be denied retention in employment or any promotion or other incident or advantage of employment because of any obligation as a member of a Reserve component of the Armed Forces of the United States.

Can you tell the committee whether the term "any obligation as a member of a Reserve component" is limited to the statutory Reserve obligation which, as we all know, is the 6-year period, or does this extend beyond that?

MR. BRADLEY. This covers all reservists and guardsmen who are covered in section 9(g) (4) of the act, which means that the ready reservist would be covered just like the active reservist.

MR. SLATINSHEK. In other words, this language here would provide job retention rights, if you will, to a reservist who has satisfied his statutory Reserve obligation but who voluntarily participates in the Reserve program and has made himself available as a member of the Reserve components and has executed presumably a Ready Reserve agreement, so therefore career reservists are given job retention rights under this language if it is enacted into law?

MR. BRADLEY. That is correct, anyone in any Reserve component or the National Guard, irrespective of whether it is active or inactive Reserve duty, or, as you say, Ready Reserve, is covered in 9(G) (4) and would be covered in this amendment.

MR. SLATINSHEK. Let's assume again for the record that I am an employee of a defense industry, an aircraft company, and I have a very responsible position and my employer—and at the same time I am a member of the Reserve. My employer feels that my Reserve participation is affecting his capabilities and requests or directs that I leave the Reserve program and in the absence of my doing so that he, of course, will discharge me from my employment. Under the circumstances that I have related, do you feel that you could properly employ the provisions of this law to restore him to his job in the absence of any showing that the discharge of the employee was due to something other than his Reserve affiliation?

MR. BRADLEY. Well, there would have to be some evidence that the discharge was due to his military obligation. We run into this very frequently right now as a matter of fact.

MR. SLATINSHEK. In that connection, may I interrupt you, I gather from reading the language here that it is a show cause affair? In other words, the burden is on the employer to show that he discharged the man for cause?

MR. BRADLEY. For reasons unrelated to his military obligation.

MR. SLATINSHEK. Precisely, so the burden is not on you or on the service, it is on the employer?

MR. BRADLEY. That is right. He would have to show the evidence. If he can show the evidence and it is acceptable, why then there is no protection. If he cannot, there is protection.

Mr. SLATINSHEK. One further point for the record: This provision of law applies in sections A and B to both private industry and the Federal Government?

Mr. BRADLEY. Federal Government, yes, sir.

Mr. SLATINSHEK. So an employee of the Federal Government would have the same job protection rights and could protect his Reserve interests in the same manner?

Mr. BRADLEY. It would, yes. That, however, would be a determination, with respect to the Federal employee, would be with the Civil Service Commission, not with our Bureau.

Mr. PRICE. Has the Bureau of Veterans Reemployment Rights received any complaints during the present emergency?

Mr. BRADLEY. During the present emergency and for a considerable period before it we received complaints almost every day of one type of thing or another. Of course sometimes the complaint is not justifiable, but we have a file full of complaints of one sort or another on this.

Mr. PRICE. You have seen sufficient justification to ask for the action that you have requested—

Mr. BRADLEY. Yes, sir.

Mr. PRICE. Through this legislation?

Mr. BRADLEY. Yes, sir.

Mr. PRICE. Thank you.

Mr. HALL. Mr. Chairman, at that point could I ask Mr. Bradley if he has received any complaint from Congressmen that are patriotic, willing, and signed-up members of the Reserve about Mr. McNamara's decision to place them in the Standby Reserve, thus violating their individual rights?

Mr. BRADLEY. We have received no complaints from Congressmen on that question.

Mr. HALL. You had better hold on tight.

Mr. PRICE. Thank you very much, Mr. Bradley and Admiral Shupper.

Mr. BRADLEY. Thank you.

Admiral SHUPPER. Thank you.

Mr. PRICE. If there is no objection, since we have the approval of the Department of Labor and the Defense Department on the legislation and by almost every veterans' organization, I think we all recognize the importance of it. Without objection the bill will be referred to the full committee with the approval of the subcommittee. Counsel will be authorized if there are any technical corrections required to make those corrections.

Without objection it is so ordered.

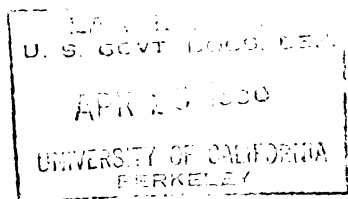

The subcommittee will now go into executive session.

(Whereupon, at 11:55 a.m., the subcommittee went into executive session.)

FULL COMMITTEE CONSIDERATION OF H.R. 11509, TO AMEND AND CLARIFY THE REEMPLOYMENT PROVISIONS OF THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT, AND FOR OTHER PURPOSES; AND PROPOSED AMENDMENT TO H.R. 12889, TO AUTHORIZE APPROPRIATIONS DURING THE FISCAL YEAR 1966 FOR PROCUREMENT OF AIRCRAFT, MISSILES, NAVAL VESSELS, TRACKED COMBAT VEHICLES, RESEARCH, DEVELOPMENT, TEST, EVALUATION, AND MILITARY CONSTRUCTION FOR THE ARMED FORCES

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Tuesday, March 1, 1966.

The committee met at 10:17 a.m., Hon. L. Mendel Rivers (chairman) presiding.

The CHAIRMAN. Let the committee come to order.

Gentlemen, this morning we have two things I want to bring to the attention of the committee. The first is a report from Mr. Price's subcommittee on H.R. 11509, and, Mr. Price, I am going to ask you to make a report from your committee on that bill, please, sir.

Mr. PRICE. Are you ready for it now?

The CHAIRMAN. Yes, sir.

Mr. PRICE. Mr. Chairman, in accordance with your direction, Subcommittee No. 3 met on February 23, 1966, for the purpose of considering H.R. 11509

H.R. 11509 is a bill designed to clarify the reemployment provisions of the Universal Military Training and Service Act. As the members of this committee are aware, the Congress has since 1940 included in its selective service legislation appropriate provisions protecting the reemployment rights of veterans. The principle underlying this legislation is that he who is "called to the colors (is) not to be penalized on his return by reason of his absence from his civilian job" (*Fishgold v. Sullivan Drydock and Repair Corporation*, 328 U.S. 275). These provisions of law are, therefore, designed to guarantee to active and inactive duty service personnel alike reemployment rights and job protection.

Generally speaking, individuals who enter on active duty either voluntarily or involuntarily and serve for a period not to exceed 4 years will, upon their return to civilian life, be entitled to return to their previous position of employment without having been penalized in the interim because of their military absence.

The bill before us today proposes to continue that reemployment and job protection by making three changes in existing law.

The first change, as provided by paragraph 1 of the bill, is to clearly establish the intent of Congress that employees with Reserve

(5323)

obligations who are members of a Reserve component of the Armed Forces of the United States shall not, by virtue of such Reserve status, be denied retention in employment or other incident or advantage of employment because of such Reserve status.

The second purpose of the bill is to clarify those provisions of the Universal Military Training and Service Act which provide for court enforcement of reemployment rights and representation by the U.S. attorney in enforcement proceedings.

The courts have made it clear that section 9(d) applies without distinction to the reemployment rights set forth in both sections 9(c) (1) and 9(c) (2), even though section 9(d) now makes reference only to section 9(c) (1). The amendment will remove any possible doubt as to the application of section 9(d) to section 9(c) (2).

The final purpose of the bill is to provide that a serviceman may serve up to 5 years on active duty without losing his reemployment rights providing that the service in excess of 4 years is at the request and for the convenience of the Government.

This latter change is particularly pertinent at this time because of the action taken by the Department of the Navy and Marine Corps in urging personnel to voluntarily extend their enlistments during the present Vietnamese crisis.

The law, as amended, now does provide a continuation of reemployment rights for those personnel who are involuntarily extended past the 4-year service point (Public Law 87-391). However, no similar provision applies to those young men who have voluntarily responded to the Secretary of the Navy's request that they help meet the Navy's critical manpower requirements by voluntarily extending their period of service beyond their 4-year enlistment. As a consequence, many naval personnel today have unwittingly lost their reemployment rights by voluntarily extending their enlistment beyond the 4-year point of service. This legislation will correct this situation.

This bill is a legislative recommendation to the Congress by the U.S. Department of Labor. It has been cleared by the Department of Defense, the Department of Commerce, the Civil Service Commission, the Selective Service System, the Office of Emergency Planning, and the Bureau of the Budget.

In addition, this bill is strongly supported by four major veterans' organizations who have urged Congress to expedite action on this necessary legislative change.

In short, this bill has the unanimous endorsement of all interested parties and the subcommittee is unaware of any opposition to it.

The subcommittee received testimony from representatives of the Department of Labor and the Department of Defense; and after extensive questioning, was satisfied that enactment of the legislation is necessary and desirable. Therefore, the subcommittee unanimously recommended that it be reported favorably to the full committee without amendment.

At this point, it should be noted that there is a slight inconsistency in the law in respect to the job protection rights of Federal employees vis-a-vis the job protection rights of other employees. This inconsistency arises out of a provision of the law contained in title 5, section 30r(b) of the United States Code which grants job restoration rights to reservists and National Guard personnel who are Federal

employees without reference to a specific time limitation, whereas the provisions of section 9(g) (2) of the Universal Military Training and Service Act provides a specific time limitation as previously indicated.

This inconsistency in the law is one of relatively long standing. However, since it is a matter primarily under the jurisdiction of the Post Office and Civil Service Committee, the subcommittee took no action in respect to it. It is recommended, however, that appropriate mention of this inconsistency be made in the committee report so as to alert the Post Office and Civil Service Committee to the desirability of effecting an appropriate legislative change in title 5, United States Code, section 30r(b), so as to make it conform to the time limitations expressly set out in section 9(g) (2) of the Universal Military Training and Service Act.

If there are no questions, I move approval of H.R. 11509 without amendment.

Mr. BATES. Mr. Chairman.

The CHAIRMAN. Mr. Bates.

Mr. BATES. The whole weight of this apparently turns on the language "at the request and for the convenience of the Government."

Mr. SLATINSHEK. That is right.

Mr. BATES. Now, under what circumstances do we find these conditions present? Is there any question?

Now, for instance, this week Frank and I had a case on voluntary extensions on active duty of commissioned reservists who under present arrangements could be retained on active duty for a period of 40 years. There is no way for them to get out. Now, this is at the request and for the convenience of the Government. Now, is this clearly spelled out?

Mr. SLATINSHEK. Yes.

Mr. PRICE. I would say that we developed that fully in the subcommittee, and the counsel took express pains to make certain that we developed this point.

I will let the counsel, Mr. Slatinshek, explain what happened in the subcommittee in connection with this point.

Mr. SLATINSHEK. The essence of the reply from Mr. Bradley, who is the chief in charge of reemployment rights, is that any evidence that the extension is for the convenience of the Government would satisfy. This evidence would be something contained in the man's record. It would indicate that the Government had requested in one form or another that he extend, and in pursuing this further I established the fact that for practical purposes everyone who has voluntarily extended during this present Vietnamese crisis would fall under this criterion. The only possible disability here is that the services will have to make certain that something does appear in the man's record to reflect this fact.

Mr. BATES. How about reenlistment, is that for the convenience of the Government, a regular reenlistment? Is this for the convenience of the Government?

Mr. SLATINSHEK. Well, again, we have the time factor here, Mr. Bates. This would, of course, encompass only a maximum period of 5 years after 1961. In other words, if the reenlistment period went beyond the total 5-year period, of course he would not be covered; he would lose his reemployment rights.

Mr. BATES. This won't cover anything in excess of the 4-year period?

Mr. SLATINSHEK. A total in excess of 5 years after 1961.

Mr. BATES. You feel that it is tied down?

Mr. SLATINSHEK. Yes, sir; it is tied down.

The CHAIRMAN. Now, I would like to ask one question. This *Fish-gold* case would lead to the Supreme Court?

Mr. SLATINSHEK. Yes, sir.

The CHAIRMAN. So that is the law?

Mr. SLATINSHEK. Yes, sir.

The CHAIRMAN. Now, these who have unwittingly lost their re-employment rights, this thing is retroactive?

Mr. SLATINSHEK. It is.

The CHAIRMAN. They can be restored?

Mr. SLATINSHEK. It is.

The CHAIRMAN. If this be done?

Mr. SLATINSHEK. Yes, sir. We interrogated the witness on this particular point also, and he indicated that this would be retroactive to certainly cover the Navy people, and the witness was of the opinion that it would also cover Air Force and Army people who voluntarily enlisted as a patriotic gesture during this period, providing it comes within the time frame in the law.

The CHAIRMAN. This phrase, Mr. Bates has used, "for the convenience of the Government," assures them their reemployment rights?

Mr. SLATINSHEK. That is correct.

The CHAIRMAN. And it comes within that interpretation of the law?

Mr. SLATINSHEK. Criterion; yes, sir.

The CHAIRMAN. Any other questions by any members of the committee?

Mr. EVANS?

Mr. EVANS. Mr. Chairman, I had one question.

In the explanation I notice on the bottom of the first page it speaks of employees with Reserve obligations who are members of a Reserve component of the Armed Forces of the United States. Does this include the National Guard?

Mr. SLATINSHEK. Yes, it does. The term "Reserve components" includes the National Guard.

Mr. EVANS. Does this in any way involve the matter of weekly or monthly—pardon me, annual duty?

Mr. SLATINSHEK. Yes, it does. Existing law does cover this aspect of military service. The witness was interrogated at length in respect to this, and this goes beyond the obligated service. The term "obligation" was explored, and the term "obligation" as used in the law means something beyond the 6-year Ready Reserve obligation.

It also includes and encompasses people who voluntarily execute a Ready Reserve agreement, and thereby acquire an obligation to continue to participate in the Reserve. These, too, would be covered. So, in effect, it covers ready reservists for the total time period they are in the Reserve.

Mr. EVANS. One other question, Frank, and that is, these men in the Navy who voluntarily extended their enlistments, for what period have they extended their enlistments?

Mr. SLATINSHEK. This varied according to the individual.

Mr. EVANS. Can it be for 6 months, 9 months, a year, a year and a half?

Mr. SLATINSHEK. It could be for any of those periods. Now, the total time frame, of course, of 5 years will apply. If he goes beyond the 5-year point he will necessarily lose his reemployment rights, the theory here being that although there is an effort to assure the individual that when he returns to civilian life he will have his employment waiting for him; on the other hand, the employer must be considered in this equation, also.

Mr. EVANS. I understand that.

Mr. SLATINSHEK. If this period is protracted—

Mr. EVANS. I was wondering what periods of time these individuals in the Navy and Marine Corps had signed up for.

Mr. SLATINSHEK. Varying periods. But if the total period of active service since 1961 is not more than 5 years, they are protected.

Mr. EVANS. Thank you.

The CHAIRMAN. Without objection.

Mr. STRATTON. Mr. Chairman, could I ask one question on that last point?

The CHAIRMAN. Mr. Stratton.

Mr. STRATTON. Suppose we get into a lengthy conflict in Vietnam, as we may be doing, suppose someone whose enlistment is coming up extends for a year, and then suppose there is a requirement for increased service in Vietnam, does the automatic termination of this 5-year point mean that he then loses everything if he goes beyond the 5 years?

Mr. SLATINSHEK. He will lose it unless the Government requires that he remain on active duty.

Mr. STRATTON. In other words, if there is a provision that he has to stay in for the duration, then he will continue to maintain his rights?

Mr. SLATINSHEK. Yes. These reemployment rights, of course, continue during any period of extended involuntary service. This was a change made in the law during the Berlin crisis.

Mr. STRATTON. I understand. Thank you.

The CHAIRMAN. Without objection, Mr. Price will report the bill, a quorum is present.

Do we have to go before the Rules Committee on this?

Mr. PRICE. I wouldn't think so.

The CHAIRMAN. There is no money in it.

Mr. PRICE. There is no cost involved. It might very well go on the Consent Calendar.

The CHAIRMAN. You put it on the proper calendar, and you handle it on the floor, Mr. Price.

Now, on the bill before the House today, the committee adopted an amendment proposed by the distinguished gentleman from Virginia, Mr. Hardy, which has caused DOD some problems because of certain unforeseen emergencies and other problems arising in the construction area in Vietnam, and in all southeast Asia, particularly Vietnam.

General Wheeler has been concerned about it, and has talked with us this morning about it, and I understand it. It is Mr. Hardy's amendment. So I think now that Mr. Hardy and General Wheeler and Mr. Blandford have worked out something under which the committee can be kept fully informed on expenditures so that there

be no blank check concept, for all this money appropriated, and for all intents and purposes our committee would otherwise only be informed after the fact. I understand now that Mr. Hardy and General Wheeler, who is here, have worked out something, and, Mr. Blandford, you report it. Is this a fact?

Mr. HARDY. Mr. Chairman, I think in discussing the matter with General Wheeler, I can see some problems in certain words in the original language, and I think we have worked out language which will accomplish the intent of the other language which ought not to present any undue burden on the Department, or cause any delays. The delays is the thing that has apparently disturbed them.

Mr. Blandford has the language that we worked out, and if you will permit I will ask him to read it.

The CHAIRMAN. Because the Secretary of Defense has assured us, before the committee, and again this morning, and so has General Wheeler representing the highest echelon of our military, that we will be kept fully informed. The committee certainly has no intention of delaying anything, and we feel pretty confident, very confident, that the Department of Defense will keep us fully informed about the modus operandi and the progress of these things as they come about.

Mr. Blandford, you read what they worked out.

Mr. BLANDFORD. Yes, sir. The original language is 401(b) and I will read the original language, and this would be offered on the floor this afternoon as a substitute for the original language which was adopted by the committee.

401(b). The Secretary of Defense shall furnish to the Armed Services Committees of the Senate and House of Representatives a description of each project, together with full and complete justification therefor, including a cost analysis thereof, prior to the execution of any contract for the establishment or development of a military installation or facility, whenever it pertains to the acquisition, construction, conversion, rehabilitation, or installation of permanent or temporary public works, including land acquisition, appurtenances, utilities, and equipment, the moneys for which are authorized to be appropriated by this Act.

Now, as the chairman has indicated, this could possibly create some very serious delays in construction. Some of these are words of art, and we have worked out the following language. What the Senate will do with this I cannot tell you at this time, but this is the language that we worked out as a substitute for 401(b), which will provide us with the information which we think the committee wants.

First, let me explain that under the directive that has been established for the first time, I guess, in history, these construction projects in Vietnam will not be cleared with OSD. They will only be cleared in categories. For example, JCS will approve airfields as a category, but in Vietnam, they will determine where the airfield will go, and the priority of construction. And there will be lump-sum categories.

General Wheeler, will you correct me whenever I am wrong in this explanation?

General WHEELER. That is absolutely correct.

The CHAIRMAN. The complex of the war can change so fast you will have to leave this discretionary power to the man in charge, to wit, General Westmoreland.

General WHEELER. That is correct.

Mr. BLANDFORD. Because of this, and because the Department of Defense is not directing this construction but General Westmoreland is, we have written this language change for 401(b) :

The Secretary of Defense shall furnish to the Committees on Armed Services of the Senate and House of Representatives a description of all construction projects, including cost estimates and periodic reports, made available to the Secretary of Defense simultaneously with the receipt of such information from the persons responsible for the construction of such projects in support of Vietnamese and other free world forces in Vietnam.

So far that means that we will get whatever the Department of Defense gets.

Now, this is the add-on :

Whenever such construction projects, involving \$1,000,000 or more, are performed by private contractors, the Secretary of Defense or his representative in Vietnam,

and at this moment that is General Westmoreland,

shall report to the Committees on Armed Services of the Senate and House of Representatives the name or names of such private contractors, the amounts involved in each contract, and a copy of the report in support of each progress payment and a complete report prior to final payment.

The CHAIRMAN. That looks like it accomplishes it.

Mr. HARDY. Mr. Chairman, I think that language is good and actually it will give us as good control as we would have had under the other language without providing for any delays that the Department is concerned with.

The CHAIRMAN. I don't see how that can hurt you, General Wheeler.

General WHEELER. I believe that will take care of it, Mr. Chairman. I don't see any difficulty with that.

The CHAIRMAN. If we do have any difficulty we will take another look at it.

General WHEELER. We will come back and see the committee again if there are any problems.

The CHAIRMAN. Do this as fast as you can.

General WHEELER. I will, indeed. I would like to thank the chairman and the members of the committee for their consideration of this matter which is most important to our effort in Vietnam.

The CHAIRMAN. Thank you.

Mr. BATES. We want to cooperate in every respect, but I wonder if you would review for us exactly how this will happen. General Westmoreland, we will say, wants an airfield.

The CHAIRMAN. You can sit down here, if you want to.

Mr. BATES. Let us run through this, because I didn't quite—

The CHAIRMAN. Just take a project.

Mr. BATES. In association with large projects, because a lot of planning must be done, and someone must be told to do it at some place at some time.

The CHAIRMAN. To begin with it is categories.

General WHEELER. The categories are major items such as an airfield, a port, or something like that.

Mr. BATES. Tell us why this is necessary in the case of an airfield.

General WHEELER. I can give you an example of an operation we have been going through out there in recent weeks. This is the estab-

lishment of a new airfield in South Vietnam. We have had difficulty in finding a location, a proper location, for an airfield, because we have found, or General Westmoreland and his people have found, it is desirable to have an airfield and a port in contiguity to each other in order to facilitate supply and so on.

Actually, in an effort to find this new airfield, Westmoreland has had surveys made of about five different locations. He has now recommended [deleted] as being the best location for this next airfield which we will build.

Now, he has come in through CINCPAC to the JCS making a recommendation that he be authorized to build an airfield at [deleted]. He will get this authorization. I mean this is actually pro forma. We are not in any position to second-guess him on this.

Now, as to why there might have to be changes made and the reasons the Joint Chiefs of Staff recommend a relaxation of DOD control: A recent instance, and a major instance, is the airfield or airbase that we are constructing at Cam Ranh Bay. This airbase was designed to have, first, an assault strip, a temporary strip made of aluminum matting, and then somewhat later they were going to start work on a permanent runway there. It would be a major piece of construction. This was all laid down, the directive had been issued, and then Westmoreland's construction people came to him and stated that they recommended that the priority to be given to the permanent runway be transferred to a priority for the roads in the Cam Ranh Bay area because of the very deep sand there. As I know many members of this committee know, these deep sands are actually hampering his ground operations. His air operations are going fine from the temporary strip. Therefore, General Westmoreland issued instructions to change priority from the permanent runway to the road facilities in order to get the aggregate to provide proper roads.

As soon as the roads are in fair shape he will put the priority back on the permanent runway again.

Now, this is the type of thing that General Westmoreland is faced with out there, and this language here is designed to give him operational flexibility.

Mr. ARENDS. Mr. Chairman, I move the adoption of the amendment to be offered by the chairman as an amendment on the floor to the bill.

The CHAIRMAN. Without objection.

Thank you very much, General Wheeler.

General WHEELER. Thank you, Mr. Chairman, and I thank the committee.

(At this point the committee proceeded to other business.)

STATEMENT OF LASZLO SZABO BEFORE THE CIA SUB-COMMITTEE OF THE COMMITTEE ON ARMED SERVICES OF THE HOUSE OF REPRESENTATIVES

I. Life History

My name is Laszlo Szabo. When I asked political asylum of the United States Embassy in London on 18 October 1965, I had served twenty years in the Hungarian security and intelligence service—for convenience I will refer to it as the AVH. In July 1946, I was appointed a sub-lieutenant in the Political Section, Rural Department, Internal Police Headquarters in Budapest. When I left the Hungarian political intelligence service on 18 October 1965, I held the rank of major. I left the Hungarian intelligence and security service because I was unwilling to carry out my assigned missions against the west. I had reached this determination after years of silent, anxious, terrible fighting with myself. This was the first opportunity I had to leave the service of the Hungarian police state in safety, and I took advantage of the opportunity.

I was born 31 August 1925, in Debrecen, Hungary, a large city in rural eastern Hungary. I grew up in a family of very modest means. My father was a printer's assistant. He had been a prisoner of war of the Russians during World War I. He was fundamentally a Communist in his political belief. After World War II, my father worked for the Soviets in Hungary as a translator. I was not in military service during World War II. I worked throughout that time in a printing plant in Debrecen.

I was inscribed in the Hungarian Communist Party by my father, and I was sent by him to the County Center of the Communist Party in 1945 for a recommendation. They sent me to the Ministry of Interior school despite my explanations that I did not want to be a policeman. I was told my father had promised that I would do what I was told. I did not have the courage to protest or back out. From that moment until the moment of my break with the Hungarian service on 18 October 1965, my life was a succession of failures to take a firm stand.

I finished gymnasium (high school) in Budapest in 1946 by attending night courses in the College of Foreign Languages in Budapest. Until 1948 I worked in the provinces, and from 1948 to 1963 in the capital, Budapest.

My assignments included a tour of duty with a counterintelligence section of the Internal Security Branch of the Department for State Security. Between January 1949 and December 1952, I took part in the work of neutralizing radio transmissions of western agents in Hungary. I was routinely promoted to lieutenant during that period.

From January 1953 to the end of 1954 I was out of Hungarian security work and served as the chief of factory guards at the Lorincz Sheet Metal Mill in Pest-Szent Lorincz. From the autumn of 1954 to November 1956, I was an officer in the Industrial Sabotage Section of the Internal Security Branch of the State Security Service. In November 1956, I was appointed deputy chief of the Metallurgical Subsection, Industrial Sabotage Section, of the Internal Security Branch, AVH. I was routinely promoted to captain in 1957 and to major in 1960.

Up to this time I had served only in internal security components. During the autumn of 1963, however, I was transferred to foreign intelligence operations. I was assigned to Subsection B in the First Main Department. This subsection handled operations against the United Kingdom. I spent one month at Oxford University, England, studying the English language in 1964. Previously, I had studied English in night courses in the College of Foreign Languages in Budapest between 1959 and 1963. I remained with this unit in Budapest until September 1965. I was sent at that time to the Hungarian Embassy in London as an espionage officer, as a member of the unit (commonly known as the *residentura*) which operates under diplomatic cover in the London Embassy. My personal cover for this assignment was a diplomatic post as Second Secretary for Economic Affairs. On 18 October 1965, shortly after my arrival in London, I took the action which severed my service with the Hungarian Communist regime forever.

These in bare outline are the main facts of my personal life and career, but they cannot reflect my whole history as a man. That is involved, complicated and must be explained in detail in order to be understood. Sometimes I believe that even after it is reviewed at length the story remains unexplainable. Fundamentally, I cannot say that I am courageous, but I do believe that I am a sensitive man. I have always aspired to a happy life and to the performance of good purposes. If a man's decisions were to be based solely on financial return, there would have been no reason for me to have left the Hungarian service. We were paid very well—almost 8,000 forints a month. That is almost as much as a minister makes in Hungary today. None of these considerations really counted in moving me finally to the break. It was a gradual, continual process, building up to the horrible realization that everything that had happened to me from 1945 had been in response to the wishes, commands, and demands of others. I finally decided not to go along any further like a piece of wood floating in a current of water.

My first grave doubts about the morality of the Hungarian security service system were generated in 1948 and 1949 when I assisted in the work on a number of cases that were basically mounted by the service against certain foreigners in the country. I began to fight myself and to begin to justify this action by conceding that in the long run there might be some ultimate justice in these basically illegal actions. Thereafter, however, the AVH service began to choke out any individuality or feeling and I was always under orders. I noted in 1949 and 1950 certain AVH officers began to disappear. These men disappeared, for example one was Oscar Havas, without a trace—that was

the period of the persecution of Ferenc Nagy and the period of the Rajk and other cases. But with these doubts also came my fears. What was happening in the service also began to happen in the country itself. Slogans began to repress all thinking and created widespread fear, and this was greatest within the AVH itself. I joined the AVH as a very young man. After a succession of events, I recognized it for what it was. I did not have personal bravery then to turn in any other direction and I found it impossible then to change the course of action.

During the two years that I was out of the service—1952 to 1954—I saw what had happened in Hungary was completely tragic, but I accepted to go back in the service. Though I hated the slogans, I felt I was probably safer in the AVH at the time and knew it better than any part of the Party organization. There was a third choice—I could have refused to go back, but I feared to do it. I knew by this time that they were ready to kill as well as pressure so I chose to go back in. It is very difficult to describe a fight that goes on inside the self. A heroic man could have refused. I was not and am not that, and I feared to do it. I talked to no one about my doubts. That would have been a mistake. I was able to leave the way I did and I am here today because I was careful.

In the period 1954 to 1956, the Hungarian security service lost in power. At the same time the country gradually was caught up in a ferment of criticism and opposition to the Communist regime. We in the AVH knew this. We were powerless to stop it in the country just as the service itself was powerless to mobilize effective counter-action.

I remember receiving in the AVH a small pamphlet printed in the west and sent into Hungary which carried the text of Khrushchev's secret speech at the Twentieth Congress. Thousands of copies of this pamphlet got into the country and were passed around secretly. Within the AVH, which had the job of picking up as many copies as it could, the document was read with great interest. It was given to me to read by a colleague. The influence on me of this little booklet was terrible and it also affected other AVH officers the same way. It was clear from Khrushchev's secret speech that Rakosi and his followers had not only followed the example of Stalin's leadership but had really carried out horrible crimes against the Hungarian people on their own. Very gradually the October 1956 Revolution developed in Hungary out of the crimes of the regime itself. First by its excesses and then by its inability to clean up its own messes. The 1956 revolt, therefore, was prepared and carried out by the Hungarians themselves, not by outsiders.

I survived the events of late October and early November because I was in the Ministry of Interior building throughout the whole time on duty. I was evacuated from the building under Soviet guard and brought back by them a week and a half later. I followed orders and kept quiet.

My transfer to the overseas part of the service was the beginning of my opportunity, finally, to decide something for myself about my life. I was able to make the change because one of my former superiors had earlier gone to the External Service as deputy chief and he

picked me to follow him there. When I was in Oxford in the autumn of 1964, I thought of remaining but ultimately I decided to return. Again I was still afraid and perhaps somewhat confused, but I also knew I was sure to come back.

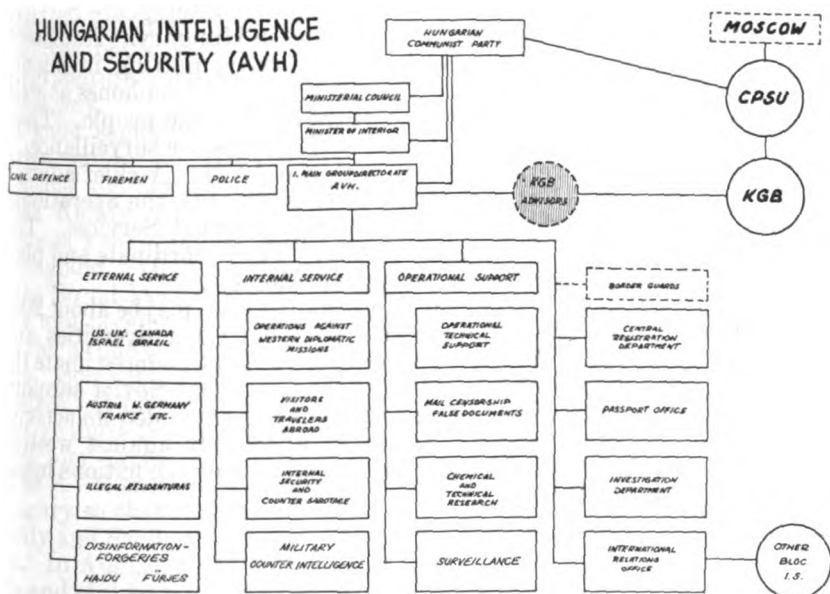

When I arrived in the United Kingdom, finally, on my assignment, I had decided I would not carry out any orders and soon after my arrival I made the break. I knew this was my last chance. I finally made up my mind I would not serve the AVH organization further. I have no doubts about my choice and I would do it over again if I had to. Was this a crime against my country? I am sure that it was not. It was the only thing I could do. The crime was that I was a member of a very cruel and inhuman organization. But I never did anything criminal, I never fired a gun at a man during my service, and I never initiated any cases against innocent people.

My soul is clear before God—and I hope before you.

II. An Evaluation of the Hungarian Security and Intelligence Service (AVH)

The Hungarian intelligence and security service—as I said earlier, for convenience I will refer to it as the AVH—is under the Ministry of Interior and is the instrument of the Hungarian Communist Party.* It protects the Party and the Government from all inside and outside enemies. It works against the “Main Enemy”, the United States and other western nations. All capitalist nations are enemies, but the United States is the “Main Enemy”. In the Magyar language it is a special term that is used in documents, instructions and briefings: “A főellenség”.** The Hungarian Communist Party keeps close contact with the AVH through the Ministry of Interior.

EXHIBIT 1

The AVH works both abroad and inside Hungary. The part for working abroad is called the Intelligence Service, or the External Service. It handles disinformation operations, such as forgeries, to make the west look bad in Africa and Asia. It runs the spies from its intelligence units, or *residenturas*, in Hungarian embassies, and the

*See Exhibit 1.

**This is the Magyar equivalent of the Russian term used in Soviet State Security documents: “Glavni Vrag”.

"illegal" agents who work disguised as non-Hungarian people. The AVH has been looking seriously to recruit agents among the refugees who fled abroad in 1956. AVH officers abroad have to study these people, find out who can be recruited and how. They have some successes in recruiting.

The External Service works mainly against the United States, the United Kingdom, France, Italy, Canada, Brazil, Israel, Austria and Germany. There is a subsection for each of these countries. All other countries are handled by the Miscellaneous Operations Section. AVH officers abroad work from centers, generally in Hungarian embassies and legations, called *residenturas*. These are located in Washington, New York, London, Paris, Frankfurt, Vienna, Rome, Rio de Janeiro, Ottawa and Tel Aviv. In Moscow and in each bloc capital there is a special group for liaison on security and counterintelligence. Each *residentura* is headed by a *resident*. He has under him staff officers and temporary, or "coopted", agents who are diplomats or administrative people who are assigned temporary spying functions by the AVH. Possibly there are unofficial *residenturas*, staffed with coopted diplomats, in Tokyo, New Delhi and other cities throughout the world.

The Internal Service of the AVH, the Counterintelligence Service, watches the Hungarian people and foreigners in Hungary. Its officers are good at entering foreign embassies secretly, putting in microphones, following people, monitoring the radio and telephones as well as using internal agents and provocateurs against the people. They are studying the use of television and such things for surveillance.

The Soviets keep several advisors with the AVH. A chief advisor works with the top AVH men, the others work with the operational departments in both the External and the Internal Services. The KGB and the AVH work together closely. They coordinate and plan operational work at periodic meetings in Moscow.

The AVH is a small but developing organization, maybe about 2000 staff officers. Staff officers are recruited from the universities and trained by the AVH. Western countries should not underestimate the AVH. It is neither poor nor weak as long as it has Soviet support. It is dangerous to the west and since 1963 it has expanded its activity against Hungarians overseas. It works effectively against western diplomats and students in Hungary and against western nations inside Hungary's own borders.

III. The Missions of the AVH

The main mission of the AVH is to protect the Communist Government of Hungary. No matter how they reorganize the AVH, change it around, this mission never changes. They have to protect the Party and the Government against all inside and outside enemies.

First, they work against the "internal" enemies. The AVH and the Soviets learned a lot from the Revolution of 1956. Since 1956, they have reorganized and have tightened up the work within the country. All the time they watch what they call "the most dangerous elements" of society: members of churches, intellectuals, people of old regimes, old army and police officers, people who used to be something. And also young people. You would think they would trust the young people they are educating their way, but no, they are not trusted either. They watch for sabotage too. They can define sabotage any way they want. Sabotage means throwing sand in machines, but it can mean not carrying out the big plans for industry or agriculture. Anybody can be called a saboteur if the AVH wants it that way.

I know something about the work of the AVH against the Hungarian emigration. I have seen how they try to penetrate their organizations and destroy these people. They used this technique against Anna Kethly, Imre Szelig and the Hungarian Social-Democrats.* There is a man named Gyula Balogh, a Social-Democrat who lived in England. He made jewelry. Balogh was a medium-level leader in the Social-Democratic Party after 1945. About 1948 he left Hungary and became an important Social-Democratic leader abroad.

After a time he quarreled with Kethly and Szelig and turned against them. Sometime after 1956 he was recruited as an agent of the AVH by an AVH officer under diplomatic cover in London. Balogh was inactive until 1964 when another officer under diplomatic cover activated him again.

The AVH then decided that Balogh must be persuaded to come to Hungary so that they could find out if his intention to work against Kethly and Szelig was serious and if he was really a good agent prospect. In August 1965, Balogh came to Hungary as a tourist with his wife and children. I was ordered to talk to him to see if he was suitable for AVH work. I met him at the end of July, for the first time.

Balogh had scandalous stories to tell against Kethly and Szelig. Then he told me that the Social-Democratic movement was declining and practically did not exist. So I asked him what he wanted to destroy. He did not answer me. I asked him what he wanted to do for the AVH. He told me: "I am really a Communist. If the

*Miss Anna Kethly and Imre Szelig were prominent leaders of the Social Democratic Party in Hungary and continue as leaders-in-exile.

AVH will give me a task I am ready to carry it out." He was not a paid agent.

The internal AVH works against the foreign diplomats, the students who come to study in Hungary and the tourists. Every foreigner is considered a possible spy. Must watch him if he acts strangely or wants to learn too much. Always the internal people are looking for good recruits among the diplomats, the students, the tourists. They monitor telephones, try to plant microphones and maintain the surveillance on foreigners. This is the main principle: if you can recruit a foreigner inside Hungary, you may have a good agent in his home or in another foreign capital one day.

The External Service is always looking for possibilities in the foreign offices in the capitals of the enemy states. Foreign offices are one of the first targets for the Hungarian service, by an agreement made among the Communist services themselves with the Soviets. Recruitments may result from watching the foreign diplomats in Hungary.

Hungarians living abroad are an important and urgent target. The AVH wants to recruit many of these people as agents. Even the children of emigrants and refugees are looked for. These emigrants and refugees are very important to the AVH. Also the AVH is always trying to find out about foreign intelligence services. They do not expect to have a lot of immediate good luck in this field, but still they keep trying.

As I pointed out earlier, the AVH works with the Soviets on disinformation and propaganda. The AVH always works with the Soviets. Anything they do has Soviet support and agreement.

IV. AVH Integration With Soviet and Other Bloc Intelligence Services

The AVH works closely with the Soviets. Since the Hungarian Revolution of 1956, however, the Soviets have relaxed their hold on the Hungarian Government somewhat, and the number of advisors has been cut down. Soviet cooperation with the AVH is carried out by advisors who are assigned to that service. There is a chief advisor. The other advisors are assigned to the Counterintelligence Department, and to the Intelligence Department.

According to the general agreement between the two services, the Soviet advisors can see all the important AVH papers, including the annual report of the service. The Information Department selects the most valuable intelligence information to send to Moscow. Hungary has no secrets from the Soviet Union. Officials of the AVH run to the Soviet advisors with any information they think is important. They are happy to be of service to the Soviet State Security—the KGB.

When the Soviets need it, they can get the operational assistance of the AVH. I remember one case some time ago. The Soviet KGB wished to recruit a woman, a foreigner. They arranged for the AVH to have this woman invited to Hungary. An AVH officer was assigned to handle the invitation to the woman and the details of her stay in Hungary so that the Soviets could approach her.

If the AVH has an operation of interest to the Soviets, they will ask the agent reports be given to them. When the Soviets want original documents or an agent's file, the material is sent to Moscow. If they want, they will also get the code names assigned to agents by the AVH, as well as the agents' true names. The logs and registers of incoming AVH intelligence reports and materials are maintained for the use of the Soviet advisors by the Evaluation and Review Department of the External Service. The Soviet advisors had their offices on the same floor and were in and out of the Evaluation Department at will. When the Hungarian External Service created its disinformation and forgeries unit, it was set up in the Evaluation and Review Department.

The AVH contacts the Soviet service in foreign capitals through Hungarian and Soviet contact officers. The AVH group in Moscow is there for counterintelligence purposes, that is, to watch Hungarian diplomats and students in the USSR. The AVH also maintains groups in the capitals of the Soviet bloc countries, but, again, for counterintelligence purposes only. They watch Hungarian citizens living in those countries. I believe the group in East Berlin also works against the western nations. Officers of one bloc service may be sent to another bloc country to work on specific intelligence cases. As I said earlier, the groups each service maintains in the capitals of the others work only on the citizens of their own nations in those bloc countries.

Requests for information on individuals to other services are handled by the AVH International Relations Office. Between the Communist services and the Soviets, the official language is Russian. The International Relations Office sends telegrams to the services of whom the request is to be made. When replies are received, the International Relations Office first sends them to the Soviet advisors where the reply is recorded; they are then sent to the subsection concerned. The Soviet advisors will always have the chance to know the details about each request for information that is passed about among the bloc services. If the AVH obtains information that is believed to be of interest to another service, the Czechs for example, it will be sent to them through the International Relations Office. Names of individuals of interest to the AVH will be cleared with the other services through the same way. If another service replied it is interested in the individual, the Hungarians would let him go or maybe use him together. If necessary, an officer will be sent to discuss specific agent problems with another service.

Periodically the Soviets call conferences with individual services in the USSR for the discussion of intelligence objectives and problems. The Soviets, as far as I know, meet with the representatives of each service individually. On occasion, however, representatives of bloc services may meet to talk over mutual problems.

All of these services work together today more as equals. I want to stress this point. The Soviets try not to order the other services around, they prefer an appearance of giving advice and suggestions. They don't command openly the other services any more in matter of details. You might call the Soviets "the first among equals". But some are still more equal than others. When something has been decided at the chief's level with the Soviets, the other services must stay strictly in line.

The Soviets give counterintelligence training in the USSR for officers from all the bloc services who want to take advantage of the opportunity. Training is not forced on the other services. They can send officers or not. The Soviets tell each service the number of officers they can send, but the services do not have to send this number. They can send less.

I have personal knowledge of the counterintelligence training because I was one of several AVH officers who attended this course in 1957. We were the first group to go to the USSR for training after the Revolution of 1956. Our course began in September 1957 and lasted one year. It was given in a KGB building in Moscow. We lived and studied in the same building. We Hungarians studied alone. We did not work with other national groups. The instructors were from the KGB. Their lectures were interpreted into Hungarian as they were delivered. All our notebooks were classified secret and kept locked in a special room when we were not using them.

The training given us was in counterintelligence subjects. We received instruction on how to find, recruit and handle agents and informers for reporting on individuals and groups. It is fine, the Soviets said, if you can find a person who will work for you of his own free will when asked, but usually he will not want to do so. Then you have to use pressure to force him. You have to investigate your

prospect to see what is the best method to use. Use blackmail if you have to, but recruit your man.

They gave us careful training in some counterintelligence subjects: every secret area of the country, such as military installations, research institutes, scientific installations, and government agencies must receive the attention of counterintelligence. According to the Soviets, special attention has to be given to the "internal enemy", that is, counter-revolutionary groups or nationalist organizations, and to anti-Soviet activity organized from abroad.

All church groups have to be penetrated by agents abroad in order to find out their plans against the Soviet Union. The Soviets consider any kind of religion to be a tool of the "imperialists". For the Hungarians this means Catholics, Calvinists, Lutherans and a number of other small sects. The Soviets gave us in the training course a long list of "subversive" churches.

They gave us training in counter sabotage. This covered counter sabotage in industry, armed forces, communications, space and agriculture.

Sabotage in planning offices must be carefully watched for. We had to plan counter sabotage and other cases which the instructor then criticized.

One significant subject was investigation, that is, how to plan an operation against a hostile person or group, make the arrest, interrogate and assemble evidence to convict the subjects and get confessions. We have to entangle the suspects and get them to confess. They gave us a problem to work out in this field. In general, everything is allowable in working against an identified traitor or group for this purpose.

We received some general instruction on the western intelligence services, their organization and how they work.

A very important part of the course was instruction in work against foreign embassy buildings and foreign diplomats. According to the Soviets, every capitalist embassy and legation in Moscow is a nest of espionage. Every means must be used to penetrate them and find out their work. They taught us to use surveillance, photographic apparatus and planted microphones in this work. Much attention was also given to physical penetration of embassy buildings and the secret theft of materials such as code books.

Whenever they can, the Soviets use agents against foreign embassies. Some of these are Soviet nationals who, for one reason or another, can visit foreign embassies. These people can look and pick up a lot of information. But the best method, the Soviet lecturer said, was to recruit diplomats as agents. This is the best way to get inside the embassy building. The Soviets gave examples of blackmailing diplomats with photographs of their intimate relations with women and with homosexuals. They use any technique: blackmail, threats against relatives, money. Anything that will work.

As a practical exercise, I had to prepare a plan for getting into a building. This included getting the layout of the building, reproducing keys to the building and the safes, working out a schedule of the movements of the diplomats, arranging for the people who will make the entry, etc.

I know there is also a course in the Soviet Union for intelligence training of officers of bloc services. This is a longer course than the counterintelligence training I have just described.

The work among Soviet and bloc intelligence and security services is a direct result of the cooperation between the national Communist parties and the Communist Party of the Soviet Union. Earlier, during the thirty years when the Communist International existed, the Bolshevik Party ran all other parties through the Comintern, and later the Cominform. They could order them directly. All this meant, generally, was that every Communist party depended upon the Soviet Communist Party for orders and directions. In effect, the Soviet Communist Party exercised total authority and control. This gradually subverted the parties from their own national interests and they became paralyzed. Now the form has changed. The national Communist parties have more authority and can choose the methods for achieving determined overall Communist bloc goals. The integration of bloc and Soviet security and intelligence services takes place in just the same way. As I said before, every bloc service is a Party instrument. Service and Party practices are in parallel. Each bloc service has agreed with the Soviet service to achieve certain broad objectives in its own interest and in the interest of the other bloc services. They all use the same method but they have integrated objectives. For example, the Hungarian service in this integrated framework has agreed to attack western foreign offices, in particular. This doesn't mean, of course, that they won't develop other good opportunities too. This is a kind of intelligence COMECON.*

*Council for Mutual Economic Assistance, set up among the Soviet and Soviet bloc countries.

V. AVH Operations Against the United States and the American Legation in Budapest

As I have already said, the Soviets consider the United States to be the "main enemy". I have talked to AVH officers who have worked against the Americans. I feel I know how the Soviets and the AVH operate in that field.

The idea of the KGB and the Hungarian AVH is always "penetrate, penetrate, penetrate". Get inside the government agencies in the enemy's capital; get inside his embassy in your own capital. Use technical means or agents but get inside somehow.

Of course you have to study your enemy's embassy and its people before you can act. There are many ways to do this. I should say first, however, the AVH considers the United States Legation a difficult target. The building is well guarded.

They keep trying though. They keep studying the place and the people who work there. Fixed surveillance posts are put in buildings near the American Legation. People going in and coming out are photographed. Infra-red binoculars are used to watch the entrance at night. Now the AVH is planning to use television cameras for surveillance. They are experimenting with television.

Of course the AVH uses foot and automobile surveillance against the Americans, and other western embassies as well. Some of the cars they use are parked openly near the American Legation, others are hidden. There is even a special AVH surveillance group at the American Legation to watch for Cardinal Mindszenty. Because of this situation, the American Legation is under the heaviest surveillance of any western diplomatic mission in Budapest. It takes a lot of manpower and money to keep surveillance on all the diplomats, so the AVH tries to evaluate them to determine who is interesting, who has an intelligence mission. They try to concentrate on the interesting ones. When diplomats go out in the country they are followed in cars. Sometimes they send men from the center in Budapest, but often local officers in the counties are used. At the county line the old surveillance stops and the men of the next county pick it up. Policemen are required to report any diplomatic automobile they see; often they neglect this duty. Employees of bars and other places foreigners visit are recruited to report on them. The AVH is able to surveil all foreigners if it has need to.

The AVH recruits employees of Americans. For example, some years ago the maid of an American official was recruited and ordered to look at every piece of paper and notebook she could find in his apartment. One day she called to say she had found an important notebook. The operations officer picked her up and photographed the book in the car, then she put it back. The AVH is always trying to recruit people to use against Americans. They use blackmail or any

kind of pressure to get these diplomats in their power. I have described how the Soviets do it. The AVH uses the same methods.

Even the public demonstrations against the Americans in Hungary are planned by the AVH. In February 1965 there was a demonstration about Vietnam in front of the United States Legation. Of course this demonstration had the permission of the Party and the Government. Otherwise it could not have taken place. A fellow AVH officer told me how they handled this demonstration. The AVH planned a large demonstration so they allotted in advance the money to pay the damages. They set aside two million forints to pay the damages before the demonstration started.

The AVH had other plans for this demonstration. They hoped to use the confusion to break into the American Legation and grab some material, files, and such. Security officers, almost all the staff of the AVH subsection handling the American Legation, were put among the demonstrators for this purpose, but they could not manage it. They could not find any opportunity to break in.

Sometimes the AVH uses the American flag. In 1949 or so they wanted to arrest two men they thought were working for the Americans. They found that these men were hiding with a farmer in the country. So they put an American flag and diplomatic plates on an American car and drove out to the farm like an official American car. I know about this because I went along as a guard in another car. When the car with the flag reached the farm the two men thought the Americans had come to rescue them. They came out and got in. Then they were arrested.

That's how the AVH works against the Americans in Hungary. I do not have much first-hand information about the work of the AVH in the United States, but I have some details. There is a secret Hungarian intelligence unit under diplomatic cover called a "*resindentura*" at the United Nations in New York. There is also a *resindentura* in the Hungarian Legation in Washington. I know nothing about AVH agents under deep cover in the United States, but I am sure that they are operating here.

I believe any group of Hungarian officials or travellers will contain AVH agents. I know also ex-AVH agents were among the refugees leaving Hungary in 1956. Since the Revolution, the AVH has lost no opportunity to reactivate former agents and to recruit real refugees, using any pretext or means. Any refugee who returns to Hungary on a visit is a target. The large number of Hungarian refugees scattered throughout the world are natural AVH targets.

I do not know the AVH plan of work in the United States, but I know what they planned for 1965 and 1966 in another area and I presume that the plan could be the same. For that area, they planned to work against the foreign service headquarters. They wanted to find out everything about it. First, everything about the building. Its heating system, electrical system, how the building is cleaned, who supplies food for the restaurants, where supplies are bought. Next, they want to know the security system, what kinds of passes are needed, how you get in and out. They want to know all about the people who work there: who they are, where they were educated and trained, where they go to eat, what doctors they use, how they

get language training, who the teachers are. They are always looking for some Hungarian-born person who has something to do with the diplomatic headquarters. Since it is the practice in one western area, why shouldn't it be the same here?

I know that they tried to make contact with American diplomats to find out if they are interested in Hungary or may have been born there.

EXHIBIT 2

JANOS FÜRJES

VI. Disinformation

I know about the use of forgeries and disinformation by the Soviets and the Communist bloc. Of course I don't know everything, but I can tell you something new.

During January 1964, *Newsweek* magazine asked for information about those persons responsible for putting out forged issues of the magazine in November and December 1963. They have probably never learned who was responsible for these forgeries and disinformation.

I can tell them. It was done by the Hungarian intelligence service. Major Janos Fürjes, Chief of Special Activities, the unit responsible for disinformation work in the Hungarian service told me about it before I was transferred to the AVH *resindentura* in London. He told me the whole story.*

There were two forged issues of *Newsweek*. The first issue, dated 18 November 1963, was printed on the secret presses of the Hungarian intelligence service. Fürjes told me that the texts of these forgeries were prepared in French, then given to Noel Field for the translation of parts into English. The first forged issue was sent by diplomatic pouch to certain Hungarian embassies for mailing to African and Asian diplomats and other selected persons. AVH personnel handled the mailings. People doing the work had precise instructions about what to do. For example, they were ordered to wear rubber gloves while handling copies so as not to leave fingerprints in handling and sticking on stamps. I know that London was one of the mailing points. The mailings were countersurveilled by AVH personnel to make certain that they were not detected.

Almost all copies of the first forged issue had been mailed when President Kennedy was assassinated. There were problems for the AVH because the forgery contained cartoons that were critical of President Kennedy. It was feared after President Kennedy's death that there would be an unfavorable reaction. Therefore, a new forged *Newsweek* issue, dated exactly one month later, and carrying President Kennedy's portrait on the cover was put out and mailed in the same manner as the first. One of the cartoons was redrawn so as to be more favorable to President Kennedy, the others were dropped.

This is the reason why two forged issues of *Newsweek*, with almost the same contents, were distributed.

Fürjes was teaching me about my work in London when he told me the *Newsweek* story. He told me they preferred that an item for disinformation should have some real basis, be based on facts, but if I can produce a good idea that does not have any fact send it in anyway. Truth is not important if the idea is good. Just send it in. They will make it look truthful, then get it published in some little

*See Exhibits 2 and 3.

paper somewhere. After that we Hungarians will hand it out, get it republished everywhere. Who can prove it is not true? Fürjes said, "the Soviets used such kind of method successfully. It is a very good method." Then he gave me an example.

This was a KGB disinformation operation in an Arab country. Fürjes didn't tell me which one it was. The KGB, he said, sent a forged letter to an Arab leader accusing a person close to him of taking an action against the leader at the request of some western country. The letter prompted the Arab leader to arrest that person. This action caused a breakdown between the Arab leader and the western country. Fürjes said that apparently some parts of the Soviet operation had been discovered. He thought it was probably for that reason that the Soviets used it with him as an example. In any case, the Arab leader found out that the accusation was not true at all but it was too late. That's how Fürjes instructed me in disinformation work.

The AVH had not been formally organized to handle disinformation work when the forged *Newsweek* issues appeared, but, of course, disinformation had been an AVH activity. After the *Newsweek* forgeries, early in 1964, a unit for this work was created. It was known as Special Activities Against the West (*Aktiv Intézkedések Alosztálya*). The Chief is Major Janos Fürjes. Special Activities was put under the Assessment and Evaluation Department, whose chief is Pal Hajdu, a lieutenant-colonel of the AVH.

All disinformation activities must have the approval of the Central Committee of the Hungarian Communist Party before they can be carried out. I know that Hungarian disinformation work is discussed with the Soviets.

Pal Hajdu, Chief of the Evaluation and Assessment Department, last year wrote a book called *Political Hucksters for Relaxation (A Fellazítás Kortesei)*, Kossuth Book Publishing House, Budapest, 1965, 71 pp.). He accused the western nations of planning to wipe out Communism by using psychological warfare techniques to push the Communist bloc governments over to the right. This volume was printed and circulated throughout the country. The book is actually an attack on the U.S. It's full of falsifications about the Hungarian Revolution, for example, that the Revolution came from outside Hungary. It is a good example of AVH domestic disinformation. Hajdu wrote it under the pseudonym Peter Hun.

The part I was to play in the disinformation campaign was small but important. As I have said, before I left for London I was told by Fürjes about my role in it. He told me to submit suggestions for causing friction between the United States and the United Kingdom and the British Commonwealth, and to undermine the relations between the United States and other western countries—economically or otherwise.

As Second Secretary for Economic Affairs, I was instructed to supply information that could be used for this purpose and to suggest ideas for forgeries. I did nothing in this field before I asked for political asylum.

(Facing page 5948)

W

VII. The Case of Bela Lapusnyik

The mysterious death of Bela Lapusnyik, a young AVH non-commissioned officer who fled from Hungary early in May, 1962, and died in a Vienna jail early in June where he was being held, created big excitement in the western world. How could a young man who appeared to be in the best of health, and with his freedom assured after escape from Hungary, suddenly die while in the hands of the authorities?

I recall after Lapusnyik's death there was a formal statement or order on Lapusnyik circulated by the Chief of the AVH. This order was read to AVH personnel at departmental or section meetings. In the order from the AVH Chief, Lapusnyik was represented as having been an immoral, corrupt person who hung out in bars and brought loose women to the apartment where he lived. He was also accused of misusing official money and not taking an interest in Communist Party affairs. The facts of his case were outlined briefly: he had escaped from Hungary by misusing his AVH status and in so doing had shot down a border guard. Throughout the document he was referred to as "the traitor, Bela Lapusnyik". The report also noted he died in jail. According to this statement, Lapusnyik had caused very serious damage to the AVH because he had revealed AVH secret locations, identities and surveillance methods. The report pointed out his superiors had failed to exercise adequate supervision and it indicated appropriate punishments had been given. The report demanded more and better discipline from personnel and more careful supervision from senior officers.

I can tell you what I learned later in Budapest about Bela Lapusnyik's death. The people who told me were in a position to know about it. Early in 1965, a little over a year ago, I was ordered by my chief in the External Service to evaluate and screen the file which concerned the safe apartment in Budapest that Lapusnyik had lived in. Lapusnyik had worked in the very secret AVH surveillance unit which required its members to have civilian cover. The apartment which Lapusnyik had used as his own home was used by the AVH for meetings with its agents. Immediately after Lapusnyik's death in Vienna, the AVH had given up the apartment but the file on the apartment still remained at the Registry, and I was given the work of evaluating it. Lapusnyik's safe apartment, administratively, had been the responsibility of the section in the External Service for which I worked.

I examined the apartment file.

In order to make a judgment what to do with this material, I had to know something about Lapusnyik himself. Therefore, as was normal in such matters, after consulting with my chief I asked the Internal Service for Lapusnyik's complete file. I was surprised to be

BELA LAPUSNYIK

told by the Counterintelligence Department of the service that his file could not be seen without the written permission of the Deputy Minister of the Interior and the head of the AVH. The man who told me this was chief of the Research Subsection of the Counterintelligence Main Directorate. This subsection investigated cases like Lapusnyik's.

I reported the fact that Lapusnyik's file was under special controls to my superiors. My chief and the Internal Service then talked the matter over and agreed to submit a report on the case in order to close

the file. This report went to the secretariat of the External Service where I was permitted to know that Lapusnyik, after he arrived in Vienna, had given information on all of the AVH cases he knew, including the persons his group had surveilled, even the license plate numbers of some western businessmen who visited Hungary. It was said: "we got some information on some other things that Lapusnyik revealed while he was in jail in Vienna".

Then I asked why I hadn't been shown the whole file. I was told this was understandable since the case was top secret. I had not been permitted to see the whole file because Lapusnyik had been poisoned by the Czech intelligence service in the Vienna jail.*

VIII. The Hungarian Revolution of 1956

The Revolution of 1956 was produced by the Hungarian people. They didn't get any outside help to do it. They didn't need any. By 1956 the AVH wasn't the big power it had been. The people were finding out too much about it, about how brutal it was. People were coming out of prison and telling what had happened to them. They also got a lot of information from Radio Belgrad and western radio stations: Radio Free Europe, the Voice of America, and the BBC. The Government jammed the broadcasts but you could still hear a lot. Then pamphlets of Khrushchev's secret speech came into Hungary continually after mid-1956. The AVH tried to pick all these up and destroy them but there were too many. Copies were passed around inside the service. As I have said, I read a copy in my office. It made me shiver to read the things Khrushchev said.

People were beginning to talk about the situation with each other. And the AVH could not do much about it. It did not have the power any more to push people into prison or concentration camps without trial. The AVH was a little paralyzed. During 1955 and 1956 the Hungarian people were getting excited.

That's why I say the Revolution came from inside Hungary, not outside. The young people wanted to demonstrate. They asked permission from the Government, but the Government could not make up its mind. Then it decided to give the students permission. The Minister of Interior and the AVH did not like it, but the Government decided anyway to let the students demonstrate. They came out in the streets on 23 October and that started everything.

I was the duty officer for my department the night of 22-23 October. I was supposed to go off duty at nine o'clock on 23 October, but they would not let me leave the building. I had to sit by the telephone in the Ministry of Interior. None of us could leave. I slept by the telephone. There was a lot of shooting I could hear but I didn't see any of it.

The new Government ordered the AVH dismissed, but it continued to exist. The AVH officers stayed in the Ministry of Interior because the Russians were there. One day the new Minister of the Armed Forces, Ferenc Munnich, came to the Ministry of Interior with an escort. He called the AVH officers together and told them the AVH was a guilty organization and they had to leave. I heard him say that. But nobody could leave. On 28 October the Soviets said we were in danger and had to leave the building. We had one hour to get ready. We packed our things, locked the vaults and left. The files stayed behind. They were scattered in the courtyard. There were too many papers to burn.

The Soviets lined our route with tanks and trucks. We were moved by truck to the middle of a Soviet camp outside Budapest. It was

in a woods. The Russians gave us clothes and tents and food. We couldn't leave the camp. Most of the AVH officers were demoralized. At first there was some talk that the Russians would take us all to the Soviet Union.

On the morning of 4 November, we were ordered to assemble. They read an order of Marshal Konyev. He said that the Soviet troops had attacked Budapest that morning and we could go back when the city was quiet. We were taken back to Budapest and went back to the Ministry of Interior on 5 November.

The Ministry was a mess. Some rooms were burned out. The files were scattered everywhere. Some of the files had been carried away. Then we were reorganized and went out to take over sections of Budapest from the Soviet troops. As I said, I was inside all the time or in the woods with the Soviets. This is how I saw the Revolution.

As I said, the Communists in Hungary caused the Revolution and the Hungarian people carried it out by themselves. When the people finally acted against the regime the Government could not do anything by itself. It became absolutely disorganized. Only the Soviets could do something and they were afraid of a war. They supposed that the West would help the Revolution. While we were sitting in the woods some of the fanatical Communist AVH officers kept saying, "Why don't the Communists organize a new government? We have to do something." The Soviets kept saying, "Just keep quiet. Something will happen." I think the Soviets were organizing a new government, the Kadar Government. Until this was ready they didn't want to do anything. Then they ordered the new government to ask them to help. It was all set up like a play. The Soviets just set up Kadar and told him what to do. We didn't know anything about this, though, while we were sitting in the woods.

It's true that some AVH officers got killed by the people in the streets. I suppose they were recognized and the people finished them. I never heard that the freedom fighters were savage, but the people did kill some AVH officers. When officers of the security service can be killed like that, the government has no power. And it was exactly these officers who oppressed the people that got killed. I am sure that lesson impressed the Soviets. When the people lost their fear of the security men, they lost their fear of the Communists too. Maybe that is the real lesson of the Hungarian Revolution. Take care of the Security Service and the government has no power.

IX. Messages to Hungarians at Home and Abroad

[Original]

MR. LASZLO SZABO'S MESSAGE TO THE PEOPLE OF HUNGARY

Üzenet a magyar népnek

Mindenek előtt fontosnak tartom ismertetni, miért szakítottam a magyar kommunista rendszerrel. 20 évet töltöttem el a kommunista rezsim szolgálatában és mit kaptam érte? Rettegést a jövőtől, a bizalmatlanság, a félelem, a gyűlölet, a kiábrándulás érzését, mely rámnehezedett a hosszú évek alatt. A rezsim ajánlott pénzt is, jobb anyagi létet mint amit az átlag élvez Magyarországon, de mit követelt érte? A lelkeimet, hitemet, magánéletemet, függetlenségemet, emberi érzéseimet, vágyaimat, boldogságomat, a kommunista eszme szolgálatát, mely engem, mint egy embert nem vett tudomásul.

Szolgálni a kommunizmust, mely engem mint egyént nem ismer el, de én csak érte létezhetek: számomra ez a kommunizmus. Nem gondolkodhatok úgy hogy ÉN hanem csak úgy hogy MI. Nincs enyém, csak MIÉNK. Van egy sokat hangoztatott jelszavuk melyszerint egy kommunistának alá kell rendelni egyéni érdekeit a kommunizmus érdekeinek. Szerintük a kommunizmus érdekei elsődlegesek, aztán jöhetnek az egyéni érdekek. De hol van hely az egyéni érdekek számára? Sehol! A kommunizmus érdekei minden helyet betöltenek. A kommunista rendszernek olyan emberekre van szüksége akikből hiányoznak az igazi emberi érzések és mint gépek készek vakon harcolni a kommunizmusért. A propaganda-gépezet Magyarországon ilyen típusú emberek előállításán fáradozik. Olyan ez mint egy ördögi gyár, melynek egyik kapuján behajtják az emberek tömegeit, és a másik kapuján élő-halottak halmai és néhány fantaszt jelenik meg; az úgynevezett kommunista ember-típus. Számomra ez a kommunizmus.

A társadalom egyes emberekből, egyénekből áll akiknek magánéletül, vágyaik, álmaik, terveik különböző elképzeléseik vannak az egyéni élet szépségeiről, a boldogságról. Miféle társadalmi rendszer az, amely elnyom minden törekvést az egyéni életre, kiöl minden hitet, vágyat, álmot az egyénekből? Ez a sötétség, az embertelenség, a kegyetlen elnyomás, a lelki és fizikai terror; a kommunizmus rendszere, melynek szolgálatát sohasem tudtam lelkiismeretemmel összeegyeztetni. Amikor a rezsim azt követelte tőlem, hogy vegyek részt a nyugati nemzetek és főleg Nagy Britannia és az USA ellen irányuló tervei végrehajtásában is, elhatároztam, hogy végleg szakítok a kommunista rendszerrel.

Hittem abban, hogy nyugaton egy új igazi szabad hazát talállok magamnak ahol a megélhetésem mellett lelkiismereti szabadságot és egyéni boldogságot talállok régi hazam helyett, mely nem tudott otthont boldogságot adni nekem.

Őszinte boldogság érzésével jelenthetem ki, hogy hitemben nem csalódtam, szabad vagyok, lehetőséget kaptam egy boldogabb új életre, biztos állásom, megélhetésem lesz, és olyan emberek vesznek körül akik őszintén fognak szeretni és megérteneek engem.

A kommunista propaganda igyekszik elhitetni a magyar néppel, hamisítások árán is, hogy a nyugati rendszerek kegyetlenek, embertelenek, hogy a nyugati nemzetek terror alatt, nyomorban élnek, ahol nincs igazi kultúra és emberi élet. Gyűlöletet és félelmet igyekeznek kelteni a nyugati társadalmak iránt azokban az emberekben is, akik hivatalosan, vagy magánemberként utaznak nyugati országokba, mivel tudják hogy ezeknek az embereknek alkalmuk van meggyőződni mindezek ellentéteiről.

Tévedés hinni a kommunisták humanitásában és abban, hogy magyar kommunista rendszer több szabadságot ad a magyar népnek. Amit a rezsim a Forradalom után adott az történelmi szükségszerűség, és nem önkéntes, humánus engedmény volt. A rendszer kimélettlenül elnyom minden törekvést, mely több szabadságot követel a magyar népnek.

Remélem, hogy mindenki, aki hasonlóképpen érez mint én, és felismeri voltaképpen mi történik ma Magyarországon, és nem szolgálja tovább a rendszert, hanem keresi és megtalálja a neki legjobban megfelelő módot arra, hogy szakítson vele és segítse a sokat szenvedett magyar nemzetet szabaddá és boldoggá válni.

Washington, 1966 február 18

MR. LASZLO SZABO'S MESSAGE TO THE PEOPLE OF HUNGARY

First of all I would like to repeat what I consider to be the most important reasons why I broke with the Hungarian Communist regime after 20 years in its service and what I got in return for this service. During those long years I increasingly felt a dread for the future, a fear of trusting my fellow man, a feeling of loathing and disillusionment weighed upon me. The regime offered money in addition to a good material life in comparison to that of the average person living in Hungary. But what was the price paid for this? The communist cause commanded the service of my soul, my beliefs, my faith, my private life, my independence, my human feelings, my longings, and my happiness, but never considered me as an individual.

To serve communism a cause which does not recognize me as an individual but only as an instrument of its own interest is intolerable: that is what communism means to me! I could not think of ME but only of US—never about MINE but only of OURS! There are many oft repeated slogans according to which under communism one must subordinate one's private interests and desires to the interests of communism and in the end thus find the most perfect expression of individual interests. But where is the place in this scheme for private

interests? Nowhere! Communist interests crowd out everything else. A communist regime needs those kinds of men lacking in all real human feelings and who, like machines, fight blindly for communism. The propaganda machines in Hungary strive to produce a certain type of "pre-fabbed" man. It is like a monstrous factory in which a mass of people is forced into one door and from another door comes a dual stream of bodies of living dead beside one composed of some fantastic appearing shapes—the so-called "communist types"! It is a sad thing, communism.

A society is composed of individuals for whom there should exist a private life, longings, dreams, plans, and their own special hopes for beauty and happiness in their own lives. What kind of a society is it that represses every aspiration of an individual's life, stamps out every religious feeling, every dream of the individual? The darkness, the inhumanity, the ruthless repression, the mental and physical terror; that is the Communist system to whose service I was never able to reconcile myself in my conscience. When the regime demanded of me that I participate in carrying out its plans against western countries, principally Great Britain and the USA, I decided finally to break with the regime.

I believe that in the West I can find a new truly free home where, in addition to a chance for a better life, I can find intellectual freedom and genuine happiness. My former homeland could not give me a real home and happiness.

It is with a feeling of joy that I can report with complete openness that true to my desires *I AM FREE!* I have received the opportunity for a happier new life, secure work and self-fulfillment. I find myself among the kind of people who accept me openly and understand me.

Communist propaganda tries hard to convince the Hungarian people falsely that Western regimes are brutal and inhumane, that their peoples live under continual terror, and that they are countries without true culture and humane living conditions. They attempt to create an abhorrence of Western society in those individuals who travel privately or as officials to western countries. But those Hungarians who have had the opportunity to travel to the West know the truth in their hearts.

It is a mistake to believe in "communist humanism" and in the claim that the Hungarian communist regime grants more freedom to the Hungarian people. What the Hungarian regime has granted since the Revolution has been a historical necessity and not a voluntary act of humaneness. The regime has, on the contrary, pitilessly suppressed every individual aspiration, rather than given more freedom to the Hungarian people.

I hope that all of you who have feelings similar to mine and who realize what is actually going on in Hungary will no longer serve the regime but will desire and find for yourselves the most effective way to break away from it and assist the long suffering Hungarian nation by choosing freedom and happiness.

MR. LASZLO SZABO'S MESSAGE TO HUNGARIAN EMIGRATION

Üzenet A Magyar Emigrációknak.

A magyar kommunista rezsim a magyar nép szabadság—törekvéseit nemcsak országon belül nyomja el kiméretlenül, hanem minden eszközzel támadja a magyar emigrációt is szerte a világon.

Mint ismeretes, a Forradalom óta a történelmi körülmények miatt a rezsim arra kényszerült, hogy némileg változtasson módszerein a magyar emigrációval kapcsolatos politikájában is. Mindez azonban nem változtatta meg politikájának lényegét. Hírszerző és elhárító szervének—mely gyakorlatilag az AVH-val azonos—változatlanul célpontja az emigráció melyet a szabad világ elleni aknamunka egyik bázisának tekint.

Mindenki aki Magyarországra utazik mint turista, üzletember vagy hivatalos delegátus, gyakorlatilag az AVH ellenőrzése alá kerül. Ügynökök, titkosrendőrök, figyelik, lehallgatják telefonját és rejtett mikrofonok utján magánbeszélgetéseit, ellenőrzik levelezését stb. Keresik az alkalmat, hogy a hazai rokonság, régi barátok, vagy éppen provokátorok felhasználásával, megtévesztéssel, megvesztegetéssel, zsarolással új hazája ellen fordítsák, mely otthont, szabad életet és boldogságot adott számára.

Lehetőségeik—kölcsonös egyezmények alapján—kiterjednek a kommunista blokk összes országára, ami azt jelenti, hogy pl. Csehszlovákia egyáltalán nem jelent menedéket egy odalátogató magyar emigráns számára az AVH támadásai ellen.

A szabad világ országainak városaiban, Washingtonban, New-Yorkban, Rio de Janeiróban, Ottawában, Londonban, Frankfurtban, Bécsben, Rómában, Tel-Avivban ávos hírszerzőtisztek csoportjai dolgoznak diplomáciai fedés alatt a magyar nagykövetségeken, követségeken és kereskedelmi kirendeltségeken. Mindenki aki hivatalos minőségben, vagy magánemberként—mint pl. turista vízum ügyben—kapcsolatba kerül a magyar külképviseleti szervekkel, gyakorlatilag az AVH-val találja magát szemben. Ezek a diplomata mezbe bujtatott ávos tisztek azonnal megkezdik kapcsolataik tanulmányozását, bizalmas, titkos adatokat igyekeznek megtudni a fecsegőktől, ártalmatlannak látszó "szivességeket" kérve felhasználni őket aknamunkájuk leplezésére és később akit lehet céljaikra.

Mindez nemcsak az egyéni védekezés szükségességére hívja fel a figyelmet a kommunizmus akanamunkája ellen, hanem nagyobb éberségre is figyelmeztet a szabad világ és ezen belül az új haza érdekeinek és biztonságának védelmében. Meggyőződésem hogy a szabad országok biztonsági szervei megfelelő biztonságot tudnak nyújtani az ilyen fajta akciók ellen.

Hiszem hogy eljön az idő, amikor sokat szenvedett hazánk és egész népünk szabad és boldog lesz és a világ népeire az örök béke korszaka köszönt. Addig azonban nekünk akik az emigrációban égünk mindenkor késznek kell lennünk a szabadság eszmejének védelmére nem csak otthon hanem új hazánk határain túl is!

Washington, 1966. február 27.

[Translation]

MR. LASZLO SZABO'S MESSAGE TO THE HUNGARIAN EMIGRATION

The Hungarian Communist regime cruelly oppresses the efforts for freedom by the Hungarian people, not only inside the country, but attacks the Hungarian Emigration all over the world.

As is well-known, after the revolution the regime was forced by historical circumstances to change its political methods at home, and in a way, in connection with the Hungarian Emigration too. But this change doesn't mean any change in the essence of its politics. A priority target of the Intelligence and Counterintelligence Services of the regime—which is the AVH—is the Hungarian Emigration. That is one of the bases of subversive work of the AVH against the Free World.

Everybody who enters Hungary as a tourist, businessman, or official delegate, falls under control of AVH agents, surveillance, telephone monitoring, hidden microphones, letter-censorship, etc. Exploiting personal relationships, old friends, or provocateurs, and with the help of charges of false official representations to the regime, corruption, and blackmail, they try to force this person to turn against his new Homeland which has given him a free life and happiness there.

On the basis of mutual agreements, they have possibilities to carry out this type of action in all countries of the Communist Bloc. It means that Czechoslovakia, e.g., isn't at all a place of refuge from the attacks of the AVH for a Hungarian emigrant.

Groups of AVH intelligence officers are working under diplomatic cover in Hungarian Embassies, Legations, and trade missions in the following cities of the free world among others: Washington, New York, Rio de Janeiro, Ottawa, London, Frankfurt, Vienna, Rome, and Tel-Aviv. Any Hungarian emigre who gets in touch with Hungarian foreign representations officially or privately—e.g., as a tourist for visa—may come face to face with the AVH.

These AVH officers, hiding in the guise of a diplomat, begin to study their contacts immediately. They try to get secret information from the careless talkers, and ask them for small apparently innocent favours. They try to use them to disguise their clandestine espionage work, and later, if some of them prove useful enough, use them for their own purposes in their intelligence collecting plans. All these facts not only call everybody's attention to the necessity of individual self-defense against the subversive work of Communism, but also warn everybody of the need to protect the interests and the security of the Free World and that of their new homes as well. Your local security authorities can assist you in defending yourselves from this kind of action.

I do believe there will come a time when our long suffering Homeland and all the Hungarian Nation will be free and happy again, and peace will come to the peoples of the world forever. However, until then, we in the Emigration must be alert always to defend the principles of freedom we sought not only at home but now seek in our new Homelands as well.

A selection of contemporary news items on the LAPUSNYIK case follows:

[Attachment]

A Selection of Contemporary Press Accounts on the Case of Bela Lapusnyik

[From the Washington (D.C.) Post]

HUNGARIAN OFFICER FLEES TO AUSTRIA

(Reuters)

Eisenstadt, May 9.—A sub-lieutenant of the Hungarian counter-intelligence today forced his way in full uniform into Austria and sought political asylum, police reported here.

The sub-lieutenant, 24-year-old Bela Lapusnyik, told police that he rode a motorcycle to a Hungarian border checkpoint near Nickelsdorf. He fired warning shots at two Hungarian border guards, forcing them to seek cover, before leaping over the barrier. The guards fired at him with automatic pistols, but he escaped injury.

[From the Vienna Die Presse, May 20, 1962]

OVERCOAT WAS "LINED" WITH ESPIONAGE LISTS

(By Norbert Linniger)

The leather overcoat of 23-year-old 2d. Lt. and AVO agent Bela Lapusnyik was heavily lined, and literally so. Among other instructive documents sewed up in the lining of the overcoat the Hungarian smuggled to Austria were lists giving the names of persons working for the Hungarian secret service in the west.

As Die Presse reported in detail before Bela Lapusnyik left Budapest on a motorcycle the night of 8 May. He outwitted the two border posts near Nickelsdorf, identifying himself as an AVO member and then fled across a mine belt to Austria. After a first questioning by Burgenland police, Lapusnyik was immediately taken to Vienna for questioning by the Hungarian affairs specialist of the Vienna political police, Dr. Hejkrlik.

Not only did the initially vague hope that Bela Lapusnyik might have brought information to Austria come true, but actually the boldest expectations of the political police were surpassed. Sewn up in his overcoat the Hungarian had brought secret information about espionage activities, foreign currency smuggling, and name rosters of agents in Austria, straight from the Budapest Ministry of the

(5361)

Interior. Lapusnyik presented detailed documents about the methods employed by the Hungarian secret service in Austria. He was also able to reveal the obscure channels through which information is smuggled from Austria to Hungary. He furthermore told the police about the "secret loopholes" in the iron curtain, as well as the names of AVO contact men in Austria.

The documents also contain names of AVO agents dispatched to Austria as refugees. Lapusnyik is even informed about the financial situation of these people. As soon as the political police fully utilize the information a major wave of arrests of secret agents is to be expected in Austria.

The AVO man was also able to give details about foreign currency smuggling. Only through his information was it learned that these activities are centrally directed by the Budapest Ministry of the Interior. Lapusnyik named a fashion shop on the Stephansplatz where any monetary transaction with Hungary can be effected. This shop is also said to be the meeting place of agents. An investigation already underway will show to what extent the shop owner is informed about these things.

Last but not least the 23-year-old second lieutenant was able to give information about man smuggling between Hungary and Austria. Hungarian authorities, it turned out, are far better informed about this than the Austrian political police have been up to now. Thus, the Hungarian police, according to Lapusnyik, have repeatedly succeeded in arresting people engaged in man smuggling for money. The Austrian authorities have been less successful in this respect.

Bela Lapusnyik is still being constantly questioned by members of the Vienna political police because it has not yet been established whether all his statements are correct. Nevertheless, a large-scale check of these statements has started and it has turned out that at least the general information the Hungarian gave about the agents and their working methods are correct. The checking of the list of names, however, requires some time because police want to prevent any premature warning of suspects.

It will be difficult to check up on Lapusnyik's information about the men-smuggling organizations. In this connection a distinction must be made between those organizations which want to save their fellow believers and persons who take people to liberty for sheer profit motives, charging up to 20,000 dollars per person.

[From the Reuters News Service, June 5, 1962]

Vienna, Austria, June 5 (Reuters).—Austrian Police today were investigating the death in a hospital of a Hungarian counterintelligence agent who escaped to the west May 9.

The agent, Lt. Bela Lapusnyik, 24, who was in custody since his escape, was admitted to a closely guarded Vienna clinic on Saturday.

Doctors diagnosed tonsillitis, but the lieutenant's condition worsened and he died yesterday. A preliminary post mortem showed death was caused by paralysis of the brain.

Police said that shortly before he died, Lapusnyik wanted to say

something to his doctors. But no one could understand him, and he was dead before an interpreter arrived.

Lapusnyik escaped from Hungary by driving up to a border barrier on a motorcycle and then leaping over amid a hail of automatic fire from Hungarian border guards.

He claimed later he wanted to give police details of Hungarian agents in Austria.

[From the Reuters News Service, June 5, 1962]

Vienna, Austria, June 5 (Reuters).—A preliminary investigation today showed no sign of unnatural causes in the death yesterday of a Hungarian counter-intelligence agent who escaped to the west last month.

A preliminary post-mortem showed the agent, Second-Lieut. Bela Lapusnyik, 24, died of "paralysis of the brain." Police said there was not the "slightest indication of an unnatural death."

He died a few days before he was to be flown to the United States.

An autopsy was begun and showed indications of inflamed intestines and pneumonia in early stages, a police statement said. The examination of the body was being continued.

Lapusnyik, who was scheduled to be flown to the United States shortly, escaped to Austria May 9 by leaping over a border barrier as Hungarian frontier guards fired at him. He was taken into protective custody.

On Saturday Lapusnyik was admitted to a closely-guarded clinic here with what physicians diagnosed as tonsillitis. His condition grew steadily worse until he died.

Lapusnyik claimed he wanted to give police details of Hungarian intelligence agents in Austria. Police said he tried to make a statement shortly before he died, but that death came before an interpreter arrived.

While in protective custody, Lapusnyik was guarded by police, only took meals prepared in a prison kitchen and had no visitors, police said.

"We exclude the possibility of outside interference," a police official said.

[From the New York Times, June 5, 1962]

HUNGARIAN DEFECTOR IS POISONED AS HE GIVES AUSTRIANS SPY DATA

(By M. S. Handler)

Special to the New York Times

Vienna, June 4.—A second lieutenant of the Hungarian secret police who escaped to Austria under a hail of bullets early this month was found poisoned last night in the maximum-security room of the Austrian State Security headquarters in Vienna.

The officer, Bela Lapusnyik, died this morning. He had been held in protective custody for questioning. He was to be released this evening.

The 24-year-old lieutenant had brought with him from Budapest a packet of secret police documents that included the identification of numerous Communist secret police agents and informers in Austria and Western countries.

Informed persons likened the role of Vienna in the East-West intelligence war to that of Lisbon during World War II, when Allied and Nazi agents frequented Lisbon.

The Austrian State Security Police were unable to solve another sensational case that held the front pages of Austrian newspapers for several weeks. A mysterious Hungarian disappeared from a house in Vienna and was never found. Only bloodstains, bits of hair and an empty drug vial were found in a room where a fierce struggle had apparently taken place.

The Hungarian, who was known as Abranyi had traveled between Vienna and Budapest under a businessman's identity, which he had assumed after having posed as a journalist.

The Lapusnyik affair began May 9, when Lieutenant Lapusnyik borrowed a motorcycle from a friend in Budapest and headed for Hegyeshalom, the Hungarian checkpoint on the Hungarian-Austrian frontier.

Lieutenant Lapusnyik wore his uniform and carried his regulation pistol in a holster. He also was carrying the packet of secret documents.

He arrived at the checkpoint shortly before 2 A.M. May 10. The frontier barriers were closed. Two frontier guards armed with machine pistols were on patrol and they pointed their weapons at the motorcycle.

LIEUTENANT SHOWED CARD

Lieutenant Lapusnyik dismounted and showed his security police card, which identified him as a member of the special branch in charge of preventing escapes from Hungary.

According to the report, he gave to the Austrian state security police after his escape, the lieutenant told the two frontier guards that he had a rendezvous with an automobile driver. He said later that he had hoped to jump into the first car leaving Hungary for Austria, but none appeared.

Finally, Lieutenant Lapusnyik said, he resolved to take a chance. He whipped out his pistol and ordered the two frontier guards to drop their weapons. Lieutenant Lapusnyik said he then started to fire above the heads of the guards, jumped over the barriers and plunged into a ditch parallel to the road leading to the Austrian checkpoint.

The two frontier guards started spraying the ditch and the road with shots from their machine pistols. Lieutenant Lapusnyik stumbled along the ditch and finally reached the Austrian checkpoint unhurt.

The Austrian police took him to Vienna, where he turned over his packet of documents and submitted to questioning.

Last night, Lieutenant Lapusnyik began to complain of cramps and a throbbing headache. This morning he was dead.

[From the Vienna (Austria) Express, June 6, 1962]

PERFECT MURDER OF AVO MAN FEARED

"The sudden death of the Hungarian AVO Second Lieutenant who had fled to Austria with important intelligence materials is like a perfect murder." That is the opinion of criminologists and of persons experienced in the agents' war, after it had become known that Bela Lapusnyik had succumbed to a severe infection of bacteriological origin within 48 hours. The official position, that no clues showing outside intervention are available—the court's medical expert had found no cyanide of potassium nor other traceable poison—is being shrugged off by experts of the agents' war.

It cannot be disputed that the murder using bacteria will never be proven. The court's medical experts will hardly be able to determine how a deadly bacteria culture could have gotten into the body of the Second Lieutenant. It is also not their job. And the investigation of the Federal Police as to who in Vienna has spent time with the refugee and, in the course of such meeting, given him an apple, for example, contaminated with bacteria will hardly be crowned with success.

The fact remains that Lapusnyik had great fear of Hungarian keepers. Before his death he had revealed names of persons in Austria who were to have been carried off to Hungary like agent Dr. Aurel Abranyi.

AVO OFFICER REVEALED PLANS OF NEW ABDUCTION

The only available, and therefore most important, witness in the sensational kidnapping of the Viennese western agent Dr. Aurel Abranyi, 47, is dead. He was the Second Lieutenant of the Hungarian Ministry of Interior, Bela Lapusnyik, 24, who as is known suddenly died a mysterious death on Monday morning in the secured section of the General Hospital. Among the secret materials which the former AVO officer had played into the hands of the Austrian Federal Police after his flight from Hungary, were also data according to which Dr. Abranyi had actually been lured to a ambush in the villa in Hetzendorf, was numbered and carried off to Hungary on 14 October of the past year. Abranyi is supposedly still alive. How far Kadar's "long arm" reaches into Austria is proven not only by the death of the Second Lieutenant, but also by the Lieutenant's all-important revelations [during interrogations]. According to the format of Abranyi's kidnapping, a series of other persons are still to be dragged off into Hungary from Austria. The victims—the names are known to the Federal Police—are for the greater part former Hungarian refugees who now are working for "intelligence services".

Although the interrogations of the defecting counterintelligence officer so far have been described as "very productive", his sudden death while in the custody of the Federal Police, nevertheless, constitutes an almost irreparable blow. Because of language difficulties it was not possible to gain complete clarification of many complexes of questions during the three weeks since his flight. Among them: Who

in Austria participated in the abduction of Abranyi and how was the victim gotten across the border.

If indeed Hungarian agents have the death of the defected counter-intelligence specialist on their conscience, then they struck literally in the last seconds. Already yesterday, Tuesday, Bela Lapusnyik was to have been flown to the USA. Although this plan had not been conceived before the weekend and although it was made in strictest secrecy, it could nevertheless have become known to his keepers.

I AM NO LONGER SAFE IN VIENNA

The Second Lieutenant himself had repeatedly asked during the previous week that he finally be turned over to the USA because he was not safe from Hungarian agents in Vienna. It is possible that the police also "smelled" something, because the Ministry of Interior had wanted to permit the departure of the important informant, even though the materials had not as yet been worked on. On Saturday at noon Lapusnyik complained to the superintendent of the police prison on Rossauerlaende that he had an ache in his throat. The police doctor suspected a tonsil abscess and ordered confinement in the secured section of the General Hospital, after the patient had not been able to eat his noon-day meal—carrots and peas—because of difficulty in swallowing.

Despite the fact that room 125—it is the so-called interrogation hospital—is under guard by Justice-guard-complement-officials, the "valuable prisoner" was still further protected against the outside world by officials of the Federal Police.

I HAVE BEEN POISONED

To begin with the doctor could only determine that he had a high temperature and an inflammation of the tonsils. On Sunday—supposedly as a result of progressive exhaustion—the patient had no fever! On the other hand, however, he complained about severe stomach pains. "I have been poisoned!" he voiced the fear, and, at the direction of the Federal Police, the interpreter sounded the alarm to no less than five doctors. His stomach was pumped out—and nothing was found. There was also no trace of appendicitis. They faced a puzzle. As a precautionary measure, the patient was treated against all possible poisonings by using heart-strengthening medications and medicines designed to improve resistance. Unsuccessfully. Monday at 5:45 the Second Lieutenant died.

During the autopsy yesterday, Tuesday, the two court's medical experts, Professor Dr. Holczabek and Professor Dr. Woelkart, could determine preliminarily:

Lapusnyik had become ill as a result of the inflammation of the tonsils as well as of an inflammation of the narrow intestine.

The beginning of pneumonia was in progress.

The direct cause of death is to be found in a paralysis of the brain.

Inasmuch as inflammation of the narrow intestine could possibly have been brought on by typhoid bacteria, a bacteria culture was taken, but only in 2 to 3 days will it be possible to tell whether the culture

"takes" and thus whether Lapusnyik actually became ill of a typhoid or paratyphoid.

ALL OTHERS ARE WELL

Even though the chemical expert, Professor Dr. Machta had been able to find no inorganic traces of poison in the body of the deceased until yesterday, Tuesday afternoon, this in no way proves that the AVO officer could not have been "poisoned" anyway. How the bacteria could have gotten into the body of Lapusnyik could not even be explained by the court's medical experts.

Inasmuch as Lapusnyik was fed in jail most of the time, all other prisoners are of good health, it seems possible that the "special prisoner's" fruit had been contaminated with bacteria. "A difficult undertaking, but certainly possible", was the explanation from the medical experts in this connection. Leaving the question of the origin of the bacteria open—doctors recall that, as a result of psychological pressures, a man can reach a condition where he has no resistance, whereby in the end the body can muster no strength for recovery.

TREATED LIKE A CRIMINAL

That the sudden death of the AVO officer under these conditions rests heavily upon the responsible officials of Austrian security is understandable. What is, however, not understandable is that no asylum other than the police jail is known for the protection of such an important man. After daily nerve-racking interrogations, Lapusnyik could then think about his situation while in an unheated, isolation cell of stone flooring, on a plank bed, with a meager prison meal. No east and no [other] west state would dare treat in such manner a refugee who had been so exposed. Particularly not when it is in its own interests (full translation).

[From the Austrian Volksstimme, June 6, 1962]

HAS THE US SECRET SERVICE MURDERED LAPUSNYIK?

Vienna, June 5.—Columns of reports appeared in numerous Viennese newspapers on Tuesday concerning a "Sensation" which they had uncovered: A Hungarian refugee in police custody was supposedly poisoned, murdered by the Hungarian secret service with a gas pistol.

How does the official presentation of the investigating offices read? The 24 year old Bela Lapusnyik, who had fled to Austria on the 9th of May and had alleged that he is a sub-lieutenant in the Hungarian counter-intelligence service, had been held in detention by the Federal Police under strict guard and had been repeatedly interrogated. On Saturday morning Lapusnyik reported illness and the physician of the police jail established tonsillitis. The refugee was taken to the General Hospital, kept under strict guard and treated by physicians of the ear, eye and nose clinic. His condition worsened, he lost consciousness from time to time, and finally died on Monday morning.

In reply to inquiries the police disputed the possibility that its charge who, after all had been under constant guard, could have been

poisoned. All that had been invented was described as sheer nonsense, in particular the mysterious gas pistol with which a person could be killed without it becoming conspicuous.

Professor Dr. Holczabeck reports to us that the autopsy has provided the following interim result: Lapusnyik suffered not only from tonsillitis, but also from an inflammation of the narrow intestine and from the beginning of pneumonia. Death from a resulting brain apoplexy is entirely possible. As far as the inflammation of the narrow intestine is concerned, this could have resulted from either paratyphoid or typhoid. Only a bacteriological examination could provide clarity on this point. This and all other microscopic and chemical examinations will be completed in a few days. In any event, to date the court's medical men have found not a single clue to show that Lapusnyik had been poisoned. They are of the opinion that he had died a natural death. So much for official statements which were made available to the other newspapers as well as to us.

Nevertheless, several papers have created an "insidious poison murder through the Hungarian secret service". No news agency had the audacity to render this kind of version. The Austria-Press-Agentur furnished the negative opinion of the court's medical men, the American UPI agency reported laconically that Lapusnyik had supposedly died of typhoid. These newspapers must, therefore, have received a nod from [certain] quarters as to how to report; that is patently evident because they have come forth with the same poison murder version in unison, as on command. These quarters must naturally pursue a certain purpose.

At the same time, statements from official Hungarian organs unequivocally refute the assertions of a poison murder made by this source. Without contradiction it has been determined that the Hungarian refugee had been under constant Federal Police guard. How would the Hungarian secret service have gotten into Lapusnyik's cell in order to murder him?

On the other hand, the same source reports that Lapusnyik was to have been flown to America during this week. He must doubtlessly therefore have had contact with the American secret service. How else would he have flown to the USA? Well then, because of the sharp guard of the Federal Police nobody could have come near Lapusnyik—with one exception: the American secret service! If it indeed is factual that he had become the victim of a murder, then the culprits are to be sought only in the American secret services, nowhere else (complete translation).

[From the Associated Press News Service, June 6, 1962]

Vienna, Austria, (AP).—A Hungarian secret police officer told his Austrian guards shortly before his mysterious death that he feared he had been poisoned, probably by Hungarian Communist agents, it was reported today.

The officer, 24-year-old Lt. Bela Lapusnyik, died last Monday in a maximum-security room at Vienna's General Hospital, three weeks after a spectacular escape through the iron curtain to Austria.

A police communique last night said there was no evidence of foul play in Lapusnyik's death and that medical examination of the body was continuing. The communique did not rule out that the Hungarian could have been murdered.

Police officials, under press criticism, were tight-lipped. Informed sources close to the Interior Ministry, however, said Lapusnyik had given Austrian authorities valuable information about the Hungarian espionage network in Western Europe, including lists of names and headquarters of agents working abroad. The young officer crossed into Austria in mid-May and surrendered to Austrian authorities.

[From the Vienna Die Presse, June 7, 1962]

JAIL PERSONNEL UNDER CROSS EXAMINATION—THE AVO MAN WAS NOT POISONED IN HIS CELL

(By Norbert Lininger)

Vienna, June 7.—At noon on Wednesday the Vienna security bureau had completed the examination of the mysterious death of the 24 year old AVO officer Bela Lapusnyik. According to the results of the investigation, it is almost impossible that the Hungarian alone had been poisoned in the jail on Rossauer Laende. Understandably, almost daily, Lapusnyik was taken by officials of the Federal Police to the [police] headquarters on Parkring. As yet it has not been possible for the Viennese security bureau to determine what possibilities for murder existed during the time of his absence from jail.

In jail Lapusnyik was quartered in an isolation cell in the section for major criminals. Only the warders—in this section selected older personnel—had access to him. The food was poured into bowls in the kitchen and taken on a cart to this section which, in addition, was divided from the rest of the jail by grilled doors. In the kitchen, they didn't know which bowl would be served the Hungarian in the cell. The distribution [of the soup bowls] was always made by two guard officials. Therefore, the circle of suspects is limited to a maximum of five or six persons. These persons were thoroughly checked and subjected to cross examination on Tuesday and Wednesday. The result was negative.

What then was the situation when Lapusnyik was taken outside of the jail? And that happened, as has now been conclusively established, almost every day. Officials of the Viennese City Police came for him usually in the early forenoon and brought him back only toward evening. During the interrogation at headquarters on Parkring, Lapusnyik received special food. He was also permitted to make special requests. In this connection he was known as a friend of farinaceous food. Often, therefore, officials had to get a cake [Torte] from a nearby pastry shop.

The possibilities that existed there for the assassination of the AVO man are currently being investigated by the Federal Police. So far nothing has been made known concerning the progress of this investigation. As has been reported, however, all criminal officials of

Department I who had any dealings with Lapusnyik were supposedly interrogated individually on Wednesday (full translation).

[From the New York Times, June 8, 1962]

DEFECTOR TOLD OF HIS FEAR THAT HE HAD BEEN POISONED

Vienna, June 6 (AP).—A Hungarian secret police officer told his Austrian guards shortly before his mysterious death that he feared he had been poisoned, probably by Hungarian Communist agents, informants said Wednesday.

The officer, 24-year-old Lieut. Bela Lapusnyik, died last Monday in a maximum-security room at Vienna's General Hospital, three weeks after his spectacular escape from Hungary to Austria.

[From the New York Times, June 10, 1962]

VIENNA AS A SPY CENTER—POISONING OF HUNGARIAN AGENT POINTS UP CITY'S NEW STATUS AS CENTER FOR INTELLIGENCE ACTIVITY

(By M. S. Handler)

Special to the New York Times

Vienna, June 9.—The sudden death this week of a young Hungarian secret service officer who had defected to the Austrians and was guarded by them in a maximum-security building in Vienna has loosened tongues on the subject of the role of the Austrian capital as the main Communist base for intelligence operations against the West.

Apart from the normal amount of gossip engendered by the death last Monday of Second Lieut. Bela Lapusnyik evidence accumulated since the first of the year indicates that Vienna has replaced Berlin as the intelligence base.

The transfer from Berlin to Vienna was caused in part by the difficulty of passing agents between the two parts of Berlin after the Communist wall was erected. The wall became a handicap because the Western Allied services could more easily control entries and exits. Other reasons for the selection of Vienna included proximity to Communist borders unrestricted movement in Austria and ineffectual Austrian laws on espionage.

BIG ROSTER

There are more Soviet officials in Austria today than in Washington and New York combined. Not including such personnel as secretaries, telephone operators, cooks and chauffeurs, all imported from the Soviet Union, there are about 240 men with official titles.

The Hungarian and Czechoslovak intelligence organizations also maintain impressive establishments in Austria, but less is known about their manpower.

The death of Lieutenant Lapusnyik served to dramatize the im-

punity with which the Communist intelligence organizations operate in Austria.

He was a member of the section of the Hungarian security police headquarters in Budapest that is concerned with preventing defections and tracking down defectors. On May 9 he borrowed a motorcycle from a friend in Budapest and headed for Hegyeshalom, the Hungarian checkpoint on the Austrian border.

Lieutenant Lapusnyik escaped across the border under a hail of bullets at 2 A.M. on May 10. He surrendered to the Austrian border police, who transferred him to the state security headquarters in Vienna. He was interrogated almost every day. He was confined in maximum security and had contact with no one except his official guards and interrogators.

The defector was to be released last Monday. The night before he complained of throat pains and a throbbing head. A police surgeon reported later that he had detected an infection of the tonsils. Lieutenant Lapusnyik was rushed in the greatest secrecy to a guarded section of the general hospital.

The patient's condition deteriorated rapidly. A team of physicians tried desperately to save him. He had no fever. At 7 a.m. Lieutenant Lapusnyik, 24 years old and a strong, athletic type accustomed to outdoor life, died of a cerebral hemorrhage.

A quick autopsy disclosed a certain amount of inflammation of the intestines and the beginnings of inflammation of the lungs—none of which explained the rapid collapse and the stroke. Chemical analyses of tissue are under way, but there seems little likelihood that the agency that caused death will be discovered.

Professional opinion holds it as certain that Lieutenant Lapusnyik was killed by a poison that leaves little trace in the body. How the poison was administered is the main question.

The drama and mystery of the affair overshadow numerous recent incidents. Some cases wind up in court but most leave no trail.

For example, the criminal court in Eisenstadt, the Provincial capital of Burgenland, sentenced a young man to a year's imprisonment on charges of having supplied information to the Hungarian secret service. His assignment included the small frontier defense bunkers being erected in Austria. A kidnapping charge was dropped when the intended victim unexpectedly reversed his testimony in court.

LONG REACH

Austrians who have been aroused to anger by Communist activities commented, perhaps cynically, that the Communist secret services had long arms.

In some cases men simply disappear and are never heard from again.

Despite such incidents, informed sources believe the "rough stuff" is only a secondary activity in the intelligence underworld. They say times have changed, as have the targets of the intelligence organizations. The main target is said to be infiltration into business and social organizations and governmental departments.

Parallels are drawn between Vienna and Lisbon as intelligence centers. During World War II Allied and Nazi intelligence opera-

tives worked intensively from the Portuguese capital because it was a bridge between the two warring camps.

Vienna is also a bridge, this time between East and West, where men can be trained and operations conducted without fear of interference unless Austria's narrow law is violated.

[From the Reuters News Service, June 13, 1962]

Vienna, Austria, June 13, (Reuters).—Josef Afritsch Interior Minister said today that police investigations into the recent death of a Hungarian counter-intelligence agent “made it appear out of the question” that he was murdered while in protective custody.

In reply to questions in the National Assembly, he said all medical tests so far had not given the slightest indication that 24-year old Bela Lapusnyik, a Second Lieutenant, had died through “outside interference.”

Investigations are continuing, he said.

Lapusnyik escaped into Austria last month, claiming he had important information on the activities of Hungarian agents in Austria. He died in a closely guarded clinic June 4, shortly before he was to have been flown to the United States.

[From the Washington (D.C.) Post, June 14, 1962]

EX-SPY'S DEATH NATURAL

Vienna, June 13 (AP).—Interior Minister Josef Afritsch told Parliament today that the investigation of the death of former Hungarian intelligence officer Bela Lapusnyik has failed to disclose any foul play. Lapusnyik died in a Vienna hospital recently and there was speculation that he had been poisoned.

[From the New York Times, June 14, 1962]

SPY'S DEATH ARGUED IN VIENNA

Special to the New York Times

Vienna, June 13.—The Interior Minister, Josef Afritsch, told the Austrian Parliament today that chemical and bacteriological analyses had not disclosed any evidence that the death of Lieut. Bela Lapusnyik, a Hungarian spy who had defected to Austria, had been caused by an “external agency.” The minister made his statement in answer to questions.

[From the Volksstimme, June 14, 1962]

COLLAPSE OF THE LAPUSNYIK STORY

Vienna, June 13.—In response to a question by the FPO [Austrian Liberal Party] in Parliament concerning the "mysterious" death of the Hungarian fugitive Lapusnyik, the Minister of Interior, Afritsch, explained among other things that: "When, on June 3 the guard personnel reported that Lapusnyik was apparently suffering from an inflammation of the middle ear, he was immediately transferred to the General Hospital at the instance of the Directorate of Police and there was uninterruptedly guarded by an especially dependable police official. Since his condition worsened, that same evening there was a medical consultation which also took account of the possibility that poisoning was involved.

"A blood test was made and an examination of the contents of the stomach was undertaken. After Lapusnyik died early on the 4th of June, his body was subjected to a forensic medicine post mortem examination. The medical, chemical, and bacteriological test results so far provide no basis for the assumption that death could have been caused by outside action. The police investigations also have not revealed any circumstance which could lead to the conclusion that Lapusnyik was exposed to health-harming influences from any direction. Before the final determination of the cause of death the pending results of the biochemical tests will have to be awaited. The conjectures concerning the cause of death appearing in various daily newspapers therefore have no factual basis whatsoever."

There was considerable hilarity when the FPO delegate Tongel asked whether death could not have been caused "by means of an undetectable poison or the like."

Afritsch replied, the question had been answered.

Concerning the fantastic new reports which had appeared concerning Lapusnyik, Afritsch remarked: "The articles which have appeared in the press in large part did not square with the truth." The Minister of Interior commented: "In a country where there is freedom of the press it cannot be avoided that all sorts of news items will be spread about without having been checked beforehand." (Freedom of the press, too!)

AND THE CIC?

Unclear remains obviously the question who, with obviously very close connections with Austrian newspapers, spread the Lapusnyik story; furthermore on what basis was Lapusnyik to be brought to the USA and made available to assist the CIC; and what is actually the situation with regard to the practically official activities of the US espionage service in Austria, which should be combatted by the Federal Police, just as every other secret service must be combatted, instead of—as the Lapusnyik case makes clear—collaborating with it closely. No delegate raised a question in this regard, and the Minister did not reply to the question put to him by the Volksstimme. But silence also conveys a meaning (full translation).

[From the *Népszabadság*, (Budapest), No. 140, June 17, 1962]

THE LAPUSNYIK AFFAIR

(Signed: István Pintér)

If there were such a thing as a next world and if Béla Lapusnyik could now, two weeks after his sudden death, look back, to be more precise, could look back upon the "free world", he himself might say that it was not worth it. Probably that is how the editors of various Austrian papers have now come to look upon the matter, for the "Lapusnyik affair" became buried in a few days' time just as the body of the escapee had been buried. Lapusnyik died a sudden death; the fuss made over his death lingered on for some days, but neither has left a lasting mark.

Yet Sergeant Béla Lapusnyik became a famous man from one day to the other when on May 9 he got to the "free world" and chose the career of escapees and deserters that so rarely leads anywhere. From *Die Presse* and *Arbeiter Zeitung* down to *Express* a number of Viennese bourgeois papers together with West-German, British and American papers were terribly anxious to exploit this and crowded over the successful escape of a "key person of the Hungarian secret service"—as put by *Die Welt* of Hamburg. Lapusnyik—who by the way had never been officer as the various papers called him but had only risen to the rank of a sergeant—was said to have taken very important "lists" with him sewn into his coat's lining, that were to provide the Austrian counter-intelligence service with fine catches. Following the well-tested course the papers hypocritically "unmasked" that there was such a thing as a political police in Hungary while they rejoiced at the present the Austrian state security organs had come by and reported that Lapusnyik was to undergo a long interrogation at the Austrian political police. This "sensation" had but a short life then, all in all one day, in the columns of the Viennese papers. By the time it was resuscitated, Lapusnyik had been dead. He died in the prison hospital while he was in the Austrian police's strict custody * * *

While Lapusnyik was alive the Vienna police did not reveal a word whether the escapee had fulfilled the high expectations or not. But it issued a statement after his sudden death saying that Lapusnyik had developed an abscess on his tonsil in the prison where he was in custody and therefore he was transferred on June 3 to the Prison hospital where he died on Monday morning. The representatives of forensic medicine who carried out the post-mortem examination established that Lapusnyik had suffered from pneumonia and an inflammation of the small intestines as well and there were also indications that he had typhoid or paratyphoid fever. The statement firmly pointed out that in the course of the examination no signs had been found to indicate that the precious captive of the Austrian police had died a violent death.

Yet on the staffs of the Austrian papers there are skeptical men as well. They did not believe that a young man of 24 could die so suddenly of an abscess on the tonsil or even of typhoid fever of which

but some traces had been found. Contrary to the big agencies, the UPI, the AP, the AFP, the Reuter, and the Austrian semi-official APA, which reported the case laconically, an abridged form of the official communiqué, the Viennese press was immediately sure that Lopusnyik had been killed. According to hair-raising reports he had been killed by "Hungarian agents" so as to forestall his "sensational revelations". Die Presse and Arbeiter Zeitung blared it out just as much as Kronen Zeitung which, worthy of the fantasy of monarchists, informed its readers under a red-letter title that "Lopusnyik had been killed with a gas-pistol". In addition to the gas-pistol, which "leaves no marks whatsoever, the victim is not aware that he has been wounded and the post-mortem examination does not reveal anything either", even papers which consider themselves serious ones produced the story of "poisoned apples".

Hardly one day had elapsed when the Viennese papers, as if led by an invisible conductor, changed their tenor. Even Die Presse brushed aside, in a cold-blooded manner, what it had said the previous day and tried to prove that Lopusnyik had died a natural death. Was perhaps the reason for this climbing down, so unusual in provocative campaigns, that on Wednesday the story of the sudden death of a young man of 24 sounded more credible than on Tuesday? Or perhaps have the Viennese journalists discovered that it was a dangerous game to maintain that Lopusnyik had been killed when even simple readers could easily detect what sort of agents could have got into contact with Lopusnyik and could have got rid of him in the prison hospital?

Lopusnyik was in solitary confinement in the prison of Rossauerlaende where—we quote Express—"after the nerve-racking daily interrogations he had to content himself with one dish a day, with an unheated cell with a stone floor and a hard bunk". He had died one day earlier before he was due to be handed over to CIC agents to be transferred immediately, as had been planned, to the U.S. from the Schwechat Airfield on June 5, for "further treatment". Pursuant to their country's laws, the Austrian political police ought to fight against all secret services alike. Or are these laws violated just by those who ought to adhere to the Austrian laws, by the officials of the Austrian police? And if an agreement had been reached between the Austrian state security organs and the CIC in regard to the handing over of the prisoner, had they not co-operated when it was to be decided whether to let the escapee live or not?

And Lopusnyik, the "good catch" must have ceased being a "precious" captive after the first sensational days of the provocative campaign had worn off. After all the Sergeant who had escaped and asked for "political asylum" because of the disciplinary proceedings instituted against him for various financial corrupt practices—did not take, and could not have taken, any "lists" with him. Whatever revelations he had promised, or had other people promised on his behalf, he could not keep his promises. The French AFP reported that Lopusnyik could give but "information of no value". The deserter, who broke through the frontier, having confidence in Western "freedom", and who was dragged to solitary confinement and submitted to continuous interrogations over four weeks and then was to be

handed over to the CIC so that that torment should be continued in the U.S., could hardly produce all that was demanded by his interrogators who were in touch with the CIC. And who cannot cite examples how the American espionage organization deals with people who no longer represent any value to them and who have become superfluous?

This time the news agencies kept aloof from the provocative campaign launched by the Austrian papers. Is it because their correspondents had received information from certain quarters before their colleagues on the staffs of Austrian papers? There is one thing certain, the Arbeiter Zeitung in its article sounding a retreat, trying to prove that Lapusnyik had died a natural death, referred to "western intelligence agents" as well. Why has the central organ of the Austrian social democrats found it necessary to obtain information in the Lapusnyik affair from the men of the head of the U.S. spy organization, McCone, as well (incidentally, how did they get in touch with them?), and why did they not find satisfactory the statements issued by the Ministry of the Interior, led by the social democrat Minister Afritsch? Last Saturday several officers of the American secret service arrived in Vienna to "clear up" the circumstances of Lapusnyik's death. Although the Minister of the Interior, Afritsch, declared in Parliament to a question posed that Lapusnyik had died a natural death, the oversea commission would continue the investigations, even if the Minister did not mention it * * *

Thus the agents of the CIC can freely travel to neutral Austria and are welcome guests at the Austrian political police. Do perhaps the anti-Hungarian provocative campaigns, that are from time to time revived, and like the Lapusnyik-story meet with a fiasco, want to divert attention from the co-operation existing between the official Austrian authorities and the intelligence organs of the U.S. and N.A.T.O.?

The cold-war circles failed to profit by the case of the dead Lapusnyik as much as by that of the living one. The escapee has become a victim of the provocative campaign, but also those have burnt their fingers who received him with open arms and with a locked cell, though open to the CIC. How beneficial it would be if Express, together with the other papers, were to remember what it wrote, as a sort of unctuous explanation when the affair took a turn for the worse, though first it had jubilantly greeted Lapusnyik, "it would be wrong to glorify the participants in the dirtiest battles of the cold-war, runaways and traitors like Lapusnyik" (translation in full).

[Taken from the Vienna (Austria) Kurier, June 27, 1962]

BEHIND THE COFFIN MARCHED ONLY FOUR MEN THE LAST MILE OF THE AVO LIEUTENANT

Vienna, (own report).—That was the last mile of AVO second lieutenant Bela Lapusnyik, who died under sensational circumstances as a prisoner of the Federal Police, a few weeks after he had fled to

Austria, had placed himself at the disposal of the local police as an informant, and had already been granted asylum.

Several hours before the funeral, set for 11:15 a.m., men of the Federal Police in civilian clothing had arrived at the Central Cemetery and had "inconspicuously" placed themselves at their posts. Four of them stood at the chapel, a fifth one at the open grave site.

These officials were to be the only escorting mourners. The time of the funeral was not made public—"publicity was to be avoided". The costs of the plain funeral, a so-called Burial 4th Class, were assumed by the Ministry of Interior. For the consecration, a Hungarian clergyman was gotten; he provided a short funeral sermon in the German language for his compatriot who had lost his life on foreign soil in so tragic a manner.

Almost unnoticed, the funeral procession moved from Chapel III to a recently dug family grave which had just been purchased for Lapusnyik. In the lead the cross-bearer, then the clergyman, four undertaker's employees who pushed the burial cart, and then four men of the Federal Police in civvies.

No wreath, no flowers * * *.

Hardly were the words of the second consecration spoken when the gravedigger grabbed his shovel. He had been ordered to close the grave while the "five gentlemen" were still present. The men of the Federal Police, however, had been ordered not to depart before the dirt mound covering the resting place of the unfortunate Hungarian had been heaped up. A plain cross with the inscription "Bela Lapusnyik"—the cost was included in the overall funeral expenses—will be erected.

Photo captions on page 3.—Upper photo: The last mile of the AVO man. Hardly noticed was the funeral procession, consisting only of the cross-bearer, the priest, four pallbearers, and four officials of the Federal Police whose assignment it was to prevent any incidents and to wait until the grave of the former AVO second lieutenant had been closed.

Lower photo: The Hungarian clergyman stood alone at the open grave of his compatriot. The four men of the Federal Police who had followed the coffin and the fifth official who had guarded the open grave, all stepped back several paces and formed a circle around the burial site as if they still wanted to guard the dead man.

Photo caption on page 1: Only four men of the Federal Police yesterday morning followed the coffin of the Hungarian refugee, Bela Lapusnyik, who had died in Vienna under mysterious circumstances, to the Vienna Central Cemetery. The funeral, which was paid for by the Minister of Interior, was conducted most unobtrusively. (Story and other photos on page 16) (Full Translation)

VARIOUS STOCKPILE COMMODITIES

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE No. 1 OF THE
COMMITTEE ON ARMED SERVICES,
Washington, D.C. Monday, March 21, 1966.

The subcommittee met, pursuant to call, at 10 a.m., in room 2118, Rayburn House Office Building, Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. PHILBIN. The subcommittee will come to order.

Today, we begin a rather backbreaking schedule. We have before us 22 stockpile bills involving 18 different commodities. Each of them relates to the disposal of surplus strategic and critical materials from the national stockpile and supplemental-barter stockpile.

In addition, on Thursday, March 17, I introduced seven additional stockpile bills sent to us by the General Services Administration. I am hopeful that we will be able to schedule these seven additional bills during the latter part of this week.

We hope to dispose of these bills through a series of consecutive hearings commencing this morning and continuing for so long as may be necessary.

Understandably, conditions may occur to interrupt this program. The tentative schedule, subject to revisions, is as follows:

Monday morning, March 21, 1966:

1. Bismuth—H.R. 13368.
2. Chromite, metallurgical grade—H.R. 13365.
3. Industrial diamond stones—H.R. 13320.
4. Rhodium—H.R. 13578.
5. Battery-grade synthetic manganese dioxide—H.R. 13661.

Monday afternoon, March 21, 1966:

6. Refractory-grade bauxite—H.R. 13662.
7. Crude silicon carbide—H.R. 13372.
8. Crude aluminum oxide—H.R. 13370.

Tuesday morning, March 22, 1966:

9. Amosite asbestos—H.R. 13580.
10. Acide-grade fluorspar—H.R. 13367.
11. Phlogopite mica—H.R. 13371.
12. Muscovite mica—H.R. 13373.

Wednesday morning, March 23, 1966:

13. Jamaica and Surinam types of metallurgical-grade bauxite—H.R. 12694.

14. Thorium—H.R. 13579.

15. Ruthenium—H.R. 13663.

16. Platinum—H.R. 13364 (Philbin) and H.R. 12412 (Ichord), also, H.R. 13569 and H.R. 13570 by Mr. Lennon.

Thursday, March 24, 1966:

17. Molybdenum—H.R. 13369.

18. Aluminum—H.R. 13366.

As you know, last year this subcommittee, the full Armed Services Committee and the Congress acted on every single stockpile bill either sent to us by the General Services Administration or introduced by a Member of Congress on which we received favorable reports from the Administration; and we authorized disposals totaling over \$1 billion.

As of February 28, 1966, the total market value of excess materials over which General Services Administration has complete disposal authority, including those materials for which congressional authorization had been given, plus the amount in the DPA inventory, totaled \$1,484 million. The authority now requested in the bills before us would provide authorization for disposal of approximately \$1,100 million worth of additional materials.

In essence, therefore, if congressional approval is given to disposals of these 25 materials as requested by the Administration, five principal commodities only will remain under congressional control. They are: lead, with a value of \$406 million; zinc, \$370 million; tungsten, \$145 million; cobalt, \$58 million; and diamond bort, \$27 million. These five items total approximately \$1 billion.

The other excess items contained in the stockpile are minor in nature, and total approximately \$200 million. Thus it is apparent that this committee and the Congress have cooperated fully with the executive branch of the Government to provide it the means to conduct a sound and orderly disposal program of excess materials.

In order to expedite the hearings as rapidly as possible, I have prepared a written statement summarizing each of these bills, and you will have before you a copy of that statement when we consider each of the bills. I do not propose to read that opening statement, but, rather, merely insert it in the record.

For the information of the members of the subcommittee, counsel has prepared a concise memorandum relating to each of these bills, which I am sure will prove helpful and will expedite the hearings.

In view of this fact, and in the interest of saving time, I will not at this time outline in detail the content and purpose of each of the bills which are to be considered. All information which has been furnished the subcommittee, including prepared statements, will appear in the printed report covering these hearings.

On March 16, I issued a press release announcing the hearings and the commodities which we would consider. In that press release, I stated that we would be happy to hear from witnesses from industry who are in disagreement or have reservations concerning any of these proposed disposals. Since each of the bills, with one exception, are Administration proposals—and I am positive that Administration spokesmen will urge their adoption—I also said in the press release that those witnesses who desire to support the legislation will not be heard, but that they will be privileged to submit their statements for the record.

The bills which we hope to take up during the latter part of the week are those which I introduced on the 17th of March, and are as follows:

1. Vanadium—H.R. 13774.

2. Celestite—H.R. 13768.

3. Cordage fiber (sisal)—H.R. 13769.
4. Crocidolite asbestos (harsh)—H.R. 13770.
5. Opium—H.R. 13773.
6. Diamond tools—H.R. 13771.
7. Metallurgical-grade manganese ore—H.R. 13772.

Naturally, the same rules will apply when we take up these bills as in the others that have been scheduled for hearing.

If we take up these additional seven bills, this means that we will be considering a total of 28 bills this week, involving 25 commodities.

I have had a copy of our stockpiling report compiled last year placed in front of you. I think you might be interested to know that the thousand copies that we had printed have been exhausted and that we have had a reprint of another thousand. I think these will be helpful to you as we proceed through the hearings.

The subcommittee is pleased to have the assistance of Mr. R. D. Young, an expert on stockpiling, to assist our regular counsel in handling these matters. We certainly appreciate Mr. Young's efforts, and his association with us, in this very important work.

As we proceed through these hearings, on each of the bills we will first hear from the Office of Emergency Planning witness and then the witness from the General Services Administration. Their testimony will be followed by testimony from industry witnesses.

I also want to welcome to the subcommittee, not for his first appearance, but for his first appearance after having been appointed Commissioner of the Defense Materials Service, General Services Administration, Mr. John Harlan. We congratulate him upon his elevation to this important position.

Under Mr. Connell, as you well know, Mr. Harlan, we have had very successful experiences here. We were able, over a period of time, through excellent cooperation on the part of witnesses, both of the Government witnesses and of the industry witnesses, to make a record regarding disposal matters of which I think that you of the administrative section of the Government, and we of this committee, and the Congress, may well be proud.

We hope we can continue along that line so that the record will continue to be good and not be marred by any inordinate delays, and we will have the same good results we have had in the past.

So we want to welcome you very much here, Mr. Harlan, and wish you good luck with your work.

And it is always a pleasure for this subcommittee to receive the expert and valued testimony of Mr. William W. Lawrence of the Office of Emergency Planning.

H.R. 13368—BISMUTH

[H.R. 13368, 89th Cong., 2d sess.]

A BILL To authorize the disposal of bismuth from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately two hundred and twelve thousand three hundred pounds of bismuth now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile estab-

lished pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

Mr. PHILBIN. The first bill we will take up this morning is bismuth, H.R. 13368.

(The prepared statement of Chairman Philbin on H.R. 13368 is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN SUBCOMMITTEE NO. 1

Mr. PHILBIN. This bill is part of the legislative package of the General Services Administration for 1966, and would authorize the disposal of approximately 212,300 pounds of bismuth from the national and supplemental stockpiles.

Bismuth is a grayish-white, brittle, hard, easily powdered metal with a reddish tinge. It has a low melting point (270° C.) and a low thermal conductivity. It is derived chiefly as a byproduct of lead-refining.

Bismuth is used primarily for low-melting (fusible) alloys, and pharmaceuticals. It is also used in other alloys, principally as an additive to improve machinability of aluminum and malleable iron.

Bismuth comes from Peru, Mexico, Canada, and Yugoslavia.

The total inventories contained in the national and supplemental stockpiles are 3,812,315 pounds, and the stockpile objective is 3,600,000 pounds, or an excess of 212,315 pounds.

The average acquisition cost of bismuth was \$2.13 per pound. The present market value is estimated to be \$4 per pound.

We will be happy to hear from you at this time, Mr. Lawrence.

STATEMENT OF WILLIAM LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. In order to save the time of the committee, I will try to paraphrase my statement on each one of these, rather than reading the entire thing.

We appreciate the opportunity of appearing before you to support this H.R. 13368. This bill covers the 212,300 pounds of bismuth which are excess to the current stockpile objective of 3.6 million pounds.

Bismuth is derived mainly from a residue of lead and copper smelting, and the major producers of bismuth are Peru, Mexico, Bolivia, and the United States. It is used in making fusible alloys, pharmaceuticals, and industrial and laboratory chemicals. The principal single use is an industrial chemical as a catalyst in the production of acrylic fibers which can substitute for wools in wartime.

There has been a considerable increase in the capacity to make these acrylic fibers in the last 18 months to 2 years, and this has caused what you might call a comparative shortage in bismuth and a corresponding increase in price.

The Atomic Energy Commission has a large current requirement for bismuth for the National Aeronautics and Space Administration

and Department of Defense space programs. It is expected that the entire quantity of this disposal will be reserved for the use of the Commission. In fact, this doesn't cover the entire requirements that the AEC have for this material.

Mr. PHILBIN. Will you tell us now something about the stockpile requirements situation for this particular material?

Mr. LAWRENCE. The requirements have gone up slightly. Actually, we, in considering the requirements for this material, don't count the use of the catalyst in the production of acrylic fibers in wartime; although they substitute for wools, we still feel that a larger portion of these outputs go to carpeting, which we don't consider an essential use.

This use that the AEC has now is, we think, a one-time use, and therefore it would not be covered in a mobilization requirement. I think the 3.6 million pounds is adequate to cover all of our wartime needs.

Mr. PHILBIN. Where would that leave the stockpile at the present time with respect to its requirements?

Mr. LAWRENCE. The 3.6 million in the inventory, we will be right at the inventory level, and the surplus will be all covered by this bill.

Mr. PHILBIN. So we won't be below the stockpile requirements?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. So you endorse this bill? You appear in favor of the bill?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You cleared it with all the consulting agencies?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. The Joint Chiefs of Staff?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Department of Commerce, GSA?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You worked in collaboration with them in preparing your own report?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Do you have any questions, Mr. Randall?

Mr. RANDALL. No.

Mr. PHILBIN. Mr. Machen?

Mr. MACHEN. No questions.

Mr. PHILBIN. Do you have any purchases going on at the present time?

Mr. LAWRENCE. Sir?

Mr. PHILBIN. What if this should be asked of GSA, would you be in a position where you could advise us concerning any purchases that are being made at this time, concerning the stockpile?

That is out of your field?

Mr. LAWRENCE. Yes.

Mr. PHILBIN. You have nothing to do with the marketing?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. So that you do say you have considered this matter very carefully and you have consulted with all of the contributing and cooperating agencies that usually are consulted in these matters, and that you appear here in favor of the passage of this bill?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. That is all I have.
 If there are no further questions, we will excuse you. Thank you very much.
 Now we will have Mr. Harlan.
 We are very glad to have you here, Mr. Harlan, and your staff.

STATEMENT OF JOHN HARLAN, GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Thank you, Mr. Chairman.
 May I assure you of full continued cooperation. Thank you very much for the statement you made.

Mr. Chairman, I have a very brief statement which I would like to read in connection with this particular piece of legislation.

Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H. R. 13368.

This bill would authorize the disposal of approximately 212,300 pounds of bismuth now held in the national and supplemental stockpiles and which the Office of Emergency Planning has determined are excess to stockpile needs.

Bismuth is a brittle, hard, and easily powdered metal. It is produced as a byproduct from the smelting and refining of copper and lead ores. Peru, Mexico, Bolivia, Canada, and the Republic of Korea are the major suppliers of bismuth in ores and concentrates. Several other countries, such as Japan and the United States, are large producers of metal from imported raw materials. It is used for low-melting (fusible) alloys in a number of safety devices such as plugs for compressed gas cylinders, automatic sprinkler systems, fire door releases, electrical fuses, and ammunition solders. The other major use of bismuth is as an ingredient in the manufacture of a wide variety of medicinal compounds.

The total inventory of bismuth held by GSA now stands at 3,812,315 pounds. The present stockpile objective is 3,600,000 pounds. The excess of approximately 212,300 pounds is covered by H.R. 13368.

The average acquisition cost of the stockpile inventories of bismuth was \$2.134 per pound. The current market price is \$4 per pound.

GSA has consulted with affected Government agencies in the development of the disposal program on the excess of 212,300 pounds. The Atomic Energy Commission has a continuing need for bismuth and its needs for the immediate future have been made known to us. It is established policy for agencies to use excess strategic and critical materials to avoid cash outlays for new procurement to the extent practicable. On the basis of the needs expressed to us at this time, it is our plan to channel the entire excess of bismuth covered by H.R. 13368 to AEC.

This agency recommends the enactment of H.R. 13368.
 This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you

may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. Thank you very much.

So that the total amount of the disposal will be allocated to the Atomic Energy Commission?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. There is no other need for it, no other call for it, is there? Is there any need for it in industry that is urgent at this time, that you know of?

Mr. HARLAN. In checking with industry we have found bismuth is in very short supply, and to the extent that we can supply the needs of the Atomic Energy Commission, we hope to be able to in some way relieve an otherwise drain on a very tight supply situation.

Mr. PHILBIN. You realize that under this disposal now you are bringing it down to the stockpile requirement?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. You heard Mr. Lawrence's testimony regarding that?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. I think that is true of several of the other bills—most of the other bills we have here, too; we are bringing them down to stockpile requirements.

If there are any industries that are looking for these materials, because they have been in short supply, after these particular disposals have been made, they will not be able to come back to the Government again to seek or secure these materials.

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. That must be made clear.

Mr. HARLAN. Yes, it should.

Mr. PHILBIN. I made it clear to industry on several occasions in the past when we had hearings here that situation was coming to pass.

Now, with the proposed disposals that are pending, it has actually arrived, and I think it should be noted for the record that is the situation.

Is this material being purchased at the present time for stockpile purposes?

Mr. HARLAN. No, sir.

Mr. PHILBIN. Have you had industry conferences?

Mr. HARLAN. We have had individual conferences with industry. We did not have an organized meeting.

Mr. PHILBIN. Do you have what we might call consensus of the industry on this? Do you think you have the consensus of the industry concerning this disposal?

Mr. HARLAN. Yes, I think the only problem we might have with the industry is that they wish we could have more available.

Mr. PHILBIN. You do not have any objection?

Mr. HARLAN. No, sir.

Mr. PHILBIN. You have not had any recorded with you?

Mr. HARLAN. No, sir.

Mr. PHILBIN. You have no unfilled contracts or commitments outstanding covering the purchases of these materials?

Mr. HARLAN. No, sir; we have not.

Mr. PHILBIN. I think as you know we have a study taking place now to fix the stockpile requirements for nuclear war.

Are you familiar with that study?

Mr. HARLAN. Yes, I am.

Mr. PHILBIN. Do you have any indication as to whether it will be available? Have you had conferences with the Defense Department, with the Joint Chiefs of Staff, about this matter?

Mr. HARLAN. Mr. Chairman, I am familiar with the study that is being made. I am not participating in the study. I believe Mr. Lawrence would be better prepared to answer your question.

Mr. PHILBIN. What do you say about that, Mr. Lawrence?

Mr. LAWRENCE. We have completed the first part of the study, which is the supply requirements analysis of the entire economy. We are moving forward. We hope to have these nuclear war stockpile objectives as soon as possible. We have them scheduled within the next 6 months, but I don't know whether we are going to be able to meet that schedule or not, because of the fact, the people who worked on these materials, objectives, are also engaged in working on expediting production for Vietnam, so that—

Mr. PHILBIN. Who are these people that are working on this study?

Mr. LAWRENCE. The Department of Commerce and Interior, are the ones mainly responsible for the requirements. We have a rather limited number of materials people in the Government today, and the same people have to work on, as I said, expediting production matters for Vietnam.

Mr. PHILBIN. Does the Department of Defense—is the Department of Defense engaged also in this study?

Mr. LAWRENCE. Yes, sir. They have participated in it. They have given us part of their requirements. They haven't come up yet with their materiel requirements.

Mr. PHILBIN. In the hearing last year we were informed we probably would have the result of this study in May or June of this year. Would you say it would not be possible now to keep that deadline?

Mr. LAWRENCE. I think we will meet part of the schedule by then; yes, sir.

Mr. PHILBIN. That will, of course, when it comes, it could possibly change some of the stockpile requirements. I don't want to anticipate that, but what is your opinion about that?

Mr. LAWRENCE. Whether it will be higher or lower than conventional?

Mr. PHILBIN. Yes.

Mr. LAWRENCE. I think they will be lower than conventional.

Mr. PHILBIN. That would change the stockpile requirements?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. I didn't ask you to give testimony on that, but that is just your opinion.

Mr. LAWRENCE. I would say from the figures I have seen, that the nuclear war objectives in general will be lower than the conventional war.

Mr. PHILBIN. Yes.

Mr. Harlan, to come back to you, there is no objection, so far as you know, from industry?

Mr. HARLAN. None, no, sir.

Mr. PHILBIN. For this disposal? You are here to recommend it?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. You are convinced there is nobody in the industry, as far as you know, that opposes it?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. Actually you will channel it all to the Atomic Energy Commission?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. To be used by them?

Mr. HARLAN. This is why we—

Mr. PHILBIN. There are sales or disposals to no one, other than The Atomic Energy Commission?

Mr. HARLAN. We don't plan to make any other; no, sir.

Mr. PHILBIN. That is the way it is set up?

Mr. HARLAN. That is the way it is set up.

Mr. PHILBIN. You don't plan to make any of it—there is no reason to believe at the present time you should make disposals other than to the Atomic Energy Commission?

Mr. HARLAN. No, sir. The Atomic Energy Commission has told us their needs are far greater than what we will have available.

Mr. PHILBIN. Do you have some questions?

Mr. ARENDS. Just one question, if I might.

I note you acquired in the inventory \$2.135 cents a pound; now it is approximately \$4. Has this been a recent increase in price? How do you account for this?

Mr. HARLAN. It has been within the last 2 years.

Mr. ARENDS. Is this because of the demands from industry for it?

Mr. HARLAN. Yes; because there has been an increased demand, and new uses have developed for acrylon fibers, as Mr. Lawrence described.

Mr. ARENDS. There is a substantial demand in industry, as set forth?

Mr. HARLAN. There is; yes, sir.

Mr. ARENDS. What do you expect to get from AEC, pricewise?

Mr. HARLAN. \$4. We will transfer it to them at the fair market value.

Mr. PHILBIN. Then that will be credited to your account?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. As a matter of bookkeeping procedure?

Mr. HARLAN. That is correct. We will end up by making a profit of about \$380,000.

Mr. PHILBIN. What was the figure?

Mr. HARLAN. \$380,000.

Mr. PHILBIN. Mr. Bennett, any questions?

Mr. BENNETT. No questions.

Mr. PHILBIN. Mr. Randall, do you have any questions?

Mr. RANDALL. What is the reason for the AEC—I understood the gentleman testified there would be less of a need in nuclear war than conventional war. Why is this?

Mr. HARLAN. He believes it is a one-time requirement, Mr. Randall. I am not completely familiar with exactly what they plan to use it for, because they don't usually talk about these things. It is some sort of a coolant arrangement.

Mr. RANDALL. Possibly for peacetime use?

Mr. HARLAN. Reactor cooler—yes, sir.

Mr. RANDALL. You say bismuth is in short supply. Is this because of the shortness—you say it is a byproduct of copper and lead; is that the reason?

Mr. HARLAN. Yes; and the increase in demand. The supply is just not able to keep up with it.

Mr. RANDALL. That is all, Mr. Chairman.

Mr. PHILBIN. Mr. Machen?

Mr. MACHEN. No questions.

Mr. PHILBIN. Do you have questions, Mr. Cook?

Mr. COOK. No.

Mr. PHILBIN. Mr. Young?

Mr. YOUNG. No.

Mr. PHILBIN. That concludes the testimony on this bill.

Are there any additional witnesses who wish to testify on this bill? (No response.)

Mr. PHILBIN. If not, that concludes the testimony on this bill. The committee will take it under advisement.

(Whereupon, the subcommittee proceeded to further business.)

H.R. 13365—CHROMITE, METALLURGICAL GRADE

[H.R. 13365, 89th Cong., 2d sess.]

A BILL To authorize the disposal of metallurgical grade chromite from the national stockpile and the supplemental stockpile

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately two million and three hundred thousand short dry tons of metallurgical grade chromite (chromite ore equivalent) now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.*

Mr. PHILBIN. What is the next bill?

Mr. COOK. H.R. 13365, chromite; metallurgical grade.

(The prepared statement of Mr. Philbin on H.R. 13365 is as follows:)

OPENING STATEMENT OF PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. This bill is a part of the legislative program of the General Services Administration, and would authorize the disposal of approximately 2.3 million short dry tons of metallurgical grade chromite from the national stockpile.

At the present time we have a total inventory of this metal of 6,244,712 short dry tons, and a stockpile objective of 2,970,000 short dry tons; or a total excess of 3,274,712 short dry tons.

There has been no domestic chromite mining since 1961. However, the United States is the major processor of chromite ore. Imports of chromite from the U.S.S.R. comprised over 19 percent of

the total U.S. imports, most of which was consumed by the metallurgical industry. The Republic of South Africa, Rhodesia, and Turkey supplied most of the remainder of metallurgical chromite ore. In 1964, the domestic industry consumed 817,000 tons of chromite.

The average acquisition cost of chromite ores and concentrates in the national and supplemental stockpile inventories was \$50.55 per short dry ton. The present market value is estimated to be about \$30 per short dry ton.

In view of this great disparity in price, I am sure the subcommittee will be interested in knowing how much money we estimate that we would lose if this chromate were sold under the proposed disposal plan.

Mr. Lawrence, will you come forward and give your testimony on this bill?

Mr. LAWRENCE. The Office of Emergency Planning appreciates the opportunity to appear before this committee to support H.R. 13365. The bill authorizes disposal of approximately 2.3 million short dry tons of metallurgical-grade chromite, or chromite-ore equivalent, from the national and supplemental stockpiles.

I used the expression chromite-ore equivalent in this instance because we have authorized the General Services Administration, within this total amount, to dispose of 325,082 short tons of high-carbon ferrochromium and 236,376 short tons of low-carbon ferrochromium from the stockpiles.

We have made these upgraded forms of chrome ore available because we are heavily overstocked in both of them, so much so that the stockpile is overcapitalized to the extent of \$236 million.

Mr. PHILBIN. Let me interrupt for one moment.

When you say it is overcapitalized, there is too much material in the stockpile?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. All right.

Proceed, sir.

Mr. LAWRENCE. We also feel that we should retain chrome ore in the stockpile in order that the chrome industry could operate in wartime if all imports were cut off.

The primary use of metallurgical-grade chromite is in the production of ferrochromium for addition to steel.

The United States has had no production of chromite since 1961 although the United States is the largest consumer in the world. In 1964, over 1.4 million tons of chromite ore were imported from Russia (over 19 percent of the total), the Republic of South Africa, Rhodesia, and Turkey.

The crisis in Rhodesia has caused a cessation of imports from that country. U.S. industrial stocks of chromite are fairly high, but a continuance of the Rhodesian problem for a protracted period could result in a shortage in the United States.

For the information of this committee, the Office of Emergency Planning authorized the General Services Administration several years ago to sell approximately 989,750 long tons of subspecification metallurgical chromite ore from the Defense Production Act inventory. The GSA has been successful in disposing of approximately 35,000 tons of this material. Another 75,000 tons of fairly good material has been offered for sale.

The balance of the DPA material which is located at Nye, Mont., is of such poor quality that it cannot be sold in today's market.

The material that would be authorized for sale under this bill is specification-grade ore and should be useful to industry if a shortage develops.

We would recommend the enactment of this legislation. We feel the better quality ore available from the stockpiles will have a more ready sale than that which we have remaining in DPA.

Mr. PHILBIN. Thank you very much, Mr. Lawrence.

You have some ore in the stockpile that is substandard material, substandard quality?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. But you are not disposing of that? It is the better quality that you are disposing of under this particular bill?

Mr. LAWRENCE. We have already authorized that, I believe.

Mr. HARLAN. The material under this bill is higher grade material.

Mr. PHILBIN. Higher grade material?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You noted the United States has not been in production of this material since 1961.

What is the reason for that?

Mr. LAWRENCE. The quality of ore available in the United States is of such poor quality that it is not profitable to mine without a Government subsidy—you can't produce it at a price that is competitive with imported ores in peacetimes.

Mr. PHILBIN. So that we have to rely on Russia and on the Republic of South Africa, and Rhodesia, and Turkey, for whatever we get.

Of course, that means, I suppose, since we don't have the kind of ore available here, that is good ore—

Mr. LAWRENCE. That is correct.

Mr. PHILBIN. Therefore the supply is not available here in our own country; we are largely dependent upon imports?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. What would our situation be if we had some of these imports cut off and we didn't have any stockpile?

Mr. LAWRENCE. We are retaining in the stockpile better than 2.5 million tons of specification-grade ore, which I feel will carry us in wartime very nicely.

Mr. PHILBIN. This brings down, however, the stockpile, to bare stockpile requirements; there is no excess?

Mr. LAWRENCE. There is no excess. We reduce the inventory to the objective, but not below it.

Mr. PHILBIN. Is that true generally of all of the disposals that you have presented to the committee, that the policy is to bring the stockpiles down to the stockpile requirements, and dispose of all that is over and above the stockpile requirements?

Mr. LAWRENCE. Everything that has been brought before this committee, that is our policy.

Mr. PHILBIN. This situation, now that you have referred to, pinpoints the real problem here, because we are apparently almost totally dependent upon foreign sources for supplies. Once we exhaust the stockpile supplies, we really will be in a very critical situation, won't we?

Mr. LAWRENCE. That is right, sir.

Mr. PHILBIN. But nevertheless, on the overall picture, you favor this?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. This amount, and this quality; and if needed in industry, you will check—I will take up with Mr. Harlan the matter of industry conferences.

Do you have some questions?

Mr. ARENDS. I was going to ask about the so-called poor quality that we have in the stockpile. The likelihood of not being able to dispose of this at all at any time——

Mr. LAWRENCE. I would say this mountain we have out in Montana may be with us forever.

Mr. ARENDS. Do you have any idea how much we have invested in this quality?

Mr. LAWRENCE. About 900,000 tons, I think.

Mr. ARENDS. In dollars and cents, how much?

Mr. LAWRENCE. Sir?

Mr. ARENDS. In dollars and cents, how much? Maybe you can supply it for the record if you don't have it.

Mr. LAWRENCE. We will have to supply this for the record, although I don't know whether you can place any value on this ore out there.

Mr. ARENDS. But we may have paid something for it.

Mr. LAWRENCE. We can give you the acquisition cost.

Mr. ARENDS. I would like to have the acquisition cost.

(The information requested is as follows:)

The acquisition cost of 900,000 short dry tons of the chromite ore stored at Nye, Mont., was approximately \$20 million.

Mr. ARENDS. It is interesting, you said that in 1964 the United States imported from Russia over 19 percent of the total 1.4 million tons of chromite that were imported. Do we continue to buy this chromite from Russia when we can get it?

Mr. LAWRENCE. Yes, sir.

Mr. ARENDS. But not from Rhodesia?

Mr. LAWRENCE. No, because of the embargo placed on it by the British, it is not shipped to the United States.

Mr. ARENDS. Is the embargo imposed by the British?

Mr. LAWRENCE. That is right, sir.

Mr. ARENDS. Very interesting—that is all.

Mr. PHILBIN. Mr. Bennett.

Mr. BENNETT. Is this metal considered to be a strategic metal?

Mr. LAWRENCE. Oh, yes, sir.

Mr. BENNETT. Do we have a law in the United States that prevents us shipping strategic materials to Russia?

Mr. LAWRENCE. Yes, sir. Strategic materials are under the control of the Department of Commerce. There is a certain list of the commodities which are not shipped to any Communist country

Mr. BENNETT. They don't have a comparable law?

Mr. LAWRENCE. No, sir; not to my knowledge.

Mr. BENNETT. Against ourselves—that is all.

Mr. PHILBIN. Mr. Machen.

Mr. MACHEN. No questions.

Mr. PHILBIN. No questions?

Thank you very much.

Mr. ARENDS. In the report on the stockpiling, it says the acquisition of commodities has been \$83.51 per short dry ton cost.

The average return to the Government, based on all of the sales made under the disposals to date, amounts to 46,066 short dry tons with proceeds of \$220,000. The average unit recovery was \$4.77 per short dry ton.

I just wanted to write that in the record.

Mr. PHILBIN. Mr. Harlan, proceed with your statement.

Mr. HARLAN. Thank you, sir.

I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13365.

This bill would authorize the disposal of approximately 2,300,000 short dry tons of metallurgical grade chromite (chromite ore equivalent) now held in the national and supplemental stockpiles. The Office of Emergency Planning has determined this quantity to be in excess of stockpile needs.

Metallurgical grade chromite is an ore consumed in the metallurgical industries principally for steel products. The ore is converted to ferrochromium and chromium metal which in turn are used to produce alloy steel and other alloying agents.

Mr. PHILBIN. At that point can you give us a breakdown of what you have in stockpile in ore, and what you have in ferro?

Mr. HARLAN. Yes, sir.

In chromite ore equivalents we have 2.5 million tons of ore; 975,000 tons of ferrochromium of the high carbon type; 790,940 of ferrochromium, low carbon; 84,258 tons of ferrosilicon chromium; 12,569 tons of chromium metal produced by the electrolytic process.

Mr. PHILBIN. Thank you.

Now proceed with your statement.

Mr. HARLAN. Then we have a number of subspecification items, including the material we have just been discussing. The total stockpile of low-grade ores at the moment is just over 1 million tons, most of which is this material stored in Montana.

Mr. PHILBIN. What about the ferro, what is the total on that, of the different grades of ferro, which is used by industry?

Mr. HARLAN. Let's see. The different grades of ferro will be—you total those up right quick—I have the various breakdowns; I don't have the total. I will total them up for you now.

Mr. PHILBIN. We can come back to that. Probably you can furnish that for the record.

You can proceed with it, and then we will come back to this matter of the quantity of ore and ferro, because I want to ask you a few questions on that subject. You can proceed with your statement, Mr. Harlan.

(The following information was received for the record:)

The total quantity of ferrochrome in inventory as of December 31, 1965, was 1,180,466 short tons of ferrochrome in chrome ore equivalents.

Mr. HARLAN. Thank you, sir.

The United States is dependent upon imports for the supply of this ore. The major sources of the supply for the United States are Rhodesia, Russia, South Africa, and Turkey.

The average acquisition cost of chromite ores and concentrates was \$50.55 per short dry ton. The current market value is in the area of \$30 per short dry ton.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on the excess.

On March 2 we held an industry meeting with the major segments of the chromite industry to discuss the proposed disposal. The industry was most cooperative. They offered many valuable suggestions from which we will be able to develop a workable, orderly plan.

This agency strongly recommends the enactment of H.R. 13365.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time, or furnish the desired information for the record.

Mr. PHILBIN. You have complete concurrence with the industry as a result of your industry conference?

Mr. HARLAN. Mr. Chairman, I understand—and I have to assume from the fact that some of the industries have asked to appear today on the subject of chromite—there has been some change of mind.

At the meeting which was a little less than 3 weeks ago—and by the way, it was a very good meeting, very well attended, with very active participation—we reviewed the whole situation, and it was generally agreed that there was considerable danger of a tight supply situation developing in chromite, largely due to the British embargo on exports from Rhodesia, but also due to the uncertainty of Russian and Turkish deliveries; and that this was probably a very good time for us to begin working away at the disposal of chromite excesses.

We agreed that a good beginning rate would be in the neighborhood of 200,000 tons a year.

We also agreed that this was a poor time to begin disposals of the ferrochromes, and that we should postpone any immediate action on the ferrochromes, but keep a careful watch on the developments in the marketplace in close contact with the industry, and as a more favorable situation developed we would get together again and discuss beginning disposals of the various types of ferrochromes.

Now, I don't know what has happened, if the industry here now has reservations since the time of that meeting, I can only assume it may be because there is some indication that the chromite from Rhodesia is getting into the consumer's hands in this country in spite of the embargo.

I wish to point out to the committee that this just points up, in my opinion, the fluid and uncertain situation which exists on the supply of chromite, and that we should have authority to move the chromite and the ferrochromes promptly in the event of developments of short supply in the market.

Mr. PHILBIN. You are buying some now, aren't you, for the stockpile? Have you been buying any?

Mr. HARLAN. There is material coming into the stockpile under the barter program of the Department of Agriculture. I believe about 9,500 tons.

Mr. PHILBIN. Where is that coming from?

Mr. HARLAN. I believe that is coming from Turkey—it is either Turkey or Africa; I am not sure.

Mr. PHILBIN. What percentage do we get from Rhodesia and what percentage do we get from Russia?

Mr. HARLAN. Well, we are getting about 350,000 tons a year from Rhodesia, and the amount of supply from Russia fluctuates all over. I would have to say it is somewhere in the neighborhood of 225,000 tons.

Mr. PHILBIN. The supply from Rhodesia is being cut off—it is, I presume?

Mr. HARLAN. There has been an embargo imposed by the British, and our people who are mining in Rhodesia, I believe, are honoring that embargo, but there is reason to believe that the Rhodesian Government is continuing the mining operation and is getting the material out and into the hands of our consumers.

Mr. PHILBIN. We are getting some out of Rhodesia?

Mr. HARLAN. It would appear so; yes, sir.

Mr. PHILBIN. Coming directly to this country, coming through Russia or some other nation?

Mr. HARLAN. I am not sure, sir. It is possible the industry witnesses who are here may have some more information on it.

Mr. PHILBIN. You are not in position to tell us how this is developing?

Mr. HARLAN. No, sir. As a matter of fact, I only learned about this developing—this being a very possible development, just last Friday.

Mr. PHILBIN. The ferro, of course, is a much more valuable metal, isn't it? One that has more widespread use? Does it have more widespread use, and is it more valuable?

How did the Bureau of the Budget come into this picture? Have they been in touch with you?

Mr. HARLAN. Oh, yes, sir.

They, of course, have to clear all these bills.

Mr. PHILBIN. Do they also clear with you the quantities that you should request in these bills?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. For example, do they request that you bring all of the materials of the stockpile down to the stockpile requirements?

Mr. HARLAN. No. They don't require this, Mr. Chairman. You will recall that as a result of the Executive Stockpile Committee activities, which were started by President Kennedy, it was generally agreed that we should begin to address ourselves to total stockpile excesses for planning purposes, and this is what we have been doing now for sometime.

Mr. PHILBIN. What is the present policy regarding the disposition, regarding disposals, as measured and indicated and reflected by the bills which you sent down here to us?

I notice that you have in this batch of bills that you have sent down here, taken all the remaining excess right down to stockpile requirements.

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. I take it that must be your policy?

Mr. HARLAN. That is right, sir. This is the result of the policy.

Mr. PHILBIN. My question was, was that policy—does it emanate from your office, does it originate in your office, or was it dictated by the Bureau of the Budget or by other agencies?

Mr. HARLAN. No, sir. I believe it emanated from the Policy Agency on Stockpile Disposals, which is the Office of Emergency Planning.

Mr. PHILBIN. How much do you expect to get in total from this disposal?

Mr. HARLAN. You are speaking now, sir, of the chromite disposal?

Mr. PHILBIN. Yes.

Mr. HARLAN. Well, we would expect to get a total of about \$189.8 million.

Mr. PHILBIN. That would be at the market price. How would you sell it? Would you sell it on bids?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Would you take it off the shelf, or what would you do?

Mr. HARLAN. Generally speaking, this type of material I think would have to be sold on bid, because there are so many uncertainties about the proper market price tied to quality, location, and so on.

Mr. PHILBIN. That would be sold on bids?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. That is the way you do it wherever you can?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. There are some instances where you would have to make sales but they are few and far between?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. I am very much interested in the export of any of these materials we are making available from our stockpiles. You realize the importance of these stockpiles to us for defense?

Mr. HARLAN. Yes.

Mr. PHILBIN. During any period of emergency or war?

Mr. HARLAN. Yes.

Mr. PHILBIN. What guarantee could you give to the committee that none of these materials would find their way into export channels, and eventually be exported?

Mr. HARLAN. Mr. Chairman, I don't think we would necessarily want to limit exports, unless the material were in short or tight supply. I believe if we are dealing with heavy excesses, and attempting as we do to get a maximum return to the Government, we should make them available on a world-market basis, unless there is a tight supply situation which would dictate our taking care of the domestic economy.

Mr. PHILBIN. Of course I appreciate that wouldn't be your particular area. You would have to do that through the Department of Commerce, no doubt?

Mr. HARLAN. That is right. It is a part of each individual plan.

Mr. PHILBIN. They handle the export license. You wouldn't have to do with that part of it?

Mr. HARLAN. No, sir.

Mr. PHILBIN. What regulations would you follow with respect to this particular disposal now, about getting it into the hands of people that need it, defense-rated orders, and that sort of thing?

Mr. HARLAN. Mr. Chairman, when we met with the industry it was agreed so long as the material was in danger of being in tight supply,

it should be limited to domestic consumption, and we would proceed on that basis, but would keep a watch on the market, and if that situation relaxed, then we might open it up for free market.

Mr. PHILBIN. So that you would believe it would get into the hands of defense-rated people, who are working on defense weapons or materials?

Mr. HARLAN. This is always given a priority, Mr. Chairman.

Mr. PHILBIN. That is always given a priority?

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. That is the understanding that you had then at the industry conference, no doubt?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. And the people in the trade well understand that?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Defense industries are given priority?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. You are not acquiring any at the present time?

Mr. HARLAN. Except through the barter program.

Mr. PHILBIN. Except for the barter program that you described, but you actually are not buying any?

Mr. HARLAN. No, sir.

Mr. PHILBIN. How much of this material have you acquired through the barter program? Do you have those figures? I don't want you to divert—

Mr. HARLAN. It is about 1.5 million.

Mr. PHILBIN. We would like that for the record, if you have it.

Mr. HARLAN. I can give you a complete breakdown.

Mr. PHILBIN. Give us the breakdown on that, the amount acquired through the barter process, and the prices, and so forth, whatever you have.

(The following information was received for the record:)

Total quantity of chromite (chromite ore equivalent) acquired through barter program as of Dec. 31, 1965

	Short tons	Acquisition cost		Short tons	Acquisition cost
Chrome ore.....	373, 018	\$41, 246, 790	Ferrochrome (NS)	3, 280	} 5, 474, 107
High-carbon ferro.....	659, 777	128, 808, 214	Chromium electric metal.....	9, 156	
Low-carbon ferro.....	471, 617	141, 210, 619			
Ferrochrome silicon.....	45, 782	18, 333, 394	Total.....	1, 562, 640	335, 073, 124

Mr. HARLAN. All right, sir.

Mr. PHILBIN. Mr. Arends, do you have some questions?

Mr. ARENDS. Just one, Mr. Chairman.

You said you decided 2,300,000 short dry tons can be disposed of. What figure remains of the stockpile at hand—what figure remains?

Mr. HARLAN. We would be holding on to 2,970,000 tons.

Mr. ARENDS. At the same time do we continue to buy for the stockpile?

Mr. HARLAN. No, sir; we are not doing any buying for the stockpile in this area at all. We are, as I said, acquiring some through the barter program which is being done for the international—

Mr. ARENDS. This is a State Department procedure, then; is that right?

Mr. HARLAN. Yes.

Mr. ARENDS. Did you anywhere cite—I don't recall the figures—did you anywhere cite what these 2,300,000 tons would cost us, what you might expect we would get for them?

Mr. HARLAN. Yes. They cost us \$319,728,000, and we would expect to get \$189,816,000, which equates to an overall loss of \$129,912,000.

Mr. ARENDS. That is because there is little industry demand?

Mr. HARLAN. That is because we paid higher prices when we acquired the material.

Mr. ARENDS. Too much?

Mr. HARLAN. Particularly the ferros.

Mr. ARENDS. Thank you, Mr. Chairman.

Mr. PHILBIN. Now, when you make these purchases, would you describe briefly the procedure of making these purchases?

What sets off the purchase by GSA, on stockpile materials?

Mr. HARLAN. We receive a purchase directive from the Office of Emergency Planning, which tells as what to obtain in terms of quantity and quality and how to obtain it.

Mr. PHILBIN. Then you proceed to do that?

Mr. HARLAN. That is correct, sir. It is based on their research as to what is needed for stockpiling.

Mr. PHILBIN. Mr. Lawrence, may I ask you this question at this point?

How do you determine what is needed for the stockpile at any given time?

Mr. LAWRENCE. Any time——

Mr. PHILBIN. Where do you get this information, that causes you to send that order to GSA?

Mr. LAWRENCE. On all of the objectives where we don't have sufficient inventory to meet them we usually issue the purchase directives covering all of the items, and we specify the type of acquisition method that they are to use; in an effort to hold down the budget we have restricted cash procurement to the jewel bearings that are produced out in North Dakota. All the other materials are being acquired by the barter route, or by payment in kind with other excess materials.

Mr. PHILBIN. As of now, what is the excess in this particular stockpile? What is the excess of the materials that you have as chromite, metallurgical type—what is the excess you have in the stockpile at this time?

Mr. LAWRENCE. 2.3 million.

Mr. HARLAN. The total, including the low-grade material, is 3.3 million.

Mr. PHILBIN. What is the stockpile requirement for it?

Mr. LAWRENCE. 2,500,000, a little over 2.5 million short dry tons.

Mr. HARLAN. 2,970,000, to be exact.

Mr. PHILBIN. Back in 1963 you acquired 2,970,000 tons. Now, at that time, were you under or over the stockpile requirements?

Mr. LAWRENCE. We were over the stockpile requirements. That was obtained under the barter program in order to assist Turkey, as I remember.

Mr. PHILBIN. That wasn't a transaction where the Government went out and paid cash for it; it was a barter?

Mr. LAWRENCE. This was proposed by the State Department.

Mr. PHILBIN. I want to make that clear, this was a State Department proposal, and you purchased this under a barter program, and you didn't go out and pay cash for it?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. You followed that procedure in a great many instances, have you not?

Mr. HARLAN. Almost exclusively, now, except in the case of jewel bearings.

Mr. PHILBIN. How often do you pay cash, as distinguished from barter cash for any of this stockpile material, Mr. Lawrence?

Mr. LAWRENCE. About 5 years.

Mr. PHILBIN. These stockpiles were built up very largely at a very rapid rate, say within the last 10 years or so?

Mr. LAWRENCE. Starting in 1952, the program was largely handled through the Eisenhower administration.

Mr. PHILBIN. It was handled—was that a combination of barter and cash, or was it mostly barter?

Mr. LAWRENCE. It was mostly cash during that period.

Mr. PHILBIN. Mostly cash during that period?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. When did you get into the heavier acquisitions under the barter program?

Mr. HARLAN. About May 1954.

Mr. LAWRENCE. Barter has been in since when—1954?

Mr. HARLAN. Just about 1954; yes, sir.

Mr. PHILBIN. I see.

Do you have some questions, Mr. Machen?

Mr. MACHEN. No, sir.

Mr. PHILBIN. Mr. Cook, do you have any questions?

Mr. COOK. Two questions, sir: How long do you anticipate this disposal program will take?

Mr. HARLAN. Well, at the beginning rate of 200,000 tons, depending on market developments, I would expect that it would take better than 10 years.

Mr. COOK. And as I understood you to say, you will not be releasing under your present plan any ferrochromium?

Mr. HARLAN. Ferrochrome releases are in the plan, but we agreed this is not a good time to release them, and would not release them until a more favorable market situation develops.

Mr. COOK. Would you then have an industry conference to discuss this?

Mr. HARLAN. Absolutely; yes, sir.

Mr. PHILBIN. That is your practice?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Wherever feasible to take action, you always follow that course?

Mr. HARLAN. That is right, sir. And this committee is largely responsible for the success of that type of program.

I would like to say at the chromite meeting the industry expressed a desire to have periodic meetings with us, regardless of the market condition.

Mr. PHILBIN. As you know, the committee is very anxious to keep informed of what you are doing, because you have always cooperated with us, and we have always cooperated with you.

Mr. HARLAN. That is right.

Mr. PHILBIN. Trying to get this job done together.

I am concerned about some loopholes here that seem to appear, regarding these exports.

I notice that you say—and I think with some reason—that you don't want to put any embargo on exports, but it seems to me to be rather inconsistent for us to be disposing of—the Congress and this committee to be taking action to dispose of these critical materials, with the thought that we are doing two things, bringing them down to the stockpile requirement level and also helping industry, and then find that those materials that we have made available, with the the thought that they are going to help industry, are being channeled out of the country, through loopholes in the present export controls.

Mr. HARLAN. Mr. Chairman, there is another factor that should be considered here, and that is the strong feeling on our part that never before have we had—and we may not ever have again—a better economic opportunity to move out these unneeded materials, and it should be pointed out that relieving this overhang from the market is also a benefit to the industry.

Mr. PHILBIN. Yes.

Mr. HARLAN. So that I would think where we have heavy excess, and there is no particularly tight market supply situation, we should not put in—

Mr. PHILBIN. That would be true, where we have heavy excesses, where there is no real demand in industry.

I am thinking of our talking about a situation where we have real demand in industry.

Mr. HARLAN. We almost—

Mr. PHILBIN. These materials nevertheless are channeled out of the country.

Mr. HARLAN. Mr. Chairman, in almost every case where there is a tight supply situation that I know of, we have limited the sales for domestic consumption, and we do have through the Department of Commerce, and our own compliance structure, a way of keeping a watch on that.

Mr. PHILBIN. You have done that in every instance, and you really have not had any other, so far as you know, result, than these materials have gone to the places that the legislation intended they should go to; namely, to relieve shortages in industry.

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. In most of the instances.

There have been some, you say, where the aim of disposal measures have to be to get rid of surplus?

Mr. HARLAN. Right.

Mr. PHILBIN. That would be good business, as you point out, too. If we get a good price, we should dispose of the materials that we don't need.

Mr. HARLAN. That is right.

Mr. PHILBIN. I was referring to an altogether different situation now, where you have a critical shortage in industry, and action by this

committee and by the Congress, to try to alleviate, to some extent, by making these materials available, and then having the materials that we have made available channeled in some way out of the country so that they didn't reach our own industry in the amount that the legislation intended they should.

You haven't had that actually happen in any disposals that you have handled with this committee; have you?

Mr. HARLAN. Not under those circumstances, and we plan to talk with you during these hearings on several commodities that are in critical short supply, and at the time we discuss those, I will point out to you that we will not only make every effort to keep them from getting out of the country, but we are going to limit our sales in a way which will get them most directly into the consumers' hands as soon as possible.

Mr. PHILBIN. That is very fine. I think that is an excellent approach.

Do you have a question?

Mr. ARENDS. Just one question.

In your real desire to get rid of the so-called surpluses, will we run into any possibility of dumping on the market against the private industry desires?

Mr. HARLAN. Mr. Arends, we can't afford to do that, even if it was legally possible, which it isn't. The law would not permit us to do that.

Mr. ARENDS. I am glad someone can't, because I know Orville Freeman is doing a pretty good job. I hope you don't associate with him too much in regard to that pattern. It worries me just being a farmer. You know, what is happening to the prices, in the urgency to get rid of the commodities, and we wouldn't want that to happen in this instance.

Mr. HARLAN. I think, maybe, Mr. Arends, the best illustration I can give you, with the help this subcommittee has given us, we have done \$600 million worth of disposal business during this year, and as far as I know, there has been no serious disruption of any kind.

Mr. ARENDS. Maybe you and I should go down and see Orville.

Mr. HARLAN. All right.

Mr. PHILBIN. It is gratifying to note there has been no disruption, and no irregularity of any kind, and there has been no criticism registered on this program up to this point, as it relates to this committee, the Congress, the United States, and your own agencies, with respect to disposals that have been handled through legislative channels; that is correct, is it not?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. Would you say that is correct, Mr. Lawrence, from what you know about it?

Mr. LAWRENCE. That is correct.

Mr. PHILBIN. If there are no further questions on that, we thank you very much for your excellent testimony.

Are there some witnesses from industry who want to be heard on this bill?

Step forward, give your name to the reporter, and we will be glad to hear from you briefly.

Mr. COOK. Our only witness is Mr. J. C. Moroso.

Mr. PHILBIN. Give your name and address, and who you represent.

STATEMENT OF J. C. MOROSO, UNION CARBIDE CORP.

Mr. MOROSO. J. C. Moroso. I represent the Mining and Metals Division of Union Carbide Corp.

Mr. PHILBIN. Who is it you represent?

Mr. MOROSO. The Mining and Metals Division of Union Carbide Corp.

Mr. PHILBIN. Do you have a prepared statement?

Mr. MOROSO. No, sir. I shall be very brief.

We want to make a point—just a point. And that is, as far as the disposal plan that Mr. Harlan has outlined, we have no quarrel with it whatsoever.

Right now is not a good time to dispose of ferrochrome, he knows that, and as long as he tells me he isn't going to do it, I certainly am going to accept his word.

However, I would like to make a point, and that point is that ferrochrome in this subobjective, which is surplus, which represents a huge quantity of electric power as well as labor, there is enough power in the surplus, there was enough power consumed in the surplus to light the city of Washington for about 3 months or more. We feel that perhaps the subobjective is a little bit on the low side. We don't quarrel with Mr. Lawrence, we don't quarrel with Mr. Harlan. We do sort of quarrel with the Bureau of the Budget.

We would respectfully request perhaps another look be given to the subobjective for ferrochrome with the possibility in the light of changed conditions as they exist today you would want to increase the amount that is in that subobjective.

We do not wish in any way to interfere with the passage of this bill.

Thank you.

Mr. PHILBIN. Thank you very much.

You are not objecting to the passage of this bill?

Mr. MOROSO. No, sir; not in its form.

Mr. PHILBIN. I might suggest you might address your objections to the Bureau of the Budget, rather than to this committee, although we are glad to have them.

We want to welcome you here; and we are glad to have you come and give your views, as you have so candidly done.

I would suggest you might have a conference with Mr. Harlan, and maybe you can work out something that might be agreeable to your point of view.

Mr. MOROSO. Yes, sir. We have been getting along very well in this whole disposal program.

Mr. PHILBIN. Thank you very much for your views.

Mr. MOROSO. Thank you.

Mr. PHILBIN. Are there additional witnesses in opposition, or who want to make some comments about this bill?

What is your name and your address, and the company you represent?

**STATEMENT OF DENTON A. SHRIVER, VANADIUM CORP. OF
AMERICA**

Mr. SHRIVER. My name is Denton A. Shriver. I am executive vice president of the Vanadium Corp. of America.

Mr. PHILBIN. That is a well-known name in Washington.

Mr. SHRIVER. Thank you, sir.

Mr. PHILBIN. Are you related to the Commissioner?

Mr. SHRIVER. Oh, about a seventh cousin, I guess.

Mr. PHILBIN. Good. That is fine. We are glad to have you here. We welcome you here.

Mr. SHRIVER. We have not formally asked for permission to address the committee, and I don't know whether it would be proper to.

Mr. PHILBIN. You may address the committee. We are glad to have your testimony.

You go ahead and let us know. Do you have a prepared statement?

Mr. SHRIVER. I do not; I am sorry. I sent the committee a letter on this matter.

Mr. PHILBIN. If you have a prepared statement, or if you care to have your letter go in the record, we can arrange for that, too. We will be glad to take your testimony; and we will also be glad to hear from you.

You go ahead in your own way and tell us what your point of view is.

Mr. SHRIVER. All right, sir.

My company is a producer of ferrochromium, in this country. We have plants for ferrochrome in Ohio and in West Virginia.

We also produce in a small way chrome ore in Rhodesia, formerly Southern Rhodesia.

We do take objection to the bill on the grounds that we see no reason for the disposal of ferrochromium at this time. We do not take objection to the objective of making available chrome ore, particularly chrome ore to relieve perhaps a shortage which will develop because of the British embargo from Rhodesia.

Incidentally, I am not aware of Rhodesian ore coming into this country at this time. Mr. Harlan may have information that we would like to have.

Mr. PHILBIN. You say no Rhodesian ore is coming here, either directly or indirectly?

Mr. SHRIVER. I didn't mean to say that, sir; I am not aware of it. I don't know that I would know the answer.

There may be some Rhodesian ore that was produced and exported from Rhodesia prior to January 20, which is the cutoff date in the British order of Council.

I do not know about ores produced or exported subsequent to that.

Mr. PHILBIN. Your position is that you want ore disposed of now; but you don't want the ferro disposed of now, because you think the market conditions are not favorable.

Mr. SHRIVER. That is correct.

Mr. PHILBIN. We had Mr. Lawrence's testimony about that, and you may not be so far apart as you think.

Mr. SHRIVER. I think our real point at this time is, obviously we do not feel that GSA can expect my company or other ferrochrome producers to purchase the chrome ore which they would like to sell

at the same time that, here, they are competing with us in the sale of ferrochrome.

We feel that if he puts up for sale the 800,000 tons of chrome ore, which he is asking authority for, approximately, here, it will take him a number of years to dispose of that without seriously damaging the economies of Turkey, perhaps Rhodesia, Russia perhaps, Iran, or South Africa, these being the traditional producers of chrome ore.

It will take him obviously many more years, to dispose of the ferrochrome, particularly if he wishes to get rid of the ore first.

So may I say that my company feels that it is totally unnecessary for Congress to grant this authority at this time for the sale of ferrochrome, and that there will be many opportunities for the GSA to come back to Congress over the next 3 or 4 or 5 years seeking this authority.

I would like to comment on one thing, sir, about this meeting on March 2. I regret that I was not present at the meeting. My company had a representative present, so that anything I know about it is second-hand hearsay information.

However, I did not understand that the industry representatives, including the steel industry representatives, approved of the idea of putting ferrochromium—or seeking authority for the sale of ferrochromium at this time.

I may be mistaken in that, and I don't—it may also be a matter of a large meeting; and it wasn't quite clear what the consensus of the meeting was.

Mr. PHILBIN. Your opposition is based on the fact that you think it would disrupt the market?

Mr. SHRIVER. I am sorry, I didn't hear.

Mr. PHILBIN. You think releasing these quantities of both the ore and the ferro at this time, particularly the ferro, would disrupt the market?

Mr. SHRIVER. The GSA is seeking authority to sell approximately three times the annual U.S. requirements of ferrochrome.

Mr. PHILBIN. You understand, of course, that would not be sold on the market at one time? That disposal would take place over a period of time.

Mr. SHRIVER. I appreciate that, sir.

Mr. PHILBIN. Have you gone over this matter with Mr. Harlan, to ascertain just how it is going to be done?

Mr. SHRIVER. We have seen Mr. Harlan's disposal plan, in which it speaks—which was filed, I believe, with the committee—which speaks of authority to sell, or a plan to sell, within the next year, 200,000 tons of chromite (chrome equivalent) I believe—I don't have it in front of me.

It isn't clear from that disposal plan whether ferrochrome would be included or not.

However, I do understand from what Mr. Harlan said today, he was not intending to dispose of ferrochromium within the next year.

I would like to make one other statement, sir—

Mr. PHILBIN. Would that change your opinion about the bill?

Mr. SHRIVER. I do not think so, sir. We feel since (1) GSA is not planning to dispose of ferrochromium within the first year, in any event, and that it does not seem likely or economically possible

for them to sell both chrome ore and ferrochrome, over the next 2 or 3 years, in quantities they are asking for, that there is very little reason for Congress at this point to approve the disposal of ferrochrome.

I would like to make one other point, though, sir. I speak for an industry which has been very depressed. Part of that depression is due to some of these stockpile programs, in a sense.

As Mr. Harlan and Mr. Lawrence pointed out, a good deal of the ferrochrome and of the chrome ore which is in the stockpile, was acquired for political purposes in the sense—I don't mean domestic political purposes—but primarily to help the economy of Turkey, and prior to that, as far as ferrochrome was concerned, to help the rebuilding of the economy of Western Europe.

This resulted in a very large increase in the capacity to produce chrome ore, particularly in Turkey.

At the time the stockpile program was ceased in the United States there was tremendous overcapacity, both in the ferrochrome production industries throughout the world, and also in the chrome ore production facilities.

This has led to a very substantial reduction in prices of these commodities in the world markets, and I think that is reflected in the figures which Mr. Harlan gave on the decline in the value of the stockpile.

In the United States, one of the ferrochrome producers has gone out of business completely, over the last 3, 4 or 5 years.

My company has closed one plant. I believe Union Carbide has closed one or two plants. Chrome Mining & Smelting has closed another one. And as an example of what we are talking about, ferrochromium, low-carbon ferrochromium, which in 1959 was selling about 39 cents a pound, contained chrome, declined in the middle of 1964 to about 20.5 cents, and it has come back slightly to the mid-twenties.

This is somewhat like trying to sell a Buick for about \$1,500.

On top of this, we have been subject to increasing competition from South Africa, primarily, and Japan, with the result that, particularly in low-carbon ferrochrome, the foreign imports have taken about 30 percent of the domestic market.

We feel strongly—my company feels strongly the U.S. industry can compete with the foreigners, but it means new furnaces, it means more efficient facilities, it means greater capital investment.

Several of the ferroalloy companies, including mine, are currently investing large sums in the building of new furnaces and new facilities.

Now, we don't think this program can continue to make the U.S. industry competitive if there is hanging over the market a 3 years' supply of ferrochrome from the stockpile, without any warning as to when it could come on the market.

I think Mr. Harlan and his group are doing a fine job. We have no criticism of them, although we had a little argument about vanadium not too long ago. But I think it is inevitable that a government body, particularly at this point, will have a temptation to save us all some tax money, and this I am thoroughly in accord with as a taxpayer, but I don't know that I can feel as an executive of a company having to invest maybe 5, 10 or 15 million in new facilities, that I

am too happy to rely on the good sense and integrity, or the long-term thinking and marketing analysis of the government body. And I know that my company would feel that it could make a much greater contribution in keeping the domestic industry competitive, in continuing to absorb large blocks of power, which is a very vital element in our national defense, only if we have some assurance that when the GSA really wants to sell ferrochrome, that they have to come back to Congress and prove their case.

I am sorry for a nonstatement. I do appreciate the committee letting me talk here.

Mr. PHILBIN. You have made a very good statement. If you were handling the stockpile, how would you handle it—this situation—having in mind now that we have a very large excess here, long standing, and we are trying to approach the disposal of it as well as we can without disrupting industry, without creating price problems for industry, and at the same time to try to safeguard the Government's interest?

What would you do if you were in the position of the Government Administrator here, and were charged with this responsibility? How would you dispose of this particular surplus?

Mr. SHRIVER. I would at this time, sir, suggest that Congress should grant only the authority to dispose of the chromium ore—chromite ore—which the GSA has asked for. The title of this bill, or the way in which this bill is expressed, is somewhat deceptive. I don't mean that in a derogatory sense.

However, it really asks for authority to sell approximately one-half chrome ore and one-half ferrochrome, or maybe one-third and two-thirds ferrochrome, on a dollar basis certainly.

I would grant authority to sell or dispose of, in an orderly manner, the chrome ore, and withhold authority at this time for the sale of ferrochromium.

I would think it will take the GSA at least 2 years to dispose of the chrome ore in an orderly manner, and that there will be a number of opportunities, for them to come back and seek additional congressional approval, if it should appear desirable to dispose of ferrochromium.

Mr. PHILBIN. Now, may I ask whether there are other members of the industry who feel as you do about the disposal?

Mr. SHRIVER. I understood that probably the second or third largest ferrochromium producer, Air Reduction Co., would be represented here. I don't see them present, so I may be wrong.

Another producer, Ohio Ferro Alloys, president, Mr. Cunningham, expressed to me somewhat the same views as I expressed to the committee. That was last week.

I am afraid our industry perhaps has been negligent here. We at first did not realize that this bill authorized the sale of ferrochromium.

Secondly, we perhaps have been a little slow in getting together in presenting our case to the committee. I apologize for that.

Mr. PHILBIN. We are very glad that you came here to give us your views. We too have responsibilities, as you know.

Mr. SHRIVER. Yes, sir.

Mr. PHILBIN. One of the responsibilities in disposing that we accept and are bound to follow—we don't want to do anything that will dis-

rupt industry, or disrupt price levels or economic conditions of the country.

I want to thank you for giving us such an excellent statement of your viewpoint, and assure you we will give your views very careful consideration.

Do you have any questions?

Mr. MACHEN. I have one question, Mr. Chairman.

You mentioned it might be more desirable to postpone this 4 or 5 years, that conditions would be more favorable then.

Can you tell us what you mean more specifically by that?

Mr. SHRIVER. Well, perhaps in a sense it is hard to say. One of the reasons that there has been a decline in this industry, or a depreciation, has been a decline in the consumption of stainless steel in the United States. That declined from about 1958, I think, through 1963, and stainless has since started to resume a growth trend. You realize stainless was one of the "wonder metals," and had a very rapid growth trend up through the 1950's, or mid-1950's. It then declined, and now is again resuming its growth.

We feel—of course, as one gets into their own industry they are always optimistic about it—we feel that the growth in stainless is going to be substantial, and that there will be better economic opportunities for disposal in the future.

There are in addition, sir, several new techniques, involving the use of metallurgical-grade chrome ores and ferrochromes. A great deal of work is being done on this, such as chromizing, and so on, chrome diffusion, which we think will substantially increase the market for ferrochromium, and therefore, for chrome ores, in the not too far off future.

But these things are not currently in the market.

Mr. MACHEN. Thank you very much.

That is all I have.

Mr. PHILBIN. Mr. Bates, would you like to inquire?

Mr. Bates is a minority representative on our committee, and a very knowledgeable and able member of the committee. If you have any questions, Mr. Bates, we would be glad to have them.

Mr. BATES. No questions.

Mr. PHILBIN. There are no further questions?

Do you have any questions, Mr. Cook or Mr. Young?

(No response.)

Mr. PHILBIN. Otherwise, we thank you for your fine statement. I want to assure you we will give your views very careful consideration.

Mr. SHRIVER. Thank you.

Mr. PHILBIN. Mr. Harlan, very briefly, would you sit down and be comfortable, and let us hear your reactions; first on the question of ore.

The preceding witness has suggested that you might make an orderly disposal of ore at this time, but do nothing at this time about the ferro. What is your reaction about this?

Mr. HARLAN. At the moment, sir, that is exactly what we plan to do.

But I would like to point out, Mr. Chairman, the ferroalloy industry, like any other industry, has its ups and downs, and the possibility that they could reach a capacity situation and not be able to supply the required ferroalloys is just as possible as it is in any other

industry. And I would think that with the defense spending program as it is, and with the level of the gross national product, this is a distinct possibility.

I would think we should be in a position if that situation develops, to consult with industry and notify some ferro——

Mr. PHILBIN. You wouldn't do anything until you consulted with the industry?

Mr. HARLAN. Absolutely not, sir.

Mr. PHILBIN. You wouldn't move until you had industry consensus and consulted with them, and found out their viewpoint?

Mr. HARLAN. That is right.

I would like to straighten something out on the record, Mr. Chairman. I am afraid Mr. Shriver may have left the impression that it wasn't clear to the industry this disposal program included ferro-chrome.

I want to say that at the meeting which we had, on March 2, I told the industry, and his company was represented, that we planned to ask the Congress for authority to dispose of this material, and we handed to every representative there a complete breakdown of the inventory of excesses, and had quite a considerable discussion on the subject of ferros. And it was understood that we would proceed with this program on the basis that we would move the ores out first, and keep a watch on the ferro situation.

Mr. PHILBIN. You will move the ores out every carefully too, won't you?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. You are not going to disrupt any markets or prices that you know of?

Mr. HARLAN. Not if I can help it; no, sir.

Mr. PHILBIN. Do you think you can confer later, at Mr. Shriver's convenience with him, and explain perhaps in detail what your plans are, what your procedure would be, in the event——

Mr. HARLAN. I certainly will, Mr. Chairman.

I think one of the things that bothers me is, we are in constant touch with Mr. Shriver's company. We have a lot of business with them. I knew nothing about this development until this morning.

Mr. PHILBIN. I suggest perhaps you might have a talk and clarify your viewpoint, as expressed here by Mr. Shriver.

Mr. HARLAN. All right.

Mr. PHILBIN. Do you have a question?

Mr. ARENDS. No, except this:

You do not anticipate disposing of the ferro; you still feel you should have the authority to do so? Is this right?

This is a long-range disposal program in that respect. It looks a long way down the road, but you feel you should have the authority nevertheless?

Mr. HARLAN. In order that we can move promptly if there is such a change.

Mr. ARENDS. Could there be such a change possible in the next 2 or 3 years, would you think?

Mr. HARLAN. It is very hard to say, but I think if it does develop it would develop within that period; yes, sir.

Mr. ARENDS. Thank you.

Mr. PHILBIN. Thank you very much.
 This concludes the testimony on this bill.
 Mr. Cook, what is the next bill?
 (Whereupon, the subcommittee proceeded to further business.)
 (The following material was received for the record:)

VANADIUM CORP. OF AMERICA,
 New York, N.Y., March 17, 1966.

HON. PHILIP J. PHILBIN,
 Chairman, Subcommittee on Disposals, House Committee on Armed Services,
 New House Office Building, Washington, D.C.

DEAR SIR: I am writing in reference to House bill 13365, which I understand has been referred to your Subcommittee No. 1 on Disposals.

We understand that H.R. 13365 is identical to Senate bill 3022. The Senate bill has been referred to the Committee on Armed Services.

Under the proposed bill, the Administrator of General Services would be authorized to disposed of "2,300,000 short dry tons of metallurgical grade chromite (chromite ore equivalent) now held in the national stockpile * * * and supplemental stockpile * * *."

"Metallurgical grade chromite" usually means chromium ore having a content in excess of 44 percent Cr_2O_3 and a 2.4-to-1 chromium to iron ratio. The term does not generally include "high-carbon ferrochromium" or "low-carbon ferrochromium." However, on the basis of information which this company has, there is not 2,300,000 short dry tons of "excess" metallurgical grade chromium ore in the stockpiles. The only way we can reconcile the 2,300,000 short dry tons is by the inclusion of 325,093 tons of high-carbon ferrochromium and 236,387 tons of low-carbon ferrochromium having, respectively, a "chromite ore equivalent" of 812,733 and 590,967 dry tons. This interpretation is made apparent by reference to the disposal plan transmitted to the Congress with the February 3, 1966, letter of the General Services Administration. On page 4 of the disposal plan the GSA states * * * "The total quantity for release hereunder includes the chromite ore equivalent of ferrochromium and electrolytic chromium. * * *"

The requested disposal authority thus is for, despite deceptive language used in the proposed act, approximately 897,000 short dry tons of chromite (ore) and approximately 325,000 tons of high-carbon ferrochromium and 236,000 tons of low-carbon ferrochromium.

We believe that the granting of authority to sell ferrochromium at this time is totally unnecessary and undesirable, that such disposals, if made, might seriously endanger the national defense of the United States and almost certainly will seriously damage the ferroalloy industry of the United States, an industry which is itself vital for our national defense.

Vanadium Corp. of America is a medium-sized, publicly owned company. It is one of a number of "ferroalloy" producers in the United States. Vanadium Corp. owns and operates chromite (ore) mines in Rhodesia through a subsidiary, although it also purchases a major portion of its chromite requirements.

From these foreign ores Vanadium Corp. and other ferroalloy producers in the United States manufacture in electric furnaces a product known as ferrochromium. The two general types of ferrochromium are referred to as "high-carbon ferrochromium" and "low-carbon ferrochromium." The majority of the U.S. ferrochromium-producing plants are concentrated in the Ohio Valley area and thus generally in the depressed economic area we have come to refer to as the Appalachian region. Vanadium Corp.'s plants for the manufacture of ferrochromium are located in Jefferson County, Ohio, near the city of Steubenville, and in Mason County, W. Va. Other Vanadium Corp. plants are located in Ohio, Washington, New Mexico, and Iowa.

Ferrochromium is an essential ingredient in the manufacture of stainless steel, and considerable tonnages are also used in the production of various other alloy steels. It goes without saying that stainless and alloy steels are, in turn, essential both for our domestic peacetime economy and for our national defense in any period of emergency. It also necessarily follows that a strong ferrochromium industry is also an essential ingredient of our national defense.

In recent years metallurgical grade chromite has come to the United States from, in the order of their importance, Russia, Rhodesia, and Turkey. There are no economically viable domestic sources of chromite (ore) in the United States and only very small tonnages known of in the entire Western Hemisphere.

The ferroalloy producers in the United States are also very major consumers of electrical power. As a result, their requirements for power are in many cases the bases for the economic strength and feasibility of large power units, particularly those in the industrial heart of our Nation, stretching from east of Pittsburgh through the Middle West. Serious disruption of the ferroalloy industry could also, therefore, seriously disrupt the present and future anticipated economic development of our electric power resources.

There is no present or anticipated shortage of ferrochromium in either the United States or the free world; sale of GSA ferrochromium, therefore, will be largely at the expense of the domestic industry.

During the year 1965 there were approximately 164,000 net tons of low-carbon ferrochromium and 148,000 net tons of high-carbon ferrochromium consumed in the United States. 1965 was, of course, a high-consumption year for ferrochromium, reflecting high-steel production rates, particularly high alloy and stainless steel rates of production. Of the ferrochromium consumed, approximately 50,000 net tons of low-carbon ferrochromium and 5,300 tons of high-carbon ferrochromium were imported into the United States, primarily from production in the Republic of South Africa, Japan, and to a lesser extent, from Western Europe. The imports of low-carbon ferrochrome were approximately 30 percent of U.S. consumption and show the substantial encroachment on the market by imports when compared to 5.4 percent as recently as 1960.

The ferrochromium industry has been severely depressed in the free world for a number of years, although the U.S. industry made a moderate recovery in the year 1965. The current price levels for low-carbon ferrochromium are below those prevailing in the so-called depression years of the 1930's.

The ferrochromium the GSA asks authority to dispose of, is approximately 2 to 3 years of the total U.S. domestic consumption, even supposing that the General Services Administration can oust foreign producers from their present entrenched position in the domestic market. (For reasons having to do with duty drawbacks foreign ferrochromium—even when sold at the same price as domestic material—has a substantial price advantage for a part of the U.S. market.)

While there may be some justification for the disposal of chromite ore at this time, arising out of the political uncertainties of the Rhodesian situation, it is obviously not practical for the General Services Administration to sell to the United States ferroalloy industry chromite ore in any substantial quantities, while destroying their market for ferrochromium. There, therefore, seems little justification for authority to dispose of ferrochromium from the stockpile at this or any foreseeable time. The chromite ore, which the General Services Administration seeks authority to dispose of, would constitute somewhat over 1 year's total U.S. consumption at a very high operating rate. As many domestic ferrochromium producers have already committed for other purchases for several years ahead, the GSA cannot be expected to complete marketing of their ore for many years even assuming Rhodesian ores are not available to U.S. industry. Furthermore, there is no basic shortage of chrome ore in the world today, so that GSA sales will undoubtedly depress world chrome ore prices. To the extent Rhodesian ores become available at depressed prices to producers of ferrochrome in South Africa, Japan, Canada, Great Britain—but not to U.S. producers—ferrochromium imports to the United States will likely increase. To this extent there will be a further reduction in the market available for GSA disposals. Accordingly, there will be many possible future opportunities for the General Services Administration to ask the Congress for authority for the sale of ferrochromium should such appear desirable.

Finally, the recent hearings before the Subcommittee on Mines and Mining of the Committee on Interior and Insular Affairs have, we believe, demonstrated the miasma involved in the setting of stockpile objectives for minerals, particularly as to objectives in the event of nuclear warfare. We believe that the objective for ferrochromium is less than 1 year's U.S. current peacetime requirements. World War II and Korean war experience was that ferrochromium requirements jumped 200 to 250 percent above previous peacetime levels. Ferrochromium is a particularly sensitive product in wartime since the United States is totally dependent on overseas supplies of chromite (the most important present supplier being Russia). Any stockpile objective is at best the sum total of a series of debatable assumptions. As to ferrochromium objectives there seems serious question as to the adequacy of the present objectives.

Vanadium Corp. of America urges strongly that the proposed House bill 13365 be revised to permit only the sale of chromite (ore) in the amount of approximately 800,000 short dry tons.

Very truly yours,

D. A. SHRIVER,
Executive Vice President.

CLEVELAND, OHIO, March 23, 1966.

HON. PHILIP J. PHILBIN,
*Chairman, Subcommittee on Disposals, House Committee on Armed Services,
New House Office Building, Washington, D.C.:*

In regard to bill H.R. 13365 now in hearing before your committee, our company as producers of chromium ferroalloys recommends that the wording be clarified as to the nature of the chromium materials authorized for release. We concur in the release of chromite ore in orderly fashion to meet industry requirements unavailable from normal sources. We object to the unrestricted release of ferrochromium alloys from the stockpile on the basis that it can be disruptive to the planned growth of this vital industry and can lead to the loss of irreplaceable labor and power units properly reserved for more critical situations than exist at present. Any chromiumferro alloy disposal should be clearly restricted in the language of the bill to meet shortages beyond the scope of existing and planned domestic capacity.

D. G. BOWSER,
Vice President.
Interlake Steel Corp., Ferroalloy Division.

MEMPHIS, TENN., March 25, 1966.

Representative PHILIP PHILBIN,
*House Armed Services Subcommittee,
Washington, D.C.:*

Reference H.R. 13365. Recommended most strongly that the disposal of ferrochromium not be permitted at this time through inclusion of wording "chromite ore equivalent." Ferrochromium should be in objective stockpile where it would be readily available in the event of emergency. We urge this course of action most strongly. Inclusion of chromite or equivalent could be very damaging to the vital ferroalloy industry.

J. THOMAS TIMMS,
*President and General Manager,
Chromium Mining & Smelting Corp.*

PICKANDS MATHER & Co.,
Cleveland, Ohio, March 23, 1966.

HON. PHILIP J. PHILBIN,
*Chairman, Subcommittee on Disposals,
House Committee on Armed Services,
New House Office Building, Washington, D.C.:*

With reference to H.R. 13365 before Subcommittee No. 1, our company, which is responsible for the marketing of Globe chromium ferroalloys, strongly recommends that the wording be clarified as to the nature of the chromium units to be authorized for release.

We are in favor of the release of stockpiled metallurgical grade chromite ore as a shortage develops.

We object to the unrestricted release of ferrochromium alloys from the Nation's stockpile. This would disrupt the growth of this vital industry. We recommend that the present stockpile of chromite be retained in the form of finished ferrochromium. Any disposal of ferrochromium should be clearly restricted in the language of the bill to assure protection of markets and the continued availability of capacity.

ELTON HOYT III,
Manager, Pig Iron, Ferroalloys & Coke Sales.

OHIO FERRO-ALLOYS CORP.,
Canton, Ohio, March 22, 1966.

HON. PHILIP J. PHILBIN,
Chairman, Subcommittee on Disposals,
House Committee on Armed Services,
New House Office Building, Washington, D.C.

DEAR SIR: We wish to call your attention to House bill H.R. 13365 which has been referred to your Subcommittee No. 1 on Disposals. We believe this House bill is identical to Senate bill S. 3022 which has been referred to the Committee on Armed Services.

The proposed bill provides that the Administrator of General Services would be authorized to dispose of "two million three hundred thousand short dry tons of metallurgical grade chromite (chromite ore equivalent) now held in the national stockpile * * * and supplemental stockpile * * *."

The significance of the above quote is concerned with the words "chromite ore equivalent." If this bill is passed by Congress, the Administrator would be authorized to sell the finished product high-carbon ferrochromium and low-carbon ferrochromium from the stockpile in lieu of the metallurgical grade chromite ore, if he so desired.

Our company, as a producer of ferroalloys, uses large quantities of metallurgical grade chromite which must be imported from foreign countries and we support the release from the stockpile limited quantities of the chromite to supplant the shortage of chromite that may be caused by the embargo by our Government against imports of Rhodesian chromite. However, we do not approve the release of the finished ferroalloy, low-carbon ferrochromium and high-carbon ferrochromium from the national stockpile or the supplemental stockpile.

In the last few years our country has become dependent upon Russia as a source of chromite to the extent that we could be in a precarious position if Russia would some day announce that no further shipments would be made to this country. More reason that the finished ferroalloy should not be disposed of, and, secondly, that the quantities of chromite should be limited so that friendly nations are not discouraged from exploring and producing the ore for shipment to this country.

The finished product, ferrochromium, mentioned above, is a storage of ore, manpower, electric energy and many other items that were put in the stockpile for emergencies such as we may find ourselves involved at the present time. Certainly now is not the time to release ferrochromium from the national stockpile.

We recommend that the reference to ferrochromium (chromite ore equivalent) be struck from the bill.

Very truly yours,

R. L. CUNNINGHAM,
President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 28, 1966.

HON. PHILIP J. PHILBIN,
Rayburn House Office Building,
Washington, D.C.

DEAR PHIL: I am attaching a copy of a telegram received today from R. L. Cunningham, president of Ohio Ferro Alloys, with reference to H.R. 13365.

It seems to me that he has a valid point in suggesting the elimination of reference to "chromite ore equivalent," and I hope it will have your consideration.

Sincerely yours,

FRANK T. BOW,
Member of Congress.

CANTON, OHIO, March 28, 1966.

HON. FRANK T. BOW,
House Office Building,
Washington, D.C.:

I urge you contact members of Armed Services Subcommittee on Disposals to strike reference to "(chromite ore equivalent)" from H.R. 13365 being voted on March 29: "(chromite ore equivalent)" would allow GSA to dump 561,000 tons of ferrochrome on the market, which could cripple the ferroalloy industry. This amount compares with total consumption in the United States in 1964 and 1965. The ferrochrome is a storage of manpower electricity—2½ tons of chromite ore per ton of ferrochrome—which could be needed in case of war emergency. We approve of original intent of the bill to release a limited quantity of the excess ore in the stockpile, but not the important finished product ferrochrome.

R. L. CUNNINGHAM, President.
OHIO FERRO ALLOYS CORP.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES.
Washington, D.C., March 25, 1966.

HON. PHILIP J. PHILBIN,
Chairman, Subcommittee No. 1, Armed Services Committee,
Washington, D.C.

DEAR MR. CHAIRMAN: Reference is made to the telegram to you and other members of the subcommittee from G. L. Weissenburger, chairman and president, Vanadium Corp. of America, and testimony before your subcommittee regarding the inclusion of ferrochrome in H.R. 13365.

In light of the damage to the domestic ferroalloy industry by this inclusion as outlined in the telegram and testimony, I would hope that you see fit to exclude ferrochrome from the bill.

With kind regards, I am,
Very sincerely yours,

WAYNE L. HAYS, U.S. Congressman.

NEW YORK, N.Y., March 24, 1966.

HON. RODNEY M. LOVE,
House of Representatives,
Washington, D.C.:

Reference H.R. 13365, disposal metallurgical-grade chromite from national and supplemental stockpiles and our written and oral statements to the Armed Services Disposal Subcommittee, inclusion of ferrochrome through wording "chromite ore equivalent" parenthesized in bill could be extremely damaging to the domestic ferroalloy industry and preclude or substantially eliminate research, development and expansion of this vitally essential industry necessary to keep pace with improved technological applications and processes. Further, our industry unanimously of opinion ferrochrome should be in objective stockpile rather than chromite ore, because of tremendous electrical power, as well as labor and transportation, used in converting ore to ferrochrome.

These items which are certain to be in short supply, as well as targets for bombing or sabotage in any national emergency, would thereby be stockpiled rather than chromite ore, which would be useless, lacking either productive capacity or these essential constituents to processing. We would therefore urgently recommend deletion of words "chromite ore equivalent" parenthesized in H.R. 13365 and either reducing tonnage of chromite ore to amount of ore currently in excess of objective, or leaving original tonnage of 2,300,000 short tons stand, so that it would be available for disposal in form of ore should the OEP act on advice from the alloy industry to switch ferrochrome into objective stockpile and place more chromite ore in excess.

Recent additions to domestic alloy productive capacity plus announced expansions currently authorized, making a shortage of domestic alloy capacity highly unlikely in the foreseeable future, and would provide ample time for congressional or presidential emergency action should ferrochrome supply fall short of satisfying domestic demand.

VANADIUM CORP. OF AMERICA,
G. L. WEISSENBURGER, Chairman and President.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 24, 1966.

Congressman PHILIP J. PHILBIN,
Chairman, Subcommittee No. 1, Armed Services Committee, the Rayburn Building.

DEAR MR. CHAIRMAN: I am enclosing the telegram I received today from the president and chairman of the Vanadium Corp. of America with respect to H.R. 13365, with respect to amending portions of the bill dealing with chromite ore.

I would appreciate it if the enclosed telegram could be made part of the hearings.

Sincerely,

KEN HECHLER.

NEW YORK, N.Y. March 24, 1966.

Hon. KEN HECHLER,
House of Representatives,
Washington, D.C.:

Re your conversation with Carl Adler, manager our Graham, W. Va., plant, the 2,300,000 short dry tons of metallurgical-grade chromite (chromite ore equivalent) in chromite disposal bill includes 900,000 tons metallurgical-grade chromite ore, approximately 236,000 net tons low-carbon ferrochrome, and 325,000 net tons high-carbon ferrochrome. Approximate U.S. consumption 1965 was 164,000 tons of low-carbon chrome, of which 50,000 was imports and 114,000 domestic material. Domestic consumption high-carbon ferrochrome 148,000 tons, 5,000 tons being imports and 143,000 tons domestic.

Telegram sent last night to members of Armed Services Subcommittee on Disposals follows: "Reference H.R. 13365 disposal metallurgical-grade chromite from national and supplemental stockpiles and our written and oral statements to the Armed Services Disposal Subcommittee, inclusion of ferrochrome through wording 'chromite ore equivalent' parenthesized in bill could be extremely damaging to the domestic ferroalloy industry and preclude or substantially eliminate research, development, and expansion of this vitally essential industry necessary to keep pace with improved technological applications and processes. Further, our industry unanimously of opinion ferrochrome should be in objective stockpile rather than chromite ore, because of tremendous electrical power, as well as labor and transportation, used in converting ore to ferrochrome.

These items which are certain to be in short supply, as well as targets for bombing or sabotage in any national emergency, would thereby be stockpiled rather than chromite ore, which would be useless, lacking either productive capacity or these essential constituents to processing.

"We would, therefore, urgently recommend deletion of words 'chromite ore equivalent' parenthesized in H.R. 13365, and either reduce tonnage of chromite ore to amount of ore currently in excess of objective, or leave original tonnage of 2,300,000 short tons stand so that it would be available for disposal in form of ore should the OEP act on advice from the alloy industry to switch ferrochrome into objective stockpile and place more chromite ore in excess. Recent additions to domestic alloy productive capacity, plus announced expansions currently authorized, make a shortage of domestic alloy capacity highly unlikely in the foreseeable future and would provide ample time for congressional or Presidential emergency action should ferrochrome supply fall short of satisfying domestic demand."

Understand committee may consider this bill again late today. Any assistance on your part to have the bill amended in subcommittee would be greatly appreciated.

G. L. WEISSENBERGER,
Chairman and President,
Vanadium Corp. of America.

H.R. 13578—RHODIUM

[H.R. 13578, 89th Cong., 2d sess.]

A BILL To authorize the disposal of rhodium from the national stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately six hundred and eighteen troy ounces of rhodium (Rh content) now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

Mr. COOK. The next bill, sir, is H.R. 13578, rhodium.

(The remarks of Mr. Philbin, on H.R. 13578, are as follows:)

**OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1**

Mr. PHILBIN. This is still another part of the legislative package of General Services Administration for disposal of metals from the national stockpile.

This is probably the smallest of the group. It calls for the disposal of approximately 618 troy ounces of rhodium (Rh content) now held in the national stockpile. There was never a stockpile objective for this particular metal.

The average acquisition cost of the commodity was \$126.537 per troy ounce.

In 1959 Congress authorized the disposal of 2,524 troy ounces of rhodium, and the average unit recovery was \$129.19 per troy ounce.

Rhodium is obtained from Canada, South Africa, the United States, and the U.S.S.R.

Rhodium is a metal of the platinum group and is intermediate between platinum and iridium with respect to hardness, toughness, and melting point. Rhodium maintains freedom from surface oxidation.

It is used to define the International Temperature Scale between 630.5 and 1063° C. Rhodium has a lower specific electrical resistance than platinum or palladium. Scientific instruments, silver and platinum jewelry, and precision instruments for the measurement of the physical properties of corrosive liquids are plated with rhodium. Electric contacts plated with rhodium are used for radio and audio-frequency circuits because of freedom from oxidation and low-contact resistance, and sliding or moving contacts are coated with rhodium to take advantage of the great hardness. Mirrors and surfaces coated with rhodium maintain brilliancy.

(The remarks of Mr. Lawrence are as follows:)

**STATEMENT BY WILLIAM N. LAWRENCE, CHIEF, STOCKPILE AND
REQUIREMENTS DIVISION, OFFICE OF EMERGENCY PLANNING**

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, thank you for the opportunity to support H.R. 13578, a bill to author-

ize the disposal of approximately 618 troy ounces of rhodium from the national stockpile.

Rhodium is one of the platinum group metals, and is usually alloyed with other members of platinum metals to give them hardness and strength. Some rhodium is produced in the United States, but most of our supply comes from Canada and South Africa.

There is no stockpile objective for rhodium, and a recent survey indicated no identifiable defense uses for the material.

There is currently a strong demand for rhodium, and the price has increased sharply in recent months. It would appear to be a most opportune time to dispose of this material.

Mr. PHILBIN. What did this quantity of rhodium material cost the Government when we purchased it? What would be the average cost of the total of 618 troy ounces which you now propose to dispose of?

Mr. ROMEO. \$127 per ounce. The total cost was \$78,200.

Mr. PHILBIN. In this case you don't have to have any industry conference, do you, Mr. Harlan?

Mr. HARLAN. No, sir.

Mr. PHILBIN. There is very little interest in this disposal. Was there any interest expressed by industry?

Mr. LAWRENCE. We have had Fiberglas people express their interest in buying it.

Mr. PHILBIN. They didn't express opposition to the bill?

Mr. LAWRENCE. No.

Mr. PHILBIN. There is no question about that?

Mr. LAWRENCE. Yes.

Mr. PHILBIN. Do you have some questions?

Mr. ARENDS. No questions.

Mr. PHILBIN. Any questions, Mr. Stratton?

Mr. STRATTON. No questions.

Mr. PHILBIN. Mr. Machen.

Mr. MACHEN. No questions.

Mr. PHILBIN. No questions. Thank you very much.

Mr. Harlan, there is not much controversy on this, but you have a statement on it?

Mr. HARLAN. Yes; why don't I submit it for the record, sir?

Mr. PHILBIN. I was going to suggest that in view of this situation. (The statement of Mr. Harlan is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13578.

This bill would authorize the disposal of approximately 618 troy ounces of rhodium now held in the national stockpile. This quantity

includes 173 ounces of rhodium in sponge form and about 445 ounces of rhodium alloyed with platinum.

The Office of Emergency Planning has determined this quantity, which represents the total inventory of rhodium in the stockpile, to be in excess of stockpile requirements.

Rhodium is a metal of the platinum group and is intermediate between platinum and iridium with respect to hardness, toughness, and melting point.

Rhodium has a lower specific electrical resistance than platinum or palladium. Scientific instruments, jewelry, and precision instruments for the measurement of the physical properties of corrosive liquids are plated with this material. Electric contacts plated with rhodium are used for radio and audiofrequency circuits because of freedom from oxidation and low-contact resistance.

U.S. production of rhodium is limited. The primary sources of the material are the Republic of South Africa, Canada, and Soviet Russia.

The approximate acquisition cost of the rhodium is about \$126.54 per troy ounce. The current quoted market price for rhodium is \$197-\$200 per troy ounce.

GSA has consulted with affected Government agencies in the development of the disposal program on the excess of 618 troy ounces. It is believed that in view of the type material which is excess and the small quantity involved there would be no impact on the market. We are, however, planning to review the disposal of this excess rhodium with the industry at a platinum industry meeting we are holding on March 23.

This agency strongly recommends the enactment of H.R. 13578.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. COOK. I have one question, Mr. Philbin.

Since this material was released, removed from the strategic and critical materials in 1957, why has a disposal plan not been developed at an earlier date?

Mr. HARLAN. Mr. Cook, there has been a continuing—I may want to ask Mr. Lawrence to correct me if I am wrong about this—there has been a continuing research by the Office of Emergency Planning to determine the possible need for rhodium, and it has only recently been determined this material should be released. Actually this material is an alloyed material, it was taken in from the Reconstruction Finance Corporation back in the days when we were trying to get adequate quantities of platinum.

Mr. COOK. This is what bothers me, the answer to the particular question. Having removed it in 1957, weren't we assured at that time that there was no continuing need for it?

Mr. LAWRENCE. We have been asked several times to make surveys on all the platinum metals.

Mr. PHILBIN. You haven't any industry conference on this particular metal. You are intending to take up this metal when you meet with the platinum industry?

Mr. HARLAN. On Wednesday, that is correct, sir.

Mr. PHILBIN. Do you expect to complete that meeting on Wednesday?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. As you know, we have a bill scheduled for consideration here.

Mr. HARLAN. I do, sir.

Mr. PHILBIN. At that time, perhaps you could bring us up to date. Remember please to make some mention of reactions you get from the platinum industry respecting this particular program.

Mr. HARLAN. I will be very glad to, sir.

Mr. PHILBIN. Are there any further questions?

If not, we thank you, Mr. Harlan. We will go to the next bill.

(Whereupon, the subcommittee proceeded to further business.)

H.R. 13662—REFRACTORY-GRADE BAUXITE

[H.R. 13662, 89th Cong., 2d Sess.]

A BILL To authorize the disposal of refractory-grade bauxite from the national stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately one hundred twenty-six thousand three hundred long calcined tons of refractory-grade bauxite now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

Mr. PHILBIN. Now the next bill is H.R. 13662, refractory grade bauxite.

(The statement of Mr. Philbin on refractory grade bauxite is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. H.R. 13662 was sent to us by the General Services Administration and provides for the disposal of 126,300 long calcined tons of refractory grade bauxite now held in the national stockpile.

At the present time, we have in our inventory 299,279 long calcined tons. The present stockpile objective which was established on April 10, 1964, is for 173,000 tons.

The proposed disposal would provide authority for disposal of all excess refractory grade bauxite.

Refractory grade bauxite is a clay-like material, dull white in color that has been calcined.

The principal use of this commodity is to produce high-alumina refractories.

Refractory grade bauxite comes from British Guiana.

The average acquisition costs of this commodity is \$79.92 per long calcined ton.

The consumption has increased from approximately 115,000 tons in 1963 to approximately 141,000 tons in 1964.

Mr. PHILBIN. Do you have that, Mr. Lawrence?

Is Mr. Lawrence here?

Mr. HARLAN. He stepped out for a moment.

Mr. PHILBIN. Mr. Harlan, you may go ahead. Is Mr. Lawrence coming back?

Mr. HARLAN. I am sure he is coming back. I think he stepped out of the room for a moment.

Mr. PHILBIN. Mr. Harlan.

STATEMENT OF JOHN G. HARLAN, GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13662.

This bill would authorize the disposal of 126,300 long calcined tons of refractory grade bauxite now held in the national stockpile. The Office of Emergency Planning has determined this quantity to be in excess of stockpile requirements.

Refractory grade bauxite is a special grade of bauxite high in alumina and low in iron. It is used primarily to produce high alumina refractories in the forms of brick and cementing compounds. British Guiana is the major source of supply.

The total inventory of refractory grade bauxite held by GSA is 299,279 long calcined tons. The present stockpile objective is 173,000 long calcined tons. The excess of approximately 126,300 long calcined tons is covered by H.R. 13662.

The average acquisition cost of refractory grade bauxite is \$37.92 per long calcined ton. The current market value is estimated to be approximately \$42 per long calcined ton.

Industry representatives and affected Government agencies were consulted in the development of the program for the disposal of the excess. On February 24, we held an industry meeting with representatives of the major segments of the refractory grade bauxite industry. At this meeting a spokesman for the Refractories Institute presented a proposal in behalf of the National Trade Association of the Refractories Industries regarding the method and rate of disposal. There was general agreement that the material is in short supply and that the disposal of the excess refractory grade bauxite from the stockpile is desirable. The industry suggested a program for orderly distribution of the material to domestic producers of refractories. With slight modification, we believe that the industry proposal is sound and will appropriately serve the interests of all concerned.

This agency strongly recommends the enactment of H.R. 13662.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. Thank you, Mr. Harlan.

It would appear if the provision of this bill were carried out, the Government would make a pretty substantial profit here, on this commodity.

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Because you bought it for something like \$37 a long ton, and the current market value is about \$42 per long ton?

Mr. HARLAN. Right, sir.

Mr. PHILBIN. There would be a profit here?

Mr. HARLAN. We stand to gain about half a million dollars on this, yes.

Mr. PHILBIN. How will that be disposed of? Will that be disposed of by competitive bidding?

Mr. HARLAN. The suggestion from the industry which has been pretty well agreed to is that it would be allocated to the makers of refractories on the basis of an initial first year disposal of approximately 40,000 tons.

Mr. PHILBIN. How can that be done, at the market price?

Mr. HARLAN. Yes, we would have to negotiate with each of the refractory producers, and we would base it on market price, yes.

Mr. PHILBIN. In that process, you will make sure all the producers are given an opportunity to get some?

Mr. HARLAN. Absolutely, yes sir.

Mr. PHILBIN. You wouldn't put it all in one or two pots, you would spread it around and give everybody a chance?

Mr. HARLAN. This material has been in short supply for quite a while, sir. The recommendations from the industry I think are sound. This will be the quickest way for it to get into use.

Mr. PHILBIN. Do we have that assurance from you: it will be handled, under this bill, or with other similar disposal bills, to give industry an opportunity either to bid or to be given a chance to be considered for some of the disposals?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. That is what you have been doing in the past, isn't it?

Mr. HARLAN. That is right, sir, but I would like to say when materials are in very critically short supply, one of our objectives of course is to get them into the hands of the using industry in the most direct and least disruptive way possible.

Mr. PHILBIN. That is right.

Mr. HARLAN. Frequently we work out arrangements where the material will be channeled directly through the normal producer channels.

Mr. PHILBIN. At the industry conferences you will advise the industry how this is going to be done, as a rule?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. In this particular case we want you to do that. We think that is very, very important. Also, you channel these materials to defense-rated orders, don't you—defense-rated industries?

Mr. HARLAN. Yes. Of course in this case, the refractories would be a little difficult to channel directly to defense because it goes into the bricks, which go into furnaces, and so on.

Mr. PHILBIN. Yes. I am speaking about general commodities.

Mr. HARLAN. In general, yes; that is correct.

Mr. PHILBIN. Where you do have any material that is used by industry, you make a point to consider defense-rated orders.

Mr. HARLAN. Yes, sir; we do.

Mr. PHILBIN. And then channel the materials, whatever they happen to be.

Mr. HARLAN. Yes; they are given priority.

Mr. PHILBIN. They are given consideration?

Mr. HARLAN. They are given priority consideration.

Mr. PHILBIN. That is right.

Then you will advise us, of course, of developments, as you always do, and advise us concerning the disposal plans, and the additional industry meetings you have, and how the proposals work out as you have been doing in the past?

Mr. HARLAN. Yes; we certainly will.

Mr. PHILBIN. Mr. Arends, do you have any questions?

Mr. ARENDS. No questions.

Mr. PHILBIN. Do you have a question, Mr. Stratton?

Mr. STRATTON. No questions.

Mr. PHILBIN. Mr. Randall?

Mr. RANDALL. The word "refractory," we know generally what it is, but you mentioned this as produced, I think, in British Guiana?

Mr. HARLAN. British Guiana.

Mr. RANDALL. Tell us a little about what the use of it is for. I don't think this would hurt. I don't think this encumbers the record at all.

Mr. HARLAN. Well, the word "refractory" has to do with heat absorption. This material has a special heat absorption quality which makes it particularly suited for making bricks in furnaces.

Mr. RANDALL. That is the principal use of it?

Mr. HARLAN. Yes, sir.

Mr. COOK. How long do you anticipate this disposal will take?

Mr. HARLAN. Mr. Cook, it will probably take from 2 to 3 years on the basis of our present agreement with the industry, which would be a rate of 40,000 to 50,000 tons a year. However, we will continue to be in touch with the industry, and if this rate should either be stepped up or cut back, naturally we will take some action to do this.

Mr. PHILBIN. Thank you very much.

Are there further witnesses on this bill?

Mr. COOK. Mr. Lawrence, sir.

Mr. PHILBIN. Mr. Lawrence, that is right.

Mr. Lawrence, you were out of the room.

Mr. LAWRENCE. I have nothing further except we fully support the bill.

(The prepared statement of Mr. Lawrence on refractory-grade bauxite is as follows:)

STATEMENT BY WILLIAM N. LAWRENCE, CHIEF, STOCKPILE AND REQUIREMENTS DIVISION, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, I wish to thank you for the opportunity of appearing before you for the purpose of supporting H.R. 13662, a bill to authorize the sale of approximately 126,300 long calcined tons of refractory-grade bauxite from the national stockpile.

The last review of the supply requirements of refractory bauxite in April 1964, resulted in an increase in the conventional war stock-

pile objective from 137,000 long tons to 173,000 tons. The inventory in the national stockpile, as of December 31, 1965, was 299,279 long tons. The upward revision in the objective was due mainly to the higher wartime requirements for refractory-grade bauxite for use to produce high-alumina refractories in the form of bricks and cementing compounds.

In the development of this disposal program, consultations were held with industry representatives and interested foreign governments. Due to the increased consumption, the supply of refractory bauxite has been tight since 1959. In view of this, and the fact that our chief supply is from British Guiana, industry producers, processors, and consumers have indicated general agreement with the proposed disposal as to quantity and timing of sales to help relieve the current market situation.

The Office of Emergency Planning, therefore, favors enactment of this legislation and feels that early passage of this bill will be helpful to the U.S. economy.

Mr. PHILBIN. You made the usual clearances?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You come up with support for the bill?

Mr. LAWRENCE. Yes, sir. I think everyone is in favor of it.

Mr. PHILBIN. You increased the stockpile objective here in April 1964 from 137,000 long tons to 173,000. What was the reason for that?

Mr. LAWRENCE. The upward revision is due mainly to the high wartime requirements for refractory grade bauxite for use in high-alumina refractories. There is a growing use of this material.

Mr. PHILBIN. By defense agencies for defense uses?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. That was done at a high level?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. Thank you.

(Whereupon, the subcommittee proceeded to further business.)

(The following material was received for the record:)

THE REFRACTORIES INSTITUTE,
Pittsburgh, Pa., March 21, 1966.

Hon. PHILIP J. PHILBIN,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PHILBIN: The Refractories Institute, the national trade association of the refractories industry, strongly supports bill H.R. 13662, which you introduced on March 15 to authorize the disposal of 126,000 long tons of refractory grade bauxite from the national stockpiles without regard to the 6 months' waiting period.

Refractory grade (calcined) bauxite (as distinguished from metallurgical grade bauxite) is essential to the refractories industry for the production of high-alumina brick and mortars used for the lining of steel and other industrial furnaces.

At present there are only two producers of this particular highly refined bauxite with mines and plants in British Guiana and Surinam. For some years past these producers have been unable to keep up with the demand and the shortage is expected to continue for at least another 2 years, at which time a third producer is scheduled to be in production. The refractories industry estimates that the available supply of refractory grade bauxite is less than 75 percent of the augmented demand resulting not only from the high rate of steel production but from higher quality requirements of modern steel technology.

We urge prompt passage of your bill H.R. 13662 to afford immediate and much needed relief to the refractories industry and its industrial customers.

Thank you for your support.

Yours very truly,

AVERY C. NEWTON,
Executive Secretary.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES.

SUBCOMMITTEE No. 1,

Washington, D.C., Tuesday, March 22, 1966.

The subcommittee met at 10:10 a.m., Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. PHILBIN. The committee will come to order.

We have several bills to consider today, and we will start with H.R. 13580, amosite asbestos.

H.R. 13580—AMOSITE ASBESTOS

[H.R. 13580, 89th Cong., 2d sess.]

A BILL To authorize the disposal of amosite asbestos from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately fifteen thousand, one hundred and seventy short tons of amosite asbestos now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

(The statement of Mr. Philbin on amosite asbestos, H.R. 13580, is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1

Mr. PHILBIN. The administration has submitted a proposal for disposal of 15,170 short tons of amosite asbestos now held in the national stockpile.

Currently, the stockpile objective is 40,000 short tons and the amount in inventory is 55,170 short tons.

The average acquisition cost of the commodity was \$245.86 per short ton.

Amosite asbestos is obtained from South Africa.

It is a fibrous amphibole mineral, characterized by long, coarse, strong, and resilient fibers. Amosite possesses good tensile strength and is more resistant to heat than crocidolite or chrysotile. It varies in color from gray and yellow to dark brown, with fiber lengths up to 6 inches.

Amosite asbestos is used in manufacturing woven insulating felt, heat insulation (pipe covering, block and segments), and marine insulating board. The long-fiber amosite is used principally in the manufacture of thermal insulation.

We have Mr. Lawrence here with us this morning, and we would be very happy to have you give us your views on this bill.

Mr. LAWRENCE. Mr. Chairman, members of the subcommittee, the Office of Emergency Planning appreciates the opportunity of appearing before you to support H.R. 13580, a bill "to authorize the disposal of 15,170 short tons of amosite asbestos from the National and supplemental stockpiles."

Amosite asbestos is used as a thermal insulating material on steam boilers and machinery and as pipe covering. It is stockpiled for ships of the Navy Department, the Coast Guard, and the Maritime Administration.

A considerable quantity of this material was obtained through the barter program of the Department of Agriculture.

About 80 percent of our inventory has been obtained on various barter programs of the Department of Agriculture. I feel that this disposal program will be helpful. I do not know of any objection. All of the agencies have concurred in the disposal plan.

Mr. PHILBIN. I don't have any questions to ask on this particular bill.

Mr. Gubser.

Mr. GUBSER. I have one, Mr. Lawrence.

In arriving at the figure of \$245.86, acquisition cost, per short ton, does that include the value of the agricultural commodities which were bartered?

Mr. LAWRENCE. Yes, sir.

Mr. GUBSER. How is that valued—whatever value the Department of Agriculture placed upon them?

Mr. LAWRENCE. At the time they made the contract, yes.

Mr. GUBSER. Thank you very much.

Mr. PHILBIN. Any questions, Mr. Bennett or Mr. Johnson?

Mr. JOHNSON. No.

Mr. PHILBIN. Thank you very much, Mr. Lawrence.

Mr. Harlan.

Mr. HARLAN. Good morning, Mr. Chairman.

Mr. PHILBIN. Good morning.

Mr. HARLAN. Since my statement is a repeat of the factual data which you and Mr. Lawrence have already covered, with your permission I will skip over that part of the statement.

Mr. PHILBIN. We will take your statement for the record.

(The statement of Mr. John G. Harlan, Jr., Commissioner of Defense Materials Service, on H.R. 13580, is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13580.

This bill would authorize the disposal of approximately 15,170 short tons of amosite asbestos now held in the national and supplemental

stockpiles. The Office of Emergency Planning has determined this quantity to be in excess of stockpile requirements.

Asbestos is a name applied to a group of naturally fibrous minerals. Amosite asbestos is characterized by long, coarse, and resilient fibers. It is more resistant to heat than crocidolite or chrysotile. The Republic of South Africa is the only commercial source of amosite asbestos.

Amosite asbestos is used in manufacturing woven insulating felt and heat insulation such as pipe covering and marine insulating board. The long fiber amosite is used principally in the manufacture of thermal insulation.

As of December 31, 1965, the total inventory of amosite asbestos held by GSA was 55,170 short tons. The present stockpile objective is 40,000 short tons. The excess of 15,170 short tons is covered by H.R. 13580.

The average acquisition cost of the amosite asbestos is \$245 per short ton. The current market price is about \$240 per short ton.

Industry representatives and affected Government agencies have been consulted in the development of the disposal program on the excess of approximately 15,170 short tons of amosite asbestos. We are continuing our discussion with industry and feel confident that an orderly program can be worked out to the mutual interests of all concerned.

This agency strongly recommends the enactment of H.R. 13580.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. Is there anything in addition you want to say about the particular disposal?

Mr. HARLAN. Just this, Mr. Chairman: This material, of course, is produced only by one producer, and comes from the Transvaal region of South Africa. The bulk of the consumption is limited to three major consumers, although I think there are a number of additional smaller consumers.

We have not felt it was necessary to hold a formal meeting with the industry in this case, but have been in touch with the industry and find no objection from them to an orderly disposal program.

Mr. PHILBIN. Does that complete your testimony?

Mr. HARLAN. Yes.

Mr. PHILBIN. What is the situation regarding industry reaction here—industry contacts?

Mr. HARLAN. Well, while we didn't hold a formal meeting with the industry, we have been in touch with the one producer who is also—I think he distributes about 90 percent of the material in this country.

Mr. PHILBIN. There is only one producer distributing 90 percent. He has no objection?

Mr. HARLAN. No objection.

And we also talked to the major consumers, and they had no objection to an orderly program for the release of the material.

Mr. PHILBIN. I don't have any questions. Do you have any questions, Mr. Gubser?

Mr. GUBSER. No.

Mr. PHILBIN. We are honored by having the great chairman of our committee here today, and we are very happy to see him here. Perhaps he would have some questions.

Chairman RIVERS. Mr. Chairman, I don't have any questions. You do such a good job there aren't any questions left to ask.

Everybody has confidence in your knowledge of this subject and your committee has done a very effective and positive and immediate job. You have taken such prompt action on all of these important bills, and the whole committee has every confidence in you. I want to thank you.

The witnesses whom you are bringing here have made a fine contribution. We have a lot of bills to report out, Mr. Chairman.

I want to thank you for the excellent progress you are making. I believe we will meet our deadline. I believe you have over 20 bills.

Mr. PHILBIN. That is right.

Chairman RIVERS. I know you will have the witnesses get right down to the meat in the coconut, and we will get all this testimony and get these bills before the full committee, and before the Congress.

Mr. Chairman, I want to thank you and your committee. I will just sit here and see if I can learn something.

Mr. PHILBIN. Mr. Chairman, thank you very much for your kind remarks. It is very fine of you to come here, to attend our meetings here. We are proceeding very expeditiously. I am sure we won't have any difficulty finishing up these bills we have scheduled.

Mr. Gubser, do you have any questions?

Mr. GUBSER. No questions.

Mr. PHILBIN. There are no questions. Thank you very much.

Are there any industry witnesses here?

I think not. We only have one member of the industry; so there wouldn't be any industry witnesses.

That will conclude the hearings on this particular bill.

H.R. 13367—ACID-GRADE FLUORSPAR

[H.R. 13367, 89th Cong., 2d sess.]

A BILL To authorize the disposal of acid grade fluorspar from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately two hundred and thirty-six thousand seven hundred and seventy-three short dry tons of acid grade fluorspar now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

Mr. PHILBIN. Mr. Cook, what is the next bill we will consider?

Mr. COOK. The next bill is H.R. 13367, a bill to provide for disposal of acid-grade fluorspar.

(The statement of Mr. Philbin on acid-grade fluorspar, H.R. 13367, is as follows:)

**OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1**

Mr. PHILBIN. The General Services Administration sent to us this bill calling for disposal of 236,773 short dry tons of acid-grade fluorspar from the national stockpile.

Presently we have in our two stockpiles and the DPA inventory a total of 1,144,090 short dry tons and a stockpile objective of 540,000 short dry tons.

Fluorspar is a mineral of calcium fluoride. Except for a very limited supply of cryolite and the very low fluorine content in phosphate rock, fluorspar is the only source of fluorine for industrial use. Most of the acid-grade fluorspar in the stockpile is a concentrate which has been finely ground.

Acid-grade fluorspar is used to make hydrofluoric acid. This acid is used to produce synthetic cryolite, freon gas, alkylate for high-octane fuel, pickling steel, etching glass, and many other minor uses. Cryolite is used in making alloys of aluminum and magnesium and in the refining of scrap of these metals.

Mexico produces approximately 25 percent of world production, and the United States is the second largest free-world producer. Countries which export acid-grade fluorspar to the United States are Spain, Italy, and France.

The approximate cost for a short dry ton of acid-grade fluorspar was \$46.69. The present market value of fluorspar is estimated to be \$45 per short dry ton.

Fluorspar—Acid grade, H.R. 13367

<i>Unit: Short dry ton</i>	
Sales through Dec. 31, 1965.....	None
Current inventory:	
National stockpile.....	458, 089
Supplemental stockpile.....	668, 684
Defense Production Act inventory.....	17, 317
Total.....	1, 144, 090
Stockpile objective.....	540, 000
Surplus (reduced by 350,000 credited to fluorspar-metallurgical).....	254, 090
Requested disposal.....	236, 773
Remaining surplus if bill is approved:	
National stockpile.....	None
Supplemental stockpile.....	None
Defense Production Act inventory.....	17, 317
Unit acquisition cost.....	\$46. 69
Present unit market value.....	\$45. 00

Disposal plan: 60,000 short dry tons first year. Conditions require revisions. Estimated 4-year program.

Would you let us have your testimony and views on this bill, Mr. Lawrence?

Mr. LAWRENCE. Thank you for this opportunity to appear before you to support H.R. 13367, a bill to authorize the disposal of approximately 236,773 short dry tons of acid-grade fluorspar from the national and supplemental stockpiles.

Acid-grade fluorspar is the commercial source of hydrofluoric acid. Important products requiring large quantities of this acid in their production are aviation gasoline, freon gas, and synthetic cryolite.

It is also used as a flux in the melting of aluminum and magnesium during alloying and in the refining of scrap aluminum and magnesium.

Mexico is the largest free world producer of acid-grade fluorspar, accounting for about 25 percent of world production of 1.8 million short tons. U.S. production is about 110,000 short tons annually. Canada, Spain, Italy, and France also contribute to the U.S. supply.

U.S. consumption has climbed steadily in recent years, and was over a half million tons in 1965.

The last stockpile objective for this material was established in February 1964, at 540,000 short dry tons. The current inventory of this material is 1,144,090 short dry tons. In addition to the objective, 350,000 short dry tons of acid-grade fluorspar is credited to the metallurgical-grade fluorspar objective. The total excess of 254,090 short dry tons is the material authorized by this bill, plus 17,317 short dry tons in the Defense Production Act inventory which OEP authorized GSA to sell some months ago.

Mr. PHILBIN. That has already been sold. You already sold the 17,317 short dry tons in the Defense Production Act inventory?

Mr. LAWRENCE. I don't know. Have we sold all that, John?

Mr. HARLAN. Fifteen hundred.

Mr. LAWRENCE. Fifteen hundred has been sold.

Mr. PHILBIN. Have you made the usual agency clearances?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You find no objection to the disposal?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. Thank you very much. Do you have any questions, Mr. Gubser?

Mr. GUBSER. No, sir.

Mr. PHILBIN. Mr. Chairman, do you have any questions?

Chairman RIVERS. No.

Mr. PHILBIN. Mr. Arends?

Mr. ARENDS. No questions.

Mr. PHILBIN. Mr. Bennett?

Mr. BENNETT. No questions.

Mr. PHILBIN. Mr. Harlan, will you come forward and give us your views of this bill?

We will take your full statement for the record, and then you can elaborate on it and present additional views as you may desire.

Mr. HARLAN. Thank you, sir.

(The statement of Mr. John G. Harlan, Jr., Commissioner of Defense Materials Service, on H.R. 13367, is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank

for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13367. This bill would authorize the disposal of approximately 236,773 dry tons of acid grade fluorspar now held in the national and elemental stockpiles.

The entire quantity covered by this bill is classified as meeting pile quality requirements and has been determined by the Office of Emergency Planning to be in excess of stockpile requirements. Acid grade fluorspar is a crystalline or massive granular mineral containing at least 97 percent calcium fluoride. Fluorspar is the primary source of fluorine for industrial use. Most of the acid grade fluorspar in the stockpile is a concentrate which has been finely ground.

Although the United States has been the world's largest fluorspar producer, domestic consumption far exceeds output and Mexico, principally, Italy and Spain are the main foreign sources.

Acid grade fluorspar is used to make hydrofluoric acid. Important industrial processes requiring larger quantities of hydrofluoric acid in their production are aviation gasoline and synthetic cryolite. It is also used as a flux in the melting of aluminum and magnesium during alloying and in the refining of scrap aluminum and magnesium.

The average acquisition cost of the stockpile inventories of acid grade fluorspar was \$46.69 a short dry ton. The current market value is about \$45 a short dry ton.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on this excess. We held a fluorspar industry meeting on January 28 to discuss plans for the proposed disposal. Most consumers favored disposal on the condition that while domestic production of acid grade fluorspar is increasing, demand for acid grade fluorspar is growing at an accelerated rate and should continue to grow. Most producers, however, had reservations against disposals at this time.

We are still in contact with the industry and believe that through selection of specific types of material from given locations, we can develop an acceptable plan to permit a modest beginning. We will, of course, need authorizing legislation to make such a beginning.

Our agency strongly recommends the enactment of H.R. 13367.

This concludes my prepared statement, Mr. Chairman. However, if any other members of your subcommittee have any questions you wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. HARLAN. Mr. Chairman, we held a meeting with the representatives of the fluorspar producing, importing, and consuming industries on January 28 to discuss the disposal program. We found divergency of opinion. The domestic producing industry and the importers were opposed to the disposal program, whereas most of the consumers, with a major exception, appeared to favor some sort of a reasonable, reasonable disposal program.

At the meeting we agreed to supply the industry representatives with additional factual information about the material available for disposal, and this material has been mailed within the last few days to the industry people. We plan to continue working with the representatives of industry in an effort to work out a reasonable disposal

program which will enable us to remove these excesses from overhanging the market, and at the same time avoid any serious disruption of regular production channels.

I am confident, Mr. Chairman, that we will be able to work out such a program.

Mr. PHILBIN. You think you will be able to work out a satisfactory program?

Mr. HARLAN. I believe we will.

Mr. PHILBIN. You got the consensus you desire, or we desire?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. In order to effectuate the disposal. You are confident on that score?

Mr. HARLAN. I feel confident we can do it.

Mr. PHILBIN. Are there any questions?

There are no questions. We thank you very much.

Now, we have Congressman Gray, our distinguished colleague.

Come forward, Mr. Congressman.

Mr. GRAY. Thank you very much, Mr. Chairman.

I do not have a prepared statement, but I have Congressman Stubblefield, who is also my neighbor from Kentucky here, and he is with me this morning.

Mr. PHILBIN. Congressman, will you come at the same time? We are very happy to have you here, too. We have two of the most distinguished Members of the House.

Mr. GRAY. Thank you very much.

Mr. PHILBIN. We want to welcome you to our committee. We will be very, very glad to hear from you, and to hear from any witnesses that you have with you.

Do you have some witnesses?

Mr. GRAY. Yes, sir; we have Mr. Gill Montgomery, Mr. Chairman, who represents the southern Illinois and Kentucky fluorspar producers.

Mr. PHILBIN. While we have Mr. Stubblefield here, perhaps off the record, Mr. Reporter—

(Discussion off the record.)

Mr. PHILBIN. Back on the record.

Mr. GRAY. Mr. Montgomery is representing the fluorspar producers. I want to briefly mention having represented the Hardin County, Ill., area of the fluorspar industry for almost 12 years—this industry has been on its knees—and I think I could probably put this in proper perspective by stating if we dump any more fluorspar on the market it would be like giving a drowning man a drink of water.

We have been very hard hit, over 50 percent of the miners have been unemployed, they know nothing but relief checks. I am really sorry the administration has seen fit to request the legislation allowing a further deterioration of the fluorspar market.

Mr. Montgomery is here, is very capable of explaining the industry's position, and with that, Mr. Chairman, I would like to introduce Mr. Gill Montgomery of Minerva Oil Co., who will speak for the fluorspar industry for southern Illinois and Kentucky.

Mr. PHILBIN. We want to welcome Mr. Montgomery here. We will be very glad to hear from you.

We have a very high regard for your Congressman.

Mr. GRAY. The feeling is mutual, Mr. Chairman.

Mr. PHILBIN. We are very happy to welcome you here, and we would like to hear your views and go over these matters with you.

Mr. Cook.

Mr. COOK. Before Mr. Montgomery testifies, I would like to read a telegram I received this morning:

WILLIAM H. COOK,
Counsel, Stock Pile Committee, House Arms Service Committee,
Rayburn House Office Building, Washington, D.C.:

Offering of surplus acid fluorspar will seriously threaten domestic acid and ceramic fluorspar price structure urge delay and much caution we are asking Mr. Gill Montgomery, Minerva Fluorspar Co. to represent us tomorrow's hearing.

KENTUCKY FLUORSPAR CO.
ROBERT N. FRAZIER, President.

Mr. PHILBIN. Without objection, we will take that for the record, and it will be a part of Mr. Montgomery's testimony.

You can proceed in your own way. Give us the benefit of your views.

Mr. MONTGOMERY. Thank you, sir.

STATEMENT OF GILL MONTGOMERY, VICE PRESIDENT AND GENERAL MANAGER OF MINERVA CO.

Mr. MONTGOMERY. My name is Gill Montgomery, and I am vice president and general manager of the Fluorspar Division of Minerva Co. of Eldorado, Ill. Our company has been a principal producer of acid, ceramic, and metallurgical grade fluorspar in southern Illinois since 1944. In Hardin County, Ill., we operate two flotation concentrates, and have five mines. We also have leased properties in western Kentucky which are inactive at the present time.

I have been authorized by the Ozark-Mahoning Co. of Rosiclare, Ill., and the Kentucky Fluorspar Co. of Marion, Ky., to speak in their behalf, and the three companies thus represented are the only current domestic noncaptive producers of ceramic and acid grade fluorspar presently shipping to the U.S. fluorspar consumers. We urge the tabling and postponement of consideration of any bill authorizing the General Services Administration to sell such surplus acid grade fluorspar requiring congressional authorization at this time, for the reasons stated as follows:

Beginning in 1950 and 1951, major discoveries of fluorspar, on and near the surface and cheaply mined, were discovered in various parts of Mexico. With little protection from the GATT tariff concession rate on acid grade fluorspar of \$1.875 per short ton, large quantities of Mexican cheaper acid grade fluorspar, as well as metallurgical gravel fluorspar, entered the country and so depressed the fluorspar prices that most domestic producers were forced out of business. In fact, today the only producers who can remain in business are those that have zinc and lead coproducts as sulfides associated with their fluorspar ores. About that same time important discoveries of fluorspar were made in Spain, Italy, Sardinia, and France which were encouraged and subsidized by the various stockpiling programs of this Government, usually to an extent not available to domestic producers. Mod-

ern new mills were built in Mexico and in European locations and amortized against stockpile contracts obtained from the U.S. Government. By the time contract deliveries had been completed and all stockpile goals were well exceeded several years ago, these mills had been fully amortized, and were in a position to furnish large tonnages of fluorspar concentrate to the American consuming market at lower prices. This situation continues to this day, and only within the last few months have we observed a slight firming in prices, but current prices are still well below what domestic producers have to charge under U.S. operating conditions to make a small profit.

We refer you to the statistics developed by Department of the Interior, Department of Commerce, and in several publications of U.S. Tariff Commission in their investigations over the past 10 to 12 years. In 1965, approximately 74 percent of the fluorspar of all grades consumed in the United States was imported. A higher proportion of metallurgical grade is imported than acid and ceramic grades, largely due to the easy and cheap milling characteristics of the lower grade gravel material. In 1965, the consumption of acid and ceramic grade fluorspar, and it is assumed that acid can be used for all ceramic purposes and usually is, totaled close to 600,000 tons. Of this the domestic producers furnished approximately 250,000 tons. Final official figures on this proportion should be forthcoming very soon from the Department of the Interior.

This year some 17,000 tons of acid grade fluorspar in the defense production inventory might be released without congressional action.

I have just been informed by Mr. Romeo this has now been disposed of otherwise.

This quantity alone is deemed enough to quite possibly upset a marketing situation which is just begun to stabilize. The prices on acid and ceramic grade fluorspar are still considerably below prices that existed in 1954 when the domestic industry still had a fair share of the market.

When the time comes, acid and ceramic grade fluorspar can command a domestic market at prices comparable to those paid to domestic producers when our Government bought from them for the stockpile; numerous domestic mines will reopen. From my knowledge of various ore reserves both in the Midwest and in our Western States, I would state that the production of acid and ceramic grade fluorspar could easily double within the time it would take to rehabilitate some existing idle mills and mines.

All of the domestic producers are, however, taking the position of any releases from the stockpile are bound to have a further detrimental effect on the vanishing acid grade fluorspar industry in the United States at a critical time of need for this highly strategic mineral. In the event any major consumers are enabled to switch to using stockpiled acid grade fluorspar, this will immediately create surplus offerings from foreign mills currently shipping into the United States, with disastrous effects on a pricing situation which has just begun to achieve a small degree of orderliness.

It is conceivable that future growth patterns in the fluorspar industries will eventually bring supply and demand into a better balance than they have been. It would to all of us seem prudent for the Government to defer stockpile disposals of acid grade fluorspar until such a time arises.

In the past year or so shortages have occurred in such mineral commodities as mercury, sulfur, and others which were in more than ample supply but a short time ago. I am sure you will agree that the best interests of the Government and the domestic industry would be best served by conserving our stockpiles for future disposal. I would also urge you to examine the higher prices at which much of the surplus tonnage was acquired, such prices being in many cases higher than the going price paid for imported acid grade fluorspar by major consumers. It is reasonable to expect that the Government does not wish to sell fluorspar from its stockpile at a loss to the American taxpayer, when by holding it until the anticipated growing demand for fluorspar creates a healthier market condition, the stockpiled acid grade fluorspar can be sold at a profit and also be used to alleviate the short supply situations which certainly do not at the present time exist.

The surplus acid grade fluorspar stocks are stored near major consuming centers in the form of a bulk damp filtercake, which will require drying before use. To avoid damage to domestic producers, I would urge that, at such a future time as stockpile offerings be made, these offerings be made only to consumers which have historically been buying most of their requirements from foreign sources. By this I mean consumers who have depended upon foreign sources for 90 percent or more of their requirements for the past 5 years. Since such imports are usually in the form of damp filtercake, and since such consumers have drying facilities, these consumers would be the only obvious bidders for this material, but it takes no great effort for speculators to purchase the material, dry it, and ship it to consumers who have been the traditional customers of the domestic producers, who usually ship the dried bulk or bagged material.

At the present time Ozark-Mahoning Co. and Minerva are both pelletizing fluorspar flotation concentrates for use by the steel industry, principally in basic oxygen furnace flux use, and we are pleased to see that a certain tonnage of surplus acid grade fluorspar has been earmarked for future pelletized use by the steel industry. This usage is increasing rapidly enough, we believe, that it is entirely feasible that all of the 236,000 tons surplus under present disposal consideration could also be set aside for later metallurgical use. At the present time, there is still an adequate supply of Mexican metallurgical gravel available, but this material seems most likely to be in short supply rather than acid grade, due to the fact that a smaller percentage of fluorspar can be separated from ore gangue at a very coarse size and sold on metallurgical gravel fluorspar specifications.

Therefore, I urge that the bill by which the House would authorize GSA to dispose of 236,000-tons-plus of acid grade fluorspar be tabled at this time pending a study by the various Government agencies concerned with the supply situation, the impact of any stockpile releases on domestic industry, and the disruption of the world market that could be caused by foreign producers of acid grade fluorspar if their production was displaced by any substantial offerings of surplus acid grade fluorspar at this time.

On behalf of the domestic fluorspar producers, I wish to thank you for hearing our side of the question.

Mr. PHILBIN. Thank you very much, Mr. Montgomery. You have given us a very powerful and very helpful and fine statement.

I take it you are concerned about the fact this disposal must be carried out very carefully, very painstakingly, by the agency, or it would have a disruptive effective on your market, conditions in your industry, and positively give rise to speculation that would be harmful to your price structure. Those are your principal objections, are they not, as you set them forth in your very fine statement?

Mr. MONTGOMERY. Yes.

Mr. PHILBIN. Have you had a chance to present your views to the officials of GSA? Have you discussed the matter with them?

Mr. MONTGOMERY. In January we gave most of these same opinions to the GSA people, as Mr. Harlan mentioned a while ago.

Mr. PHILBIN. You understand, of course, when the Congress authorizes the disposal projects by law, the disposal programs by law, they then go to GSA, which has charge under the law of administering the disposal, and that every care is exercised to make sure of the tenor of the law, because it is specified right in the law nothing can be done to bring on the disruption of prices or the market.

The committee is very zealous in enforcing that provision, and also making sure, as well as we possibly can, that no unfavorable effects or impacts are going to be caused at all here to any industry in this country. That would be the last thing anyone on this committee would desire.

So we have set up with the GSA, by agreement of the committee, which in the past has always been carried out, certain safeguards relating to the disposals. And these include, by way of preface, rather extensive conferences at times where they are required—industry conferences, so called—and in one case an industry task force was set up so as to receive the views of industry, record all the objections, and then try to see if some method could be worked out, some formula could be worked out, by which these objections could be met as the disposal goes forward.

I don't know whether you were in the room at the time Mr. Harlan testified here, but you noted he expressed some optimism that there was a good likelihood of coming to an agreement with your industry regarding the problems in controversy. Are you willing to consult with GSA and go over the matter with them, speaking for your industry, and cooperating with other segments of your industry, other representatives of your industry, with the problems so you might be able to work out some suitable formula by which this disposal project can be authorized and go forward and yet not bring all the dire results that you fear?

Mr. MONTGOMERY. We have had some conversations, and we certainly hope to have many, many more with the people of GSA about this problem. They just speak of the disposal of acid grade. That particular item would cause no disruption because there is no appreciable production of acid-grade lump, as such, in the United States at the present time. But I have perhaps one view, and other domestic producers would have other views. I know if I speak for the majority it is that they fear when Congress absents its responsibility, that is just one step forward toward a possibility which they fear, that is that maybe for one reason or another GSA might not go along with the producers as well as Congress might do, or have the knowledge of the various problems in the various districts that the Congressmen themselves would have.

Now, as far as I am concerned, our relations with the GSA people are very pleasant. We found them most cooperative, and certainly the ones that we have been in touch with here, and in January, are very reasonable people, and I am sure they would do nothing to hurt the industry. Still, I wanted to tell you that this is a general situation which disturbs most of the producers.

Mr. PHILBIN. Mr. Harlan, would you be able to make some comment here, addressed to the testimony Mr. Montgomery has given regarding the type of cooperation he may expect from GSA, in the formulation of the methods of disposal, and other matters pertaining to the execution of this bill?

Mr. HARLAN. Mr. Chairman, as we always do, we will work very closely with the industry, and we will not undertake any program until it has been thoroughly explored and worked out with the industry, and there will be absolutely no danger of our upsetting either the domestic production market or the importing market.

The law, as you pointed out, would not permit this. As a matter of fact, the language in this particular bill again repeats the responsibility for the production of producers and consumers' normal market. We expect to be able to work with these people. As the gentleman has mentioned, we discussed with him this morning the possibility of undertaking a beginning program with the type of material which would have practically no effect as far as the domestic producers are concerned. We would be in touch with them continuously throughout this program, watching the market situation, and when a favorable time would arise that might permit us to move other types of material in the market we would want to be in position to do that.

Mr. PHILBIN. You can give some assurance there is going to be no disruption of the price or market arising from these disposals?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. You will consult with the industry very carefully about the disposal plans going to be made, and you will come to a consensus if you can do it, and then you will carry out the plan as it has been laid before the industry in such a way as to conform to the statute to bring no disruption to price or market, or upset the conditions in the industry.

You are prepared now, and you are in a position where you can give such assurance to Mr. Montgomery, are you not?

Mr. HARLAN. Yes, I am, sir.

Mr. PHILBIN. Are you willing to enter into talks with them, conferences with Mr. Montgomery and his colleagues from the industry, to see if you cannot get some plan by which this disposal could go ahead, and at the same time satisfying him by your assurances and his colleagues, as well, and his associates in the industry, that there will be no disturbance, no price disturbances, or disruptions in the industry. That is the procedure that we usually follow here. If you were assured, as you have been, in this public meeting here, which is a matter of record—if you were assured after having the conferences with some of your colleagues and Mr. Harlan and his group, that this would be the case, that this disposal would be carried out in an orderly way, and would have no unfavorable impact on your industry or on your price situation or on your market, would you be disposed to go along with it if the other members of your industry would go along with it?

Mr. MONTGOMERY. Yes, sir; I believe that could be worked out. I think we face now a matter of timing, and if there is an insistence from above that the disposal be implemented at once, this year, and possibly next year, then we are going to have to take an attitude that we would be probably hurt. But if this can be delayed until a time we anticipate, when the disposal would not hurt the domestic industry, why, then, we would certainly go ahead with it.

Mr. PHILBIN. You understand, under the usual rule, accompanying these disposals, it is such procedure that the GSA does have, not to dump vast quantities of these materials on any market, either for your product or any other product that is the object of this proposed legislation, that they proceed very carefully and must do it in an orderly way. That would be done here, I have every reason to believe. We have the assurances of the Administrator, the able Administrator, who is in charge here. I have every reason to believe he would keep any agreement he makes with you or makes with us.

The chairman has a question he would like to propound to you.

Chairman RIVERS. I would like to ask this question: You produce this acid-grade fluorspar, this commodity we talked about?

Mr. MONTGOMERY. Yes, sir.

Chairman RIVERS. We have 236,000 tons we don't need in the stockpile. What do you think we ought to do with it? This committee is not in the price-fixing business, but here is what worries us: We have the responsibility. For instance, we paid 36 cents for copper, now it is between 70 and 80 in the world market. Now, we have to consider currency balances, the outflow of capital.

Now, is your prime concern—here is what I am getting to—is your prime concern the state of health of your industry here, or is your concern equally divided by the producers to the welfare of the producers away from America?

Mr. MONTGOMERY. My primary concern is the health of the domestic industry, and also the health of the country as a whole.

Chairman RIVERS. What about the exporters from some other country?

Mr. MONTGOMERY. The exporters from the other countries have the bulk of the market at the present time. I think we have to watch for their welfare to the extent that if they are hurt they are going to break the price structure, and then that will hurt us.

Chairman RIVERS. Well, we cannot anticipate everything, and we cannot have concern for everybody. If you always look for a way—I would rather hear you make your case on the welfare of the domestic industry. If we got 236,000 tons—you have two eloquent Congressmen there; they are eloquent; they are effective.

Mr. MONTGOMERY. They put a good idea in my mind.

Mr. RIVERS. We have affection for these gentlemen. We want to hear your side. Certainly we are not going to be a party to anything that would destroy the local industry. But the overall currency flow from this country in these 20-odd bills we have—for instance, take bauxite, we use an awful lot of aluminum in our airplanes. If we can work out some kind of agreement with the aluminum industry to use some aluminum we have which we don't need, it just looks like commonsense to me to do it. I don't care where France likes it, Haiti, or whoever says that now. This is the detail for that man sitting down there to do, and he better do it.

me way with copper. Mr. Arends is quite concerned about We want copper to go to the people who are producing the or this world, and we don't want anybody else to get it who al part of this, keeping a strong base, so we can keep these s, just like yours. We want to protect your industry. So e welfare of the foreign people—I do not share the same ap-on you do. I would rather look after you here, and tell these ot to dump it on the market because we are not in the price

We are not going to be a party to using these stockpiles to any market, but we must fulfill our responsibility now and ur defense industries, and everybody that is in it, get the ey need without paying through the nose to some people like

France has been a conscious party to destroying our cur- They came down here and made a demand on Fort Knox for n in gold, to try to bankrupt America. I do not have any in France—very little, very little. And, less than that, in sent President, the way he goes carrying on to this country. ONTOMERY. Amen.

nan RIVERS. I want to help you, and we want to protect your , and Mr. Philbin is the most knowledgeable man I know on ect. He is a scholar and a student in this area. I would like ou address yourself to that, because we welcome people like ing up here. We like to have a practical man from industry up here and tell us what you are up against. That is why ou the question.

o ahead and tell me anything you want, sir.

ONTOMERY. I will try to answer the several points.

nan RIVERS. You see, I have to make a little speech.

ONTOMERY. Yes.

to compare acid-grade fluorspar with copper, we have just pletely opposite situations. Here we see a runaway price throughout the world, on the world market copper selling o two and a half times the domestic price, and we have an runaway, uncontrolled price problem to the extent that the producers of copper themselves have come out in favor of se of this material.

nan RIVERS. That is right, sir.

ONTOMERY. This is just completely the opposite situation.

nan RIVERS. That is just the other side of the coin?

ONTOMERY. Yes. Here we have a situation where most of estic producers are either out of business or their production etely in abeyance waiting for such time as a price exists under ey can operate and produce again. And there are large d reserves of fluorspar in our Western States, for instance, e completely idle, most of them owned by the Ozark Mahon- which would like very much to participate in the present acid-arket, but cannot because of the depressed price structure.

nan RIVERS. You think now is not the time to turn any of it that right?

ONTOMERY. Sir?

nan RIVERS. You think now is not the time to turn any of it s this your position?

ONTOMERY. That is correct.

Chairman RIVERS. Don't you realize there will come a time when we must dispose of some of this?

Mr. MONTGOMERY. I think there are plenty of other commodities, such as mercury, tin, copper, and important dollarwise things in the stockpile, that can be released at this time with a benefit, rather than damage, to the domestic economy, without picking on poor old domestic fluorspar.

Chairman RIVERS. Do you think you will ever be in a position where you can recommend we get rid of any of it?

Mr. MONTGOMERY. Yes, sir. I believe we would be very glad to step aside and say the time of a shortage and the time of a need is here, and we anticipate in 1 year, 2 years, or 3 years, the situation may be stable enough to where an orderly program of disposal could be gone into, and at that time we will have no objection. In fact, we would even help, if possible, to implement through GSA such a disposal.

Chairman RIVERS. Well, for my part, I am impressed with your testimony. I welcome your coming. But you see what the overall picture is with us. We must think about all of these things. But you have two eloquent advocates sitting to your right, and Mr. Philbin and I will weigh these matters as he does all of them.

I am sure his decisions out of this committee will be decisions that will be in the interest of everybody concerned.

Mr. MONTGOMERY. I have just one more point I would like to make, sir.

I believe it is seven times that the domestic industry has come before the U.S. Tariff Commission seeking various forms of relief in the form of a tariff increase of this \$1.87½ per short ton tariff structure on acid grade which does not give us any perceptible protection against the low wage structures and subsidized situations in foreign countries. And the absence of this tariff protection has been a very serious deterrent to the production and health of the domestic industry. This has been a factor that is still interwoven in this whole problem that we have today.

Chairman RIVERS. Thank you, Mr. Philbin.

Mr. PHILBIN. Thank you very much, Mr. Chairman; you have been very helpful in developing the points you mentioned.

Mr. GRAY. May I have the opportunity of thanking both the subcommittee chairman and the full committee chairman for a very precise and concise understanding of this problem.

There is one point I would like to elaborate upon for just a moment, if I may. Mr. Montgomery did not touch this, and that is two-thirds of all of the fluorspar consumed in this country is coming from foreign producers. As far as our outflow of cash is concerned, we are buying a lot of this fluorspar from foreign producers, over two-thirds of it now, which is certainly not helping our balance-of-payments problem.

The second thing I want to point out is—

Chairman RIVERS. We should release some of this to our local consumers, it looks to me like that would be a wise thing to do.

Mr. GRAY. Well, if you do, it will drive the last nail in the last coffin, or, as the distinguished gentleman pointed out, almost all of the fluorspar producers are down, their mines are filled with water. This would be a very practical thing for a short period of time, but

if we have a national emergency, God forbid, it would take years to get some of these abandoned mines back into operation. We do not want to be pennywise and dollar foolish, of causing the last mine to close, and then need this stockpile that is now available, that might not be available if we dispose of it.

That is the first thing. The second thing is, the market has been so glutted with overproduction and the foreign imports that we are selling fluorspar today for less than what it sold for when I came to Congress in 1954, and yet they have had probably 15 pay increases by labor. So the management just absolutely have stretched themselves as far as they can possibly go. If it were not for the fact some of the land was very cheap in these areas, to buy these deposits, they probably wouldn't be operating now. That is why in some of the higher mine areas the mines are completely closed.

This is a very critical situation if we do not want to completely eliminate a domestic industry.

Chairman RIVERS. Making the stockpile available to this gentleman wouldn't help the situation?

Mr. GRAY. Unless at a price he could afford to buy it and market it and make a profit. Knowing GSA, they are not about to do that, with all due respect, gentlemen.

Chairman RIVERS. Why cannot you work out some way of staying in business without giving this to the foreigners?

Mr. GRAY. This would be good if it could be worked out. I want to compliment the subcommittee chairman, and the full committee chairman, also, of their assurance to the domestic industry if this bill should pass it will be an orderly disposal. I appreciate that. I deeply appreciate your feeling in that regard.

Mr. PHILBIN. The agency has given that assurance also, for the record.

Mr. GRAY. With all due respect to the kind gentleman, he used the words "practically no damage."

Mr. PHILBIN. Up to this point, and I am sure we never will. I hope we never will, that the word the agency has given us has never been broken. When they say they are going to provide for orderly disposal, that is a rule that is followed. That has been our experience. That is why I suggested perhaps here in this situation, where Mr. Montgomery and where you, Congressman Gray, and those who appear before you and with you, made such a strong showing here, and have indicated you are caught here between two situations.

First, the imports that are coming in the country, and putting you in a very unenviable position, and now you feel large quantities of, substantial quantities of this material, you fear are being released. Of course, the latter fear, as I pointed out, I think the chairman touched upon this, is not necessarily realizable. I think when you have conferences with the agency that you can come to some kind of an agreement on an orderly disposition, an orderly disposal, and you can more or less, through agreement, come to some final plan that will not result in any impairment or any injury to your industry. That is the way we hope this is going to work out, and I think that is the way it will work out.

I think you made a very strong case for your point of view, and I want to compliment our friend and distinguished colleague, Mr. Gray, for his excellent observation.

Mr. Gubser has a question he would like to ask Mr. Montgomery.

Mr. GUBSER. Thank you, Mr. Chairman.

Mr. Montgomery, is it your considered judgment any disposals of the stockpile of this material at the present time would create an adverse effect upon the domestic industry?

Mr. MONTGOMERY. Yes, sir.

Mr. GUBSER. Is it your considered judgment that any disposal during the next year would constitute—would probably constitute an adverse effect upon the domestic industry?

Mr. MONTGOMERY. Yes, sir; that is what I meant, in 1966.

Mr. GUBSER. Can you give any considered prediction as to when you think this situation might change?

Mr. MONTGOMERY. That is rather difficult.

Mr. GUBSER. Can you set a limit on it, the earliest you think it is possible the situation may change?

Mr. MONTGOMERY. This is purely a personal opinion, but I think within 3 years the situation, the supply and demand, will permit the orderly disposal of the tonnage that we have under consideration.

Mr. GUBSER. Are you personally willing to go so far as to say you cannot foresee any possibility of a disposal within the next year which would not create an adverse effect upon your industry?

Mr. MONTGOMERY. That is my opinion. That is in my statement.

Mr. GUBSER. Do you believe the other members of the industry share your opinion?

Mr. MONTGOMERY. I will say this, the other members of the industry are much more fearful than I am. Some of them are possibly not as conversant with the international types of movement of acid grade as I am, and they are even more fearful than I am.

Mr. GUBSER. Well, in assuming you are correct, and the others—and your opinion is shared by other members of the industry—what we would in effect be doing is passing a blanket standby authority to dispose of this material, and we would presume that the assurances given here this morning by the representatives of GSA would apply, and that there probably, since there would be an adverse effect on the industry, there would be no disposal for the next year.

Mr. MONTGOMERY. I think this would be very reassuring if they know there would be no disposal in 1966.

Mr. GUBSER. In other words, what I am trying to say is, if we were to pass this bill, with these assurances made here this morning, and taking into account the facts which you have just revealed to us; namely, that it would take at least a year before you could dispose of anything without an adverse effect, then what we are doing is passing a standby authority that would probably not be utilized.

Are you familiar with the provisions of a Senate bill called S. 28?

Mr. MONTGOMERY. Not offhand, I don't recognize it.

Mr. GUBSER. Well, I might say that the provisions of S. 28, amongst the many other things, provide standby authority for the administration to dispose of stockpile material without coming to Congress, and I would like to make the point here that if we are going to stand by here in this committee this morning and pass legislation which we know is not going to be utilized for another year, and we know that this Congress is going to be in session for another year, all we are doing is passing S. 28, on a piecemeal basis, and I am opposed to it.

I don't see any sense at all of coming up here asking for standby legislation which does nothing more than give you S. 28 on the installment plan, and I am strongly opposed to it, and I will fight it all the way.

Mr. ARENDS. Mr. Gubser took the words out of my mouth. With all due respect to the gentlemen from GSA, and they do try to do an honest job, I do not know why we should put in their hands any instrument to make a mistake, and so when the proper time comes, then this committee can properly approach this question, and since this is to be delayed, why give them the implement at this particular time?

I am like Mr. Gubser, this business of Congress just giving away our rights, well, we shouldn't do it. When the time comes, when it is necessary, then we will think about it again.

Mr. MONTGOMERY. The domestic industry will praise you.

Mr. GUBSER. I want the record to clearly show I agree with Mr. Arends. My statement is in no way an expression of a lack of confidence in the General Services Administration. They have done a magnificent job. But I just don't want to surrender our authority.

Mr. ARENDS. I think what probably prompts some of my statements is what happened to copper. We will go into that a little later on as the mistakes made in the disposal of the copper program. This is the kind of think they want to avert, and so do we. This is the position I take at this time in regard to your presentation at this time.

Mr. PHILBIN. Thank you, gentlemen. The questions will be carefully considered by this committee, and the full committee.

Mr. MONTGOMERY. Thank you very much.

Mr. PHILBIN. Thank you very much, gentlemen.

Mr. GRAY. Thank you, I appreciate it.

Mr. PHILBIN. Does that conclude the witnesses on this bill, Mr. Cook?

Mr. COOK. We have Mr. Mugdan, vice president of the Ore & Chemical Corp., New York City.

Mr. PHILBIN. Come forward and be seated.

Give your name and address, and the company you represent to the reporter, for our record.

Mr. PHILBIN. You may proceed now, sir.

Mr. MUGDAN. Thank you.

STATEMENT OF ERNEST MUGDAN, VICE PRESIDENT OF THE ORE & CHEMICAL CORP.

Mr. MUGDAN. I am Ernest Mugdan, vice president, the Ore & Chemical Corp., 235 East 42d Street, New York, N.Y.

Mr. Chairman, members of the subcommittee, my company, incorporated under the laws of the State of New York, is the sales agent in the United States of Minerales y Productos Derivados S.A. (Minersa) of Bilbao, Spain, which operates a number of fluorspar mines and mills in various parts of Spain. With a yearly production of approximately 100,000 short tons wet weight, Minersa belongs to the large fluorspar producers of the world. It markets a small quantity in Spain, the rest in other European countries, the United States, and little in Japan.

I would like to submit for your consideration our reservations concerning the disposal of acid-grade fluorspar at this time and in the form proposed in H.R. 13367. We believe that it is too early to authorize this disposal and that the quantity is too large.

We respectfully request that the passage of this bill be postponed and that the quantity authorized initially for disposal be eventually reduced to 100,000 to 125,000 short dry tons.

(1) TIMING

We do not disagree with the basic policy that materials which are in excess in the U.S. stockpiles should be disposed of in view of the urgent need for additional funds which our country now has and in an effort to stem inflation. However, for a number of reasons, the time for the disposal of acid-grade fluorspar does not seem ripe.

(a) The disposal at this time would not be in the best interest of the U.S. Government.

Most, if not all, of the quantities in the national stockpile were acquired at much higher prices than presently obtainable. The Government would suffer a great loss if any of these quantities were now sold. The material in the supplemental stockpile was mainly acquired through Commodity Credit Corporation barter transaction and the average cost of acquisition is also higher than the value at present market prices.

If the United States waited with the disposal of acid-grade fluorspar until the market price has properly recovered from a recent slump, the Government's loss could be substantially reduced. The cost of maintaining fluorspar in its present storage facilities is relatively small; so are the carrying charges in view of the rather low per-ton value of fluorspar.

(b) The disposal at this time would not be in the best interest of the producers here and abroad.

Just now, the independent producers are trying to recover from the effects of the worst depression of prices experienced in recent times. While H.R. 13367 provides that producers and processors shall be protected against avoidable disruption of their usual markets, we fear that the passage of this bill, at this time, would promptly terminate the gradual restoration of more normal prices and cause new selling at distressed prices on the part of some producers.

The independent producers here and abroad have not been able to earn a fair return on their investments in recent years and, consequently, it was difficult to plan ahead, explore, and develop new deposits. A continuation of the slow rise in prices which started about 18 months ago is needed in order to return the fluorspar-producing community to a healthy and vigorous state.

In spite of much higher costs, the present price for European acid-grade fluorspar of approximately \$40 per short dry ton f.o.b. carrier's conveyance, U.S. east coast ports, duty paid, is considerably lower than the price paid by U.S. consumers 8 years ago when the effects of the Korean war had been completely overcome and the United States was not involved in any other war.

This country needs the foreign producers as much as the domestic producers, as it does not have sufficient fluorspar reserves to fill the

consuming industry's requirements. For many, many years, Minersa has been a faithful supplier of the large chemical industry here. It presently exports about one-half of its production of acid-grade fluorspar to the United States.

Minersa did not participate in the deliveries to the national stockpile at the high prices granted by the U.S. Government in the early years of the stockpiling program but, instead, furnished its product at lower prices to its U.S. clients. Only a small tonnage of 15,000 tons was delivered by Minersa in 1961 through a barter arrangement to the Commodity Credit Corporation at a price scarcely higher than today's price.

Not having benefited from this country's former stockpiling program, our Spanish principals, and we, wish to avoid that our vested interests in the United States now suffer from a premature disposal program.

Should the present price further recover, then, we feel, a careful disposal of stockpiled acid grade fluorspar could be considered.

(c) The disposal at this time would not be in the best interest of the U.S. consumers.

While it is true that a consumer looks for a low price, it is known that the large, responsible fluorspar consuming community of this country was quite concerned about the economic health of the producers during the period of extremely depressed prices. They felt that their long-term interests were better served if the producers could mine profitably and, consequently, could plan intelligently for the future, than if they suffered through very low prices.

For reasons of stability and proper development of new resources of a very much needed raw material here and abroad, the U.S. consumers would not wish to see the present recovery trend in the producing industry disrupted and possibly reversed by premature stockpile disposals.

(2) QUANTITY

Once the time is ripe for stockpile sales, the disposal bill should initially authorize the disposal of only a relatively small tonnage, both for psychological and for practical reasons—236,773 short dry tons represent approximately 60 percent of this year's total consumption of acid grade fluorspar in the United States which we estimate to be approximately 390,000 short dry tons. If this tonnage were offered for sale in a relatively short period of time, it would have a tremendously damaging effect on prices. In order to avoid damage, the total tonnage would have to be sold over a period of, say 10 years.

As this is a very long period of time, indeed, and in view of the inherent sensitivity of the fluorspar market it will be much safer to authorize in the first bill (which should have an experimental character) the sale of only 100,000 to 125,000 short dry tons to be disposed of slowly and carefully. The reaction of the market to such a bill would be cooler, the prices obtainable by the U.S. Government would consequently be higher, and Congress would have the opportunity to review the situation after a few years and make revisions, if necessary.

In any case, quantities required by the U.S. consumers in the foreseeable future can be supplied by the producers here and abroad. In recognition of a projected rise in consumption, Minersa—like other producers—plans to expand its production facilities in future years.

In connection with these plans, Minersa is presently in touch with U.S. manufacturers of modern equipment. These expansion plans and possible benefits to U.S. exporters of machinery and the U.S. consumers of fluorspar could be in jeopardy if stockpile disposals were authorized too early or in too large quantities.

I thank you very much for the opportunity to express our concern in this matter before you.

Mr. PHILBIN. You made a very fine statement. Now perhaps you want to tell us something about the present situation of your market. Are you having sales right along now from day to day?

Mr. MUGDAN. That is right, Mr. Chairman.

Mr. PHILBIN. Are you in a position where you are doing business all the time?

Mr. MUGDAN. We do.

Mr. PHILBIN. There is some demand for this substance?

Mr. MUGDAN. That is correct; yes.

Mr. PHILBIN. You don't have any trouble on that.

What do you think will be the future state of demand of the industry over a period of, say, the next 6 months?

Mr. MUGDAN. If there were no interference from outside sources, the market in my opinion should continue to gradually recover to a normal state.

Mr. PHILBIN. Yes. How would you describe the market at the present time? Is the market depressed at the present time?

Mr. MUGDAN. It has been very much depressed, and as I stated it has, in the last 12 to 18 months, gradually recovered to more normal prices, but the industry, both here and abroad, feels that it would still need a further rise to mine profitably, and particularly to have the financial resources to explore and develop new mines which is so very important in our industry.

Chairman RIVERS. Could I ask the gentleman a question?

Mr. PHILBIN. Surely, Mr. Chairman.

Chairman RIVERS. Are you telling this committee all grades, all classes, all kinds of fluorspar is in surplus supply? Are you making that statement?

Mr. MUGDAN. No, sir. I do not make that statement. If you talk about metallurgical fluorspar I would not say it is presently in surplus, and if you talk about acid-grade fluorspar I would say at this point we approach the moment where supply and demand gradually again get into a good balance.

Chairman RIVERS. My understanding is that some was sold to a previous witness the other day that was in short supply that he needed. Is that a fact? Have you bought any that was needed?

Mr. MUGDAN. No, sir.

Chairman RIVERS. You heard about it though, didn't you?

Mr. MUGDAN. No, sir.

Chairman RIVERS. If you would permit me, Mr. Chairman, I would like to ask the representative of the GSA: Do you understand what I am talking about?

Mr. HARLAN. Yes, sir.

Chairman RIVERS. Would you straighten out the committee and tell us whether or not there are certain grades or classes or kinds of fluorspar in your stockpile that this depressed industry needs, and who, if

any, has bought it; because the previous witness gave me the impression it is in surplus supply and that it was injurious to the market if you turned loose any of it.

This was the impression I got. Was this the impression you got?

Mr. HARLAN. Yes, sir; that was the impression.

Chairman RIVERS. Tell the committee what the truth is.

Mr. HARLAN. I am glad for this opportunity to straighten it out, Mr. Chairman.

At the rate we figure our material can be disposed of without disruption, we have approximately a 3-year supply of material which I am advised the steel industry actually really needs at this moment. It is a lumpy material, which will not be competitive with the type of material that is either produced domestically or the type of material this gentleman is talking about.

This material can be released into the market today and is actually needed by industry. This means we could work this program on that material for 2½ or 3 years before we would even have to give any consideration to the type of material that is concerning these people.

Chairman RIVERS. Did the previous witness buy some of that from you?

Mr. HARLAN. The previous witness bought some contaminated material, Mr. Chairman, which we had for sale under an earlier authorization.

Chairman RIVERS. It all comes from the same stockpile though?

Mr. HARLAN. Yes, sir, it does.

Chairman RIVERS. That is what I am talking about, Mr. Chairman. We are in charge of all of this.

Mr. MUGDAN. Mr. Chairman, I did not have a chance to see the statement of the GSA which was mailed in the last few days, because I'd left New York already yesterday. That is why I did not know in detail what lumpy material and what off-grade material was offered.

I am restraining my statement strictly to what is called acid grade fluorspar, which can be used in the chemical industry for the production of hydrofluoric acid.

Mr. GUBSER. Where is the bill?

Mr. COOK. You have a copy of it.

Mr. GUBSER. I know, but I have a lot of stuff here. It says "acid grade" right on it, doesn't it?

Mr. PHILBIN. Have you finished?

Mr. MUGDAN. I have the bill here, Mr. Chairman.

Mr. PHILBIN. Mr. Bennett wants to ask a question.

Mr. BENNETT. When you speak of this industry being a depressed industry, I wondered what your criteria for it being a depressed industry was. Are you basing that on the past performance of the sale of the product, or are you basing it on whether or not the companies make a profit, or just how do you arrive at this?

Mr. MUGDAN. I base it strictly on whether a company makes a profit.

Mr. BENNETT. You are telling me, then, in the overall picture of the production of fluorspar, the companies are not making a profit in 1966?

Mr. MUGDAN. I stated, sir, that it is not to be considered a fair return on the investment that would permit the mining industry to go

ahead with exploration and development of new deposits, which is of prime importance in the mining industry.

The mining industry has to plan many, many years ahead, and a mine can only be developed in 3 or 4 years, while in a manufacturing business you can make decisions rather fast and have a plant in a relatively shorter time.

Mr. BENNETT. You don't expect to lose money on the goods you have on hand, do you?

Mr. MUGDAN. No, sir, we do not.

Mr. BENNETT. It is just that you feel if a large quantity of this material went into the market you would be discouraged from making new explorations?

Mr. MUGDAN. That is very true. And I feel if the GSA had 233,000 tons of fluorspar on the shelf, psychologically that would discourage the mining industry to a certain extent from going ahead with the program that they must go ahead with if this country should happen to need fluorspar at reasonable prices in 5, 6, 7 or 8 years from now.

Mr. BENNETT. It would look like the Administration could cooperate with you and see that there would be proper balance there so you wouldn't be so heavily discouraged. I admit if you dumped it all on the market at one time it would seem to me to be a disturbing thing to do.

Mr. MUGDAN. Sir, it is my experience any such bill, if it is passed, would be having what I call an overhanging effect——

Mr. BENNETT. Overhanging what?

Mr. MUGDAN. An overhanging effect, inasmuch as anybody would look toward this store of 233,000 tons and say, "Well, that is enough material available here. I don't have to pay the price. I will wait." And that would be what I called in my statement a termination of the present trend to a restoration of reasonable prices for fluorspar.

Mr. BENNETT. I would like to ask Mr. Harlan, a question, and then that will conclude my questioning.

You said just a minute ago that you could go ahead with this program for a year or two, without ever getting into the field that this last witness has been testifying about. If that is so, why don't we limit this law to the type of stuff you could dispose of without interfering with them? And wouldn't everybody be happy, because you could come back here next year or the following year and take care of the other type things.

Mr. HARLAN. Mr. Bennett, when I assured the committee I was certain we could work out these problems with the industry people I was aware of the reservations, both on the part of the importing people and the domestic producers, but I was aware of the types of material we had for disposal and at the time of our meeting they were not thoroughly aware of it.

I have sent to them a complete breakdown of the types of material we do have for disposal and it does include a sufficient quantity of a type of material classified as acid grade fluorspar, but more generally used by the steel industry than even the chemical industry, because of its lumpy characteristic.

Mr. BENNETT. I yield to the chairman.

Chairman RIVERS. You make that a point of record now. We are not talking about metallurgical fluorspar, we are talking about acid.

Mr. HARLAN. That is right.

Chairman RIVERS. This component about which you speak is a part of that acid fluorspar which is of interest and of concern and need to the industry; is this a fact?

Mr. HARLAN. This is a fact.

Chairman RIVERS. Did the previous witness know this?

Mr. HARLAN. He had been advised of this this morning, sir.

Chairman RIVERS. Come up, Mr. Montgomery, because we want to get the facts here. We don't want to hurt anybody.

Don't you have confidence in this man sitting at your right? Have you found him to be a pretty good fellow under certain conditions?

Mr. MONTGOMERY. Yes, sir.

Chairman RIVERS. (Take that off the record.)

Mr. MONTGOMERY. I found when I arrived here this morning, and I just obtained this list upon arrival in Washington, that a few thousand tons of this list constituted what we call acid grade lump; that is, in gravel form; and, as such, is not suitable for use by the chemical industry or the aluminum industry where they have to make it into hydrofluoric acid first. As such, this gravel lump is in world short supply, and would be used by the steel industry. This is not what I was talking about in any of my testimony at all.

Chairman RIVERS. So if this bill relates to that, and if it permits the disposal of that, you would have no objection?

Mr. MONTGOMERY. No objection to these few thousand tons of acid lump which are included in this list.

Mr. GUBSER. Why can't we say that in the bill? What terminology would you use to finitely describe this material that the industry has no objection to?

Mr. BATES. This legislative history I suggest ought to take care of it.

Mr. GUBSER. Yes, I think so.

Mr. MONTGOMERY. You would call it acid-lump fluorspar, as differentiated from acid-flotation concentrates.

Chairman RIVERS. Is there any other kind of fluorspar over which he has possession that he can be trusted in the disposal of, in your opinion?

Mr. MONTGOMERY. Yes. While I have the stand, may I state in the record I am a little bit on the——

Chairman RIVERS. That is why I wanted you to come back.

Mr. MONTGOMERY (continuing). On the matter of contaminated acid fluorspar which was recently offered for sale. I believe our company bought 1,835 tons of this material, which was stored at Granite City, Ill.; and this is not to be used for the same purposes as any other acid grade is used. We are going to take this stuff back to our mill and clean it up. It is badly contaminated. Instead of 97 percent calcium fluoride, it is something like 83 or 85 percent calcium fluoride, full of cinders, rocks, sticks, and other trash. And then this will be made into a product sold to the metallurgical industry, not the regular acid-grade consuming industry, as such.

Mr. BATES. That takes care of that.

Mr. PHILBIN. Do you have any questions, Mr. Stratton?

Mr. STRATTON. No.

Chairman RIVERS. Thank you.

Mr. PHILBIN. Any questions on this side?

All right. Thank you very much.

Mr. MUGDAN. Thank you, Mr. Chairman.

Mr. PHILBIN. That was a very good presentation.

Will you give your name and your address and the concern you represent to the reporter?

STATEMENT OF BENJAMIN BUSCH, INTERCOMMON ORE & TRADING CORP.

Mr. BUSCH. My name is Benjamin Busch. I am an attorney at law, and general counsel to the Intercommon Ore & Trading Co. and a vice president of the company.

Intercommon Ore & Trading Corp. essentially is an importer of the ore that is now under discussion from Spain.

I would like to take advantage of my prerogative as an attorney to support the statements made by Congressman Gubser, and to state that both as an attorney and as a citizen I have been greatly impressed with the testimony that has been given by the last two witnesses, which in my opinion, if I were to sit here only as a private citizen, would impress me with the sensitivity of the area that is confronting Congress in disposing of this stockpile; not only a sensitivity which approaches the needs and the welfare of miners in our own domestic mines in the areas that have been covered by Congressmen who have been sitting here, but also in other sensitive areas.

Foreign exporters are not all of the country named by the chairman, whose remarks I do applaud when confined to one country, but we have other foreign countries that are here involved, countries like Spain that have supported the United States in every effort, monetary, military, cultural, every effort that makes for good will that will support the bulwarks against communism.

Countries like Spain are not in an economic position where they can see a definite threat to the few products which they export, which keep its economy in balance. The destruction of the economy in balance of countries like Spain, and others upon whom we rely as allies and friends, is a threat to the welfare of the United States.

In addition, it must be pointed out, as it was to the GSA, that if these countries like Spain and others cannot export their products in a measured and deliberate fashion to the United States, the economic tendency will be to cause a diversion, possibly to countries that we would not like to have or obtain possession of these strategic elements or ores. We refer to Iron Curtain countries.

There is a distinct possibility that unless there is a delay, unless there is a measured delay in the sale of these strategic ores, countries that should not get control of these products may get control of these products.

We have been talking now of 1 year, a year which marks a danger to domestic sources and a year which marks a danger to foreign sources. But the project which is before this subcommittee is a present authorization. There is no limitation which does not make it an immediate authorization for the disposal of all of the ore which is measured and referred to in the report of Mr. Harlan.

Mr. BENNETT. Is Spain and the other countries you referred to that are friendly to our country, are they involved in this lump type?

Mr. BUSCH. No, sir.

Mr. BENNETT. If we are back to the acid type, we are not in a position we can't solve, by amending this legislation, it looks like to me. We might be able to amend it to take care of the acid type.

Mr. BUSCH. I think definitely that legislation could be amended. My purpose in speaking here is to urge the delay.

Mr. BENNETT. Particularly with regard to the acid type?

Mr. BUSCH. Correct.

I point out, as Congressman Gubser did, however much trust and reliance one may have in the GSA, and I certainly have a great deal of trust and confidence in them, the question that is here today is the approach that Congress takes.

The Supreme Court of the United States has had occasion to say when there is too much delegation by Congress to the administration, it becomes an illegal delegation. And this subcommittee ought to be warned of a delegation which approaches excess delegation.

Mr. BATES. What is that citation?

Mr. BUSCH. That is the citation of Mr. Justice Cardozo in the NRA case, immediately after the chicken case, the *Schafter* case.

Mr. BATES. There has been a lot of water over the dam since then—a lot of it muddy.

Mr. BUSCH. There has been a lot of water.

Mr. PHILBIN. It is good law. It hasn't been changed in any way; it is good law, but it may not have bearing on the particular legal questions we are dealing with here.

We are glad to have your mention of it. We understand, of course, what his point of view is, he doesn't want us to approve the bill. We understand that.

Now I want to ask you one question along that line. How are we going to dispose of surplus materials that we have in the stockpile, excess surplus stockpile materials, that the Government doesn't need, and that are in the stockpile to the tune of several billions of dollars? As a businessman, how would you handle that matter differently than the way we are approaching it?

Mr. BUSCH. I would say the approach should be made both as businessmen and as legislators who have every little sensitive element of the Government at heart.

Mr. PHILBIN. That is just exactly what this committee is trying to do. We are acting more or less as an umpire here. We give certain power to GSA to make these disposals. Before we give that power, we always make sure there has been an industry conference with businessmen, that there has been a consensus in the trade concerning these measures, and that we are constantly informed as to what is being done, that assurances are given that the law will be observed, there will be no disruption of price or market, and conforming with the stockpile laws, and in every way trying to make sure that there is going to be no distribution, no disposal of these materials, that is going to be harmful to business.

Mr. BUSCH. I point out to the chairman—

Mr. PHILBIN. You have that procedure, don't you?

Mr. BUSCH. Yes, and I say the conclusion shows exactly why this bill should not be passed now, for the reasons the chairman has stated.

Mr. PHILBIN. Have you had an opportunity to confer with GSA on this bill?

Mr. BUSCH. I attended the January meeting with the members of the industry, and it seemed to be the consensus of opinion, as stated today, as given in answer to the question by Congressman Gubser, at least 1 year ought to elapse before we approach the problem of disposal.

Mr. PHILBIN. So rather than passing legislation now and having the GSA look into the situation, formulate plans, consult with industry, try to come up with some solid plan of disposal, you think we should wait for another year?

Mr. BUSCH. I definitely do.

Mr. PHILBIN. Or another 2 or 3 years, until perhaps the industry itself is more willing than it is today to support legislation?

Mr. BUSCH. I most definitely do.

Mr. PHILBIN. I want to point out to you actually we are arriving at the same result, except we are getting a little headstart on this. I think we can definitely say here, and you heard the assurances of the Commissioner given, that there will be no disposal of this material so long as the market conditions don't permit it, and so long as there would be any disruption of your price structure, or anything to upset or impair your conditions of your industry. I think there can be no question about that.

We have had this here 100 times. We haven't had any problem. The agency has always carried out the mandate of the act, and the commitments that are made here, and there is a complete followup on everything that is done. If the bill were passed now, it wouldn't be effectuated for 1, 2, or 3 years—it couldn't be, under the circumstances, until such time as the market conditions are right.

Mr. BUSCH. I would reiterate the question asked by Congressman Gubser: Why pass legislation now which would not go into effect for a year?

Mr. PHILBIN. Do you have any answer to that?

Mr. BUSCH. I think the question should be raised again in a year, then a consensus should be taken both of the industry here and abroad and of the world situation.

Mr. PHILBIN. We understand your views.

Mr. BUSCH. Times might certainly change. A year from hence, if the condition is not ripe for disposal, you might have a report from GSA that in its opinion it is.

Mr. PHILBIN. You understand now no disposals will be made now, and no one knows whether it will be made necessarily within a year, or 2 or 3 years perhaps?

Mr. BUSCH. There is nothing in the legislation to indicate that, sir.

Mr. PHILBIN. You heard the statements made here by the Commissioner.

Mr. BUSCH. It has congressional approval, if it obtains it, which requires or permits immediate sale and disposal, in its discretion.

Mr. PHILBIN. That is not true.

Mr. BUSCH. There is nothing in the bill which limits the disposal.

Mr. PHILBIN. Yes, there is. The bill and the relationship of the agency to this committee, and the way this law has been administered since the time it was enacted, all negate the statement you just made and bear out the statement I made that this disposal will be made only when it can be made in an orderly way without disrupting price or

markets or conditions in your industry. That is the way we do, the procedure followed here, and that would be the inevitable result which would follow here if this bill is enacted.

By passing this bill now, I will say this, it will give the agency an opportunity to continue with these conferences, which are desirable to you. Don't you think that is helpful to your industry?

Mr. BUSCH. I think the conferences are desirable, but not the passage of the legislation.

Mr. PHILBIN. If they are going to do it 1, 2, or 3 years from now, don't you think it is important for you to know what the thinking of this agency is on a commodity that is so important to you, that is your business, in fact? Don't you like to be in a position where you can go and consult, where you are called upon from time to time, to consult with the agency that has charge of disposal?

Mr. BUSCH. I should like to point out the last conference was held without a bill.

Mr. PHILBIN. They never will be made in my judgment, now—I speak with all deference to the views you have expressed and some others have expressed—they will never be made in my judgment unless they are done in an orderly way and without disrupting prices and markets in your industry. That is in accordance with the law. Not the bill you referred to, but the existing stockpile law, under which this committee must operate, and under which GSA must operate.

Do you understand?

Mr. BUSCH. I understand everything you said, Mr. Chairman, but it seems to me nothing said militates to the passage of legislation now.

Mr. PHILBIN. You may be sure we will consider the views you have expressed, and we will consider them very carefully, because the last thing that anybody on this committee would want to do would be to cause any disruption of your prices or your business in any way. That is why we welcome you here to give your testimony.

We are glad to have your testimony. We commend you for coming here and giving us the benefit of your view. That is what we are here for, to find out the merits and demerits of this legislation, and then pass upon them, as we are charged to do by law, and do the best we can to make sure nothing is going to happen that will be disruptive to your business.

Mr. BUSCH. I thank you for the gracious attention and courtesy you have extended. I simply repeat everything the chairman has said which is consistent with what I have said, is not inconsistent with the deferment of this bill for 1 year, and a rehearing at that time as to what the situation then presents.

Mr. PHILBIN. As I stated, we will carefully consider your views.

Mr. Bennett has a question.

Mr. BENNETT. You are an antiacid man instead of an antilump man, and therefore there shouldn't be any great controversy between you and the committee if we brought out legislation that dealt with the lumps instead of the acid. I think there is more consensus here than appears.

Mr. BUSCH. That is the only consensus which seems to be uniform for sale now. If the legislation that was recommended by this committee were limited to that one small item, then I don't think industry would have any objection at all.

Mr. BENNETT. You have been a significant witness because you have been the only witness who has brought to our attention not only the domestic situation but the international implications with our friends, and apparently they are in the same position as are the domestic industry in this field.

I thank you very much.

Mr. PHILBIN. Just one moment. I hold in my hand now the bill we are discussing here, H.R. 13367. I direct your attention to page 2 of that bill, beginning on the third line, after the word "Provided," and I read, "that the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual market."

Mr. BUSCH. May I comment on that? This language is not helpful because it is too vague and it permits the substitution of the decision at the discretion of the GSA as to what is avoidable loss and protection and substitutes for the discretion of this honorable body. In that regard it is not good legislation.

Mr. PHILBIN. I can understand that last statement, we will accept it, but I think it is a little legalistic.

Mr. GUBSER. Would the witness not say it is giving a blank, unsigned check to someone on the promise he would not cash it?

Mr. BUSCH. I answer it in the affirmative.

Mr. PHILBIN. We have done that so many times with the approval of my beloved friend, I think that is more or less academic, too. However, we appreciate your appearance and views. Let me assure you again we will take very careful consideration of your statement.

Mr. GUBSER. Just one quick question.

You would have no objection to the disposal, however, of this particular type of fluorspar to the metallurgical industry; you would have no objection to that type of disposal?

Mr. BUSCH. No objection.

Mr. GUBSER. Again, I don't think we have any argument here, or any kind that is in short supply.

Mr. BUSCH. Or any kind that is in short supply.

Mr. ARENDS. Yesterday we considered a number of these bills, and on three of them we found no controversy whatsoever in appearances before the committee, in relation to 13368, 13578, and 13662, bismuth, rhodium, and refractory grade bauxite, and I move, Mr. Chairman, favorable consideration of these three bills.

Mr. BENNETT. I second.

Mr. PHILBIN. Without objection, the bills will be reported to the committee for action.

Do you have another witness?

Mr. COOK. That is all on this subject.

There is a telegram that should be inserted in the record.

Mr. PHILBIN. Well, this is a telegram directed to this committee by Samincorp, South American Minerals & Merchandise Corp., 425 Park Avenue, New York, N.Y., 10022, E. Herz, assistant vice president.

(The telegram above referred to is as follows:)

NEW YORK, N.Y., March 21, 1966.

HOUSE ARMED SERVICES STOCKPILE SUBCOMMITTEE,
Rayburn Building, Washington, D.C.
(Attention: Mr. William H. Cook, Counsel.)

With reference to the hearings scheduled to take place before the House Armed Services Stockpile Subcommittee on March 22, 1966, in connection with proposed releases of stockpile acid grade fluorspar (H.R. 13367), we hereby respectfully request that the following statement be included in the record of these proceedings:

The undersigned, a U.S. corporation domiciled in New York City, is the sole representative of two Italian producers of acid grade fluorspar, Mineraria Silius and Societa Monreale, both located in Sardinia and considered among the largest European producers of this material. For many years these producers have serviced, on a continuing basis, requirements of important U.S. industrial consumers, having invested substantial time, money, and energy to keep up with the needs of their customers in this country, despite the adversity of depressed prices, having always looked upon the U.S. market as a permanent outlet for their productions.

We firmly believe that a decision to release substantial tonnages of surplus stockpile acid grade fluorspar within a short period of time would represent an extremely damaging blow to both the domestic and foreign fluorspar producing industry. Such releases unless handled with utmost caution would result in immediate precipitous price drops which, in our opinion, would force a large majority of domestic as well as foreign producers to close down their operations and cease production at a time when it is the consensus of opinion of consumers that there will be an increasing demand for acid grade fluorspar, which is supported by the willingness of many consumers to purchase considerable quantities of this material for delivery as late as 1968 and possible beyond. Alternatively, if the U.S. market is closed off to them by sudden releases of large stockpile tonnages, many producers may find it necessary to attempt diversion of their output to other, possibly undesirable, destinations.

We, therefore, respectfully plead that if a release of surplus tonnages from stockpile is found unavoidable, this be done over a period of 10 years or more. We understand that it is the intention to release an approximate metal of 250,000 tons, and we feel that a release of about 25,000 tons per year, possibly in quarterly installments of around 6,000 tons, can be absorbed by the U.S. market without causing a noticeable disruption which would be damaging to both producers and consumers and thus, in the end, to the U.S. economy.

We know that the administration has authorized long-range planning of disposals from the stockpile and that it is not the intention of the Government to engage in dumping of large surplus tonnages within a short time. We, therefore, earnestly repeat our plea that these disposals be handled in a gradual and nondisruptive fashion.

SAMINORP, SOUTH AMERICAN MINERALS &
MERCHANDISE CORP.,

E. HERZ, Assistant Vice President.

MR. PHILBIN. Does that close the testimony on this bill?

MR. COOK. Yes, sir.

(Whereupon, the subcommittee then proceeded to further business.)
(The following material was received for the record:)

SHEPARD CHEMICAL INDUSTRIES, INC.,
New York, N.Y., March 18, 1966.

Re stockpile hearings March 22, 1966—Item 10, acid grade fluorspar, H.R. 13367.

WILLIAM H. COOK,
Counsel, House Armed Services Stockpile Subcommittee,
Rayburn Building, Washington, D.C.

DEAR SIR: Please take notice that our company, which has been active in the sale of imported fluorspar in this country, is submitting for the record, that we do not oppose the orderly disposal of some 236,000 tons of acid grade filtercake fluorspar from the stockpile, provided that the action of General Services Administration is conducted on an orderly basis with the cooperation of industry in

the United States concerned with the sale and consumption of acid grade filtercake fluorspar, and provided that the disposal of this enormous stockpile would be spread over at least a 10-year period, whereby the maximum to be disposed of during any one year shall be 25,000 tons.

The substance of these opinions were covered at a meeting on January 28, 1966, before the GSA, John G. Harlan, Jr., Commissioner, and his staff, which was attended by about 50 participants interested in the subject, and at which the Commissioner expressed that the intent of GSA in the disposal of the stockpile would be in close cooperation with American industry and importers, who may be affected by any precipitous disposal of said filtercake fluorspar.

Upon the adjournment of that meeting on January 28, GSA stated that they would furnish all interested parties a list of the quantities stockpiled in various parts of the United States, together with present analyses of chemical and mesh specifications, so that the industry could evaluate the quality of the material and whether it could be applicable for the respective uses for which it was intended.

To date, this information has not as yet been furnished by GSA, and it was expressed at that meeting that after the details have been given to the interested parties attending that hearing, a second hearing would be called for a meeting of the industry and interested parties, and their opinions and recommendations as to the orderly disposal of the said stockpile during a period of at least 10 years, so as not to affect the long-range stabilization of the market and the long-range requirements of industry for this very important raw material.

In view of the close cooperation of GSA and industry, we do not oppose congressional authorization being given to GSA on H.R. 13367.

Respectfully submitted.

B. JOHN SHEPARD, *President.*

[H.R. 13371, 89th Cong., 2d sess.]

A BILL To authorize the disposal of phlogopite mica from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately three million seven hundred and sixty-five thousand pounds of phlogopite mica splittings and approximately two hundred and five thousand six hundred and forty pounds of phlogopite block mica now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

[H.R. 13373, 89th Cong., 2d sess.]

A BILL To authorize the disposal of muscovite mica from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately six million seven hundred and seventy-two thousand pounds of muscovite block mica, approximately five hundred and twenty-eight thousand pounds of muscovite flm mica, and approximately twenty-two million six hundred and sixty-six thousand pounds of muscovite mica splittings now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

Mr. PHILBIN. What is the next bill?

Mr. COOK. The next bill is H.R. 13371, phlogopite mica.

(The statement of Mr. Philbin on phlogopite mica is as follows:)

**OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1**

Mr. PHILBIN. The administration sent us a legislative proposal authorizing the disposition of 3,765,000 pounds of phlogopite mica splittings. There are approximately 223,239 pounds of phlogopite block mica now held in the national stockpile.

While we have an inventory of 223,239 pounds of block phlogopite mica, we have a stockpile objective of only 17,000 pounds. Thus, we have a total of 206,239 pounds of excess block mica.

For mica splittings, we have a stockpile objective of 1,300,000 pounds and a total in our two stockpiles of 5,065,000 pounds or an excess of 3,765,000 pounds.

The principal free world producer of phlogopite mica is the Malagasy Republic.

In 1963, U.S. imports for phlogopite mica totaled 587,496 pounds, including 313,000 pounds obtained for the Government account by barter. In 1963, consumption of this mica totaled 212,261 pounds.

The average acquisition cost of the mica for disposal was \$1.36 for block and \$1.06 for the splittings. The approximate current prices for Malagasy "high heat" sheet (block) mica range from \$0.50 to \$1.90 per pound, and there is no published price for mica splittings.

Mica, phlogopite block, differs from muscovite block, in that it withstands high temperatures with less deterioration, while less resistant to abrasion across the edge of the laminae. It may be classified as "high heat" quality if it withstands a certain high temperature for a stated period of time. This type of mica is used as insulating material in soldering irons and high temperature coils, liners in proximity fuses, transformers, and heater elements.

Phlogopite mica; block and splittings, H.R. 13371

Sales through Dec. 31, 1965:	Pounds
Block.....	None
Splittings.....	None
Current inventory:	
National stockpile:	
Block.....	223,239
Splittings.....	3,079,000
Total.....	3,302,239
Supplemental stockpile:	
Splittings.....	1,986,000
Total.....	5,288,239
Stockpile objective:	
Block.....	17,000
Splittings.....	1,300,000
Total.....	1,317,000

Phlogopite mica; block and splittings, H.R. 13371—Continued

Surplus:	<i>Pounds</i>
Block-----	206, 239
Splittings-----	3, 765, 000
Total-----	3, 971, 239
Requested disposal:	
Block-----	205, 640
Splittings-----	3, 765, 000
Total-----	3, 970, 640
Remaining surplus if bill is approved:	
National stockpile, block-----	599
Supplemental stockpile-----	None
Unit acquisition cost:	<i>Dollars</i>
Block-----	<i>per pound</i>
Splittings-----	1.36
Present unit market value:	
Block-----	\$0.50-1.90
Splittings-----	Various

Disposal plan: 5,000 pounds of block and 20,000 pounds of splittings will be offered for sale during the first year. This figure is expected to be adjusted upward based upon experience. If no change is made, disposal of block and splittings will require approximately 41 and 200 years, respectively.

Mr. Lawrence.

Mr. LAWRENCE. Mr. Chairman, I was going to suggest you might like to consider both 13371 and 13373 together. Both of these bills pertain to mica. One is phlogopite mica and the other is muscovite.

Mr. PHILBIN. Would you briefly describe the difference between these two types of mica?

Mr. LAWRENCE. Well, the muscovite mica is a little bit harder than the phlogopite. Phlogopite has an ability to withstand higher heat than the muscovite. But they have many interchangeable uses. But if you prefer, I can proceed on the muscovite and then go to the phlogopite.

(The statement of Mr. Philbin on muscovite mica is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. This is another one of the package of bills sent to us by the General Services Administration, and provides for the disposal of 6,772,000 pounds of muscovite block mica, approximately 528,000 pounds of muscovite film mica, and approximately 22,666,000 pounds of muscovite mica splittings from the national stockpile.

The stockpile objective for muscovite block mica is 6 million pounds, and we have an excess of 13,187,069 pounds in the national and supplemental stockpiles and DPA inventory.

For muscovite film mica, we have a stockpile objective of 2 million pounds, and a total inventory in the two stockpiles and DPA inventory of 2,527,786 pounds.

For muscovite mica splittings, the stockpile objective is 22,200,000 pounds, and an inventory in the national and supplemental stockpiles of 44,866,426 pounds.

We obtain block and film mica from India, Brazil, and the United States. We obtain mica splittings only from India.

The approximate acquisition cost per pound of muscovite block mica was \$2.60; the average cost per pound for film was \$5.60, and \$1.04 for splittings.

The present market value per pound for muscovite mica, depending upon quality and grade, are as follows: block, \$2 through \$9; film, \$1 through \$12; and splittings, \$1.20.

Muscovite mica—Block, film and splittings (H.R. 13373)

Sales through Dec. 31, 1965:

	Pounds
Block.....	237,083
Film.....	None
Splittings.....	None

Total..... 237,083

Current inventory:

National stockpile:

	Pounds
Block.....	10,811,778
Film.....	2,308,549
Splittings.....	40,040,169

Total..... 53,160,496

Supplemental stockpile:

Block.....	1,960,711
Film.....	116,556
Splittings.....	4,826,257

Total..... 6,903,524

DPA inventory:

Block.....	6,414,580
Film.....	102,681

Total..... 6,517,261

Total inventory..... 66,581,281

Stockpile objectives:

Block.....	6,000,000
Film.....	2,000,000
Splittings.....	22,200,000

Total..... 30,200,000

Surplus:

Block.....	13,187,069
Film.....	527,786
Splittings.....	22,666,426

Total..... 36,381,281

Requested disposal:

Block.....	6,722,000
Film.....	528,000
Splittings.....	22,666,000

Total..... 29,916,000

Remaining surplus if bill is approved:

National stockpile.....	None
Supplemental stockpile.....	None
DPA inventory.....	6,414,580

Unit acquisition cost:

	Dollars per pound
Block.....	2.60
Film.....	5.60
Splittings.....	1.04

Present unit market value:

Block.....	2.00- 9.00
Film.....	1.00-12.00
Splittings.....	1.20

Disposal plan: A starting rate of 750,000 pounds semiannually. Should this rate prove realistic the program will require approximately 20 years for completion. It is stated, however, that the DPA inventory, over which Congress has no control, will be disposed of under a separate plan, no details furnished, and the total disposals will be coordinated.

Comment: H.R. 13373 authorizes the disposal of all of the surplus material in the national stockpile and the supplemental stockpile over which Congress exercises control. The present stockpile objectives for these materials will remain in these two stockpiles. The disposal of the remaining surplus materials in the DPA inventory, totaling 6,414,580 pounds is controlled by the OEP and Congress has no voice in the matter.

You may proceed.

Mr. LAWRENCE. H.R. 13373 is authorizing the disposal of approximately 6,772,000 pounds of muscovite block mica, 528,000 pounds of muscovite film mica, and 22,666,000 pounds of muscovite mica splittings from the national and supplemental stockpiles.

Mica tape and cloth made from mica splittings are used as insulation for field coils, armature windings, transformers, and other electrical coils and devices operating at elevated temperatures. Built-up mica is used as insulation between copper commutator segments, around armature shafts, and as rigid insulation plates. In recent years there have been developed a number of substitutes for mica applications.

Free world production of mica comes mainly from India. Brazil produces small amounts. Production in the United States has been negligible since the termination of the Government purchase program in mid-1962.

Domestic consumption of muscovite mica is about 9 million pounds annually. The GSA disposal program must therefore be spread over a number of years.

We also support H.R. 13371, a bill to authorize the disposal of 3,765,000 pounds of phlogopite mica splittings and 205,640 pounds of phlogopite block mica from the national and supplemental stockpiles.

Phlogopite mica splittings are required as support and insulation for electrical heating elements and many other applications where higher temperatures are encountered.

Phlogopite block mica can withstand higher temperatures with less deterioration than muscovite mica. High-heat phlogopite block mica is used as interlayer insulation for high-temperature coils, thermal batteries, as a liner in proximity fuses, transformers, and heater elements. It was formerly used in spark plugs, but a ceramic was developed for this purpose.

The principal commercial source of this type of mica is the Malagasy Republic.

U.S. consumption of phlogopite mica block has been increasing in recent years. However, the quantities covered by this legislation will require a number of years for their disposal.

This disposal action has been coordinated with all the Government departments and agencies.

Mr. PHILBIN. You followed the usual procedure in that regard, and they are all in agreement?

Mr. LAWRENCE. That is right. The consultation has been carried forward on muscovite mica, now, for a period of almost 2 years, because of the problem of India.

Mr. PHILBIN. That was the point I raised just a moment ago, the importance of having some authority in standby to consider the dis-

posals, consider materials in the stockpile with a view to disposal, and have the authority to be ready when legislation is presented, or when the time comes to make proper disposal.

Mr. LAWRENCE. That is right.

We favor the passage of this legislation.

Mr. PHILBIN. Thank you very much.

Are there any questions?

If there are no questions, then we thank you.

We call Mr. Harlan.

Mr. Harlan, you have your prepared statement on this; we will take it for the record, and then you can interpolate.

(The prepared statements of Mr. Harlan on phlogopite mica and muscovite mica are as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13371.

This bill would authorize the disposal of approximately 3,765,000 pounds of phlogopite mica splittings and approximately 205,640 pounds of phlogopite block mica now held in the national and supplemental stockpiles. The Office of Emergency Planning has determined these quantities to be in excess of stockpile requirements.

Mica is a group name for a number of minerals which have a characteristic structure permitting easy separation into thin tough sheets. Phlogopite mica is softer than muscovite but will withstand higher temperatures.

Special uses for phlogopite block mica include insulating material in soldering irons and high temperature coils, liners in proximity fuses, transformers, and heater elements. Phlogopite mica is obtained primarily from the Malagasy Republic.

The total inventory of phlogopite mica (block and splittings) held by GSA is 5,288,239 pounds. The present stockpile objective is 1,317,000 pounds. The excess of approximately 3,971,000 pounds is covered by H.R. 13371.

The average acquisition cost of the phlogopite mica planned for disposal was \$1.36 per pound for the block and \$1.06 per pound for the splittings. The approximate current prices for the block range from \$0.50 to \$1.90 per pound, duty paid. The average market price for the various grades of splittings is about \$1.60 per pound.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on the excess. At the present time there is no domestic production of this type of mica. On January 28 we held an industry meeting with the major consumers and traders in the mica industry.

Industry representatives had reservations against disposal at this time, because of present supply-demand conditions and the uncertainty

of the types of mica which would be made available. We are preparing a detailed listing of all types of mica which are available and will forward that listing to the industry representatives shortly. We will continue our discussions with industry and feel confident that an orderly program can be developed to the mutual interests of all concerned.

This agency strongly recommends the enactment of H.R. 13371.

This concludes my prepared statement Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13373.

This bill would authorize the disposal of approximately 6,772,000 pounds of muscovite block mica, approximately 528,000 pounds of muscovite film mica, and approximately 22,666,000 pounds of muscovite mica splittings now held in the national and supplemental stockpiles. The Office of Emergency Planning has determined these quantities to be in excess of stockpile requirements.

Mica is a group name for a number of minerals which have a characteristic structure permitting easy separation into thin, tough sheets. Muscovite mica, covered by this bill, has the best electrical insulation properties. Phlogopite mica, covered by H.R. 13371, is best for heat insulation purposes. Block mica is the thicker sections ranging from seven-thousandths of an inch upward. Film is split from block to a variety of predetermined thickness ranges. Mica splittings are thin layers of mica with a maximum thickness of twelve ten-thousandths of an inch, split by hand from block mica. Within these three principal forms (block, film, and splittings) there are a number of qualities and grades.

Muscovite Mica is used as dielectric supporting elements in electronic tubes, mica capacitors, as insulation in motors and other electrical apparatus. Splittings are easily bonded to cloth and glass fabric or built up into plates of any desired thickness or dimensions. Tape and cloth made from mica splittings are used as insulation for field coils and transformers and other electrical coils and devices operating at elevated temperatures.

The principal sources of mica are India and Brazil.

The total inventory of muscovite mica (block, film, and splittings) held by GSA is 66,581,281 pounds. The present stockpile objective is 30,200,000 pounds. The total excess is thus 36,381,281 pounds of which 29,966,701 pounds are in the national and supplemental stockpiles and are covered by H.R. 13373. The remaining excess of 6,414,580 pounds is in the Defense Production Act inventory.

The approximate acquisition cost per pound of muscovite block mica in the national and supplemental stockpiles was \$2.60; for film, \$5.60; and for splittings, \$1.04. The present market value per pound, depending on quality and grade, ranges from \$2 to \$9 for block, \$1 to \$12 for film, and is \$1.20 for splittings.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on the excess.

At the present time there is no domestic production of this type of mica. On January 28 we held an industry meeting with the major consumers and traders in the mica industry.

Industry representatives had reservations against disposal at this time because of present supply-demand conditions and the uncertainty of the types of mica which would be made available. We are preparing a detailed listing of all types of mica which are available and will forward that listing to the industry representatives shortly. We will continue our discussions with industry and feel confident that an orderly program can be developed to the mutual interests of all concerned.

This agency strongly recommends the enactment of H.R. 13373.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

On January 20, we had a meeting with the industry. You will note from the figures which Mr. Lawrence has just given you that we have a huge excess situation on this material.

When we met with the industry, we found that the industry has reservations about going forward with the disposal program, their feeling being a disposal program will be disruptive of imports, all of this material being imported excepting a very small quantity which is mined domestically.

Mr. Chairman, we also agreed with the industry to supply them with some additional facts about the material and to continue working with them to work out a reasonable program to get started with the disposal of the mica.

Mr. PHILBIN. So you have industry consensus here?

Mr. HARLAN. Yes, sir; we have had a meeting with the industry.

Mr. PHILBIN. There is no opposition of any kind you know of?

Mr. HARLAN. Yes, sir; they do have reservations about the disposal, particularly the importers, but we have agreed to continue working with them to attempt to work out some sort of a reasonable program to get started with it.

Mr. PHILBIN. They are not opposing the bill at this time?

Mr. HARLAN. I don't believe so; no, sir.

Mr. COOK. We have no industry opposition. We have no witnesses that have asked to be here.

Mr. PHILBIN. We don't have any industry opposition. But you do know there are some, if not opposition to these bills, some reservations on the part of the industry?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. They will get in touch with you again and you will be in touch with them?

Mr. HARLAN. We have submitted information they asked for. We have plans to meet with them again, until we work out an agreeable program, yes.

Mr. PHILBIN. Thank you very much.

No additional witnesses this morning, Mr. Cook?

Mr. COOK. No, sir.

Mr. PHILBIN. There are no additional witnesses on this bill. There are no additional witnesses on any bill.

Mr. Cook, I think under the circumstances, then, we can conclude these hearings now, and we can meet tomorrow at 10 o'clock.

Mr. COOK. Yes sir.

Mr. PHILBIN. The committee is adjourned until 10 o'clock tomorrow morning.

(Whereupon, at 11:52 a.m., the subcommittee adjourned, to reconvene at 10 a.m., Wednesday, March 23, 1966.)

H.R. 13579—THORIUM

[H.R. 13579, 89th Cong., 2d sess.]

A BILL To authorize the disposal of thorium from the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately three million five hundred thousand pounds (thorium oxide content) of thorium nitrate now held in the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98b): *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES.

SUBCOMMITTEE No. 1,
Washington, D.C., Wednesday, March 23, 1966.

The subcommittee met at 10:12 a.m., Hon. Philip J. Philbin, chairman of the subcommittee, presiding.

Mr. PHILBIN. The committee will come to order.

We will first take up H.R. 13579—thorium.

(The statement of Hon. Philip J. Philbin, on thorium, H.R. 13579, is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. This bill would authorize disposal of 3,500,000 pounds—thorium oxide content—of thorium nitrate now held in the supplemental stockpile.

Currently, we have 3,965,461 pounds of thorium in the stockpile and a stockpile objective of 500,000.

Thorium is obtained from India, Brazil, and South Africa.

The average acquisition cost of thorium was \$4.54 per pound.

Thorium is a gray powder or a heavy malleable metal changing from silvery white to dark gray or black in air. It is used with tungsten or nickel in electrodes in gas-discharge lamps and in conversion of fissionable uranium. Used to make the incandescent—Welsback—type gas-light mantle. Some of its compounds are used in luminous paints and in flashlight powders. Compounds with nickel to produce a high-temperature alloy.

We have Mr. Lawrence here who is prepared to testify on this bill. You may proceed, Mr. Lawrence.

Mr. LAWRENCE. Mr. Chairman, members of the committee.

Mr. PHILBIN. Let us have your views. Proceed with your testimony.

(The statement of Mr. William N. Lawrence on thorium—H.R. 13579—is as follows:)

STATEMENT OF WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, I appreciate the opportunity of appearing before you to support H.R. 13579, a bill to authorize the disposal of approximately 3,500,000 pounds—thorium oxide content—of thorium nitrate from the supplemental stockpile.

On March 13, 1964, thorium was added to the objective list of stockpile materials in the amount of 500,000 pounds, leaving an inventory of about 3.5 million pounds determined to be excess to stockpile needs.

Thorium nitrate is obtained in the form of monasite, chiefly from Canada, India, Brazil, east Africa, and to some extent as a byproduct from Florida beach sands.

Thorium is radioactive and is used as a source of fissionable uranium 233 in the breeder reactor. The principal nonenergy uses of thorium and its compounds are in recently developed magnesium and nickel alloys which are estimated to account for 50 percent of present consumption. Other uses are in the manufacturing of gas mantles, refractories, luminous paints, vacuum tubes, and flashlight powders.

Because of its radioactive properties, the release of thorium oxide from the supplemental stockpile is subject to the licensing procedures and requirements established by the Atomic Energy Commission.

All interested departments and agencies have consulted industry and foreign governments on this disposal action.

The Office of Emergency Planning is in favor of the enactment of this legislation.

There is no objection to the disposal.

Mr. PHILBIN. You made the proper inquiries of the agencies?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Thank you very much.

Do you have any questions?

No questions.

Mr. Harlan, let us have your views on this thorium.

Mr. HARLAN. Mr. Chairman, since the factual data in my statement has already been presented by yourself and Mr. Lawrence with your permission I will submit the formal statement for the record.

Mr. PHILBIN. We will take your statement for the record. You can make comments in elaboration as you desire.

(The statement of Mr. John G. Harlan, Jr., on H.R. 13579, disposal of thorium, is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff mem-

bers of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13579.

This bill would authorize the disposal of approximately 3,500,000 pounds—thorium oxide content—of thorium nitrate now held in the supplemental stockpile. The Office of Emergency Planning has determined this quantity to be in excess of stockpile requirements.

Thorium is used commercially with tungsten or nickel in electrodes in gas-discharge lamps. Some of its compounds are used in luminous paints and in flashlight powders. It is also compounded with nickel to produce high-temperature alloys. The Atomic Energy Commission is a significant user of thorium in the conversion of fissionable uranium. The chief sources of thorium nitrate are Brazil, India, South Africa, and to some extent, in the United States.

The total inventory of thorium nitrate—oxide content—held by GSA is 3,965,461 pounds. The present stockpile objective is 500,000 pounds. The excess of approximately 3.5 million pounds is covered by H.R. 13579.

The average acquisition cost of the thorium inventory was \$2.08 per pound of thorium nitrate. The current market price is about \$2 per pound.

Affected Government agencies were consulted in the development of the program for the disposal of the excess. The Department of Commerce has consulted with major segments of industry on the matter. It appears that at the present time market conditions for thorium are "soft." GSA has arranged for an industry meeting with the major segments of the thorium industry on March 24 so that we may thoroughly review the situation with the industry before we firm up the details of specific disposal action. We are confident we will be able to work out a mutually agreeable program which will protect the interests of all concerned.

It is probable that the Atomic Energy Commission may have a requirement for some of this excess thorium. Authorizing legislation is needed to satisfy these needs as well as to begin a commercial disposal program under the arrangements which we will work out with industry.

This agency, therefore, strongly recommends enactment of H.R. 13579.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. Chairman, this is a huge excess of this material, and it is a material which is currently available in the market.

We have a meeting scheduled with the industry to discuss what might be done about disposing of these excesses. At the very best it is going to be a long-drawn-out program. We have had discussions with the industry individually, not on an organized basis yet.

Mr. PHILBIN. What was the reaction you received?

Mr. HARLAN. The reaction is, there is plenty of this material around, and, they want to know, what are we going to do with it? But there

is a very distinct possibility that the Atomic Energy Commission will have a need for some of this material, and for this reason we are seeking authority to make it available to them and to any commercial uses which we may be able to develop.

Mr. PHILBIN. Has the Atomic Energy Commission yet made a request for any specific amount of it?

Mr. HARLAN. No, sir; they are studying some new program which they have underway, and have alerted us to the effect they may have a need for some fairly substantial quantities.

Mr. PHILBIN. They will advise you?

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. They have not stated what the amount would be?

Mr. HARLAN. That is right; yes, sir.

Mr. PHILBIN. You will have industry conferences, and you will report on those conferences, in regard to the bill?

Mr. HARLAN. Yes, sir; this is so. I feel pretty confident that when we get together with the industry we are going to discover it is going to be an extremely difficult job to market the material, simply because there is plenty of the material around. Probably its principal use, and the reason it was acquired for the stockpile, was as a fuel element in reactors. To the extent that additional uses can be developed for the material we may be able to move it.

Mr. PHILBIN. You will dispose of it in an orderly way, as you always try to do, without disrupting the market, as required under the terms of the act?

Mr. HARLAN. That is correct.

Mr. PHILBIN. The procedures you follow will be submitted to the committee?

Mr. HARLAN. All right, sir.

Mr. PHILBIN. There are no questions. Thank you very much.

Do we have any industry witnesses present this morning to testify on thorium?

Mr. COOK. No, sir.

Mr. PHILBIN. The bill is disposed of at this time.

H.R. 12412, H.R. 13364, H.R. 13569, H.R. 13570—PLATINUM

[H.R. 13364, 89th Cong., 2d sess.]

A BILL To authorize the disposal of platinum from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately three hundred and sixteen thousand three hundred troy ounces of platinum now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

[H.R. 12412, 89th Cong., 2d sess.]

A BILL To authorize the release of platinum from the national stockpile, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately three hundred sixteen thousand three hundred ounces of platinum from the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2. The platinum covered by this Act, materials in the inventory maintained under the Defense Production Act of 1950, as amended (50 U.S.C. App. 2061-2166), and materials in the national stockpile and the supplemental stockpile (7 U.S.C. 1704(b)) the disposition of which has been or may hereafter be authorized pursuant to law, shall be available, without reimbursement, for transfer at fair market value in payment of the purchase price and other expenses of acquisition (including transportation and other accessorial expenses) of palladium for the national stockpile.

[H.R. 13569, 89th Cong., 2d sess.]

A BILL To authorize the disposal of platinum from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately three hundred and sixteen thousand three hundred troy ounces of platinum now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

[H.R. 13570, 89th Cong., 2d sess.]

A BILL To authorize the release of platinum from the national stockpile, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately three hundred and sixteen thousand three hundred ounces of platinum from the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

SEC. 2. The platinum covered by this Act, materials in the inventory maintained under the Defense Production Act of 1950, as amended (50 U.S.C. MR. PHILBIN. The next bill we will consider this morning—we will start on platinum now.

Mr. Lawrence, will you come forward? Do you have a prepared statement, Mr. Lawrence?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Mr. Lawrence, before you start your testimony I have a brief statement I want to add for the record.

This is another legislative proposal submitted by General Services Administration, and I think we will proceed with your statement now, and I will introduce my brief statement for the record without reading it further.

(The statement of Hon. Philip J. Philbin on platinum is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. In taking up platinum this morning, we have four bills before us: One, which our good friend and distinguished colleague, the Honorable Richard H. Ichord, of Missouri, has introduced; an administration proposal which I introduced; and an identical bill to each of those above introduced by our colleague, the Honorable Alton Lennon, of South Carolina.

The bills introduced by Mr. Ichord and myself each authorize the disposal of 316,300 troy ounces of surplus platinum. But they differ in the following respects: Mr. Ichord's bill provides that surplus platinum shall be disposed of from the national stockpile only. The administration bill authorizes the disposal from both the national stockpile and the supplemental stockpile.

Mr. Ichord's bill provides that the funds realized from the sale of surplus platinum will be retained by the General Services Administration and used for the purpose of acquiring palladium, which is in a deficit position in the stockpile.

It is my understanding that the Senate Armed Services Committee reported out Senator Dirksen's bill, which is similar, if not identical, to the bill introduced by Mr. Ichord.

The administration proposal calls for the outright release of platinum. But the administration also has given a favorable report on Mr. Ichord's bill.

Naturally, the committee must determine what the position of the administration is in this matter. While the two positions do not necessarily conflict, they are not completely in harmony either.

This committee obviously is interested in protecting the integrity of the stockpile. Before we would be able to authorize disposal of platinum, we would have to know the plans to acquire palladium. We are cognizant, too, that to follow the procedure of Mr. Ichord's bill would be establishing a precedent which we might regret at some future date because this really is a back-door way of financing purchases for the stockpile. Ordinarily, to purchase materials for the stockpile, GSA is required to request appropriations for such purchases.

The stockpile objective for platinum is 450,000 troy ounces and the total in our inventory is 766,304 troy ounces. The unit acquisition cost is \$79.47 per troy ounce and from previous disposals the average unit recovery is \$62.87 per troy ounce. I understand the present unit market value is \$97 to \$100 per troy ounce.

Platinum is obtained from Canada, the United States, South Africa, Colombia, and the U.S.S.R.

Platinum is a heavy grayish-white noncorroding precious metal. It is very soft, ductile, and malleable. It does not tarnish at elevated temperatures. It is inert to the common strong acids, including nitric acid, but aqua regia slowly reacts with it. Alkali-metal hydroxides, especially with oxidizing agents, attack platinum. Chlorine and fluorine react with platinum.

The platinum group metals are used separately and in alloys or combinations with each other and other metals. The electrical uses are principally contacts, electrodes, filaments, resistance thermometers, and resistors and thermocouples. In the chemical field, it is used for crucibles and other heat and corrosion resistant vessels, cathodes, spinnerettes for organic filaments as rayon and for Fiberglas, burner nozzles, and catalysts. Other sundry uses are dentistry, jewelry, purification of hydrogen, and precision instruments.

Platinum—H.R. 12412 (Mr. Ichord), H.R. 13364 (Mr. Philbin), H.R. 13569 (Mr. Lennon), H.R. 13570 (Mr. Lennon)

Each of the four bills referred to the subcommittee for consideration authorize the disposal of the same amount of surplus platinum, i.e., 316,300 troy ounces. H.R. 13364 (Mr. Philbin) and H.R. 13569 (Mr. Lennon) are identical. This is also true with respect to H.R. 12412 (Mr. Ichord) and H.R. 13570 (Mr. Lennon). The latter two bills, however, contain a provision that the funds realized from the sale of surplus platinum will be available for the purchase of palladium for the national stockpile. This provision, if accepted, would establish a precedent. Under previous disposal authorizations, the amounts recovered from the sale of surplus materials have been deposited in the Treasury.

Palladium, generally speaking, is interchangeable with platinum from a usage standpoint. It is presently in short supply. The stockpile objective is 1,300,000 troy ounces. The current inventory is 737,935 troy ounces. Under present authorizations, it is expected that 100,000 troy ounces will be procured through barter transactions.

	Troy ounce
Sales through Dec. 31, 1965.....	4, 471
Current inventory :	
National stockpile.....	716, 305
Supplemental stockpile.....	49, 999
Total.....	766, 304
Stockpile objective.....	450, 000
Surplus.....	316, 304
Requested disposal.....	316, 300
Remaining surplus if bill is approved.....	None
Unit acquisition cost.....	\$79. 47
Present unit market value.....	97-100

DISPOSAL PLAN

Entire surplus to be made available for sale as early as possible.
You go ahead with your testimony.

(The statement of Mr. William N. Lawrence on platinum is as follows:)

STATEMENT OF WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, the Office of Emergency Planning appreciates this opportunity of appearing before this committee to support H.R. 13364, a bill, "to authorize the disposal of 316,300 troy ounces of platinum from the national and supplemental stockpiles."

The OEP also favors the passage of H.R. 12412, which also authorizes the disposal of 316,300 troy ounces of excess platinum. H.R. 12412 differs from H.R. 13364 in that, in addition to authorizing the disposal of the 316,300-ounce surplus of platinum, H.R. 12412 includes a provision in section 2 which would permit the use of excess platinum, as well as other excess stockpile materials, in payment of the purchase price and other expenses of acquiring palladium for the national stockpile.

We have authorized the Department of Agriculture to engage in a barter program to obtain the deficit—562,000 troy ounces. To date, 100,000 ounces have been contracted for and 50,000 ounces delivered. The Department of Agriculture will also seek bids to contract for another 100,000 ounces prior to the end of this fiscal year. The balance will be sought in fiscal 1967. This stretchout of procurement on the part of OEP is deliberate in order that no extraordinary demand will be placed upon the market which will enhance the price of palladium.

There is ample palladium on the market today. This is evident by the number of offers received by the Department of Agriculture and the General Services Administration to barter or exchange for agricultural products or excess stockpile materials. Moreover, the price of this member of the platinum family has been remarkably stable over the last year.

On the other hand, the supply of platinum has tightened drastically in the past 6 months, and the shortfall is now estimated to be more than 300,000 ounces in calendar year 1966. Many industries, but particularly the petroleum and chemical industries, have been forced to delay expansions of capacity for lack of platinum. In addition, defense industries have been forced to pay premium prices for platinum in order to meet advanced delivery dates.

In view of these problems, OEP has determined that the excess platinum can be sold before we obtain all the palladium deficit. We do not feel that this impairs our national security because of the ready availability of palladium by open-market purchases or barter, or both.

However, since passage of H.R. 12412 would provide a broad authorization enabling us to channel vitally needed excess platinum into the consuming industry and, at the same time, provide standby authority to acquire palladium through the exchange of excess strategic and critical materials should this later prove desirable, either concurrently with or in lieu of acquisition through the barter of agricultural excesses, enactment of H.R. 12412, or an identical bill S. 2642 passed by the Senate on March 21, 1966, would enable accomplishment of the purposes of the administration's legislative proposal.

Mr. PHILBIN. Does that finish your statement?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You are not concerned about the stockpile requirement problem here?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. When was the stockpile requirement evaluated last?

Mr. LAWRENCE. It was evaluated in January of this year.

Mr. PHILBIN. With full concurrence of all the cooperating agencies, including the Joint Chiefs?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. With respect to the participation of the Joint Chiefs, how was that handled? Who represented the Joint Chiefs in this proceeding?

First, describe the proceedings that take place on his particular evaluation, which I take it was a standard evaluation.

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Then the participants, what your procedure is, and in general the principal factors on which you based the evaluation. I would like to have that briefly for the record.

Mr. LAWRENCE. All right, sir.

When we go into the supply requirements data, we send to the Department of Defense a request for their actual requirement for platinum. In addition, we ask other agencies, like the Department of Commerce, to supply the requirements for the rest of the economy. When these figures are obtained and put together, then we have a group known as the Interdepartmental Materials Advisory Committee, which is composed of a number of Government agencies, including Defense, State, Interior, Commerce, GSA, and several others, which go over the data, and they approve it. This establishes the objectives.

Mr. PHILBIN. Is this a regular standing committee now?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Comprised of the same members? They may be replaced from time to time, but generally the same members participate?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. Who participates for the Department of Defense?

Mr. LAWRENCE. The man who has been participating is Mr. Carl Rolle, who acts for the Assistant Secretary of Defense for Installations and Logistics. He is also the one through whom the Joint Chiefs participate in the decision.

Mr. PHILBIN. Prior to the time that he consults with you does he consult with the Joint Chiefs?

Mr. LAWRENCE. Yes, sir; as well as all of the three services.

Mr. PHILBIN. How does he consult with the Joint Chiefs? Do they participate in these discussions? They, of course, are very knowledgeable in matters of strategy and tactics, but they probably presumably wouldn't have the same knowledge in matters affecting industrial mobilization, or needs for industry that should be retained in the stockpile.

Now, through whom do they convey their opinions?

Mr. LAWRENCE. They have members of one of their staff—I am not familiar with whom Mr. Rolle does contact there, other than the fact we are given the knowledge.

Mr. PHILBIN. Could you furnish us for our record the person or persons who are knowledgeable in industrial mobilization and industrial problems, that represent the Joint Chiefs and speaks for the

Joint Chiefs, and negotiates for the Joint Chiefs, and attended the conferences with Mr. Rolle in these matters?

Mr. LAWRENCE. Yes.

Mr. PHILBIN. We would like very much to have that information.

Mr. LAWRENCE. I will furnish the information.

Mr. PHILBIN. You, yourself, as a result of all your evaluations, you are retaining enough of the stockpile at the present time, even if we do make the disposals that are provided by the pending bills?

Mr. LAWRENCE. I feel we will be adequately covered for all of our defense needs, with the present stockpile objective.

Mr. PHILBIN. That opinion is based on the information that you derived from your contacts with all of the participating and cooperating agencies?

Mr. LAWRENCE. That is correct, sir.

Mr. PHILBIN. Do you have some questions, Mr. Gubser?

Mr. GUBSER. It is obvious on its face, but I would like to tie it down and get it in some specific words in the record.

Is the reason for this barter authority—you are seeking this barter authority, is that you would save time by bartering platinum for palladium? You wouldn't be required to go through an authorization and possibly an appropriation process to acquire the palladium?

Mr. LAWRENCE. Well, that is true. If we get the authority contained in section 2 here, we would not require any appropriation.

Mr. GUBSER. Without section 2 what would be the time element involved and what process would you have to go through? Could you describe it for me briefly, please?

Mr. LAWRENCE. Without section 2, we would use the barter route rather than ask for an appropriation, because we have found it is readily available so far.

Mr. GUBSER. Without section 2?

Mr. LAWRENCE. Without section 2.

Mr. GUBSER. I got it backward.

Mr. LAWRENCE. I am sure we can acquire the palladium within the next 2 years or 2½ years, so it will all be delivered into the stockpile within that time.

Mr. GUBSER. Those are all the questions.

Mr. PHILBIN. Mr. Clancy?

Mr. CLANCY. No questions.

Mr. PHILBIN. Does the distinguished chairman have a question he would like to ask?

Chairman RIVERS. Thank you, Mr. Chairman.

Mr. Lawrence, how long have you been with the OEP?

Mr. LAWRENCE. Well, I have been with it and its predecessor agencies for about 30 years.

Chairman RIVERS. That is too long.

Now, the OEP favors the bill that Mr. Ichord introduced as against the one that the GSA sent over here. Why didn't you think of that?

Mr. LAWRENCE. I didn't understand you, Mr. Chairman.

Chairman RIVERS. You said you would favor the one the Senate passed, where you have the authority to buy the palladium, the stockpile palladium, on a barter basis as well as—is this a barter basis?

Mr. LAWRENCE. This provides you can pay for palladium with the platinum or other excess stockpile material.

Chairman RIVERS. Either from the money realized from the 316,000 troy ounces of platinum—does it take care of the barter? You don't need any authority for the barter?

Mr. LAWRENCE. No, sir.

Chairman RIVERS. And you do that from your excess agriculture products?

Mr. LAWRENCE. That is correct.

Chairman RIVERS. With whom will you barter to get this palladium?

Mr. LAWRENCE. The Department of Agriculture sends out offers or asks for tenders to bid. It usually comes from those companies which handle palladium regularly, or with other traders who happen to have palladium available.

Chairman RIVERS. They take agriculture products?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. Domestic companies?

Mr. LAWRENCE. Yes, sir. What they do is they sell the agriculture products not on the American market, but outside. They regain the cash in that manner.

Chairman RIVERS. That is a kind of an unusual way to handle it. I cannot imagine the United States Steel Co. selling 100 boatloads of wheat, for instance, or the Pittsburgh Glass Co. selling a million bushels of soybeans, for instance. That is kind of out of their character, wouldn't it be?

Mr. LAWRENCE. The barter program has been a very successful one, Mr. Chairman. It has been used not only to acquire critical materials for us from time to time, but it has been most successfully used for the offshore procurement of the Department of Defense.

Chairman RIVERS. I thought the DOD—they don't do like that in the DOD?

Mr. LAWRENCE. No, they handle that through the Department of Agriculture.

Chairman RIVERS. They let the Government handle the industry. We built some houses that way. We built some houses in England called Tobacco Houses, they took the tobacco and converted it into pounds in their way of doing it. This way looks like kind of unusual. But if you say you can do it, that is the first time I have experienced it.

Mr. LAWRENCE. I think it would be a nice thing to have. Either bill would be satisfactory to us.

Chairman RIVERS. I think the one the Senate passed is a good bill, because it commits you to buying this palladium. Now, that gets to my other question.

Do you plan to substitute palladium for platinum?

Mr. LAWRENCE. No, sir; you cannot do that. I do not know of any application where you can substitute palladium for platinum. Platinum can be substituted for palladium; it is a rather expensive substitution, but it can be done.

Chairman RIVERS. Palladium is one of the platinum group?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. That is the reason for it, is that it?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. There is a shortage now of 300,000 troy ounces?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. You are going to release 316,000?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. You will just take up the slack, and you will be right where you started, won't you? You will probably start off even, but you will not have supplied the market yet. You may be back here in a very short time wanting some more.

Mr. LAWRENCE. No; I believe the 300,000 ounces, this 316,000 will satisfy the demand. There is coming from South Africa, in 1967, an increased supply of platinum, which I think will take care of the market from then on.

Chairman RIVERS. You are sure of that, are you?

Mr. LAWRENCE. That program is underway; yes, sir.

Chairman RIVERS. Despite this country's policy of fighting South Africa, you think you can get them to cooperate with you? You know what they are doing in South Africa, in Rhodesia, don't you?

Mr. LAWRENCE. Yes.

Chairman RIVERS. You don't think we are a bunch of fools sitting up here having you tell us we can be assured of those people's cooperation when it is the policy of this Government to oppose both of those governments, for one excuse or another?

Mr. LAWRENCE. The platinum has been coming forward all the time, in regular quantities, from the Union of South Africa.

Chairman RIVERS. I just hope so. You are talking about the Republic of South Africa, aren't you?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. I just wanted to be sure, because you know we cannot always take the word of you people, because some things we may know you don't know.

Mr. LAWRENCE. I am sure that is quite true.

Chairman RIVERS. This platinum is kind of short, and Mr. Philbin is quite knowledgeable on this, and he keeps me well informed on it. We have a responsibility.

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. We don't plan to give you a blank check, you know.

Mr. LAWRENCE. I know that, sir.

Chairman RIVERS. For your information, we don't plan to pass S. 28, you know.

Mr. LAWRENCE. That is my understanding, sir.

Chairman RIVERS. You work for Mr. Bryant now, don't you?

Mr. LAWRENCE. Yes, sir.

Chairman RIVERS. You are doing a good job, Mr. Lawrence, we are glad to have you. All of you are doing a good job.

Mr. BENNETT. Before you leave, I thought I understood you until we got further into it, now I am not quite sure.

Why are palladium and platinum tied together in the same bill if they are not interchangeable, if you are selling one and buying the other? Why do you have two bills, why are they tied together in the same legislation?

Mr. LAWRENCE. This bill was introduced in the Senate last year by Senator Dirksen. It provides a means for filling the palladium objective, which is always one of our desires, and I am sure it is the desire of this committee that we fill all objectives as rapidly as possible.

Mr. BENNETT. You require legislation to fill deficits—do you have to have legislation introduced?

Mr. LAWRENCE. No, we don't; we can acquire it through the barter route or ask for an appropriation to buy it through legislation.

Mr. BENNETT. All I am in doubt about is why the two metals are tied together, because apparently you do not need any legislation to buy some, and you are in excess in the other. It looks like to me the simple thing to do is get rid of the excess, and use your standing authority to acquire whatever you need in the other metal. I do not understand why they are tied together.

Mr. LAWRENCE. That would be perfectly acceptable to us.

Mr. BENNETT. I am not arguing with you, I am trying to find out why it happened this way.

Mr. LAWRENCE. Actually, the GSA had offers last year, palladium, in exchange for not platinum but tin or nickel. In other words, the people who had palladium were interested in other excess materials. GSA, of course, is interested in selling or disposing of all of these excesses, so this would have been a very nice way for us to acquire palladium, and then pass on and get rid of the tin and nickel which are excess to our needs.

Mr. BENNETT. Tin and nickel are not in this legislation at all, are they?

Mr. LAWRENCE. You passed bills on those last year, which permitted us to dispose of them.

Mr. BENNETT. You don't need legislation to acquire palladium at all?

Mr. LAWRENCE. No, sir.

Mr. BENNETT. It just happens it was drawn this way. It looks like a good way to draw it.

Mr. LAWRENCE. That is right.

Mr. BENNETT. Thank you.

Mr. COOK. But has it not been the administration's position you would not release platinum until you reach the level of stockpile requirements for palladium?

Mr. LAWRENCE. This has been, but after we acquired the first 100,000 ounces of palladium, and found that we could obtain the other readily, we have receded from that position. We feel that the platinum need is so urgent that we should go ahead and take this risk for a temporary period.

Chairman RIVERS. Did you check that thing through the Joint Chiefs, or your authority, on what is the health of the stockpiles in general?

Mr. PHILBIN. They cooperate with the Joint Chiefs.

Chairman RIVERS. What is that?

Mr. PHILBIN. The Joint Chiefs participated in determining the stockpile requirements.

Chairman RIVERS. The Joint Chiefs' opinions have a lot to do with this.

Mr. LAWRENCE. Well, they provide us with the intelligence and assumptions, and that type of thing, that we use as a basis for computing our requirements.

Mr. BENNETT. You kind of confused me when you answered the question a moment ago, when you said it would be all right to have this

short period of time of danger of not having the palladium. I do not see any connection between the two at all. That is what I am trying to get at. I thought in our conversation of 5 minutes ago you developed you had one thing in excess, another in short supply, and you are trying to get the one in excess sold, and you are trying to get the one in short supply bought. But you are testifying they are not interchangeable. So I do not understand why any conversation about a period of danger—you are in a period of danger any way whether you sell the platinum or not.

Mr. LAWRENCE. You can use platinum for palladium applications. You cannot use palladium for platinum applications.

Mr. BENNETT. I thought you said that was impractical?

Mr. LAWRENCE. No. You can use platinum, for example, you can use it, for example, for electrical contact points made usually out of palladium, but it is a darned expensive way to do it. You cannot use palladium in lieu of platinum.

Mr. BENNETT. There is a shortage of platinum.

Mr. LAWRENCE. That is right.

Mr. PHILBIN. Mr. Clancy.

Mr. CLANCY. How many domestic concerns handle palladium?

Mr. LAWRENCE. You have two principal ones. Englehard Industries and Johnson Matthey, which is a U.S. subsidiary of the English company of Johnson Matthey. In addition, there are a number of trading firms in New York and other places which handle palladium on a regular basis.

Mr. CLANCY. On a regular basis, do they have this on hand at all times?

Mr. LAWRENCE. That is my understanding.

Mr. CLANCY. How would you purchase palladium if you were called upon to purchase it?

Mr. LAWRENCE. We would ask GSA to buy it, and they would make an offer and anybody who offered palladium at a price considered reasonable by the Government we would do it that way; I mean if we had the cash.

Mr. CLANCY. Do you approve the price paid by the Government?

Mr. LAWRENCE. The GSA has that responsibility.

Mr. CLANCY. Do they consult with you on the price?

Mr. LAWRENCE. Not usually on prices. We leave that to their judgment.

Mr. PHILBIN. I think those questions could be addressed to Mr. Harlan, who will give us an elaboration on how the purchasing is accomplished.

Do you have a question?

Mr. GUBSER. One more question.

I am like Mr. Bennett, the further I get into this the more confused I get.

Am I to understand the advantage of accepting this second section—

Mr. LAWRENCE. I am sorry, I didn't hear.

Mr. GUBSER. Am I to understand the advantage to you of this additional section, which allows you to use the proceeds to purchase palladium, is that you might be able to make a package deal with some dealer?

Mr. LAWRENCE. Yes; and we would, with this section 2, acquire it faster than we can through the barter route.

Mr. GUBSER. In other words, it is speed, and also the fact that you might be able to get a better price, and make a better deal for the Government?

Mr. LAWRENCE. That is right.

Chairman RIVERS. May I ask one question?

You can substitute platinum for any of the platinum group, but you cannot substitute any one of the platinum group for platinum. That is a fair statement, is it?

Mr. LAWRENCE. I think so.

Chairman RIVERS. The platinum group is a group of hard metals with different degrees of the alloy in it, of the platinum in it—the alloy is such it is just a percentagewise situation, isn't it? Isn't that what you mean by the group? You can substitute the parent for any of the children, but none of the children for the parent?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. There are no further questions. We thank you, Mr. Lawrence.

Mr. Harlan, will you please come forward and let us have your views on these bills?

Before you start, I would like to read into the record a letter which the committee has received from the Department of Defense, which states:

The Department of Defense has reviewed the two bills, H.R. 12412 and H.R. 13364, both of which authorize the disposal of approximately 316,300 ounces of excess platinum from the national stockpile. The Department of Defense favors the enactment of either bill. H.R. 12412 provides a means whereby the stockpile objective for palladium can be met.

Although we understand that the Office of Emergency Planning and the General Services Administration are developing plans for meeting the palladium objective through exchange of agricultural surpluses, H.R. 12412 would provide additional permissive authority for meeting the palladium objective.

That letter is signed by Mr. Cyrus Vance for the Department of Defense, and we will take this for the record.

Proceed with your statement, Mr. Harlan.

Mr. HARLAN. Mr. Chairman, with your permission I will not read the actual parts of this statement, and I ask your permission to have it placed in the record.

Mr. PHILBIN. It is so ordered.

(The statement of Mr. John G. Harlan, Jr., on platinum is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the

purpose of expressing the views of GSA on the bill for the disposal of platinum.

This bill would authorize the disposal of approximately 316,300 troy ounces of platinum from the national and supplemental stockpiles. The Office of Emergency Planning has determined this quantity to be in excess to stockpile requirements for platinum.

Platinum is stockpiled for a variety of industrial uses. Its greatest use is in the chemical field, with electrical uses making the second heaviest demand. It is used in heating elements for furnaces and is wound into resistance coils for precision instruments.

U.S. production of platinum is inconsequential. The principal sources of supply are the Republic of South Africa, Canada, and Russia.

The total inventory of platinum held by GSA now stands at 766,304 troy ounces. The present stockpile objective is 450,000 troy ounces. The excess of 316,300 troy ounces is covered by this bill.

The average acquisition cost of the platinum in the stockpiles was \$79.47 per troy ounce. The current market price quoted by major suppliers is \$97 to \$100 per troy ounce.

GSA has consulted with the effected Government agencies in the development of the disposal program on the excess of 316,300 troy ounces. These agencies in turn consulted with consumers, producers, and refiners and there was no opposition expressed by those consulted insofar as the release of platinum is concerned.

We have arranged a meeting with industry for March 23 to review details regarding the methods through which the excess should be released, subject to authorizing legislation.

This agency strongly recommends the enactment of this bill.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. Chairman, as in the case of ruthenium, which we discussed a few minutes ago, we are meeting as I explained with the industry at 2 o'clock this afternoon. We expect to have a large meeting, over 100 people, from industry, from all parts of the industry, the producing industry, the distributing people, and the consumers. As Mr. Lawrence explained, this material is badly needed by the industry; for better than a year now I have been in almost constant discussions with the industry about what might be done to help relieve the tight supply situation.

I know there is no problem as far as the industry is concerned in the release of this material. This afternoon we will discuss the details of how this should be done. In the event this committee agrees to authorize this disposal we will do that.

Mr. PHILBIN. You will keep us fully informed of the developments of these conferences. I take it from what you say up to this time, as a result of the evidence you received during your conferences with the industry, that you feel there is no problem involved here, that the industry is agreeable to these bills. Do they reflect any preference for one or the other of the bills? Have they expressed any views about that?

Mr. HARLAN. No, they have not.

Mr. PHILBIN. What are your views about that? Do you have any preference as to which of the bills should be considered favorably?

Mr. HARLAN. No, Mr. Chairman. When we prepared the administration bills, we prepared them in a uniform fashion and submitted them in a uniform way. The difference in this particular case would give us no problem. It would give us some added authority which might prove to be useful.

Mr. PHILBIN. Now, the Senate bill, so-called, which has already been enacted by the Senate, provides for giving you the authority to purchase from the funds that they receive from the disposal of platinum, to purchase palladium?

Mr. HARLAN. That is right.

Mr. PHILBIN. Is there any precedent for that procedure, in the acquisition of stockpile materials?

Mr. HARLAN. No.

Mr. PHILBIN. You can get the stockpile materials by barter, you can get it in the stockpile by having a bill adopted and an appropriation given by the Congress, but have you ever before got the materials into the stockpile in this particular way by passing one bill providing for the disposal, and then receiving the funds in your agency and purchasing other materials for the stockpile? Is there any precedent for that procedure?

Mr. HARLAN. I am not aware of any such precedent; no, sir.

Mr. PHILBIN. I didn't think there was. I am not aware of any precedent. I couldn't understand what the reasoning or rationale would be. Do you have any information on that?

Mr. HARLAN. I think the rationale was this added authority might broaden our abilities to barter. In other words, not be limited to agricultural surpluses, but to provide the authority that we could also use the stockpile surpluses in attempting to arrange for barter.

Mr. PHILBIN. You could do that if you had appropriated funds just as well. There wouldn't be any difference. Only in one instance you would have to come through the Congress, and in the other instance you could bypass the Congress?

Mr. HARLAN. That is correct.

Mr. PHILBIN. That would be about the situation?

Mr. HARLAN. That is correct.

Mr. PHILBIN. I know you didn't introduce the original bill, but I wondered what the thinking was, why that method was followed?

Mr. HARLAN. In the discussions I participated in about this legislation, it has been my understanding the thinking was it would give us a broader scope of materials which we might use to barter for palladium.

Mr. PHILBIN. Of course, as you know, the bill adopted by the other party was identical to the bill introduced by Mr. Ichord. Since the Senate has acted first in this matter it will be necessary for us to consider their bill. We are nevertheless free to write whatever amendments we desire into it. I wondered if you had any suggestion along that line.

Mr. HARLAN. Mr. Chairman, I think there are other advantages from the Government's point of view in acquiring materials in exchange for surpluses, rather than cash. And for that reason, to the extent that a broader range of surplus materials would be available

purpose of expressing the views of GSA on the bill for the disposal of platinum.

This bill would authorize the disposal of approximately 316,300 troy ounces of platinum from the national and supplemental stockpiles. The Office of Emergency Planning has determined this quantity to be in excess to stockpile requirements for platinum.

Platinum is stockpiled for a variety of industrial uses. Its greatest use is in the chemical field, with electrical uses making the second heaviest demand. It is used in heating elements for furnaces and is wound into resistance coils for precision instruments.

U.S. production of platinum is inconsequential. The principal sources of supply are the Republic of South Africa, Canada, and Russia.

The total inventory of platinum held by GSA now stands at 766,304 troy ounces. The present stockpile objective is 450,000 troy ounces. The excess of 316,300 troy ounces is covered by this bill.

The average acquisition cost of the platinum in the stockpiles was \$79.47 per troy ounce. The current market price quoted by major suppliers is \$97 to \$100 per troy ounce.

GSA has consulted with the effected Government agencies in the development of the disposal program on the excess of 316,300 troy ounces. These agencies in turn consulted with consumers, producers, and refiners and there was no opposition expressed by those consulted insofar as the release of platinum is concerned.

We have arranged a meeting with industry for March 23 to review details regarding the methods through which the excess should be released, subject to authorizing legislation.

This agency strongly recommends the enactment of this bill.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. Chairman, as in the case of ruthenium, which we discussed a few minutes ago, we are meeting as I explained with the industry at 2 o'clock this afternoon. We expect to have a large meeting, over 100 people, from industry, from all parts of the industry, the producing industry, the distributing people, and the consumers. As Mr. Lawrence explained, this material is badly needed by the industry; for better than a year now I have been in almost constant discussions with the industry about what might be done to help relieve the tight supply situation.

I know there is no problem as far as the industry is concerned in the release of this material. This afternoon we will discuss the details of how this should be done. In the event this committee agrees to authorize this disposal we will do that.

Mr. PHILBIN. You will keep us fully informed of the developments of these conferences. I take it from what you say up to this time, as a result of the evidence you received during your conferences with the industry, that you feel there is no problem involved here, that the industry is agreeable to these bills. Do they reflect any preference for one or the other of the bills? Have they expressed any views about that?

Mr. HARLAN. No, they have not.

Mr. PHILBIN. What are your views about that? Do you have any preference as to which of the bills should be considered favorably?

Mr. HARLAN. No, Mr. Chairman. When we prepared the administration bills, we prepared them in a uniform fashion and submitted them in a uniform way. The difference in this particular case would give us no problem. It would give us some added authority which might prove to be useful.

Mr. PHILBIN. Now, the Senate bill, so-called, which has already been enacted by the Senate, provides for giving you the authority to purchase from the funds that they receive from the disposal of platinum, to purchase palladium?

Mr. HARLAN. That is right.

Mr. PHILBIN. Is there any precedent for that procedure, in the acquisition of stockpile materials?

Mr. HARLAN. No.

Mr. PHILBIN. You can get the stockpile materials by barter, you can get it in the stockpile by having a bill adopted and an appropriation given by the Congress, but have you ever before got the materials into the stockpile in this particular way by passing one bill providing for the disposal, and then receiving the funds in your agency and purchasing other materials for the stockpile? Is there any precedent for that procedure?

Mr. HARLAN. I am not aware of any such precedent; no, sir.

Mr. PHILBIN. I didn't think there was. I am not aware of any precedent. I couldn't understand what the reasoning or rationale would be. Do you have any information on that?

Mr. HARLAN. I think the rationale was this added authority might broaden our abilities to barter. In other words, not be limited to agricultural surpluses, but to provide the authority that we could also use the stockpile surpluses in attempting to arrange for barter.

Mr. PHILBIN. You could do that if you had appropriated funds just as well. There wouldn't be any difference. Only in one instance you would have to come through the Congress, and in the other instance you could bypass the Congress?

Mr. HARLAN. That is correct.

Mr. PHILBIN. That would be about the situation?

Mr. HARLAN. That is correct.

Mr. PHILBIN. I know you didn't introduce the original bill, but I wondered what the thinking was, why that method was followed?

Mr. HARLAN. In the discussions I participated in about this legislation, it has been my understanding the thinking was it would give us a broader scope of materials which we might use to barter for palladium.

Mr. PHILBIN. Of course, as you know, the bill adopted by the other party was identical to the bill introduced by Mr. Ichord. Since the Senate has acted first in this matter it will be necessary for us to consider their bill. We are nevertheless free to write whatever amendments we desire into it. I wondered if you had any suggestion along that line.

Mr. HARLAN. Mr. Chairman, I think there are other advantages from the Government's point of view in acquiring materials in exchange for surpluses, rather than cash. And for that reason, to the extent that a broader range of surplus materials would be available

for such purpose, I can see where there would be an advantage from the Government's point of view in having this added authority.

Mr. PHILBIN. You think it would be a more flexible situation?

Mr. HARLAN. I believe it would; yes, sir.

Mr. PHILBIN. But here in this instance you would have cash. You would have cash proceeds from the sale of platinum.

Mr. HARLAN. Since all of this—

Mr. PHILBIN. You would presumably purchase palladium with that cash?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. That is what the bill provides.

Mr. HARLAN. Since all of this material comes from off-shore sources, I would think to the extent the Government could obtain the material by relieving itself of surpluses, rather than allowing the cash flow from the country, that this is an added advantage.

Mr. PHILBIN. Yes. You, in any event, would have the cash under your control. You could use that in any way you saw fit to purchase that one particular material though, only the palladium?

Mr. HARLAN. That is correct.

Mr. PHILBIN. But you couldn't engage in what the Government does engage in, when they enter into a barter agreement through the Department of Agriculture. That is a different thing altogether, isn't it?

Mr. HARLAN. Mr. Philbin, counsel has just reminded me this is not a cash transaction in any way. It would be an exchange of one material for another.

Mr. PHILBIN. That is the way the counsel interprets the bill, the cash, wouldn't flow into the coffers of GSA? Does the counsel construe this bill as adopted by the Senate, which I haven't had an opportunity to read in its entirety as yet, though I have some information about it, does counsel construe that bill does not provide for giving authority to the GSA, to sell platinum, and with the funds that are received purchase palladium?

Mr. HARDING. That is correct. The bill provides that the excess platinum or other excess materials, the disposal of which is authorized, may be used in kind to pay for the acquisition of palladium, but there would be no cash—any cash received would not be—

Mr. PHILBIN. Not received by GSA. That is what I wanted to get. The cash, then, that is received will go into the coffers of the Treasury, not GSA?

Mr. HARDING. If there was any cash received it would go into miscellaneous receipts.

Mr. PHILBIN. I wanted to clarify that point. That is the very information.

Mr. Machen.

Mr. MACHEN. No questions.

Mr. PHILBIN. No questions.

You will keep us fully advised about the results of your industry conference. As you know, we are very much interested in that.

Mr. HARLAN. I will advise you immediately.

Mr. PHILBIN. We are always glad to get the clearances from you. You also in your testimony stated, and you always do, you stated these disposals will be carried on in a normal fashion without disrupting the

market, and generally complying with the requirements of the Stock Piling Act, and the principles that have been agreed upon here between your agency and this committee with respect to the disposal under the laws that are passed here.

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Thank you very much.

Do we have any other witnesses?

Mr. COOK. Congressman Ichord is here, who introduced an identical bill to Senator Dirksen's.

Mr. PHILBIN. Would you like to be heard on the bill Mr. Ichord?

Mr. ICHORD. Mr. Chairman, I have a statement.

Mr. PHILBIN. Since the Congressman is one of the outstanding and most valuable members of this committee, we would be very glad to hear him on his own bill if he desires to be heard or if he desires to present his views in any way or make any comments on this pending legislation.

Mr. ICHORD. Yes, Mr. Chairman, I would appreciate the opportunity.

I have a statement which I would request the permission of the chairman to file with the committee in order to conserve time.

(The statement of Hon. Richard H. Ichord on platinum is as follows:)

STATEMENT OF HON. RICHARD H. ICHORD, OF MISSOURI

Mr. ICHORD. Mr. Chairman, I welcome this opportunity to express my views on the merits of H.R. 12412 and H.R. 13364, bills to authorize the release of 316,300 ounces of platinum from the national stockpile. This bill was introduced by me early in this session because of my conviction that something had to be done—and quickly—to satisfy the growing need for platinum in many of our industries. This is a need which cannot be met in the foreseeable future by standard supply sources at a reasonable price.

I was most pleased to receive the favorable comments from the General Services Administration on the merits of H.R. 12412. GSA, with the concurrence of the Office of Emergency planning, is equally concerned about the imbalance between the supply and demand for platinum and favors enactment of the bill as it is now written.

H.R. 12412, in brief, contains two sections for dealing with this problem. Section 1 of the bill authorizes the Administrator of General Services to dispose of approximately 316,300 ounces of platinum from the national stockpiles established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). This amount is in excess of the stockpiling objective for platinum established by the Office of Emergency Planning.

Section 2 of H.R. 12412 provides for the use of materials which have been authorized for disposition in the acquisition of palladium which is below the stockpile objective. Palladium is available in exchange for platinum or other materials if GSA should choose to acquire it.

In order to emphasize the need for legislation to release platinum from the national stockpile, and to outline the basis for the wide industry support that exists for H.R. 12412, I have developed some background information on the major industrial uses of platinum.

The regular U.S. sellers of platinum, Englehard Industries, who market the Canadian production, and Johnson Mathey, who sell South African platinum, are currently unable to meet the demand for the platinum needed by the oil, chemical, glass, and electrical industries. Russian material has to be bought, through brokers, to make up the substantial shortfall in platinum. In recent months the prices paid for Russian platinum has ranged from \$135 to \$175 per troy ounce, compared to \$97 to \$100 per ounce from regular U.S. suppliers. This added cost to industry, and the dollar outflow that results, could be corrected by the provisions of H.R. 12412.

The most important industrial uses for platinum are in the oil, chemical, glass, and electrical industries. In the first two instances, platinum is used mainly as a catalyst. In the second two cases it has the necessary mechanical and electrical properties, respectively, that are needed to do these jobs. Replacement of platinum by other materials is very difficult and uneconomic. In many instances there is no substitute. Finally, in the first three of these four applications, the platinum is not used up at any appreciable rate, and is available for recovery and reuse.

The oil industry has become the largest user of platinum, taking an estimated 150,000 ounces in 1965. Continued increases in octane demand, in requirements for aromatics for explosives and chemical manufacture, and in the growth of a new process—hydrocracking—that is making it possible to get even more gasoline per barrel of crude oil, have led platinum use in this industry to a high level. Even more platinum will be needed in the future by our oil industry.

Our chemical industry uses platinum primarily as a catalyst in the manufacture of nitric acid from ammonia. The demand for nitric acid for fertilizer and for military explosives is at an alltime high, and the platinum requirement of the chemical industry is accordingly increased.

Our glass industry relies on platinum to line glass furnaces and similar melting and refining devices and for dies and fixtures required for glass fiber production. There is no known substitute for platinum in regard to this application. One major firm in this field is reported to be particularly troubled by their inability to obtain, at competitive costs, the platinum needed for a large new glass fiber mill. This bill will assure their ability to provide needed additions to the capacity of this industry.

Our electrical industry uses platinum for contact points and for spark plug tips. While desirable progress is being made in substituting palladium for platinum in some of these applications, the demand for special platinum-tipped spark plugs for defense uses has tended to offset the effect of this substitution.

I think the committee has already heard of the variants between the two bills, 12412 and 13364; namely, section 2 of 12412. As stated before, 12412 is identical to the bill introduced by Mr. Dirksen.

I would say, Mr. Chairman, I think this bill, 12412, is in the interest of the Nation. Certainly I wouldn't ask this committee to approve the disposal of one dime's worth of platinum if I thought it would hurt our national defense capabilities. But we do have the surplus of 316,300 ounces of platinum. I think it can be disposed of and bring some money into the Treasury and help the balance-of-payments situation, and not injure in any way our defense capabilities.

I introduced this bill, Mr. Chairman, after a conference with one of the major glass producers, which happens to be located in my district. There is a great need, in order to obtain supply sources at a reasonable price. In order to emphasize the need for legislation to release the platinum from the national stockpile, I have developed some background information on the major industrial uses of platinum.

The regular United States sellers of platinum, Englehard Industries, who market the Canadian production, and Johnson Mathey, who sells South African platinum, are currently unable to meet the demand for the platinum needed by the oil, chemical, glass, and electrical industries.

Russian material has to be brought through brokers to make up the substantial shortfall in platinum. In recent months the prices paid for Russian platinum has ranged from \$135 to \$175 per troy ounce, compared to \$97 to \$100 per ounce from regular U.S. suppliers.

The reason why I have in my statement, Mr. Chairman, the uses to which the oil, chemical, glass, and other industries put platinum—one of the reasons why the glass industry has such a great need for platinum, in that it is used in the manufacture of fiberglass, in the bushings, and molds, and the making of fiberglass.

I would point out to the committee that this is a nonconsuming use. That is, if the Government has any need in the future for additional platinum it can commendeer or condemn under the power of eminent domain, or use the proper procedures in order to get this platinum back for defense purposes. So I do not think, since it is a nonconsuming use, I do not think there would be any danger in disposing of the surplus that we have.

In regard to section 2, Mr. Chairman, I would prevail upon the committee to adopt that provision in the bill because, as has been pointed out, there is a shortage of palladium. I, too, construe the language to mean that GSA only can use the platinum for barter. This will provide a means by which we can build up our palladium stockpile. So I do hope that the committee does see fit to read that provision into the bill.

Thank you, Mr. Chairman.

Mr. PHILBIN. Thank you, you made a very fine statement.

Do you understand the Senate bill was introduced by Mr. Dirksen? Did Mr. Douglas also have a bill? It seems to me I had some information that Mr. Douglas' bill was the bill that was adopted by the Senate.

Mr. ICHORD. I am not familiar with the bill by Mr. Douglas, Mr. Chairman. The Dirksen bill is the only one that I had seen.

Mr. PHILBIN. Well, that clarifies that situation.

You think Senator Dirksen's bill and your bill is identical, as I pointed out before?

Mr. ICHORD. Yes; they are identical bills.

Mr. PHILBIN. So if this bill is adopted there would be no need for amendments of any kind?

Mr. ICHORD. And I understand the Senate committee has voted this bill out, without amendments. There was no amendment to the bill.

Mr. PHILBIN. You don't propose any amendments? You have no amendments?

Mr. ICHORD. No, sir.

Mr. PHILBIN. Your bill is to stand, it is just as agreeable to you as you submitted it?

Mr. ICHORD. Yes, sir. With the understanding, I do feel like the chairman indicated, that GSA should not have the authority to sell the platinum and use the platinum to purchase palladium. I think it should be barter authority alone.

Mr. PHILBIN. That matter has been very well cited by Mr. Harlan and his able counsel. We have it on the record.

Mr. Clancy.

Mr. CLANCY. Is this palladium available today, Mr. Harlan?

Mr. HARLAN. Yes, sir.

Mr. CLANCY. How much would we acquire if we decided to purchase some today?

Mr. HARLAN. It is our estimate, Mr. Clancy, we could take about 200,000 ounces from the market without upsetting the market. This is the rate at which the Department of Agriculture plans to acquire it.

Mr. CLANCY. Over what period of time?

Mr. HARLAN. It would take $2\frac{1}{2}$ years at that rate.

Mr. CLANCY. I am speaking as of today. How much could we acquire today if the need occurred? How much could we put into our inventory within a reasonable time?

Mr. HARLAN. Oh, I would say about 200,000 ounces, unless, of course, we took drastic action and required the industry to turn over more palladium to the Government. It would depend on the degree of emergency.

Mr. CLANCY. It could be acquired within a reasonable time?

Mr. HARLAN. I believe so; yes, sir.

Mr. PHILBIN. You were satisfied about the need in the industry?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. That was conveyed to you in no uncertain terms, the need the industry has for platinum?

Mr. HARLAN. That is correct.

Mr. GUBSER. But we are faced with a deficit as far as the stockpile of palladium is concerned for 2 years at the procurement rate?

Mr. HARLAN. That is right.

I would like to point out if the total amount of platinum were held against that deficit, it would only take care of about one hundred and seventy-some thousand ounces of the palladium deficit, because of the difference in the weight of the two materials.

Mr. GUBSER. You don't think there is any danger to the national security that we are going to accept a deficiency for the next 2 years?

Mr. HARLAN. We have a quite substantial supply of palladium on hand, as it is, Mr. Gubser. I believe with that material on hand we would be able, as I explained to Mr. Clancy, to obtain the material sufficiently to take care of it.

Mr. GUBSER. Thank you.

Mr. PHILBIN. Thank you very much, Mr. Harlan.

Do we have any additional witnesses on this bill?

Mr. COOK. No additional witnesses, sir, but we have an additional statement to put in the record.

Mr. PHILBIN. That may be put in.

Mr. COOK. Mr. Lennon, who has a bill identical to yours, and also Mr. Ichord, in support of this, and also we have a letter from Mr. Lawson B. Knott, Jr., Administrator, GSA.

Mr. PHILBIN. They may be taken for the record, without objection. (The statement of Mr. Alton Lennon, re platinum, and the letter from Mr. Lawson B. Knott, Jr., re platinum, are as follows:)

GENERAL SERVICES ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR,
Washington, D.C., March 18, 1966.

Hon. L. MENDEL RIVERS,
Chairman, Committee on Armed Services, House of Representatives,
Washington D.C.

DEAR MR. CHAIRMAN: By letter of January 19, 1966, we forwarded a draft bill to Hon. John W. McCormack, Speaker of the House of Representatives, which would authorize the disposal of approximately 316,300 troy ounces of excess platinum from the national stockpile. This proposal has since been introduced as H.R. 13364 and referred to your committee.

By letter dated February 8, 1966, to you, we commented favorably on H.R. 12412, which also authorizes the disposal of 316,300 troy ounces of excess platinum. H.R. 12412 differs from H.R. 13364 in that, in addition to authorizing disposal of 316,300 troy ounces of platinum, the former bill includes a provision in section 2 which would permit the use of excess platinum, as well as other excess stockpile materials, in payment of the purchase price and other expenses of acquiring palladium for the national stockpile.

In our report of February 8, 1966, to you, we indicated that while the legislative proposal which we had sent to the Speaker of the House of Representatives on January 19 (since introduced as H.R. 13364) did not include provisions comparable to section 2 of H.R. 12412, it would authorize disposal of the same quantity of excess platinum as our proposal, and that since H.R. 12412 would enable accomplishment of the purposes of our legislative proposal, we favored enactment of H.R. 12412.

The inventory for palladium is presently 562,065 troy ounces below the stockpile objective of 1,300,000 troy ounces. Platinum is substitutable for some palladium uses. Therefore, for some time past, the excess quantities of platinum have been held and applied against the shortfall in the palladium objective.

Because of differences in density of the two materials, 2 ounces of platinum are required to do the job of 1 ounce of palladium. However, on the basis of current quoted producers' prices, platinum, at approximately \$100 per ounce, is worth three times more than palladium at \$33 per ounce. It seems quite clear, therefore, that retention of platinum valued at approximately \$31.6 million against an unfilled objective for substitute material valued at \$5.2 million is economically unsound.

The Office of Emergency Planning has determined that needed palladium should be acquired through exchange of agricultural excesses under the Agricultural Trade Development and Assistance Act of 1954 and that the rate of acquisition of palladium in fiscal year 1966 should be limited to no more than 200,000 ounces. The quantity to be procured this year was arrived at after careful consideration of supply-demand factors for palladium, and a conclusion that acquisition of quantities in excess of 200,000 ounces for stockpiling might place disruptive pressures on the palladium market. The Commodity Credit Corporation already has entered into a firm contract for the first 100,000 ounces of palladium under the current year's directive, and deliveries of the material to the stockpile have already started. The existing inventory of palladium together with that which is being acquired this year through barter, constitutes about a 2-year supply in an emergency.

The supply of platinum to domestic consumers in recent months has been drastically curtailed. The shortfall has been estimated at well above 300,000 troy ounces. Industries constituting a vital segment of our national economy, such as the chemical and petroleum industries, have reportedly been forced to set aside plans for expansion of their operations because of the lack of adequate supplies of platinum. In view of the steps which have been taken to acquire palladium and the critical shortage of platinum in the domestic market, OEP determined that the uneconomic application of excess platinum to the unfilled palladium objective was no longer warranted and that national defense interests would not be impaired by disposal of the excess platinum.

However, since passage of H.R. 12412 would provide a broad authorization enabling us to channel vitally needed excess platinum into the consuming industry and, at the same time, provide standby authority to acquire palladium

through the exchange of excess strategic and critical materials should this later prove desirable: either concurrently with or in lieu of acquisition through the barter of agricultural excess, enactment of H.R. 12412, or an identical bill S. 2642 reported by the Senate Committee on Armed Services on March 17, 1966, would enable accomplishment of the purposes of the administration's legislative proposal.

Sincerely yours,

LAWSON B. KNOTT, JR., *Administrator.*

STATEMENT OF ALTON LENNON, OF NORTH CAROLINA

Mr. LENNON. Mr. Chairman and members of Subcommittee No. 1, I have introduced H.R. 13569 and H.R. 13570, identical to H.R. 13364 and H.R. 12412, to authorize the disposal or release of platinum from the national stockpile. Either one of these measures will be satisfactory to my interest in the subject.

Two major glass companies requiring substantial quantities of platinum have recently advised me of their urgent need for this metallic element. The Corning Glass Works last week announced the building of a plant in my congressional district for the manufacture of electrical resistors. These electronic components are used in television sets, computers, and in the worldwide Gemini tracking network. The Pittsburgh Plate Glass Co. is planning to build a plant at Lexington, N.C., but a company official has reported to me that their proposed plant for the manufacture of fiber glass cannot be constructed unless some platinum can be obtained.

With availability of platinum now limited, there is critical operational requisite by industry for any excess in the Government's stockpile.

I urge that any platinum surplus to our country's defense needs be released to alleviate the current industrial shortage.

Mr. PHILBIN. That completes the record on the four bills on platinum, and we will now take up the next item on the agenda.

(The following material was received for the record:)

GENERAL SERVICES ADMINISTRATION,
Washington, D.C., March 29, 1966.

HON. PHILIP J. PHILBIN,
*Chairman, Subcommittee No. 1,
Committee on Armed Services,
House of Representatives,
Washington, D.C.*

DEAR Mr. PHILBIN: At the time we discussed the legislative proposals authorizing the disposal of the platinum group metals (rhodium, ruthenium, and platinum), it was agreed that we would report to you on the results of the March 23 meeting with the industry.

The meeting, attended by 75 persons representing all segments of the platinum group metals industry, was held as scheduled. Commissioner John G. Harlan, Jr. of the Defense Materials Service chaired the session.

Mr. Harlan explained to the group that the material which would be released upon congressional approval would be for U.S. consumption only and that the Government's objective was to formulate as soon as possible a program that would most equitably relieve the current shortage of platinum.

There was no indication of any reservation on the part of industry regarding the need for the disposal of this material. It was unanimously agreed that the material is in short supply and is urgently needed by the industry.

The industry representatives stressed the matter of timing and the importance of relieving the critical shortage as soon as possible. After discussing the various ways of implementing the disposal program, it was determined by a unanimous show of hands that the best and quickest method for disposal of these materials would be through the normal channels of distribution. Based

on this consensus, the General Services Administration agreed to contact those firms normally distributing platinum to work out arrangements for the equitable distribution of this material on a nonprofit basis, under firm guidelines to be determined by GSA. These guidelines would include provision for the handling of defense-rated priorities and hardship cases, and also a special consideration for small business in addition to the above-mentioned restriction to domestic consumption.

We believe that on the basis of the agreement reached at this meeting, we will have little difficulty in developing a workable, orderly program to insure the proper distribution of these materials in a manner most beneficial to the interests of the industry and the Government.

Sincerely yours,

LAWSON B. KNOTT, Jr., *Administrator.*

UNIVERSAL OIL PRODUCTS Co.,
Des Plaines, Ill., March 25, 1966.

Hon. PHILIP J. PHILBIN,
Rayburn House Office Building,
Washington, D.C.

DEAR MR. PHILBIN: We were privileged to attend the public hearing held by your subcommittee regarding H.R. 12412 and H.R. 13364 and a subsequent industry meeting called by Mr. John G. Harlan, Jr., Commissioner of Defense Materials of GSA.

As expressed in our letter of March 24, 1966, to Mr. Harlan, copy of which is enclosed, Universal is vitally interested in the method to be used in distributing the excess platinum which may be authorized. We feel that section 2 of H.R. 12412, even though it may be permissive rather than restrictive, would introduce an element of inequity and disadvantage to the platinum users and primary producers who have little or no palladium to exchange for platinum, unless they bought it for cash solely for use in the exchange.

We strongly urge a favorable report on H.R. 13364 and its passage by the House of Representatives despite the additional time that might be required for joint conference action to resolve the difference between it and S. 2642.

If there is any other information or assistance that we may provide to your subcommittee for its consideration, we remain at your disposal.

Very truly yours,

GEORGE ORESCAN, *Vice President.*

PITTSBURGH PLATE GLASS Co.,
Pittsburgh, Pa., March 4, 1966.

Hon. PHILIP J. PHILBIN,
Chairman, House Armed Services Committee,
Rayburn House Office Building, Washington, D.C.

DEAR CONGRESSMAN PHILBIN: My company and I appreciate the interest you have shown in H.R. 12412 to authorize release of surplus platinum from the national stockpile. I know that with the assistance such as you will give us, this bill should come to a successful conclusion.

If there is any further information I can give you regarding this situation I will be most happy to do so.

Sincerely yours,

R. A. McLAUGHLIN.

H.R. 13663—RUTHENIUM

[H.R. 13663, 89th Cong., 2d sess.]

A BILL To authorize the disposal of ruthenium from the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately fifteen thousand troy ounces of ruthenium now held in the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic

and Critical Materials Stock Piling Act (50 U.S.C. 96b): *Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.*

Mr. PHILBIN. We will take up the next bill, 13663.

(The statement of Hon. Philip J. Philbin on Ruthenium, H.R. 13663, is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. Again, this is another legislative proposal submitted by the General Services Administration.

Ruthenium is one of the platinum group metals, and there has never been a stockpile objective for this metal.

In 1959, 51 troy ounces were approved for disposal.

While the average acquisition cost of the commodity was \$37.298 per troy ounce, the average return to the Government based on all sales made under the disposal, was \$35.18 per troy ounce.

Currently, we have in our inventory 15,001 troy ounces. The bill provides for the disposal of approximately 15,000 troy ounces.

Ruthenium is obtained from Canada, South Africa, the U.S.S.R. and the United States.

Ruthenium is a gray or silverlike, brittle, nonductile metal of the platinum group. It is brittle at high temperatures. Ruthenium is insoluble in acids, but is attacked by fused alkalis.

Ruthenium is alloyed with platinum and palladium for a hard corrosion-resistant metal. The alloy is used for jewelry, contact points, and catalysts. Ruthenium alloys are not used at elevated temperatures under oxidizing conditions. Ruthenium has been used for the nibs of pens, phonograph needles, and pivots in instruments. The high melting point, hardness, and brittleness limit the satisfactory working of ruthenium mechanically.

Mr. Lawrence, will you give us your views on that bill?

(The statement of Mr. William N. Lawrence on ruthenium, H.R. 13663, is as follows:)

STATEMENT OF WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, I wish to thank you for the opportunity of appearing before you to support H.R. 13663, 89th Congress, a bill to authorize the sale of approximately 15,000 troy ounces of ruthenium from the supplemental stockpile.

Ruthenium occurs, together with other metals of the platinum group, in various ores, notably the nickel-copper ores of Canada and deposits of South Africa. When alloyed with platinum and palladium, ruthenium is effective in creating a hard, corrosion-resistant metal. The alloy is used principally for jewelry, electrical contact points, and catalysts.

There is no stockpile objective for ruthenium, and the total inventory consisting of 15,000 troy ounces is determined to be excess to defense needs. The proposed disposal program for this material has

the concurrence of all interested Government agencies, processors, domestic consumers, and foreign governments.

The Office of Emergency Planning favors the passage of this measure.

Mr. PHILBIN. When was this stockpile requirement fixed? You don't have any stockpile requirement?

Mr. LAWRENCE. No, sir; there is no defense stockpile for ruthenium. The last study was made only about last fall, and the Department of Defense could not identify any need for it, as far as they were concerned.

Mr. PHILBIN. Have you had any further conferences on that? You have not had conferences since last fall about it?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. Nothing has been done about it since last fall?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. All you have now is the information about the inventory that you have?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. And the fact there is no stockpile requirement. There is no stockpile requirement at this time?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. Do you have some questions?

Mr. ARENDS. No.

Mr. PHILBIN. No questions. Thank you very much.

Mr. Harlan.

Mr. HARLAN. Mr. Chairman, may I submit this prepared statement for the record?

Mr. PHILBIN. Yes; we will insert your statement in the record and then you can give us your own views.

(The statement of Mr. Harlan on H.R. 13663 is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13663.

This bill would authorize the disposal of approximately 15,000 troy ounces of ruthenium now held in the supplemental stockpile.

The Office of Emergency Planning has determined this quantity, which is the total inventory of ruthenium in the stockpile, to be in excess of stockpile requirements.

Ruthenium is a gray or silverlike, nonductile metal of the platinum group. It is alloyed with platinum and palladium to produce a hard corrosion-resistant metal. The high melting point, hardness, and brittleness limit the satisfactory working of ruthenium mechanically.

U.S. production of ruthenium is limited. The primary sources of the material are the Republic of South Africa, Canada, and Russia.

The approximate acquisition cost of the ruthenium in the inventory was about \$37.50 per troy ounce. The present market value is \$55 to \$60 per troy ounce.

We have consulted with the affected Government agencies in the development of the disposal program on the excess. The Department of Commerce consulted with the principal dealers and processors of ruthenium.

We have arranged a meeting with the major segments of the platinum industry on March 23 to review details regarding the methods through which the excess should be released, subject to authorizing legislation.

This agency strongly recommends the enactment of H.R. 13663.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. HARLAN. Mr. Chairman, we are meeting with the industry this afternoon at 2 o'clock to discuss the platinum group metals. We will discuss this along with platinum and rhodium, which we discussed with this committee earlier this week.

I have been in close touch with the platinum group metals people. Ruthenium is probably the hardest of the platinum groups, and it is used as a hardening alloy primarily with platinum. Because of its extreme hardness, its uses are somewhat limited.

The industry seems to feel there will be no problem in working out a schedule for disposing of this material through the regular channels, and I expect no problem on this at all.

Mr. PHILBIN. Have you had industry conferences as such with the industry, or have you just polled the industry informally?

Mr. HARLAN. I polled the industry informally, but we do have a meeting this afternoon at which I expect about 100 different representatives of the industry present.

Mr. PHILBIN. You keep us advised of the outcome of that meeting?

Mr. HARLAN. I certainly will, sir.

Mr. PHILBIN. The views expressed, and whether you have had a consensus with the industry, and the other information we usually like to have in this committee with which you are so thoroughly familiar.

Mr. HARLAN. I will furnish you with a report promptly.

Mr. PHILBIN. Are there any questions, Mr. Chairman?

Chairman RIVERS. No.

Mr. PHILBIN. We again have our distinguished chairman of the full committee here this morning. I thought perhaps he might have some questions.

Chairman RIVERS. Like yesterday, I came to learn something, I don't know anybody I would rather learn from than you.

As I said yesterday, he is the most knowledgeable man in Congress on the subject. I am privileged to be here. I want to again congratulate your subcommittee for your leadership in the job you are doing in this entire field. I am glad to be here.

Mr. PHILBIN. Thank you very much, Mr. Chairman; you always add so much to our meetings.

H.R. 13774—VANADIUM

[H.R. 13774, 89th Cong., 2d sess.]

A BILL To authorize the disposal of vanadium from the national stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately six thousand four hundred and fifty short tons of vanadium (V content) now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,

SUBCOMMITTEE NO. 1,

Washington, D.C., Thursday, March 24, 1966.

The subcommittee met at 10:30 a.m., Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. PHILBIN. The committee will now come to order.

The first bill that we will consider today will be H.R. 13774.

(The statement of Hon. Philip J. Philbin on vanadium, H.R. 13774, is as follows:)

**OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1**

Mr. PHILBIN. This is another part of the administration package for stockpile disposals and calls for the disposal of approximately 6,450 short tons of vanadium (V content) now held in the national stockpile.

At the present time, we have in our inventory 7,865 short tons and our stockpile objective is 1,400 short tons. Thus, we have an excess of 6,465 short tons.

Vanadium is a pale-gray metal with a silvery luster and readily alloys with iron and other metals.

Vanadium is used primarily by the steel industry as an alloy in the production of high-strength structural steels, tool steels, and related products requiring toughness and strength at high temperatures. The average acquisition cost of the commodity was \$4,013.72 per short ton.

In 1962, Congress authorized the disposal of 33 short tons, and the average return to the Government was \$1,350 per short ton. There is indication now, however, that the present market value is about \$4,100 per ton of contained vanadium.

Vanadium is obtained in Peru and the United States. Other major producing areas are South-West Africa, Finland, and the Republic of South Africa.

With that preliminary statement on the record, I would like to have Mr. Lawrence come forward and give us his testimony on the bill.

Mr. LAWRENCE. Thank you, Mr. Chairman.

(The statement of Mr. William N. Lawrence on vanadium is as follows:)

STATEMENT BY WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, I wish to thank you for the opportunity to appear before you to support H.R. 13774, 89th Congress, a bill to authorize the sale of approximately 6,450 short tons of vanadium (V content) from the national stockpile.

On the basis of the current stockpile objective amended July 22, 1964, the remaining quantity totaling 6,450 short tons is determined to be excess to stockpile needs and available for disposal. In addition, the Atomic Energy Commission carries an inventory of vanadium pentoxide and is currently disposing of its surplus stock through the facilities of the General Services Administration.

The principal sources of foreign supply are Peru, Northern Rhodesia, and South-West Africa. However, the United States accounts for more than 50 percent of the world production as a coproduct of uranium.

Approximately 95 percent of all vanadium is consumed by the steel industry in the manufacture of high strength structural steels, tool steels, and related products requiring toughness and strength at high temperatures. It is also used in combination with other alloying materials such as nickel, aluminum, boron, and manganese.

In the preparation of the disposal plan, discussions have been held with interested agencies who have concurred after holding consultations with processors, traders, consumers, and foreign governments.

The Office of Emergency Planning favors the enactment of the legislation under consideration.

Vanadium has been in somewhat of a shortage of supply recently. The sales we have been carrying on, or GSA has been carrying on, have been vanadium turned over to them by the Atomic Energy Commission as surplus stock. I think the sales have been going very well, they have been very helpful to industry.

Mr. PHILBIN. What is the top price the Government is getting for these sales? Do you have the price per ton of the most recent sales?

Mr. HARLAN. About \$1.22 a pound, on the average, per pound. That would be \$4,300 per ton.

Mr. PHILBIN. About \$4,300. We had some information to the effect that the present market price might be above \$4,100. Do you have anything to confirm that?

Mr. HARLAN. Sir?

Mr. PHILBIN. Would you be able to confirm some information we have to the effect the present market value is about \$4,100?

Mr. HARLAN. Yes, sir. One of the problems here, Mr. Chairman, is that if we talk about the contained vanadium that would be about right. If you are talking about—

Mr. PHILBIN. Was this contained vanadium which you are disposing of?

Mr. HARLAN. It was vanadium—

Mr. PHILBIN. The most recent sales of vanadium. If it was contained vanadium there would be no reason why that wouldn't be sold at the market price. If you sold it at \$2,300 you sold it substantially below the market price. If that be so, what is the explanation of that?

Mr. HARLAN. I was speaking about vanadium pentoxide. If I get in line with you and talking about vanadium contained in——

Mr. PHILBIN. I asked if it was vanadium contained; you replied it was.

Mr. HARLAN. That is correct.

Mr. PHILBIN. If it was, you sold it at \$2,300 at the top. Could you give any explanation why there should be that disparity between what you sold it for and the market price?

Mr. HARLAN. We are both talking about the same thing, Mr. Chairman.

Mr. PHILBIN. I just want to have the explanation.

Mr. HARLAN. Yes; the vanadium we sold was sold at the price we quoted, about \$4,300 a ton.

Mr. PHILBIN. You sold it for about \$4,300, not \$2,300?

Mr. HARLAN. That is right.

Mr. PHILBIN. I must have misunderstood you, then.

Mr. HARLAN. I am afraid I was talking about another type of vanadium.

Mr. PHILBIN. Has there been some other type you have been selling?

Mr. HARLAN. No, sir.

Mr. PHILBIN. Have you been selling all vanadium contained or other types of vanadium?

Mr. HARLAN. We have been selling vanadium pentoxide. The content of the vanadium in the vanadium pentoxide is relatively one-half of the volume of the pentoxide. When I was giving you the price of the pentoxide I was giving you only half of the price you were talking about.

Mr. PHILBIN. Now, that we have an understanding on that, you didn't sell below the market price?

Mr. HARLAN. No, sir; we did not sell below the market price.

Mr. PHILBIN. Did you ever make a practice of selling below the market price?

Mr. HARLAN. No, sir.

Mr. PHILBIN. In this case did some of this vanadium go overseas?

Mr. HARLAN. No, almost all of this vanadium was sold for domestic consumption.

Mr. PHILBIN. For domestic consumption?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. There has been no instance you know of where any increment of the vanadium that you disposed of has been sold overseas?

Mr. HARLAN. Mr. Chairman, in the first sale of the vanadium, the AEC vanadium we held, we permitted 25 percent of the materials sold to be available for export. I have no information as to how much of it actually did get into export.

In the second sale, because of the increasingly critical supply situation, we confined the entire sale for domestic consumption.

Mr. PHILBIN. That is your practice?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. If you have a critical supply situation here you mark it for domestic consumption?

Mr. HARLAN. That is right.

Mr. PHILBIN. Otherwise, where you can you may sell a certain portion or percentage of it overseas?

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. Mr. Arends, do you have any questions?

Mr. ARENDS. Not yet.

Mr. PHILBIN. Not yet. We will come back to you a little later.

Mr. Clancy.

Mr. CLANCY. Yes, Mr. Chairman.

In 1951 our stated objective here was 6,500 short tons, and that was true also in 1952. Now, April 2, 1964, which is current, our objective is 1,400. How do you account for an adjustment downward of this extent?

Mr. LAWRENCE. We are just not doing what—

Mr. CLANCY. Our objective was 6,500 short tons in 1951 and 1952.

Mr. HARLAN. He wants to know why you decreased it.

Mr. LAWRENCE. This is due to the fact there is an increasing supply being developed within the United States, itself, of this material. In fact, there is a very large mine operation coming into being, it may be in operation right now, in Arkansas, producing vanadium ore.

Mr. CLANCY. What does that have to do with our objective? In other words, if we acquire 6,500 short tons because we feel it is necessary, and we have adjusted this downward to 1,400 short tons, does this mean we have adjusted it downward due to the fact we may be able to secure the tonnage?

Mr. LAWRENCE. That is correct. When the supply becomes available to us, in the United States, in North America, or countries immediately adjacent to North America, increased supplies, the objective will go down. This has happened in quite a number of materials.

Mr. CLANCY. All right. You say this mine is about to be opened?

Mr. LAWRENCE. It is about to be opened. It is a very large operation by the Union Carbide Co. in Arkansas.

Mr. PHILBIN. Does the gentleman yield?

Mr. CLANCY. Yes.

Mr. PHILBIN. What production do you expect to get annually with this mine?

Mr. LAWRENCE. I do not know. The gentleman is here, maybe he can answer it.

Mr. Moroso, Union Carbide.

How much production?

Mr. MOROSO. I couldn't answer the question because it goes up every day. I haven't been there for 2 days.

Mr. PHILBIN. How high up has it gone now?

Mr. MOROSO. We haven't gone into production.

Mr. PHILBIN. You haven't gone into production. These are just estimates. Did you base your stockpile requirements on estimates?

Mr. LAWRENCE. Yes, sir; but I will have to check in and find out exactly what this is. I can supply it for the record as to what we have got in there.

Mr. PHILBIN. Give us the supply and the background, and how you arrived at your evaluation.

Mr. LAWRENCE. Yes.

Mr. PHILBIN. What your analyses of the evaluation was, so the committee will have an idea of what your thinking was, and what facts you considered.

Mr. LAWRENCE. On any stockpile objectives, it is projected over a period of years in the future, usually 2 or 3 years from the time we establish the objective. It is based on a mobilization period of 3 years. We take into account the requirements for the material as they are known to industry at the present time, and we also get estimates from the Bureau of Mines as to the available supply, and that which is planned, to come in in the particular period we are speaking of.

Mr. PHILBIN. When you find you are below stockpile requirements for any reason, what action do you take about that?

Mr. LAWRENCE. I am sorry, I didn't follow you.

Mr. PHILBIN. If you find for any reason yourself below stockpile requirements, what action do you take about that?

Mr. LAWRENCE. Then we proceed to increase the objectives. Of course, if the inventories don't meet the objectives, then we try to take some steps to cure it.

Mr. PHILBIN. Do you have any outstanding or conspicuous instances now with respect to the stockpile where you have critical materials that you anticipate aren't really truly critical materials that are under the stockpile objectives?

Mr. LAWRENCE. We have about 11 or 12 materials where we haven't met the objectives completely, but I do not consider any one of them in what you might call a critical situation. In other words, we have sufficient material available so that in most instances we could carry on for the first 1 or 2 years with the mobilization period. The other will be acquired toward the third year. In other words, we are moving, for example, one of the items where we haven't met the objective is jewel bearings. Here we have deliberately been slow in the procurement because all of this procurement comes from this Government-owned facility out at Rolla, N. Dak. We are trying to, spread our production over the longest period of years so that this facility can keep in operation. It is on an Indian reservation, and they employ all Indians there. It is a source of income that would not be available otherwise to them.

In the other items, like in the palladium, as I explained to you yesterday, we intend to procure what we think in the next 1, 2 or 2½ years. We have a shortage in iodine—no, that one has been made up. All the shortage on this one is now under a barter contract, so it is completed.

Some of the others that are here, we have Quinidine, we have a deficit, but we are making no attempt to get this because the Quinidine situation for the civilian population in the United States is very critical. The price of the Quinidine, which is a heart medicine, has gone up from about, I think the prescription about 2 years ago used to cost about \$3, now it is between \$12 and \$14, which is prohibitive.

Mr. PHILBIN. What is it used for, heart conditions?

Mr. LAWRENCE. That is right. This is one that we may have to take some action with the stockpile, because we have got to do something to make this drug available to the U.S. population. All of the bark, from which you make this—Quinidine is actually made from quinine, which in turn comes from the cinchona bark. All the cinchona bark, the majority of it, is from Indonesia.

Mr. PHILBIN. Is the supply being stepped up at the present time? Is the production being stepped up?

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. Mr. Arends, do you have any questions?

Mr. ARENDS. Not yet.

Mr. PHILBIN. Not yet. We will come back to you a little later.

Mr. Clancy.

Mr. CLANCY. Yes, Mr. Chairman.

In 1951 our stated objective here was 6,500 short tons, and that was true also in 1952. Now, April 2, 1964, which is current, our objective is 1,400. How do you account for an adjustment downward of this extent?

Mr. LAWRENCE. We are just not doing what——

Mr. CLANCY. Our objective was 6,500 short tons in 1951 and 1952.

Mr. HARLAN. He wants to know why you decreased it.

Mr. LAWRENCE. This is due to the fact there is an increasing supply being developed within the United States, itself, of this material. In fact, there is a very large mine operation coming into being, it may be in operation right now, in Arkansas, producing vanadium ore.

Mr. CLANCY. What does that have to do with our objective? In other words, if we acquire 6,500 short tons because we feel it is necessary, and we have adjusted this downward to 1,400 short tons, does this mean we have adjusted it downward due to the fact we may be able to secure the tonnage?

Mr. LAWRENCE. That is correct. When the supply becomes available to us, in the United States, in North America, or countries immediately adjacent to North America, increased supplies, the objective will go down. This has happened in quite a number of materials.

Mr. CLANCY. All right. You say this mine is about to be opened?

Mr. LAWRENCE. It is about to be opened. It is a very large operation by the Union Carbide Co. in Arkansas.

Mr. PHILBIN. Does the gentleman yield?

Mr. CLANCY. Yes.

Mr. PHILBIN. What production do you expect to get annually with this mine?

Mr. LAWRENCE. I do not know. The gentleman is here, maybe he can answer it.

Mr. Moroso, Union Carbide.

How much production?

Mr. MOROSO. I couldn't answer the question because it goes up every day. I haven't been there for 2 days.

Mr. PHILBIN. How high up has it gone now?

Mr. MOROSO. We haven't gone into production.

Mr. PHILBIN. You haven't gone into production. These are just estimates. Did you base your stockpile requirements on estimates?

Mr. LAWRENCE. Yes, sir; but I will have to check in and find out exactly what this is. I can supply it for the record as to what we have got in there.

Mr. PHILBIN. Give us the supply and the background, and how you arrived at your evaluation.

Mr. LAWRENCE. Yes.

Mr. PHILBIN. What your analyses of the evaluation was, so the committee will have an idea of what your thinking was, and what facts you considered.

Mr. LAWRENCE. On any stockpile objectives, it is projected over a period of years in the future, usually 2 or 3 years from the time we establish the objective. It is based on a mobilization period of 3 years. We take into account the requirements for the material as they are known to industry at the present time, and we also get estimates from the Bureau of Mines as to the available supply, and that which is planned, to come in in the particular period we are speaking of.

Mr. PHILBIN. When you find you are below stockpile requirements for any reason, what action do you take about that?

Mr. LAWRENCE. I am sorry, I didn't follow you.

Mr. PHILBIN. If you find for any reason yourself below stockpile requirements, what action do you take about that?

Mr. LAWRENCE. Then we proceed to increase the objectives. Of course, if the inventories don't meet the objectives, then we try to take some steps to cure it.

Mr. PHILBIN. Do you have any outstanding or conspicuous instances now with respect to the stockpile where you have critical materials that you anticipate aren't really truly critical materials that are under the stockpile objectives?

Mr. LAWRENCE. We have about 11 or 12 materials where we haven't met the objectives completely, but I do not consider any one of them in what you might call a critical situation. In other words, we have sufficient material available so that in most instances we could carry on for the first 1 or 2 years with the mobilization period. The other will be acquired toward the third year. In other words, we are moving, for example, one of the items where we haven't met the objective is jewel bearings. Here we have deliberately been slow in the procurement because all of this procurement comes from this Government-owned facility out at Rolla, N. Dak. We are trying to, spread our production over the longest period of years so that this facility can keep in operation. It is on an Indian reservation, and they employ all Indians there. It is a source of income that would not be available otherwise to them.

In the other items, like in the palladium, as I explained to you yesterday, we intend to procure what we think in the next 1, 2 or 2½ years. We have a shortage in iodine—no, that one has been made up. All the shortage on this one is now under a barter contract, so it is completed.

Some of the others that are here, we have Quinidine, we have a deficit, but we are making no attempt to get this because the Quinidine situation for the civilian population in the United States is very critical. The price of the Quinidine, which is a heart medicine, has gone up from about, I think the prescription about 2 years ago used to cost about \$3, now it is between \$12 and \$14, which is prohibitive.

Mr. PHILBIN. What is it used for, heart conditions?

Mr. LAWRENCE. That is right. This is one that we may have to take some action with the stockpile, because we have got to do something to make this drug available to the U.S. population. All of the bark, from which you make this—Quinidine is actually made from quinine, which in turn comes from the cinchona bark. All the cinchona bark, the majority of it, is from Indonesia.

Mr. PHILBIN. Is the supply being stepped up at the present time? Is the production being stepped up?

Mr. LAWRENCE. No, sir. We have all kinds of difficulty getting it out of Indonesia. They put an embargo on the bark, the quinine, and everything else.

Mr. PHILBIN. You cannot get the bark, is that the problem?

Mr. LAWRENCE. They divert their supplies to China or other places. I don't know, this may be remedied in time.

Mr. PHILBIN. We are not getting enough of it to step up our supply; is that right?

Mr. LAWRENCE. That is right. A lot of it has gotten into the hands of speculators around the world, and they have put the prices up to prohibitive levels.

Mr. PHILBIN. What is the next one of the materials in short supply?

Mr. LAWRENCE. We have rutile ore; this is a minor one, where we have a deficit of only about 4,000 tons of a total objective of 51,000 tons. We are making no effort to obtain that.

Sapphire and ruby. This is the artificial jewel that is used for making jewel bearings. This is a very small deficit of about 2,000 carats out of a total of 18,000.

We have a small deficit in selenium, where the objective is 475,000 pounds and we have an inventory of 404,000 pounds. Asbestos, we have a small deficit of about 4,000 tons out of a total of 13,000.

Refractory chromite, we have an objective of 1,425,000 tons. We have available 1,227,000 tons in inventory.

So I think we could safely say we are very close to our objectives in most everything that we have.

Mr. PHILBIN. Your list probably contains 13 or 15 materials.

Mr. LAWRENCE. Yes.

Mr. PHILBIN. Is that all you have? Aren't you omitting some?

Mr. LAWRENCE. That is all we have where we have deficits.

Mr. PHILBIN. Would you have a deficit in copper at the present time?

Mr. LAWRENCE. We have a deficit in copper now. We are about 370,000 tons below the objective.

Mr. PHILBIN. 370,000 tons below the objective at present?

Mr. LAWRENCE. Yes, sir. That will be so after we have sold the 200,000 tons which was released by the President.

Mr. PHILBIN. What are we doing about making that up, about bringing that up, eliminating that deficit?

Mr. LAWRENCE. We haven't made any effort—

Mr. PHILBIN. Has any attempt been made to try to step up the supply, or cut down the deficit, or eliminate it?

Mr. LAWRENCE. We are at the present time in OEP with the co-operation of a number of other agencies developing a subsidy program for an increased production of copper in the United States and its territories. We are going to use the Defense Production Act Borrowing Fund where we have available about \$100 million for this program. I do not know whether that is enough money, but we are going to attempt to expand production around 120,000 tons over a period of the next 3 or 4 years.

We may have to pay considerably more than 36 cents for some of this production, because it is going to have to come from high-cost mines which are not now operating. Any copper purchased under this program will be available to put in the stockpile, or for resale

to consumers—it depends on whether the copper situation improves any.

Mr. PHILBIN. Do you have pending plans to purchase from overseas sources, too?

Mr. LAWRENCE. None at the present time; no sir. I mean, the copper price overseas is 42 cents. That is what the producers price is. Of course, it sells up to 70 and 80 cents on the London metal exchange. We have no plans at the present time for procurement of copper. We would have to request an appropriation for this purpose.

Mr. PHILBIN. Are you informed concerning the present negotiations of the Government with Chile to purchase 100,000 tons of copper?

Mr. LAWRENCE. These are regular supplies that are coming in and have been coming in all along to the American companies who are mining in Chile. These are not Government purchases.

Mr. PHILBIN. This would not be allocated for Government purchases?

Mr. LAWRENCE. No.

Mr. PHILBIN. Are negotiations been conducted by the Government?

Mr. LAWRENCE. As far as I know, yes. What they did, there was an agreement made, it is my understanding—I may not be completely clear on the facts here—that they agreed to sell to the United States 90,000 tons of copper at 36 cents rather than their own world price, which is 42 cents. In return for this, we loaned them \$10 million to the Chilean Government. But the copper will be distributed through the regular sales channels of the two American companies who mine the copper in Chile.

Mr. PHILBIN. So none of it would come into the stockpile?

Mr. LAWRENCE. None of it.

Mr. PHILBIN. It is not being purchased for the stockpile, it is being purchased for private consumption?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. But the Government negotiated the deal and made some sort of arrangement with Chile that was satisfactory?

Mr. LAWRENCE. That is right, sir.

Mr. PHILBIN. That is being purchased at 36 cents plus whatever quid pro quo is being paid by the U.S. Government in the form of laws of favorable terms, or other benefits?

Mr. LAWRENCE. That is correct, sir.

Mr. PHILBIN. Do you know of any plans that are in being to balance or eliminate the deficit of this material, to get it in the stockpile?

Mr. LAWRENCE. The 200,000 tons of copper we propose to sell will be sold, we hear, with two options in the contracts. One will be that the Government will have an option to rebuy this copper, or the amounts of copper that are allocated to individual producers at 36 cents, or less, if the price of copper decreases. But the 36 cents is the ceiling that the Government will have to pay for it.

We also have another option which is—

Mr. PHILBIN. Where are you going to buy copper today for 36 cents?

Mr. LAWRENCE. Well, this is going to be in the contract. In other words, we are going to sell this copper to the producers for 36 cents, with the option to repurchase it at some time in the future at the same price, or less.

Mr. PHILBIN. If these producers were buying it outside would they be able to buy it for 36 cents?

Mr. LAWRENCE. I do not know, but I don't think so.

Mr. PHILBIN. What is your agency, or any of the agencies that are involved here, doing about eliminating the deficit that exists, or will exist, in this supply?

Mr. LAWRENCE. We will have to lay plans at some time in the future when copper becomes plentiful again, to replenish the stockpile, and I am sure we will do that, but at the present time, with the grave shortage that we have, it has always been the policy of stockpile procurement to never go into a tight market and create an additional impact where the shortage already exists.

Certainly we wouldn't make any effort whatsoever at the present time to procure copper for the stockpile. We think every pound of copper we can make available, we have such a large defense requirement for copper now, should go to relieve the current U.S. shortage. Requirements for copper are now beyond the productive capacity of the United States.

Mr. PHILBIN. If we have such a large defense need for copper at the present time I suppose when we do make disposals for one reason or another, you would normally expect that that copper would be allocated to defense-rated orders?

Mr. LAWRENCE. Defense-rated orders receive first priority on all of it.

Mr. PHILBIN. Is that the case on all of these materials?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. So any reports to the contrary are not verified and not accurate?

Mr. LAWRENCE. No, sir; they are not.

Mr. PHILBIN. I take it that you might be concerned, or I ask you whether you are concerned about what possible action is open to us in the event we should have hostilities at any time, or in the future, and we find ourselves in the rather difficult position of having shortages in this stockpile?

Mr. LAWRENCE. I can say this. If we got even further into—if we have an increased defense production load there is only one course of action the Government can take: we will have to start allocating copper. We will issue limitation orders which will forbid the use of copper in many applications that are being used in today. I don't think we would have the slightest hesitancy in doing this.

Mr. PHILBIN. You believe by channeling copper away from less urgent uses to urgent uses that in that way you might be able to tide over any emergency?

Mr. LAWRENCE. Yes, sir; we have that authority under the Defense Production Act. I don't hesitate to say we would use it if it became necessary.

Mr. PHILBIN. Mr. Arends, do you have some questions?

Mr. ARENDS. We have gotten off on copper this morning and I might follow that a little bit, if I might.

On these defense-rated orders, approximately 200,000 pounds of copper are going to be released. Would you say every pound of this is going because of the need of defense orders?

Mr. LAWRENCE. I couldn't say that; no, sir.

Mr. ARENDS. Approximately all of it?

Mr. LAWRENCE. Well, let me answer it this way: The last time we made a release of copper, about 40 percent of it went for defense-rated orders.

Mr. ARENDS. Forty percent?

Mr. LAWRENCE. Yes.

Mr. ARENDS. And we had a rather sad tale about what happened to some of it, as you know.

Mr. LAWRENCE. Yes, sir.

Mr. ARENDS. We are going to get rid of 200,000. Then you say you have a clause in the contract that you can buy it back. Why are we selling it in the first place, or why are we asking these fellows to buy it back? Why are they buying it in the first place if they don't need it?

Mr. LAWRENCE. They need it badly.

Mr. ARENDS. What is the use of putting the clause in there? If they need it badly, you can't buy it back.

Mr. LAWRENCE. We would like to buy it back and refill the stock-pile objective at some time in the future when copper becomes more plentiful.

Mr. ARENDS. But it won't. If they need it so badly now, they will use the 200,000 tons.

Mr. LAWRENCE. There is privately financed expansion of copper underway at the present time in the United States. We hope by 1970 we will have at least 400,000 tons more than we have this year, 300,000 more than we will have in 1966, because approximately 100,000 tons new capacity came into being in 1965.

Mr. ARENDS. I am not quite clear, as developed by the chairman a moment ago, what happened in Chile with the \$10 million loan. In other words, without the \$10 million loan to that country, we possibly could not have bought the copper at 36 cents, we would have had to pay on the market, the world market?

Mr. LAWRENCE. Forty-two cents; yes.

Mr. ARENDS. In other words, we say we give you 10 million bucks if you sell it to us for 36 cents a pound; is that right?

Mr. LAWRENCE. I don't say "give." It was loaned, as I understood it.

Mr. ARENDS. The loans have a funny way of ending up something else—I don't know how to put it. But anyhow, the loan part had to come into being in order to effectuate the purchase at 36 cents?

Mr. LAWRENCE. That was the consideration, as I understand it, yes, sir.

Mr. PHILBIN. That was part of the consideration.

Mr. ARENDS. That was part of the consideration?

Mr. LAWRENCE. Part of it.

Mr. PHILBIN. The basic price, as I understood it from the press, was 36 cents a pound. That was the contract price. And then according to the press there was an understanding that the loan, or perhaps some other benefits, might be furnished to Chile that would sort of make them willing to continue to go into the deal.

Is that what your understanding was?

Mr. LAWRENCE. That is my understanding. But I have to confess I don't know any more about the other considerations than you do; I only know what I read in the paper.

Mr. PHILBIN. I only know what I read in the press, too. I take it the press maybe is accurate in this instance, from what you say, and what your knowledge is.

Of course, if we do get this 100,000 tons, and it is channeled into industry here, it would greatly lessen the pressure we have here for a transfer out of stockpile?

Mr. LAWRENCE. We certainly hope so.

Mr. PHILBIN. That would in that sense be something that we could feel was moving in the direction of lessening pressures and take care of shortages?

Mr. LAWRENCE. Yes, sir; that is exactly why we are doing it at this time.

Mr. PHILBIN. Do you have some further questions?

Mr. ARENDS. Except in the final analysis, I would have to say there is an awful lot of hanky-panky gets involved in some of this maneuvering. I don't know how we do these things, but we seem to do it.

Mr. LAWRENCE. Well, copper is a commodity that seems to move around quite a bit in the United States, and the people's desire to get hold of it, I'm sure, there is plenty of what you call hanky-panky going on.

Mr. ARENDS. Yes. I am not pointing a finger at anyone. The only thing is, I hope we do a much improved job over what we did in the original release when this time comes, and we do it really for the defense purpose, and nothing else.

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Mr. Clancy.

Mr. CLANCY. No questions.

Mr. COOK. Mr. Chairman, I would like to ask one or two questions.

Did I understand the copper from Chile was going into private industry, going to private American producers who have plants or mines in Chile?

Mr. LAWRENCE. That is correct.

Mr. COOK. And it will be sold.

Now, will it be sold at 36 cents or 42 cents, or at the world market price in this country? In essence, are we subsidizing these two private companies?

Mr. LAWRENCE. It will be sold at 36 cents in this country. These copper companies, the three that have mines there, are very good. They don't try to gouge on the prices. They have held the price to 36 cents all along.

Mr. COOK. The second question, Mr. Lawrence: What are we selling the copper for? At what price are we selling the copper from the national stockpile?

Mr. LAWRENCE. It will be sold at 36 cents.

Mr. COOK. What do you estimate we will be paying in 1970, when these additional mines are opened? What price do you estimate the price will be at that time when we buy it back?

Mr. LAWRENCE. Thirty-six cents, under the option, going into these contracts.

Mr. COOK. But we won't be making contracts necessarily with people that will be in the mining business; will we?

Mr. LAWRENCE. That is right.

Mr. COOK. We are only selling the copper to producers?

Mr. LAWRENCE. I don't think the final decision has been made as to how this would be allocated. I can't give you that detail, because it was undecided as of last night as to exactly the method which will be used in distributing of this 200,000 tons.

Mr. COOK. We don't know whether it is going to be distributed to consumers or producers at this stage?

Mr. LAWRENCE. Well, if this option clause goes in, it will have to go through the producers. Now, whether we make a further allocation—I mean tell the producers who to allocate it to—I don't know whether we could do that or not. This is under discussion.

Mr. PHILBIN. Have you finished, Mr. Cook?

Mr. COOK. Yes, sir.

Mr. PHILBIN. How would you explain the different prices you find for copper in the market today? How do you explain the different prices that we have in the market today; you have an American market, which is apparently 36 cents, and then you have another American market that ranges up around 42 cents to 50 cents, and then you have a world price that is set to range from 70 to 80 cents. How do you account for such a wide spread?

Mr. LAWRENCE. Well, you have 36 cents as the producer price, primary copper in the United States.

Mr. PHILBIN. That is the producer price?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. You don't anticipate that is going to be raised?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. You think they will observe the guidelines?

Mr. LAWRENCE. That is right. The scrap dealers on the other hand are getting anywhere from 40 to 60 cents for that copper.

This is something where you can't control it. I mean when the primary producer of copper, when the copper leaves his control, there is no—it is whatever the market will bear as far as the scrap dealer is concerned. This price is reflected in the New York Commodity Exchange.

Mr. PHILBIN. Based on the demands and the supplies?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. Like everything else.

And the world market is the same?

Mr. LAWRENCE. I think that—

Mr. PHILBIN. I don't want to belabor the point, but I wanted to have something for the record in view of the fact the question was raised here today regarding the copper disposal. We ought to have some explanation concerning it.

I agree with you that the price normally would be—I think everybody would agree—that the price would be normally established by the supply and demand, but it is more difficult to ascertain or to understand the reason why, in the light of this demand, the fact that copper is selling at such a much higher price both in the domestic market and in the world market, why the production, the price at the production level should be apparently pegged at 36 cents a pound. Can you explain that in any way?

Mr. LAWRENCE. Well, I think I can, and it is one given to me by a copper producer. They don't want to go above 36 cents because once they do they are going to lose a large part, some good portion of their market to aluminum.

Mr. PHILBIN. I understand.

Are there any further questions on this bill?

Mr. ARENDS. No. We will talk more about copper later on.

Mr. PHILBIN. We will try to get all the information we can about copper, and every other material we have in the stockpile. The gentleman understands that.

Mr. ARENDS. With your cooperation—

Mr. PHILBIN. So far as the Chair wants, he wants all the information he can possibly get on any bill presently under consideration, and what is present in the overall stockpile situation.

I think it was understood these gentlemen are always very frank with us, and candid, and they give us the best of their information, from anything they have available, and it is expert information, because Mr. Lawrence has been in the Government for a long time. He is an outstanding public servant. He always gives us very candid, frank, complete answers to our questions here.

Mr. LAWRENCE. Thank you, sir.

Mr. PHILBIN. Mr. Harlan is virtually in the same position. I think we don't have any trouble getting all the information we require to take any action on bills pending before us.

Now, Mr. Harlan, perhaps you will testify now.

Thank you, Mr. Lawrence.

Perhaps you will testify on this bill.

Mr. HARLAN. Mr. Chairman, with your permission I will submit my prepared statement for the record.

Mr. PHILBIN. We will take your statement for the record, and we would like to have your views.

(The prepared statement of Mr. John G. Harlan, Jr., on vanadium is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13774.

This bill would authorize the disposal of approximately 6,450 short tons of vanadium (V content) now held in the national stockpile. The Office of Emergency Planning has determined this quantity to be in excess of stockpile requirements.

Vanadium is a pale-gray metal with a silvery luster. It occurs in combination with other minerals or metals, including uranium and phosphate rock. It readily alloys with steel. When added to steel it toughens and strengthens it—forming hard carbides which are retained at high temperatures. Vanadium increases tensile strength without lowering ductility. The greatest percentage of all vanadium is consumed by the steel industry in the manufacture of high-strength structural steels, tool steels, and wear-resistant cast iron. It is also

used in combination with other alloying materials such as nickel and aluminum.

U.S. vanadium ore is mined principally in the Colorado Plateau as a coproduct of uranium. Other sources in the United States are South Dakota, New Mexico, Idaho, and Utah. Foreign sources of supply are Finland, Republic of South Africa, and South-West Africa.

The total inventory of vanadium (V content) held by GSA is 7,865 short tons. The present stockpile objective is 1,400 short tons. The excess of approximately 6,450 short tons is covered by H.R. 13774.

The vanadium for disposal is stockpile quality material in the form of vanadium pentoxide. The approximate acquisition cost of the vanadium pentoxide inventory was \$1.18 per pound. The average price received for similar vanadium pentoxide sold by GSA in February of this year was approximately \$1.22 per pound.

Industry representatives and affected Government agencies were consulted in the development of the program for the disposal of the excess. On March 3, we held a vanadium industry meeting with producers, consumers, and traders in the industry to discuss the proposed disposal. It was the opinion of the majority that the release of the vanadium would relieve a tight supply situation.

This agency strongly recommends the enactment of H.R. 13774.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. Chairman, as explained earlier, we have been disposing of vanadium declared excess by the Atomic Energy Commission, and since last October have disposed of quite a substantial amount of this material.

In the course of our disposal programs we have discovered beyond a doubt the material is badly needed by industry, particularly by the steel industry; that the consumption of this material is increasing. I assume it is increasing along with the growth of the economy generally, but also with the discovery of new uses for the material in alloying it with steel.

Mr. PHILBIN. Have these sales that you made shown a profit or a loss to the Government?

Mr. HARLAN. We are about breaking even, Mr. Chairman, on the sales. In this case, it is pretty much of a Mexican standoff.

We held a meeting, Mr. Chairman, on the 3d of March, with the representatives of various segments of the industry, and arrived at a majority agreement to release of the vanadium. I think I should say for the record that although there was agreement, no objection raised at the meeting, one of the small producers who participated in the meeting did write us a letter after the meeting raising some objection about the releases of the material.

Mr. PHILBIN. You have strong demand from some other places, haven't you, from the steel industry?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. There are serious shortages in several places. Could you give us some illustration of the character and scope of these demands which you received from industry?

Mr. HARLAN. Yes, sir. I have been in almost daily touch with representatives of the steel industry, and the ferroalloy industry, and

everyone is of the unanimous opinion that there is a short supply situation for this material, which probably will go on for 2 or 3 years. And I believe the material we are releasing here will help that situation over that period.

Mr. PHILBIN. We have several letters and communications and wires regarding this bill that we will insert in the record.

(The material above referred to is as follows:)

PITTSBURGH, PA., March 23, 1966.

HON. PHILIP J. PHILBIN,
Chairman, House Armed Services Subcommittee, Stockpile Disposals, House of Representatives, Washington, D.C.:

It is urgent that favorable action be taken promptly by your committee to expedite passage of H.R. 13774 for early release of surplus U.S. Government stockpiled vanadium pentoxide because of the present and anticipated future serious shortage which is affecting our production of vanadium-bearing steels.

W. W. CRAWFORD,
Vice President, Purchasing, United States Steel Corp.

PITTSBURGH, PA., March 23, 1966.

HON. PHILIP J. PHILBIN,
*House Office Building,
Washington, D.C.:*

We firmly believe that unless additional vanadium is made available in line with H.R. 13774, the domestic steel industry will face a serious shortage of this important alloying element before mid-1966 and that this shortage will continue for upward to 2 years. The item is extremely tight right now.

We respectfully request that you and your committee report favorably on H.R. 13774.

W. C. MEYER,
Crucible Steel Co. of America.

READING, PA., March 23, 1966.

HON. PHILIP J. PHILBIN,
*Chairman, House Armed Services Committee, Rayburn House Office Building,
Washington, D.C.:*

Urge prompt passage of bills releasing molybdenum and vanadium from stockpile. Delay will result in cut back production of specialty steels essential to defense and domestic economy and release of inflationary pressure on price due to domestically produced alloying elements from foreign sources.

H. S. POTTER,
Vice President, Carpenter Steel Co.

TOOL & STAINLESS STEEL INDUSTRY COMMITTEE,
Washington, D.C., March 24, 1966.

HON. PHILIP J. PHILBIN,
*House Committee on Armed Services,
Rayburn Office Building,
Washington, D.C.*

DEAR CONGRESSMAN PHILBIN: The Tool & Stainless Industry Committee wishes to express its strong support of H.R. 13774, the proposed release of 6,450 short tons of contained vanadium from the national stockpile.

Vanadium is one of the most important alloying elements used in the production of tool steel. The vanadium situation is rapidly approaching a critical stage and promises to result in a serious shortage unless prompt steps are taken. The contemplated release will provide enough vanadium to forestall the type of chaotic, hand-to-mouth problems that have caused such disruption of the specialty steel industry in connection with the molybdenum crisis.

Tool steel is used to cut, shape, and form all other metal products. As such it is vital to the national economy and security. Assurance of necessary raw materials to this essential industry must be high among our national objectives. We strongly urge prompt and favorable consideration of this important legislation.

Sincerely,

THOMAS F. SHANNON.

STATEMENT ON BEHALF OF VANADIUM CORP. OF AMERICA BY G. L. WEISENBURGER,
PRESIDENT AND CHAIRMAN

Vanadium Corp. of America is a major producer of ferroalloys in the United States. The company is heavily involved in the mining and milling of uranium/vanadium ores on the Colorado Plateau of the United States and from these and purchased ores produces vanadium pentoxide at the company's mill in Shiprock, N. Mex. From such vanadium pentoxide produced by our company at Shiprock and from purchased vanadium pentoxide, Vanadium Corp. manufactures in Cambridge, Ohio, various vanadium products for sale to the steel, titanium, aluminum, and chemical industries. The major form in which vanadium is consumed in the United States is in the form of ferrovanadium, which is sold primarily to the steel industry.

In recent years the United States has been the major producer of vanadium oxide, which has come mainly from vanadium/uranium mining operations on the Colorado Plateau and from slags resulting from the production of elemental phosphorus. The rest of the free world has obtained its oxide from the lead vanadates of South-West Africa, the vanadium-bearing magnetite ores of South Africa and Finland and by exports from the United States. The vanadium oxide produced from these sources is the base raw material for vanadium alloys and chemicals. As a result of the technological advances in the fields of metallurgy and chemistry, the growth in the use of vanadium has sharply accelerated within the last year. Forecasts of total use in the early 1970's made only 2 years ago may well be exceeded this year if sufficient raw material in the form of vanadium oxide can be made available. While total tonnage of steel in 1965 increased 3 percent over 1964, consumption of vanadium increased 33 percent, and in some of the vital areas of newer grades of steel the increase was 43 percent. If our domestic steel, lightweight metals and chemical industries are to achieve the progress they are capable of, additional vanadium oxide must be made available promptly, and the only current source of additional vanadium to fill this vacuum is material determined to be "excess" in the Government stockpile. This sudden imbalance between supply and demand was brought about by the unexpectedly rapid expansion in use, while at the same time the primary source of vanadium pentoxide in the United States has been substantially reduced by the policy decision of the Atomic Energy Commission to reduce the production of uranium, which as a side effect has reduced the production of vanadium pentoxide from combination uranium/vanadium ores. We have no quarrel with this decision of the AEC but do wish to point out that a major contributing factor to the present shortage of vanadium is a direct result of a Government policy decision.

Although demand and supply for vanadium oxide were approximately in balance early in 1965, this was made possible only because major producers were drawing heavily on reserves of oxide from uranium/vanadium mill tailings on the Colorado Plateau, but rapid inroads on this source have resulted in a near-term supply problem, which is becoming increasingly acute. Various producers, recognizing the impending shortage, have stepped up their search for alternate sources of supply and research on and expansion of controlled sources previously considered marginally economic. However, this additional production cannot be expected to catch up with the escalating demand until late 1968 or early 1969.

In view of the fact that the current vanadium shortage should be of an interim nature and that the major raw material sources are located in the United States, we feel that the use of the vanadium oxide determined "excess" in the stockpile to relieve this shortage can be fully justified.

Vanadium Corp. of America recommends to the committee adoption of H.R. 13774 authorizing the sale by the General Services Administration of approximately 6,450 short tons of vanadium contained in vanadium pentoxide.

In making this recommendation, we do so on our understanding that, based on various conferences between the General Services Administration, the vanadium industry and consumers of vanadium, the plans of the General Services

Administration will be to dispose of this material with due regard to its effect on the domestic market. It is our further understanding that the material will be offered over a period of 3 years, and would be offered at a "shelf price," with proper precautions, through restriction to U.S. consumption and processing, to avoid either the raw material or processed material produced from the same, being siphoned off into exports during a period of shortage in the United States. It is also our understanding that the vanadium pentoxide will be distributed through the ordinary channels of trade.

I want to thank the committee for this opportunity to express our views.

Mr. PHILBIN. Do you think this situation, these shortages, will continue for 2 or 3 years?

Mr. HARLAN. Yes, sir, I do.

Mr. PHILBIN. Now, how about the industry conferences? You have, as you say, limited opposition to the bill?

Mr. HARLAN. Only one case of opposition that I am aware of, Mr. Chairman.

Mr. PHILBIN. I believe—would that be Mr. Mattson, vice president of the Kerr-McGee Corp.?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. He is here to testify, and he will have an opportunity to present his views.

Mr. HARLAN. Right, sir.

Mr. PHILBIN. Do you have anything further to say about this bill?

Mr. HARLAN. No. We strongly urge this bill be passed.

Mr. PHILBIN. If there are no further questions, sir, thank you—

Mr. HARLAN. Thank you, sir.

Mr. PHILBIN (continuing). For your usual very informative testimony.

Now, is Mr. Mattson here?

Step forward, Mr. Mattson. Please give your name and address and the company you represent to our reporter for the record.

Mr. MATTSON. Mr. Chairman, I am Vernon L. Mattson of Kerr-McGee Corp., Oklahoma City.

Mr. PHILBIN. We are very glad to have you here this morning. We welcome you here to the committee. Do you have a prepared statement?

Mr. MATTSON. I do.

Mr. PHILBIN. We will be glad to have you read it for the benefit of the committee.

Mr. MATTSON. It has been distributed, I believe.

Mr. PHILBIN. Yes, I believe it has been distributed. You can proceed in your own way and give us your views.

Mr. MATTSON. The statement is quite short, and if I may, I will read it.

STATEMENT OF VERNON L. MATTSON, KERR-McGEE CORP.

Kerr-McGee Corp. is a producer of vanadium pentoxide and ammonium metavanadate. The source of feed material is a byproduct from western phosphorus operations.

The proposed disposal of 85 percent of the vanadium now held in the national stockpile at a time when domestic production is dropping rapidly and when the demand for the metal is increasing at a rapid rate is a serious matter. There appears to be no question of the urgent need of the steel industry for quantities of vanadium far in excess of the present productive capacity of the vanadium industry.

There is also no question regarding the importance of the judgment of this committee and all other Government bodies involved in this matter in correctly comparing the present needs of the steel industry for vanadium with those that they might face if a more urgent national emergency should arise.

Kerr-McGee certainly does not object to use of stockpiled material to meet bona fide defense needs. We do object to sale of this material in such a manner as to discourage production from known sources of domestic vanadium.

We were told at a recent Government-sponsored meeting that the pricing basis for future stockpile sales of vanadium has been established. At this meeting it was assumed that approximately 6,400-plus tons of vanadium will be sold and the only problems relate to the rate of sale and manner of allocation to the consumers.

It is our feeling that the recent sales of vanadium from the AEC stockpile did not establish a price for vanadium that in any way reflects production cost of this commodity.

The average price paid at the last sale was slightly over \$1.22 per pound of contained vanadium pentoxide. It is true that this price reflects the Government purchase cost of a little under a dollar plus handling and storage costs plus a profit for holding the material for several years. But does it reflect the cost of producing this material or of replacing this material? We feel that it does not.

At the time the Government purchased this material for less than \$1 the posted price of vanadium pentoxide was \$1.38 per pound. At that time the steel companies were paying \$3.20 per pound for vanadium contained in ferroalloying material. The uranium companies who sold their vanadium to the Government for a dollar a pound did so because at that time there was no other market for this commodity, which was of course a byproduct of the production of uranium from the Colorado Plateau mills.

Our point is that sales of vanadium from the AEC stock were not priced on a basis that in any way reflects cost of production. It is not our intention to state who erred when the price of vanadium pentoxide was driven downward from \$1.38 to less than 80 cents during the period 1960-63. The fact that must be faced today is that vanadium that is released from the stockpile at \$1.22 cannot be replaced from non-Government sources at this figure.

We strenuously object to a disposal policy that discourages the development of domestic sources of vanadium and particularly those properties that might be successfully worked if normal balances of supply and demand were operating freely and were a factor in determining price.

Mr. PHILBIN. Thank you, Mr. Mattson. You have given us a very informative statement.

Your fear is any increments of vanadium sold on the market will depress the price as well as production; that is your view?

Mr. MATTSON. Yes, sir.

Mr. PHILBIN. You understand, of course, this committee here is not a price-fixing committee. We handle the stockpiles with the idea of having enough in the stockpiles to provide for defense needs, and disposing of any excess that there may be of these stockpiles in an orderly way under the act, under which we operate, which requires the Govern-

ment not to dispose of any materials from the stockpile when such disposals would disrupt the market or the prices. Do you understand that?

First, there is the question of having enough for defense. Second, there is the question of disposing of any surpluses that we have in an orderly way that will not have any unfavorable impact upon the price situation in the industry.

Have you discussed the matter with the General Services Administration?

Mr. MATTSON. Yes, sir.

Mr. PHILBIN. Haven't they given you assurances any disposal that may be authorized by the Congress will be carried on in an orderly way?

Mr. MATTSON. Yes. We seriously question, though, that under these conditions disposal of 85 percent of the stockpile is a wise move. The remaining 1,400 tons will apparently represent something less than 2 months' requirements that are estimated for the end of this year.

Mr. PHILBIN. You appreciate that there have been evaluations made by the agency that is in charge of that, represented here by Mr. Lawrence, the previous witness, whom you have heard?

Mr. MATTSON. Yes, sir.

Mr. PHILBIN. The matter is very carefully considered at one of the higher levels of the Government, and they have come to the conclusion that is all they need in the stockpile.

Mr. MATTSON. Of course we would also question the wisdom of banking these estimates of future supply on mines that are not yet in production. As we all know, many things happen between the time a mine is—

Mr. PHILBIN. Yes, that is quite true. But on the overall evaluation, you see, we have to make sure we have enough in these stockpiles and yet where you have excessive amounts, as we do have of this commodity, good business seems to indicate we should get rid of it if we can without disrupting the market, as is our purpose always to do.

But you haven't been satisfied with assurances that have been given you by GSA, apparently.

Mr. MATTSON. That is correct; yes, sir.

Mr. PHILBIN. Do you have some questions, Mr. Arends?

Mr. ARENDS. In other words, do you think, Mr. Mattson, there is a possibility of further mining activities that can develop sufficient supplies as the years go on? I mean we are not up against this tight situation all the time?

Mr. MATTSON. No, sir. We feel there are those opportunities, but in these cases the vanadium will have to be mined as vanadium, being the principal ingredient of the ore, not as a byproduct from uranium operations as it has been in recent years. When that cost of production is based on the cost of producing vanadium, as such, the present prices are not realistic.

Mr. Arends. Is there some hesitancy on the part of the mining corporations to go ahead under the price situation as we see it now?

Mr. MATTSON. I'm sorry.

Mr. ARENDS. Is there some hesitancy on the part of the mining operations to go ahead because of the price situation this might create?

Mr. MATTSON. Yes. I think at the present price, the mines that would have to produce the material required to fill this gap would

have great difficulty in operating, say, at the price of \$1.22, which was the price at which the last sales was made.

Mr. ARENDS. In other words, they could not profitably operate at that price, in your opinion?

Mr. MATTSON. That is my opinion.

Mr. PHILBIN. Thank you, Mr. Arends.

Mr. JOHNSON.

Mr. JOHNSON. Mr. Mattson, you say that the proposed disposal of 85 percent you feel is going to be detrimental. Do you have a suggestion to GSA as to an alternative amount that might be disposed of that you do not feel would be detrimental to the industry?

Mr. MATTSON. I feel rather than dispose of such a large percentage of the pile at this time, say to definitely commit it to disposal, that it would be wise to evaluate the proposed future operations perhaps after they are in production, and at that time take a further look at the supply and demand picture rather than reduce the pile to only 15 percent of its present size at this time.

Mr. JOHNSON. When do you think a further look could be taken, in terms of the time element, for the committee's benefit?

Mr. MATTSON. I think this would to some degree have to be determined by the date at which this new source of vanadium, on which apparently the hope is pinned to keep this supply in control, which comes into being. Maybe that will be next year; apparently it will be.

Mr. JOHNSON. One final question. Do you feel there is a possibility that, in your discussions with GSA you have already had, there is any area of agreement that you might find as to some kind of a less extensive disposal at this time, to look at it later down the line, or do you feel that the areas of disagreement are too far apart on this?

What I am trying to find out is, your objection is, as I see it, the disposal of this large amount at this time. I am wondering if there is any area of agreement there where something down the line could be worked out by not disposing of so much at this time?

Mr. MATTSON. I think, perhaps, it should be limited to perhaps the best estimates of this year's disparity between the production and the estimated demand for the material this year. As I understand it, there is a certain tonnage involved in the so-called pipeline of supply. It is not something that can be turned on and off, certainly.

This is particularly true from the production end. It takes a long time to open up a mine and build a plant to process the material and get it into the hands of the steelmaker.

Mr. JOHNSON. That is all, Mr. Chairman.

Thank you.

Mr. PHILBIN. You asked some very penetrating questions. You have introduced some important information. I take it your point is there might be room for further communications and further collaboration between the gentleman, the witness, and the GSA with a view to seeing whether or not there could be a meeting of the minds?

Mr. JOHNSON. This is precisely my point.

Mr. PHILBIN. I think that would be a very valuable thing, and I was going to suggest that to the gentleman, with the thought perhaps you could have further talks with GSA to see whether you couldn't reconcile some viewpoints that you now have.

That would be agreeable to you, Mr. Harlan?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. You would be willing to arrange to have conferences with him and receive his views whenever you can, and go over the matter with him thoroughly and give fair consideration to his point of view?

Mr. HARLAN. Absolutely; yes, sir.

Mr. PHILBIN. Would that be agreeable to you?

Mr. MATTSON. Yes, sir; I think so.

Mr. PHILBIN. Thank you very much.

Mr. Clancy has a question.

Mr. CLANCY. Just one question.

How much vanadium do you produce, sir?

Mr. MATTSON. We produce approximately $1\frac{1}{2}$ million pounds of V_2O_5 a year at the present time. We are making preparations to increase this as our source of supply has recently developed.

Mr. CLANCY. What is the current market price?

Mr. MATTSON. The current market price is a very difficult thing to determine. The world price, of course, is considerably in excess of the prices that were offered at the last sale of the AEC stockpile material.

But my point is that the costs of production were not necessarily a factor in the prices that were offered at this last sale. This was material that the Government had purchased at a price that was considerably under the market price at the time the purchases were made.

Mr. CLANCY. Do you export a lot of the material that you produce?

Mr. MATTSON. Virtually the only market for domestically produced vanadium in the past, from those companies who do not have conversion facilities—the steel companies use practically no vanadium pentoxide, as much. Vanadium pentoxide must be converted to either ferrorvanadium or a vanadium carbide, to be usable by the steel company. Those producers of vanadium who do not have those conversion facilities have necessarily had to sell a large part of their production abroad.

Mr. CLANCY. Do you sell a large part of your production abroad?

Mr. MATTSON. We have, sir; yes, sir.

Mr. CLANCY. Did I understand you correctly before when you said 1,400 short tons represents just a 2-months supply?

Mr. MATTSON. Yes, sir; at the estimated rate of consumption at the end of this year, it would be something under 2 months' supply.

Mr. CLANCY. What do you base that statement on?

Mr. MATTSON. It is based on an estimated consumption of 24 million pounds of V_2O_5 this year. I think that that figure, that the GSA is in general agreement with that estimate of requirements for this year. And it is quite well recognized that production of vanadium from the Colorado Plateau, which has been our principal source of domestic supply in recent years, is dropping off rapidly as the end of the AEC uranium purchase contracts approaches.

Mr. CLANCY. What is the world market price of this material at this time?

Mr. MATTSON. It would be difficult to state.

Mr. CLANCY. Well, approximately?

Mr. MATTSON. I would say it is above \$1.50 a pound.

Mr. CLANCY. That is all, Mr. Chairman.

Mr. ARENDS. One more question, Mr. Chairman, if I might.

Mr. MATTSON, are you quarreling, or do you find yourself in disagreement with the release of this 85-percent above stockpile requirements? Is this your point? Or are you quarreling with the effect the disposal of this is going to have on the market price?

Mr. MATTSON. I think we are in disagreement with both points, sir.

Mr. ARENDS. Both?

Mr. MATTSON. But we certainly are not in disagreement with the release of some portion of this stockpile. We feel that the 85-percent release—

Mr. ARENDS. Is too high?

Mr. MATTSON (continuing). Is great.

Mr. ARENDS. Thank you.

Mr. PHILBIN. Are there further questions?

Do you have some questions, Mr. Machen?

Mr. MACHEN. No questions.

Mr. PHILBIN. Thank you very much.

Now we have another witness in the room who expressed a desire to testify, Mr. Moroso.

Is he here?

Mr. MOROSO. Yes, sir.

Mr. PHILBIN. Come forward and be seated, Mr. Moroso.

Do you have a prepared statement?

Mr. MOROSO. No, sir.

Mr. PHILBIN. Would you please give your name and address and the company you represent to the reporter for the record?

Mr. MOROSO. I am J. C. Moroso, Mining & Metals Division, Union Carbide Corp., New York.

May I say the record in the press—I testified on Monday at the chromite session you had—the next day the Comtel came over, “the head of the division made the statement.” I am not the head of the division.

Mr. PHILBIN. You weren’t adverse to being promoted, were you?

Mr. MOROSO. You promoted me; somebody did. I told the president to move over, and I gave him 24 hours to clear his desk.

Mr. PHILBIN. We will be glad to hear from you on this bill.

STATEMENT OF J. C. MOROSO, UNION CARBIDE CORP.

Mr. MOROSO. I am in the marketing division, and I work directly for the vice president of marketing. When we talk of vanadium, we are talking about one of the few success stories of my 30-odd years in the business. And if you will bear with me, I will give you some brief history.

Some 4 or 5 years ago, as a result of the Atomic Energy Commission refusing to buy vanadium together with their uranium, which had been their practice for many years, there came to be built up a tremendous surplus in this country, and we, ourselves, had 12 million pounds of contained vanadium in a large pile, out on a plateau, which represented quite a heavy investment.

So one of our executives told us, fellows, you’ve got to find some way to turn this stuff into money. Whereupon we put our research people to the job.

We talked with the steel industry. At the time, Mr. Mattson was right, the ferrovanadium was selling for \$3.45 a pound. And we had trouble giving it away at that price. There was just no use for it. It was too highly priced.

We therefore approached people in the stainless—rather, in the steel industry, and philosophized with them to the effect that we knew the various properties of vanadium, we knew what it could do. The only question was at what price could we put this in certain applications.

After about a year or so of banging the thing around, we came up with a number—in terms of V_2O_5 , it would be something like \$1.10, or \$1.15, in that range. This is equated to the price of the finished product, being ferrovanadium. Whereupon, we went to work and we developed a product which we call Carvan, which is a vanadium carbide, which is a new product, and it happened just to fit the bill, and a number of large steel companies thereupon began to experiment with it, and over the period of a year the thing met with much more success than we had anticipated.

We were in effect—went to church to pray for rain, and we didn't take our umbrellas, and we got awfully wet. We underestimated our sales capacity, and all of a sudden the material found its use in many applications in the steel industry, even far and beyond their own expectations. Whereupon, we immediately started to investigate new sources.

We have looked all over the world, high and low, for new sources, realizing the increase that would take place in the consumption of this material over a long-term basis. We do have an extensive property in Arkansas. We also recently acquired one in the South Africa region, I believe.

In our opinion, until such time as these properties, plus some other large properties in Africa, which are being brought in by our competitors, until such time there will be a terrific shortage.

Now, one of the things that aggravated the shortage, Vietnam—

Mr. PHILBIN. When you say a terrific shortage, what would it be?

Mr. MOROSO. I would guess on the order of something like 5 million pounds of contained "V" between now and the end of the year; that is 10 million pounds of V_2O_5 .

I will tell you this, we spent a considerable amount of time and effort to determine this, because with us it is a big business, and we have a large percentage of the business, which makes me hesitant to talk in a committee meeting like this. And I would like to put this on the record, that I speak not, as I am sure my own firm doesn't know I am here, but what I say is my own opinion, and it is based on some very extensive market research work that has gone forward through a number of years.

The thing that aggravates it is that, let's take titanium-vanadium-aluminum alloy. This is an alloy that was developed by the titanium business some 5 or 6 years ago, never amounting to very much, but gradually it is taking hold. And after a period of a number of years of testing in aircraft, it was accepted as a material for engineering and it is used in practically every type of aircraft, both commercial and military, that is being built today.

One firm came to us, who had not been a customer, and they served us with a number of DO ratings which concerned us very much. Here is a firm that didn't buy much from us in the way of this alloy. They suddenly came in and gave us this big order. Naturally it would disrupt our markets to our other people, so we sent people over to find out just where this material was going, and as a result we have good people who talked to the aircraft people.

We covered the entire industry, and we by our own estimates, we feel that at least $1\frac{1}{2}$ million pounds of contained vanadium that is a new application this year is just going into aircraft engines and supporting members. And this is an entirely new thing. It is a defense rating I think of the highest priority.

The effect of this has sort of hit us a little quicker than we had anticipated. We didn't anticipate Vietnam. We didn't anticipate somebody would start to build a lot of airplanes overnight like that [illustrating], and for that reason we have been embarrassed by the shortage.

The other thing that is true—

Mr. PHILBIN. With those increased needs, what would the total consumption be for the year, in your judgment?

Mr. MOROSO. We sort of feel it will be in the neighborhood of what Mr. Mattson said, something on the order of 12 million pounds of contained vanadium.

Last year it was—I think it was 9.4 million. Production last year was of the order of 12 million, and about 3 million was exported. These are traditional markets.

I have no quarrel with anybody that has been exporting. It is just the same as molybdenum. These have been traditional markets for the nonintegrated producers, such as Mr. Mattson. We have participated in them. However, we have stopped as nearly as our firm contractual relations would permit us, we have stopped all export. We did that a year ago.

Mr. PHILBIN. Has the industry generally done that?

Mr. MOROSO. I can't speak for the other people, sir. But the shortages really embarrass us. We have taken steps, regardless of other people's opinion, to increase the capacity of vanadium, and we have done this knowing full well what the price is, and it is considerably below what vanadium oxide has been selling for.

Just as the gentleman made the statement about copper, we know, we are very certain, that if vanadium gets above a certain level we are just going to dry up the use of it. And this application is in lined pipe. Lined pipe has been produced for many years. It never had a pound of vanadium in it. And the thing that put vanadium in lined pipe was the little product which we call vanadium—free advertising. It put it in that application.

Now, we know if we get the price up beyond a certain point the people who are making lined pipe will revert to their former practices. It is a matter of pure economics. We are therefore doing everything we can to keep the price down. We don't want it to go up, because we have based our long-range plans on a price considerably lower than Mr. Mattson mentioned.

Mr. PHILBIN. Do you regard throwing this amount on the market, as provided by the bill, would have the plans of GSA that you know about, if carried out, have a disruptive result on the market?

Mr. MOROSO. If he doesn't put up what he thought—the feeling of the meeting was it will have a disruptive effect in the wrong direction; that is, it will serve to inflate prices. It will get people to engineer vanadium out.

This is something we do not want, because we have considerable sums of money invested in the future of vanadium, and if people once engineer it out, we will have 5 years of hard work and a good deal of expense just pretty much shot.

So we feel—again I say, we have done a tremendous amount of market research. We feel that he should put up another 6 million pounds of contained vanadium tomorrow.

Mr. PHILBIN. In other words, you want a faster rate of disposal rather than a slower one?

Mr. MOROSO. Yes, sir.

Mr. PHILBIN. What are you going to do when there is no longer excess left in the stockpile, or in Mr. Harlan's inventory?

Mr. MOROSO. I hope he gets rid of it before our mine comes into production.

Mr. PHILBIN. Do you expect that to be in the near future? What is your timing? What timetable on the coming into production of the mine?

Mr. MOROSO. We expect to come into production near the shag end of 1967. All the work is going forward on preparing the ground. And this deposit is a large thing. It is right on top of the ground.

The only thing that we can't settle right now is the mill which will process it, because when we first made our plans it was small, and 6 months later it is bigger, and the last time I heard we haven't gotten our money from the Appropriation Committee, it is much bigger.

Mr. PHILBIN. Have you had an ample opportunity to present your views to the GSA about this bill?

Mr. MOROSO. Yes; we have. I'm sure we are in accord on the thing. I just chastised Mr. Harlan this morning for being so—

Mr. PHILBIN. So your attitude is you favor the bill?

Mr. MOROSO. I favor it strongly.

Mr. PHILBIN. I believe the marketing part of it must be very carefully attended to.

Mr. MOROSO. Yes, sir.

Mr. PHILBIN. So as to carry out the objectives of the conference which you have had with the GSA.

Mr. MOROSO. Yes, I do.

Mr. PHILBIN. So as to prevent any price or market disruption?

Mr. MOROSO. Yes, I do, sir.

Mr. PHILBIN. Mr. Arends.

Mr. ARENDS. I am just interested in the gentleman's statement. The gentleman from Kerr-McGee worries about our disposing of too much, and you worry about our not disposing of it at all?

Mr. MOROSO. You are absolutely correct, sir.

Mr. ARENDS. So I'm worried, period.

Mr. MOROSO. We hesitated to say this, because we do have a great percent of the total market, and therefore we are vulnerable.

Mr. BENNETT. Maybe I didn't understand it all, but I thought the Kerr-McGee gentleman was objecting to the situation as it is proposed because to keep the domestic production of this metal available it

costs so much money, and his business would be seriously hampered and hurt, and production curtailed, and maybe eliminated, if he didn't get an adequate price for it. This would be hurtful to his price.

Isn't that his position as you understand it?

Mr. MOROSO. Yes, but he is speaking for his price, not mine—our costs. We know what our costs are.

Mr. BENNETT. Of course this is the first time I ever had this presented to me, but just for what it is worth, as we heard this little bit of testimony here, it seems to me there is a good deal of equity in what he says.

Obviously you can get this at a very cheap price, and go on with your business. That is fine. But it looks like to me that the Government has the responsibility to the miners as much as it does to the manufacturers who want to get a cheap product and produce something that you already have said has been a windfall for you.

Mr. MOROSO. Well, I don't like that word "windfall," sir. There are two things you must understand: No. 1, he is working a slag, which is a byproduct for a ferrophosphorus operation. This is an entirely different thing than our operation, which is a mine. Based only on the production of vanadium and nothing else.

So there is quite a difference. In other words, if you want to button the weed, we have the advantage of the earth with us. It is quite a natural advantage.

Mr. BENNETT. You have the advantage of coming to the Government and getting it out of the stockpile, as I see it. You are competitive with him in this particular bill from the standpoint of getting it out of the stockpile. He is trying to get it out of the earth. I think in that kind of situation the Government has some kind of responsibility to somebody that is in that industry of bringing it out of the earth. I am not so sure it is not a more vital one.

The reason I am saying this to you, is not to state my opinion, but really to elucidate your feelings of the morality and equity in this situation, because, offhand, as I understand it, you are just a manufacturer, and you have got a mine that you think you can produce this thing cheaply in the future. He has a mine which he cannot produce it so cheaply in, and you are trying to get it out of the stockpile, enough of this stuff, at the cheap price, until you get your mine opened. It looks to me he has got a good deal of equity on his side to see to it the price isn't too low.

I don't understand why you think this committee would feel differently. Obviously you do or you wouldn't be testifying. But I don't understand why you feel that way.

Mr. MOROSO. Well, sir, as long as I have been in business it seems to me the strength of economics, for example, were the price to be kept at his figure of \$1.38, he would defeat his own long-range purpose, because vanadium will absolutely not be used in many of these applications at that figure, and we are sure of that. We want to keep the material—we want a broad market.

Mr. BENNETT. Is he selling it at that now?

Mr. MOROSO. I do not know what he is selling it at. We don't sell it, we consume all of our own.

Mr. BENNETT. Do you buy some of it?

Mr. MOROSO. We happen to be in the very unfortunate position of having all the defense orders placed on us.

Mr. BENNETT. That is something, a disadvantage many people would like to have, I think. Why do you object to having defense orders?

Mr. MOROSO. Simply because we don't have the material to fill them, and we have contractual relations with a number of people which would have to be broken. We can fill those orders, we can pay \$5 a pound, and we can get it, and there is nothing in the law that says we cannot price our material that goes into defense on the base of the higher priced material. If you want to change yourself to defense, we can do that.

Mr. CLANCY. Will you tell us at this time what you sell this to as a defense contract per ton? How much do you sell it at to the defense contractor? What is the price you make, the profit?

Mr. MOROSO. If you relate it to the \$1.22, which you last sold it at, we are selling it to them at \$1.10.

Mr. CLANCY. The same material you purchased at \$1.20?

Mr. MOROSO. No, we have not purchased it.

Mr. CLANCY. You do mine it, too?

Mr. MOROSO. Yes, sir.

Mr. CLANCY. You sell the metal you mine to various defense contractors throughout the country?

Mr. MOROSO. Yes.

Mr. CLANCY. Principally the developers, and people who manufacture, jet engines?

Mr. MOROSO. Right.

Mr. CLANCY. You are selling it to them at \$1.10?

Mr. MOROSO. That is absolutely correct.

Mr. CLANCY. All right. How much of this metal did you mine last year?

Mr. MOROSO. I would guess 60 percent of the total in the country.

Mr. CLANCY. How much would that be?

Mr. MOROSO. Seven and one-half million pounds of contained vanadium.

Mr. CLANCY. How much of that—did you export any of that that you mined?

Mr. MOROSO. Very small quantity, under half a million pounds.

Mr. CLANCY. So then we are talking about 7 million pounds more?

Mr. MOROSO. That is correct, sir.

Mr. CLANCY. That was sold to defense contractors?

Mr. MOROSO. Not defense, the whole industry as a whole. The Defense requirement is rather new, say like the last 3 months. So we didn't. We sold quite a bit that went into defense but the material is going into engines and parts that were in a development stage. Somebody made a decision here within the last 90 days that they start making these new engines, new sophisticated things, and so we are looking to the future, not what has happened last year.

Mr. CLANCY. Is there a different price you sell this material at to nondefense contractors?

Mr. MOROSO. We have what we call a spot price, but we do not sell anything because we don't have any material to sell.

Mr. CLANCY. Thank you.

Mr. MOROSO. People who sign long-range contracts with us have been signed over a number of years. But as far as we are concerned, the spot price means nothing, because we do not have the material.

Mr. CLANCY. That is all, Mr. Chairman.

Mr. PHILBIN. Mr. Johnson?

Mr. JOHNSON. I have no questions.

Mr. PHILBIN. Mr. Machen?

Mr. MACHEN. No questions.

Mr. PHILBIN. No questions. Thank you very much.

Mr. MOROSO. You are quite welcome.

Mr. PHILBIN. We appreciated your testimony. The next bill—

Mr. BENNETT. Before we get off that bill, is anyone trying to resolve this in the Department? There is a conflict here. What is the feeling of the Department? You recommended it at a low price, and Kerr-McGee has asked a higher price. What is your reasoning about it? Have you given thought to the fact he feels he cannot produce it?

Mr. HARLAN. Yes, sir; we have. He is a small producer. He has a high cost production operation. As the gentleman from the Union Carbide just explained, he is working with a different type of basic material. It may be true at the market price which we believe at this moment is in the neighborhood of \$1.22 he is having a little trouble producing. But I do not think this is true of the industry as a whole, by any means.

Mr. BENNETT. You do think there is a sufficient or large volume of this stuff to produce, and to be produced to really arrive at a market price at the moment?

Mr. HARLAN. Yes, sir; we have had very good readings in the market, we have been selling it privately and openly, and taken careful readings of the bids we received. The price of this material is in the neighborhood of \$1.15 and \$1.25.

Mr. BENNETT. No further questions.

(The following material was received for the record:)

LATROBE, PA., March 23, 1966.

Hon. PHILIP J. PHILBIN,
House Armed Services Committee,
House Office Building,
Washington, D.C.:

Latrobe Steel Co., one of the major producers of high speed and tool steels and special alloys vital to national defense, supports the proposed release from the stockpile of 23 million pounds of vanadium V²⁰⁵ and 14 million pounds of molybdenum. This is absolutely essential to relieve the acute and chaotic shortage in molybdenum at the present time and to prevent an acute shortage from developing further in the supply of vanadium. It is likewise absolutely necessary to assist in preventing additional cost increases of raw materials. If raw materials continually increase in cost this will only add to the inflationary pressure and result in higher prices. We recommend in the molybdenum release that it be released in the form of ferromolybdenum or molybdenum oxide so that the steel producers can buy it directly and consume it immediately without further processing. Your support of these releases and speedy action toward the passage of required legislation to obtain the releases is respectfully urgently requested.

M. W. SAXMAN, President, Latrobe Steel Co.

H.R. 13369—MOLYBDENUM

[H.R. 13369, 89th Cong., 2d sess.]

A BILL To authorize the disposal of molybdenum from the national stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately one million and thirty-four thousand three hundred pounds of molybdenum now held in the national stockpile established pursuant to the Strategic and Critical

Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

Mr. PHILBIN. The next bill is H.R. 13369.

(The statement of Hon. Philip J. Philbin on molybdenum is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. This is still another bill sent to us by the General Services Administration, and would authorize the disposal of approximately 1,034,300 pounds of molybdenum from the national stockpile.

Molybdenum is a hard, silver-white metal obtained from molybdenite. It imparts a high melting point, high strength, stiffness, and toughness to alloys.

Molybdenum is used as an alloying metal in iron and steel. It is also used by the electrical, chemical, and ceramic industries. Small quantities have applications as catalysts, welding rods, paints and pigments, lubricants, and a trace element in plant and animal metabolism.

At the present time we have in our inventory 69,034,253 pounds of molybdenum and a stockpile objective of 68 million pounds.

The average acquisition cost of the inventory was \$1.04 per pound and the present market value is approximately \$1.55 per pound.

For 1965, total production of molybdenum was projected to be in the area of 75 million pounds and total consumption, 67,500,000 pounds.

Mr. PHILBIN. Mr. Lawrence will be the first witness.

We are glad to have you give us your testimony and views on this bill, Mr. Lawrence.

STATEMENT OF WILLIAM LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. The Office of Emergency Planning appreciates this opportunity of appearing before this committee to support H.R. 13369, a bill to authorize the disposal of molybdenum from the national stockpile.

This bill authorizes the release of approximately 1,034,300 pounds of molybdenum. I wish to propose an amendment to this bill which would increase the amount of molybdenum to 14 million pounds of molybdenum (Mo content).

We have just completed a review of the stockpile objective which decreases the objective for this material from 68 million pounds to 55 million pounds. Although requirements for the material have increased substantially over the previous review in April 1 1964 new supplies of molybdenum are greater. Two new sources not reflected in the previous review are the Molybdenum Corp.'s new mine at Questa, N. Mex., which will have an annual output of 10 million pounds and Canadian production will be increased from 7 to 8 million pounds annually in 1965 to 23 million pounds annually by 1968. In a mobilization period, we believe that at least 60 percent of this Canadian production would be channeled to the United States.

This new objective has been approved by all members of the Inter-department Materials Advisory Committee.

There has been a shortage of molybdenum in the United States in 1962 when a long strike in the Climax mine virtually dried up all pipelines of the material. Since that time it has been impossible to fill the pipelines because of increasing demand. The increases caused by defense orders have created a critical shortage of the material in the United States.

If this disposal plan is approved by Congress, it is planned to have the General Services Administration sell 9.5 million pounds of molybdic oxide and 4.5 million pounds of molybdenum concentrates to domestic consumers only in accord with allocations which will be made by the Business and Defense Services Administration, Department of Commerce. It is felt that this will provide the most equitable distribution of the material.

If I may digress here, we may consider permitting the U.S. producers to buy some of the concentrates, too, but with the understanding it will all be sold in the United States.

All interested Government agencies have concurred in this disposal. I feel certain that there will be no objection to this disposal action from producers or consumers of molybdenum.

We urge enactment of this legislation.

Mr. PHILBIN. You reduced the stockpile requirements very substantially following a careful analysis of new developments in the industry, new developments in the supply?

Mr. LAWRENCE. Supply is the whole reason for this decrease.

Mr. PHILBIN. As I recently requested you to inform me by letter regarding the revised objective, you sent me a very illuminating letter to this question, which I will have placed in the record, which contains the conclusions that you arrived at, and it summarizes your, in effect, justification for the reduction that you have made in the stockpile requirements.

Mr. LAWRENCE. Yes, sir.

(The letter above referred to is as follows:)

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF EMERGENCY PLANNING,
Washington, D.C., March 23, 1966.

HON. PHILIP J. PHILBIN,
House of Representatives,
Washington, D.C.

DEAR MR. PHILBIN: In response to your request, I am indicating below the agencies consulted with respect to the revised molybdenum objective and a summary of their positions.

The review of the objective was initiated by OEP because of new supplies in the United States which were not reflected in the last review of supply and requirements. It was thought that this review might result in some additional surplus which could be released to relieve the critical shortage of this material. The Department of Commerce and the Department of State submitted data summarizing the outlook for the demand and supply of molybdenum and indicating a balance which would result in a substantially lower stockpile objective. OEP then requested a listing of the expansion programs by Canadians and United States producers of molybdenum. A task group of technicians representing Commerce, State, Interior, and OEP reviewed the supply and demand data received, arrived at mutually agreeable data fitted to an updated economic model. The economic model used in the previous (1964) review of all objectives was brought up to date by OEP to reflect increased steel production and usage of molybdenum in the projected mobilization years (1968-70).

The basic data thus reached were factored for foreign source reliability by OEP and discounted for concentration of producing and processing capacities in the United States and Canada. This factoring and discounting followed guidelines set forth for use in all objective reviews, as established by OEP in 1964. The application of the guidelines in this instance was the same as in the previous full scale molybdenum review in March 1964, and concurred in by all members of the Interdepartmental Materials Advisory Committee.

While DOD did not directly participate in the task group discussions, my staff kept their DOD counterparts advised of the proceedings, reviewed the final work sheets with them, and received their informal concurrence in the task group results.

Sincerely,

WILLIAM N. LAWRENCE.
Chief, Stockpile and Requirements.

Mr. PHILBIN. You think these all have been cleared?

Mr. LAWRENCE. I do.

Mr. PHILBIN. You made reference to a task force of technicians, representing the Commerce, Interior, and OEP, to review the supply and demand data that you received. Then you arrived at a mutually agreeable date fitted to an updated economic model. What did you mean by that?

Mr. LAWRENCE. This is the basis on which we compute the stockpile objectives for all materials for the economy. We use the gross national product projection which covers the economy. The Department of Defense requirements are, of course, computed by them. The Department of Commerce used the dollar figures that are in the GNP model, to which they have related factors of consumption of the material, for example, to develop the steel requirements; from the steel requirements we developed the molybdenum.

Mr. PHILBIN. Have you taken into consideration the added use of molybdenum in the increased production of steel?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Did you take into account also the usage of molybdenum in the projected mobilization years?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. From 1968 to 1970?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. That was all included in the study made by this task force?

Mr. LAWRENCE. That is right, sir.

Mr. PHILBIN. What is the situation regarding the foreign-source reliability? Did you look into that also in your study?

Mr. LAWRENCE. Yes, sir; we only count on the Canadian production. You see, the United States actually is the largest producer of molybdenum in the world. The other source of molybdenum is principally Canada. For this reason, the whole free world is dependent on U.S. production of molybdenum for their needs.

Mr. PHILBIN. There is considerable export of "moly" all over the world?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. What percentage of the production does that amount to? What percentage of the local production does that amount to?

Mr. LAWRENCE. I have it right here.

Mr. PHILBIN. In other words, what is consumed here of the total production? What is consumed here and what is consumed by exports?

Mr. LAWRENCE. Well, about 70 percent is consumed in the United States. About 30 percent is exported.

Mr. PHILBIN. Is exported to all countries?

Mr. LAWRENCE. Free world countries.

Mr. PHILBIN. Only free world countries?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. None of it gets in behind the Iron Curtain?

Mr. LAWRENCE. I couldn't swear to that.

Mr. PHILBIN. It does not go directly from the United States to them?

Mr. LAWRENCE. No, sir. After it gets to its destination in the free world, it may move on from there.

Mr. PHILBIN. Do you have instances where it has been sold by the United States to free world countries and afterward sold to Russia, let us say, or one of the satellite nations behind the Iron Curtain?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. You have no information along that line?

Mr. LAWRENCE. No, sir.

Mr. PHILBIN. From time to time there are rumors along these lines, not only with respect to "moly" but other critical materials.

Mr. LAWRENCE. That is right. The critical shortage in the United States has been such that there is a black market price for molybdenum in the United States of \$3.75 a pound, compared with the producer price of \$1.74.

Mr. PHILBIN. Would you repeat that statement?

Mr. LAWRENCE. There is a black market price on some molybdenum which has gotten in the hands of dealers where they are offering it at \$3.75 per pound which compares with the producer price of \$1.74 a pound.

Mr. PHILBIN. They are buying it at the market price? I suppose those who need it urgently enough will have to do that?

Mr. LAWRENCE. Yes, sir.

Mr. BENNETT. How do you arrive at a black market designation—how do you arrive at the term "black market" when it is a free market? In a free market there is no statutory requirement that it shall be sold for at such a price?

Mr. LAWRENCE. There has been such a shortage of this material, Congressman Bennett, for the last 3 years. No one has ample molybdenum for any purpose.

Mr. BENNETT. Since there are no controls on it how do you arrive at the term "black market?" It is not illegal to sell it; is it?

Mr. LAWRENCE. Let us not use the term, let us say there is an offering of the material at that price.

Mr. BENNETT. Monopolistic, but not illegal?

Mr. LAWRENCE. There is nothing illegal about it; no, sir.

Mr. PHILBIN. So that the situation is, while users can buy from producers at a lower price, \$1.74 was the price you cited?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. They are not always able to get it at that price because of shortage of production, but they have to go to other sources and those sources will sell only at the higher price?

Mr. LAWRENCE. That is correct.

Mr. PHILBIN. Which would be something in the neighborhood of \$3.58?

Mr. LAWRENCE. \$3.75 and \$4, I understand.

Mr. PHILBIN. I heard it was something in that area, too.

Mr. BENNETT. Why don't the producers raise the price, themselves!

Mr. LAWRENCE. Well, as we have said several times this morning, they are trying to maintain a market for their material. Molybdenum has always had a very stable price. I think it has only been raised once in the past 5 or 6 years.

Mr. PHILBIN. Now, at the time that you had this task force, the Department of Defense didn't participate, but they later came in and notified you that they approved of the reduction in the stockpile requirements?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. I have a letter from the Deputy Secretary of Defense, Mr. Cyrus Vance, informing the committee to that effect, which we will take for the record, Mr. Cook, together with Mr. Barnes' letter of March 23.

(The letter from Deputy Secretary of Defense Cyrus Vance, dated March 24, 1966, is as follows:)

THE SECRETARY OF DEFENSE,
Washington, March 24, 1966.

HON. PHILIP J. PHILBIN,
*Chairman, Subcommittee No. 1, Committee on Armed Services,
House of Representatives, Washington, D.C.*

DEAR MR. CHAIRMAN: In response to your request of March 22, 1966, the Department of Defense has reviewed the analysis of molybdenum supply and requirements recently conducted by the Office of Emergency Planning which resulted in a reduction of the stockpile objective from 68 million pounds to 55 million pounds. The Department of Defense has no objection to this new objective.

The Department of Defense favors the passage of H.R. 13369 with respect to disposal of excess molybdenum.

Sincerely,

CYRUS VANCE,
Deputy Secretary of Defense.

Mr. PHILBIN. Mr. Bennett is acting for Mr. Dent; my esteemed colleague, Mr. Dent, of Pennsylvania, has a number of communications. They will be taken care of for the record.

(he material above referred to is as follows:)

TESTIMONY OF HON. JOHN H. DENT

Mr. Chairman, for the past 3 years this country has been suffering from a shortage of molybdenum, an essential raw material for the production of tool and other specialty steels.

The action in Vietnam has aggravated this shortage and many steel mills are hobbling along under serious handicaps.

The mills in my district find that they cannot plan expansion, or for that matter go all out on present orders, which, of course, curtail their activities in building up future production orders.

The President has cooperated in my efforts to supply a sufficiency of molybdenum for distressed plants. However, the overall policy of our trade and balance of payments in our State and Commerce Departments makes it difficult even for the President to assure a supply to U.S. industry.

I have introduced three separate bills, each aimed at relieving the situation and in my humble opinion, one or more of these bills must pass or we will face a more serious problem in this area.

The first is like the bill you are considering, H.R. 10361, which would authorize the disposal, without regard to the prescribed 6-month waiting period, of molybdenum from the national stockpile.

The second is H.R. 10362, a bill to amend the Tariff Act of 1930 to provide that certain forms of molybdenum be admitted free of duty.

The third bill, H.R. 10367, would prevent the export of molybdenum under certain circumstances.

Mr. Chairman, the fact of these hearings this morning give me cause for great optimism. I have tried for some time to have the molybdenum case heard—but, to no avail. It is a vital situation that deserves immediate consideration and prompt and positive action. To do otherwise, would be to stand by in idle disregard of the destruction of an American industry.

Mr. Chairman, I understand that the original request for release from the stockpile has been increased to the amount of about 14 million pounds. I would much rather it were a lesser amount, sufficient to meet the needs of American production.

I am very fearful if this amount is released at this time the exporters will have a heyday and we will find ourselves in the same position where we are now, except that we will have no stockpile to go to.

However, whatever is done, Mr. Chairman, I urge you to insure that on behalf of special steel industries and the worker that not one single pound of stockpile release in any form be permitted to go out of the country unless the American consumers are satisfied as to their needs.

While this action, today is again a temporary stay on the shutting down for some plants it cannot answer the long-range needs.

However, this is not the problem of this committee at this point but rather as I see it the only question before this committee is whether to release or not release molybdenum from the stockpile. This I assure you, requires an affirmative answer and the sooner the better.

In support of my plea for early action on this legislation, I wish to submit a telegram from Marquis W. Saxman III, president of Latrobe Steel Co., received of recent date, as well as other pertinent correspondence that I wish to be made part of the record and respectfully request that the committee review.

Immediately following the telegram from Saxman you will find a telegram dated July 1964, protesting the disposal of our stockpile by public bid and the correspondence from Commissioner Maurice J. Connell showing the difficulty of keeping the available source of molybdenum for the uses intended—namely, domestic producers.

Also, a letter from David Wolfson of Braeburn Alloy Steel Division, Continental Copper & Steel Industries, Inc., showing both the urgency in this matter of shortage as well as the danger of our assuring a steady supply to our domestic industries.

There is a well documented case made by E. F. Andrews of Allegheny Ludlum Steel Corp., Pittsburgh, Pa., as early as January 24, this year, and also appeals for relief from many others both in and out of the State of Pennsylvania that shows correspondence going back to 1963 and continuing unabated up until this very moment.

All of them in the same vein and for the same purpose—to insure a supply of molybdenum to meet the demands of the industry and to allow the schedule of production to maintain maximum employment.

My correspondence in this matter is voluminous and I would not attempt to tire the committee with all of the fires that have been built up over the continuing fight for 3 years to insure some degree of continuity in our steel industry.

I repeat that I urge the immediate passage of this bill and beg you to give consideration to legislation when it comes before us in the House that will remove the threat of shortages.

Let me thank the committee for its courtesy in behalf of myself, the workers, and the operators of the tool steel industry.

LATROBE STEEL CO.,
Latrobe, Pa., March 7, 1966.

HON. JOHN H. DENT,
Rayburn House Office Building,
Washington, D.C.:

Shortage of molybdenum continues to be critical. Latrobe Steel Co. estimates that it will need between 300,000 and 400,000 pounds additional molybdenum for the balance of 1966 over what it is now receiving to continue production on defense material and essential tool steel and high-speed steel products. If the shortage continues we will be forced to secure additional molybdenum from other sources at inflated prices. Our company cannot absorb any additional raw material increases without increasing prices for our own products. This will only

add to inflationary pressures. The only solution that we see is immediate export controls together with suspension of duty on molybdenum imports and release from stockpile. Immediate action is required to solve the molybdenum shortage situation which is now completely chaotic. We ask your immediate attention and immediate action at all levels of government to solve this critical shortage.

MARCUS W. SAXMAN III, *President.*

LATROBE STEEL Co.
Latrobe, Pa., March 7, 1966.

Hon. JOHN H. DENT,
Rayburn House Office Building, Washington, D.C.:

Telex of March 7, 1966, re molybdenum situation sent to the following:

Lyndon B. Johnson, President.
John T. Conner, Secretary of Commerce.
James F. Collins, Deputy Assistant Secretary of Commerce.
Alexander B. Trowbridge, Assistant Secretary of Commerce.
William Lawrence, Chief of Economic Affairs, OEP.
James M. Owens, Director, Office of Metals and Minerals, BSDA.
Senator Stuart Symington.
Senator Joseph Clark.
Senator Hugh Scott.
Representative John H. Dent.
Representative Philip J. Philbin.
Paul Ignatius, Assistant Secretary of Defense.

MARCUS W. SAXMAN III, *President.*

THE CARSTEEL Co.,
Reading, Pa., July 29, 1964.

Hon. JOHN H. DENT,
House of Representatives, Washington, D.C.:

Wish to protest most emphatically public sale stockpile molybdenum to high bidders, by GSA on tenders opened July 27. In spite of bid stipulations, if awards are made to high bidders, result will be to divert molybdenum from our normal distribution channels whose allotment to us for August is 50 percent of normal usage. Strongly recommend you make representations to the President that the offering be canceled and all stockpile molybdenum released by Congress for sale be made available to the molybdeum suppliers at current market prices. Unless this is accomplished our company faces probability of not being able to meet order commitments commencing August for defense and defense supporting end uses. It should not be the function of the stockpile to make exorbitant profits for the Government at the expense of our industry and a consequent loss of jobs.

H. S. POTTER.

GENERAL SERVICES ADMINISTRATION,
DEFENSE MATERIALS SERVICE,
Washington, D.C., February 5, 1963.

Hon. JOHN H. DENT,
House of Representatives, Washington, D.C.

DEAR MR. DENT: Careful consideration has been given to your telegram of January 21 requesting that excess molybdenum authorized for disposal be sold only to domestic sources.

One of our basic objectives in disposing of excess materials from our inventories is to maximize competition, and thus to obtain the greatest possible return to the Treasury. In accordance with this objective, the disposal plan for the 5 million pounds of molybdenum from the national stockpile provides for sales to industry on a competitive basis, and does not limit sales to domestic sources.

Limiting sales of this molybdenum to domestic sources would not assure that the material would be domestically consumed. The company referred to in your telegram not only is a producer of molybdenum, but also is a metals trader. Accordingly, limiting sales to domestic sources would reduce competition without necessarily preventing the export of molybdenum.

Sincerely yours,

MAURICE J. CONNELL,
Commissioner.

BRAEBURN ALLOY STEEL DIVISION,
CONTINENTAL COPPER & STEEL INDUSTRIES, INC.,
Braeburn, Pa., March 10, 1965.

Hon. JOHN H. DENT,
Member of Congress, House Office Building, Washington, D.C.

SIR: A bill was passed last summer authorizing the release and sale of 11 million pounds of molybdenum from the national stockpile. As you know, GSA sold the final 3 million pounds last month.

Braeburn Alloy Steel Division of Continental Copper & Steel Industries, Inc., used 145,600 pounds of molybdenum last year. Our estimated requirements for 1965 are in excess of this amount, but we have no present assurance that these needs can be met. The molybdenum shortage has a direct effect on our production capacity, which of course is the key to our continued growth. The release and sale of 11 million pounds eased, but did not solve the domestic shortage of molybdenum.

The national stockpile of reserve molybdenum today contains 68 million pounds. The President's Office of Emergency Planning has established this requirement. It is our understanding that OEP is planning a reanalysis of certain stockpile objectives later this year, and we will strongly urge that the molybdenum stockpile requirement be reconsidered.

We will contact agencies such as OEP and Commerce's Business and Defense Services Administration and other Members of Congress in order to explain our position on this important matter. We hope we may count on your support in this effort.

Very truly yours,

DAVID WOLFSON, Vice President.

ALLEGHENY LUDLUM STEEL CORP.,
Pittsburgh, Pa., January 24, 1966.

Hon. JOHN H. DENT,
House Office Building, Washington, D.C.

DEAR SIR: Mr. Thomas Shannon has asked me to write you concerning our observations on the molybdenum shortage and the present plans under consideration for the relief of this shortage.

One of our most serious concerns is the fact that molybdenum is being offered quite widely on what we would call a black market. Molybdenum oxide, which should normally sell for \$1.75, is being offered for \$3.75. Some of this material is foreign product, but much of it is guaranteed to be U.S. domestic produced. Those who offer this material frankly tell us they are buying the material here in this country, and they are either offering it direct at black-market prices or exporting it where it can command a higher price in the world marketplace.

One of the suggestions for relief of the current short situation is an additional disposal from the Government stockpile. Our first thought here is that this country produced about 76 million pounds of molybdenum in 1965. It is my understanding that there is a proposal to release 5 million pounds from the stockpile. Therefore, this is a fairly small addition percentage-wise to the available supply. It should be remembered that in 1965, we not only produced 76 million pounds; but we added to that a very late 1964 stockpile release of 3 million pounds and a February 1965 stockpile release of an additional 3 million pounds, both lots of which were consumed during the calendar year 1965. Therefore, the total available from the United States in 1965 was not 76 million pounds but 82 million pounds. Five million pounds put into this large capacity is relatively insignificant.

However, be that as it may, we do not want to take a position against the stockpile release, as we must admit that every pound helps. We would like to suggest, therefore, that careful consideration be given to the means of disposal from the stockpile. It is our feeling that much of the stockpile material from the last go-around drifted out of this country in spite of the intentions of the Government to the contrary. The terms of the release specified that the material had to be consumed in the United States. Since it was molybdenum disulfide, the buyers had it roasted (converted to the ferro or oxide state) in the United States and thereby fulfilled the requirement of being consumed in the United States. They were then free to export it or do as they pleased with it. We therefore, feel that some disposal means similar to the cadmium disposal or at least the last stockpile disposal of molybdenum be insisted upon.

While on the subject of the stockpile release, we would also like to point out that the urgent need for material to relieve the shortage is now in your bill, H.R. 10361, you provide for the release of molybdenum disulfide from the stockpile. Let us assume that it would take 60 days to get the bill passed through both Houses and signed. It would then take an additional 60 days for the GSA to make its offering, receive its bids, and deliver the goods. Another 60 days would be required for the buyer to arrange for roasting and delivery to his plant. This means that the consumers would have molybdenum in a form which they could use in about 5 to 6 months from now, provided the Government would be willing to withdraw its roasting contracts from the major roasters to make room for the roasting of this stockpile material. In the 68 million pounds presently in the stockpile, 7,500,000 pounds are already in the ferro state; 19,500,000 pounds in the oxide state; and 39 million pounds in the disulfide state. We would like to suggest that you change the wording in H.R. 10361 to provide for the release of ferro or oxide material which could be sold directly to the consumer and thus avoid the speculators getting around the technicality of consuming it when they roast it. This would also eliminate a very serious step in the timing and speed up the flow to the consumer.

We have said, we feel that the stockpile release, while helpful and needed, will be too little, too late. Therefore, it is our feeling that the Commerce Department should impose some sort of curtailment of exports at least for the first 6 months of 1966. We note that Secretary Trowbridge, in a letter to Mr. Thomas E. Morgan, indicated that the exports have, in fact, dropped from 40 percent of production in 1964 to 37½ percent in 1965 and that he anticipated they would go to 33½ percent in 1966. We have indicated in a previous letter to Mr. James Rill, of Collier, Shannon and Rill, that we take issue with these figures, and we still do. However, we admit that in the case of Bureau of Mines figures it is difficult in this instance to make sure that everyone is talking of apples and apples. Therefore, let us for the moment accept the Department of Commerce figures as Secretary Trowbridge presents them and let us admit that the export rate in 1965 was 37½ percent of our production. There is no question but that during 1965, with an export rate of 37½ percent, there was a severe and injurious shortage of molybdenum in the United States. It is fairly well estimated, and certainly is true in our own company, that we could have used a minimum of 25 percent per month more last year over and above that which we were able to obtain. We have heard other companies advise that their shortages ran as high as 50 percent per month. Be that as it may, let us assume that we would be satisfied with the same amount which we had in 1965 when an admitted serious shortage existed. Most major consumers have been advised by the major producer that, for the foreseeable future in 1966, we will receive 15 percent less per month than we received in 1965, so we start out the year with 15 percent less material than we had last year. Secretary Trowbridge's letter indicates that exports will be curtailed from the 37½ percent to 33½ percent. This would mean that we would have 4 percent more material from the export areas than last year. We are still 11 percent short of 1965 figures. The only new material available to the domestic consumers during 1966 would be the Molybdenum Corporation's New Mexico facility. This mine is rated at a capacity of 10 million pounds. The 10 million is based on their beginning to produce at rated capacity on January 1 and maintaining that rate until December 31. This, of course, has not and will not happen. If the Molybdenum Corp. can get into business and put 7 million pounds into the bloodstream during 1966, and if we are able to keep all of it in the United States in the hands of domestic consumers, this will be less than 10 percent of the material available during 1965. So, when we say we are going to get 9 percent help from Molybdenum Corp. and 4 percent help from exports, we are still 2 percent short of the amount we had in 1965 when a serious shortage existed. If we release 5 million pounds from the stockpile and it gets into the bloodstream by summer, we would be adding another 3 percent to the available material. We would then be 1 percent better off than last year, provided it does not leak out of the country. It should also be noted that it is generally agreed, and history has shown that the demand in this country is increasing at the rate of 7½ percent per year. Therefore, if all of the above-mentioned help comes into existence and does not leave the country, including the stockpile release, we will end up with a 7½ percent more serious shortage than we had in 1965.

The latest figures we have on export are the Bureau of Mines statistics. One of the things that bothers us is the tremendous rate of increase of exports noted at the end of the year, particularly when it is recognized that the major producer

is bringing a new plant on stream in Rotterdam. The October Bureau of Mines figures indicate that the exports to European countries in October over September were increased as follows:

	Percent
West Germany-----	21
Netherlands-----	16
Japan-----	14
Belgium-----	11
United Kingdom-----	9
Sweden-----	8
Austria-----	7
France-----	6

These countries received 92 percent of the total exports. What is even more alarming is that the October rate to the Netherlands and to Belgium was over 1,000 percent higher than the rate last year. During this same period of time in 1965, when all of these countries were receiving increased exports over the previous month, we were reduced by an additional 15 percent available to us. If we take the first 9 months of 1965, we were exporting at the rate of 24.6 million pounds per year. In October we exported at the rate of 31½ million pounds per year.

It should also be noted that the October figures of the Bureau of Mines indicate that our stocks, or inventories, at the end of October were 3½ million pounds. It is easy to see that our national inventory is approximately 2 weeks' supply. Therefore, some strong effort must be made to fill the pipelines. As anyone knows, you just cannot keep operations flowing properly with this small a quantity in the pipeline. This is why we suggest both release from the stockpile and curtailment of export to not only make more material promptly available to the consumers, but to also give the pipeline an opportunity to adjust to the demand.

Another argument which has been advanced in favor of the export of molybdenum is that it aids the balance of payments. This argument does not stand up when you realize that if we had molybdenum, we would be exporting 100 pounds of 316 stainless steel for \$35 to \$50 rather than 3 pounds of molybdenum for \$6.

It should also be noted that the world supply of molybdenum is also going up. Canada has added about 5 million pounds last year and will add an additional 15 million pounds within the next 2 years. This material is not available to the U.S. consumers because of a prohibitive import duty on molybdenum in this country. Therefore, we support your efforts to eliminate or at least reduce this duty permanently or set it aside temporarily as we did the nickel duty.

We apologize for being so lengthy in this letter, but it is difficult to be brief and at the same time clear. Thank you for your attention and your assistance.

Sincerely yours,

E. F. ANDREWS,
Vice President, Purchases.

M. PASHELINSKY & SONS,
Jersey City, N.J., July 31, 1964.

Re molybdenum sales

Representative JOHN DENT,
House of Representatives,
Washington, D.C.

DEAR HONORABLE SIR: We owe you a vote of thanks, and we think we should express our appreciation of your action calling for an investigation of price on the initial offering of molybdenum from the Government.

We believe that this sale should have been broken down into 5,000-pound units, and no individual buyer should have been permitted to buy more than one or two 5,000-pound units.

You are perfectly right in your desecry. The manner in which the material was offered practically created a monopoly bid.

We would strongly suggest that the sale be voided, and reoffered on the basis as above outlined. This action would give the small businessman an opportunity to exist.

Respectfully yours,

M. PASHELINSKY.

READING, PA., *March 10, 1966.*

Hon. JOHN H. DENT,
Rayburn House Office Building,
Washington, D.C.:

Unless immediate action is taken the present molybdenum shortage will result in a cutback on the production of specialty steels critical to defense and domestic economy and/or release of inflationary pressure on price due to purchase of domestically produced molybdenum from foreign sources. Action indicated includes immediate release of substantial quantities from stockpile establishment of controls on export and suspension of import duty. Please advise what action is taken and oblige.

CARPENTER STEEL CO.
H. S. POTTER.

LATROBE, PA., *March 11, 1966.*

Hon. JOHN H. DENT,
House Office Building,
Washington, D.C.:

Urge immediate action to install export controls on molybdenum to assure adequate supply for domestic producers of critical high-speed steels, tool steels, high-temperature alloys, and other materials important to our economy. Supplies inadequate. Situation critical. Only reduction of exports will be effective to solve problem during next 6 months. Inflationary pressures of shortage through black-market manipulation are called to your attention.

G. A. ROBERTS,
President, Vasco Metals Corp.
W. SHERMAN,
Vice President, General Manager, Vanadium Alloys Steel Co.

PITTSBURGH, PA., *March 14, 1966.*

Congressman JOHN DENT,
Rayburn Office Building,
Washington, D.C.:

Molybdenum shortage is critical, unless relief is provided immediately. Inform of export controls stockpile release and import duty suspension domestic specialty steel industry cannot long refrain from purchasing moly at inflationary prices with inflationary results.

ROBERT K. WARREN,
Vice President Sales, Firth Sterling Inc.

WASHINGTON, D.C. *January 24, 1966*

Hon. JOHN H. DENT,
House of Representatives,
Washington, D.C.:

Responding to your telegram, January 21, which you forwarded to the secretary regarding molybdenum supply difficulties or Latrobe Steel, Climax Molybdenum Co. advises it delivered 12,000 pounds January 21. Will ship an additional 15,000 pounds early week January 24. Molybdenum Corp. plans to deliver 2,500 pounds by January 25. Department of Commerce will respond to request for export control by letter.

A. B. TROWBRIDGE,
Domestic and International Business Department of Commerce.

LATROBE, PA., *January 20, 1966.*

Hon. JOHN H. DENT,
Member of Congress,
Longworth House Office Building,
Washington, D.C.

Moly supply at Latrobe Steel Co. has now reached extremely critical stage. If we receive the 27,000-pound balance due us from American Metal Climax by Monday or Tuesday plus the 2,500 pounds due from Moly Corp., we will have

sufficient moly to get us through the week of January 24. We have received no commitment as to when we can expect the 69,000 pounds due from American Metal Climax in February. If we get it in the first week of February it will supply us through the third week of February. At that time will be completely out of moly and will have to shut down furnace operations. This will mean loss of production to defense material customers, loss of wages, loss of taxes, and reduced profits if for any reason the moly which has been committed does not arrive at the times indicated above. Shutdown will have to occur earlier. We can find no moly anywhere. It is obvious now that release from stockpile will not solve problem. The only answer to us and other companies in our industry is an immediate embargo on exports in order to fill the domestic pipelines quickly.

LATROBE STEEL CO.,
G. E. McDONALD,

Secretary and General Counsel.

OFFICE OF CONGRESSMAN JOHN H. DENT,
Greensburg, Pa.

Congressman John H. Dent fights to keep specialty steel operators in the United States from curtailing employment.

Dent said "The repeated warnings of the danger to U.S. tool steel plants inherent in our foreign trade policies seems to fall on deaf ears. For the past 3½ years I have been fighting to curtail exports of much-needed molybdenum, a critical raw material in the specialty steel industry. This is not the first time local facilities such as Latrobe Steel, Vasco, and others, both in Westmoreland and in other parts of Pennsylvania and the Nation have been up against the problem of short supply of this material. Both President Kennedy and Johnson have opened up our strategic stockpiles on previous occasions to save the jobs of our steelworkers, however, the basic policy of our Commerce Department with State Department overtones causes the crisis to be chronic rather than occasional."

The following letter and telegrams to the Secretary of Commerce and the White House tell the story of what is happening and what can happen if we don't change the present policy.

JANUARY 21, 1966.

Hon. JOHN T. CONNOR,
Secretary of Commerce, Washington, D.C.:

Received following telegram and talked with company officials. Matter critical. Need immediate action. Reply requested.

JOHN H. DENT,
Member of Congress.

Hon. JOHN H. DENT,
*Member of Congress, West Pittsburgh Street,
Greensburg, Pa.:*

Moly supply at Latrobe Steel Co. has now reached extremely critical stage. CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., January 18, 1966.

Mr. HENRY W. WILSON,
*Administrative Assistant to the President,
The White House, Washington, D.C.*

DEAR HENRY: In order to give you more pertinent information to work with, relative to the molybdenum shortage, which I shall call moly from now on, I would like to pass along to you the following:

As you know, my people have been quite disturbed about the fact that the Government has been disposing from the stockpile without seeming to give enough concern to American consuming industries.

Certainly I am not taking a position, nor is the industry, against the anticipated 5 million pounds to be released from the stockpile. Our only concern is that it is too little—and may come too late.

The industries wonder if it is to be placed for sale, as the last release, under terms which merely stated it must be consumed in the United States within 3 months. One of the gamuts used was that many defined consumption as "being converted to the ferro state" and then it could be sold anywhere.

If this same practice is followed then the stockpile release will put 5 million pounds into a market that is already consuming 75 million pounds annually. You can easily see that it will be lost in a shuffle.

The least we can recommend is that it be handled similarly to the cadmium disposal made lately, or at least, on the same ground rules as the last couple of bids on moly.

I would like to quote in part from information I have at hand; as well as interposing some of my own thoughts on the matter. I hope these will give you additional light on the seriousness of the situation.

"We believe that the stockpile disposal will be too little and that we should continue very strong efforts to try to get an export curtailment. It is the increase in rate of exports in October that bothers us; and since we have been advised by Climax that we are to be cut an additional 15 percent, it makes us worry whether the rate of increase will continue. It's been pointed out that the Netherlands received 347,000 pounds in all of 1964 and 418,000 pounds in October of 1965. Belgium, Luxembourg, and other countries close to Rotterdam received similar increases. It must be remembered that the steel industry consumes 80.6 percent of all moly consumed in the United States and that the Climax Corp. represents 62 percent of free world production and 85 percent of U.S. production.

One argument that has been advanced against curtailing exports is international political responsibility. As we have said, the only country that is complaining of the shortage of moly is the United States. Japan and the United Kingdom are both down in quantity exporting. Needless to say, Japan is suffering from its worst depression since the war; and the United Kingdom is getting part of its material from the mines recently brought on stream in Canada. This helps the export picture look better; but when you see that the Netherlands increased 1,460 percent and Belgium 1,350 percent, it makes you wonder.

Another point is that certain Government officials will argue that we must maintain the export of moly to aid the balance of payments. This argument does not stand up when you realize that, if we had the moly, we would be exporting 100 pounds of 316 stainless steel for \$35 rather than 3 pounds of moly for \$6.

It should also be pointed out that perhaps we would have an opportunity to buy some moly from Canadian mines if we did not have a prohibitive import duty on moly in this country.

This again demonstrates the confounded trade policy that has this country putting restrictive tariffs on products in short supply and eliminating tariffs on the products in surplus.

If inconsistency is a mark of a great mind then this Nation must have the brainiest people that ever lived; for the only thing I find consistent is inconsistency.

I sincerely believe that this is a very acute and pressing problem.

I have had requests from presidents of the various steel companies and their representatives for a top-level meeting to look into the moly problem; which, incidentally, will soon be just as acute in the matter of tungsten and other short supply raw materials.

Please let me know the results of your investigation.

Sincerely yours,

JOHN H. DENT, *Member of Congress.*

LATROBE STEEL CO.,
Latrobe, Pa., March 10, 1966.

Mr. JAMES DEUCSENBERRY,
*Council of Economic Advisers,
 Washington, D.C.*

DEAR MR. DEUCSENBERRY: Thank you very much for your telephone call this morning in reply to my recent telegram to the President of the United States concerning the critical shortage of molybdenum in the United States.

Latrobe Steel Co.'s situation regarding this vital element is as follows. We currently have on hand approximately enough molybdenum to meet our melting requirements for the balance of March in defense-rated orders and in essential defense-supporting high-speed steel cutting tool material. This compares with regular plant inventory of 30-60 days' supply in normal times.

Furthermore, our future commitments from all suppliers for April and beyond are approximately 25,000-35,000 pounds per month under our estimated requirements for the balance of 1966.

The danger exists with the short operating supply, that we may face temporary shutdown before March 31, because of variations in specifications of different types of molybdenum to meet specific melting requirements.

Latrobe arrived at this precarious position by the following route. In the latter part of 1964, the shortage of molybdenum was beginning to make itself felt, and we were not able to maintain our normal operating supply. Therefore, we purchased 147,000 pounds of contained molybdenum from the G.S.A. stockpile release in October 1964.

Since that time, our receipts of molybdenum have not equaled the consumption. We have been able to maintain production schedules by using the material obtained from the stockpile release. We have now reached the point where all of this material has been consumed; therefore, we are in a critical position concerning this element.

I might also add that we would have reached this point several weeks sooner had we not prevailed upon our major supplier to advance us some material in January and February from future commitments through use of D.O. ratings and other methods. However, this has not resulted in an increase of our total available supply.

We appreciate the concern of the Administration and the Council of Economic Advisers with our problem. We hope that you will be of assistance to us in the near future.

Sincerely yours,

MARCUS W. SAXMAN.

Mr. PHILBIN. Do you have some questions, Mr. Arends?

Mr. ARENDS. No, just an observation that I thought was interesting.

The reason they wanted to keep a stable price was the reason the producers have not gone up in price.

Mr. LAWRENCE. Yes, sir.

Mr. ARENDS. I am just naive enough to believe there must be something more involved.

That is all, Mr. Chairman.

Mr. PHILBIN. I do not know that the committee would be that naive, too.

Mr. BENNETT. Didn't you indicate the reason for that was you felt they would price themselves out of the market, or something of that sort?

Mr. LAWRENCE. They want to maintain and build the market for the material. There are not very many substitutes. In fact, there is only one substitute for molybdenum, and it is not a complete substitute; it is tungsten. It has been the policy of the companies producing this material; they keep a very stable price for it, the material, all along.

Mr. PHILBIN. Mr. Machen, do you have any questions?

Mr. MACHEN. No questions.

Mr. PHILBIN. Mr. Clancy.

Mr. CLANCY. How much of this material is produced in the United States; that is, the amount we consume in the United States?

Mr. LAWRENCE. Total production in the United States was 77 million pounds in 1965. Total U.S. consumption in 1965 was 53 million pounds.

Mr. CLANCY. Seventy-seven million pounds?

Mr. LAWRENCE. Yes, sir.

Mr. CLANCY. What is the source of supply for these people who sell at this \$3.75 a pound figure?

Mr. LAWRENCE. They can pick it up in the form of scrap. Some of it that is exported no doubt comes back to the United States at this price.

Mr. CLANCY. How much do we export each year?

Mr. LAWRENCE. In 1965 we exported in the neighborhood of about 29 million pounds, I believe.

Mr. CLANCY. Roughly, one-half of what we consume domestically; is that right?

Mr. LAWRENCE. That is right, sir.

Mr. CLANCY. What is the world market price of this material?

Mr. LAWRENCE. I am sorry, I don't have that figure. The producer price in Europe, for example, I think is close to the U.S. price. There may be some difference, but it is not substantial.

Mr. CLANCY. I have no further questions.

Mr. PHILBIN. I want to ask a few more questions about your letter. Mr. Lawrence, as to the method that you used in making the reduction.

You had a task group of technicians representing Commerce, State, and Interior, and OEP, reviewing this situation. They were principally, I take it, economists or technical economic people?

Mr. LAWRENCE. No, these people are mostly metallurgists, that type of people.

Mr. PHILBIN. Metallurgists and scientists?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. At the time you were considering this matter, in this group, this task group, as you termed it, you did not have any representatives of the Defense Department?

Mr. LAWRENCE. No, sir; because molybdenum is one of several materials where the Department of Defense does not supply us their requirements. You see, their requirements are not for molybdenum, as such; they are for steels which contain molybdenum. Therefore, we include the production of their—we estimate the quantity of steel that would be needed for defense, and from that we factor out the molybdenum.

Mr. PHILBIN. In other words, molybdenum is not used, itself, by the Defense Department?

Mr. LAWRENCE. That is correct, sir.

Mr. PHILBIN. Don't they participate in all the evaluations made when the stockpile is made?

Mr. LAWRENCE. They participate, and they approve all of the stockpile objectives, but they do not submit requirements for all materials.

Mr. PHILBIN. Were you in touch with the Defense Department; you notified them of the meeting, I presume?

Mr. LAWRENCE. Oh, yes. They have had the data; they have gone over them.

Mr. PHILBIN. Do they communicate with you? Do you have communications from them?

Mr. LAWRENCE. Yes, sir. They approved it.

Mr. PHILBIN. You heard me read the letter from the Deputy Secretary of Defense. We received a statement, as I stated, to the effect that they approved of it.

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Do they also notify you?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Do they furnish you with any information; or did you, on the other hand, receive or procure any information from the Defense Department sources in connection with the inquiries of the task group?

Mr. LAWRENCE. Well, the defense requirements, as I say, for the steels are computed for these mobilization years.

Mr. PHILBIN. You had all that information before you?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. When the task force met and considered the stockpile reduction?

Mr. LAWRENCE. That is correct.

Mr. PHILBIN. Are there any questions?

Any questions, Mr. Bennett?

Mr. BENNETT. No.

Mr. PHILBIN. No questions.

Thank you very much, Mr. Lawrence.

Mr. Harlan.

You have a prepared statement, Mr. Harlan?

Mr. HARLAN. Yes; I do, Mr. Chairman.

Mr. PHILBIN. We will take that for the record. Then you can amplify your views.

(The prepared statement of Mr. Harlan on disposal of molybdenum is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13369.

This bill as originally submitted would authorize the disposal of approximately 1,034,300 pounds (molybdenum content) of molybdenum concentrates now held in the national stockpile. This was the quantity of molybdenum in the stockpile which the Office of Emergency Planning had determined was in excess of stockpile requirements.

On March 17 we were advised by the Director of OEP that the stockpile objective for molybdenum has been reduced to 55 million pounds and that legislative authorization should be sought for dis-

posal of 14 million pounds now excess to stockpile needs. We recommend amendment of H.R. 13369 to authorize the disposal of this quickly.

We have developed a modified plan of disposal reflecting the increased quantity and will submit it to you at this time if you wish.

Molybdenum is a hard, silvery white metal used as an alloying element principally in the manufacture of steel. It imparts a high melting point and toughness to alloys.

The United States is the world's largest producer of molybdenum ores and concentrates.

The total inventory of molybdenum held by GSA now is 69,034,253 pounds. As indicated above the present stockpile objective is 55 million pounds. The excess of approximately 14 million pounds would be covered by the amendment to H.R. 13369 which we propose.

The average acquisition cost of the inventory was \$1.10 per pound (molybdenum content). The current market price is \$1.55 per pound (molybdenum content) of concentrates, free on board, Climax, Colo., and \$1.75 per pound (molybdenum content) of molybdic oxide.

GSA has consulted with affected Government agencies in the development of the disposal program on the excess. We are aware from our contacts with the industry and the other Government agencies that the present supply of molybdenum is extremely tight, and that industry strongly supports the release of the stockpile excesses.

Although time has not permitted formal consultation with affected industries, telephone samplings taken by the Department of Commerce and GSA with a representative number of producers and consumers indicate that the industry will fully support disposal of the total excess quantity.

Plans for the disposal of the additional quantities of excess molybdenum will be discussed in detail with representatives of the industry at a meeting which we have scheduled for March 29.

Increasing industry demands for molybdenum will not only enable us to carry out the disposal without adverse effect, but in a manner which will relieve, on a timely basis, a critical supply shortage situation.

This agency strongly recommends the enactment of H.R. 13369, amended as we have outlined.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. Chairman, yesterday you read for the record a letter from the Administrator, Mr. Lawson B. Knott, stating that we supported the amendment to authorize the disposal of approximately 14 million pounds of excess stockpile molybdenum, and to modify our plan of disposal to reflect the increased quantity.

We have done that, Mr. Chairman, and are prepared to submit to the committee the modified plan.

Mr. PHILBIN. Do you have the proposed amendment or the modified plan too?

Mr. HARLAN. I do, sir.

Mr. PHILBIN. We will give it consideration when the time comes.

Mr. HARLAN. I will turn it over to counsel.

Mr. PHILBIN. You have had extensive industry conferences about this matter?

Mr. HARLAN. Mr. Chairman, again, this is one of these situations where we have been in almost constant touch, particularly with the steel industry.

I would rate the supply situation of molybdenum as being very close to, as critical at the moment, as it is for that of copper. For this reason we plan, at the moment, to ask that the Department of Commerce cooperate with us, and if we have approval for the disposal of this material we would do it by allocation on the basis (1) of defense requirements, and (2) of hardship requirements of the using industry.

Mr. PHILBIN. Has that plan been discussed with the members of the industry?

Mr. HARLAN. It has, and I have a meeting scheduled next week, on the 29th, to go over the final details with the industry.

Mr. PHILBIN. Have you reached concurrence with the industry on the plans—first, on the bill, and then on the plans you have made for disposal?

Mr. HARLAN. Yes, sir; after we received advice of the increased quantity I touched base again on a selective basis with both the consuming and producing industry.

Mr. PHILBIN. There is no objection?

Mr. HARLAN. None that I know of; no, sir.

Mr. PHILBIN. Thank you very much.

Do you have some questions, Mr. Arends, or Mr. Bennett?

Mr. BENNETT. Since there is such a great diversity between the average producer's rate of sale and what the exceptional seller sells at, do you take this into consideration, the higher price, or are you arriving at what the average producer sells at—the so-called black market? Does that enter into the figure which you presented?

Mr. HARLAN. Do you mean in determining the price at which we would sell the material?

Mr. BENNETT. Right.

Mr. HARLAN. No, sir, we would sell the material at what we recognized as a legitimate market price, and in that case it would be the producer's price.

Mr. BENNETT. The fact it is sold at a much higher rate commercially doesn't affect that at all?

Mr. HARLAN. Well, no. I believe that in disposing of this material we should dispose of it at the fair market value. In this case, we believe it is the producer price.

Mr. BENNETT. No further questions.

Mr. PHILBIN. You don't have further questions?

Mr. ARENDS. No.

Mr. PHILBIN. Thank you very much, Mr. Harlan. You gave us an excellent statement.

Mr. COOK. I have a statement of the Tool and Stainless Steel Industry Committee on molybdenum, which I would like to now insert in the record.

Mr. PHILBIN. That may be inserted in the record.

(The statement of the Tool and Stainless Steel Industry Committee on molybdenum is as follows:)

The Tool and Stainless Steel Industry Committee is an association of 18 U.S. specialty steel producers. For over a year this committee has been gravely

concerned about the steadily worsening molybdenum situation in the United States. The committee feels strongly that the stockpile release of 14 million pounds of molybdenum proposed by the administration is an essential first step toward a solution of this molybdenum problem.

Molybdenum is an alloying element essential to the production of both tool and stainless steels. These products are basic to our national economy and security. The United States produces approximately 65 percent of the free world's molybdenum; over 75 million pounds in 1965. In that year, available domestic supplies of molybdenum fell as much as one-third below the requirements of the U.S. specialty steel industry. An additional 15 percent cutback has been felt by major consumers in the first quarter of 1966. U.S. specialty steel producers face a continuing shortage of this essential element which grows more critical every day.

Figures on production and consumption of this strategic material do not tell the whole story. In 1965, domestic production of 77 million pounds plus a stockpile release of 6 million pounds made up the total domestic supply of 83 million pounds of molybdenum. Of this amount 54 million pounds went to domestic consumers and 29 million pounds were exported. Some suggest that these figures show that supply satisfied demand. Nothing could be more misleading. These figures show merely that every available pound of molybdenum was used. Since no molybdenum inventories survived the year 1964, steel producers and other users were limited to the 54 million pounds made available domestically by the producers.

Demand for molybdenum steels is constantly increasing. Predicted increases in the domestic supply of molybdenum have materialized much more slowly than expected. Domestic producers have forecast a 13 million pound increase in 1966. This figure is based on 12-month operations, yet the net change in the first quarter of this year has been a reduction in available molybdenum.

Specialty steel producers face lost and canceled orders with attendant slow-downs, shutdowns and layoffs unless more molybdenum becomes available domestically. Their only alternative is to purchase needed molybdenum at inflationary prices on the world market.

The industry has been pressing for a three-part attack on the molybdenum shortage: import duty suspension, export controls, and stockpile releases. Of these the stockpile release of useable material is the one which promises the fastest relief, if Congress will act promptly.

The Tool and Stainless Steel Industry Committee urges immediate release of stockpiled molybdenum. While the industry does not contend that 14 million pounds of molybdenum will completely eliminate their problem, it does feel that release of this amount will enable the specialty steel producers to weather the present crisis until permanent solutions can be effected. The Tool and Stainless Steel Industry Committee earnestly asks your prompt and favorable action to assure the release from the stockpile of the 14 million pounds of molybdenum now declared excess to the requirements of national security.

(The following material was received for the record:)

PITTSBURGH, PA., March 23, 1966.

Hon. PHILIP J. PHILBIN,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN PHILBIN: Yesterday we wrote you regarding H.R. 13369 on which Subcommittee No. 1, House Armed Services Committee, will hold a hearing tomorrow, March 24.

In that letter we indicated that production of molybdenum in the United States during 1966 will fall far short of meeting demand. In our haste to get our letter to you prior to the hearing, however, we overlooked the fact that H.R. 13369 as originally written calls for the disposal of 1 million pounds of molybdenum whereas, the total excess now in the stockpile is 15,034,300 pounds.

The 1 million pounds would be grossly inadequate to help the present critical shortage of this important element. Our comments were intended to apply to the entire 15,034,300 pounds.

W. C. MEYER,
Crucible Steel Co. of America.

PITTSBURGH, PA., March 4, 1966.

Hon. PHILIP J. PHILBIN,
U.S. House of Representatives, Washington, D.C.:

Serious shortage of molybdenum is curtailing our specialty steel operations. Urgent that minimum of 1 million pounds of molybdenum that has been declared surplus be released from stockpile immediately for application to defense rated orders. Will appreciate prompt response.

WILLIAM G. STEWART,
President, Cyclops Corp.

PITTSBURGH, PA., March 7, 1966.

Hon. PHILIP J. PHILBIN,
Member of Congress,
House of Representatives Office Building, Washington, D.C.:

Shortage of molybdenum continues to be critical. Latrobe Steel Co. estimates that it will need between 300,000 and 400,000 pounds additional molybdenum for the balance of 1966 over what it is now receiving to continue production on defense material and essential tool steel and high-speed steel products. If the shortage continues we will be forced to secure additional molybdenum from other sources at inflated prices. Our company cannot absorb any additional raw material increases without increasing prices for our own products. This will only add to inflationary pressures. The only solution that we see is immediate export controls together with suspension of duty on molybdenum imports and release from stockpile. Immediate action is required to solve the molybdenum shortage situation which is now completely chaotic. We ask your immediate attention and immediate action at all levels of government to solve this critical shortage.

MARCUS W. SAXMAN, III,
President, Latrobe Steel Co., Latrobe, Pa.

PITTSBURGH, PA., March 23, 1966.

Hon. PHILIP J. PHILBIN,
House Armed Services Committee,
House Office Building,
Washington, D.C.

Urgently solicit your help and support for passage of H.R. 13774 covering release of excess vanadium in amount of 6,450 tons contained vanadium in 23 million pounds vanadium pentoxide.

Also more urgently need your support for release of 14 million pounds of molybdenum contained in oxide and molybdenite now declared surplus by OEP.

E. F. ANDREWS,
Vice President Purchases,
Allegheny Ludlum Steel Corp.

GENERAL SERVICES ADMINISTRATION,
Washington, March 18, 1966.

Hon. L. MENDEL RIVERS,
Chairman, Committee on Armed Services,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: Legislative proposal submitted by our letter dated January 19 would authorize the disposal of approximately 1,034,300 pounds of molybdenum now held in the national stockpile, established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). The quantity of molybdenum covered by our proposal was the quantity in the stockpile which had been determined excess to stockpile needs by the Director, Office of Emergency Planning. The proposal was introduced in the House as H.R. 13369 and is now pending before your committee with hearings scheduled to begin on this and other disposal authorizations Monday, March 21.

We are now in receipt of a letter dated March 18 from the Acting Director, Office of Emergency Planning, advising that approximately 14 million pounds of molybdenum are excess to stockpile needs and that legislative authorization should be sought for disposal of that quantity.

Accordingly, during the hearings on H.R. 13369, we intend to support its amendment to authorize disposal of approximately 14 million pounds of excess stockpile molybdenum and to modify our plan of disposal to reflect the increased quantity. Although time has not permitted formal consultation with affected industries, a telephone sampling taken today with a representative number of producers and consumers indicates that the industry will fully support disposal of the total excess quantity. Your committee is assured that implementation of the plans for the disposal of the additional quantities of excess molybdenum will be worked out in close consultation with representatives of the industry with whom a meeting has been scheduled for March 29, 1966. Increasing industry demands for molybdenum will not only enable us to carry out the disposal without adverse affect but in a manner which will relieve, on a timely basis, a supply shortage situation rapidly becoming critical.

Sincerely yours,

LAWSON B. KNOTT, Jr., *Administrator.*

Mr. PHILBIN. We have another bill we intended to take up here this morning.

Mr. Arends, who is interested in the bill, which is H.R. 13366, aluminum, a disposal bill for aluminum, advises that he has rather extensive questions that he wants to ask about this bill.

Mr. Clancy is also interested in the bill, and he suggests or has requested that the hearing on this bill be continued until sometime next week, perhaps.

Mr. ARENDS. At your convenience.

Mr. PHILBIN. At the convenience of the committee.

I think that would be agreeable to everybody. You could be here sometime next week, Mr. Harlan and Mr. Lawrence?

Mr. HARLAN. Yes.

Mr. PHILBIN. The committee will notify you so everybody will have a chance to introduce their evidence.

The committee will now go into executive session.

(Whereupon, at 11:48 a.m., the subcommittee proceeded into executive session.)

(The following material was received for the record:)

CRUCIBLE STEEL CO. OF AMERICA,
Pittsburgh, Pa., March 23, 1966.

Hon. PHILIP J. PHILBIN,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PHILBIN: Yesterday we wrote you regarding H.R. 13369 on which Subcommittee No. 1, House Armed Services Committee, will hold a hearing tomorrow, March 24.

In that letter we indicated that production of molybdenum in the United States during 1966 will fall far short of meeting demand.

In our haste to get our letter to you prior to the hearing, however, we overlooked the fact that H.R. 13369 as originally written calls for the disposal of 1,034,300 pounds of molybdenum, whereas, the total excess now in the stockpile is 15,034,300 pounds.

The 1 million pounds would be grossly inadequate to help the present critical shortage of this important element. Our comments were intended to apply to the entire 15,034,300 pounds.

Very truly yours,

W. C. MEYER,
Assistant Vice President, Purchasing and Traffic.

SPRINGFIELD, N.J., March 30, 1966.

Hon. L. MENDEL RIVERS,
Chairman, House Armed Services Committee,
House Office Building, Washington, D.C.

This wire has also been sent to President Lyndon B. Johnson, the White House, Washington, D.C., and Hon. Wilbur D. Mills, chairman, House Ways and Means Committee, room 1102, House Office Building, Washington, D.C.

The Office of Emergency Planning asked Congress to declare approximately 13 million additional pounds of molybdenum as surplus to the stockpile objectives that it may be released to molybdenum consumers and converters in the United States. While this measure will afford welcome relief, it could only serve, in our opinion, as a temporary palliative, leaving the Nation's strategic materials supply position still exposed to the continuing and persistent threat of molybdenum shortages in the future.

In its testimony before the Armed Service Committee, the office of emergency planning stated that it felt safe in reducing stockpile objectives because of new molybdenum supplies which will become available from Questa, N. Mex., and from Canada during 1966, the OEP estimates that 60 percent of Canadian production would reach the United States in the event of an emergency. We should point out that the output of established Canadian products is already committed to Europe and Japan under long-term contracts. We ourselves have contracts for the purchase of a substantial portion of the output of the largest producer in Canada. Much of this material could have reached the United States but we, and others like us, elected instead to establish markets in Europe for our products made from the Canadian molybdenite because the U.S. tariffs which, in a normal market, would not permit us to be competitive with domestic producers.

In order to stimulate further production in Canada where substantial molybdenum deposits exist and to encourage the establishment of U.S. markets for Canada producers, we feel that it is vital that any change in stockpile objectives be accompanied by passage of the Dent and Dwyer bills H.R. 10362 and H.R. 10629, respectively, which provides for the removal of duties on molybdenum and of the Dent bill, H.R. 10367, or of similar legislation which provides for the control of exports.

We are and have been significant producers of molybdenum products and a leading supplier of molybdenum to the vacuum melting industry. For the past several years. We have been faced with recurrent shortages of raw material. Releases from the stockpile during the past 3 years have from time to time afforded temporary relief; however, we feel that steps should be taken to provide the long-term relief that access to the readily available supplies in Canada would afford.

If the duty were to be removed we would certainly bring a part of our Canadian material into the United States for sale here, and we are sure that others would do likewise.

In connection with the release of molybdenum which is now proposed, we feel that it should serve to add to the domestic supply and should not replace material diverted or which may be diverted to foreign consumers or conversion facilities. No increase in exports should be permitted until a satisfactory domestic supply situation is evident.

With regard to the domestic consumers climax should not be permitted to deny normal commercial allocations of supplies to recipients of stockpile material as they did when previous releases were made.

The release of molybdenum from the stockpile is undoubtedly necessary. However, releases from the stockpile have not been sufficient, thus far, to solve the basic problem which involves increased consumption control of this strategic material is still concentrated in the hands of corporations and one in particular whose policy serves to stifle new enterprise. In this field, removal of the duty could help to break this hold and stimulate new productions here in Canada and elsewhere abroad. We submit that only in this manner can the threat of future molybdenum shortages be effectively eliminated.

M. & R. REFRACTORY METALS INC.
 R. S. WOOD, *Vice President, Sales*

MARCH 25, 1966.

HON. PHILIP J. PHILBIN,
*Chairman, Subcommittee No. 1,
 Armed Services Committee,
 House of Representatives,
 Washington, D.C.*

DEAR MR. CHAIRMAN: It is my understanding that your subcommittee held hearings on March 24 on H.R. 13369, as amended, to authorize the disposal of approximately 14 million pounds of molybdenum now held in the national stockpile but excess to the stockpile objective as recently revised by the Office of Emergency Planning.

I am aware of the critical shortage of molybdenum at this time and wish to go on record as supporting this disposal. The release would not adversely effect the domestic mining industry and would be of considerable benefit in relieving current consumer shortages, including mounting military requirements. Under these circumstances and where the disposal does not impair national security by reducing the stockpile below established objectives, I will continue to support such legislation as I have in the past.

Sincerely,

WAYNE N. ASPINALL, *Chairman.*

H.R. 13661—BATTERY-GRADE SYNTHETIC MANGANESE DIOXIDE

HOUSE OF REPRESENTATIVES,
 SUBCOMMITTEE NO. 1 OF THE
 COMMITTEE ON ARMED SERVICES,
Washington, D.C., Monday, March 21, 1966.

The subcommittee met, pursuant to notice, in room 2118, Rayburn Building, Hon. Philip J. Philbin (chairman of the subcommittee), presiding.

MR. PHILBIN. What is the next bill, Mr. Cook?

MR. COOK. H.R. 13661, battery-grade synthetic manganese dioxide. (The bill reads as follows:)

[H.R. 13661, 89th Cong., 2d sess.]

A BILL To authorize the disposal of battery-grade synthetic manganese dioxide from the national stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately fourteen thousand, five hundred and seventy-two short dry tons of battery-grade synthetic manganese dioxide now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

(The statement of Mr. Philbin on battery-grade synthetic manganese dioxide is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

MR. PHILBIN. This is another legislative proposal submitted by the General Services Administration.

The bill would provide for the release of approximately 14,572 short dry tons of battery-grade synthetic manganese dioxide now held in the national stockpile.

The current inventory of this material is 21,272 short dry tons in the national stockpile and 3,779 short dry tons in the DPA inventory or a total in all inventories of 25,051 short dry tons. The stockpile objective established March 13, 1964, is 6,700 short dry tons. Thus, we have an excess of 18,351 short dry tons.

The average acquisition cost of this commodity was \$224.35 per short dry ton.

This material is a black material usually passing a U.S. standard sieve No. 60. It is principally used in the manufacture of dry cells for batteries. For military use, it is usually mixed with natural grade to produce high-standard batteries. It is also used in special types of batteries for hearing aids and other small elements. The material is obtained in the United States.

Mr. Lawrence.

(The statement of Mr. Lawrence is as follows:)

STATEMENT BY WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, we appreciate this opportunity of appearing before you to support the passage of H.R. 13661, a bill, to authorize the disposal of approximately 14,572 short dry tons of battery-grade synthetic manganese dioxide from the national stockpile.

Synthetic manganese dioxide is produced from manganese ore, of foreign or domestic origin. It is used as a depolarizer in all defense and civilian dry cell batteries.

The last review of the stockpile objective for synthetic dioxide in February 1964, resulted in a reduction from 20,000 short dry tons to 6,700 short dry tons. The review of natural ore battery-grade manganese showed an increase from 50,000 short dry tons to 80,000 short dry tons. In other words, battery manufacturers are moving from the synthetic to the natural ore.

Consultations have been held with representatives of industry and interested foreign governments on the disposal of this material, and all parties have concurred in its sale.

Mr. PHILBIN. You have decreased your objective for the synthetic and increased it for the natural ore?

Mr. LAWRENCE. That is correct.

Mr. PHILBIN. Was there any objection from industry?

Mr. LAWRENCE. Not to my knowledge. It was reported to me there was none.

Mr. PHILBIN. This has been cleared in the usual way with the Government agencies?

Mr. LAWRENCE. That is right.

Mr. PHILBIN. You recommend it?

Mr. LAWRENCE. Yes.

Mr. PHILBIN. There are no questions. We thank you.

Mr. Harlan.

Mr. HARLAN. Mr. Chairman, if you will agree, I will skip over most of the contents of the statement.

Mr. PHILBIN. Yes, that will be agreeable.

Mr. HARLAN. I would like to discuss the part where we mention the contacts with the industry.

As we usually do, we have consulted with Government agencies concerned and in accordance with our usual pattern had depended on the Departments of Commerce and Interior and State to make the contacts with the industry and with the interested foreign governments.

Now we have had some contacts also with the industry, and know that there is some reservation on the part of the producing industry. However, in our early conversations with that industry, we have already been exploring with them the possibility that we might enter into an agreement with the producers whereby either they would work this material off by buying it from us and reselling it, or possibly handling the material for us in the capacity of an agency.

We have a meeting scheduled with the manganese industry as a whole, on March 31, and will discuss this in considerable detail with them at that point, but in recommending approval of this bill, we feel confident that we will be able to work out a satisfactory program on this material, working through the producing industry.

Mr. PHILBIN. Then you will report to our committee the results of your conferences with the industry?

Mr. HARLAN. Yes, sir: we certainly will.

Mr. PHILBIN. We will appreciate that. Is there much opposition to the bill?

Mr. HARLAN. I wouldn't call it—at least to my way of thinking. Mr. Chairman, I don't consider it opposition. I consider it concern and some reservation, but I believe we can work it out.

Mr. PHILBIN. You expect to be able to come to an agreement after you have had a conference?

Mr. HARLAN. We are confident we can do that, Mr. Chairman.

Mr. PHILBIN. You keep us advised on this matter, so we can have your views after you have had your conference.

Mr. HARLAN. All right.

Mr. PHILBIN. Thank you very much.

(The statement of Mr. Harlan is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13661.

This bill would authorize the disposal of approximately 14,572 short dry tons of the battery-grade synthetic manganese dioxide now held in the national stockpile. The Office of Emergency Planning has determined this quantity is in excess of stockpile requirements.

Battery-grade synthetic manganese dioxide is produced from natural manganese ores and is much more reactive than natural ore. It

is used primarily in the manufacture of dry cells for batteries for military use, and for such use it is mixed with natural ore. It is also used in special types of commercial battery cells, such as those used in hearing aids. It is supplied almost entirely by domestic production.

The total inventory of battery-grade synthetic manganese dioxide held by GSA is 25,051 short dry tons. The present stockpile objective is 6,700 short dry tons.

The excess of 18,351 short dry tons consists of 3,779 from the Defense Production Act inventory and 14,572 short dry tons covered by H.R. 13661.

The approximate cost per short dry ton of the battery-grade manganese in the national stockpile was \$224.35. Acquisition cost of the synthetic dioxide was approximately \$650 per short dry ton. The present market value is \$490 per short dry ton.

GSA has consulted with Government agencies in the development of the program for the disposal of the excess. The Department of Commerce has consulted with major segments of the industry on the matter. We have arranged an industry meeting on March 31 so that we may thoroughly review the situation with the industry before we firm up the details of specific disposal action. We are confident that we will be able to work out a mutually agreeable program which will protect the interests of all concerned. We will need authorizing legislation so that we may proceed when the program has been satisfactorily agreed upon.

This agency strongly recommends the enactment of H.R. 13661.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. Who is our next witness?

Mr. COOK. Mr. F. Hamilton Gouge, vice president, E. J. Lavino & Co.

Mr. PHILBIN. Give your name and address and the company you represent to the reporter for the record.

Mr. GOUGE. My name is F. Hamilton Gouge. I am a vice president of E. J. Lavino & Co., Philadelphia.

Mr. Chairman—

Mr. PHILBIN. Do you have a prepared statement?

Mr. GOUGE. No, sir. I heard about this hearing only last Friday afternoon.

Mr. PHILBIN. We are glad to have you here. We are glad to hear your statement.

Mr. GOUGE. Thank you, sir.

I understand the proposed bill, H.R. 13661, would authorize disposal from the stockpile of about 14,572 short tons of synthetic battery grade manganese dioxide, and the GSA would be authorized to sell it in the open market.

I had no chance to see this proposed bill until this morning—

Mr. PHILBIN. May I ask whether you attended the industry conference?

Mr. GOUGE. That is not until March 31.

Mr. PHILBIN. You will attend?

Mr. GOUGE. From what has been said so far, I think we better had, yes, sir.

Mr. PHILBIN. You intend to?

Mr. GOUGE. Yes, sir.

And in fact, I only learned of the bill this morning—I only learned of the bill and this hearing last Friday afternoon. Furthermore, I might add that as has happened before today, it seems there have been no discussions with industry about this disposal. I would make a difference with Mr. Harlan on this point. Nobody has talked to us about it.

Mr. PHILBIN. Well, there will be discussions. You heard Mr. Harlan testify.

Mr. GOUGE. I trust so, sir.

Mr. PHILBIN. On March 31, and you will have the opportunity to present your views at that time.

Mr. GOUGE. Yes, sir.

Mr. PHILBIN. Do you have some reservations about the bill?

Mr. GOUGE. Yes, we do. To put it briefly, and speaking for E. J. Lavino & Co., we do object to and have serious reservations about releasing this material from the stockpile.

I will try to explain why we take this position.

First, we understand the stockpile currently contains about 25,000 short tons of synthetic battery manganese dioxide. In wartime it is reliably estimated such material would be consumed by dry cell battery manufacturers at a rate approaching 15,000 short tons per year. Yet the proposed bill calls for disposing of all but 10,479 short tons in the stockpile.

I think the implications are quite apparent since there would be less than 1 year left in the strategic reserve.

Second, by authorizing this disposal, we believe you may be threatening the very existence of American production of synthetic battery manganese dioxide. There were only four American producers and only three sell their products on the market. Of these, only American Potash Co., and my company, E. J. Lavino Co., make electrically chemically produced material. While Manganese Chemical Co., produces chemical materials, the total annual U.S. consumption of synthetic battery manganese dioxide is about 7,000 short tons.

Lavino estimates that between Lavino and American Potash we supply the bulk of this tonnage, about 5,000 short tons, also called electrolyte MnO_2 . Manganese Chemical supplies, we estimate, about 1,500 short tons, all chemical MnO_2 . Imports from Japan, all electrolytic, supply the balance, about 500 short tons.

It is a highly competitive market, as I am sure the other American producers will agree. Consider the fact that Japan now has the capacity to produce nearly 34,000 short tons per year, that Japan exports a large portion of this production, that Japan wants a larger share of the United States and world market, and that Japanese producers seem to be prepared to undercut American prices. Consider the fact that there is ample American productive capacity to more than meet American requirements, then consider what it would mean to release this stockpile material and also place it on the market.

Inevitably, American producers' sales would be cut back. Profits would be seriously reduced, if they did not become losses. Tax revenues would be lost. And if these releases were continued long enough, one or more of the producers might be forced to close down.

Third, synthetic battery-grade manganese dioxide is vital in the production of certain types of dry cell batteries, particularly those used in transistor radios, and most significantly those used in specialized military and electronic applications.

A current dry cell battery requirement for the Armed Forces in Vietnam is a clear case in point.

Thus, an economically healthy American industry, producing synthetic battery MnO_2 is vital; indeed, we must remain economically healthy. We must continue to stay in the technical forefront of an industry whose requirements continually become more sophisticated and complex.

Fourth, let us not forget that over 23 years ago during World War II it was recognized that domestic production of synthetic battery manganese dioxide was a military necessity. Many millions of dollars were devoted to this. Much of the Federal funds. The doctrine is even more valid today, particularly considering the fact that only one small production of natural manganese dioxide exists in the United States, and this is in Montana.

Five, it is generally recognized by both the synthetic battery manganese dioxide producers and the dry cell battery manufacturers, that in wartime, acceptable and usable dry cells cannot be made unless synthetic battery manganese dioxide is available.

If the industry is now to be faced with possible curtailment, how can the United States count on a solid, healthy, synthetic battery manganese dioxide industry under emergency or wartime conditions?

In short, sir, we urge that this committee does not approve this bill. May I add, I had heard nothing about any cooperative venture on the part of the industry to participate with GSA in the disposal of this material. That is news to me.

Mr. PHILBIN. Have you been invited to attend any meeting?

Mr. GOUGE. Yes, sir; on the 31st.

Mr. PHILBIN. You propose to go at that time?

Mr. GOUGE. Yes, sir.

Mr. PHILBIN. You will have an opportunity to present your views there.

Mr. GOUGE. I certainly will.

Mr. PHILBIN. How would you dispose of it? How much a year do you think you could dispose of without hurting the industry or disrupting the market?

Mr. GOUGE. I think this is a very difficult question to answer, because I don't myself know what this battery stockpile is made up of, what grades. Is it up to par at the present time? What are the industry requirements and so forth? I couldn't answer that question.

Mr. PHILBIN. At the meeting you can get all that information.

Mr. GOUGE. Yes, sir.

Mr. PHILBIN. Then you will be able to give a very effective and constructive answer.

Mr. GOUGE. I hope so. It needs to be disposed of at some time. The question is how?

Mr. PHILBIN. You recognize at some time it has to be disposed of. The question is how, and the purpose of the conference, and the committee, and the Congress, is not to do anything that is going to injure industry, or outside people. In the process, what we want to do is

have the kind of disposal that is going to be helpful to the Government, and at the same time not harmful for the industry.

That is what we are working for, and that is what GSA and the other Government agencies are working for. When you go to that meeting you will have an opportunity to air your views, present your recommendations and I am sure they will be considered in the overall action to be taken on this bill.

Mr. GOUGE. Yes, sir; but I trust your committee will not—how shall I say it—authorize this bill without having first heard the views of this meeting on March 31, which is only a short time away.

Mr. PHILBIN. We will hear the results of the meeting before any consideration will be given, and before any action is taken on the bill.

Mr. GOUGE. Thank you, sir.

Mr. PHILBIN. Do you have any questions?

Mr. ARENDS. No; I was going to emphasize that point, Mr. Chairman.

Once we have information from that meeting on the 31st, we will be so much better off.

Mr. PHILBIN. Make sure we get that information.

Mr. ARENDS. I would like to ask one more question. What is the name of your company?

Mr. GOUGE. Lavino.

Mr. ARENDS. I have something here in relation to another, spelled L-a-v-i-n & Son, Chicago—no relation?

Mr. GOUGE. No, sir; no relationship whatever.

Mr. PHILBIN. Thank you very much.

Are there other witnesses?

Mr. COOK. Mr. Franz R. Dykstra, president, Manganese Chemical Co., Baltimore, Md.

Mr. PHILBIN. Come forward, be seated, make yourself comfortable, make yourself to home.

Give your name, address, and the concern that you represent to our reporter for the record, and then proceed with your statement. Do you have a prepared statement?

Mr. DYKSTRA. No, Mr. Chairman, I do not have a prepared statement.

Mr. PHILBIN. Whatever it is, we would be glad to hear from you.

Mr. DYKSTRA. My name is F. R. Dykstra, I am president of Manganese Chemical Co. of Baltimore, which is a wholly owned subsidiary of Pickands-Mather in Cleveland. I am based in Cleveland.

I might say in preface here, Mr. Chairman, we were not approached by General Services Administration with respect to the orderly disposition of synthetic manganese dioxide, and we were apprised of these hearings only on Saturday morning so I may not be as well equipped to discuss it as I might otherwise be.

Mr. PHILBIN. How do you account for the fact that you weren't advised?

Mr. DYKSTRA. I have no idea.

I might say that—

Mr. PHILBIN. Have you been advised since Friday morning?

Mr. DYKSTRA. I was advised by Mr. Gouge Saturday morning by phone. That was my first knowledge of this.

Mr. PHILBIN. But you will attend the industry meeting?

Mr. DYKSTRA. I wasn't even apprised of that until now when it was mentioned.

Mr. PHILBIN. You will attend the meeting?

Mr. DYKSTRA. Yes, indeed, I will.

I appear here opposed to the disposal of this tonnage of synthetic manganese dioxide. I think it should be brought to the attention of the committee that the producing industry has a capacity to produce synthetic manganese dioxide about 200 percent of consumptive requirements today. This is largely as a result of Signal Corps' efforts shortly after the Korean war, when every effort was made to the three of us who are the principal producers to increase our production in anticipation of the battery industry going to synthetic, which has not materialized to the extent Signal Corps anticipated.

We in our own case, for example, are producing at the rate of about 30 percent of our capacity. Disposition of even a modest tonnage of synthetic could very seriously and adversely affect our decision to continue, tax structure being what it is, one doesn't mothball equipment like this, the tendency is to dismantle it.

I think therefore it should be seriously considered that this productive capacity would be lost to the country if this were done.

I think also Mr. Harlan has possibly been somewhat ill informed on the price structure. I have seen his prepared statement where he quotes the domestic price at \$490 a ton. In actual fact, the Japanese are offering this in this country now at just about \$400 a ton. The domestic price is higher than this only by reason of the fact that the battery industry is prepared to pay it to keep them in business.

Finally, I think it well to bring to your attention that the term "synthetic battery manganese dioxide" is to a degree misleading as it was in the case of diamonds. There are a number of synthetics, each one peculiarly well suited for specific types of dry cell batteries, so therefore it would be extremely difficult just to offer a blanket tonnage of synthetics, since one would have to know what type you are talking about, and for what specific application it is used.

So in summary, I would like to say even a token disposition could very seriously and adversely affect our decision to continue to produce it as I am sure it would the others as well.

Mr. PHILBIN. Well, when you attend the industry meeting, and get full information about it, and make suggestions——

Mr. DYKSTRA. I would hope so.

Mr. PHILBIN. Of course, we will have your testimony and your viewpoint in mind when we are considering it, and of course we are not going to consider it, or take any action on it until after the industry meeting is held.

Mr. DYKSTRA. I am indeed pleased to hear that.

Mr. PHILBIN. There will be no precipitate action you can be certain of that.

Mr. DYKSTRA. This is all I was concerned about.

Mr. PHILBIN. We appreciate very much your coming here and giving us your splendid testimony.

Mr. DYKSTRA. Thank you.

Mr. ARENDS. I would like to address my question to Mr. Harlan. The last two witnesses have indicated now neither one of them have been advised of any such meeting being established. How do you select

those you advise, do you select them from the list, or does the trade industry do this? How do you get this information out? Apparently it is faulty somewhere along the line.

Mr. HARLAN. I am sure the people from Lavino didn't say that, Mr. Arends, because we personally talked with them on the telephone. I must say I do not have this gentleman's company on the list, that we got from the Department of Commerce, but you can depend on it he will be promptly added to that list.

Mr. ARENDS. The gentleman from Philadelphia, his boss, or whoever it might be, didn't tell him?

Mr. GOUGE. This was just an industry rumor. They did not contact us, we contacted them.

Mr. ARENDS. But you did have the information. It was done by telephone. You knew about the meeting by telephone from him?

Mr. GOUGE. I knew about the meeting, the meeting of the 31st, yes.

Mr. ARENDS. I am trying to be helpful in both respects, both GSA and the industry know about these things in advance, this is all I am thinking about.

Mr. HARLOW. I don't think I can allow that statement to go unchallenged. Lavino Co. is getting a letter from us in the the usual manner that we generally proceed, and my associate here has been in touch with the Lavino Co. I don't think it is fair for them to indicate they were not in any systematic way advised of the meeting.

Mr. PHILBIN. You stated you advised them, and they stated they hadn't received any advice.

Mr. HARLAN. I have his name on my list.

Mr. PHILBIN. What are you doing, Mr. Harlan, about making sure now that everyone is advised about the March 31 meeting?

Mr. HARLAN. We depend on the Department of Commerce list, Mr. Chairman, pretty much.

Mr. PHILBIN. You advise everyone on the Department of Commerce list?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Is that a complete list?

Mr. HARLAN. Well, generally speaking what happens is, if someone is missed the word gets around in the trade and we hear from them promptly, then we can add them to the list.

Mr. PHILBIN. Is it an up-to-date list?

Mr. HARLAN. It is as up to date as we are able to keep it, yes, sir.

Mr. PHILBIN. Don't most of these people in this business we are considering in all these bills, and in this one specifically—don't they have some trade associations?

Mr. DYKSTRA. I might say there are only three producers.

Mr. PHILBIN. You don't have a trade association?

Mr. DYKSTRA. No.

Mr. PHILBIN. But you found their names, Mr. Harlan, on the Department of Commerce list, and you notified Lavino?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Did you notify the others, do you know, do you recall?

Mr. HARLAN. We hope we notified everyone. But now I am concerned?

Mr. PHILBIN. Anyway, you have been notified now, no damage has been done up to this point. You can attend the meeting.

Mr. DYKSTRA. I would be glad to be advised we will be included on the mailing list.

Mr. HARLAN. You will be.

Mr. PHILBIN. Thank you.

Mr. DYKSTRA. Thank you.

Mr. COOK. The next witness, sir, is Mr. Robert Walsh, counsel of the American Potash & Chemical Co. of New York City.

Mr. PHILBIN. Mr. Robert Walsh, give your full name and address, Mr. Walsh, and the company that you represent.

Mr. WALSH. Right, American Potash & Chemical Corp., 99 Park Avenue, New York, N.Y.

Mr. PHILBIN. Do you have a prepared statement?

Mr. WALSH. No, sir, I have a very short statement in light of what has gone on before.

It is our opinion a release of only a relatively modest tonnage of stockpile material would, in the light of the present overcapacity of the industry, and the increased foreign competition, principally the Japanese material, would have a very disruptive force on the market. It is our hope, after hearing you people this morning, that we can resolve this at the industry meeting.

Mr. PHILBIN. I think so.

Now as a point of information, do you have considerable Japanese competition in this industry?

Mr. WALSH. Yes, sir; it has increased in 1964, in the whole year they imported approximately 255 tons, and in 1965 the first half of the year, they imported that much. It has increased as far as I can tell, the latter part of 1965, and will get worse in 1966.

Mr. PHILBIN. From your standpoint now, what would be a fair—what would be a practical amount to dispose of each year probably on a long-term basis if you were going to handle this yourself, not to disrupt the market or prices?

Mr. WALSH. I am afraid I am unable to answer that, I got into this very late.

Mr. PHILBIN. You may be able to answer that when you get to the industry meeting.

Mr. WALSH. Yes, sir.

Mr. PHILBIN. Do you have any questions?

Thank you, Mr. Walsh.

Does that conclude the testimony on that bill?

Mr. COOK. Yes, sir.

Mr. PHILBIN. We will take the bill under advisement at this time, and we will wait until we get a report from GSA on the industry meeting before we take action.

(Whereupon, the subcommittee proceeded to further business.)

H.R. 13320—INDUSTRIAL DIAMOND STONES

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE NO 1 OF THE
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Monday, March 21, 1966.

The subcommittee met, pursuant to call, in room 2118, Rayburn House Office Building, Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. COOK. The next bill is industrial diamonds, sir.

Mr. PHILBIN. Industrial diamonds.

(The bill reads as follows:)

[H.R. 13320, 89th Cong., 2d sess.]

A BILL To authorize the disposal of industrial diamond stones from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately eight million and two hundred thousand carats of industrial diamond stones now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. This is another legislative proposal submitted by General Services Administration, and calls for the release of approximately 8.2 million carats of industrial diamond stones from the national stockpile.

At the present time, we have 24,698,775 carats of industrial diamonds in our national and supplemental stockpiles and a stockpile objective of 16,500,000 carats. Thus, the total excess is 8,198,775 carats.

Industrial diamond stones are those that, because of structure, color, flaws or impurities, are unsuitable as gems. They are used principally in grinding wheels to shape and sharpen tungsten carbide cutting tools, and as the cutting edges of tools used for turning, grinding, and drilling hard metals.

Industrial diamond stones come from the Congo and from Holland.

The average acquisition cost was \$11.62 per carat. The present market value is about \$13.05 per carat, depending upon class.

In 1964, the U.S. consumption of industrial diamond stones amounted to 7.7 million carats.

Diamonds—Industrial stones, H.R. 13320

	Carats
Sales through Dec. 31, 1965-----	None
Current inventory:	
National stockpile-----	9, 268, 736
Supplemental stockpile-----	15, 430, 039
Total-----	25, 698, 775
Stockpile objective-----	16, 500, 000
Surplus-----	8, 189, 775
Requested disposal-----	8, 200, 000
Remaining surplus if bill is approved-----	None
	Dollars per carat
Unit acquisition cost-----	11. 62
Present unit market value-----	13. 05

Disposal plan: Initial offering 500,000 carats. Subject to change based upon experience. At an annual rate of 500,000 carats disposal will require approximately 17 years.

Proceed on industrial diamonds, Mr. Lawrence. You know what they say about diamonds.

(The statement of Mr. Lawrence is as follows:)

STATEMENT BY WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

MR. LAWRENCE. Mr. Chairman and members of the subcommittee, we appreciate this opportunity to support H.R. 13320, a bill to authorize the disposal, without regard to the 6-month waiting period, of approximately 8.2 million carats of industrial diamond stones from the national and supplemental stockpiles.

Industrial diamond stones are used for diamond dies, drills, and so forth. Africa is the principal source of the diamonds.

In recent years a considerable quantity of these stones have been acquired by the barter of surplus agricultural commodities. Much of this program was initiated in order to help the economy of the Congo. While this has resulted in a considerable surplus of stones, it has saved cash grants and has helped our balance of payments.

We know that this may be a lengthy disposal program, but we feel that it should be started now while our economy is at a high level and there is a good demand for this material.

We respectfully urge your approval of this legislation.

MR. PHILBIN. You are in agreement about it with all the agencies?

MR. LAWRENCE. Yes, sir.

MR. PHILBIN. The agencies are in agreement about it?

MR. LAWRENCE. Substantially I would say this is true; yes.

MR. PHILBIN. There is nothing unusual about this particular bill. From your standpoint, no opposition has been raised?

MR. LAWRENCE. That is right, sir.

MR. PHILBIN. On the part of any agency you consulted. You touched all the phases as you always do in this case, to make sure you applied all the safeguards required by the law and required by this committee?

MR. LAWRENCE. Yes, sir.

MR. PHILBIN. You can say you know of no objections, no opposition at this time, from the agencies that you have consulted?

MR. LAWRENCE. That is correct.

MR. PHILBIN. You want to put yourself on the record as favoring the bill?

MR. LAWRENCE. Yes, sir.

MR. PHILBIN. Mr. Arends.

MR. ARENDS. No questions.

MR. PHILBIN. Mr. Machen.

MR. MACHEN. I have no questions.

MR. PHILBIN. Thank you, Mr. Lawrence.

MR. HARLAN. Thank you, sir.

(The statement of Mr. Harlan is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee. I am John G. Harland, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson E. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13320.

This bill would authorize the disposal of approximately 8,200,000 carats of industrial diamond stones now held in the national and supplemental stockpiles. The Office of Emergency Planning has determined this quantity to be in excess of stockpile requirements.

Industrial diamonds are those that, because of structure, color, flaws, or impurities, are unsuitable as gems. Industrial stones are usually classified on the basis of size and shape for specific uses. The diamond stones are used primarily in drilling and cutting tools.

Africa is the principal source of industrial diamond stones (90 percent).

The total inventory of industrial diamond stones held by GSA now stands at 24,698,775 carats. The present stockpile objective is 16,500,000 carats. The excess of 8,198,775 carats is covered by H.R. 13320.

The average acquisition cost of the industrial diamond stones in the stockpiles was \$11.62 per carat. The current average market price is about \$13 per carat.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on the excess of the approximate 8.2 million carats.

On February 4, we held a diamond industry meeting with the importer-dealers and consumers of industrial diamond stones to discuss the proposed disposal. We agreed to establish a Government-industry task force to consider the problem and recommend a course of action acceptable to both the Government and industry.

Comments are being received from the industry representatives and the task force is now being formed. Full consideration will be given to these recommendations before disposal action is taken.

This agency strongly recommends the enactment of H.R. 13320.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. That is a fine statement, I want to state that.

Mr. HARLAN. There is a great deal of reservation on the part of the industry in regard to this disposal program. One is ready availability of supplies of most of the types of stones, and the reservation in this case is primarily on the part of the importers, although it is also echoed by the consumers who do not want disruption of the normal import channels.

We had considerable discussion at the meeting. It was a very good meeting, well attended, and well participated in by the industry people, and generally agreed that we did have a huge excess, something probably did need to be done about it, and that we should create a joint Government-industry working group to study the problem in depth and come up with a detailed program.

I have confidence, Mr. Chairman, we will be able to do this.

One of our problems is that the type of materials which we have for disposal, unfortunately, is primarily the types which are readily available in the marketplace today.

So that whatever program we come up with will undoubtedly have to be a very limited program, but we are anxious that something be done so that we can get started with the project of disposing of the excess.

Mr. ARENDS. Is this committee in position to act intelligently on this proposition until we have the results of your study? You say you are studying this, you have a committee set up to study this whole thing.

Mr. HARLAN. Well, that is right, sir.

Mr. ARENDS. Should we await the finding of your committee before we go further with this, or should we do something about it now?

Mr. HARLAN. I would think, Mr. Arends, that we should do something about it now, in order that we will have a position that the material is available and should be disposed of, so that we can work out the details of how the disposal should be carried out.

Mr. PHILBIN. Yes; that is true. I agree with that principle that we should dispose of it as rapidly as we can, if we have the excess; but on the other hand, as you know, this committee follows the policy of requiring industry conferences and consensus of the industry. That is the procedure we followed in the past. Evidently, you don't have that with respect to this industry at this time, do you?

Mr. HARLAN. No, sir. I think this is probably going to be true of several of the disposal programs, and I would like the committee to know my feeling about the idea of getting something started.

We have had a great deal of experience now, as you know, in disposing of these commodities, and very frequently have had to try to move them out at times when the industry was not in complete accord with it.

However, our experience has been, by working the programs out, and handling them carefully and responsibly, many of the fears of the industry disappear, and the programs begin to work very well.

Mr. PHILBIN. I think that is true enough. It all adds up to having further conferences, and having conferences before you come down here, so we have the ground cleared before and not after legislation is enacted; because once the legislation is enacted, of course, these people are in no position where they can take any remedy. They don't have any remedy then, it is too late, in the event something happens, to the administrative department of the government taking a little different view than you take, yours is a commendable one and proper one, but you might get some administrator that will take a little different view, and proceed with a program that will raise havoc with price levels and markets, and be extremely disruptive.

That is something we are seeking to avoid here; you are seeking to avoid that, as well as we are. I know that. But I point out the fact

there is doubt, you do have doubt as to this. It might be well to have some additional conferences here before passing the legislation, because as you know the situation would be in the event that we passed legislation here, you will have authority here, and I know you are not going to abuse the authority that you have. I have confidence that you are going to carry out your mandate under the legislation as your agency always has.

You are going to keep your will with the Congress, you are going to follow the rules that have been laid down here at these hearings, and in the legislation, but nevertheless there would seem to me to be some area here that might be rather disquieting to those people in industry who at the present time have some fears, and these fears might well be resolved if you did have some further conferences with them.

Mr. HARLAN. Well, Mr. Chairman, as I explained, we probably have worked out with this particular industry a more detailed working arrangement than any we have had up to date, where it has been agreed that we are going to create a joint Government-industry task force to study the whole problem. But I would like to point out—

Mr. PHILBIN. You are not going to take any action on the bill until you have the task force implemented and you get its recommendations and they are in agreement as to what you are doing?

Mr. HARLAN. This is what we have agreed to. I would like to point out, Mr. Chairman, that the fact that you grant us the authority to move forward with this disposal does not relieve the industry of any legal protection, because under the Strategic and Critical Materials Act, the law would prohibit our taking action which would unduly upset the market.

Mr. PHILBIN. That is right; that is true. Do you have some questions?

Mr. ARENDS. Well, there is only one question I would raise. We learn the hard way up here once in awhile about granting authority, as I mentioned a moment ago about the Department of Agriculture. It was never the intent and purpose of Congress anything like that should happen, but it is happening. And so once in awhile we move too hastily, and that prompted my question as to whether or not we should wait until the time when you might come in complete agreement with industry as to what is the best thing to do, and then we are always here most of the time, and we can work it out—this is a little more intelligent approach to it.

This is what is running through my mind at the moment.

Mr. PHILBIN. Mr. Harlan wants to get that authority, and he is not going to abuse it. We believe—I personally believe, and I think you do—

Mr. ARENDS. I don't think he will abuse it.

Mr. PHILBIN. We don't know who is going to come in after him.

Mr. ARENDS. Exactly.

Mr. PHILBIN. We have to also, I think, consider the industry position. From what you say, Mr. Harlan, I think it is pretty clear you have been extremely fair, and also very intelligent the way you have proceeded to work this matter out, and I think in the long run if you are going to have an industry task force, that is going to be set up so all members of the industry can come into your deliberations and present your views, and come to agreement on policy and program

procedure, you certainly are going to develop some safeguards that will be satisfactory to everyone concerned.

Mr. HARLAN. We expect to, sir.

Mr. PHILBIN. Do you have some questions, Mr. Randall?

Mr. RANDALL. Mr. Chairman, I am trying to get caught up; I had to be away. I will question the witnesses to follow.

Mr. PHILBIN. Mr. Machen.

Mr. MACHEN. I have one question, Mr. Chairman.

It might be elementary to some of them, but my own case, I notice in your statement that the consumption is 7.7 million carats, and we have 24 million-odd carats, which is a little over a 3-year supply based on that.

What is your minimum criteria? Here if your supply was cut off, we import all of it, we only have a 3-year supply.

Mr. HARLAN. The stockpile objectives, Mr. Machen, are based on a 3-year-war assumption.

Mr. MACHEN. Based on the chairman's statement, we use 7.7 million. That would cut you down to just a little over 2 years' supply, wouldn't it, if you go down to 16 million?

Mr. HARLAN. My colleague advises me the 7.7 million includes not just the industrial stones, but also the crushing bort, which is a separate commodity.

Mr. MACHEN. The statement here says industrial diamond stones. This is the chairman's statement.

Mr. HARLAN. Yes; both are industrial diamond stones, but their uses are entirely different.

Mr. PHILBIN. Did you get an answer to your question, Mr. Machen?

Mr. MACHEN. I guess so.

Mr. PHILBIN. I want you to be sure. I want you to get the best answer the witness can give you.

In your opinion, would this disposal, if granted, bring the stockpile down too low?

Mr. HARLAN. No, sir.

Mr. PHILBIN. For many reasons, the bill itself doesn't provide for bringing them down too low. Secondly, that is the procedure you propose to follow. There may be some indefinite period before something is done here?

Mr. HARLAN. As it looks now, it may be the same as quartz crystals, they will be around for 25 years.

Mr. PHILBIN. That is right. Thank you.

Do you have any questions, Mr. Cook?

Mr. COOK. No, sir; but we have three industry witnesses, and we also have a statement from an industry witness which he requested we put in the record at this time.

Mr. PHILBIN. The industry statement will be put in the record.

Mr. COOK. It is a statement from Michael Werdiger, Inc., Industrial Diamonds.

Mr. PHILBIN. Who is the individual submitting it?

Mr. COOK. Mr. Werdiger.

Mr. PHILBIN. We will take the statement for the record.

(The statement referred to is as follows:)

STATEMENT OF MICHAEL WERDIGER, PRESIDENT OF MICHAEL WERDIGER, INC.

Mr. WERDIGER. Mr. Chairman and members of the subcommittee, I am Michael Werdiger, president of Michael Werdiger, Inc., and of Diamond Abrasives Corp. I have been in the industrial diamond business for over 20 years. My company is a direct importer from the prime suppliers and a distributor to the major U.S. manufacturers of diamond products.

This statement is presented in opposition to enactment of H.R. 13320, a bill that would permit the sale of a so-called surplus of 8.2 million carats of industrial diamond stones from the national and supplemental stockpiles.

In my opinion there is no valid basis for such a sale.

I have no reason to believe that a surplus of stones does exist. The industry has been advised that many objectives for the national stockpile have been subjected to great variations in quantity as opinions have arbitrarily changed regarding the various factors that determine the needs of a conventional war. We have been told that the executive departments have been working for years on objectives for nuclear war, and no firm figures are yet available. The statistical uncertainties indicated in arriving at a reasonable objective are sufficient alone to seriously question the validity of a decision that we have a surplus.

Another set of factors that should currently affect the quantity of many objectives, and are valid reasons for maintaining stockpile inventories, are the mounting supply problems of the Vietnam crisis, coupled with rising commercial demand and the many instances of political unrest around the world. These factors affect the many materials in the stockpile differently according to their particular supply and demand relationships. In the case of diamonds it must be remembered that approximately 95 percent of U.S. supplies are imported from African countries and that we are completely dependent upon them for our supplies. Any internal problems there can immediately affect their exports and a conventional war could easily disrupt shipments. Under such circumstances we would soon be completely dependent on Government stockpile reserves.

Other statements submitted with reference to this legislation have referred to a meeting of diamond industry representatives with the General Services Administration on February 4, 1966. A review of the discussion at that meeting emphasizes the hazard of rushing into a disposal program for diamonds.

1. The recommendation for a sale of diamonds by Government agencies was not based on any shortage of supply for commercial or defense needs. In fact the announced policy at that meeting was to sell material while the economy and prices were at prosperous levels; in short, to produce revenue for operations of the Government. This never was the congressional policy adopted in establishing the stockpile principles.

2. This proposal to dispose of diamonds had been formulated, adopted by the Government, and presented to the industry with no published information on either estimated or reported annual domestic consumption of diamond stones. We do have some opinions on such

a figure and it would appear that the proposed annual disposal, as reported in the press, would be equivalent to 1 year of U.S. consumption. The total request for disposal would be 16 times this figure. It is quite apparent to us that such a plan if instituted could and would completely disrupt our domestic markets.

3. Another serious problem that would result from this fast-moving effort to sell part of the slowly acquired stockpile is that diamonds that would be purchased may well represent the most desirable grades of the diamond stockpile, since the industry will obviously buy material currently needed: this would deprive the stockpile of its primary function; to be of service in case of emergency. Sale at this time would seriously jeopardize the very existence of the U.S. industrial importer-dealer, who would be unable to buy "across the board" from the suppliers. This move would cause serious disruption of the domestic market.

The February 4 meeting was, we thought, constructive in that GSA was advised of the special characteristics of the acquisition of diamond supplies and GSA agreed that an industry task force was needed to advise the Government before a sales program could be proposed. It was the plan that this group would be selected and meet within a few weeks, when consumption statistics would be available to guide this discussion. It was certainly our impression that any further action on diamond disposal would be held in abeyance until this industry-Government group had reached some conclusions. There has been no such industry task force meeting and we are now faced with an executive department request for authorization to proceed with disposals.

Mr. Chairman, these stockpiled materials, diamonds included, were purchased as items necessary for the defense of our country. Our experiences in the two World Wars and the Korean conflict were the basis and the proof that a stockpiling program is logical and essential. Stockpiled diamonds, like all other materials, represent a ready reserve of manpower, transportation, electric energy, and capital investment that was required in their discovery, development, and production. These are all essential defense factors.

Mr. Chairman, we appreciate the deep interest and effort of you and your committee in your study and action on these matters. Our interest is similar to yours in considering the needs for the defense of the United States and the correct control of sales when necessary, but in a manner that will not disrupt markets.

To us, every aspect of the stockpiling principles established by the Congress indicate that a disposal of any diamond materials in the stockpile is not warranted at this time and we again state our strong opposition to enactment of this legislation.

Mr. PHILBIN. Now we have some witnesses?

Mr. COOK. The first witness, sir, is Mr. Irving Freed, president of North American Diamond Trading Co.

Mr. PHILBIN. Will you come forward, Mr. Freed.

Do you have a prepared statement, Mr. Freed?

Mr. FREED. I do, Mr. Chairman.

Mr. PHILBIN. Sit down, Mr. Freed. Make yourself comfortable.

Give your name, address, and whom you represent to the reporter, and then we will be glad to have your statement.

Mr. FREED. Thank you. I submitted copies, Mr. Chairman.

Mr. PHILBIN. Yes.

Mr. FREED. I will proceed to read for the record, if in your opinion it is more preferable to submit it as it exists—

Mr. PHILBIN. If you submit it for the record that will be fine. If you will take a seat, perhaps we will have a little colloquy here to see what your fears are. What are your fears about this legislation?

Mr. FREED. May I read my opinion?

Mr. PHILBIN. Yes.

Mr. FREED. Thank you.

STATEMENT OF IRVING FREED, PRESIDENT OF NORTH AMERICAN DIAMOND TRADING CO.

Mr. Chairman, gentlemen, my name is Irving Freed and I have been in the industrial diamond industry for over 25 years. At the present time I am president of Freed Industrial Diamond Corp., suppliers to dealers and consumers in the United States and Canada.

President of Synthetic Diamond Corp., the exclusive American representatives for the Quintus synthetic diamonds, manufactured by ASEA of Sweden.

President of North American Diamond Trading Corp., importers and dealers, whose main operations are conducted in New York, with branches in London, England, Antwerp, Belgium, and Accra, Ghana.

For over 8 years, marketing consultant for the Consolidated African Selection Trust, Ltd., a worldwide mining company with diamond producing mines in Ghana and Sierra Leone.

Vice president of the Diamond Trade Association of New York, an organization representing over 650 diamond dealers.

Immediate past president of the Industrial Diamond Association of America, Inc., and at present a director of this association as well as the chairman of the importers-dealers committee.

I am appearing today in opposition to the passage of H.R. 13320.

And, I might say, programs discussed this morning.

In disposal programs previously authorized by Congress, there was either an acute shortage of the material or a potential price rise about to be effected. Neither of the above conditions exist in the industrial diamond industry. This disposal may, in fact, seriously affect the national security.

On February 4, I appeared before a public hearing conducted by the General Services Administration, and on February 18, I submitted to Commissioner John G. Harlan, Jr., some further suggestions with regard to the proposed disposal program.

To save the committee's time, I shall not read these two statements, copies of which are attached. To summarize them, it is my opinion that none of the industrial diamond stones held in the stockpile should be disposed of for the following reasons:

Diamonds are unique in that there is no domestic source of supply for this product.

The free world is dependent upon the turbulent continent of Africa for all diamonds.

The disposal of 8 million carats of industrial diamonds would create economic havoc in our industry, doing irreparable damage.

If this committee feels that it would be in the best national interest to conduct disposal nevertheless, then H.R. 13320 should be amended to fit our particular industry's problems. May I suggest that the following be considered:

No waiver be included in this bill of section 3 of the Strategic and Critical Materials Stockpiling Act. A waiting period is necessary for the following reasons:

At the meeting on February 4, the General Services Administration discussed the creation of a task force consisting of Government and industry to study the problem of orderly disposal in order to avoid the potentially serious impact on industry.

Another subject discussed was the possible institution of a current national consumption survey. Without current statistics on consumption, no intelligent approach can be made as to what quantity of industrial diamond stones could be disposed of without serious impact on industry.

H.R. 13320 should be more specific in the authority it grants to the General Services Administration. The Congress, at the present time, has the authority to regulate the disposal of the materials accumulated in the stockpile and it should not unequivocally delegate this authority.

If Congress should decide to grant the GSA this power, then GSA should be instructed specifically to consult with industry both in the initiation and in the administration of the disposal.

Only in this way could the impact on industry be regulated so that the least damage is done. Our industry, though quite small, is vital to national security and must be protected against any arbitrary action such as uncontrolled disposal of 8,200,000 carats of industrial diamond stones.

To summarize:

No disposal should take place because industrial diamond stones are not in short supply.

National security would be seriously affected should there be disposal.

If disposal should take place, careful consideration should be given to the quantity released at one time and the method through which it is released. It has taken 25 years to accumulate the stockpile and surely it should not be liquidated recklessly or in haste.

The intent of Congress when the stockpile concept was originally created was to accumulate strategic materials which would be required for the national defense. The problems of national defense have not changed. It was not then, nor is there now, a domestic source of supply and the national security problem is more obvious now due to the political unrest in Africa, the principal source of diamonds.

Therefore, I respectfully request this subcommittee refuse to recommend passage of H.R. 13320.

May I divert from my statement. Where I asked to have the committee's time saved by submitting to the record, I think it is most appropriate for me to read one of the statements.

Mr. PHILBIN. You go ahead and read.

Mr. FREED. Thank you.

Re proposed Government disposal of industrial diamond stones.

DEAR SIR: We want to thank you for giving us the opportunity to express our views with regard to the orderly release of excess industrial diamond stones from the national and supplemental stockpiles.

We are opposed to the disposal of any industrial stones from any Government for the following reasons:

1. Quoting from the stockpile report to the Congress by the Office of Emergency Planning, "Congressional actions over the past two decades have firmly established stockpiling as a most important phase of our national security policy * * *. Legislative history shows that the Congress recognized clearly that many of our country's resources for strategic and critical materials are inadequate to meet the needs of the military and essential civilian requirements in the event of an emergency and, in its wisdom, took actions to protect the Nation's security against the cost material shortages experience in World War II * * *. The broad purposes of these acts have been to provide for adequate supplies to meet the military requirements and essential civilian needs in the event of war * * * and to prevent wherever possible a dangerous and costly dependence of the United States upon foreign countries as a source of supply in wartime."

The very conditions against which the Congress tried to protect our country exist today.

There are approximately 250,000 U.S. troops in Europe and over 300,000 in the Vietnam area at the present time.

The potentially explosive position of southeast Asia is known to everyone and requires no further elucidation.

In view of the above worldwide turmoil, disposal of industrial diamonds would be a serious threat to the national security.

2. The purpose of this meeting is to discuss a program for the orderly release of excess industrial stones.

Consider, if you will, the fact that there is no domestic source of supply of industrial diamond stones. It is a well-known fact that approximately 95 percent of all diamonds are of African origin.

Let us examine the political climate of Africa: Within the last 60 days there have been military coup d'etat in the following countries:

- (a) Nigeria.
- (b) Republic of Congo.
- (c) Dahomey.
- (d) Upper Volta.
- (e) Central African Republic.

Since the time of my letter there have been two further coups.

Those familiar with the African diamond sources know that the bulk of all production comes from the following countries:

- (a) Republic of Congo which had a recent military coup.
- (b) South Africa which is subject to racial upheaval.
- (c) Ghana which is anti-West.
- (d) Sierra Leone.
- (e) Angola which is subject to racial upheaval.
- (f) Tanzania which is anti-West.
- (g) French Guinea which is anti-West.

In view of the many dangerous situations existing in Africa, it is not inconceivable that all Africa could be embroiled in a terrible conflict based both on racial conflicts and political doctrines.

If Africa suddenly became isolated from the rest of the world, could one then think of excess supplies of industrial diamond stones?

It is for the above reasons that we are opposed to any disposal program. However, if Congress should, in its best judgment, authorize a disposal program, great care should be taken as to the impact it might have on our industry.

Under Defense Mobilization Order V-7, the Director of OEP can authorize disposal provided it does not disrupt the usual markets.

It is respectfully requested that before any program is instituted, a task force be created consisting of Government and industry to study the disposal problem and to determine what quantity of industrial diamond stones are consumed annually by U.S. industry.

It is only in this way that some accurate basis can be established as to the quantity to be sold and at what intervals.

If no study is made, it is possible that the quantity offered for sale might be so excessive that an entire segment of our industry would be bankrupted by the sale.

We are well aware of the serious nature of this meeting. If this writer, therefore, can be of any service to this Government agency, he hereby offers his services in any manner which they may be required.

Now, a letter to Mr. John G. Harlan, Jr., Commissioner, General Services Administration, dated February 18, 1966.

DEAR MR. HARLAN: May I again thank you for the opportunity afforded our industry to express its views on the proposed disposal program? Industry held an informal meeting after the Government hearing and all who attended expressed the view that your meeting was most informative and fruitful.

I should like to reiterate that I am opposed to any disposal program for the reasons given in the statement I read at your hearing.

With regard to your proposal that a task force be created to study the problems involved, may I suggest the following:

1. The task force consist of various segments of industry; i.e., importers, dealers, toolmakers, and various branches of Government; i.e., GSA, OEP, SBA, Department of Commerce.

2. Since the greatest part of the industrial diamond business in this country is conducted by members of the Industrial Diamond Association, the majority of task force industry representatives should consist of Industrial Diamond Association members.

3. The industry consumption survey conducted by the Department of Commerce should be studied by the task force and, possibly, a more current consumption survey should be undertaken.

A study of this kind would reveal the quantity of industrial diamond stones which could be disposed of reasonably and at any one time, without seriously disrupting the supply and demand equilibrium.

4. The task force should give consideration to the most advantageous methods to be employed for disposal. For example, the importer-dealers (as opposed to the toolmakers) would be in a better position to distribute the various categories of diamonds involved.

In general, they would have better financial resources to acquire substantial quantities and dispose of these quantities in an orderly fashion. Because of the international scope of the importer-dealer segment of our industry, they would also be in a better position to distribute any surplus above U.S. industry requirements.

As I stated at your hearing on February 4, I shall be glad to serve as a member of the proposed task force and if there is any other additional way in which I can be of service to the Government, I shall be delighted if you will call on me.

Now, I will refer back to my statement of today.

I thought this particular point was of the essence in view of the previous discussions this morning.

I am now back to page 2 of my statement.

MR. PHILBIN. You appreciate, of course, Mr. Freed, before this committee passes any legislation of this kind relating to stockpile, we seek the testimony of people in this Government who are able to talk to the point that you raised of national security.

MR. FREED. I appreciate that. I felt it was my duty for the industry.

MR. PHILBIN. One of the most knowledgeable men in the Government that I know of is here today, Mr. Lawrence. When he comes here he assures us he has coordinated the opinions of several agencies in the Government that have to do with national security. He reflects and embodies their opinions in testimony before us.

Now, it is pretty hard for us to go behind the statements that are made by the really knowledgeable people in the Government on this point, including the Joint Chiefs of Staff. At the same time, I willingly acknowledge you have made a very strong point here. Anything is possible, of course. We might have trouble in Africa that would completely cut off the supply. While we have a considerable supply in the stockpile at the present time, if the supply from Africa happened to be cut off for a long period of time we might find ourselves up against it, and you have appropriately raised that point.

But you acknowledge, of course, we have to rely on the judgment of those in the Government who are best informed in these matters concerning the national security for the basis of action we take.

We appreciate having your opinion.

Mr. FREED. Unquestionably you must rely on them.

Mr. PHILBIN. The Joint Chiefs, the Central Intelligence Agency, and the other agencies of the Government are very well informed on these matters, from which we derive the views that are expressed here in our hearings. Those are the sources we have to evaluate and have to accept.

Mr. FREED. Perhaps an alternative view might help you in your final decision.

Mr. PHILBIN. I agree with that. We want to have your view. That is why we have given you a full opportunity to express your views.

Mr. FREED. I understand your point thoroughly.

Mr. PHILBIN. The reason why I raised the question was to inform you that we are informed from the highest sources of this Government concerning the impact of this legislation on the national interest.

Mr. FREED. Fine, I appreciate your point.

Mr. PHILBIN. Now, the question is whether we are going to take care of you, what would you suggest?

Mr. FREED. I would take a very serious view of the entire picture before I came to any conclusion.

Mr. PHILBIN. I agree with that. We always do, in this committee, take a very thorough view of what we do.

Mr. FREED. I appreciate your attitude. I felt it was my duty as a citizen to explain my views as to the political size of this issue. I have an active office in Africa.

Mr. PHILBIN. You are a very experienced expert, and we have an expert with real experience representing one of these companies that have been in business for a long time.

Mr. FREED. I have been in Africa recently.

Mr. PHILBIN. It gives your testimony a special mark of both distinction and authenticity, so we are glad to have it.

Mr. FREED. Thank you, Mr. Chairman. I have one or two other points I would like to raise without taking up too much time.

To save the committee's time, I shall not read two statements, copies of which are attached.

To summarize them, it is my opinion that none of the industrial diamond stones held in the stockpile should be disposed of for the following reasons—

Mr. PHILBIN. Would that be true notwithstanding the fact these disposals would take place over a long period of time?

Mr. FREED. No, if it were an orderly disposal this would not be true. But reading the text of the statute, it is not apparent to me an orderly disposal is provided for.

Mr. PHILBIN. We have to work under the statute and GSA, Mr. Harlan, who represents GSA here, has charge of this particular matter, he has the responsibility of determining how he is going to work to comply with the requirements of the law, and to provide for orderly disposal, to provide there is going to be no disruption of markets or prices, or economic conditions in the industry. All those things are provided for in the statute.

Mr. Harlan is here to carry out those objectives. Now, we have had considerable experience, as you know, with the stockpile disposals, and we worked through these agencies that are here represented this morning, since there are representatives of other agencies that have to do with these matters, and we have received similar assurances from GSA and these other agencies in the past. We have never experienced any evidence in which they have gone back on their word with us.

Mr. FREED. I have the greatest confidence in Mr. Harlan. As you say, he might be replaced by somebody else to have the duty to follow out the law, and may not have the same opinions.

Mr. PHILBIN. Mr. Harlan has just come to this particular office. He has been, however, with the agency for some time. He is a very dedicated, very capable, and very well experienced public servant. His predecessor was the same, he was before this committee for a long time. We have never had any problems here. We have never had any complaints. Last year we disposed of over a billion dollars worth of materials. And as a business man I know you realize that is a very large amount of material to dispose of in a year. But it was done, and there was no irregularity connected with it. There was no criticism that I know of. No complaints. That is the way you can be sure it will be carried on, in my opinion.

I know you may have some misgivings, and perhaps some fears, but it seems to me we have to place our faith in those people who work with us here. I can assure you they are capable, qualified, dedicated people who know their business. Up to this point, I can say to you categorically they have always kept their word with this committee and with the industry, and they make a practice of conferring with the industry.

Did you attend the industry conference?

Mr. FREED. I did. The industry conference was held on February 4. It was attended by over 40-odd representatives of our industry, which is a comparatively small industry, I would say well up to three-quarters of the people concerned in the industry attended. They felt it was a very serious problem.

Mr. PHILBIN. Were they representatives of the industry?

Mr. FREED. Yes, there were over 40 representatives of our industry who attended.

Mr. PHILBIN. You had the opportunity of speaking your mind and expressing your views?

Mr. FREED. I did.

Mr. PHILBIN. You had the assurances given at that time there would be orderly disposal?

Mr. FREED. I got the assurance. At my recommendations a task force would be created. I have had correspondence from Commissioner Harlan that a task force will be created after they accumulate all of the views of industry. It is now a comparatively short period of time, 7 weeks, since the original hearing.

The thing that bothers me is this: This statute provides for the waiver of the 6 months' period, and I seriously object to that waiver, because it is now 7 weeks and no task force has been publicly announced.

Mr. PHILBIN. So we can consider the legislation in an orderly way, we have many things to take care of, particularly on this committee. And a limited period in which we may perform this work.

The basic thing here is you would have the assurances, at least given to the industry in the industry conferences, and in the task force that is going to be appointed here, that there will be a truly orderly disposal.

How would you handle this matter if you were a Government official and charged with the orderly disposal of these billions of dollars worth of stockpile materials that are in excess now to our requirements, as attested to by Government agencies charged with establishing the stockpile requirement?

Mr. ARENDS. Mr. Chairman, before he answers that question could I put it this way:

Do you believe that this study that may be forthcoming 3 months, 6 months, whenever it may be—do you believe it would lead to a better climate in this whole relationship?

Mr. FREED. Unquestionably; unquestionably. A study is required and a proper background of the *modus operandi* of the disposal could be discussed, and I am certain agreed to. But I do not think this legislation, waving the 6-month period, forcing upon us a cloud, so to speak, authorizing an agency to dispose of a huge quantity, without a waiting period, a study period. There are many problems involved which Commissioner Harlan is well aware of. My objection is that the 6 months' period might be used as a threat against us.

I would like to see this legislation pass for 6 months or a year, sent back to the Committee, so to speak. Let us study the problem, and then create legislation.

Mr. RANDALL. Will the gentleman yield?

Did I understand the gentleman's objection eliminates the waiver of 6 months?

Mr. PHILBIN. No, he complained about it.

Mr. ARENDS. My thought was, with this study we could more effectively handle it.

Mr. FREED. This will be better.

Mr. PHILBIN. Couldn't you have a rapport between Government and industry? Wouldn't you have it before the law is enacted? You will have these conferences from time to time. You had it not too long ago.

Mr. FREED. Definitely so.

Mr. PHILBIN. We want to dispose of all the excess that we can now, when we know it can be done consistently with the national security. You appreciate what our problem is. I ask you the question, or rather, Mr. Arends' question, for which I was glad to yield, how would you handle this matter if you were charged with this responsibility?

Mr. FREED. I would like to answer that question. If I were in charge of this overall program I would not dispose of anything in the industrial diamond stone area at the present time. The principal source of diamonds is Africa. It has taken the Government 25 years to accumulate these diamonds. There should be no urgency today to dispose of them without a 6 months' waiting period, as the statute presently provides. They should be disposed of. But if it has taken 25 years to accumulate them, at which time there were normal political conditions existing in Africa, today we have a violent Africa. Let us

wait a year or two and see whether Africa simmers down, whether our source of supply is running smoothly. At this time we can provide for legislation to orderly dispose. I do not think this is the critical time to have an orderly disposal of this particular strategic material.

Mr. PHILBIN. So notwithstanding any assurances given you by General Services Administration you oppose the bill in its entirety at this time, and believe it should be deferred to some indefinite time in the future?

Mr. FREED. That is a fair statement of my opinion.

Mr. PHILBIN. Have you finished your statement?

Mr. FREED. This about summarizes my statement. Thank you, Mr. Chairman.

Mr. PHILBIN. Mr. Randall.

Mr. RANDALL. Mr. Freed, would you spell out what effect this disposal is going to have on your business? In other words, you are concerned about the situation in Africa. I know we all are. But would you answer the question, is it your conclusion these conditions are going to increase your cost of getting these diamonds, yourself; is that right? Is that what you are saying, or implying?

Mr. FREED. No; I am not implying that at all. I am implying a possible source of supply could be cut off, as to a worldwide basis.

As to my own personal problem, I am opposed to this disposal program in the manner and quantity about to be disposed of. If Congress, in its best judgment, decides to dispose of a quantity, this was the point I brought up before Commissioner Harlan's hearing, let us study the problem. How much is involved on a basis of annual consumption? Let us have a current consumption survey. There has been a consumption survey in 1962. Let us have a current survey in order to have some intelligent basis for a disposal program.

Mr. RANDALL. In other words, you are saying that survey has not been made?

Mr. FREED. This was one made in 1962. There has not been another one made since.

I would like to see a survey made.

Mr. RANDALL. As I understand your testimony, you said there was no excess supply. In other words, I mean—

Mr. FREED. Excess demand.

Mr. RANDALL. Well, all right. I am sure you said—I am sure you indicated, at least I thought you did, this situation in Africa would affect the supply. Wasn't that your point?

Mr. FREED. This was a point; yes, indeed.

Mr. RANDALL. I cannot see any other condition in Africa, except it affects the supply.

Mr. FREED. That is true.

Mr. RANDALL. The normal result is this would raise the price of diamonds?

Mr. FREED. Unquestionably, this could happen. If the supply was cut off, the price would go up, unquestionably.

Mr. PHILBIN. Have you finished?

Mr. RANDALL. I am trying to see if we are all going in the same direction here. I am not questioning the gentleman's concern. I think if there has been a survey, it may have some merit. But if there is a real possibility of a shortage of supply, I think we ought to look at it. That is the point I am trying to make.

Mr. PHILBIN. We will look at it.

Do you speak for other members of the industry other than yourself?

Mr. FREED. No, sir; I am speaking on my own behalf.

Mr. PHILBIN. Thank you very much. You have given us a fine statement.

Are there any other witnesses from industry who wish to present their views to the committee?

Mr. COOK. Yes, sir; we have two additional witnesses, sir.

Mr. PHILBIN. Who are they?

Mr. COOK. **Mr. Leopold Metzger**, president of Super-Cut Corp., and Golconda Corp.

Mr. PHILBIN. Do you want to file a statement, or do you want to be heard?

Mr. METZGER. I would like to be heard, sir, because there have been so many things said this morning I think it is important to discuss them.

Mr. PHILBIN. We would like to hear you.

The committee will now adjourn until 2 o'clock this afternoon.

(Whereupon, at 12:17 p.m., a recess was taken until 2 p.m. of the same day.)

AFTERNOON SESSION

Mr. PHILBIN. The committee will come to order.

Now when we adjourned we were considering industrial diamonds. We had invited the witnesses who desired to appear to make themselves known. We have **Mr. Leopold Metzger**, of Chicago; is he here?

Mr. METZGER. Yes, sir.

Mr. PHILBIN. Will you give your full name for the reporter and the company you represent?

Mr. METZGER. **Leopold Metzger.** I am president of Super-Cut, Inc., and of its wholly owned subsidiary company Golconda Corp. I am authorized to speak for Engis Equipment and Precision Diamond, both of whom have given written statements, which I have submitted to Mr. Cook, as well as my written statement.

Mr. PHILBIN. They may be taken for the record.

(The statements referred to are as follows:)

STATEMENT OF LEOPOLD METZGER, PRESIDENT OF SUPER-CUT, INC.

Mr. METZGER. **Mr. Philbin** and members of the committee, it is a privilege for me to appear before you.

Please let me introduce myself by saying that I am president of Super-Cut, Inc., and of its wholly owned subsidiary, Golconda Corp. We make diamond tools, diamond wheels and diamond saws. We have done so since 1943. Dun & Bradstreet gives us an AAA-1 rating. BDSA knows us well. I also speak for Engis Equipment Co., Chicago, and Precision Diamond Tool Co., Elgin, Ill., and submit herewith letters from both companies.

In 1951, on behalf of the National Academy of Sciences, I made a survey in Europe concerning abrasive methods involving the use of diamonds.

I am a member of the American Society of Tool & Manufacturing Engineers, American Society for Abrasive Methods, American Society for Metals, and am chairman of subcommittee No. 3 of the American Standards Association Sectional Committee B74.1—American standard identification code for diamond wheel shapes.

Because I am convinced that over 80 percent of the business in our country in the kind of industrial diamond tool stones under discussion at this meeting, is done by members of the Industrial Diamond Association, I also want to add that for 4 years I was a director of that association, a vice president for 2 years, and president for 1 year. It is my belief that this association has more knowledge of the usage of the diamond tool stones in question than any other group in the country.

I attended the meeting February 4 held by the General Services Administration, at which were present 44 men from industry and 16 from Government, Mr. John G. Harlan, Jr., presiding. At this meeting it was stated that the Government wished to dispose of 8,200,000 carats of industrial tool stones which were considered excess in the stockpile, and that of this, it was desired to dispose of 3,100,000 carats immediately. Lists were given, outlining the quantities mentioned.

On March 4 a bill was introduced in the Senate, S. 3023, to authorize the disposal of this quantity of diamonds, and on March 7 duplicate bill H.R. 13320 was introduced in the House of Representatives. Each of these bills states, "Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets." On January 19 Lawson B. Knott, Jr., Administrator of BDSA, wrote a letter to Vice President Humphrey accompanying the Senate bill, attaching thereto a disposal plan, but we have not been privileged to read the plan.

However, in considering loss to the United States, much more must be given consideration than mere monetary loss. Shortly after the last World War, British intelligence published a report, which I am sure is available to all of you, of a survey made throughout Germany, wherein it was clearly demonstrated that one of the important factors contributing to the downfall of the German military machine and the loss of the war was the fact that Germany had run short of industrial diamond tool stones. In fact, they were trying all sorts of substitutes, without success.

Now, why is this important? Well, industrial diamond tool stones are used to dress grinding wheels, true them up and make possible the fine precision tolerances in grinding that are critically important in the machines of war and of defense. This is why industrial diamonds were placed in our strategic stockpile. Were the supply of industrial diamonds cut off, the loss to the United States could not be measured in dollars, only in catastrophe. Consider for a minute the very uneasy political situation in Ghana, Guinea, Sierra Leone, Belgian Congo, South Africa, and other parts of the world where diamonds are produced and trouble now exists, and you will realize how hazardous our source of supply is, should something happen to cut off this supply, even before a war.

The second reason why a catastrophic loss might occur to the United States lies in the recent statement made by the head of the major producing company in South Africa, that he foresaw at the present time only a 10- to 15-year supply of industrial diamond stones, if they continue to be mined at the present rate of production. The U.S. Bureau of Mines has men stationed throughout all of this territory and can confirm or deny this, but certainly the supply is limited, and no one in the world has yet produced large synthetic diamonds of the size and quality needed for American industry, which are the present subject of discussion and covered by the bills mentioned above.

Thus, we envision a huge potential loss to the United States if any of the stockpile of industrial tool stones is sold, and we are opposed to such sale or disposition.

However, if our opinion is overruled and if the Congress still insists on disposing of some of our stockpile, then we call to your attention the second part of the quotation above, which reads, "The method of disposition shall be fixed with due regard to the * * * protection of producers, processors, and consumers against avoidable disruption of their usual markets."

At the February 4 meeting, Government representatives were questioned and it was clearly stated that it would be impossible to decide whether this disruption would occur until it was known exactly what the usual market consisted of.

The only survey ever made by the Government which would disclose how many carats of diamond tool stones were used per year in the different categories, was made for the years 1961 and 1962 by BDSA. It was promised on February 4 that this survey would be made public and a copy supplied to those present, within a few weeks. But such has not yet occurred and we still do not have copies of figures showing the actual consumption of tool stones in the United States for those 2 years. Even if we did, another similar survey should quickly be made to update the annual usage figures, for the reason that within the past 5 years the technology and usage of diamonds for dressing grinding wheels has changed radically, and important techniques have obsoleted older techniques in many cases.

When one considers disposition of strategic materials from the stockpile, one can think of so many pounds of copper or similar materials and know exactly what is being discussed. But when industrial diamond tool stones are mentioned, it is a different story. There are differences in size, differences in shape, and differences in quality and structure of the diamonds. This is why the strategic stockpile includes so many different classifications of industrial diamonds and not just one classification. So when industrial diamond tool stones are to be disposed of, there is not just one commodity under discussion; there are as many commodities as there are different classifications in the stockpile.

This is why it is so important to know what is currently being used in industry, both as to quantity, size, type, shape, and quality, before it is possible to learn whether the producers, processors and consumers can be protected against avoidable disruption of their usual markets.

For these reasons it was agreed February 4 that a properly constituted task force would be formed to carefully study the situation. It

was recommended that this task force consist of members from industry, as well as government, who knew the business and who knew industrial diamonds. This task force should first inspect the diamonds that it is desired to dispose of, and should next correlate such disposition in terms of any disruption to the usual markets and annual usage of such diamonds based on Government surveys of such usage.

An approach without such a study being made would not give full effect to the wording of the bills presently before the House and Senate above mentioned, and in fact it would be impossible at the present time to determine whether the passage of such bills would fully comply with the intent contained therein.

We strongly urge, therefore, that any legislation which is passed have incorporated in it that such studies should be made and that the disposition of any industrial diamonds be made in conformity with the recommendations of such a task force, both as a protection to the United States and to producers, processors, and consumers against avoidable loss and disruption of their usual markets.

It will be noted that each of the two bills above mentioned omits the words, "importer-dealers," but I cannot stand before you today without stressing the importance of this group of businessmen to our industrial diamond economy. The manner in which such diamonds are sold and imported into the United States makes it absolutely necessary for there to be importer-dealers, who must purchase large stocks which then must be sorted and distributed to the toolmakers according to their needs. These importer-dealers must, at the same time, purchase other merchandise from the foreign source, in order to get the industrial diamond tool stones. A toolmaker alone or a consumer could not do this, and anything which upsets the welfare and continued life of the importer-dealer makes it practically impossible, under the present marketing system, for the toolmakers to continue in their usual markets and methods of manufacturing and distribution.

At the meeting above mentioned on February 4, Mr. Harlan stated that the Government wanted to dispose of 8 million carats total, of which 3 million carats were for immediate disposition. Since I do not have the Government figures of our annual domestic consumption by category and classification, I cannot be definite, but from what I can learn, our annual domestic consumption of the total stones in the categories covered by the 3 million carats is a small portion of 500,000 carats. If this is true, the immediate disposal of 3 million carats would equal from 6 to 10 years' annual consumption of the types set forth. This would, without question, disrupt the usual markets and would so discourage importer-dealers that many of them would be out of business.

Furthermore, if, as I am informed, our annual consumption of all tool stones is between 500,000 and 600,000 carats (excluding stones used for drilling purposes), I am strongly opposed to the Congress giving a blank check to dispose of a quantity of diamonds equal to 14 years or more consumption. Congress itself should look at this periodically, every 2 or 3 years, and should, under no circumstances, grant authority to dispose of a total of more than 2 or 3 years' consumption, and this should be regulated so that only a certain percentage of our annual consumption of each category under consideration is disposed of per year.

Therefore, in conclusion, I recommend that—

(1) In order to avoid possible loss to the United States, no diamonds be disposed of from the stockpile at all, for reasons given above.

(2) That if, however, the Congress decides that some disposal should be made anyway, there be written into the bill under consideration that such total disposal be not more than an amount equal to 2 or 3 years' consumption, and that the amount per year be a certain percentage of our annual consumption as determined by the proper Government agency from up-to-date surveys properly made, after considering such surveys with a properly constituted task force.

(3) The above conclusions do not mention disposal to foreign purchasers. If it is absolutely necessary to dispose of some of the stockpile, consideration should be given to selling these diamonds abroad so as not to disrupt our usual markets.

I want to thank you for the privilege of appearing before you and assure this committee, as I have assured the GSA, that if I or my firm can be of further service to the Government, I will be glad to cooperate in any way possible.

Attached hereto is a copy of my letter of February 11 to the General Services Administration for your records.

FEBRUARY 11, 1966.

Subject: Task force discussed at meeting held February 4, 1966, for the program for the orderly release of excess industrial diamond stones from the national and supplemental stockpiles.

Mr. JOHN G. HARLAN, Jr.,
Commissioner, General Services Administration,
Defense Material Service,
Washington, D.C.

DEAR MR. HARLAN: I have been to many governmental meetings in Washington.

However, never have I been to one which was conducted in a more businesslike manner or where industry was given a more orderly and fair opportunity to voice their opinion. You are indeed to be complimented.

You asked those present to write you regarding their ideas for the composition and the program for a task force to study the subject matter, in line with the recommendations made by Mr. Irving Freed. That is the purpose of this letter.

First, please let me introduce myself by stating that I am the president of several companies, one of which sells diamond tools domestically, one of which sells only diamond wheels domestically, and one of which sells for export only. We invite your investigation of the size and stability of our companies through Dun & Bradstreet, the Continental Illinois National Bank & Trust Co., of Chicago, and through your BDSA. Miss Marguerite Doyte has been acquainted with our company since 1951.

Golconda Corp., one of our wholly owned subsidiaries, has been in the diamond tool and stone saw business for over 25 years. Super-Cut, Inc., the parent company, has been in the diamond wheel business since 1942, and I am president of both.

I have been a director of the Industrial Diamond Association for 4 years, was a vice president for 2 years, and a president for 1 year. I am a member of ASTM, ASAM, ASMS, and the chairman of Subcommittee No. 3, ASA Sectional Committee B74.1, American Standard Identification Code for Diamond Wheel Shapes.

I am convinced that over 80 percent of the business done in the kind of tool stones under discussion at the meeting last Friday is done by members of the Industrial Diamond Association of America. Therefore I urge you to give consideration to this in the selection of the task force you will appoint.

My second suggestion is that the task force consist of large-medium- and small-size firms selected from toolmakers and importer dealers (i.e. at least three from each).

Third, there should be enough in this task force to give a really cross section opinion. I now learn that the task force which went to Washington years ago with regard to the set tools, which Mr. Casto discussed, consisted of representatives of only three firms. It is possible that a few more firms added to the task force might have given other recommendations.

In any event, the most important consideration is just what will such a task force do and it would seem to me that its major objectives are rather clear:

(1) Physical inspection should be made of the diamonds it is desired to be disposed of, so that all members know what we are talking about in actual merchandise.

(2) This task force should then study the quantities you wish to dispose of in terms of the annual consumption in the United States of similar goods, and I presume that this study will be made from the report which Marguerite Doyte said was going to press. Such a study can then indicate what course should be followed with regard to the disposal of the diamonds "with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets."

(3) Consideration should certainly be given to the question of whether the 1961-62 survey by DDSA of diamond usage is up to date in terms of advances in technology and industry usage as of 1965 and 1966. Otherwise, correct conclusions will be difficult.

This means that you should have people on the Task Force that know their business.

From the general information I have been able to gather and in the absence of reading the consumption figure report of 1961-62, it would seem, offhand, that 3 million carats of tool stones would be several times the annual consumption of such tool stones in this country per year. Therefore, your task force should seriously seek to determine if it is practical and possible to dispose of the material to foreign buyers.

In conclusion, there is no question but that the least danger of disrupting American importer-dealers, toolmakers and the diamond tool industry, would lie in a course where no diamond tool stones were put on the market at all. For that reason I support the recommendations made by Mr. Irving Freed. However, if it has definitely been determined that there must be a sale of some diamond tool stones, then I think that the attitude of the task force should be one of determining how best to do this, rather than a completely negative position where no diamonds should be sold at all.

What is best for the Government's interest is also to the best interest of our country and therefore of my own companies. However, if the sale of the tool stones is made in such a way as to destroy or damage our present lines of manufacture and distribution, it might well do more harm than good. Both defense industry and normal industry need importer-dealers and toolmakers. Therefore, in selection a task force I hope that serious consideration will be given not only to men who know their business, but also to men who know American industry's problems as well.

Because I have been in the business as long as I have, and because I believe that I am familiar with various facets of it, both here and abroad, I would enjoy very much the privilege of serving on such a task force, and hope that you will call upon me for any help that I might render. Furthermore, should you so desire and if it is not improper, I would be glad to suggest names of firms as possible members of your task force.

Again, many thanks for inviting me to participate last Friday and for the manner in which you conducted the meeting.

Sincerely yours,

SUPER-CUT, INC.
L. H. METZGER, *President*.

[Excerpt from the Diamond News and S.A. Jeweler, September 1965]

The chilling question that is now asked sometimes in diamond trade circles is: "Does Russia stockpile? Is the Kremlin secretly planning a similar trick it played on the platinum industry in 1960 when Russia dumped so much platinum on the markets that the slump lasted for years?"

If Russia has really stockpiled diamonds for dumping purposes, it could at last break De Beers' reign over world diamond sales.

But there is a good reason why the Russians will not do so now. All over the world there is a serious shortage of diamonds. Prices have risen 40 percent since 1962. Even the biggest producer, South Africa, has to import diamonds to supply its internal market. Mr. Harry Oppenheimer, chairman of De Beers, has admitted that the corporation's reserve kitty is empty.

GROWING HABIT

If Russia would flood the market now the gems would be snatched up, mostly as a result of the growing habit in Europe and elsewhere to have diamonds besides gold in engagement rings. The industrial stones, selling at a flat \$2.80 (R1.80) a carat, would sell as fast. They are so scarce that five countries now make artificial diamond grit.

To get around the main boycott obstacle, the African countries, De Beers has given birth to a number of companies registered outside South Africa to buy diamonds in Black Africa.

And to keep the home fires burning strongly, De Beers is making a grandiose attempt to find new diamond sources. The corporation is doing high-speed research into the "diamond fields of the future," as they have been called—the seabeds off South-West Africa.

TESTED IN LABORATORIES

Faster and more efficient ways to suck up the precious stones, by means of giant "vacuum cleaners" mounted on floating barges, are being tested in laboratories. Methods to actually mine underneath the seabed, rather than just scraping it, are being investigated.

Otherwise, and whatever the boycott pressure, the attitude of De Beers remains that of South Africa's late Field-Marshal Jan Smuts, whose favorite saying was "The dogs may bark, but the caravan moves on."

Attacks or not, De Beers hopes to keep its caravan moving from one glittering diamond field to another.

[Excerpt from the Diamond News and S.A. Jeweller, July 1964]

DE BEERS AND RUSSIAN DIAMONDS: OVERSEA COMMENT

The breaking off of De Beers' contract to handle Russian diamonds sold to the West—announced by Mr. Harry Oppenheimer recently—is not the first time the diamond trade has been touched by African politics, the Financial Times points out.

Since 1961, all diamonds produced in Ghana have been channeled through the Government Diamond Marketing Board.

BUYING OPERATIONS

"In the other newly independent African states, buying operations are now in every case undertaken by companies registered and managed outside the South African Republic."

Though closely associated, they are not subsidiaries of De Beers.

However, the large majority of gem diamonds are handled by the Central Selling Organization, De Beers' selling organization.

The steady rise in demand means that the supply position is laboring to keep up. In fact it looks as though the industry is living almost hand-to-mouth.

But the Soviet's undertakings to support independence throughout Africa means that unless and until there is some adjustment in South African policy, the contract has no prospect of being renewed.

NEW FOCUS

The Financial Times refers to the search for stones of gem quality on the seabed off the South-West African coast.

Political pressures are throwing this highly exciting exercise up into new focus.

In 1961, Mr. Oppenheimer said that production in the Western World of all types of diamonds could not continue at the present rate for more than 10 years.

Little is known about the Russian reserves and it is therefore difficult to estimate at this stage precisely how far stones offered for sale through the C.S.O. will fall short of the demands of its markets.

Indications are that Russia is not keen on a permanent break with the C.S.O.

[Excerpt from the Diamond News and S.A. Jeweller, August 1964]

SEARCH FOR NEW DIAMOND SOURCES STEPPED UP

The search for new sources of diamonds to meet increasing world demand grows more intense. In productive areas the off-take of gem stones is being stepped up.

Reports of Consolidated Diamond Mine's productions target confirm the strong impression by marketing experts that the stockpile is running dangerously low.

The company aims to produce 125,000 carats a month by the end of this year.

In the past months' output has been running at about 75,000 carats—a volume insufficient to keep up reserve levels against the drain.

Output at present is about 4,000 carats a working day and this, says a company official, is worth R160,000.

But the target of 125,000 carats a month might have to be raised in response to pressures of world demand.

There are 13 screening plans at work along the coast of South-West Africa and an additional five are planned to maintain the desired tempo of production.

C.D.M. recently began prospecting between the high- and low-water marks, the Diamond Fields Advertiser's representative at Windhoek reports.

New plant capable of taking samples of sea sand down to bedrock has been operating day and night. The company has ordered two more machines of this type.

Diggings extend for about 60 miles up the coast. The company is also prospecting in the Kaokoveld.

Meanwhile, there is no apparent slackening in the pace of seabed activity. The interested parties—mainly Marine Diamonds and the Oppenheimer group—are working hard on scientific prospecting. And production of gem stones proceeds at a steady rate.

THREE MORE SHIPS TO JOIN HUNT FOR GEMS

Three ships will glide into Cape Town docks shortly to take their place as part of the worldwide Collins group.

Worth about R300,000, the additions to Mr. Sam Collins' Marine Diamond Corp. fleet in South African waters will be a mere bagatelle in a multi-million-dollar concern.

A director of the company, Comdr. Peter Keeble, said a twin-screw diesel yacht displacing about 187 tons will be used to transport personnel and for liaison work up and down the coast.

Another craft will be used as a crew boat to take crew from the company's airport in Luderitz to offshore mining units.

The third vessel will be used for oceanographic work and for other survey purposes, and will be attached to the corporation.

ENGIS EQUIPMENT Co.,
Morton Grove, Ill., March 18, 1966.

HON. PHILIP J. PHILBIN,
Chairman, Subcommittee No. 1,
House Armed Services Committee,
Washington, D.C.

Re hearings to be held on Monday, March 21, agenda point 3, industrial diamond stones—H.R. 13320.

DEAR SIR: Following your subcommittee's request that interested parties submit their views on the above-proposed legislation, I am pleased to advise that I have asked Mr. Leopold Metzger, president, Super-Cut, Inc., who will appear before your subcommittee, to present my views as well.

Furthermore, I am submitting herewith copies of my letter dated February 17, 1966, addressed to Mr. John G. Harlan, Jr., Commissioner, General Services

Administration, which contains my recommendations on a task force to be set up for the purpose of orderly disposal of excess industrial diamond stones.

I urge that legislative action be deferred until the proposed task force has had the opportunity of submitting its views to the General Service Administration and to the Congress. It was my understanding at the meeting held on February 4 that the foregoing would be the action taken in order to avoid substantial disturbance of industrial diamond markets.

Yours very truly,

E. J. SCHNEIDER,
Vice President.

ENGIS EQUIPMENT CO.,
Morton Grove, Ill., February 17, 1966.

Mr. JOHN G. HARLAN, Jr.,
Commissioner, General Services Administration,
Defense Material Service, Washington, D.C.

Re proposed long-range program for the orderly release of excess industrial diamond stones from the national and supplemental stockpiles. Meeting held February 4, 1966.

DEAR MR. HARLAN: May I first thank you for the most informative and constructive manner in which the General Services Administration handled the industry meeting held earlier this month. The spirit of complete cooperation with industry on the basis of all available facts has indeed been most helpful.

Engis Equipment Co. has been active in the field of specialized diamond abrasives for more than 25 years. The application of our diamond products is of importance to defense industries as well as to industrial manufacture—it covers a broad range from metallurgy and high-speed electronics to plastics manufacture, wire drawing, and metalworking generally. In the volume of business done, Engis Equipment Co. ranks internationally among the top three firms engaged in similar research and production activities.

I have been an officer, director, and president of the Industrial Diamond Association of America, Inc., and am now the chairman of its public relations committee as well as the chairman of the general management committee of its recently formed advanced technology committee.

I am also serving as the Chairman of the Standing Committee of the U.S. Department of Commerce on Commercial Standard CS261-43 Grading of Diamond Powders in Sub-Sieve Sizes.

May I confirm that the least danger of disruption of the American market for diamond stones, including importer dealers, toolmakers, and the diamond products industry generally, would consist of the avoidance of putting any diamond stones on the market. If, however, it has been decided that some disposal of diamond stones must be considered, then the task force should be established. It is my understanding that the proposed task force should assist GSA to find a method of disposal which will protect the U.S. Government against avoidable loss and which will, at the same time, protect producers, processors, and consumers against avoidable disruption of their usual markets.

From data which we have been able to develop, it would appear that on the average taken from the calendar year 1964 and the first 10 months of 1965, the total average annual quantity of industrial diamond stones (drilling stones and other industrial diamond stones, but excluding crushing bort) remaining in the United States is approximately 2,900,000 carats. Of this, it would appear that approximately 600,000 to 700,000 carats are diamond tool stones themselves, the remainder are drilling stones. I believe you will find these figures in general agreement with other industry estimates; they are also likely to be in agreement with the figures developed during the BDSA survey made for the years 1961-62.

The meeting brought out the importance of the importers-dealers in our industry, who provide the diamond product manufacturers (processors) with a continuing, expertly managed, and reliable supply of the large variety of diamond stones required. In this sense, they are actually assuming the role normally performed by the producer of American-made commodities.

The task force might well perform the following functions:

1. Study most carefully the lists of industrial diamond stones which you have kindly submitted to all participants. This should be done in view of the fact that you wish to first consider the stones now located at the U.S. Assay Office, with the exception of class No. 1 drilling stones which, I understand, are not being considered for ready disposal.

2. Thereafter, the task force should carefully study the 1961-62 diamond tool stone use survey which is expected to be available to industry before the end of this month. The task force might then consider whether or not a new survey covering the year 1965 is required so as to provide up-to-date, comprehensive, information in the required detail.

3. At the same time, the task force might physically inspect the diamond stones considered for early disposal in order to fully assess their relation to the present use pattern. From this could be determined the possibilities of proper disposal of all classes and sizes for use in the American market.

4. At the same time should be determined the possibility of reexport of material and other important international implications of continuing supply under the existing methods of international diamond marketing.

I suggest that the 6 to 10 industry members of the task force should include a representative not only from the diamond toolmakers and importers but also from the drill manufacturers, the diamond gem trade, the diamond abrasive products manufacturers, and the American producers of manufactured diamond abrasives. The entire diamond market, in all its phases, is closely interrelated so that the disposal of diamond stones will have a significant effect on the market in gem stones and other industrial diamond end products.

It might be useful to have terms of membership in the industry task force of varying length so that, by proper overlap of service, the best possible balance between continuity and the broadest base could be accomplished.

Members of the Industrial Diamond Association of America, Inc., represent 80 percent by volume of industrial business transacted in the importer-dealer and diamond toolmaker categories and I am sure that the association, as well as its members, will be most happy to serve the General Services Administration in any capacity in which they can be of assistance.

As I am leaving for a business trip abroad, this letter is being written in some haste; however, I hope that you will find the ideas presented useful. Naturally, I will be most happy to serve in any capacity you may desire.

Yours very truly,

E. J. SCHNEIDER,
Vice President.

P.S.—During the meeting you suggested that further industry meetings take place along the lines established on February 4. It might be most useful to discuss recommendations of the task force at another early, full industry meeting.

E.J.S.

PRECISION DIAMOND TOOL CO.,
Elgin, Ill., March 19, 1966.

Subject: House bill H.R. 1320; Senate bill S. 3023.

Mr. L. H. METZGER,

Care of Willard Hotel, Washington, D.C.

DEAR MR. METZGER: Due to prior commitments I cannot join you in Washington on Monday, March 21, to appear before the House Armed Service Committee relative House bill H.R. 1320. You have my authority to speak in my behalf knowing that our views coincide.

It is my considered opinion that the supply and demand of industrial diamonds is presently in a delicate and strained balance. Disposal of any substantial quantity may have damaging effects and disrupt this market.

As a toolmaker I need special shapes and quality of diamonds in increasing numbers. These must be selected carefully out of fresh imported goods. I have great doubts that they would be available from stockpile.

If, therefore, stockpile disposal was to discourage or interrupt fresh imports, we must anticipate a critical shortage of these specialty goods. This would immediately affect our ability to service the jet aircraft, helicopter, and electronics industries.

During the GSA meeting of February 4, which I attended, the industry made a strong plea for a task force to study the effect of stockpile disposal and to formulate and suggest to the Government a method least damaging to the industry. Mr. John G. Harlan, Jr., promised to establish this task force. I urgently plead that this task force convene and that all action on either the Senate or House bills be deferred until a constructive plan has been worked out.

I regret I cannot make my views known in person. Please keep me posted.

Sincerely yours,

JAN TAEYAERS, President.

Mr. METZGER. I would like to say a few things, Mr. Philbin, in view of what has been said this morning, because I think they go to the heart of the matter.

Bismuth is bismuth, and chromium ore is chromium ore. But when you speak of industrial diamonds, you are speaking of an entirely different animal.

In the stockpile there are over 150 different categories. Now, by "categories," I mean size, shape, quality, and types. To show you how complex this picture is, in Mr. Harlan's statement this morning—and I have great respect for Mr. Harlan, I am not trying to disparage him in any way—he mentions diamonds are used in drilling and cutting tools. One of the biggest uses also for diamonds are in dressing grinding wheels for precision grinding of the most important parts in both our war and defense economy.

To show you why they need 150 categories or more, may I submit just these samples to show you what a diamond tool looks like! These are only a few. But you can see from this that you need big diamonds, you need little diamonds, and you need diamonds that can be shaped to chisels, you need diamonds that can be shaped to a turning tool for a lathe. This all requires a vast store of quality, shape, type, and size.

Mr. PHILBIN. Yes.

Mr. METZGER. This is why, when we say 1 million carats of diamonds, we are not just talking about copper, bismuth, or something like that.

Mr. PHILBIN. The diamonds themselves would be in the stockpile!

Mr. METZGER. This is the diamond here.

Mr. PHILBIN. That is what is in the stockpile?

Mr. METZGER. Yes.

Mr. PHILBIN. Not this instrument that it is attached to, not the shaft that is attached to it?

Mr. METZGER. No, that is coming up next week.

Mr. PHILBIN. That is right.

Mr. METZGER. This for example will be passed across a grinder to keep it true, to keep it accurate.

Mr. PHILBIN. Yes.

Mr. METZGER. Now, the reason I think this is so important is because the bill in question states that protection should be given against the avoidable loss to consumers—to producers, processors, and consumers, against the avoidable disruption of their usual markets.

Now what is a usual market? In 1961 and 1962, a survey was made by BBSA which is the last and first to my knowledge, that has ever been made, and although those figures were promised on February 4, they have not yet been printed, and I don't have a copy of them. I understand that that report states that there were some 2 million carats per year used in 1961-62. Only 2 million.

Now, of this 2 million, two-thirds were for drilling purposes, or drill board, as we call it, leaving say 600,000 carats of the kind of industrial tool stones that you saw samples in tool shanks.

Now with the bill that was submitted, was an accompanying letter from Mr. Lawrence B. Knott, and the reason I wanted to talk to you is because this today is the first time I have seen that, and this was a disposal plan that he suggested, and in this disposal plan he states the program will be started with an initial commercial offering of approximately 500,000 carats.

When we convened on February 4, with Mr. Harlan, and incidentally in all the years that I have been coming here, this is the biggest meeting I ever saw. My company has been making diamond tools, diamond drills, diamond wheels, diamond saws, since 1943. There were 44 men from industry at that meeting and 16 from Government.

This has aroused intense interest on the part of the taxpayers. At that meeting we were given two lists by Mr. Harlan. I have copies of them here. I am sure that you do too. One shows that he wishes to dispose initially as soon as possible of some 3 million carats. The other shows that he wants to dispose of a total of 8 million carats, all told, as is covered by the bill.

Now when you speak of disrupting a normal market, the usual market, how can we, or Government, determine what is usual market, if we, for example, don't even have a copy of the survey that has been made? And the survey that was made in 1961-62, is now obsolete because of improved techniques, because of different types and usages of types and forms of diamonds, and this was the main reason why the task force was suggested, and frankly, sir, it seems to me that this is Congress' prerogative to determine how much should be thrown on the market, not that I have little faith in Mr. Harlan, I think he has a wonderful reputation. But I think it is up to Congress every 2 or 3 years to say how much we are going to put on the market in terms of disruption to the average market of industry as it is.

You asked Mr. Freed a question this morning, and I can tell you that if I had been he, I might have answered a little bit differently. I think probably 80 percent of the diamonds under consideration, the type of diamonds we are talking about here today, are handled by the members of the Industrial Diamond Association.

I was a director of that association for 4 years, a vice president for 2 years, and a president for 1. I know a little bit about it, and I can speak also for several other members who are here today and will speak for themselves if you want them to.

But if you put 8 million carats of diamonds on the market, or if you put 3 million carats of diamonds on the market, you are going to put some of these import dealers out of business, and it is just that plain and simple.

This should only be done after a sincere and real study has been given. An importer-dealer, who is not included in the bill—it just says processor, producers, and consumers—but in this particular type of merchandising, an importer-dealer is of vital importance. He has to carry a stock of diamonds for super cut. He has to carry a different stock of diamonds for wheel chewing, and when he goes to London or Antwerp to buy he has to buy sites, including many types of diamonds.

He has to invest a lot of money, sort the goods out, distribute it, and then sell it. If you put on the market 5 years' or 10 years' supply, you are just going to run the importer-dealer out of business, and I don't think it is right, sir.

Mr. PHILBIN. If I may interrupt you for a moment, that is the purpose of the task force set up here by GSA, so everybody could come in, have an opportunity to present your views. You have a plan, or your friend has a plan that you referred to, you can present it. It will receive consideration. You are entitled to get the surveys available currently.

In other words, you can try to get together with people in your industry and GSA to see if you can't work your will together on this matter and make sure the disposal is going to be orderly and not disruptive, and agreeable in every way.

Mr. METZGER. I agree.

Mr. PHILBIN. That is the way Congress likes to see it work. Obviously, there are going to be some instances where there will be some disagreement in a segment of the trade. That is why we insisted on these industry conferences to give you people who are in the trade an opportunity to work your will wherever you can.

Obviously, there must be some regard given to the overwhelming majority opinion. I am not saying that exists in this case at all.

In fact, there might be some doubt about that. But in any event, aren't you satisfied, since you have an agreement now, to have a task force who will work on this, to join with GSA to see if you can't work up some sort of a satisfactory agreement?

Mr. METZGER. Sir, my life may go out tomorrow. I have great respect for Mr. Harlan, but I think it is basically wrong for Congress to pass a bill that disposes of from 6 to 15 years' supply of industrial diamonds. I think what Congress should do is to put into the bill a restriction of some kind that gives a percentage of usage, or a total number of carats that is equal to a percentage of usage for 2 or 3 years, based on some kind of an equitable study.

I just don't like to see a blank check like that.

Mr. PHILBIN. I know, but obviously that is something Congress can't administer, in every bill that is passed, as you understand that. That is why we have administrative agencies.

Mr. METZGER. I am an idealist, I guess.

Mr. PHILBIN. What we have done here is the same thing you suggest. We maintain in the committee a very careful check, and we lay down very careful safeguards in all these matters.

We keep in practically constant touch with GSA and any other agencies involved to see how this is working out. We have commitments from them. One of these commitments you heard today, is a provision for a task force, which should be, I think, a good practical way of getting your industry together to see what would be agreeable, and arriving at some figure, some rate of disposal, so to speak, and the quantity of disposal for each period of time may be agreed upon.

In other words, work up some arrangement, some plan, some formula that will accomplish what the acts provide, and it will not bring any disruptive forces to bear on your industry.

That is what we are seeking to accomplish here. Congress could not possibly administer all these sales. It would be impossible. It was never the intent under the law. If it had been, Congress never could do it.

Don't you think you could work in the harness with the administrative agency here?

Mr. METZGER. Sir, I am a novice in this, obviously you can tell that from my ideas.

Mr. PHILBIN. To the contrary, your ideas are very sensible, and I am very much impressed with them. But I do think you have an opportunity here, or you will have an opportunity—of course I am not going to venture any suggestion as to what is going to happen to this

bill, it is under the advisement of the committee, and it will be up to the membership of the committee what will be done with it.

In the event the bill is passed, or even now before the bill is passed, you have an open invitation and an excellent opportunity to come in contact and come in conference with Mr. Harlan and those associated with him to present your views, to urge your views upon them, and to bring your influence to bear on the plans that are going to be effectuated to carry out the purposes of this bill.

Mr. METZGER. Well, if I may repeat what Mr. Arends and you were saying earlier in the day, it would seem wiser to me if Congress got the results of this task force before they set up 8 million carats of diamonds to sell.

Mr. PHILBIN. Of course, that is an opinion. I think we will have the results, and I think we have the assurance that nothing will be done until these results are received by us.

Mr. METZGER. That would be wonderful.

Mr. PHILBIN. Sir?

Mr. METZGER. That would be wonderful, because this is a complex technical thing.

Mr. PHILBIN. Reports are made to us periodically. As I say, we are in touch with the agency practically all the time, in connection with the proposed programs. I think if you talk with Mr. Harlan, and his associates, you can come to some agreement. I am sure you can, and I have an understanding, I am convinced in my own mind—I know it may be difficult to convince you—but I am convinced in my own mind as to this and any other disposal program, that there will be orderly disposal that will be fair to the trade, and that will carry out all the objectives of the act, which relate to not disrupting the market or the prices, and be fair to the industry, and all those people who are interested, or who are concerned with the legislation.

I personally think perhaps some of the fears you express may be unfounded, and I wish you would at least make a good try, a good strong endeavor, to see if you couldn't join with those that feel as you do, and get into a meeting, in a conference with GSA, to see if you couldn't work out something.

Mr. METZGER. I agree. I think once you set a course you should follow it and cooperate.

Mr. PHILBIN. Right.

Mr. METZGER. Yes, I think some of the political things that have happened in the last week or 10 days may make it very hazardous. I think there is going to be a shortage of diamonds, without question. Your own Bureau of Mines can verify this.

I submitted with my proposal some literature to this effect. I think in the long-term pull it might be wiser to keep these diamonds and not sell any. But if you decide to do it, and I am told this is what Congress decides, I am for you. I will do anything I can to help. But, for heaven's sake, do it on a scientific, technical basis, rather than just say 3 million carats of diamonds or 8 million carats of diamonds.

Mr. PHILBIN. That is why we assign it to the agency, to make sure they do this on a commonsense basis.

You participated in some of these conferences?

Mr. METZGER. Yes. I went away very happy.

Mr. PHILBIN. You have an option forum here, and you will have a task force. We are very glad to have you here. We find your views very interesting. They will be of benefit to us.

Mr. METZGER. Fine.

Mr. PHILBIN. What we want to do is to move any excess materials that we have in the stockpiles that can be safely removed, when we make a finding consistent with the national defense and national security, this should be done, and when we make a further finding that it is not going to be disruptive. In that respect, we rely a great deal on the agency. While we have had extensive delegation with the agency, we never on any one occasion as yet—and we disposed of literally billions of dollars' worth of these excess materials—we have never had any unpleasant experience with the agency in the respect that they have gone back on any commitment. They have never gone back on any commitment they made to us.

Mr. METZGER. They have that reputation, sir. And I think frankly—

Mr. PHILBIN. For that reason I wanted to make clear to you that I thought you could first enter into a discussion with them, and try to see if you could—I know your views would be received, and I know they would be sympathetically viewed and considered, together with all of the other views and opinions of members of your industry, and others that might want to have their views presented to the agency.

I am sure that procedure will be followed, will it not, Mr. Harlan?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. There wouldn't be any question about it.

Mr. METZGER. I have personal faith in Mr. Harlan, but he may not be here all the time. Someone else may come who is not as reasonable. This is why I say, Congress maybe shouldn't give the full \$8 million, or shouldn't give the total quantity.

Mr. PHILBIN. That is something quite open now; we have your opinion about that, and we will consider it, when the time comes we will be glad to have it.

Mr. METZGER. Thank you.

Mr. PHILBIN. Thank you very much for coming here.

Mr. METZGER. Thank you very much for letting me appear.

Mr. ARENDS. If understand you correctly, you prefer, prior to any action taken by this committee, the findings of the task force be reported, so that we have an opportunity to study their recommendations?

Mr. METZGER. I certainly would, sir. I certainly would.

Mr. ARENDS. We didn't ask the question, I don't believe, Mr. Chairman, as to how this committee would be constituted? Who will appoint this task force committee? Will it be appointed part from your organization, part from industry, and pretty well mixed up?

Mr. HARLAN. Yes, sir.

Mr. ARENDS. Have they been appointed as yet, any of them?

Mr. HARLAN. At the meeting we agreed each of the industries represented would write their recommendations to us.

I think I have almost all of those recommendations now. The last few I received in the last day or so.

Mr. ARENDS. It is anticipated then you will shortly establish this committee?

Mr. HARLAN. Yes, sir.

Mr. ARENDS. It should go into action in what might probably be termed a reasonable time, 6 months, to come up with a finding or recommendation?

Mr. HARLAN. I hope we can work it out faster than that.

Mr. ARENDS. Faster than that?

Mr. HARLAN. Yes, sir.

Mr. ARENDS. Maybe time isn't so much of the essence here.

I noticed you said the initial disposing plan was 500,000 carats. Would this be agreeable to you, the 500,000 carats? Would this be effective? Or are you sticking with the policy of nothing now until we get a clear picture?

Mr. METZGER. 500,000 carats, sir, is a whole year's supply, depending on what categories are sold. It may be 6 years' supply if the categories are just in 1, 2, or 3.

Mr. ARENDS. In other words, this could be a choosing of some individual, is that right?

Mr. METZGER. Well, the category probably would be set up by Mr. Harlan. But if, for example, you only had one category in the 500,000 carats, it could well be a 10-year supply.

Mr. ARENDS. Thank you, Mr. Chairman.

Mr. PHILBIN. With further reference to the task force now, Mr. Harlan, I address my question to you: This is admittedly a rather unusual procedure for you to name a task force, isn't it?

Mr. HARLAN. Yes, it is.

Mr. PHILBIN. Don't you normally convene the industry and then try to develop through an industry conference some consensus of the industry?

Mr. HARLAN. That is right.

Mr. PHILBIN. When you found out there were objectors, like the gentlemen who testified here, you decided that the views they presented were so weighty that you would have a task force committee for them, to make a complete survey of this matter, work together with you to see if you could come to some agreement?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. Is that what you had in mind when you established the task force?

Mr. HARLAN. That is right.

We recognized as a result of the meeting there were a number of complicated problems that needed to be looked into.

Mr. PHILBIN. You are to cooperate with the gentlemen to the extent of getting their views, consulting with them, and all of those who want to consult with the agency, before coming to any decision in this matter?

Mr. HARLAN. That is right.

Mr. PHILBIN. Your purpose is to try to get a consensus of the industry, to see if you could bring all the industry into agreement. That isn't always possible?

Mr. HARLAN. No.

Mr. PHILBIN. In a great many instances it is possible.

Mr. HARLAN. Yes.

Mr. PHILBIN. In that respect, you should have no problem. But in any event, we will carefully consider your views.

Mr. METZGER. Thank you very much, gentlemen, for letting me talk.

Mr. PHILBIN. Is there another witness who wants to be heard?
Come forward.

Give your name to the reporter, give the name of the company you represent, and your address.

**STATEMENT OF LEON D. WEINDLING, ANTWERP INDUSTRIAL
DIAMOND CO.**

Mr. WEINDLING. Leon D. Weindling, of the Antwerp Industrial Diamond Co. of New York, 580 Fifth Avenue.

Mr. PHILBIN. Have you submitted a written statement?

Mr. WEINDLING. Yes; we have, Mr. Chairman.

I would like to read it, and in the light of what has gone on before, I should like to amplify it a little.

We want to thank you for the opportunity to express our views before this committee.

We are importers, exporters, and distributors of industrial diamonds and while our company has been in business over 50 years, I myself have been part of it for 25 years with the exception of 4 years during the war.

Industrial diamonds, unlike most other materials in the stockpile, are subdivided in a great variety of qualities, shapes, and sizes used for a wide range of industrial applications. In fact, the National Stockpile Specifications list 168 different types.

At this point, if I may, I should like to deviate from the prepared text and submit to the committee a sample of industrial diamonds.

These include, among others, 11 different qualities in one size range.

By nature, the supply of lower grade stones is far greater than that of better quality and special purpose stones required for today's highly automated precision industries.

While ours is a relatively small industry, it is essential and indispensable and any disruption in this industry would have repercussions throughout all manufacturing and particularly defense industries, because today's advanced technology requires extremely close tolerances which can be achieved only by the use of industrial diamond tools.

H.R. 13320 would authorize the disposal of 8,200,000 carats of industrial diamonds.

According to a breakdown received from GSA, at a meeting on February 4, approximately 7.5 million carats of this amount are in categories of other than stones for such uses as oil drilling, coring, and reaming shells. Of these 7.5 million carats a large proportion is in sizes and qualities currently in oversupply.

According to the last available Department of Commerce figures which are for 1961-62, the annual consumption of stones other than those for drilling, coring, and reaming shells was approximately 600,000 carats.

Therefore, the amount proposed for disposal would be 12.5 years' full supply, if all the stones to be released conformed to current demand.

However, due to technological developments, the pattern of consumption has changed, and the demand for better quality and special purpose stones is increasing, while that for lesser quality is decreasing.

and these are now in oversupply. As far as we can judge from available data, the diamonds to be disposed of contain a very small proportion of currently desirable stones and none at all of some of the very scarce categories.

When the importer acquires material from the prime source, he is required to buy a complete package consisting of a full range of sizes and categories. Some of these are in oversupply.

Any uncontrolled large-scale disposal would add to the oversupply condition of less desirable stones and severely limit the importer's ability to further acquire the material in present demand. This liquidation of stockpile diamonds would have adverse effects on industry and defense production.

We respectfully call this committee's attention to precedents in the disposal programs, such as aluminum disposal, where the yearly amount released from the stockpile corresponded to approximately 5 percent of consumption.

We further respectfully submit that any legislation concerning the disposal of industrial diamonds should include clear, well-defined, and mandatory provisions for consultation with industry, including importers and distributors. It should also include a statutory limit on the amount to be released annually, not only by quantity, but also by quality in current demand. These qualifications should naturally be subject to an annual review by Government and industry jointly.

I should like to deviate from my text in the light of what has transpired this morning.

I would earnestly recommend that the committee not favorably act on the bill in its present form at this time. I would like to associate myself with Mr. Harlan's position as well as others, that have been expressed here this morning; that we need to know a great deal more about consumption and about needs and the political situation before we attempt to develop a disposal program for the attention of the Congress.

In closing, we respectfully request that this committee not recommend passage of H.R. 13320. Or if in its judgment, this committee feels that it should recommend its passage, the text should be amended and clarified to include the points set forth above.

Thank you.

Mr. PHILBIN. Thank you very much. You made a very clear and frank statement. You may be sure the committee will take it under careful advisement.

Mr. WEINDLING. Thank you very much.

Mr. PHILBIN. Thank you.

I would suggest you give your name, address, and the concern you represent for the reporter.

STATEMENT OF EDWARD A. ZUZELO, CARDINAL ENGINEERING CORP.

Mr. ZUZELO. My name is Edward Zuzelo. I am president of the Cardinal Engineering Corp. in Philadelphia.

I have a prepared statement which I will not read, particularly in view of the testimony which has gone on before, and in view of the fact I don't want to take any more of the committee's time than necessary.

Mr. PHILBIN. If you wish, we will insert your prepared statement for the record; then we will have any comments you care to make.

(The prepared statements of Mr. Zuzelo are as follows:)

CARDINAL ENGINEERING CORP..
Philadelphia, Pa., March 18, 1966.

Hon. PHILIP J. PHILBIN,
Chairman, Subcommittee No. 1, House Armed Services Committee,
Rayburn Building, Washington, D.C.

DEAR CONGRESSMAN PHILBIN: Cardinal Engineering Corp., a manufacturer of diamond products containing various types of crushing board, desires to be on record as opposing the disposal of industrial diamonds held in the Government stockpile without adequate consultation with members of the diamond industry.

At the meeting held in Washington on February 4, chaired by John G. Harlan, Jr., Commissioner of General Services Administration, and attended by approximately 44 members of this industry, as well as 16 members of Government. Mr. Harlan indicated that it was the intention of Government to provide a disposal program which would not impose a hardship or financial burden on industry. At this meeting it was concluded that the best approach would be the selection of an industry task force to intelligently study the matter and make recommendations to GSA.

One of the first requirements of a prudent disposal program would be the availability of current diamond usage figures which are simply not available at this time. From this data a program could be developed which would recommend the annual disposal of say 10 percent of the annual usage of each specific type of diamond held in the national stockpile. Practical limits could be placed on the total amount to be disposed over a 10-, 20-, or 30-year period as warranted by the information studied.

The second step to be considered is the actual method of disposal. More details on this can be obtained in our letter of February 9, 1966, addressed to John G. Harlan, Jr., and made a part of this statement.

It appears that the exercise of wisdom on the part of the subcommittee at this time will avoid the disruption, if not the complete destruction, of an industry so vitally required for the defense of the United States.

Very truly yours,

EDWARD A. ZUZELO, President.

FEBRUARY 9, 1966.

GENERAL SERVICES ADMINISTRATION,
Defense Materials Service,
Washington, D.C.

(Attention of Mr. John G. Harlan, Jr., Acting Commissioner).

GENTLEMEN: Pursuant to the meeting of February 4 regarding the intention of your department to release excess industrial diamond stones, we have outlined below our thoughts on the matter. Knowing that you will probably receive voluminous correspondence on this matter, we have attempted to keep our comments as brief as possible.

We are in agreement with the consensus of opinion of those in attendance at the meeting that the most prudent and practical approach would be through a task force or industry advisory committee.

Our first thought would be that this committee should be made up of nine industry members at least six of which would be selected from the membership of the Industrial Diamond Association of America, since member companies of this association account for and supply at least 80 percent of the industry volume on products containing tool stones. The committee should also have at least three members from Government. Four of the nine industry members should be heavily oriented in the manufacturing of products using toolstones because tool-stone disposal presents the greatest complications. Three members should be importers or wholesalers in order that they contribute information regarding matters directly affecting them and other members of their facet of the industry on the mechanics and logistics of disposal. The remaining two industry members should be drawn from the classification of general manufacturers who would be familiar with the use of other types of diamonds in the stockpile.

It would appear that the first objective to be considered is the advisability of disposal of each specific class of material. In order to arrive at intelligent conclusions in this respect, the primary point to be considered is the availability of

the necessary diamonds in today's market with respect to the quality and quantity of the material on hand.

Assuming that this conclusion indicates an excess of material in the stockpile, the disposal figures should be further refined by taking into account present-day usage, particularly with reference to recent technological developments. In other words, perhaps the Government has based their tentative disposal figures on outdated information which may indicate the need to dispose of more or less diamonds than would have been indicated at first. This may require more recent usage figures than those now available, or it may be possible to interpolate from the present statistics.

Assuming that meaningful conclusions are obtained from this initial study, it would then be the next objective of the task force to determine how to physically accomplish the orderly release of such material from the stockpile without disrupting industry business interests and at the same time producing the greatest return to the Government. For example, should the material be offered to domestic suppliers, manufacturers, or original sources. Perhaps some program can be developed wherein such material can be offered to manufacturers for use in products to be sold in the export market, thereby aiding the United States in their balance of payments. Is there a possibility that the material, or products made from the material, can be used for barter or foreign aid. Government representatives can also indicate whether there would be any objections to the material ultimately reaching certain foreign countries. If the material is to be disposed of domestically, what quantities are to be offered per lot, at what time intervals.

We are all cognizant of the implications of your program particularly because of the uniqueness of our industry with respect to its limited sources of raw material. At the Washington meeting, one exporter voiced the comment that the disposal of a single specific class of diamonds could raise havoc with the domestic market purely from the standpoint that raw materials are not purchasable from original sources in separate specific classes, but rather are a part of so-called tie-in sales. Certainly the attendance at your Washington meeting indicates a keen interest on the part of all industry members.

I would personally be most happy to serve on the task force committee as a member from the general manufacturing group and if selected would pledge to do an unbiased job to the best of my ability. I would like to take this opportunity to commend you on your handling of the meeting as well as the consideration you have given our industry.

Very truly yours,

CARDINAL ENGINEERING CORP.,
EDWARD A. ZUZALO, *President*.

Mr. ZUZALO. I would like to make a comment here. It was my original intent to come up here and perhaps reflect the thoughts of Chairman Philbin, where it was originally suggested that nothing be done with respect to bill 13320 until the material prepared by the task force, which was promised to us by Mr. Harlan, be reviewed.

However, it appears, at this point, that perhaps the chronological order of business necessitates that some authorization be given by Congress for diamond disposal, in which case I am now in agreement with Congressman Arends, to perhaps reduce somewhat the quantity of diamonds that are authorized for disposal to a more practical amount, such as 500,000 carats as suggested by him.

My statement, of course, is available in the written presentation, but this is about all that I have to say at this time.

Thank you.

Mr. PHILBIN. Thank you very much. We will keep your suggestion in mind with regard to the limitations and coverage of the bill. Thank you very much for your excellent testimony.

Does that conclude the witnesses who wish to testify on the bill?

Come forward and be seated and give your name and address and the concern you represent to the reporter for the record.

Mr. POLLOCK. Thank you, Mr. Chairman. My name is Henry Pollock of the Henry Pollock Diamond Corp. I am an importer and

dealer, and I sell yearly about 40,000 carats of stones, for roughly an amount of \$1.5 million.

Mr. PHILBIN. Are these for industrial purposes?

Mr. POLLOCK. Yes, sir; only the type of stones that is proposed to be disposed of.

Mr. PHILBIN. No precious stones?

Mr. POLLOCK. No, sir; only industrial diamonds.

My whole capital is invested in industrial diamonds, and the idea that 8,200,000 carats hangs over my head, if I take the figure given this morning of \$13 per carat, it is \$106 million makes it very difficult to stay calm and to stay in business this way. I am afraid to go buy diamonds to supply my customers, as this amount is really staggering.

This morning, in the chrome area, I think it was——

Mr. PHILBIN. How many do you think could be disposed of a year without disrupting the industry?

Mr. POLLOCK. I wrote a cable, sir. The annual consumption—we only have the figure for 1962—was 600,000 carats. I feel confident this industry can take 10 to 15 percent more, let us say another 100,000 carats, without doing it harm.

Mr. PHILBIN. In other words, if you had a disposal program of about 100,000 carats a year?

Mr. POLLOCK. How much, sir?

Mr. PHILBIN. Did you say 100,000 carats?

Mr. POLLOCK. Yes, in addition to the usual supply, because we have commitments we have already.

Mr. PHILBIN. You can stand that?

Mr. POLLOCK. Yes, this is my personal opinion.

Mr. PHILBIN. In any event, you wouldn't even want that to be done, as it would affect the prices currently and the market currently?

Mr. POLLOCK. Like I said, this is my personal opinion. One hundred thousand additional carats can be disposed of yearly, but a half million, 3 million, or 8 million, this can ruin myself and my colleagues. We would feel much more at ease if we can take the suggestion made by yourself this morning, sir, to first form the task force, first study, and then pass this bill. We have full confidence in the gentleman back of me; nevertheless to give him carte blanche——

Mr. PHILBIN. Did you attend the industry meeting?

Mr. POLLOCK. Yes, sir; I did.

Mr. PHILBIN. You gave your views to GSA?

Mr. POLLOCK. Yes, I did, sir.

Mr. PHILBIN. You think it is a good idea to have the task force?

Mr. POLLOCK. Definitely.

Mr. PHILBIN. Do you have any fears the task force isn't going to work out well?

Mr. POLLOCK. No, I feel it will work out well, but I would feel much more at ease if the decision is made by the task force and then the bill filed. If you give carte blanche—I have great respect.

Mr. PHILBIN. This task force is the first time it has ever been inaugurated in a disposal proceeding. This is the very first time.

Mr. POLLOCK. Yes, sir.

Mr. PHILBIN. The usual practice is to have what we call industry meetings, industry conferences, to seek consensus, as we do in every case.

Mr. POLLOCK. Yes, sir.

Mr. PHILBIN. Have you attended one of those?

Mr. POLLOCK. Oh, yes.

Mr. PHILBIN. When it became obvious there was considerable difference in the industry about what should be done, if anything, and how it should be done, then GSA representatives, Mr. Harlan, in his desire to be very helpful and considerate, inaugurated this entirely new procedural device of the task force, and that is now going to be formed, and the industry conference has already been held. They are usually a condition precedent to any hearings on the part of this committee?

Mr. POLLOCK. I understand, sir.

Mr. PHILBIN. We will give careful consideration in any event to the report.

Mr. POLLOCK. Thank you very much.

Mr. PHILBIN. Do you have any questions to ask?

Mr. ARENDS. Just a matter of interest—off the record, it doesn't make any difference—being a layman I know little, if anything, about an industrial diamond. Can you give a comparison what a good diamond is worth, what would an industrial diamond be worth? Can you make them down that way? I don't even know.

Mr. POLLOCK. One carat stone, the top quality would be today around \$45 a carat.

Mr. ARENDS. How much?

Mr. POLLOCK. \$45 a carat, going down in six or seven different categories, all the way down to \$6 or \$7 a carat.

Mr. ARENDS. Thank you. That was a matter of interest. Thank you.

Mr. POLLOCK. Yes, sir.

Mr. PHILBIN. Mr. Machen.

Mr. MACHEN. No questions.

Mr. PHILBIN. Mr. Stratton.

Mr. STRATTON. No questions.

Mr. PHILBIN. Thank you very much, you have given us excellent testimony.

Are there any further witnesses on this bill?

Mr. COOK. No, sir.

Mr. PHILBIN. The hearings will be concluded on this bill. We will move to the next bill.

Mr. ARENDS. May I ask permission to insert a letter from the American Mining Congress?

Mr. PHILBIN. That may be inserted in the record in the hearing.

(The letter from the American Mining Congress, dated March 18, 1966, is as follows:)

AMERICAN MINING CONGRESS,

March 18, 1966.

HON. PHILIP J. PHILBIN,
Chairman, Armed Services Committee,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: The American Mining Congress is very appreciative of being permitted this opportunity to comment upon the 18 specific commodity stockpile disposal bills which you have announced will be considered by your subcommittee March 21 through March 24, 1966.

H.R. 13369, calling for the disposal of 1,034,300 pounds of molybdenum from the national stockpile without regard to section 3 of the Strategic and Critical

Materials Stock Piling Act, is endorsed by the American Mining Congress. The amount contemplated for release is a small fraction of U.S. annual consumption and we are advised by industry that the material is much needed at this time.

There are four bills (H.R. 13364, 12412, 13569, 13570), each of which has in common the authorization of the release of some 316,300 troy ounces of platinum from the stockpiles without regard to section 3 of the Strategic and Critical Materials Stock Piling Act. The release of this amount, which is the total surplus over conventional war objectives of the platinum in the stockpile, is endorsed by the American Mining Congress because the material, we are advised, is greatly needed by industry at this time and because we are of the opinion that this release would not disrupt domestic markets. The American Mining Congress has no comment on the various technical differences between the bills.

H.R. 13366 calls for the release of approximately 920,000 short tons of aluminum from the national stockpile, " * * * notwithstanding any other provision of law * * * " The American Mining Congress supports this bill because it implements an industry-Government agreement entered into last fall after extensive negotiations.

With the exception of six bills—H.R. 13368 (bismuth, H.R. 13661 (synthetic manganese dioxide), H.R. 13370 (crude aluminum oxide), H.R. 13580 (amosite asbestos), H.R. 13367 (acid grade fluorspar), and H.R. 12694 (metallurgical grade bauxite)—all the bills to be considered by your subcommittee calls for the disposal by the executive branch of all the presently declared surpluses in each commodity without further supervision by the Congress. As for the indicated six, the disposals contemplated amount to substantially all the surplus.

The American Mining Congress has consistently regarded with concern proposals for legislation, or any other plans, which would turn over to the executive branch either general authority for stockpile disposals or authority to dispose of a large quantity of any particular material over an extended period.

Pending before you now are two classic examples of this problem as it affects the mining industry. H.R. 13365 calls for disposal of 2,300,000 short dry tons of metallurgical-grade chromite from stockpile. This amount, together with the approximately 985,000 tons presently in the Defense Production Act inventory (releases from which do not require congressional authority), would place a total of approximately 3,285,000 tons of chromite, representing all the surplus, in the hands of the administration for disposal without further congressional review. This amount is the approximate equivalent of 3 years U.S. annual consumption. In the same vein, it should be noted that the amount of metallurgical bauxite contemplated by H.R. 12694 is the equivalent of more than 6 months U.S. annual consumption.

It is essential that stockpile disposals continue to be handled in a manner which does not disrupt employment and activity in the raw material industries of this country or of our foreign suppliers. This objective can best be served by adhering to a pattern of making limited sales of surplus materials from time to time, after due consultation with industry in each such instance and specific approval by the Congress.

As I am sure you will recall, this position of the American Mining Congress is exactly the same position which we took last summer when the full Committee on Armed Services was considering S. 28. Although we did not testify prior to the adjournment of those hearings, our prepared testimony then, as now, emphasized the absolute necessity of the retention of congressional control over disposals from stockpile. The result of each of these individual disposal bills is exactly the same as if S. 28 had been passed, giving the administration complete control without congressional supervision over all surplus disposals from stockpile.

The American Mining Congress continues in its position that these Government stockpiles of metals and minerals are such valuable assets that the Congress should not, under any circumstances, relinquish control thereof.

We would very much appreciate your including this expression of the American Mining Congress views in the hearing record.

Sincerely yours,

J. ALLEN OVERTON, Jr.,
Executive Vice President.

H.R. 13372—CRUDE SILICON CARBIDE

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE NO. 1 OF THE
ARMED SERVICES COMMITTEE,
Washington, D.C., March 21, 1966.

The subcommittee met, pursuant to notice, in room 2118, Rayburn Building, Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. PHILBIN. What is the next bill?

Mr. COOK. H.R. 13372, crude silicon carbide.

(The bill reads as follows:)

[H.R. 13372, 89th Cong., 2d sess.]

A BILL To authorize the disposal of crude silicon carbide from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately one hundred and sixty-six thousand five hundred short tons of crude silicon carbide now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

(The statement of Mr. Philbin on crude silicon carbide is as follows:)

**OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1**

Mr. PHILBIN. Another portion of the administration package releasing excess materials from the stockpiles is a bill relating to crude silicon carbide.

We have in our inventories contained in the national and supplemental stockpiles 196,502 short tons. This includes approximately 56 short tons of materials authorized for disposal pursuant to Public Law 89-252, enacted on October 9, 1965. The stockpile objective is 30,000 short tons. Thus, we have a total excess in our inventories of 166,502 short tons.

Silicon carbide is manufactured by fusing clean silica sand, coke, salt, and sawdust in an electric furnace. This process requires 36 hours for fusion and 24 hours for cooling. The cooled mass is crushed to provide crude material with no lumps in excess of 4 inches for the stockpile. Silicon carbide is exceeded in hardness by boron carbide and diamonds.

Abrasive grain is processed from crude silicon carbide and is used in the manufacture of grinding wheels, coated sheets, belts, and disks. Silicon carbide is preferred for grinding stone, materials that are hard or brittle or of low-tensile strength, such as cast iron, brass, aluminum, and leather. Silicon carbide does not soften or melt at temperatures

below 4,550° C. and is used for metallurgical refractory, but is less resistant to molten steel and basic slags. It is not attacked by most acids and is used in the chemical industries. This metal is obtained in the United States and Canada. The average acquisition cost of carbide in the stockpile was \$194 per short ton and the present market value is approximately \$219 per short ton.

Mr. Lawrence?

(The prepared statement of Mr. William N. Lawrence on crude silicon carbide is as follows:)

STATEMENT BY WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. Mr. Chairman and members of the subcommittee, I appreciate the opportunity of appearing before you to support H.R. 13372, 89th Congress, a bill, to authorize the disposal of crude silicon carbide from the national stockpile and the supplemental stockpile.

This bill would authorize the disposal of approximately 166,500 short tons of crude silicon carbide which the Director of the Office of Emergency Planning has determined to be excess to stockpile needs pursuant to section 2(a) of the Strategic and Critical Materials Stock Piling Act, as amended.

Silicon carbide is obtained chiefly from Canada and the United States. It is used as an abrasive, a refractory, and in metallurgical, chemical, and electrical applications. It is preferred to other abrasives for grinding stone and materials that are hard and brittle or of low tensile strength, such as cast iron, brass, and aluminum. It is an emergency substitute for the far more expensive and efficient diamond bort in grinding and sharpening tungsten carbide tools.

The stockpile objective for silicon carbide was reduced April 2, 1964, from 100,000 short tons to 30,000 tons. Current inventories as of December 30, 1956, is 196,502 short tons.

The proposed disposal program for this material has been reviewed with interested industry representatives and affected Government agencies.

The Office of Emergency Planning favors the passage of this legislation and respectfully request prompt and favorable consideration of this bill.

Mr. PHILBIN. You wouldn't have conferences, but there is no objection by any of the agencies here. All the agencies you cleared it with are favorable?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. There are no questions. Thank you very much.

Mr. Harlan, let us have your views on this bill, H.R. 13372, for crude silicon carbide.

Mr. HARLAN. I think, sir, with your permission I won't repeat some of the information which was given.

(The prepared statement of Mr. John G. Harlan, Jr., on crude silicon carbide is as follows:)

**STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES
ADMINISTRATION**

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13372.

This bill would authorize the disposal of approximately 166,500 short tons of crude silicon carbide now held in the national and supplemental stockpiles. The Office of Emergency Planning has determined this quantity to be in excess of stockpile requirements.

Silicon carbide is an abrasive, manufactured by fusing sand and petroleum coke, along with salt and sawdust in an electric furnace.

Canada is the principal world producer, accounting for 38 percent. The United States produces about 26 percent.

Approximately 90 percent of the annual Canadian production is of crude material which is exported to the United States for processing into finished grain. It is used in the manufacture of grinding wheels and applied to coated sheets, belts, and discs.

The total inventory of silicon carbide held by GSA is 196,502 short tons. The present stockpile objective is 30,000 short tons. The excess of approximately 166,500 short tons is covered by H.R. 13372.

The approximate acquisition cost of the stockpile inventories of silicon carbide was \$194 per short ton. The present market value is in the area of \$220 per short ton.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on the excess of 166,500 short tons. On February 4 we held a meeting with the major producers and consumers of this material to discuss the proposed disposal.

Although industry representatives had strong reservations against disposal at this time because of present supply-demand conditions, we are still working with them and believe that we will develop a program designed to make a modest start, with which industry will agree, and which will result in a minimum of disruption. Authorizing legislation will be needed to permit this beginning.

This agency strongly recommends the enactment of H.R. 13372.

This concludes my prepared statement, Mr. Chairman. However, if you or members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. We are more interested in finding out if you have had an industry conference and what the result was.

Mr. HARLAN. Yes, sir; we did hold an industry conference on the 4th of February, we held a meeting with the major producers and consumers of this material to discuss the proposed disposal.

Although the industry representatives had strong reservations against the disposal at this time because of the present supply-demand

conditions, we agreed to keep working with them and believe that we will develop a program designed to make a modest start, with which the industry will agree, and with which we will be able to carry out the disposal with a minimum of disruption.

Mr. PHILBIN. You did have some disagreement with the proposed disposal too, didn't you?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. You didn't have unanimous agreement?

Mr. HARLAN. We have not reached unanimous agreement; no, sir.

Mr. PHILBIN. How many people were in disagreement?

Mr. HARLAN. How many of the people at the meeting were in disagreement?

Mr. PHILBIN. How many people in the industry generally, approximately—what percentage of the industry was in disagreement?

Mr. HARLAN. I would say pretty near all of them were in disagreement. They have reservations about the possible disruption of the market with the disposal program, and they also have some concern as to whether or not the quantity to be held for the stockpile is sufficient. But as I explained this morning, we feel very strongly that we've got to get started with these disposal programs, and that a modest disposal program can be got underway for this and other commodities where there is reservation by the industry, and if it is handled carefully and carefully watched that the disposals can be carried out without real disruption in the industry.

Mr. PHILBIN. Under the plan which you developed here, over what period of time would you make the disposal, as provided for by the bill?

Mr. HARLAN. Initially we expected it would last for at least 10 or 12 years. However, I would like to say that this figure as far as we are concerned is still very much open, depending on what we can work out with the industry.

Mr. PHILBIN. Some of the industry feel that the disposal would be disruptive of the price or prices and the market?

Mr. HARLAN. They feel it will; yes, sir.

Mr. PHILBIN. Did they present their reasons to you?

Mr. HARLAN. They did.

Mr. PHILBIN. In writing, I suppose, and verbally at the meetings?

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. You are willing to give them full consideration?

Mr. HARLAN. My reason for recommending we proceed with this is I am fully confident a program, a very modest program albeit, can be worked out and successfully carried out.

Mr. PHILBIN. That is not going to interfere with prices or the market or conditions of the industry?

Mr. HARLAN. That is right.

Mr. PHILBIN. It will not, of course, be inconsistent with the defense needs of the security needs?

Mr. HARLAN. No.

Mr. PHILBIN. That was testified to by Mr. Lawrence.

Do you have some questions, Mr. Stratton?

Mr. STRATTON. No.

Mr. PHILBIN. Mr. Randall?

Mr. RANDALL. No.

Mr. PHILBIN. Thank you very much.

Is there anyone from industry here that wants to be heard?

Mr. COOK. Mr. Allen Wherry, manager of Abrasive Grain Association, accompanied by Mr. J. S. Tomlinson, president, General Abrasives Co., Inc.

Mr. PHILBIN. Give your names. Do you both want to testify individually? Do you have prepared statements?

Mr. TOMLINSON. Mr. Wherry will testify. I represent one company, and in the absence of my competitors I don't want to get in too deeply because they might not be in full agreement with what I have to say, but I am available if there are any questions.

Mr. PHILBIN. Do you want to start your testimony? Have you given your name and address to the reporter, and the concern that you represent?

Mr. WHERRY. My name is Allen P. Wherry, with Thomas Associates, Cleveland, Ohio. We manage the Abrasive Grain Association, which is a trade association composed of manufacturers of crude aluminum oxide and abrasive grain produced from these crude materials.

The association represents a major portion of the manufacturers in the United States.

Mr. Chairman, we have made a prepared statement and have submitted it to Mr. Cook, the counsel.

(The complete prepared statement of Mr. Wherry is as follows:)

STATEMENT OF ALLEN P. WHERRY OF THOMAS ASSOCIATES OF CLEVELAND, OHIO, ON BEHALF OF THE ABRASIVE GRAIN ASSOCIATION

Mr. WHERRY. We have been advised that the General Services Administration has submitted a disposal plan to your committee proposing the sale of 166,052 short tons of crude silicon carbide from the national stockpile and the supplemental stockpile. We further understand that this action is as a result of a decision made by the Office of Emergency Planning that this amount has been declared as excess to stockpile needs.

The manufacturers of crude silicon carbide have had two meetings with the various governmental agencies involved in this action. The first was held on February 11, 1965, under the auspices of the Office of Emergency Planning, and the second was held on February 4, 1966, under the auspices of the General Services Administration.

Following the first meeting with the Office of Emergency Planning, the industry wrote to Mr. E. J. Talbert, Director of the Miscellaneous Metals and Minerals Division, Business and Defense Services Administration, U.S. Department of Commerce, expressing concern over the contemplated disposal of this material, not from an economic point of view but, rather, from the national security standpoint. Apparently, our position had very little impact on the thinking of the Office of Emergency Planning since they have not changed their original view on the amount of crude silicon carbide which should be maintained in the stockpile since the amount in question has not changed significantly.

The meeting held on February 4, 1966, with the General Services Administration, was solely for the purpose of determining the methods to be used for disposal with no consideration being given to the industry's position regarding the need for the maintenance of the stockpile.

We felt, therefore, that it was desirable to express our views to you and your subcommittee so that you will have this information available when you consider the GSA request. The industry's position is:

(1) The pertinent figures to consider are as follows:

	<i>Short tons</i>
Silicon carbide, current inventory-----	196, 502
Declared excess to stockpile needs-----	166, 052
Inventory stockpile objectives (established April 2, 1964)-----	30, 000
Industry sales of crude SiC (yearly average over 5-year period 1961 through 1965) domestic and foreign sales (tons per year)-----	3, 750

As you can see by the above figures, the total amount contemplated for disposal is equivalent to industry sales of crude silicon carbide for 44.4 years. Therefore, the impact of the contemplated disposal would be serious and could have an extremely disruptive effect on the market for crude silicon carbide.

(2) Although the production of crude silicon carbide is somewhat dispersed, a large portion is concentrated on the Niagara frontier and, therefore, extremely vulnerable, in our opinion, to enemy attack and sabotage. The destruction of the facilities on the Niagara frontier would eliminate a principal source of an important ingredient for the abrasive-consuming industry such as grinding wheels, coated abrasives, high temperature refractories, etc. It is also used by such strategic industries as electrical, metallurgical, electronic, and chemical. It is, therefore, self-evident that the destruction of even a portion of the production capacity for silicon carbide would seriously hamper the ability of the U.S. industry to continue at a pace required during a period of national emergency.

The production of 1 pound of silicon carbide requires approximately 3 kilowatts of electric power; therefore, the silicon carbide stockpile also represents a substantial stockpile of electric power.

(3) The contemplated stockpile objective of 30,000 tons is, in our opinion, inadequate and also would pose a serious threat to the ability of the U.S. industry to maintain the production capacity necessary during any emergency. We have been advised that the Office of Emergency Planning has established, as a criteria for their stockpile objectives, a 3-year supply of the material.

We cannot resolve this with the 30,000 tons established as the stockpile objective. It is our considered judgment that during a period of mobilization the U.S. producers would be required to supply approximately 150,000 short tons of silicon carbide crude material per year. Thus the 3-year objective established by OEP, in our opinion, would require that 450,000 short tons of the material be maintained in the Government stockpile.

(4) In point (1) above, we mentioned that industry sales of crude silicon carbide averaged 3,750 short tons per year for the 5-year period 1961 through 1965. In point (3) above, we stated that, in our opinion, during a period of mobilization the U.S. producers would be required to supply approximately 150,000 short tons of silicon carbide crude material per year.

At first glance, these figures might appear to be in conflict; however, the difference is explained by the fact that in the first instance we are referring to the market for crude material, whereas in the second instance we are talking about total usage of the material. All producers of crude silicon carbide convert a major portion of their production into grain which is then sold for use in the manufacture of grinding wheels, coated abrasives, refractories, etc. Only a small portion is sold as crude silicon carbide since there are only a few users of silicon carbide grain who are equipped to convert crude material into grain sizes.

(5) The importance of the abrasive industry to the maintenance of industrial production cannot be stressed too strongly. To support this point, we call your attention to restricted document ST49-20 (the abrasives industry) of the Industrial College of the Armed Forces, published April 15, 1949, which describes the industry as follows:

The abrasives industry is one of those small industries upon which all other production is dependent and is vital to mass production (p. 36).

The abrasive industry is specifically included in the list of essential industries published by the U.S. Department of Commerce, August 3, 1950; major group 32, code No. 3291. The essentiality of this industry is also recorded in great detail in the files of the National Security Resources Board.

While grinding wheels are themselves expendable production tools, they are indispensable for manufacturing the machine tools and metal cutting tools which are the primary requisite of munitions production. The product is the same in peace or war. The grinding wheel and abrasives in other forms are also indispensable in the direct production of planes, engines, guns, tanks, motor vehicles, shells.

The Industrial College report also concludes that the industry must be assured of a supply, in most cases in relatively small quantities but nevertheless indispensable, of raw materials which in a wartime economy become critical.

Evidence that the industry must operate at full volume to sustain the productive capacity of all other segments of the economy is found in the fact that capacity in World War II was increased to four times its greatest previous output.

In conclusion, we emphasize again that if there is any validity at all in the necessity of stockpiling strategic materials, the contemplated reduction in the silicon carbide crude stockpile would seriously jeopardize the ability of the U.S. manufacturing industry to meet wartime requirements. We, therefore, strongly urge that the decision regarding disposal be reviewed in light of the foregoing comments.

For your information, the members of the Abrasive Grain Association are as follows:

Abrasive Products Co., Lansdowne, Pa.
 American Abrasive Co., Westfield, Mass.
 The Carborundum Co., Electro Minerals Division, Niagara Falls, N.Y.
 Electro Refractories & Abrasive Corp., Buffalo, N.Y.
 The Exolon Co., Tonawanda, N.Y.
 General Abrasive Co., Inc., Niagara Falls, N.Y.
 Hamilton Emery & Corundum Co., Chester, Mass.
 Macklin Co., Jackson, Mich.
 Mid-West Abrasive Co., Owosso, Mich.
 Simonds Abrasive Co., Philadelphia, Pa.
 Washington Mills Abrasive Co., North Grafton, Mass.

The contemplated stockpile objective of 30,000 tons is, in our opinion, inadequate and also would pose a serious threat to the ability of the U.S. industry to maintain the production capacity necessary during any emergency. We have been advised that the Office of Emergency Planning has established, as a criteria for their stockpile objectives, a 3-year supply of the material.

Mr. PHILBIN. What do you think it should be?

Mr. WHERRY. In our opinion it would require 450,000 short tons of the material be maintained in the stockpile.

Mr. PHILBIN. What did you base that amount on?

Mr. WHERRY. This estimate is based on the projection that the current usage of silicon carbide crude, for all purposes, is approximately 150,000 short tons per year.

Mr. PHILBIN. Annually?

Mr. WHERRY. Using the multiplier of a 3-year supply as established by the Office of Emergency Planning we come up with the 450,000 short tons.

Mr. PHILBIN. Who made that evaluation?

Mr. WHERRY. Pardon?

Mr. PHILBIN. Did you make that evaluation or was it done in your industry?

Mr. WHERRY. It was done by our industry in conjunction with my office through the industry statistics.

Mr. PHILBIN. It was not the industry as a whole, your own industry?

Mr. WHERRY. We represent the industry as a whole. These are industry figures.

Mr. PHILBIN. These are industry figures?

Mr. WHERRY. That is right, sir.

Mr. PHILBIN. You think you should have 450,000 rather than 30,000?

Mr. WHERRY. Well, if this 3-year supply criteria is valid, then it should be 450,000 short tons; yes, sir.

Mr. PHILBIN. Well, you know the procedure that we follow on that question. We have to take the views of those who are very highly placed, so highly placed we can't always mention their names in public hearings, and who are concerned in a very vital way with maintaining the security of the United States. These are the people who make the evaluations that we receive here in our evidence, and we can't go behind them very well when they come from such a highly placed source in our Government. These are men who have devoted their entire lives to national security matters, and who are acquainted with all of the needs of the national security, and who have, with painstaking evaluation, given us their figures. We feel bound by those figures.

Do you consider yourself to be as competent as the Joint Chiefs of Staff to determine what is in the interest of the national security of the United States?

Mr. WHERRY. Let me say that in this—

Mr. PHILBIN. I won't press that question. That represents the kind of assertion we have to make here now, as a matter of policy, on our committee. You understand.

Do you have a comment, Mr. Stratton?

Mr. STRATTON. I didn't want to interrupt what you were saying.

Mr. Chairman, if I could ask a question, I would like to ask the witness why it is that setting the stockpile at 30,000 tons would impair the ability of the industry to produce silicon carbide? I don't understand that.

Is your purpose to sell what you produce to the Government, and if we didn't have that stockpile you would be unable to sell it? Is that the point?

Mr. WHERRY. No, sir. There is no current sale being made to the Government of silicon carbide that I am aware of.

Mr. STRATTON. Well, then, why does the size of the stockpile have any bearing on your ability to produce? I can understand how getting rid of the stockpile at a too rapid rate could create or could impair your market, but I don't get the point that you have to maintain a particular stockpile in order to make it possible for your company to produce.

You have indicated, and I would certainly agree, that we have a large production capacity concentrated along the Niagara Frontier in my State. I certainly wouldn't want to see anything happen to that productive capacity. But I don't quite understand how this would threaten, as you say here in point (3), a serious threat to the ability of the U.S. industry to maintain the production capacity necessary during any emergency. I don't understand that.

Mr. WHERRY. In that case, sir, we are referring to the consumers of silicon carbide as being able to continue the production of the materials required for a wartime effort. If, because of the high concentration of the industry in the Niagara Frontier, the facilities for the manufacture of silicon carbide were put out of action the 30,000 tons contemplated in the stockpile would be grossly inadequate to take up the slack in production caused by knocking out even a single production facility.

Mr. STRATTON. What is the annual production there in the Niagara Frontier, how many tons is that?

Mr. TOMLINSON. I don't think I can answer that, because not all of the industry is concentrated there. In the case of silicon carbide there was one operation in Vancouver, Wash. There is another at Three Rivers, Quebec. And there is another one at Shawinigan Falls. I can't say all of that is concentrated there.

Mr. WHERRY. Mr. Stratton, I would like to clear up one other point. I am not a representative of a manufacturer of silicon carbide. I represent the Association of Manufacturers of Silicon Carbide, the trade association to which all of these people belong.

Mr. STRATTON. I am just trying to understand the argument. I don't think anybody on the committee wants to do anything to impair the security of the country, and if this is a product for which there will be such a great demand and which the annual supply is itself limited and is as you suggest subject to being knocked out, then maybe we ought to explore this a little bit further. But I just wanted to try to get an idea of what we were talking about.

Do I understand from your testimony the annual production of this product, and I haven't got the vaguest idea what silicon carbide is, to tell you the truth, but do I understand the annual production roughly is 3,700 tons per year?

Mr. WHERRY. No, sir.

Mr. STRATTON. What is it?

Mr. WHERRY. The 3,700-ton figure we quote in our statement is the actual average sale per year over the past 5 years. This is the sale of crude material. The actual production and use of silicon carbide during any one year—it approaches 150,000 tons.

Mr. STRATTON. 150,000 tons?

Mr. WHERRY. Are consumed.

Mr. STRATTON. Are consumed.

Mr. WHERRY. I wouldn't want to be held precisely to that figure, sir, because I don't have those figures with me. But approximately that.

Mr. STRATTON. Well, now, again, maybe I am just a layman in this field, how does that jibe with the sales of 3,000 tons a year?

Mr. TOMLINSON. That is one of the difficulties in this situation. The big producers, the biggest producer is the Carborundum Co., and the Norton Co.

Mr. STRATTON. Excuse me, just to get it straight, they don't produce this material, do they?

Mr. TOMLINSON. Yes, they do.

Mr. STRATTON. I thought this was a raw material from which they produce—

Mr. TOMLINSON. They are integrated companies, from the raw material right up to the finished product. There are five producers. There is the Norton Co., the Carborundum Co.; there is General Abrasive, which is the company I represent; the Exolon Co., in North Tonawanda, and Electro Refractories & Abrasives Corp.

Now, most of the crude silicon carbide which is produced is used in the manufacture of end products, whether they be grinding wheels, refractories, as we were mentioning before, coated abrasive and such, by the companies that produce the crude material. That is why, with such a large requirement each year, and such a large production, and such a large amount in the stockpile is what worries me personally, there are so small sales each year, because there isn't very much sold.

In the case of our own company, we do not make end products. We and Exolon do not make end products, but we make this into abrasive grain, which we in turn sell. Actually the market—this is what I don't understand, where all this going to be sold, because there isn't that big a market for it.

I don't know that I clarified or confused the original question.

Mr. STRATTON. Well, if I understand it, again, what you are saying is that almost all of what is currently being produced is currently being used in end products of one kind or another.

Mr. TOMLINSON. By the people who produce it. So there isn't a market for the crude, as such.

Mr. STRATTON. Right. And this is largely in the civilian end of the economy?

Mr. TOMLINSON. Yes; I would say so at the present time.

Mr. WHERRY. Civilian and military, and there is no difference. There is no difference between its use, whether it be military or civilian. Its use is exactly the same whether we are in a peacetime economy or wartime economy.

Mr. STRATTON. Is the rate of use the same?

Mr. WHERRY. No; the rate of use is not the same in a wartime economy, as industrial activity increases so does the demand for silicon carbide.

Mr. STRATTON. That is right. So that if you had or if you were in an increased emergency situation, the demand would become greater, and therefore you wouldn't have the ability to produce the excess that would be needed; is that right?

Mr. WHERRY. And if we lost any of the production capacity through enemy action, this would become even more serious.

Mr. STRATTON. So the stockpile that is being recommended by the Government, by the General Services Administration, represents only one-fifth of the annual production, and your proposal is that it ought to represent 3 years' production; is that the point?

Mr. WHERRY. If there is any validity to the formula of 3 years; yes, sir.

Mr. TOMLINSON. I don't know if we actually make that as a proposal. But what we are saying is if you use the 3-year period, and you talk about the usage, then you are drawn to that conclusion. We don't propose that. We are not proposing an addition to the stockpile.

Mr. STRATTON. As I say, I am a novice in this field, but it does seem to me that a safety factor of only 20 percent is a pretty slim safety factor; even an airplane is supposed to have about 50 percent in its fuel supply. And I would certainly think, Mr. Chairman, that subject to some technical points here that I don't understand, that this is a very slim proposal indeed, for only a 30 percent stockpile factor.

Mr. RANDALL. Mr. Chairman.

Mr. PHILBIN. Yes, Mr. Randall.

Mr. RANDALL. I am trying to follow these. I understood the testimony to say, the sale—is that the right word?—that you had sold 3,750 tons per year.

Mr. WHERRY. This is the average industry sales, sir.

Mr. RANDALL. You also said there were 150,000 tons consumed?

Mr. WHERRY. I am "guesstimating," sir, I don't have those figures with me. I think the confusion arises because the producers and the consumers are one and the same in most cases, you see.

Mr. RANDALL. This is sort of a surplus you are selling here?

Mr. WHERRY. No; there are some people who buy crude material for further processing. But this segment of the industry is extremely limited.

Mr. RANDALL. What do you mean by "used"; it is abrasive, ground up in dust, and that is all you see or hear of it again?

Mr. WHERRY. They buy the crude material and they crush into grain sizes for their own use, rather than buying grain sizes. This is a three-step product.

No. 1, you produce the crude material from raw materials. Your end product there is crude silicon carbide. This crude silicon carbide then is crushed and graded for sizes, much the same as, well, take sugar, for example. This would be one of the grain sizes. But it goes from the size of the tip of your finger, down to very fine powders. This is known as abrasive grain. This abrasive grain is then used for the manufacture of grinding wheels, coated abrasives, lapping compounds, buffing compounds, refractories, and so on.

In the case of carborundum, they make the crude abrasive, they reduce it to abrasive grain, and they produce grinding wheels, refractories, and coated abrasives.

In the case of Mr. Tomlinson's operation, he makes the crude, and reduces it into grain sized for sale to grinding wheel manufacturers who do not make their own material. Now, he also sells a limited amount of crude material for people who have their own crushing and screening facilities.

It is these people that represent the market for the crude abrasives. This is where you get the 3,750 tons.

Mr. RANDALL. Yes. And the 450,000 tons that you say should be maintained in the stockpile, represents 150,000 tons consumed times 3 years?

Mr. Wherry, may I have the benefit of your conclusion as to what you believe could be disposed of without disrupting the industry? Have you got around to that yet?

Mr. WHERRY. No, sir. I am not in a position to comment on that question, because our discussions have been limited to the strategicness of the situation.

Mr. RANDALL. That is all.

Mr. STRATTON. Mr. Chairman, may I ask a question?

Mr. PHILBIN. Yes, Mr. Stratton.

Mr. STRATTON. Your figures, here, give the current inventory as 196,000 tons. Is that the current inventory in civilian hands?

Mr. WHERRY. This is the inventory that has been reported to us by the GSA.

Mr. STRATTON. In the stockpile?

Mr. WHERRY. Yes, sir.

Mr. STRATTON. In other words, your feeling would be that the stockpile itself is not up to what the requirements should be?

Mr. WHERRY. If the 3-year requirement is valid; yes, sir.

Mr. STRATTON. Right. Let me see again if I understand what we are talking about.

By abrasive grains, do you mean the kinds of things that are on sandpaper, are those abrasive grains?

Mr. WHERRY. Yes, those are abrasive grains.

Mr. STRATTON. Therefore, an individual that Mr. Tomlinson's company might supply with abrasive grain would be somebody like the Behr-Manning Co., Watervliet, for example, that makes papers of that kind?

Mr. TOMLINSON. Yes. May I give you a specific example. Maybe this will clarify the other point, the difference between consumption in your own company, and a sale.

For instance, the Behr-Manning Co. is a division or a subsidiary of the Norton Co. The Norton Co. makes crude silicon carbide. They crush and grade it into grit sizes, so called, and then they sell it or transfer it to the Behr-Manning Co., and they put it on sandpaper.

Now, take the case of the 3-M Co., in St. Paul. The 3-M Co. does not have a furnace plant, so they do not make crude silicon carbide, but they buy crude silicon carbide from one or more of the producers of crude silicon carbide. They then crush this, grade it, make grit sizes of it, and put it on their sandpaper. That is the sort of thing that would constitute a sale of crude silicon carbon.

Mr. STRATTON. I understand.

Thank you.

Mr. TOMLINSON. I confused you more.

Mr. RANDALL. This is one of the ingredients of sandpaper?

Mr. WHERRY. It sure is.

Mr. TOMLINSON. Yes. Probably the major use of abrasives as such is in grinding wheels. Now 15 years ago I didn't know much about a grinding wheel but I know a little more now. Another use is in refractories; that is not an abrasive use, though.

Mr. PHILBIN. Do you think there is some prospect of coming to an agreement with GSA, about a plan?

Mr. TOMLINSON. A modest start, as the Commissioner phrased it—to make a modest start on the disposal. Do you think there would be a prospect of reaching some kind of agreement on that basis?

Mr. TOMLINSON. Well, I don't think Mr. Wherry can speak on that from the industry standpoint, because the industry has prepared a brief, and I think we all stand by it.

I'm a little reluctant to speak as an individual company. I thought my competitors would be here. I do raise the question, though, is this quantity of 166,000 tons of crude silicon carbide to be sold? This 3,750 tons per year, that is going to take, what, 50 years to do that?

Now, in 1965, this figure had gone up a little. It was about 5,000 tons. But the total production of my company, for instance, of this No. 1 grade, is less than 10,000 tons a year. So I see a new competitor hovering over me who has many times my annual capacity, and I wonder where in the world he is going to sell it, unless he possibly reduces the price to such a point that new companies come into the field, merely to take advantage of this, perhaps on a marginal basis.

I certainly, as an individual—I'm not speaking for the association or the members—as an individual, our company would be glad to cooperate, but I'm a little overwhelmed at the moment as to what course this action can take.

Mr. PHILBIN. Would you be willing to continue to cooperate to the extent of attending any meetings with the Department?

Mr. TOMLINSON. Yes, sir; I would be happy to attend a meeting.

Mr. PHILBIN. You may be able to work out something agreeable.

Mr. TOMLINSON. Yes, sir.

Mr. RANDALL. Mr. Chairman—

Mr. STRATTON. Mr. Chairman, I wonder if we could come back to the GSA representatives. If the point the industry makes here is a valid one, it seems to me they are poles apart. The point I tried to make a moment ago, Mr. Chairman, was that we had here a product which is certainly vital to industrial production, whose annual manufacturing rate is roughly 150,000 tons a year. The proposed stockpile of this vital product is only one-fifth of that amount.

Now, I have never heard of the GSA coming in here before and suggesting, or OEP or whoever it is, coming in here and suggesting we can get along safely on just one-fifth of an annual year's production of a vital product.

Mr. PHILBIN. I would suggest you might ask Mr. Lawrence.

Mr. STRATTON. I would be glad to hear what they have to say. Unless there is some factor in here that escapes us, it just doesn't seem to make sense to me.

Mr. PHILBIN. Would you talk to that point, Mr. Lawrence?

Mr. LAWRENCE. We are working from the wrong premise here. The stockpile objective is not the total requirement of the United

States for 3 years. The stockpile objective is determined by the deficit between the requirements and the expected wartime supply.

Now, it is true that we did discount certain supply sources where there is a concentration, but the production of silicon carbide crude in 1964 was about 132,000 tons in the United States and Canada. The Canadian production is not particularly vulnerable. We can count on that in wartime. We usually do.

I don't have the basic data sheet with me on silicon carbide, but I could show the members of this committee very clearly how we reduced the stockpile objective, from what it is, to 30,000 tons.

You've got to remember, also, in the stockpile, we have a number of other abrasives. We have aluminum oxide. We have carborundum. And we have diamond bort. All of them are abrasive.

Mr. STRATTON. You mean one is just as good as another?

Mr. LAWRENCE. They can be substituted. And we certainly do provide for substitution.

We don't have 100 percent of every type, for use of the entire abrasive industry.

Mr. STRATTON. In other words, you say your stockpile objective is based on the excess of wartime demands over production capacity; is that right?

Mr. LAWRENCE. That which is available to us. As I say, we take a discount on any capacity which represents a certain percentage of total production.

Mr. STRATTON. Let's try to get the figures now. Are these figures correct? Is that what your figures show, the total production is 150,000 tons a year?

Mr. LAWRENCE. I don't have anything like that for 1965. My latest figures here are for 1964. We had total production in the United States and Canada in that year of about 132,000 tons.

We had imports principally from Canada of 80,000. We had U.S. exports of 14,000. You had U.S. consumption, which is an estimated figure, at 109,000 in 1964.

Mr. STRATTON. You say we had a total production in the United States and Canada of 132,000, and then we imported 80,000 from Canada?

Mr. LAWRENCE. No; we had total production in the United States and Canada combined, 132,000. Canadian production was 87,000. Of the total 87,000—

Mr. STRATTON. Wait a minute now, that means then we produced in this country 132 minus 87, is that right, 50,000 tons?

Mr. LAWRENCE. 44,000, that is right.

Mr. TOMLINSON. As far as I know there is no crude silicon carbide produced in this country, except in Vancouver, Wash.

I think—would you excuse me a minute, Mr. Lawrence?

I think possibly some of the confusion arising here is caused by the dividing line between the United States and Canada on the Niagara frontier, which is simply the Niagara River. Our plant at Niagara Falls, N.Y., is within approximately 4 miles of our furnace plant in Niagara Falls, Ontario. Exolon's plant is at Thorold, Ontario. Norton has a silicon carbide furnace plant in that general area of Niagara Falls, Ontario, at Chippewa, Ontario. When Mr. Wherry refers to the dangers of a concentrated industry, we are so used to dealing back

and forth with our subsidiary companies in Canada that we think of this as a common area.

Now, I will agree with Mr. Lawrence, that there is Vancouver, Wash., for the Carborundum Co. There is Three Rivers, Quebec, for electrorefractories which is only 5,000 tons a year. There is Shawinigan Falls for Carborundum Co., all big producers. You can't distinguish between United States and Canada, because they are all lumped at the Niagara frontier.

Mr. WHERRY. That is what we mean by the frontier, Mr. Stratton. We are not differentiating between geographic locations in the United States versus Canada.

Mr. STRATTON. Is this where the production stems from, we come down to the total figure which Mr. Lawrence has of 132,000, as compared to your sort of offhand figure of 150,000. Are these close enough to be acceptable from your point of view?

Mr. WHERRY. Yes, sir. He is quoting 1964; 1965 was a bigger year than 1964. And also, if you will refer to our statement, we say, during a period of an emergency, the supply would be approximately 150,000 tons. So I would accept Mr. Lawrence's figures for the purposes of this discussion. I would, however, like to add one other point in response to a point Mr. Lawrence made, and this is in regard to substitution.

He said that they had made ample provisions for substituting other materials for silicon carbide.

Now, he mentioned carborundum as one of the substitutes. Carborundum is a trade name for silicon carbide of the Carborundum Co.

He mentioned diamond. I don't know of any direct practical substitution of diamond for silicon carbide. And he also mentioned aluminum oxide.

Now, these abrasives, these materials are all abrasives, but they are not directly substitutable.

Mr. STRATTON. The aluminum oxide comes up in the next bill, doesn't it?

Mr. WHERRY. Yes, sir.

Mr. STRATTON. I think you made a good point there. I caught the reference to carborundum, too.

Mr. LAWRENCE. I made a mistake, I should have said corundum, which is a different substance.

Mr. WHERRY. Corundum, sir, is imported from South Africa, and that is the sole source. It is used primarily for glass grinding, and there is some usage of it for the grinding of cast iron, but it is very limited.

Mr. STRATTON. If they get in the same trouble Rhodesia is in, we might not get any of that material then.

Mr. LAWRENCE, what is—if you have an annual production of 132,000 tons, what is your estimate of the requirements that would exist if there were a war, or an emergency, or what we have now for that matter?

Mr. LAWRENCE. 150,000. So you have an 18,000-ton spread here. Which means 54,000 tons. I'm sure there are reasons why our figure is down to 30.

Mr. STRATTON. Well, that is just a 1-year—

Mr. LAWRENCE. No; it isn't. You have an 18,000-ton-spread deficit in 1 year.

Mr. STRATTON. That is right. I thought we did have a 3-year figure here, so that would make it 3 times 18; wouldn't it?

Mr. LAWRENCE. That is right. But there are other discounts that have not been shown here. I suspect one of them is this; we have not provided for all of the nonessential uses for grinding wheels.

Mr. STRATTON. On the other hand, didn't you say you made a special consideration where an industry was concentrated, and therefore more subject to sabotage or destruction?

Mr. LAWRENCE. Yes; we do.

Mr. STRATTON. So that ought to increase the figure rather than decrease it, shouldn't it?

Mr. LAWRENCE. It should, but it didn't in this case. That is why I prefer that we wait until tomorrow. I can bring the figures up and show them to the committee.

Mr. STRATTON. I have no objection to that, Mr. Chairman, but I think since you had talked about the possibility of an agreement here, that maybe we might agree on 1 year's production of 130,000, as being a reasonable figure, rather than, say, 30,000. I would think that would be a considerable decline from what the industry is suggesting, and yet a substantial figure over the 30,000, and I would myself think that you should have some kind of a pad in there, and I'm a little amazed that the proposed pad is so small, particularly when you have an industry that is as vulnerable as this one is.

After all, we lost all our electricity up in Niagara Falls not too long ago. Nobody has as yet guaranteed it won't happen again. You can't make much of the stuff without electricity; can you, Mr. Tomlinson?

Mr. TOMLINSON. No; you can't make any. It represents about a third of the total cost involved. So silicon carbide, and also with aluminum oxide, which we will discuss later, we refer to powder as a raw material in our production.

Mr. WHERRY. I think I mentioned, sir, we calculated it takes 3 kilowatts of electricity to produce 1 pound of silicon carbide crude material.

Mr. STRATTON. There is an element of vulnerability.

Mr. PHILBIN. We will hear more from Mr. Lawrence. Maybe we will have to go into executive session to touch on some of these top security questions involved in his testimony.

However, we will consider that further, and we thank you gentlemen for your fine testimony.

(Whereupon, the subcommittee proceeded to further business.)

H.R. 13370—CRUDE ALUMINUM OXIDE

HOUSE OF REPRESENTATIVES,
ARMED SERVICES COMMITTEE.

SUBCOMMITTEE No. 1,
Washington, D.C., March 21, 1966.

The subcommittee met, pursuant to notice, Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. PHILBIN. We will take up the next bill, which is crude aluminum oxide.

(The bill reads as follows:)

[H.R. 13370, 80th Cong., 2d sess.]

A BILL To authorize the disposal of fused crude aluminum oxide from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately one hundred and thirty thousand short tons of fused crude aluminum oxide now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704(b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided*, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.

(The statement of Mr. Philbin on crude aluminum oxide, H.R. is as follows:)

**OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN,
SUBCOMMITTEE NO. 1**

Mr. PHILBIN. The General Services Administration has forwarded a bill calling for the disposal of 130,000 short tons of fused crude aluminum oxide now held in the national stockpile.

Crude aluminum oxide abrasive is produced by fusing calcined abrasive bauxite, coke, iron, and titanium oxide under intense heat of an electric arc reduction for about 24 hours. After cooling, the product is crushed to minus 6 inches for the stockpile.

Practically all of the fused aluminum oxide is used in the manufacture of grinding wheels, sharpening stones, coated abrasives, grinding and lapping compounds, and nonskid stair treads and walkways.

We have in our inventories in the national and supplemental stockpiles 433,359 short tons. While the stockpile objective currently is 160,000 short tons, the recommended objective which is now awaiting Interdepartmental Materials Advisory Committee action, is 300,000 short tons. Thus, if we assume the Advisory Committee objective will be established, we would have 133,359 short tons of excess.

The approximate acquisition cost of the stockpile inventories of crude aluminum oxide was about \$117.57 per short ton. The present market value is approximately \$144 per short ton.

Canada is the principal producer of this metal, and accounts for approximately 36 percent of world production. Canadian and United States production together averaged about 160,000 short tons per year with Canada producing about 148,000 short tons and the United States about 12,000 short tons per year. U.S. consumption in recent years is approximately 157,000 short tons.

Mr. Lawrence, will you come forward.

**STATEMENT OF WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY
PLANNING**

Mr. LAWRENCE. We wish to support H.R. 13370, a bill to authorize the sale of approximately 130,000 short tons of fused crude aluminum oxide from the national and supplemental stockpiles.

Fused crude aluminum oxide is obtained chiefly from the United States and Canada. The principal uses of the material are for the manufacture of grinding wheels, sharpening stones, and coated abrasives.

On the basis of the last full-scale review of wartime supply requirements for fused crude aluminum oxide held April 2, 1964, the stockpile objective was established at 160,000 short tons. Preliminary studies recently completed indicate that the increased wartime requirements will necessitate an upward revision of the stockpile objective to 300,000 short tons. This action is currently awaiting approval by the Interdepartmental Materials Advisory Committee. As of December 31, 1965, the total inventory amounted to 433,359 short tons. On the basis of the presently proposed objective of 300,000 tons, the quantity of 130,000 short tons specified for disposal under bill H.R. 13370 is determined to be excess to stockpile needs.

The Office of Emergency Planning favors the passage of this legislation and respectfully requests your favorable consideration.

Mr. PHILBIN. Thank you, Mr. Lawrence. If this bill is acted on favorably we would dispose of practically all of the present surplus in the stockpile for this material?

Mr. LAWRENCE. That is right. In other words, we are using a new objective that has gone up sharply from the old one, and we haven't yet made it official.

Mr. PHILBIN. Up from 1964?

Mr. LAWRENCE. That is right. We are using the new one rather than the old one.

Mr. PHILBIN. Do you have some questions, Mr. Stratton?

Mr. STRATTON. Well, this is certainly a much more substantial figure than the other one. What is the difference if these are interchangeable as an abrasive material?

Mr. LAWRENCE. I suspect when I go back and look at the figures I will find aluminum oxide is being used more extensively than silicon carbide is today. What we are reflecting here may be the changes in the practices of the manufacturing.

Mr. STRATTON. Just to try to put this on the same basis as the other, what is the annual production? I don't think you have those figures in your statement do you?

Mr. LAWRENCE. About 150,000 tons.

Mr. STRATTON. 150,000 tons, and you are proposing a stockpile objective which would be equal to twice the annual production?

Mr. LAWRENCE. That is right.

Mr. STRATTON. Thank you, Mr. Chairman.

Mr. PHILBIN. Mr. Randall.

Mr. RANDALL. Mr. Chairman.

I am trying to pin down a few of these things as we go along. You pointed out, I think you said it is 160,000 tons, was that your 1964 stockpiling objective?

Mr. LAWRENCE. That is right.

Mr. RANDALL. You raised that to 300,000, but you are still 130,000 tons long, that is it in essence?

Mr. LAWRENCE. That is right.

Mr. RANDALL. If I understood your response to the question, did you answer Mr. Stratton's question that the need for this aluminum oxide was greater than silicon carbide?

Mr. LAWRENCE. I suspect this will probably be true. I am not completely familiar with the facts. I want to wait until tomorrow.

Mr. RANDALL. Where is the differentiation between the two? They are both abrasives?

Mr. LAWRENCE. One cuts better than the other on metals.

Mr. RANDALL. Which is that?

Mr. LAWRENCE. That is the aluminum oxide.

Mr. RANDALL. Thank you.

Mr. PHILBIN. Thank you, Mr. Lawrence.

Mr. Harlan, we would like to have your testimony on this bill.

Mr. HARLAN. Mr. Chairman, from my point of view, we have here a situation almost identical with the commodity we just discussed.

We met with the industry, which in most cases are the same people, at the same meeting. As I described before, the industry does have reservations about proceeding with the proposal, but the primary reservation has to do with the quantities to be held in the stockpile.

I feel, Mr. Chairman, very confident this industry will work with the Government in working out a disposal program, and I feel equally confident that if your committee grants us the authority to move ahead with this we can get together with the industry immediately and work something out on this.

Mr. PHILBIN. I have a feeling there will be a good chance. These gentlemen who appeared here seem to be very cooperative. They, of course, are stressing their points, and want to go over them with you very carefully. I think you will make an effort here, that will be a good, real hard effort, to try to come to some agreement. I think I would suggest that course. I think you propose to follow that course. You have heard them say they are willing to cooperate with you.

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. These two disposals are tied in, as you said, tied together, and you would want to try to reach a decision that would be mutually agreeable.

Mr. HARLAN. That is right, sir. It should be apparent, I think, any disposal program that is to be worked out will have to be worked out with the producers, since these producers are 90 percent also the consumers.

Mr. PHILBIN. That is right.

(The statement of Mr. John G. Harlan, Jr., is as follows:)

STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES ADMINISTRATION

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Material Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 13370.

This bill would authorize the disposal of approximately 130,000 short tons of fused, crude aluminum oxide now held in the national and supplemental stockpiles.

The material covered by this bill is classified as stockpile grade. The Office of Emergency Planning has determined that the entire quantity is excess to stockpile needs.

Fused, crude aluminum oxide is produced by fusing abrasive grade bauxite, coke, and iron. The fused mass is then crushed and graded into various particle sizes which are of greater uniformity in structure, lower in price, and more readily obtainable than natural abrasives. Most aluminum oxide is produced in Canada. Approximately 85 percent of the annual Canadian production of crude material is exported to the United States for processing.

About 95 percent of the fused, crude aluminum oxide produced is used for the manufacture of grinding wheels, sharpening stones, and coated abrasives such as sheets, belts, disks, and sleeves.

The average acquisition cost of the stockpile inventories of fused, crude aluminum oxide was \$117.57 per short ton. The current average market price is about \$144 per short ton, delivered Niagara Falls, N.Y.

Industry representatives and affected Government agencies were consulted in the development of the disposal program on the excess of 130,000 short tons. On February 4 we held an aluminum oxide industry meeting with the major producers and consumers of this material to discuss the proposed disposal.

Although industry representatives had strong reservations against disposal at this time, because of present supply-demand conditions, we are continuing to work with them to develop a program designed to make a modest start, with a minimum of disruption. Authorizing legislation will be needed to permit this beginning.

This agency strongly recommends the enactment of H.R. 13370.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. Mr. Stratton.

Mr. STRATTON. Mr. Harlan, since these are similar and appear to be on all fours with one another, can you tell the committee why in the one case you are proposing a stockpile of twice the annual production, and in the other case are proposing a stockpile one-fifth of the annual production?

Mr. HARLAN. I would like to be able to answer that question, Mr. Stratton, but this is out of my bailiwick.

Mr. PHILBIN. That is in Mr. Lawrence's area. That is all tied up with some security matters.

As I told you, if you want to go into that, the means by which the stockpile was determined, we will have to go into executive session tomorrow and have that done.

Mr. STRATTON. I will just leave the question on the record, Mr. Chairman.

Mr. PHILBIN. That is fine, Mr. Stratton. Thank you very much.

We have the industry witnesses. Do you want to make another presentation on this, or does what you said on the other pertain to this also? Do you have about the same objections?

Mr. WHERRY. There are a couple of other points.

Mr. PHILBIN. If you have new evidence we would like to have it. We don't want any rehash of what you said, as good as it was.

Mr. TOMLINSON. We will try to not be unduly monotonous, but this is of great concern to us.

Mr. PHILBIN. I ask you to avoid repetition as much as you can.

Mr. TOMLINSON. Yes, sir.

Mr. PHILBIN. It seems to me these two products are tied in pretty closely together. I believe that is the way they are considered by those faced with the responsibility of the stockpile.

Mr. TOMLINSON. That is right. When we meet with the GSA and OEP we discussed both subjects together.

Mr. WHERRY. I might like to point out, Mr. Chairman, we have submitted a prepared statement to Mr. Cook registering our views on this bill, and taking full objection, complete objection to it.

Again on the basis of the strategic nature of the material, and the unique situation the industry is in, particularly from the standpoint of concentration of industry in a vulnerable geographic area, and, secondly, particularly in this case, aluminum oxide, we have a unique situation in regard to the supply of raw materials.

The major ingredient of aluminum oxide is bauxite, which comes from sources outside of the continental United States, both of which are, in our opinion, subject to political implications because of the instability of their Government.

I would like to also comment on the statement Mr. Lawrence made in support of the quantity that they recommend for stockpile, the 300,000 tons. If I remember correctly, he said that the reason for the 300,000 tons, as opposed to 30,000 tons for silicon carbide, was that aluminum oxide cuts better. I do not know whether he said this, or whether he inferred it could be substituted for silicon carbide.

Again, I want to point out to you these materials are not directly interchangeable. There are some marginal areas where one will work well enough to be used, but from an efficiency standpoint, a production efficiency standpoint, this is not the case. And, bear in mind, the grinding wheel is a high production tool, gentlemen. This is not something that you just take an ordinary grinding wheel and put it on the machine and start producing with. This is a highly refined production tool, and it has to be tailored to the specific job for which it is intended to be used.

Therefore, a substitution of aluminum oxide for silicon carbide flatly across the board is not a practical situation. Furthermore, silicon carbide cuts better than aluminum oxide on glass, and aluminum oxide cuts better than silicon carbide on high-tensile strength steels. So you cannot lump the two together and say they are both abrasives, and therefore they can be substituted freely for one another.

Mr. PHILBIN. We want to hear you a little further on that, Mr. Lawrence. Possibly we will have to go into executive session to do it, but some time during the hearings I would like to have you give us a full briefing, and a full answer to the questions he has raised here on that point, that is as to the interchangeability of these materials, whether one is a substitute for the other, and take the whole picture, and how it was arrived at, and what the final analysis was, and the reason for it.

Mr. STRATTON. Mr. Chairman, could I ask the witness whether he agrees with the statement made earlier that the annual production figure was roughly 150,000 tons? It seems to me you have in here 220,000.

Mr. WHERRY. 220,000 tons; yes, sir. Again, these are estimates based on the performance of the industry during World War II, and the effect the conflict had on the industry.

Mr. STRATTON. I see.

Mr. WHERRY. If we are subjected to the same type of thing, all-out mobilization, based on our past experience, we would "guestimate" that the 220,000 short-ton figure would be within the ball park, as what would be required.

Mr. STRATTON. Well, now, if you would agree that the current production is 150,000 tons, then the stockpile recommended in this case is twice the annual production?

Mr. WHERRY. Yes, sir.

Mr. STRATTON. Would you not agree that this was a more satisfactory situation than the one proposed in the case of the silicon carbide?

Mr. WHERRY. Absolutely, sir, and I call your attention to the fact that OEP did increase their objectives. They at one time—let me see if I can find it—it is in the statement.

They at one time reduced them—yes, they reduced them; at one time they declared excess was 218,000 tons. Currently, it is 133,000 tons. So apparently, because of their reevaluation of the situation, they felt that they required more in the stockpile.

Mr. STRATTON. Therefore, from your point of view, although your own statement seems to be almost equally strong, and your own proposed objectives is considerably higher, you would still feel, I would take it, that this bill is not as bad as the other one?

Mr. WHERRY. Oh, yes, sir; this is correct.

Mr. STRATTON. Is the vulnerability of the industry much the same in the case of this material as in the case of the other one?

Mr. TOMLINSON. It is higher for two reasons. In the first place, all of the bauxite currently available as the raw material for making aluminum oxide comes from the Guianas, British and Dutch Guiana. This involves foreign countries, transporting, and that sort of thing, which I am sure Mr. Lawrence is fully familiar with.

The other thing is the industry is even more highly concentrated in the Niagara frontier, than is the silicon carbide industry.

There is only one operation that I think of offhand that is not there, and that is the Simond's Abrasive Co., up at Arvida, Quebec. I think all the other aluminum oxide capacity is right there in the Niagara frontier. So it is a more vulnerable situation than silicon carbide.

Mr. STRATTON. What is the raw material for silicon carbide?

Mr. TOMLINSON. Petroleum coke, and silica sand. The petroleum coke comes from wherever such is available in the United States, and the silica sand comes primarily from Ottawa, Ill., and there is some in Pennsylvania. Mostly from Ottawa sands. Those are domestic materials. There is no problem on materials.

Mr. WHERRY. But you see this concentration, I think we can't stress this too highly, because when we say concentration of the silicon carbide production facility in the Niagara frontier we are also talking about the concentration of the aluminum oxide production facility in the same location. So they are both equally vulnerable to the same attack.

The substitution of one for the other becomes academic, because if you knock out the facility of one, you knock out the facility of the other, you see. We have got a unique situation.

Mr. PHILBIN. When you start putting your case on the basis of evaluations that are being made by high security people of the Government, you are far more suppressive than you are when you put your case on the needs of your own industry.

I might say we here in this committee would have to rely on the sources that we have for evaluating security questions. We would be bound by that.

Mr. TOMLINSON. Yes. With all due respect we are simply trying to point out we may be more familiar with some of the difficulties involved here, than either the committee is. We are not arguing with you.

Mr. PHILBIN. This is a matter of strategy, and how they are going to affect the security of the United States. While I would be very willing to arrange an appointment with you with the Joint Chiefs so you can give them your opinion, I think this committee will have to be bound by the opinions of the Joint Chiefs, as we are related with them, connected with them, and related with them, in giving their evaluations. I say that with all due respect because you have given us some very good testimony here.

I want to repeat and emphasize when you get into the business of determining security factors your testimony is less impressive than it has been in other respects, so far as I am concerned.

Mr. TOMLINSON. May I testify very briefly? I came here primarily as an observer because I am very deeply concerned with this. I had no intention to testify. But I have been very much impressed with the cooperative attitude, and the fact that in all of these materials that have come up, you, sir, and your committee, have taken into consideration the things which necessarily are my own deepest concern, because I am responsible for the welfare of my own company.

Again, aluminum oxide, for instance, the average sales were 18,000 tons per year over a 5-year period. Last year they were 25,000 tons. Now, these are the outside sales, and again this is like the case of the sandpaper, where they are the producers who produce their own, and this is the only market that is left over. So that if GSA took over the total aluminum oxide outside sales, rather than own use, it would take them 5 years. And in the case of my own company, our production last year was 22,000 tons, so this time we have a competitor who has six times the inventory—his inventory is six times our annual production. So this is a source of concern, but I am sure we are in good hands.

Mr. PHILBIN. I want to assure you we are greatly concerned about anything that affects you. And we want, of course, to follow the law here as strictly as we can, and we will do it, and we want to cooperate with you in every way we can, and we will. I feel very sure you are going to have some very fruitful conferences with the General Services Administration and their representatives. They indicated here they welcome your cooperation, and will give you theirs as best they can.

I think as we go along here we may be able to work out a formula that will be satisfactory to everyone concerned. I hope that will be

the case. But you can be assured we will do everything we can toward that end, and make sure as well as we can here that there will be no disruption of your markets or your business, or the conditions that affect your business.

I am glad you feel that we are endeavoring to give everybody an opportunity to be heard here, and to be fair. Not only in that regard, but in conducting these proceedings, and in carrying out our duties as members of this committee in the House of Representatives.

Of course you know we have to not only get this legislation in shape, but we also have to present it to the House, and let the House work its will on the bill we present. That is our problem and the problem we will have to meet. But we are very thankful that you should come here and give us such splendid, illuminating, enlightening, evidence, and present your views as strong as you have. You made a very good case for your side, I must say.

MR. TOMLINSON. We appreciate the opportunity and the fine treatment we have received.

MR. STRATTON. Mr. Chairman, could I ask Mr. Tomlinson another question before he leaves, since we probably won't have the benefit of his testimony after we have heard the material in executive session. I don't know what the classified material is, and I would be interested to get it, but presumably it would bear on the question of why we don't need much of a stockpile of silicon carbide and do need a larger stockpile of aluminum oxide.

I wonder if you could first answer two questions for me. First of all, from your point of view in the industry, do you think this difference between one-fifth of the annual supply for silicon carbide, as compared with twice the annual supply for aluminum oxide is justified on any ground that you can think of, interchangeability, or what have you?

And, my second question is, if there is some difference, would you, in this spirit of compromise and agreement that the chairman has referred to, be willing, for example, to agree that 1 year's supply in the case of silicon carbide would be acceptable in comparison with 2 years' supply in the case of aluminum oxide?

MR. TOMLINSON. Well, Congressman Stratton, I don't think I am capable or in a position to give my opinion on your conclusion. As I sit here wondering about this, it strikes me possibly the difference is that aluminum oxide is used in grinding wheels, sandpaper, and so forth, which are used in heavy duty grinding, and grinding of steel and metals, and so forth, whereas a lot of silicon carbide is used in cutting granite, in polishing granite, glass, and things like that, and it may be that the committee, or whoever passes on these things, has examined the uses of the two materials and said that in the case of aluminum oxide, in a time of emergency, there would be more of the type of grinding and cutting that is done with aluminum oxide than is done in the case of silicon carbide.

For instance, maybe you don't cut headstones for a cemetery, or something like that with silicone carbide during a period of emergency. That is all I can think of. Maybe Mr. Wherry can answer that.

MR. WHERRY. I think maybe another point they probably considered is the difference in the availability of raw materials. In the

case of aluminum oxide the basic material is obtained from outside the continental United States, whereas in the case of silicon carbide it is domestically available. I think this may be one of the factors they considered.

Another factor they probably considered roughly, Jim, would you say there is twice as much aluminum oxide used currently in industry as silicon carbide?

Mr. TOMLINSON. Our sales are just about our sales of silicon carbide. I don't know if that pertains to everyone.

Mr. WHERRY. These might be some of the factors.

I would like to enter into the record, Mr. Chairman, the fact that our prepared statement lists the members of the Abrasive Grain Association, but it does not include the Norton Co., who is not a member of the Abrasive Grain Association, but I have been advised by the Norton Co. that they are in full accord with the contents of my two prepared statements.

Mr. PHILBIN. That will be shown in the record.

Mr. WHERRY. Secondly, not to belabor the point, but again to just get this on the record, I would like to quote very briefly from a document issued by the College of Armed Forces, published in 1949, which describes the abrasive industry very concisely, as follows:

The abrasive industry is one of those small industries upon which all other production is dependent, and is vital to mass production.

(The complete statement of Mr. Wherry is as follows:)

STATEMENT OF ALLEN P. WHERRY OF THOMAS ASSOCIATES OF CLEVELAND, OHIO, ON BEHALF OF THE ABRASIVE GRAIN ASSOCIATION

Mr. WHERRY. We have been advised that the General Services Administration has submitted a disposal plan to your committee proposing the sale of 133,359 short tons of crude aluminum oxide from the national stockpile and the supplemental stockpile. We further understand that this action is as a result of a decision made by the Office of Emergency Planning that this amount has been declared as excess to stockpile needs.

The manufacturers of crude aluminum oxide have had two meetings with the various governmental agencies involved in this action. The first was held on February 11, 1965, under the auspices of the Office of Emergency Planning, and the second was held on February 4, 1966, under the auspices of the General Services Administration.

Following the first meeting with the Office of Emergency Planning, the industry wrote to Mr. E. J. Talbert, Director of the Miscellaneous Metals and Minerals Division, Business and Defense Services Administration, U.S. Department of Commerce, expressing concern over the contemplated disposal of this material, not from an economic point of view but, rather, from the national security standpoint. Apparently, our position has had some impact on the thinking of the Office of Emergency Planning since the amount declared surplus has been reduced from 218,350 to 133,359.

The meeting held on February 4, 1966, with the General Services Administration was solely for the purpose of determining the methods to be used for disposal with no consideration being given to the in-

dustry's position regarding the need for the maintenance of the stockpile.

We felt, therefore, that it was desirable to express our views to you and your subcommittee so that you will have this information available when you consider the GSA request. The industry's position is:

(1) The pertinent figures to consider are as follows:

Aluminum oxide (short tons) current inventory-----	433,379
Declared excess to stockpile needs-----	133,359
Inventory stockpile objectives-----	300,000
Industry sales of crude aluminum oxide (short tons yearly average over 5-year period 1961 through 1965) domestic and foreign sales-----	18,044

As you can see by the above figures, the total amount contemplated for disposal is equivalent to industry sales of crude aluminum oxide for 7.4 years. Therefore, the impact of the contemplated disposal, although not as serious as in the case of crude silicon carbide, could have an effect on the market for crude aluminum oxide.

(2) The major ingredient in the manufacture of aluminum oxide abrasive is bauxite. Abrasive grade bauxite is available from only two sources, both of which are located outside the continental United States. There is no calcined abrasive grade bauxite commercially available to the abrasive industry within the boundaries of North America. While there is a supply of bauxite in the Government stockpile, it is of refractory grade which is economically unsuitable for the manufacture of fused aluminum oxide.

Current world demand is such that all available facilities for the production of abrasive grade bauxite are being fully utilized to meet the current requirements and all abrasive crude producers are on an allocation basis. Furthermore, the aluminum oxide crude material currently in the stockpile is not only an effective means of stockpiling abrasive grade bauxite but, also, a means of storing manpower and electric power.

In addition, the sources of abrasive grade bauxite are located in British and Dutch Guiana, of which the government of one is regarded as politically unstable, thus further complicating the situation. These factors alone are, in our opinion, sufficient reason for maintaining the stockpile.

(3) Practically all of the production facilities for aluminum oxide abrasive crude are located on the Niagara frontier within a 10-mile radius and they are, therefore, extremely vulnerable to enemy attack and sabotage. The destruction of the facilities on the Niagara frontier would completely eliminate the source of the major ingredient of the abrasive consuming industries, such as grinding wheels, coated abrasives, high temperature refractories, and so forth. There is no known substitute for aluminum oxide.

To point up how critical the bauxite situation is, we call your attention to the problem the industry has recently faced because of the dock strike in New York, Philadelphia, and Baltimore. If the strike had not been settled when it was, a large portion of the production facilities for aluminum oxide abrasive crude would have had to be shut down because of the lack of raw material. If this can happen in normal times, consider what the situation would be in time of national emergency.

(4) The contemplated stockpile objective of 300,000 tons is, in our opinion, inadequate and also would pose a serious threat to the ability

of the U.S. industry to maintain the production capacity necessary during any emergency. We have been advised that the Office of Emergency Planning has established, as a criteria for their stockpile objectives, a 3-year supply of the material.

We cannot resolve this with the 300,000 tons established as the stockpile objective. It is our considered judgment that during a period of mobilization the U.S. producers would be required to supply approximately 220,000 short tons of aluminum oxide crude material per year. Thus the 3-year objective established by OEP, in our opinion, would require that 660,000 short tons of the material be maintained in the Government stockpile.

(5) In point (1) above, we mentioned that industry sales of crude aluminum oxide averaged 18,044 short tons per year for the 5-year period 1961-65. In point (4) above, we stated that, in our opinion, during a period of mobilization the U.S. producers would be required to supply approximately 220,000 short tons of crude aluminum oxide per year.

At first glance, these figures might appear to be in conflict; however, the difference is explained by the fact that in the first instance we are referring to the market for crude material, whereas in the second instance we are talking about total usage of the material. All producers of crude aluminum oxide convert a major portion of their production into grain which is then sold for use in the manufacture of grinding wheels, coated abrasives, and so forth. Only a small portion is sold as crude aluminum oxide since there are only a few users of aluminum oxide grain who are equipped to convert crude material into grain sizes.

(6) The importance of the abrasive industry to the maintenance of industrial production cannot be stressed too strongly. To support this point, we call your attention to restricted document ST49-20 (The Abrasive Industry) of the Industrial College of the Armed Forces, published April 15, 1949, which describes the industry as follows:

The abrasives industry is one of those small industries upon which all other production is dependent and is vital to mass production (p. 36).

The abrasive industry is specifically included in the list of essential industries published by the U.S. Department of Commerce, August 3, 1950; major group 32, code No. 3291. The essentiality of this industry is also recorded in great detail in the files of the National Security Resources Board.

While grinding wheels are themselves expendable production tools, they are indispensable for manufacturing the machine tools and metal cutting tools which are the primary requisite of munitions production. The product is the same in peace or war. The grinding wheel and abrasives in other forms are also indispensable in the direct production of planes, engines, guns, tanks, motor vehicles, shells.

The Industrial College report also concludes that the industry must be assured of a supply, in most cases in relatively small quantities but nevertheless indispensable, of raw materials which in a wartime economy become critical.

Evidence that the industry must operate at full volume to sustain the productive capacity of all other segments of the economy is found in the fact that capacity in World War II was increased to four times its greatest previous output.

In conclusion, we emphasize again that if there is any validity at all in the necessity of stockpiling strategic materials, the contemplated reduction in the aluminum oxide crude stockpile would seriously jeopardize the ability of the U.S. manufacturing industry to meet wartime requirements. We, therefore, strongly urge that the decision regarding disposal be reviewed in light of the foregoing comments.

For your information, the members of the Abrasive Grain Association are as follows:

Abrasive Products Co., Lansdowne, Pa.
 American Abrasive Co., Westfield, Mass.
 The Carborundum Co., Electro Minerals Division, Niagara Falls, N.Y.
 Electro Refractories & Abrasives Corp., Buffalo, N.Y.
 The Exolon Co., Tonawanda, N.Y.
 General Abrasive Co., Inc., Niagara Falls, N.Y.
 Hamilton Emery & Corundum Co., Chester, Mass.
 Macklin Co., Jackson, Mich.
 Mid-West Abrasive Co., Owosso, Mich.
 Simonds Abrasive Co., Philadelphia, Pa.
 Washington Mills Abrasive Co., North Grafton, Mass.

Mr. PHILBIN. Thank you very much.

Mr. TOMLINSON. Thank you.

Mr. WHERRY. Thank you.

Mr. PHILBIN. That will conclude our hearings for the day.

We will meet tomorrow at 10 o'clock to consider four bills as scheduled.

Mr. Cook, do you have the list of those bills? You gave them to me a moment ago. I misplaced them. Maybe you took them back.

Mr. Cook. Amosite asbestos, H.R. 13580; acid grade fluorspar, H.R. 13367; phlogopite mica, H.R. 13371; and muscovite mica, H.R. 13373.

Mr. PHILBIN. We will hear those bills tomorrow starting at 10 o'clock, in order.

Thank you all, gentlemen. The meeting will adjourn until 10 o'clock tomorrow morning.

(Whereupon, at 4:31 p.m., the committee adjourned until Tuesday, March 22, 1966, at 10 a.m.)

H.R. 12694—JAMAICA AND SURINAM TYPE BAUXITE

HOUSE OF REPRESENTATIVES,
 SUBCOMMITTEE NO. 1 OF THE
 ARMED SERVICES COMMITTEE,

Washington, D.C., Wednesday, March 23, 1966.

The subcommittee met, pursuant to notice, in room 2118, Rayburn Building, Hon. Philip J. Philbin (chairman of the subcommittee) presiding.

Mr. PHILBIN. Now the next bill we will consider this morning is H.R. 12694, Jamaica and Surinam type bauxite, metal grade.

(The bill reads as follows:)

[H.R. 12694, 89th Cong., 2d sess.]

A BILL To authorize the disposal of bauxite from the national stockpile and the supplemental stockpile

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Administrator of General Services is hereby authorized to dispose of, by negotiation or otherwise, approximately

five million, four hundred thousand long dry tons of Jamaica and Surinam types of metallurgical grade bauxite now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h) and the supplemental stockpile established pursuant to section 104(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (7 U.S.C. 1704 (b)). Such disposition may be made without regard to the provisions of section 3 of the Strategic and Critical Materials Stock Piling Act: *Provided, That the time and method of disposition shall be fixed with due regard to the protection of the United States against avoidable loss and the protection of producers, processors, and consumers against avoidable disruption of their usual markets.*

(The statement of Mr. Philbin on Jamaica- and Surinam-type bauxite is as follows:)

OPENING STATEMENT OF HON. PHILIP J. PHILBIN, CHAIRMAN, SUBCOMMITTEE NO. 1

Mr. PHILBIN. H.R. 12694 is a bill introduced by our very able colleague, the Hon. Charles N. Wilson, of California. Mr. Wilson is a distinguished member of the House Armed Services Committee.

This bill would provide for the disposal of approximately 5,400,000 long dry tons of Jamaica and Surinam types of metallurgical-grade bauxite now held in the national and supplemental stockpiles.

There are presently in the national and supplemental stockpiles in excess of the stockpile objectives, approximately 5,400,000 long dry tons of metallurgical-grade bauxite consisting of 3,200,000 tons of Jamaica type and 2,200,000 tons of Surinam type. The stockpile objective for Jamaica-type bauxite is 5 million tons and the stockpile objective for Surinam-type bauxite is 5,300,000 tons. In addition, 345,509 tons are being held for possible reclassification to chemical grade upon instructions from the Office of Emergency Planning.

The average cost of Jamaica-type bauxite held in the national stockpile is \$15.83 per ton while that held in the supplemental stockpile is \$15.35 per ton. The present market value for Jamaica-type bauxite is \$11.64 per ton. For the Surinam-type bauxite the average cost is \$15.83 per ton for that held in the national stockpile and \$15.44 for that held in the supplemental stockpile. The present market value for Surinam-type bauxite is \$15.35 per ton.

World production of bauxite in 1964 was estimated at 33.1 million long dry tons. The United States is a minor supplier of the Surinam-type bauxite but this accounts for only 6 percent of the year's free world supply. Over 60 percent of free world production comes from British Guiana, Surinam, and Jamaica. The latter country accounts for about 24 percent of the total free world production.

Bauxite is a mixture of minerals composed principally of hydrous oxides of aluminum. There are two basic ore types: a trihydrate (gibbsite) and the alpha monohydrate (boehmite). North and South American deposits are largely trihydrate. Caribbean Island deposits are a mixture of trihydrate and monohydrate. For purposes of distinction, the trihydrate is arbitrarily labeled "Surinam type" and mixed Caribbean "Jamaica type."

About 80 percent of total bauxite product is metallurgical grade which is used for the production of aluminum. The bauxite ore is processed to extract alumina (aluminum oxide) which is reduced to aluminum metal in electrolytic cells. Approximately 4 tons of bauxite

are chemically processed to make 2 tons of alumina which, by electrolytic reduction, becomes 1 ton of aluminum.

Since our able colleague and friend on the committee, Mr. Wilson, is now here we decided this would be the appropriate time to take it up.

Do you desire to make your presentation? We would like very much to have you testify.

Mr. CHARLES H. WILSON. I want to apologize for not being here when I should have at the beginning of the meeting to present this in order.

Mr. PHILBIN. We are very glad to have you here. As you know, we would be happy to have your testimony and proceed in your own way and give us the benefit of what we know will be your very valuable views on this legislation.

Mr. WILSON. I introduced H.R. 12694, Mr. Chairman and members of the committee, at the request and after consultation with one of the fine aluminum companies in our country that is in my area, in Los Angeles. It provides for the disposal of Jamaica and Surinam-type bauxite.

I have a statement here that I will introduce into the record, and just indicate to my knowledge there has been no opposition expressed to the bill. Perhaps there may be some controversy in connection with it, but it has not come to my attention, however, if there is.

The principal purpose of the bill, of course, is to make available at public bidding this type of bauxite for companies other than the larger ones that have had pretty much of a monopoly on this business and have had the access to their own deposits.

This, Mr. Chairman, will suffice for my statement at this time.

Mr. PHILBIN. We will take your excellent statment for the record. You do state your industries are in need of these materials?

Mr. WILSON. Yes, very much so.

Mr. PHILBIN. You have given us an excellent statement. I want to commend you on it. Thank you very much on behalf of the committee and myself.

Mr. WILSON. Thank you.

(The statement of Mr. Charles H. Wilson on Jamaica and Surinam type bauxite is as follows:)

STATEMENT OF HON. CHARLES H. WILSON, OF CALIFORNIA

Mr. WILSON. Mr. Chairman and other distinguished members of this committee, I appreciate this opportunity to appear before you on this very important subject of the disposal of bauxite which has been found to be excess to the needs of our present stockpile objective.

It is my understanding that the administration has determined that without jeopardizing our current stockpile needs, we can safely dispose of 5,400,000 long dry tons of metallurgical grade bauxite which is of two types, Surinam and Jamaica.

Assuming the soundness of this determination—and I have no facts upon which to question it—I want to register my wholehearted support for the disposition of this material. Due to our military commitments, particularly in Vietnam, and our programs to benefit our own citizens, we are faced with a shortage of money in the Federal Treas-

ury. Since the bauxite is in surplus, the Government no longer has use for it.

Furthermore, it is stored in the open and subject to progressive deterioration. And of necessity, the Government must stand continuing expenses of storage including administration. The receipt of the cash sales prices for the bauxite and the savings of the storage and administrative costs will help the position of the Federal Treasury and will, in part at least, diminish the need to generate revenue from other sources.

There are other advantages which will accrue to our economy if the committee will endorse some methods of disposal which I will now suggest:

Apparently there are three established primary aluminum companies which sold or bartered this bauxite to the U.S. Government and have their own bauxite supplies and reserves. The acquisition of this material by them would not therefore increase, in any way, their production of our much needed aluminum.

On the other hand, there are several newer and smaller companies which do not have captive bauxite mines or access to other sources of supply. For those smaller companies, availability of stockpile bauxite can assure continuance of their aluminum production for our military and other needs. This will also broaden the base of supply in the primary aluminum industry, thereby helping to diminish the dominance of the industry by the present oligopoly.

It is my information that the processing facilities available to these smaller and newer companies are geared largely to the uses of Surinam bauxite. The Jamaica type bauxite has been taken into the stockpile only since 1951 and then only at the request of two of the established producers which had large reserves in that area and then had, or were constructing, processing facilities to treat the Jamaica type specifically. I therefore suggest that, to the greatest extent consistent with the maintenance of the current stockpile objective, the preponderance of the bauxite sold should be of the Surinam type.

It is my understanding that arm's-length sales of bauxite in the United States have been and are practically nil, so there has been no opportunity for a general market price to develop.

It is also my understanding that the acquisition cost to the Government of the bauxite in both the stockpile and the supplemental stockpile averages approximately \$15.40 per long ton. This is probably substantially more than the material is worth in a competitive market, for instance.

The value of Surinam metallurgical grade bauxite received at New Orleans in 1964 as reported to the U.S. Customs Service was about \$6.80 per long ton free on board Surinam. I do not say this particularly in criticism of the officials who did the purchasing because most of the bauxite, particularly that in the supplemental stockpile, was acquired through barter transactions where other considerations than the price of bauxite were important.

Under these circumstances, the only fair way both to the Government and to the prospective purchaser is to dispose of the bauxite by open competitive bidding that has always been the true test of value under our American system of free competitive enterprise.

To recapitulate, I suggest that this bauxite be disposed of as quickly as possible; that it consist of Surinam type bauxite; that it be offered to those American companies which do not now have or are not operating their own captive bauxite deposits; and, that the sales price be determined on the basis of open competitive bidding.

May I again thank the chairman and members of this distinguished committee in hearing my suggestions which I believe will both help the Government in its present need for financing and will promote the development of a competitive aluminum industry.

Mr. PHILBIN. Mr. Lawrence, let us have your testimony on the pending bill.

STATEMENT OF WILLIAM N. LAWRENCE, OFFICE OF EMERGENCY PLANNING

Mr. LAWRENCE. The Office of Emergency Planning appreciates this opportunity to appear before you to support H.R. 12694.

As of December 31, 1965, the total excess of metallurgical grade bauxite in Government inventories amounted to 6.1 million long tons. This is on the basis of the combined stockpile objectives for Jamaica and Surinam types and the respective strategic storage retention programs for these materials. Of this total excess (6.1 million long tons), 714,000 long tons of the Jamaica type only is held in the Defense Production Act inventory and is presently available for disposal.

It is the objective of the proposed legislation under consideration to make 2.2 million long tons of Surinam type of bauxite and 3.2 long tons of Jamaica type bauxite available through the release of additional excesses of both Jamaica and Surinam from the national and supplemental stockpiles. When Congress approves such action, the disposal of bauxite from the stockpile will be coordinated with the releases from the Defense Production Act inventory and periodic offerings will be made in approximately equal quantities of Jamaica and Surinam types.

Mr. PHILBIN. Perhaps at this point you would amplify the statement you made in that last sentence, with respect to the difference between Jamaica and Surinam bauxite. Would you tell us briefly what are the differences between these two materials?

Mr. LAWRENCE. Well, it is—

Mr. PHILBIN. Also, whether you have separate categories in the stockpile for these materials, or whether they are all bracketed in under the general heading of "bauxite."

Mr. LAWRENCE. No, we have separate stockpiles of them. Some industries use Surinam and some use Jamaica. You can't use the ores interchangeably, without a modification of your equipment.

Mr. PHILBIN. Would you tell me, first, whether these disposals would bring the stockpiles of these two materials under the stockpile requirements or not?

Mr. LAWRENCE. These are over the stockpile requirements. We are retaining in inventory all the bauxite we need to meet the objectives of both materials.

Mr. PHILBIN. After these are disposed of, you would still have the amount that would be meeting the stockpile requirements?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Now, would you briefly describe what these substances are—Jamaica and Surinam bauxite?

Mr. LAWRENCE. You mean the ores themselves?

Mr. PHILBIN. Yes. What are the differences between them, and how do they differ from other bauxites?

Mr. LAWRENCE. Bauxite is a mixture of minerals composed principally of hydrous oxides of aluminum. There are two basic ore types: a trihydrate (gibbsite) and the alpha monohydrate (boehmite). North and South America deposits are largely trihydrate and monohydrate. Caribbean island deposits are a mixture of trihydrate and monohydrate. For purposes of distinction, the trihydrate is arbitrarily labeled "Surinam type" and mixed-Caribbean "Jamaica type."

Mr. PHILBIN. That explains it. That is very illuminating, very enlightening.

Anyway, we are glad to have it on the record for those who have the expertise to understand it.

Mr. LAWRENCE. Yes.

Mr. PHILBIN. Now we will discuss—you have cleared this as you cleared the other projects? You cleared this with the cooperating agencies?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Everybody is in agreement about it?

Mr. LAWRENCE. Yes, sir.

Mr. PHILBIN. Thank you.

Mr. LAWRENCE. Foreign sources supply about 85 percent of the total domestic consumption. Jamaican-type ore is obtained primarily from Jamaica, Haiti, and the Dominican Republic. The Surinam type comes chiefly from Surinam and British Guiana. The United States produces approximately 13 percent of the domestic supply. Over 90 percent of the metallurgical bauxite consumed is used to produce alumina, which, in turn, is converted into aluminum.

Discussion of these disposals of bauxite have been under way with the aluminum industry for approximately 18 to 24 months. As of today, a minority portion of U.S. importers and producers is seeking such a disposal. The representatives of the majority capacity oppose this disposal.

I feel that the stockpile objectives established for both types of bauxite on April 10, 1964, are the most realistic and factual that we have ever made for any stockpile material.

Consequently, the Office of Emergency Planning favors the passage of this measure. It will provide for the orderly liquidation of surplus Government inventories of both Jamaica and Surinam types of bauxite.

Mr. PHILBIN. Mr. Harlan.

Do you have a prepared statement?

Mr. HARLAN. Yes. May I submit it for the record?

Mr. PHILBIN. Submit it for the record and then amplify your views, and discuss the bill any way you so desire.

(The statement of Mr. Harlan on Jamaica and Surinam type bauxite is as follows:)

**STATEMENT OF JOHN G. HARLAN, JR., GENERAL SERVICES
ADMINISTRATION**

Mr. HARLAN. Mr. Chairman and members of the subcommittee, I am John G. Harlan, Jr., Commissioner, Defense Materials Service, General Services Administration. I have with me other staff members of GSA who are familiar with the Government's stockpile program.

On behalf of the Administrator, Mr. Lawson B. Knott, Jr., who has asked me to represent him at the hearing today, I want to thank you for the opportunity to appear before your subcommittee for the purpose of expressing the views of GSA on H.R. 12694.

This bill would authorize the disposal of approximately 5,400,000 long dry tons of Jamaica and Surinam types of metallurgical-grade bauxite now held in the national and supplemental stockpiles. The Office of Emergency Planning has determined this quantity to be excess to stockpile requirements.

Metallurgical-grade bauxite is used primarily for the production of aluminum metal. Other uses are for the production of abrasives and refractories and a small quantity in the chemical industry. It is obtained principally from Jamaica, Dominican Republic, Surinam, British Guiana, Ghana, and the Republic of Guinea.

The total inventory of metallurgical-grade bauxite held by GSA is 16,748,849 long dry tons. The present stockpile objective is 10,300,000 long dry tons. A total of 345,509 long dry tons has been held for possible reclassification to chemical grade in accordance with instructions of OEP. The total excess is 6,103,340 long dry tons of which approximately 5,400,000 long dry tons are in the national and supplemental stockpiles. The remaining excess of 714,000 long dry tons is in the Defense Production Act inventory.

The average acquisition cost per long dry ton was \$15.83 for the material in the national stockpile and \$15.40 for the material in the supplemental stockpile. The present market value per long dry ton is \$11.64 for Jamaica type and \$15.35 for Surinam type bauxite.

We have under active consideration a two-part plan for disposal of the 6.1 million tons of excess metallurgical-grade bauxite. The first part of the plan contemplates disposal of the 714,000 long dry tons of Jamaica-type bauxite from the Defense Production Act excess. The second part of the disposal plan which we have under consideration contemplates disposal of an additional 5.4 million tons of excess metallurgical-grade bauxite from the national and supplemental stockpiles. Disposal of this latter quantity requires congressional approval which enactment of the bill would provide.

Our plan contemplates disposal at an initial rate of 200,000 tons of Surinam type bauxite annually and 200,000 tons of Jamaica type bauxite annually, bringing the total initial disposal rate for both types of metallurgical grade bauxite to 400,000 tons per year. The annual domestic consumption of Jamaica and Surinam type bauxite is approximately 12 million tons. Thus, our planned annual disposal rate of all types of excess bauxite is only slightly more than 3 percent of total domestic consumption.

In developing our disposal plan, we have consulted with interested Government agencies and industry representatives. Although we have obtained the concurrence of the various Government agencies

concerned, we have encountered widely divergent views within the industry. Some industry members favor disposal of the excesses but other industry members oppose. We are now analyzing and evaluating these conflicting industry views and are continuing to confer with industry representatives in an effort to develop a program which will accommodate the opposing views. Obviously, this is a difficult task. However, we will exhaust every effort to work out a disposal plan that is generally acceptable to all members of the industry. We are confident that we will eventually be successful in this effort.

Since our inventories of metallurgical grade bauxite are in excess of stockpile objectives, we believe that the excesses should be disposed of at a rate which will meet the needs of that segment of the industry which requires it.

Therefore, while we favor the enactment of H.R. 12694, we assure the subcommittee that we will not initiate a metallurgical grade bauxite disposal program until we have worked out with the affected members of the aluminum-producing industry a plan that goes as far as possible in accommodating their conflicting interests.

We believe we have demonstrated our ability to work excess stockpile materials into the market a manner which protects the United States against avoidable loss and protects producers, processors, and consumers against disruption of their usual markets. H.R. 12694, if enacted, would expressly require us to respect these safeguards in the disposal of excess metallurgical grade bauxite. We are confident of our ability to dispose of the excess bauxite in a manner acceptable to industry and Government alike.

This concludes my prepared statement, Mr. Chairman. However, if you or other members of your subcommittee have any questions you may wish to ask, we shall be happy to answer them at this time or furnish the desired information for the record.

Mr. PHILBIN. What is the nature of the objections you have had from the different segments of industry regarding this bill?

Mr. HARLAN. Mr. Chairman, the industry doesn't seem to have any reservations about being able to absorb the excess readily without any problem, particularly at the rate we are discussing. Their primary concern seems to be that they believe this material should be held for emergency purposes.

Mr. PHILBIN. This is the industry statement. It doesn't need it at this time?

Mr. HARLAN. No; they don't particularly need it. I believe they could absorb these excesses without any problem. However, as I say, there seems to be a feeling the material is acquired for emergency reasons and should be held for those reasons.

Mr. PHILBIN. From the Government standpoint, this disposal is to dispose of the excess.

Mr. HARLAN. That is true.

Mr. PHILBIN. Not to take care of any shortages that exist in the industry?

Mr. HARLAN. That is correct, sir.

Mr. PHILBIN. What is the scheduling of your disposal program as it stands right now, having in mind that you do not have industry concurrence?

Mr. HARLAN. Well, we had a meeting with the industry, and have agreed to furnish the industry with details which have been sent to them, and I plan to meet with them again in the very near future.

Mr. PHILBIN. At the present time do you have any schedule concerning the disposal of these two types of bauxite?

Mr. HARLAN. No. We would begin disposing of it at the rates I described.

Mr. PHILBIN. The disposals will take place currently, or will they be deferred?

Mr. HARLAN. They will be deferred until we have worked up some arrangement with the industry; yes, sir.

Mr. PHILBIN. That is the practice you usually try to follow?

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. The committee expects you to follow, naturally.

Mr. HARLAN. That is right.

Mr. PHILBIN. To get an agreement with the industry, and then make the disposals in the orderly fashion you usually try to do.

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. That will be your procedure here. You think you will have to work over some period of time in order to get the industry concurrence?

Mr. HARLAN. Yes, sir. I don't think it will take an awful long time, but I believe it will take us some while to work it out.

Mr. PHILBIN. What will be your best guess on that, your best opinion, as to when you might have agreement, when you might be able to make the first disposal? Has any date been fixed for the first disposal at any time?

Mr. HARLAN. No, sir. As I said, we were proceeding on the basis that you just described.

Mr. PHILBIN. Waiting to get industry—have an industry conference, find out what the situation is, whether you can come to a resolution on the methods of the disposal; is that correct?

Mr. HARLAN. That is right.

Mr. PHILBIN. Tell us something about the price here. Suppose you were to make disposal as of now, say within the next year, would you regard the price or the marketing conditions to be favorable for the Government? Is this a favorable time for the Government to dispose of these materials?

Mr. HARLAN. Mr. Chairman, I think probably this is the most favorable time we have ever had, and may ever have, to dispose of almost all of these excesses, and therefore I would think I would answer your question yes.

Mr. PHILBIN. I can pinpoint my question better perhaps if I asked you, now, what is the average price of acquisition of these materials, and what is the present market price in each case?

Mr. HARLAN. Well, we paid a little different price for the two different types.

Mr. PHILBIN. Mention both of them.

Mr. HARLAN. The average price of the Jamaica bauxite was about \$15.04 a ton.

Mr. PHILBIN. What is the market price today?

Mr. HARLAN. This is hard to say, Mr. Chairman. We have acquired some bauxite under the barter program, and this price is pretty much the same today as it was.

Mr. PHILBIN. About \$15?

Mr. HARLAN. That is right, sir. Actually, what we would be able to get, if we put the material—

Mr. PHILBIN. There would be some difference, perhaps, in the barter price and the actual market price?

Mr. HARLAN. No, sir.

Mr. PHILBIN. No?

Mr. HARLAN. No.

Mr. PHILBIN. In every case when you acquire materials through a barter, do you get the market price?

Mr. HARLAN. Yes, sir. When the Department of Agriculture gets a proposal for barter transaction, we advise them as to what the proper market price should be. That is usually the level at which the transaction takes place.

Mr. PHILBIN. We have some information now, this is your own statement, that the present market value per long dry ton is \$11.64 for the Jamaica type, and \$15.35 for the other type of bauxite, as against the \$15.40.

Mr. HARLAN. You are correct, sir; I was looking at the Surinam type.

Mr. PHILBIN. So if this is true, there would be a loss?

Mr. HARLAN. There would be a slight loss on the Jamaica bauxite.

Mr. PHILBIN. Is that the statement that appears on page 2 of your own statement?

Mr. HARLAN. Yes.

Mr. PHILBIN. Would that be correct as to the market price?

Mr. HARLAN. It is correct; yes, sir.

Mr. PHILBIN. So if you did dispose of these materials at the present time, there would be a pretty substantial loss to the Government?

Mr. HARLAN. Yes. Let's see—

Mr. PHILBIN. I know you wouldn't dispose of all of them at one time. But any increment of the total authorized disposal that you might dispose of now, there would be a pretty substantial loss to the Government. Would that be true?

Mr. HARLAN. This is true, yes.

Mr. PHILBIN. Do you have some questions?

Mr. ARENDS. The only question I have, Mr. Chairman, there must be some reason on the part of industry why they would not like you to do this at this particular time. I believe you have told us. There is not an industry representative here, but they would rather you keep the whole pot of stuff now and do nothing about it, isn't that right?

Mr. HARLAN. That is right.

Mr. ARENDS. Would you give us their reasoning on it?

Mr. HARLAN. This material for the most part was acquired for their use in an emergency and stored close by, or actually on their facilities. And they feel we should just leave it there.

Mr. ARENDS. Keep it and hold it for them until they wanted it, is that it?

Mr. HARLAN. That is it, yes.

Mr. PHILBIN. That is the view of the industry, they are concerned lest in an emergency, if one should develop, they wouldn't have a readily available supply?

Mr. HARLAN. This is what they have said to me; yes, sir.

Mr. ARENDS. Thank you.

Mr. PHILBIN. Are there any questions?

If there are no further questions, Mr. Cook.

Mr. COOK. In your statement, Mr. Harlan, do I understand that you will be disposing—you have about a 3-year disposal program from the DPA inventory, before you would put on the market anything that this bill would dispose of?

Mr. HARLAN. No, sir.

Mr. COOK. Any congressional approval required?

Mr. HARLAN. We have a 3-year supply of the Jamaica type. We would start using the Surinam type immediately if we got the authority, in conjunction with the Jamaica-type bauxite.

Mr. COOK. We have no Surinam type of bauxite in the DPA inventory?

Mr. HARLAN. That is right.

Mr. PHILBIN. I would like to make another reference, to try to determine just what these different types are, and what they are used for.

What is the Jamaica type used for now? Is it used for making aluminum products?

Mr. HARLAN. Both are used for making aluminum, 94 percent. There are some other uses.

Mr. PHILBIN. What is the difference between the two of them in the making of aluminum products?

Mr. HARLAN. The Jamaica type is a mixture of trihydrate and monohydrate or mixed Caribbean bauxite. For a long time it was felt that it would be almost impossible to work with that material, but a process was developed. The companies who have developed that process are mining and using this material, and can only use that certain type of material in their facilities.

The other material, the trihydrate material, is easier to process and some of the other companies are set up to handle only that type material.

Mr. PHILBIN. For which is there the greater demand?

Mr. HARLAN. The Surinam type, the trihydrate material.

Mr. PHILBIN. If there are no further questions—pardon me, Mr. Wilson.

Mr. CHARLES H. WILSON. Is it the general consensus of the entire industry?

Mr. HARLAN. No, sir; this is split right down the middle.

Mr. CHARLES H. WILSON. That is what I thought. I think the implication you left was that the industry was in agreement.

Mr. HARLAN. I hope not, sir. In the statement I think I clearly said there is a very definite division within the industry.

Mr. CHARLES H. WILSON. There is a large part of the industry that does want to dispose of it?

Mr. HARLAN. They want to dispose of it, and wish to buy it; yes, sir.

Mr. PHILBIN. In any event, any disposal you made would be conducted as all your disposals are with reference to the act, with reference to doing it in the most orderly fashion possible.

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. With reference, not to disrupting prices or markets, following the usual standards that are understood to be the objectives of your agency, and of the law, and of this committee.

Mr. HARLAN. That is right, sir.

Mr. PHILBIN. That would be correct, would it not?

Mr. HARLAN. Yes, sir.

Mr. PHILBIN. Mr. Arends.

Mr. ARENDS. Are you saying, Mr. Harlan, in response to Mr. Wilson's question, that industry can't get together on an opinion on this any more than he can get all his voters together to think the way he wants them to; is that right?

Mr. HARLAN. That is right.

Mr. PHILBIN. Mr. Cook.

Mr. COOK. Just to clarify for the record, as I look at page 2 of your statement, you speak of disposing of 714,000 long tons of Jamaica-type bauxite from the DPA inventory. And the second part of the disposal contemplates the disposal of an additional 5.4 million. The bill provides for only the disposal of this 5.4 million. What portion of the inventory is in Jamaican-type bauxite and what is in Surinam bauxite?

Mr. HARLAN. Are you speaking of the excess inventory?

Mr. COOK. The excess inventories.

Mr. HARLAN. Jamaica type is 3.1 million tons, and Surinam 2.2 million tons.

Mr. COOK. We won't be disposing of any of the Jamaican type for at least 3 years, based on your proposed rate of disposal?

Mr. HARLAN. If we were successful in getting the authority to move on this material, we might dispose of some of this, because of its location. In other words, there might be some definite advantages in the types of materials and locations involved which would give us some flexibility.

Mr. PHILBIN. Are there any further questions?

Are there any further witnesses on this bill?

Mr. COOK. No, sir.

Mr. PHILBIN. That will conclude the hearings on this bill. The committee will go into executive session.

Mr. ARENDS. Mr. Chairman, before you do that, may I ask another question?

Mr. PHILBIN. Mr. Arends is recognized.

Mr. ARENDS. This is what I want to present this morning for the record, and I would appreciate you gentlemen being here when I read this into the record. I would appreciate your knowing about it.

This is a copy of a letter in relation to the disposal of copper, in the first instance. This individual that sent me the letter, I do not know him. He happens to be from Chicago, Ill., and apparently being from Illinois that is why he may have contacted me. After reading his letter, which was interesting indeed, and whether it is all based on complete fact I do not know. However, I want to read it, asking permission if I might read this into the public record, which he said I could.

This was under date of February 28, by the Interstate Smelting & Refining Co. I repeat, I read this into the record only because it raises the possibility of avoiding similar errors to this in the disposal of any further copper.

(The letter above referred to by Mr. Arends is as follows:)

INTERSTATE SMELTING & REFINING CO., INC.,
Chicago, Ill., February 28, 1966.

HON. LESLIE ARENDS,
*Member of Congress, Minority Whip, Armed Service Center,
Rayburn Building, Washington, D.C.*

DEAR MR. ARENDS: Last November the GSA was directed by Secretary of Defense McNamara, to release 200,000 tons of copper from the national stockpile to relieve the shortage of this material and to stabilize the price.

This shortage was caused by strikes during 1965, but mostly due to the unrestricted exports of copper and copper alloys to Japan and Europe. Much of this exported copper found its way to Red China and to Russia, as it was purchased in the United States by foreign companies who were fronts for these countries. The Department of Commerce was advised of this many times during these years, but nothing was ever done about it by the Department until November 1965, when the stockpile release and export restrictions were announced at the same time. The new regulation stated that 30,000 net tons of copper units would be licensed for export annually. The export regulations applied to all countries except Canada (please note p. 7 of the enclosed BDSA report).

Almost immediately after the restrictions were put into effect copper and copper-based alloys of all types went to Canada from the United States. Then they were exported from Canada, just as they were before out of the United States, only at much higher prices and profits. This export is still going on today despite the fact that in January 1966 the Canadian Government issued licenses and quotas for the export of copper and copper-based alloys from Canada. The quotas are extremely liberal, and the licenses are gotten by just asking for them. This actually served to increase the export, because of the higher prices paid across the Canadian border.

In November 1965, when the Government disposed of 200,000 tons from the stockpile it was with the intention of stabilizing the rising price of copper and its products. When the release was made official, the price for electrolytic copper was 36 cents per pound in the United States and also in the world market. The actual price for copper on the commodity exchange was 60 cents per pound. Three months later the U.S. market is 36 cents; the world market has gone to 42 cents and the U.S. commodity copper market is well above the 70-cent level. It is completely impossible to buy copper from the producers at 36 cents.

Most of this 36-cent electrolytic copper goes from the producer to their own captive mills where finished products are made out of it. Since last November, the price of copper and copper-bearing materials has risen close to 15 cents per pound depending on grade and type, and is still rising due to Canadian exports and strikes. The producer's price for copper outside the United States is 42 cents, so it is only natural that no copper ore, or other raw material from the world market will move to the United States into a 36-cent market level.

On February 9, 1966, I called Mr. W. A. Miesner, of the BDSA regarding the release of copper from the stockpile. Mr. Miesner is the head of the Copper Division in the Department of Commerce and he is the man who made the decision as to who and how much copper was to be allocated to the various industries. There were 19 ingotmakers that received allocation from the 7,175 tons allocated to this industry. Mr. Miesner informed me that no ingotmaker should have received any copper from stockpile. I asked why he released this copper to this industry, but he declined to answer the question.

Out of the 19 companies, 1 received 3,000 tons (6 million pounds). This was R. Lavin & Sons, Chicago. H. Kramer, Inc., of Chicago, received 1,300 tons (2,600,000 pounds). These two companies represent less than 20 percent of the industry that they are in and received almost 60 percent of the total released to this industry.

The only thing that Mr. Miesner and I agreed on was that no ingotmaker should have received copper from the stockpile. This copper should have gone to the critical industries such as wire mills and brass mills where it is in desperately short supply. The ingotmaker has no need for refined or electrolytic in his products. It is the function of the ingotmaker to smelt and refine brass, bronze, and copper-based scrap and produce his alloys from these basic raw materials.

If the price on the stockpile release had not been 36 cents, none of these companies would have bought it. They certainly do not buy it in normal times.

It is hard to understand why copper was released to ingotmakers and how the amounts of the release were arrived at. It also created a very bad crisis in a relatively small industry such as the ingotmakers exist on. Repercussion from this crisis will be felt in the many industries it serves.

With release of 3,000 tons, such as to R. Lavin & Sons received and 1,300 tons to H. Kramer Co., the Commerce Department gave these two companies several million dollars to put their competition into a very difficult position. It is almost impossible to compete with these two companies due to the subsidies they received from the BDSA under the guise of nonavailability of copper to produce brass and bronze ingot. The rest of the ingot industry feels that it has been discriminated against in every respect and this situation should be corrected by the Commerce Department.

Enclosed is an application from an earlier release in 1965, dated April 8, 1965, from the same Department of Commerce liquidating copper and copper material from the national stockpile. Had the pricing guidelines of this release been applied to the one in November, the situation would have been very different.

Copper from the national stockpile was sold by the BDSA to companies that do not produce anything from it at all; they are dealers and exporters of copper and copper base metals. Companies such as Commercial Metals Co., Dallas, Tex.; Joseph Beher Co., Rockford, Ill.; I. A. Berkson Co., Chicago and other companies that received copper ingot are smelters, but are also large trading companies, such as Barth, Inc., Newark, N.J.; M. Kettelman, Inc., Division of Philipps Bros., Baltimore, Md.

Many other companies that were awarded copper from the stockpile sold their inventories of copper and copper scrap out at tremendous profits and then replaced their inventories with the low priced stockpile copper. The profits on this copper, if it were conservatively figured would be 30 to 35 cents per pound average.

The total copper disposed of by the GSA amounted to 200,000 tons or 400 million pounds to the different industries. The windfall in dollars from the GSA to these industries would be approximately \$120 million. My company received copper from the stockpile and if we were to sell this material today we would show a 35 cents per pound profit.

In closing this letter I would like to point out again the serious lack of understanding by the BDSA as to what the situation in the copper industry is regarding price, demand, and the export situation.

It is also very hard to understand by what formula the BDSA justified the tonnages it released from the national stockpile to the different industries. The fact that 7,175 tons of copper were released to the ingotmakers who actually do not require this type of material is also hard to understand, but the discriminatory tonnages released to two producers of ingot, in our opinion, is completely unjustified in every aspect of the situation.

Yours very truly,

FRED M. ROTHSCHILD, *President.*

Mr. ARENDS. I read this in the record merely because of the anticipated release of additional copper as time goes along, and to raise some discussions in your minds and ours as to what you think might be constructive as we approach these problems.

Mr. PHILBIN. Yesterday the Chair put out a press release announcing we would take up H.R. 13774—Vanadium, on Thursday. This, of course, means we will not hold hearings on the other six bills which we have before us, but which were not definitely scheduled for hearings this week. These are as follows:

H.R. 13768—Celestite.

H.R. 13769—Cordage fiber (sisal).

H.R. 13770—Crocidolite asbestos (harsh).

H.R. 13773—Opium.

H.R. 13771—Diamond tools.

H.R. 13772—Metallurgical grade manganese ore.

The Chair also wishes to read into the record a letter received by Hon. L. Mendel Rivers, chairman of this committee, distinguished

chairman of this committee, as follows, from the General Services Administration, dated March 18, 1966:

(The letter above referred to was read by Mr. Philbin as follows:)

GENERAL SERVICES ADMINISTRATION,
OFFICE OF THE ADMINISTRATOR.
Washington, D.C., March 18, 1966.

HON. L. MENDEL RIVERS,
Chairman, Committee on Armed Services,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: Legislative proposal submitted by our letter dated January 19 would authorize the disposal of approximately 1,034,300 pounds of molybdenum now held in the national stockpile established pursuant to the Strategic and Critical Materials Stock Piling Act (50 U.S.C. 98-98h). The quantity of molybdenum covered by our proposal was the quantity in the stockpile which had been determined excess to stockpile needs by the Director, Office of Emergency Planning. The proposal was introduced in the House as H.R. 13369 and is now pending before your committee with hearings scheduled to begin on this and other disposal authorizations Monday, March 21.

We are now in receipt of a letter dated March 18 from the Acting Director, Office of Emergency Planning, advising that approximately 14 million pounds of molybdenum are excess to stockpile needs and that legislative authorization should be sought for disposal of that quantity.

Accordingly, during the hearings on H.R. 13369, we intend to support its amendment to authorize disposal of approximately 14 million pounds of excess stockpile molybdenum and to modify our plan of disposal to reflect the increased quantity. Although time has not permitted formal consultation with affected industries, a telephone sampling taken today with a representative number of producers and consumers indicates that the industry will fully support disposal of the total excess quantity. Your committee is assured that implementation of the plans for the disposal of the additional quantities of excess molybdenum will be worked out in close consultation with representatives of the industry with whom a meeting has been scheduled for March 29, 1966. Increasing industry demands for molybdenum will not only enable us to carry out the disposal without adverse affect but in a manner which will relieve, on a timely basis, a supply shortage situation rapidly becoming critical.

Sincerely yours,

LAWSON B. KNOTT, Jr., Administrator.

Mr. PHILBIN. Now the committee will go into executive session.

Thank you, gentlemen, for your testimony and your appearance.

(Whereupon, at 11:40 a.m., the subcommittee proceeded to executive session.)

[No. 51]

**SUBCOMMITTEE NO. 3 CONSIDERATION OF H.R. 12617, TO AMEND
THE ACT PROVIDING FOR THE ECONOMIC AND SOCIAL DEVELOPMENT
IN THE RYUKYU ISLANDS**

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE NO. 3 OF THE
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Wednesday, March 23, 1966.

The subcommittee met at 10:15 a.m., in room 2212, Rayburn House Office Building, Washington, D.C., Hon. Melvin Price (chairman of the subcommittee) presiding.

Mr. PRICE. The committee will come to order.

We have with us this morning Mr. Thaddeus Holt, Deputy Under Secretary of the Army for International Affairs, and Lt. Gen. Albert Watson, High Commissioner of the Ryukyu Islands.

I have had the opportunity to read both of their statements and that of General Watson is particularly detailed and will be useful in refreshing our minds with respect to a similar bill which we handled in 1962 and which passed the House, but failed to pass the Senate.

If there is no objection, I will now ask Mr. Holt to give his statement and General Watson will give his statement when Mr. Holt is finished.

(The bill, H.R. 12617, is as follows:)

[H.R. 12617, 89th Cong., 2d sess.]

A BILL To amend the Act providing for the economic and social development in the Ryukyu Islands

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 4 of the Act of July 12, 1960, Public Law 86-629, as amended (76 Stat. 742), is amended by striking out the figure "\$12,000,000" and inserting the figure "\$25,000,000" in place thereof.

**BIOGRAPHICAL SKETCH OF THADDEUS G. HOLT, JR., DEPUTY UNDER SECRETARY OF
THE ARMY (INTERNATIONAL AFFAIRS)**

Thaddeus Goode Holt, Jr., was appointed Deputy Under Secretary of the Army (International Affairs) effective December 10, 1965.

Previously Mr. Holt had been serving as Special Assistant to the Secretary of the Army and the Under Secretary since joining the Department of the Army on September 13, 1965. Before this Government service, he was a lawyer with the firm of Covington & Burling in Washington, D.C., specializing in litigation and administrative law matters.

Mr. Holt is responsible for advising and assisting the Secretary and Under Secretary on international security matters and foreign relations affecting the mission of the Army. Included in his areas of concern are the U.S. administration of the Ryukyu Islands, the Canal Zone Government and Panama Canal Company, positions for treaty negotiations concerning the Panama Canal and u

(5629)

prospective sea level canal, civil affairs, certain security and foreign liaison matters, military support of civil defense, and various special projects.

Mr. Holt was born in Birmingham, Ala., on November 26, 1929, son of Mr. and Mrs. Thad Holt, of Birmingham. He graduated from the University of the South in 1951 with a B.S. in mathematics, and from Yale University in 1952 with an M.A., also in mathematics. From 1952 to 1954 he was a Rhodes scholar in residence at Oxford University, where his college was Christ Church; he received a B.A. degree in jurisprudence from Oxford in 1954, with an M.A. in 1959. In 1956, he graduated from the Harvard Law School with an LL.B. degree.

A member of the Alabama and District of Columbia bars, Mr. Holt practiced law with the firm of Cabaniss & Johnston in Birmingham from 1956 to 1958, and with the firm of Covington & Burling in Washington from 1958 to 1965.

Mrs. Holt is the former Waring Inge of Mobile, Ala. They have two children: Sarah Oliver Holt and Francis Harrison Inge Holt. They reside at 4964 Allan Road, Washington, D.C.

STATEMENT OF HON. THADDEUS G. HOLT, JR., DEPUTY UNDER SECRETARY OF THE ARMY

Mr. HOLT. Mr. Chairman, gentlemen, I am Thaddeus Holt. I have been Deputy Under Secretary of the Army for International Affairs since December 10 last. I am representing the Department of Defense, and more specifically the Secretary of the Army, who, as you know, is responsible for supervising the civil administration of the Ryukyu Islands. I am glad to join with Lt. Gen. Albert Watson II, the High Commissioner of the Ryukyu Islands, in appearing before you in support of the bill before you, H.R. 12617, which would amend Public Law 86-629, familiar to us as the Price Act, to increase to \$25 million annually the standing aid authorization for the Ryukyus.

Mr. Chairman, I know that you and the members of this committee are familiar with the key role of the island of Okinawa, the principal island of the Ryukyus chain, in helping meet U.S. commitments in the western Pacific area. The strategic importance of the Ryukyus, and particularly Okinawa, is so well known that I do not need to discuss it at great length. However, a brief review may be helpful to your consideration of the proposed amendment.

The United States has developed a tremendous military base, comprising installations of all the military services, on Okinawa. These installations are important to us, principally because of their geographic location and the freedom of action which we enjoy in the Ryukyus.

The islands are located in the arc of free nations which runs from Japan and Korea in the north through Taiwan to southeast Asia. Under the terms of article III of the peace treaty with Japan the United States exercises full powers of administration, legislation, and jurisdiction over these islands, their territorial waters and their inhabitants. As a result we have freedom of movement of troops, weapons, equipment, and supplies into and out of the islands, without hindrance and without the delay which might otherwise occur in meeting procedural requirements of a foreign government.

The Ryukyus serve a threefold purpose in our deployments to meet our security commitments in the Western Pacific. They provide a centrally located logistical base; they provide a close-in staging area and operational base for U.S. forces with missions in the Western Pacific; and they are an important center of military communications and transportation. Moreover, the Ryukyus serve other important

purposes, such as providing sites for major Voice of America operations. The value of this base has been demonstrated repeatedly, from the time of the Korean war to the present day. Indeed, today this base is playing an increasingly important role in the support of operations in Vietnam.

Although we have the legal right to continue to use these islands freely for the important purposes which I have outlined, it is fundamental that with authority goes responsibility. Further, the effectiveness of any base obviously depends on a favorable attitude in the community in which it is located. So far, most of the people of the islands have given reasonable acquiescence to our presence, and our base on Okinawa has functioned generally in an atmosphere of cooperation and friendship.

There must also be cooperation among the United States, the Government of the Ryukyu Islands, and the Government of Japan. As to the Japanese relationship, you know that it is United States policy to retain this base only so long as conditions of threat and tension exist in the Far East. The United States Government has publicly declared that "residual sovereignty" over these islands rests with Japan. The Ryukyans are Japanese and would prefer to return to Japanese administrative control, despite their generally friendly attitude toward the United States.

In order to carry out the purposes of the Price Act that "every effort shall be made to improve the welfare and well-being of the inhabitants of the Ryukyu Islands and to promote their economic and cultural advancement, during such time as the United States continues to retain authority over the Ryukyu Islands," our efforts must be planned carefully and must be coordinated not only with those of the Ryukyans, helping them to help themselves, but also with those of the Government of Japan. To insure that effective use be made of the various sources of funds which are available, General Watson instituted a long-range planning and programing system jointly with the Government of the Ryukyu Islands shortly after his arrival on August 1, 1964. The goals of the plan are those which had been set forth by President Kennedy in 1962—to raise "the levels of public health, educational, and welfare services so that over a period of years they reach those obtaining in comparable areas in Japan." You may remember that following the President's 1962 announcement, the Congress raised the Price Act ceiling from \$6 million to its present level of \$12 million. Actual appropriations have reached this level in each of the last 2 fiscal years. In the development of the join plan it became clear that it would be necessary to request amendment of the Price Act to increase the authorization if these goals were to be reached.

An increased contribution from the Government of Japan for the economic development of the Ryukyus is part of the funding for this plan. On the occasion of Prime Minister Ikeda's visit to President Kennedy in June 1961, the President welcomed Japanese cooperation in efforts to enhance the welfare and well-being of the inhabitants of the Ryukyus, and arrangements for that purpose were worked out with the Government of Japan. A Japan-United States Consultative Committee on Okinawa was established as a means of coordinating the economic aid provided by the Governments of Japan

and the United States, and within this framework Japan took steps to increase its aid on projects agreed to by the United States.

During Prime Minister Sato's visit to the Ryukyus in August 1965 he announced the Japanese Government's desire to increase further its aid to the Ryukyus. This announcement was followed by an agreement within the Consultative Committee that the Japanese aid for Japanese fiscal year 1966, which begins on April 1, 1966, would amount to \$16.1 million, an increase of \$8.2 million over the \$7.9 million made available by the Government of Japan in the previous year. Our own budget proposes to increase U.S. aid from \$12 to \$17.3 million in fiscal year 1967. In considering the amounts of aid required in support of the long-range plan over succeeding years, gradual increases have been projected in both the Japanese and United States contributions. The amounts required on the U.S. side may reach approximately \$24.5 million by fiscal year 1971.

In summary, passage of the proposed legislation is needed to support United States interests and to enable the United States to discharge its responsibilities to the Ryukyuan people. Accordingly, on behalf of the Department of Defense, I urge your approval of H.R. 12617, and I can assure you that the Department of State similarly endorses this action.

This concludes my prepared statement. If you have no questions I suggest now that you hear from the High Commissioner, General Watson, who is prepared to testify concerning the details of the need for, and proposed uses of, the increased authorization and whom I am privileged to introduce at this time.

Mr. PRICE. Thank you, Mr. Secretary.

I think it might be wise to defer questions until we hear from General Watson, but in the meantime, could you provide for the record a comparison of the standard of living in the Ryukyus with that in Japan and include statistics that indicate the gap in the public health, education, and social welfare areas?

Mr. HOLT. Yes, Mr. Chairman.

Mr. PIKE. Mr. Chairman.

Mr. PRICE. Mr. Pike.

Mr. PIKE. In that regard, could we also have the comparison to show any change which has taken place in the relative standards of living over the last decade, say.

I would like to know not only how it compares today, but how it compared 10 years ago in relation to how it compares today?

Mr. PRICE. Also provide a comparison of the highlights of the proposed USA programs for fiscal 1967 with the approved Japanese program. Will you do that?

Mr. HOLT. We can do that readily, Mr. Chairman. We have information available for both fiscal years 1966 and 1967.

Mr. PRICE. And then summarizing the funding policies on which the fiscal 1967 United States and Japanese aid programs are based.

Will you proceed, General.

(The information is set out below :)

STANDARD OF LIVING: RYUKYUS VERSUS JAPAN

Past history: Before World War II, Okinawa was the poorest prefecture in Japan. Per capita income of Okinawa averaged about \$25 per year during the 1934-36 years; whereas in mainland Japan, annual per capita income averaged

about \$60 during the same period. However, despite the poor economic state of prewar Okinawa, the Government of Japan (GOJ) central government took measures to provide the Okinawans with schools, hospitals, and welfare facilities which were adequate for that time and comparable to those in other prefectures in Japan.

Current plans: Currently Okinawa still ranks with the poorer prefectures of Japan (1962) as indicated in table A, below, with five sections.

Sections I, II, and III compares the per capita national income, disposable income, and consumption expenditures in the Ryukyus with the average in all Japan, and with 12 prefectures that are physically closest to Okinawa. Fiscal year 1962 was the latest year available when a USCAR and a GRI representative personally visited these prefectures last fall to discuss conditions and obtain actual information.

As you can see, the Ryukyus rank ahead of Kagoshima and behind the other 11 prefectures.

Section IV of the table compares the Ryukyus with the Japanese national average for which we do have statistics through fiscal year 1965.

Section V compares fiscal year 1965 price levels against the Tokyo consumer price index which is 100. We have the figures for the 12 prefectures in this case. In fiscal year 1965, prices in the Ryukyus were slightly higher than in Japan. However, the price index in Japan has made some rapid increases in fiscal year 1966, which we estimate will show that Ryukyuan prices are now equal to or less than Japan.

In Japan and the Ryukyus, another important measure is the so-called fiscal level of the budgets of the individual prefectures. The Japanese Government, in a recent consultative committee meeting in Tokyo, provided us with a fiscal year 1963 comparison with seven selected (by them) prefectures. The average prefecture expenditure totaled \$86 per person which compares with \$59 per person in the Ryukyus including Central Government functions that would be borne by Japan if Okinawa were a prefecture. Excluding those costs, the average in the Ryukyus is \$45 per person, or 52.3 percent of the average in the seven prefectures. Concerning the three program areas of public health, education, and welfare, with which the Governments of the United States, Japan, and the Ryukyu Islands are concerned about, the serious gaps between the Ryukyus and Japan, table B, below, has certain key indicators showing these gaps.

Future plans: As stated in the opening statement, one of the primary goals of the long-range plan is to raise the levels of public health, educational, and welfare services to the extent possible by fiscal year 1971 to levels obtained in comparable areas of Japan.

SUMMARY OF FUNDING POLICIES FOR FISCAL YEAR 1967

As stated in my opening statement, our studies revealed that three programs seriously lag behind Japan. They are public health, education, and welfare. The communique issued in January 1965 following the talks between President Johnson and Prime Minister Sato of Japan stated that "they confirmed that the United States and Japan should continue substantial economic assistance to the Ryukyu Islands in order to advance further the welfare and well-being of the inhabitants of these islands." Our studies further indicated that Japan would be paying for a substantial portion of these costs if Okinawa were once again her prefecture; that Japan would be providing many other central government services, thus relieving the Ryukyus of a substantial financial burden.

We decided that it would be cumbersome for the United States and Japan to try in a partnership effort to assist the Ryukyus financially in defraying all the many costs of central government functions. Therefore, we proposed, and the Japanese Government accepted, a proposition that we channel substantial assistance into the three social programs, public health, welfare, and particularly education. By doing this, the Government of the Ryukyu Islands would not only have adequate funds for these programs, but would also have certain of its own revenues freed for use in adequately meeting costs of the other central government functions. Therefore, these three programs were our first priority for funding.

For the U.S. budget, we also placed a high priority on continuing our reimbursement to the local government for public safety, public health, and sanitation services rendered in support of U.S. forces.

The next funding priority for the United States and Japan funding was assigned to continuation of the key programs of technical education and training and technical cooperation.

The final priority went to continuation by the United States and Japan of vital economic and public works assistance. These were developed on a selected project basis to continue assistance to certain key projects that support continued rapid economic development.

General WATSON. I have a statement which I am prepared to read. However, should the committee desire, I will submit it for the record and I am prepared to brief orally, if you desire.

Mr. PRICE. Well, I think since the 1962 hearing has been such a gap, it may be well for you to go through the statement at least and give us the highlights of it so that the full committee will be familiar with the problem.

General WATSON. Very well, sir. Then I will not read the entire statement, but give the highlights.

Mr. PRICE. Highlights, significant enough that the committee would understand just exactly what is the problem that we are dealing with this morning.

General WATSON. Very well, sir. I will do that.
(General Watson's complete statement follows:)

BIOGRAPHICAL SKETCH OF LT. GEN. ALBERT WATSON II

Albert Watson II was born in Mount Vernon, Ill., January 5, 1909. He graduated from the U.S. Military Academy in 1930 and was commissioned a second lieutenant in the field artillery.

After 4 years of duty as a battery officer at Fort Myer, Va., he attended the regular course at the Field Artillery School, Fort Sill, Okla., graduating in 1937, and the advanced horsemanship course, graduating in 1938. He remained at the Field Artillery School as an instructor and detachment commander until he was reassigned to Fort Riley, Kans., in 1941 to command a firing battery of the 3d Field Artillery Battalion. After a year as battery commander he was placed in command of the battalion. During the period he commanded the battalion he attended the Field Artillery School field officers course. In 1943 he returned to Fort Sill, Okla., and served for a year as an instructor in the field officers course.

In June 1944, he graduated from the Command and General Staff College and was assigned as assistant artillery officer of the 10th Army. He went overseas in August 1944 and served with the XXIV Corps and 6th Army in Hawaii, Hollandia, and Leyte. Returning to the 10th Army, he remained through the Okinawa operation, reporting to General Headquarters, Pacific, for duty in the G-3 section in October 1945.

After serving for 2 years with G-3, General Headquarters in Tokyo, he was transferred to the United States for amphibious training duty with the Navy in Coronado, Calif. In May 1950, he was assigned to the faculty of the Army War College, first at Fort Leavenworth, Kans., and later at Carlisle Barracks, Pa.

In the summer of 1953 he was sent to Korea where he commanded successively the X Corps Artillery and the 3d Infantry Division Artillery. In September 1954, he was appointed Assistant Chief of Staff, G-3 for the 1st Army, Governors Island, N.Y. In July 1955, he was assigned to the Office of the Deputy Chief of Staff, Personnel, Department of the Army, Washington, D.C. His assignment in that office as Director of Programs terminated in July 1958. General Watson assumed command of the 24th Infantry Division Artillery, Munich, Germany, on September 16, 1958. In April 1960, he assumed command of the 3d Infantry Division and, in May 1961, became the U.S. Commandant and Commanding General, U.S. Army, Berlin. On February 2, 1963, he assumed command of 3d U.S. Army with headquarters at Fort McPherson, Ga. On August 1, 1964, General Watson became Commanding General, USARYIS/IX Corps, and High Commissioner of the Ryukyu Islands.

STATEMENT OF LT. GEN. ALBERT WATSON II, U.S. ARMY

General WATSON. Mr. Chairman, gentlemen, it is a pleasure to appear before you in support of the bill, H.R. 12617, which would increase the aid authorization to the Ryukyu Islands in the Price Act from \$12 to \$25 million. This proposed new ceiling is the same as that which in 1962 was approved by the House of Representatives. The 1962 proposal was based upon a report of an interdepartmental task force dispatched to the Ryukyus by President Kennedy in September 1961 to review the economic and social problems. The current request is based upon conditions some 4 years later.

The United States is responsible for promoting the welfare and well-being of the Ryukyans. We have made considerable progress in this respect over the past year. Economic growth, increases in national income, and the general standard of living have continued at a high level. The political situation, which was somewhat agitated by the attempted resignation of the GRI chief executive when I first arrived in Okinawa, has become relatively stable. It is an uneasy stability, and must be recognized as such, since for 20 years our tenure in the islands has been considered to be indeterminable, with the ultimate goal of returning the islands and the people to their status as a prefecture of Japan.

The past year has seen an increase of threats and tensions in Asia. This is caused primarily by the situation in Vietnam. The Okinawa military base is vitally important in the defense of the United States, Japan, and our other allies in the western Pacific. This was demonstrated during the past year when we were able rapidly to redeploy troops and supplies from Okinawa to Vietnam. Our unilateral flexibility of decision and movement lies in the exclusive administrative rights held by the United States under article 3 of the Treaty of Peace with Japan. The continuation of this unilateral flexibility is essential.

[Deleted.]

General WATSON. For the record, I believe it would be well to include a few pertinent historic facts. Prior to World War II, the

Ryukyu Islands constituted one of 47 prefectures of Japan, the Okinawa prefecture. After the war, the United States alone occupied the islands as a territory separate and distinct from Japan. The occupation of Japan proper was nominally under authority of the allied powers.

In 1952, the Treaty of Peace with Japan provided for the administrative separation of the Ryukyu, and in article 3 stated that—

the United States will have the right to exercise all and any powers of administration, legislation, and jurisdiction over the territory and inhabitants of these islands.

Since then, the United States has remained in the islands as the sole administrative authority, and has built its vital military support base which, as stated by the President in 1962—

* * * helps us assure our allies in the great arc from Japan throughout south east Asia not only of our willingness but also our ability to come to their assistance in case of need.

In the peace treaty, Japan did not renounce all right, title, and claim to the Ryukyus, as she did to Korea and Formosa. Since 1951, the United States has recognized that Japan has "residual sovereignty" over the islands, a term first used by former Secretary of State Dulles in describing the relationship of the islands to Japan. As a result of the recommendations of the aforementioned interdepartmental task force, President Kennedy stated in pertinent part that:

The report of the task force examines in detail the problem of reconciling the military imperative for continued U.S. administration with the desires of the Ryukyuan people to assert their identity as Japanese, to obtain the economic and social welfare benefits available in Japan, and to have a greater voice in the management of their own affairs. The report has also considered in the same context the desire of the Japanese people to maintain close contact with their countrymen in the Ryukyus.

I recognize the Ryukyus to be a part of the Japanese homeland and look forward to the day when the security interests of the free world will permit their restoration to full Japanese sovereignty. In the meantime we face a situation which must be met in a spirit of forbearance and mutual understanding by all concerned. I have directed that a number of specific actions be taken to give expression to this spirit by the United States, to discharge more effectively our responsibilities toward the people of the Ryukyus, and to minimize the stresses that will accompany the anticipated eventual restoration of the Ryukyu Islands to Japanese administration. These actions consist of * * * and I quote the two pertinent ones * * *

"(1) Preparing for submission to the Congress plans for the support of new programs in the Ryukyus to raise the levels of compensation for Ryukyuan employees of the U.S. Forces and the Government of the Ryukyu Islands, and the levels of public health, educational, and welfare services so that over a period of years they reach those obtained in comparable areas in Japan * * *."

"(2) Entering into discussions with the Government of Japan with a view to working out precise arrangements to implement a cooperative relationship between the United States and Japan in providing assistance to promote the welfare and well-being of the inhabitants of the Ryukyu Islands and their economic development, as discussed between Prime Minister Ikeda and myself during his visit to Washington last year * * *."

It was at this point that the President in 1962 requested the Congress to raise the Price Act authorization. The Congress has appropriated the full \$12 million approved in 1962 for the past 2 years, fiscal year 1965 and fiscal year 1966.

Continuing with the historical background, on the 12th and 13th of January 1965, President Johnson and Prime Minister Sato met in Washington to exchange views. The communique issued after the meetings stated in part:

The President and the Prime Minister recognized the importance of U.S. military installations on the Ryukyu and Bonin Islands for the security of the Far East. The Prime Minister expressed the desire that, as soon as feasible, the administrative control over these islands will be restored to Japan and also a deep interest in the expansion of the autonomy of the inhabitants of the Ryukyus and in further promoting their welfare. Appreciating the desire of the Government and people of Japan for the restoration of administration to Japan, the President stated that he looks forward to the day when the security interest of the free world in the Far East will permit the realization of that desire. They confirmed that the United States and Japan should continue substantial economic assistance to the Ryukyu Islands in order to advance further the welfare and well-being of the inhabitants of these islands. They expressed their satisfaction with the smooth operation of the cooperative arrangements between the United States and Japan concerning assistance to the Ryukyu Islands. They agreed in principle to broaden the functions of the existing Japan-United States Consultative Committee so as to enable the Committee to conduct consultations not only on economic assistance to the Ryukyu Islands but also on other matters on which the two countries can cooperate in continuing to promote the well-being of the inhabitants of the islands.

Over the past 18 months, additional authority and powers have been granted to the local government. With this growth in autonomy the local government has become more effective and responsible. A signal step forward on the road to increased autonomy occurred on the 20th of December 1965, when the President signed Executive Order 11263. Now the Ryukyu chief executive shall be elected by a majority of the Ryukyuan legislative body. This replaced nomination by the legislature and appointment by the High Commissioner.

Another important recent accomplishment has been the joint development by the Government of the Ryukyu Islands and the United States Civil Administration of a formal long-range planning system and a long-range plan, which were referred to earlier by Secretary Holt. This was done to insure that long-range goals and objectives were identified and relative priorities were established between programs to provide the optimum application of available resources. The first phase of the plan was completed on March 18, 1965. Since then the Ryukyuan Government and the United States Civil Administration have continued to identify those programs elements that needed acceleration to achieve the United States goals for the Ryukyus and meet the reasonable desires of the inhabitants. The goals of the long-range plan are derived from the U.S. policy set forth in the Price Act and in Executive Order 10713, and from the goals stated in the White House statement of March 19, 1962—which is the President's statement I referred to earlier. Those goals are to insure that—

1. The public sector contributes all it can to optimum economic development and promotes cultural advancement; and

2. The levels of public health, educational, and welfare services advance toward levels obtained in comparable areas of Japan and reach them, to the extent possible, by the end of fiscal year 1971.

Off the record.

(Discussion off the record.)

General WATSON. Analyses of the education, social welfare, and public health programs were completed in the summer of 1965 in time to revise the long-range plan for use in the simultaneous preparation of the proposed United States and Japanese Governments' aid programs for fiscal year 1967 and (JFY 1966).

Gentlemen, annually we have the difficult but most interesting problem of developing programs and budgets that will be acceptable to three separate governments. We attempt to insure that the total annual program for the Ryukyus is consistent with the goals of the long-range plan. The Ryukyus lag behind comparable areas of Japan in such important programs as public health, education, and social welfare.

[Deleted.]

In view of the foregoing, we proposed for fiscal year 1967 that the United States and Japan provide more needed financial assistance to the local Government of the Ryukyu Islands, particularly for education, public health, and welfare services. Since then, two significant actions have occurred.

The first action was on September 20, 1965, at a meeting of the United States-Japan Consultative Committee in Tokyo when the Japanese Government was invited to assist in raising the levels of public health, education, and welfare to those prevailing in comparable areas of Japan by the end of fiscal year 1971, and to continue to contribute to the economic development of the islands. [Deleted.] The Japanese Government agreed to provide \$16.1 million for JFY 1966, which is similar to our fiscal year 1967.

The second is the introduction of the bill before you to raise the authorization for U.S. aid at the request of the executive branch in order that the U.S. contribution can be increased to be commensurate with the situation today.

The budget proposal for fiscal year 1967 of \$17.3 million is based on requirements [deleted].

With the increase in its own revenues and those from the United States and Japanese Governments anticipated in fiscal year 1967, the budget of the Government of the Ryukyu Islands is expected to be about \$87 million.

The funds that are released by the increased United States and Japanese funding will be utilized by the Government of the Ryukyu Islands for a number of important activities. These include, among others, meeting the increased costs for operation and maintenance of the expanding school system, and for the government's increased contributions to the expanded social insurance program; financing additional much-needed economic and public works projects; and increasing its financial assistance to the municipal governments. Also, the released funds will assist the Government of the Ryukyu Islands in meeting the costs of Central Government functions which it must finance while separated from Japan, without neglecting other important activities.

At this point, I would like to insert in the record and discuss chart A, which shows gross national product and national income. This information is taken from the long-range plan, and it is in accord with the request that the chairman made earlier this morning.

Mr. PRICE. Without objection, it will be printed in the record along with any other charts that you desire to submit.

(The charts submitted with General Watson's statement are as follows:)

CHART A
GROSS NATIONAL PRODUCT
IN CONSTANT DOLLARS AFTER FY'65.

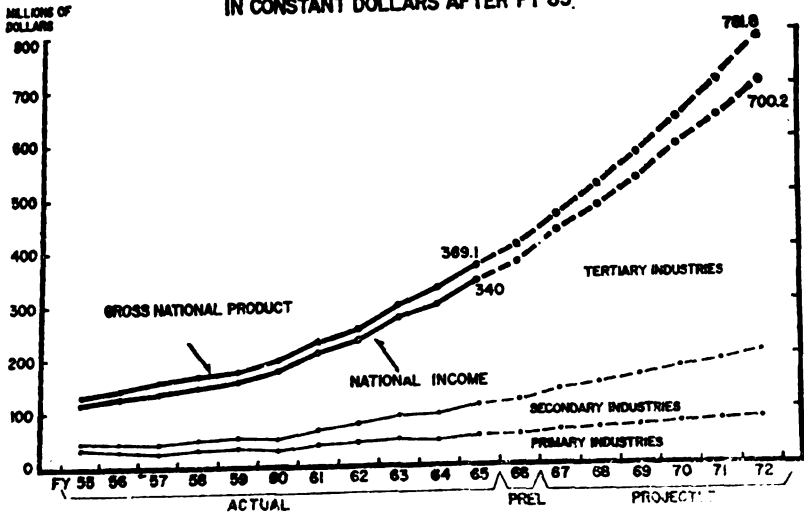

CHART B
COMMODITY EXPORTS AND IMPORTS

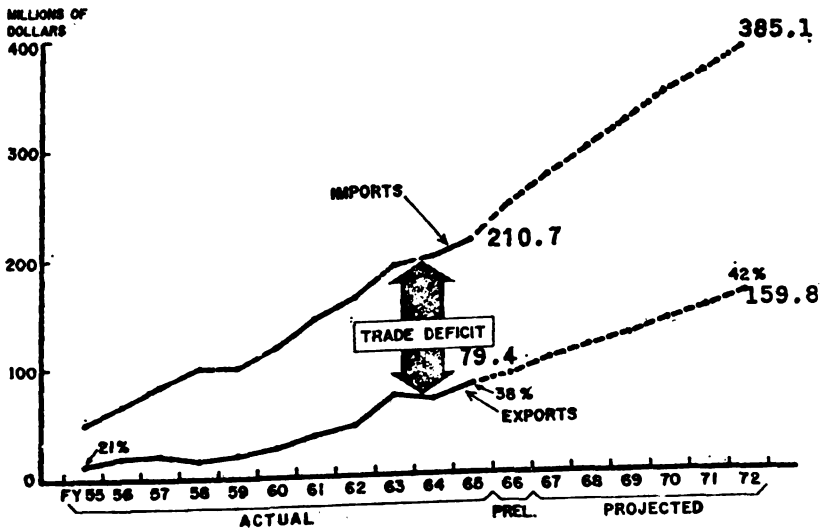

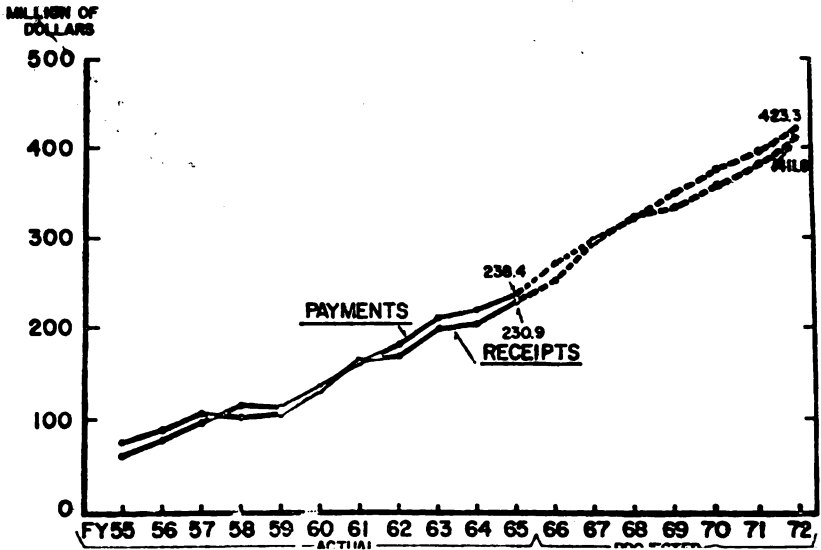

CHART C
FOREIGN RECEIPTS AND PAYMENTS
(EXCLUDING CAPITAL TRANSACTIONS)

General WATSON. The gross national product in fiscal year 1965 was \$369.1 million and is projected to reach \$781.8 million in fiscal year 1972 in terms of constant fiscal year 1965 dollars. The annual average rate of growth would be 11.3 percent compared to 13.1 percent during the period fiscal year 1960 through fiscal year 1965. This growth rate is one of the best in the world, but it is not indicative of the gap between the Ryukyus and Japan in public health, education, and welfare.

National income is anticipated to rise from \$340 million in fiscal year 1965 to \$700.2 million in fiscal year 1972, an average annual rate of growth of 10.9 percent.

Per capita income is expected to increase from \$364 in fiscal year 1965 to \$705 in fiscal year 1972, also in constant fiscal year 1965 dollars. This should put the Ryukyus further ahead of most of the lower prefectures of Japan since today they are equal to or slightly higher than a number of prefectures.

We have difficulty in making valid and timely economic comparisons with Japanese prefectures for three primary reasons. First, prefectural statistics become available about 3 years after those of Japan's Central Government. Second, the Ryukyus' statistical system differs from the prefectural system. The Ryukyuan system is designed as a national government and has no interprefectural duplications. Third, there are no precisely comparable prefectures to the Ryukyus as will be shown in these next two charts.

Chart B shows commodity imports and exports, actual through fiscal year 1965, and the long-range plan projections through fiscal year 1972. The large imbalance in trade results from the lack of raw materials in the Ryukyus. The main exports are sugar and pine

apple to Japan. Japan subsidizes the high cost of sugar production by paying much higher prices than she pays to other countries which are competitive on the world market. In the long-range plan, government measures, such as subsidies, are programed to assist private industry in increasing the ratio of exports to imports from 38 percent in fiscal year 1965 to 42 percent in fiscal year 1972. Although chart B indicates a heavy deficit in the balance of payments, this is not actually the case as shown on chart C.

Receipts and payments are about equal because the spending in the economy by the military base and U.S. personnel makes up the large imbalance in trade. There is no prefecture in Japan where the economy is propped for the most part by military spending. Our "comparable area" comparisons are derived from the lowest income prefectures because Okinawa was the lowest prior to World War II.

The rapidly expanding aid program of the Japanese Government has changed the character and complexion of our U.S. budget request. We seek to develop the most effective application of United States and Japanese aid so as to bolster the three social programs—public health, education, and social welfare—in which the Ryukyus are substantially behind Japan.

[Deleted.]

General WATSON. At the same time we seek to insure that the activities and individual items funded are of highest priority to the local government. Our principal programming job in the Ryukyu Islands is to insure that the government developments an annual program which is best suited to achieving the objectives of the long-range plan. With many unfilled requirements remaining in the developing society of the islands, we realize that the local government in its eagerness must not program beyond its execution capabilities and the ability of the economy to absorb the total government program. For fiscal year 1967, this limit is estimated to be about \$87 million.

Our current long-range plan is based upon our judgment that the Ryukyuan economy vitally needs and can absorb, and the Government of the Ryukyu Islands can administer, increases in budget planning levels averaging 13.3 percent for each year of the planning period, fiscal year 1968 through fiscal year 1972. If this proves true, the Government of the Ryukyu Islands budget will increase to \$163 million by fiscal year 1972. This will enable a substantial reduction of the gaps between the Ryukyus and Japan in the level of public health, education, and welfare.

[Deleted.]

General WATSON. Mr. Chairman, in order that the United States can assist the people of the Ryukyus in more rapidly achieving a standard of living similar to that in comparable areas of Japan, favorable action by the Armed Services Committee is respectfully requested. This concludes my opening statement.

Mr. PRICE. Thank you very much, General.

Now, basically, the principal policies of the Government of the Ryukyu Islands and the United States group, the long-range plan, is what?

General WATSON. In the briefest of terms, to provide a social and economic situation [deleted] which is similar to those obtaining in comparable areas of Japan. [Deleted.]

Mr. PRICE. Who sits on this United States-Japan Consultative Committee?

General WATSON. The U.S. representative is our Ambassador to Japan, the Honorable Edwin Reischauer, and the Foreign—

Mr. BURNS. Foreign Minister Shiina of the Japanese Government.

General WATSON. And the Director General of the Prime Minister's Office, Mr. Yasui.

Mr. PRICE. Do you get together on an annual basis or more frequently?

General WATSON. It is on an oncall basis which is more frequently than annual.

[Deleted.]

Mr. PRICE. [Deleted.] I was about to ask what system you now use in acquiring [deleted] land.

General WATSON. We have a system, of course, where the military service desiring the use of the land must completely justify the land and provide information which includes such things as whether or not the man may continue—the owner may continue—to farm the land if it is farmland or he may continue to use it even after we have taken control of it, whether any standing improvements must have to be removed, whether some land in another area would not do better. In other words, the military service must completely justify the requirement for this land.

Mr. STAFFORD. Mr. Chairman, could the general comment on to whom the justification has to be made? Who decides?

General WATSON. I, as the High Commissioner.

The next move is to go to the Government of the Ryukyu Islands and inform them of the problem. They look at it to determine what the local conditions are with regard to the impact upon the owners—the impact upon them of the requirement for this land. In other words, if they are forced to move off entirely, is it their sole source of revenue; is it their livelihood entirely? If they have a house there this is a serious matter and the Government of the Ryukyu Islands then attempts to see whether it has lands under its control to which these individuals may be displaced in order to minimize the adverse effect of the taking of the land.

[Deleted.]

Mr. PRICE. Do you recall what the land acquisition requirements were said to be back about 1957, I think it was, when we had the Bikini land acquisition problem there, that there was so much opposition and we made some adjustments then?

General WATSON. I would like to provide it for the record.

(The following material was received for the record.)

Initially, and subsequent to the occupation policy of land seizure under the rules of land warfare, the U.S. agencies acquired a so-called "determinable estate" interest which gave the United States full use and possession of the land with a single payment to be made in full at current fee value, title remained with the Ryukyuan owners. By 1958, this method of land-taking had generated violent opposition because landowners were convinced that title to lands taken under the determinable estates procedure had passed to the United States so that their lands were completely lost to them by subterfuge. This conviction gave rise to unusually serious consequences because of unique traditional relationship of a Ryukyuan to his land holdings. The sensitivity of this land question is further highlighted by the fact that in this area, with perhaps the world's greatest population density, the United States had, by 1964 acquired about 25 percent of the entire Ryukyu Islands land area and 26 percent of the land area

of Okinawa. Furthermore, the Government of Japan was so concerned in the matter that it made it the subject of official diplomatic representations.

Recognizing the inequity in the situation, and its potential for generating increasing Ryukyuan and Japanese dissatisfaction and resentment, a conference was held in Washington to review the land policy. This conference, held in the Pentagon and attended by representatives of the Government of the Ryukyu Islands (GRI), and Defense, Army, and State, resulted in the abandonment of the determinable estate, single-payment concept, and the adoption of an indefinite leasehold procedure, the details of which were to be determined by a Joint Land Conference to be convened in Okinawa. In a series of five meetings, this conference hammered out the details of the new leasehold procedure—a procedure which was formalized in HICOM Ordinance No. 18, dated January 13, 1959. Briefly, the new concept provided for U.S. land tenure under two types of leaseholds: temporary (less than 5 years), and indefinite (for 5 years or longer); all such leaseholds being acquired by the GRI under a master lease arrangement with the United States.

In September 1959, at the time of revision of our land acquisition program, our land holdings were 66,817 acres; as of December 15, 1965, they were 75,664 acres.

[Deleted.]

Mr. PRICE. Have there been any areas there that in the last 10 years—well, put it since the problem of 1957, the last 7 or 8 years that you have been able to turn back to the local economy?

General WATSON. Yes, sir. We make a periodic report on this subject, and I would be glad to provide that for the record, if I might.

(Approximately 2,260 acres of land have been relinquished since 1957.)

I might say in terms of total acreage, it is relatively minor, but we constantly review and turn back what we don't need.

Mr. PRICE. Has there been any local demand for return of additional U.S. occupied areas to the local economy?

General WATSON. Yes, there are demands from time to time, Mr. Chairman.

Mr. PRICE. Has there been any serious trouble?

General WATSON. Well, there is one—in a sense there is one that has one this—and this is a case where our jet aircraft are making so much noise that the schoolchildren for a great part of their schoolday are unable really to study. They can't study during those times because those jets are so noisy.

Mr. PRICE. But the amount of land you have turned back you say as been inconsequential in recent years?

General WATSON. Yes, sir.

Mr. PRICE. Has it been completely cleared for them and returned so that if it is farmland they could go right to work on it?

General WATSON. It has either been done or they have been compensated for it, whichever was appropriate in accordance with the rules.

We are not inconsiderate of these people. We are not cavalier with them at all. If an oversight or a failure to understand their position does occur, we rectify it as soon as it is called to our attention.

Mr. PRICE. So that you have not had any real trouble in the last few years because of the land acquisition problem?

General WATSON. That statement is correct, sir.

[Deleted.]

Mr. PRICE. I think that is important.

General WATSON. Yes, sir.

Mr. PRICE. Because I remember the time we had a program under way to encourage many of these people to move to other islands. Do we still have such a program?

General WATSON. It isn't effective. We have immigration to other continents such as South America.

Mr. PRICE. But not with any encouragement from——

General WATSON. Not as a program as such. There is movement to Japan of some of these people.

Mr. PRICE. I was not thinking of Japan. I was thinking of some of the other Ryukyu Islands.

General WATSON. Of the islands. No. There is no formal program.

Mr. HOLT. Mr. Chairman, if I may, one figure that might be of interest to the committee is that approximately 25 percent of the total acreage of Okinawa is now used by U.S. agencies.

Mr. PRICE. How many percent?

Mr. HOLT. Twenty-five percent.

Now much of that land is not suitable for production. The estimate we have is that approximately 7 percent of the arable lands is presently used by U.S. agencies.

[Deleted.]

Mr. PRICE. How has the amount of the Government of Japan assistance compared with that of the United States for the past 5 years?

General WATSON. We have these figures right here, sir. May I provide them—should I read them?

Mr. PRICE. Yes.

General WATSON. Beginning with 1962 and moving down in successive years through fiscal 1966, I will read these in two columns.

United States, \$5.4 million; Japan, \$0.6 million; 1963, United States, approximately \$7 million; Japan approximately \$3 million; 1964, United States, \$7.9 million; Japan, \$5 million. And then in the next 2 years the United States has \$12 million each, as against \$5 million in 1965 for Japan and roughly \$8 million in 1966 for Japan.

So we have been variously a hundred percent more or a little bit greater, and 50 percent more than Japan in the last 2 years.

[Deleted.]

Mr. PRICE. Well, now, since the cooperation program has been working, have we made any proposals that the Japanese have not been able to come up with funds for?

General WATSON. Nothing major that I know of, sir. [Deleted.]

Incidentally, we put our heads together in my administration and realized that we were going to have to make some changes. We realized back in the fall of 1964 that we didn't have a proper long-range plan, so we prepared one with the GRI. The plan made it clear that we needed more money in certain activities, particularly these three that Mr. Holt and I have been emphasizing today, education, public health, and public welfare, social security.

And as far back, as early as the late fall of 1964 we knew we were behind in some of these programs and really were going to have to get out and move forward if we were going to make any reasonable progress in order to be comparable with those areas of Japan which are similar to Okinawa. So we went ahead then and realizing that this situation was as it was, we worked up a current revision of the long-range plan and then went to the Japanese Government and suggested some of these increases to them. [Deleted.]

Mr. PRICE. Where are the major gaps in the programs?

General WATSON. The gaps are in these three, really: In education—

Mr. PRICE. Specifically, for instance, in the public health area, what are you thinking about?

General WATSON. Public health we need—

Mr. PRICE. Education we can understand.

General WATSON. Yes, sir.

Mr. PRICE. It is the cost of the teaching corps—

General WATSON. Buildings, school buildings, equipment for the school, so on.

Mr. PRICE. But in the public health area, what concerns you?

General WATSON. Primarily we have a shortage of doctors, nurses, and interns. We have a need of more hospitals, hospital facilities. We need money for surveys, health surveys to go out in the communities—for example, we have learned that in one area the incidence of trachoma is way up in the eighties—85 percent. In other words, almost 9 out of 10 of the people in that particular community have an eye disease called trachoma, which is caused by filth.

Also there is filariasis, which is an elephantiasis type of disease. They have made great progress on malaria. Tuberculosis is one that needs considerable assistance.

The numbers of doctors, nurses, and dentists per thousand people are very sad indeed, and if you like, we will present them for the record, the Ryukyu Islands compared to Japan.

Mr. PRICE. Yes. Will you.

(For information requested see p. 5636.)

General WATSON. The latest figures we have, we have in Okinawa an average population, sir, per doctor, of 2,444. In all Ryukyus, this is.

Mr. PRICE. And what do you say the Japanese figure is?

General WATSON. 898—that is just a little bit more than one-third of the number of people per doctor in the Ryukyu Islands. Population per dentist is about a fourth of the number in Japan, as compared to the Ryukyus. Ryukyus, 9,087 people per dentist; in all Japan, 2,772. Nurses, a similar sad picture. In the Ryukyus, population, sir, per nurse, is 1,106; in all Japan, 439. And the hospital beds, of course, number per 100,000 population in the Ryukyus, 396; in all Japan, 826. And I could go on down, sir.

Mr. PRICE. Will you supply these figures for the record?

(For information requested see p. 5636.)

General WATSON. Yes, sir. It happens that our death rate per thousand population is better in the Ryukyus right now than it is in Japan. Of course, their traffic problem in some of the cities up there I think is bad enough to make up for part of that difference, anyway.

Mr. BURNS. Mr. Chairman, we have also supplied similar statistics for the other areas in which we lag.

Mr. PRICE. What is the main problem in the social welfare area?

General WATSON. This is a matter of social security benefits. We actually have not only shortages in the coverage, but amount of coverage.

Mr. PRICE. Can you compare that with what it is in the rest—

General WATSON. In the homeland. Yes, sir.

(For information requested see p. 5636.)

Mr. PRICE. What is the population of Okinawa and the size of it?

General WATSON. The population is about 933,000, sir; a million in round figures.

Mr. HICKS. How large is Okinawa?

General WATSON. Sixty-two miles long; at the widest point some 16, 18 miles; at the narrowest point, 2 miles. It runs northeast and southwest. It is quite hilly in the northern sector.

Unfortunately, much of the land that is arable is only in one sector, that is in the southern third, and there is where the heaviest density population in the world exists.

Mr. HICKS. You say 7 percent of the arable land is used by—

General WATSON. Used by U.S. agencies.

Mr. HICKS. And how far is it from the Japanese homeland?

General WATSON. About 2 hours flying time. We have distances. Around 450 miles.

Mr. BURNS. 970 miles to Tokyo. About a half of that or a little less to the southern island of Japan, Kyushu.

Mr. HICKS. Thank you.

General WATSON. About 400 miles from China, the mainland of China.

Mr. PRICE. General, how much in dollars and by percent is the Government of the Ryukyu Islands contributing to its own operations?

General WATSON. Running down, sir, I have it all the way back from 1951 on up to estimate for the next fiscal year.

Mr. PRICE. Would you supply the general information for the record and then let us have now what the present situation is.

General WATSON. Yes, sir.

(The following information was received for the record:)

Receipts of the Government of the Ryukyu Islands, fiscal years 1951-66

(Dollars in thousands)

Fiscal years	Revenue internally generated	Total revenues and grants	Percent internally generated
1951 (April 1950 to March 1951).....	\$2,436.8	\$10,347.2	23.6
1952 (April 1951 to June 1952).....	8,621.9	17,547.9	49.1
1953 (July 1952 to June 1953).....	8,940.6	12,327.2	72.5
1954.....	11,818.8	14,398.3	82.1
1955.....	13,052.4	16,409.9	79.5
1956.....	16,408.1	19,834.9	82.7
1957.....	17,608.8	19,240.3	91.5
1958.....	18,093.2	20,577.6	87.9
1959.....	19,503.6	21,364.9	91.3
1960.....	21,660.0	23,303.0	92.9
1961.....	23,966.0	26,883.0	89.5
1962.....	28,486.0	32,881.5	86.6
1963.....	33,490.2	40,388.7	82.9
1964.....	38,964.2	47,736.3	81.6
1965.....	42,841.7	52,853.2	81.1
1966.....	49,651.0	63,165.0	78.6

In 1966 the percentage internally generally, that is, by the Government of the Ryukyu Islands, is 78.6 percent.

Mr. PRICE. How is the tax collection system that we authorized in legislation here some years ago—1962 I think it was—how are they working out?

General WATSON. Mr. Chairman, I regret——

Mr. PRICE. I do not have a copy of the 1960 law here, but I remember we had some provisions in there that permitted them to use certain funds that they were using previously but without authorization.

Mr. KELLEHER. Yes. Here is a copy of the 1960 act.

General WATSON. I have that information here, sir, I believe.

In section II of the act itself, all fines, forfeitures, tax assessments, and other revenues received by the Government of the Ryukyu Islands shall be covered into the treasury of the Ryukyu Islands and that will be available for the expenditure of the Government of the Ryukyu Islands.

Mr. PRICE. Yes. I think they were permitted to do that previously under the treaty, but the 1960 act gave them a specific legal authorization.

General WATSON. Yes, sir; that is currently in effect.

Mr. PRICE. And then they gave them authority in the 1960 act to use—section III of that act:

Revenues derived by the United States Civilian Authority of the Ryukyu Islands from the following sources shall be deposited in separate funds which are hereby authorized to be established by the High Commissioner of the Ryukyu Islands and shall be available for obligation and expenditure in accordance with the annual budget programs approved by the President.

I am just trying to get some idea of the amount of those revenues and how they fit into the financing system in the islands.

General WATSON. Well, Mr. Chairman, if I might, I would like to take those particular provisions of the act and match them for the record.

Mr. PRICE. Yes. Will you do that.

General WATSON. I will be glad to do that, sir.

(The following information was received for the record:)

Amounts provided under price act, by action, fiscal years 1965-67

[In millions of dollars]

Source of funds	Fiscal year 1965	Fiscal year 1966	Fiscal year 1967
Sec. 2—Revenues of the Government of the Ryukyu Islands...	42.8	49.7	58.7
Sec. 3—Revenues derived by the U.S. Civil Administration...	12.2	13.1	12.6
Sec. 4—Annual appropriations (administration, Ryukyu Islands, Army).....	12.0	12.0	17.3

¹ Under increased authorization proposed in H.R. 12617.

Mr. PRICE. I don't know whether we have the answer yet on the percent that the Government of the Ryukyu Islands is contributing to its own operations, the amount and the percentage.

General WATSON. Yes, sir. It was 78.6 in 1966, and it is estimated this year to be 71.8. And incidentally, it is quite interesting to note that even though we propose to increase in this coming fiscal year, if the authorization is provided and funded, 5.3 over 12 million dollars, in other words, we plan to increase almost 50 percent, the percent of its total budget which the Government of the Ryukyu Islands will generate drops only from 78.6 to 71.8, which is 6.8 percent; so with this tremendous increase that we are putting in there, their partici-

pation only drops some 7 percent approximately. We estimate that they will have some \$87 million in their budget for this coming year.

Mr. PRICE. What is the estimate—\$87?

General WATSON. Eighty-seven, yes, sir.

Mr. PRICE. What is the estimated cost of the Ryukyuan military base? In other words, what would we lose in dollars and cents if we were compelled to leave Okinawa?

General WATSON. I can provide that figure to the best—as close as estimation may permit it. We have some exact figures of cost and so on. It has roughly been estimated at being anywhere between half a billion and a billion dollars. And we can provide that for the record, showing what sort of a breakdown we have on it.

As far as real property is concerned, it's about \$700 million; and equipment, about a quarter of a billion dollars; inventory, about \$470 million; so that the total is about \$1.5 billion.

These must be rough, Mr. Chairman, and there is no way really to come out with a good tight dollar-figure on this.

Mr. PRICE. The only way you could do it is make a compilation of all the expenditures we have made over there, and it would take some time to do it.

General WATSON. Yes, sir; it sure would.

Mr. PRICE. What are our major capabilities in Okinawa?

General WATSON. Military capabilities there are to provide a base for military operations for all of the armed services, and this includes not only the staging and housing and training of troops there, but the provision of logistic support to those troops. [Deleted.]

Mr. PRICE. Now, in previous hearings on this matter, there was a question raised about the Ryukyus having no adequate sewer system. Has that situation been corrected?

General WATSON. No, sir; but we are making progress toward this.

The first problem, of course, before any sewer system can be developed anywhere, is to insure adequate water supply. And in 1963 we had such a very severe drought out there—it lasted for 11 months—that we were really in most serious condition for usable water. We had to lay pipes along the ground and use salt water, ocean water, to take care of some of our sanitary problems. We just didn't have fresh water to spare for it. So development of water supply has actually preceded the development of the sewer system. But we are now making progress. We have actually set up in our budget for the current year and for next year, some improvement, quite a way along the line.

You may be familiar, Mr. Chairman, with the fact that in 1964 and 1965 we did provide modest financial assistance to begin the development of this islandwide sewer system for the southern and central crowded areas of Okinawa. We had planned for the independent sewer systems for various municipalities, but these however are designed for later connection with two sewage treatment plants, one for the largest city—which is Naha—in the lower part of the island, and one in the central part of it. Funds were requested for fiscal 1967 from the U.S. aid appropriation which is \$1.3 million, and from the U.S. Civil Administration general fund, \$2 million for further development of the systems.

The Government of the Ryukyu Islands is also expected to make its initial contribution of funds in fiscal 1967 for the sewer program.

Mr. PRICE. What is the present situation with respect to electric power and what are your plans to meet future requirements?

Mr. HOLT. I will speak to that, if I may, briefly, Mr. Chairman. And perhaps General Watson can fill in more specifically.

An engineering study anticipates a need for additional power on the order of about 240,000 kilowatts—or 240 megawatts—over the next several years, and estimates a cost of construction for that of something in the area of \$40 million.

The last expansion of the power system there was financed by a loan from the U.S. Treasury in 1959. We are quite hopeful that we will be able to finance this next needed expansion by some means short of a direct loan from the U.S. Treasury. We have been exploring every avenue. We have held discussions with various U.S. entrepreneurs who might have an interest in doing this work on different sorts of bases. We plan to examine—we are in the course right now of examining some of these approaches to see what would be the most effective method of doing it with the least burden on the Treasury.

Our great hope is to avoid having to ask for a loan from the Treasury for this financing again.

Mr. PRICE. What is the present additional requirement for power there?

Mr. HOLT. Over the next 6 years or so, the additional requirement is projected to be on the order of two hundred and—well, 240 megawatts over about a 10-year period, I suppose.

Current projections are for on the order of a total of 250 megawatts by 1969, which will be already in excess of the present firm capacity, and probably progressive increases after that as the utilization of electricity by the civil population increases.

And one reason these predictions can't be any too firm right at the moment is because of [deleted]. But certainly our need for construction is going to be of the order of 240 megawatts over the next several years.

Mr. PRICE. Additional requirement?

Mr. HOLT. That's right.

General WATSON. Minimum.

Mr. PRICE. And you say now you do not have any firm proposal from anybody to supply this need?

Mr. HOLT. No firm proposal because it hasn't been done that way in the sort of a bricks and mortar contract approach of laying out specifications and asking for bids. Doing the work calls for a combination of financing, construction, and design and building of the electrical equipment. We have had communications from a number of groups of such enterprises who have outlined tentative approaches. We plan to explore these in more detail with them.

Mr. PRICE. How do you explore them? Do you call these people in and meet with them and see how serious their proposal is and what they actually intend to do in the event that they are successful?

Mr. HOLT. Precisely. And in addition, our present thinking is to set up a board within the Department with appropriate legal and engineering and other skills represented to examine and compare the possible alternative approaches, secure any additional information from these potential builders that might be needed, and come up with a recommendation of the best approach with the best net advantage to the Government.

Mr. PRICE. Is the situation such that it could be met with a brownout over there?

Mr. HOLT. Indeed it is, and perhaps General Watson is a little closer to that than I am, but the projection is for a brownout condition under present circumstances, to begin perhaps by the latter part of 1968.

And again, as I say, this could be affected in some degree [deleted].

Mr. PRICE. That's all the questions the Chair has. Does any other member have any?

Mr. STAFFORD. Mr. Chairman, I have one or two.

Mr. PRICE. Governor Stafford.

Mr. STAFFORD. [Deleted.] Could you comment on what you consider to be reasonable acquiescence of the inhabitants of the Ryukyu Islands to our presence?

General WATSON. I'm glad to do that because I want them to know what I consider reasonable.

This point came up when I went back last year. The first press conference after I got back there they got on me, "What do you consider reasonable acquiescence." And I said you people are always kind to me, you are very friendly, yours is a land of courtesy. I feel I am among friends, and I have no fear for my family; this is our home and we feel there is no hostility, and therefore I think there is a reasonable acquiescence. You are friendly to me. I just ask them and of course they are courteous and they wouldn't say they aren't. They actually are very friendly to us.

We have a wonderful program of public relations there, so good that—higher headquarters has sent us congratulations on it. I am not boasting; this is a fact. We do have a very good program.

[Deleted.]

Mr. STAFFORD. Looking into the future, to your knowledge might there be any future plans or policy on the part of this government to switch from the type of High Commissioner government which you represent to a civilian type of government. Can you comment in this field?

General WATSON. Yes, sir; I can comment on it, but I think that probably the one who is from the Department which would be most knowledgeable on this question besides the Defense Department sits near me in the presence of Mr. Fearey. I would like to take my part of it first, though, if I could.

[Deleted.]

General WATSON. As far as policy of any other departments of government or even the Department of Defense at this point, I am not qualified to answer.

[Deleted.]

Mr. STAFFORD. Thank you very much, General. Would you care to comment, sir?

Mr. FEAREY. Yes. I know of no consideration being given in State to making the High Commissioner a civilian. We feel that the job there is so heavily military that the top person should be a military man with capacities in the civil field too.

Frankly, we think we've got that.

Mr. STAFFORD. Thank you.

Mr. HOLT. May I add one other point to that, sir, that may be relevant.

Mr. PRICE. Mr. Holt.

Mr. HOLT. The Civil Administrator, the No. 2 post in the U.S. civil administration under the High Commissioner, is a civilian and has been since 1962.

Mr. STAFFORD. Thank you, Mr. Chairman.

Mr. PRICE. Thank you.

Mr. ICHORD. Mr. Chairman.

Mr. PRICE. Mr. Ichord?

Mr. ICHORD. Mr. Chairman, I am sorry I was called out to testify on another bill, and I possibly might ask a question which has already been answered in the record.

Now under the terms of the article III of the peace treaty with Japan, we have control and jurisdiction over the islands for an indefinite period of time. Is that correct?

General WATSON. Yes, we do. And I would like to ask Mr. Fearey if he would respond a little bit further to this point.

Mr. FEAREY. Yes. The treaty provides that we may remain there with full powers pending the placing of the islands under a U.N. trusteeship. There is no thought of placing them under a U.N. trusteeship. It is recognized that we can stay there and we will stay there as long as conditions of threat and tension continue in that area.

Mr. ICHORD. Our Government has no intentions in the immediate future, then, of turning—

Mr. FEAREY. None whatsoever.

Mr. ICHORD. No plans whatsoever for that.

What is the population of the islands?

General WATSON. 933,000, sir, approximately.

Mr. ICHORD. Now, I would like to have in the record—and it may already be in, Mr. Chairman; I apologize if I am dealing in duplication here.

We are putting in \$12 million a year now in aid. You have been spending the entire Price authorization; haven't you?

General WATSON. Yes, we have.

Mr. ICHORD. What other moneys do we put into the economy?

General WATSON. I would like to provide this for the record. I might just briefly touch upon them.

Mr. ICHORD. We have about 53,000 people that we employ on our bases there; don't we?

General WATSON. This is true, Mr. Congressman. And of these 53,000 of course only about a half are actually directly employed by U.S. officialdom—in other words, appropriated or nonappropriated funds. That comes to I think about 24,000 of that total of 53,000.

We have done some work—

Mr. ICHORD. How much does that amount to?

General WATSON. About \$196.3 million is the figure we estimated—and we worked on this a long time—for fiscal year 1965. We can give you some other data which shows the sources and how much from each source comes to the economy.

Mr. ICHORD. I would like to have that for the record. I didn't hear all of the testimony, but I am a little concerned that we might be letting ourselves get blackjacked into giving more aid to the islands when—and I am not particularly impressed by the argument that the people of the islands don't have a standard of living comparable to

Japan. There is not enough out there on the islands to develop to give them a living that is comparable to the Japanese islands. I don't think they have the resources available that we could ever raise their standard of living with what they have unless we did pump in large amounts of aid.

(The following information was received for the record:)

U.S. EXPENDITURES IN THE RYUKYU ISLANDS

The overall input of money resulting from the presence of the U.S. Government, and Americans as individuals—military and civilian, official and private—reflect the following expenditures in fiscal year 1965:

	Millions
Expenditures by the U.S. Government and personnel-----	\$121.5
U.S. direct aid to GRI-----	12.7
Capital transactions (public and private)-----	44.0
Export of goods and services to the United States-----	18.1
Total-----	196.3

General WATSON. That is true, sir.

On the other hand, the Japanese Central Government does provide for its less favorably disposed or endowed prefectures with certain subsidies which help them in their own internal expenses.

Mr. ICHORD. Well, most of the trade of the islands is carried on with Japan; is it not?

General WATSON. That is correct; yes, sir, definitely.

Mr. ICHORD. What is their trade, how much trade do they carry on with Japan?

General WATSON. I have those figures right here. I will provide them for you.

In trade with Japan, the Ryukyu Islands import about \$151 million as contrasted to exporting about \$73 million to Japan, so that they have a deficit balance with Japan of about \$78 million in fiscal year 1965.

In the case of the United States, the Ryukyus import about \$8.1 million from the United States and export about \$5.1 million. So there is a deficit balance there of \$26 million. And all other countries, about \$28 million imported by the Ryukyu Islands, and only \$1.6 million exported. So they've got about a \$26 million deficit there too.

The total deficit is about \$131 million. This is in trade, now.

Mr. ICHORD. Now did I understand you to say the salaries, the compensation we pay to island workers amounts to 193—

General WATSON. No, sir; this is all sources for all purposes, \$196.3 million.

Mr. ICHORD. Well, actually as a practical matter, if we were to pull that out of the island, the whole economy would fold; would it not?

General WATSON. It would collapse. And we have two charts that are appended to my statement here, B and C, which give a graphical picture of this.

Mr. ICHORD. Well, I am just a little concerned. I am sure that probably they can use more money to raise their standard of living, but I am a little concerned that you might just be following suit with Japan here and we are more or less being blackjacked into giving them more aid.

General WATSON. I can see the reason for your concern and I do not think that this is in fact taking place. [Deleted.]

Mr. ICHORD. \$193 million into a little nation of some 900-odd thousand people is a pretty good chunk of money to put into the economy of the island.

General WATSON. We figured up the Ryukyus per capita income in comparison with the inhabitants of the homeland of Japan, and we found out it is considerably lower.

I should point out that this \$196.3 million we put in there was not a gift. We get a return on that, on a great part of it.

Mr. ICHORD. That is true.

General WATSON. So that the aid we put in there is really quite small; \$12 million this year, this current year, and the preceding year was only \$12 million.

Mr. ICHORD. Well, the income per capita for the State of Wyoming is considerably lower than the State of New York, too.

General WATSON. We have the per capita figure in the Ryukyu Islands of \$364 a year. That's a dollar a day. And that compares with \$587 in the homeland of Japan.

Mr. ICHORD. \$587?

General WATSON. Yes, sir. I can see your concern, Mr. Congressman. I don't want you to feel that I am advocating just a giveaway program [deleted]. These people compare their lot with that of their brothers and sisters and cousins who live in the homeland of Japan.

Mr. PRICE. General, on the amount that you put into education, would the Japanese be willing to put more into the educational program than we are asking them to, or agreeable?

General WATSON. They would be agreeable to it. By their law, they provide their prefectures 50 percent of the pay of teachers, for example, for the first nine grades.

Mr. PRICE. Do you think it is desirable to permit them to put 50 percent in?

General WATSON. I do not object to their providing that in the Ryukyus so long as we contribute as much as they of the pay of teachers of all grades. Also I think this is a responsibility that the Government of the Ryukyu Islands itself should bear in part. In other words, the Japanese Government, the GRI, and our own Government each should provide one-third of the pay of all teachers, including the grades above the first nine.

Mr. PRICE. Is this an important area for us to keep our hand in?

General WATSON. This is extremely important. [Deleted.]

Mr. ICHORD. Do you have complete control over the disbursement of all of these funds under the Price Act?

General WATSON. Yes, sir; we do. Some of them we actually personally disburse in segments throughout the year. In other cases it is done by transfer to the Government of the Ryukyu Islands.

Mr. ICHORD. And what percentage of the \$12 million do you transfer to the Government and what percentage do you spend in—

General WATSON. About 80 percent.

Mr. ICHORD (continuing). In your own program? About 80 percent turned over to the Government?

General WATSON. That's right.

Mr. ICHORD. Now of this \$25 million, what—you are not going to spend the entire \$25 million?

General WATSON. In the first year that this would be effective, we propose to spend \$17.3 million.

Mr. ICHORD. What percentage are you going to turn over directly to the Government?

General WATSON. It would run a little higher than that, but we can check it right here.

Mr. BURNS. A ratio of 13.8 to 17.3; which is 80 percent of the total program for 1967. The preceding year was 8.6 out of 12 million, which is about 72 percent.

Mr. ICHORD. How do they put this to you, General?

General WATSON. It's about equal.

Mr. ICHORD. How do they put it to you? Do they demand more help from the United States or do they put it "We would rather go back with Japan"?

General WATSON. The way help from the United States comes up is this: We worked up the long-range plan based on the President's directive. As mentioned earlier we started in the fall of 1964 jointly with the Government of the Ryukyu Islands.

Mr. BURNS. Yes, sir.

General WATSON. There are 11 major programs in this long-range plan that we have, and each of them have subprograms and so on very similar to our planning structure over here.

We then, following the President's directive, March 1962, looked forward to the goals which were "the levels obtaining in comparable areas of Japan," with the idea of reaching them, to the extent possible, by 1971.

And we worked this up in increments in succeeding fiscal years so that we don't try to do it all at once.

In the first place, they won't be able to do it all at once. They have to phase it in because their situation won't permit it to go any faster. This is the way we actually do it. So it is in committee meetings that we work up these statements.

Now, when the plan for a given fiscal year is worked up by our staffs together, then the Chief Executive and I sit and are briefed on the plan, the major policy decisions that are involved therein, the major goals, the sources of funds, and so forth. And we closely question the staffs and make them come forth with the sound justification.

Now on the other hand, the Government of Japan participates in this then after we have developed the funding level for any given fiscal year. The Government of Japan then is invited to come in to the extent of a given number of dollars for each of these programs in accordance with what we have prepared ahead of time, and we are the ones who deal with the Government of Japan.

The Government of the Ryukyus does not deal directly. They are related, they know each other, there is a lot of back and forth travel: but any official contact is through USCAR to the consultative committee which was referred to earlier by a question. And at that point the Ambassador of the United States and the Foreign Minister of the Government of Japan sit together with assistants and work out the agreed upon figures.

[Deleted.]

Mr. ICHORD. Have you tried any propagandizing among the people as to how much we pay out in salaries to the islands?

General WATSON. We have; yes, sir. This \$196.3 million that I referred to you earlier was arrived at as a result of a study which I directed because I thought the people weren't aware of it.

Mr. ICHORD. What is the whole gross national income of the islands?

General WATSON. Gross national product for fiscal year 1965, \$369.1 million.

Mr. ICHORD. Better than half.

General WATSON. And the national income, \$340 million.

Mr. ICHORD. Thank you, Mr. Chairman.

Mr. PRICE. Mr. Love?

Mr. LOVE. General, other than aid, what precisely does the Government of Japan do in the islands, since according to your statement, and my own information, they did not renounce all the land title interests in the islands? I mean what do they have over there in the islands precisely, the Government of Japan?

General WATSON. The Government of Japan at this moment has a southern area liaison which is called Nampo, which is a Japanese word, liaison office, and they have their representatives of the Government itself. [Deleted.]

Mr. LOVE. So actually—

General WATSON. They participate in a number of ways. For example, there are technical groups which come down there to advise, farming, for example.

They have a tremendous subsidy for sugar, for example. Without the sugar subsidy I don't know what the farmers—what the agricultural industry of Okinawa would do.

Mr. ICHORD. Well, this is their foreign aid program, except they have a larger attachment.

General WATSON. Exactly, in effect it is.

Mr. LOVE. Does the record show the dollar value of that foreign aid program with the Japanese?

General WATSON. Yes, we have the figures. We don't call it that per se. But we have figures and we will provide them. We will provide a table which will show—

Mr. LOVE. To make a comparison between what you are asking and what the Japanese do?

General WATSON. Yes, sir. We have these figures and we can present them for the record very easily. In fact, they are shown previously.

[Deleted.]

Mr. LOVE. Just roughly can you give me some idea of how much that is compared with what we do?

General WATSON. This coming fiscal year they have approved, a total contribution of \$16.1 million, as compared with that which we propose for the coming fiscal year of \$17.3 million. We are a million dollars apart.

Mr. LOVE. That is in the statement here, isn't it, sir?

General WATSON. Yes, sir; it is.

Mr. LOVE. I thought so. Yes.

Thank you, General.

Mr. PRICE. Mr. Hicks?

Mr. HICKS. No questions.

Mr. KELLEHER. Mr. Chairman.

Mr. PRICE. Mr. Kelleher.

Mr. KELLEHER. Just one question. I am not sure whether the record will reflect now exactly how the \$17.3 will be used for fiscal 1967—

General WATSON. Yes.

Mr. KELLEHER. Exactly how much for teachers' salaries, how much for social security, and so forth. Could you put that in not only for this year, but for a couple of years in advance, too?

General WATSON. We will supply that.

Mr. KELLEHER. In detail, please.

General WATSON. Yes.

[Deleted.]

Mr. PRICE. General, the point that Mr. Ichord made is the thing that we had to contend with in the Senate.

General WATSON. Yes, sir.

Mr. PRICE. This was the main thing that they kept throwing at me when I testified before the Senate. So I think we will have to be prepared on that.

Mr. ICHORD. I sympathize with your position, but I do have a little concern about that and I think as long as you recognize it and you are taking steps to keep it from really building up, because you have had experience with that type of thing.

General WATSON. It is ever present, and we are working on it all the time.

Mr. PRICE. Thank you very much, General and Mr. Holt, and others who testified here this morning.

I think you did a good job in presenting your case. I hope we can do as well when we have to go through the Senate again.

General WATSON. Thank you very much, Mr. Chairman. Thank you, gentlemen.

Mr. PRICE. The committee will remain just a few minutes.

(Whereupon, at 11:46 a.m., the subcommittee proceeded to committee business re H.R. 12617.)

LETTER OF TRANSMITTAL

MARCH 8, 1966.

Hon. L. MENDEL RIVERS,
*Chairman, Committee on Armed Services,
House of Representatives, Washington, D.C.*

DEAR MR. CHAIRMAN: I submit herewith for consideration of the Committee on Armed Services a report of Subcommittee No. 1 on the deferral of military construction.

The subcommittee held brief but thorough hearings on this matter, and I believe the report correctly summarizes the position of the subcommittee when it considered this vital subject.

Sincerely,

PHILIP J. PHILBIN,
Chairman, Subcommittee No. 1.

III

REPORT OF SUBCOMMITTEE NO. 1 ON DEFERRAL OF MILITARY
CONSTRUCTION PROJECTS AUTHORIZED AND FUNDED BY THE CON-
GRESS FOR FISCAL YEAR 1966

INTRODUCTION

On January 11, 1966, Chairman L. Mendel Rivers, of the Committee on Armed Services of the House of Representatives, assigned Subcommittee No. 1 to look into the action announced on December 21, 1965, by the Secretary of Defense to temporarily defer \$620 million of military construction projects authorized and funded by the Congress for fiscal year 1966. The deferral action involves projects located in 42 States and the District of Columbia. It includes 8,500 units of family housing or all of the housing funded by the Congress last year.

Subcommittee No. 1 consists of Hon. Philip J. Philbin, Massachusetts, chairman; Hon. Charles E. Bennett, Florida; Hon. Samuel S. Stratton, New York; Hon. William J. Randall, Missouri; Hon. Jed Johnson, Jr., Oklahoma; Hon. Hervey G. Machen, Maryland; Hon. Leslie C. Arends, Illinois; Hon. Charles S. Gubser, California; and Hon. Donald D. Clancy, Ohio.

BACKGROUND

Early in February 1965, the Secretary of Defense submitted to the Congress a military construction request totaling \$1,935,497,000. A Department of Defense news release dated February 9, 1965 described the request as follows:

The Department of Defense has submitted to the Congress for fiscal year 1966 a military construction bill requesting new authorization in the amount of \$1,945,497,000 to support the Active Forces, the Reserve components, and the defense agencies. New construction projects directed primarily to the strengthening of our military posture on a worldwide basis amount to \$1,438,331,000 of the total requested, including \$228,434,000 for the construction of 12,500 new family housing units. The balance of the request amounting to \$507,166,000 covers other family housing costs which require annual authorization, including amounts for operation and maintenance, repair and improvement of existing units.

The proposed new construction will support key defense missions, such as our strategic offensive and defensive forces and our general support forces. Proposed construction sites are located at over 300 installations throughout the United States, as well as at locations in the Caribbean, Europe, Pacific Islands, Iran, Japan, and the Philippines. Projects are also proposed in support of such essential contributing defense activities as research and development, supply, medical care, training and intelligence. The bill will provide many needed replacements for obsolete and inefficient facilities, necessary to reduce the cost of base operations and maintenance.

After four committees of the Congress considered these matters; namely, the Armed Services Committees and the Appropriations Committees of both the House and the Senate, this request was cut by the Congress to approximately \$1.306 million, or a cut of nearly \$600 million.

During the hearings conducted by the House Armed Services Committee, the Assistant Secretary of Defense for Installations and Logistics told the Committee that the military construction program was governed by the 5-year programming system of the Department of Defense. He then stated "the projects included in the present request represent the fiscal year 1966 segment of the approved 5-year construction plan, and must be in place not later than fiscal year 1966 to coincide with the overall defense objectives for this period."

After mentioning the 5-year construction program, Secretary Ignatius then stated:

In addition to the controls applied by 5-year programming procedures, construction requirements are further refined under a special annex to the system which identifies the character, size, and estimated cost of the major projects at each installation in the 5-year plan. In developing the construction program to be presented to the Congress for any given fiscal year, facility requirements are again examined to insure their continuing validity under current mission requirements and to verify that costs and standards are both reasonable and economical. Each line item in the fiscal year 1966 proposal has undergone this meticulous requirement and engineering reappraisal, in collaboration with the Bureau of the Budget, as the result of which the requests of the military departments and the defense agencies were reduced by more than \$700 million, or 37 percent of the total requested.

Thus, after having completed assurances from defense officials that their initial request represented only urgent construction needs, the four committees of the Congress and their respective houses thoroughly considered the projects and eliminated those which they considered not to be essential.

While the original construction request was submitted by the Department of Defense early in February 1965, the President of the United States on August 23, 1965, vetoed the legislation enacted by the Congress on the basis that certain provisions were an encroachment by the legislative branch on the powers constitutionally vested in the executive. After the veto, the Deputy Secretary of Defense, among others, acting as a personal emissary of the President and the Secretary of Defense, came to this committee in August and September, urging that a new construction bill be passed, identical insofar as line item authorization was concerned, to the bill vetoed by the President. This committee, as well as other cognizant committees, and the Congress, recognizing the imperative need for these projects, once again authorized these projects.

On December 21, 1965, the Secretary of Defense announced deferral of nearly half of the construction projects authorized for fiscal year 1966. He and the Deputy Secretary of Defense accepted full responsibility for this action although prior to the announcement, the matter was cleared with higher officials in the executive branch of the Government.

The subcommittee attempted to determine the reasons of the Secretary of Defense in making these deferrals and also consider the question of why the Secretary of Defense should be permitted to substitute his judgment for the collective judgment of four congressional committees, the House of Representatives, the Senate, and the President of the United States.

SUMMARY, CONCLUSIONS, RECOMMENDATIONS

Summary

The subcommittee, in a brief, but thorough hearing, examined the reasons underlying the deferral of \$620 million worth of military

construction projects authorized and funded by the Congress for fiscal year 1966.

In February 1965, the Department of Defense submitted a request totaling \$1,945,497,000 for military construction projects around the world. After four committees of the Congress considered these requests, authorization and funding was given by the Congress for military construction projects totaling \$1,306 million. On August 23, 1965, the President vetoed the authorization bill because of certain restrictive language which he thought to be objectionable. This language pertained to base closures. Thereafter, at the urging of personal emissaries of the President and the Secretary of Defense, the Congress passed a second authorization bill, eliminating the "objectionable" language, but retaining all of the line items.

Yet, the Secretary of Defense on December 21, 1965, without consultation with any elected official in the legislative branch of the Government, by the stroke of a pen wiped out nearly half of the construction projects authorized and funded for fiscal year 1966. Congress was not given an opportunity to pass upon the merits of this unilateral action in any way. Routine information was provided to the Congress after the fact of the deferral of many construction projects of great importance to the well-being, convenience, living necessities, training, and effectiveness of officers and enlisted personnel of the armed services which had previously been deemed essential.

The Department of Defense witnesses justified the action on the basis that the magnitude of the costs of military operations in the Republic of South Vietnam, coupled with signs of developing inflationary pressures, required them to seek out areas where expenditures could be postponed without impairing combat posture.

The subcommittee, while recognizing the increased costs of the Military Establishment occasioned by the expanded tempo of military operations in support of the Republic of South Vietnam, finds it hard to accept either the reasoning or the conclusions of the Secretary of Defense in deferring these items of military construction.

Apparently, the action of the Secretary in making these deferrals was predicated upon the reasoning that increased military spending was primarily responsible for the signs of developing inflationary pressures. The subcommittee believes that military spending is only one facet of the total spending program of the Federal Government. In determining whether to proceed with programs authorized and funded by the Congress, the total spending program of the Federal Government must be examined and priorities assigned to these programs only by those responsible for the entire Federal program.

Secondly, the testimony presented to the subcommittee does not indicate that there was any faster acceleration of inflationary pressures during the period from September to December 1965 than there has been in the past 2 years, although the subcommittee is aware of creeping inflation during the 2-year period. The subcommittee further believes that the deferral of the construction projects at this time will ultimately result in higher total costs to the Federal Government due to this creeping inflation.

Thirdly, the subcommittee believes that it is not the primary function of the Department of Defense to try to control inflationary pressures in this country as this responsibility has been delegated to

other departments and agencies of the Government. Rather, the duty of the Department of Defense is to provide to this Nation the best Defense Establishment within the bounds of the authorizations and appropriations voted by the Congress.

Fourth, the subcommittee cannot agree with the conclusion of the Secretary of Defense that the deferrals will not impair combat effectiveness. For instance, wherever a basic trainee is required to wait hours for a dental appointment, the time lost while waiting is time taken from training. The subcommittee believes, too, that the effectiveness of the fighting soldier is bound to be impaired when he realizes that his family is to be sheltered in inadequate housing. Morale of the combat troops is a vital ingredient to victory—and letters to the subcommittee from service personnel the world over are positive proof that the servicemen are convinced that they are being required to make the sacrifice of all those facilities which would provide for their well being and their welfare, in addition to the sacrifice of their time, and possibly their lives, so that the Great Society program may move forward at an accelerated rate.

Hon. L. Mendel Rivers, chairman of the House Armed Services Committee, succinctly summarized the views of the members of the subcommittee when he said:

I think the military is being asked to bear two crosses, one in the graveyard and one at home.

Conclusions

(1) It is incredible to the subcommittee how the Department of Defense could justify these projects so eloquently as essential in the spring of 1965 and yet come back to the subcommittee (after they had been given the "bureaucratic line") and state that the services will not severely suffer as the result of the deferrals. It should be noted that this type of doubletalk will make it more difficult for the committee to accept future justification requests presented by the Department of Defense witnesses at their face value.

(2) The subcommittee believes that the projects are just as essential today as they were when they were authorized and funded by the Congress.

(3) While the subcommittee recognizes the impact of increased expenditures in Vietnam and the possible threat of inflation, it believes that the total program of the U.S. Government must be considered when projects are deferred and that the basic weakness in the Department of Defense presentation lies in the fact that they considered only their own program and without any real emphasis on inflation.

(4) The subcommittee is concerned over the request of the Secretary of Defense to have \$620 million of unused authorizations and appropriations to build military construction projects whenever he desires. While the authorizations limit the projects to be constructed to those specifically authorized, a reprogramming of these funds could be made by the Armed Services Committee at the request of the Secretary of Defense. The subcommittee believes that the entire Congress which authorized and appropriated this money has the right to have its will made known as to when these projects are to be constructed.

(5) The subcommittee believes that the increased rental program is a means to circumvent the intent of Congress as shown in the conference report on the fiscal year 1966 military construction authorization bill. But even if such a leasing program were authorized, it will not effectively remedy the housing shortages at the many military installations throughout the world where housing was authorized and funded.

(6) The subcommittee is not at all convinced that the deferrals were made so as to lessen the "tendency toward inflation" but believes they were the result rather of an arbitrary decision to keep military spending below a specified amount.

(7) The subcommittee believes that once Congress has authorized and funded projects for military construction, these projects should be built within the shortest possible time. To extend the authorization for the construction of these projects as requested by the Secretary of Defense, is putting too much power in the hands of one man whose area of responsibility is the running of the Military Establishment rather than controlling inflationary pressures in the United States.

(8) The subcommittee is convinced that the action of the Secretary of Defense in deferring these projects was not only unwise but was completely unwarranted, and urges the full committee and the Congress to exercise its full constitutional responsibility to see that this program is resumed at the earliest possible time.

Recommendations

1. The subcommittee urges immediate and full restoration of all military construction projects authorized and funded by the Congress for fiscal year 1966 which were deferred by the Secretary of Defense.

2. The subcommittee recommends to every Member of Congress that before voting for appropriation bills of any kind, it should be noted that servicemen and their dependents have been required to forfeit all construction projects which would contribute to their health, well-being, convenience, or morale.

3. The subcommittee recommends that rental housing should not be used as a substitute for appropriated housing and that housing should not be leased at installations where appropriated housing has been specifically denied. To the extent, however, that leased housing would be supplemental to the appropriated housing where there are shortages, the subcommittee recommends that additional leasing authority be approved.

HEARINGS

Hearings were held on Wednesday, February 2, 1966. The list of witnesses is as follows:

Cyrus Vance, Deputy Secretary of Defense.

Paul Ignatius, Assistant Secretary of Defense (Installations and Logistics).

John J. Reed, Deputy Assistant Secretary (Family Housing).

Edward J. Sheridan, Deputy Assistant Secretary (Properties and Installations).

Dr. Robert A. Brooks, Assistant Secretary of the Army (Installations and Logistics).

Graeme C. Bannerman, Assistant Secretary of the Navy (Installations and Logistics).

Lewis E. Turner, Deputy for Installations, Office of the Assistant Secretary of the Air Force (Installations and Logistics).

DEPARTMENT OF DEFENSE POSITION

Hon. Cyrus Vance, Deputy Secretary of Defense, presented the position of the Department of Defense. After stating that the presentations made by DOD and service personnel in support of the fiscal year 1966 program are still valid and that the longrun requirements which were requested must at some future time be constructed. Mr. Vance then stated the reasons for the deferral in these words:

* * * the conflict in Vietnam grew in intensity. The U.S. role changed from an advisory function to the direct participation of U.S. troops in support of the Republic of South Vietnam. In the last 6 months, the number of U.S. military personnel in Vietnam has increased significantly, the tempo of operations has heightened, and the costs for conducting the higher level of operations have risen substantially. The magnitude of these costs, coupled with signs of developing inflationary pressures, indicated to us that we should give particularly close scrutiny of Defense programs, with the objective of seeking out areas where expenditures could be postponed without impairing our combat posture.

Secretary Vance told the subcommittee that the decision to defer military construction projects was made by the Secretary of Defense and himself, and was not instituted at the suggestion of the Bureau of the Budget. However, he did admit that before announcing the deferral decision, it was reported to higher authority. He outlined the reasoning behind the decision as follows:

As we began to develop the fiscal year 1967 budget and the fiscal year 1966 supplemental, it became increasingly clear that inflationary pressures were beginning to appear. For example, a number of our suppliers informed us of copper shortages and rising copper prices. Similar signs began to appear in other important commodities. In the field of construction we noticed a number of significant facts. The Department of Commerce composite construction cost index which had stood at 113 a year earlier had increased by about 3.5 percent to 117 by October and November of 1965.

This percentage increase was twice the annual average of the previous 7 years. Contract construction average hourly gross earnings increased 4.4 percent from October 1964 to October 1965, substantially in excess of the guidelines of 3.2 percent.

Construction materials costs, which had increased by about 1.5 percent from October 1961 to October 1964, increased by 14 percent between October 1964 and October 1965; that is, the average annual rate of cost increase approximately quadrupled. Hardwoods rose 7.7 percent. Metals and metal products rose 2.4 percent. Reinforcing bars prices rose 5.6 percent. Copper water tubing prices rose 12.1 percent. Construction equipment prices rose 3 percent. Authoritative sources forecast greater increase in construction cost for 1966.

In light of these developments, Mr. McNamara and I concluded that we should defer all projects which were not essential for combat readiness and were not time urgent; i.e., were not required for new missions, safety, health, and other compelling reasons.

FACILITIES IN THE MILITARY ESTABLISHMENT

Members of the subcommittee were aware, as the result of personal visitations, of reports of subcommittee inspections, and of a constant flow of correspondence from service personnel and their families as well as from the testimony from departmental and service witnesses that the personnel support facilities are reaching a stage of block

obsolescence, and unless a planned long-range construction program were undertaken in increments, an enormous crash program must be undertaken in the near future.

In his statement in support of the Department of Defense military construction program last year, Paul R. Ignatius, Assistant Secretary of Defense (Installations and Logistics), said:

In the fiscal year 1966 program, we are placing special emphasis on the improvement and modernization of our real property inventory, primarily through the replacement of mobilization-type personnel facilities built to temporary standards during World War II. Despite their temporary character, these buildings were again pressed into service during the Korean conflict and have been continued in use since that time with only limited improvements and maintenance. This has been due, in large part, to the overriding need to concentrate most of our construction resources since the Korean episode on the operational support of new weapons systems, and the forces necessary to establish the clear nuclear retaliatory capability of the United States in the event of an attack.

Now that these more critical facilities are largely completed, it is timely to address our efforts to the improvement and modernization of our capital plant. This is highly important, not only to provide our military personnel with a decent standard of living, and so improve morale and reenlistment rates, but also to reduce maintenance costs by eliminating aging, obsolete structures from the real property inventory.

Vice Adm. Lot Ensey, Deputy Chief of Naval Operations for Logistics, told the committee during its consideration of the military construction bill last year:

After World War II the Navy concentrated on providing facilities for the operation, maintenance, and training in technologically advanced weapons systems. These improvements were of immediate need. Personnel facilities were relegated to a lesser position because of the squeeze on military construction funds.

Facilities such as barracks and bachelor officer's quarters continue to lag far behind the minimum standards and goals we need. If the Navy and Marine Corps are to improve the retention rate of the officers and enlisted personnel who are required to man today's modern and highly technical weapons systems, this aspect of the program needs immediate increased support.

The deterioration of the troop housing facilities of the Naval Shore Establishment since World War II is a matter of serious concern to the Department of the Navy. A 5-year improvement program is being implemented. As a result, \$74 million, or approximately 22 percent, of this year's military construction program, is devoted to improvements of barracks, BOQ's and messes. This compares with the much lower average percentage of 10 to 12 percent of the program during the past several years.

The fiscal year 1966 military construction program that you are now considering is designed to achieve the foregoing aims. It is an essential phase of the Navy's continuing efforts to modernize and to improve the overall effectiveness of the operating forces. The program amounts to a total of \$313,593,000 in new authorization, a relatively small percentage of the overall Navy budget.

Eugene H. Merrill, Deputy Assistant Secretary of the Army (Installations and Logistics), last year told the committee:

Again this year the Army has emphasized in its proposed program provisions for replacement and modernization of deteriorated and obsolete facilities. Projects intended to deal with the problems of morale, efficiency, high maintenance costs, and impending structural failure associated with the aging World War II temporary and other inadequate structures still in use represent approximately 60 percent of our proposed program. It is the objective of the Department of the Army to establish a level of effort, under the 5-year force structure and financial plan concept, which will eliminate our deficits in the replacement and modernization category. If the Army's program is funded at the rate proposed in this year's authorization bill, about 13 years will be required to eliminate the permanent construction deficit.

Maj. Gen. Robert H. Curtin, speaking for the Air Force, last year told the committee:

The troop housing and the community facilities category, one-quarter of the requested authorization, contains the projects that mainly provide the non-working-hours environment for our airmen and officers. These are the facilities that most directly affect the attitude of the individual toward his Air Force career. Consequently, there is a very direct relationship between the adequacy of facilities in this category and our ability to retain our skilled personnel. The \$89.5 million requested in this program will allow us to continue the program to eliminate deficiencies and replace temporary and substandard facilities with adequate structures. However, this amount will not solve the total problem. We will need future programs and will also then request your continued assistance in providing the facilities that will produce an acceptable standard of troop housing and community facilities for Air Force personnel.

Within this amount we are requesting the construction or replacement of some 9,800 airmen dormitory spaces and the alteration or improvement of over 11,000 more spaces at a cost of \$21.5 and \$6.3 million, respectively. Similarly, we are requesting to build about 2,400 new officers quarters for \$18.5 million and to improve some 1,900 spaces at \$2.7 million.

The other authorizations within this category will provide a wide variety of projects that are steps toward establishment of a community atmosphere on our installations, particularly those removed from urban centers, compatible with the caliber of people needed to maintain our Air Force the most effective it can be. It contains, among others, 7 service clubs, 25 chapels or chapel annexes, 15 schools, 3 exchanges, and 14 theaters. These facilities are basic to a balanced and effective force.

The order deferring construction of military family housing, bachelor officer's quarters and Armed Forces medical facilities, also calls for postponement of construction of troop housing, messhalls, schools, chapels, gymnasiums, commissaries, theaters, service clubs, and other morale-type facilities totaling almost \$200 million.

The largest portion of the funds was slated for the construction, expansion, or rehabilitation of 88 troop housing units. The total cost of all projects amounts to \$140 million. The Army would have received the lion's share of the total amount, commanding \$91 million for 17 building projects.

The Air Force had planned to build 35 barracks costing \$18.5 million and the Navy and Marine Corps had scheduled 33 troop units costing \$30.8 million. The Army had fewer barracks projects than the Navy-Marine Corps and the Air Force but would have received almost twice the combined funds of both due to the planned erection of several major barracks complexes. The largest were to be built at Fort Dix, N.J., Fort Leonard Wood, Mo., and Fort Jackson, S.C.

While the Army took the severest beating in the troop quarters cutback, it fared better than the other services in canceled construction of messhalls, some of which were to be built in conjunction with barracks. Funds in the amount of \$14.8 million were pigeonholed for 47 dining halls. Of the total, the Air Force was forced to put off building 24 such structures costing \$6.5 million, the Navy and Marine Corps lost 15 messhalls at a cost of \$6.3 million and the Army lost 8 messhalls costing \$1.9 million. The largest dining hall project deferred (\$1,490,000) was at NAS, Memphis, Tenn.

The Air Force also suffered heaviest cuts in the commissary field. Although no single project would have run over \$1 million, the DOD order suspends construction of six Air Force commissaries costing \$1.6 million. The Army lost four totaling \$993,000. The Navy lost one (NAS Barbers Point, Oahu) at a cost of \$267,000.

The Navy and Marine Corps, with no plans for additional school facilities, suffered no setback because of the restriction placed on

new school construction. However, the Army lost a \$2.1 million elementary school in Okinawa and a \$123,000 grade school at the Army Security Agency, Location 4 Asmara. The Air Force was required to table the building of five elementary school additions costing \$2 million in all.

The military services with the approval of the Secretary of Defense, submitted justifications for each line item approved by the committee last year. It is significant to note illustrative and representative examples of the requests made and the justifications therefor. The committees of the Congress, acting in good faith, on the testimony of departmental witnesses, authorized and funded these projects which were deemed to be absolutely essential last year but which were arbitrarily deferred as the result of a unilateral decision by the Secretary of Defense in December. The justifications presented by the services for these projects, speak more eloquently for their essentiality than any committee editorializing could possibly do. It is time that the record be examined.

Enlisted men's barracks

Army

Fort Jackson, S.C., enlisted men's barracks complex..... \$13,342,000

This item will provide another increment of the permanent barracks and other troop support facilities required at this installation. The fiscal year 1964 program provided the first increment of 8 enlisted men's barracks and supporting facilities and the fiscal year 1965 program provided 12 enlisted men's barracks and supporting facilities. No permanent facilities of this type exist. The buildings now used were built in 1941 and except for 6,982 barracks spaces which were improved in 1957, they have had no rehabilitation or modifications. They have no interior finish. The plumbing fixtures are often only 50 percent of those required. Buildings have reached the age at which the overstressing of structural members is resulting in deformation of the members and in failure of nailed connections. A number of buildings have collapsed due to these failures. A total of 199 temporary buildings, totaling 582,239 square feet, will be demolished.

The execution amount reflects the \$13,176,000 appropriated for this item.

Navy

Fleet Antisubmarine Warfare School, San Diego, Calif..... \$1,212,000

The existing barracks, built during World War II of temporary wood construction, are in an advanced state of deterioration. Over the years, the roofs of all buildings, originally flat with poor drainage, have sagged and rafters bowed. The floor boards in all barracks are warped, rippled, and badly worn. Many windows are warped and frozen shut. Electrical wiring is the antiquated knob/tube type which represents a dangerous fire hazard. The limited electrical capacity prevents installation of habitability improvements such as bunk reading lights and convenience outlets. Heat is provided by individual oil burning heaters which are a serious fire hazard and fail to provide adequate temperature control. Although the barracks capacity is only 448 men by peacetime space criteria, the number of personnel actually berthed is 1,224. The resultant severe overcrowding jeopardizes the health, welfare, and morale of personnel. Despite

annual maintenance costs of \$30,600 for the past 3 years, barracks rehabilitation would cost an estimated \$290,000 with still no relief from overcrowding and the hazards of fire. Accordingly, immediate replacement is the only practicable means of meeting the requirements. The remaining deficiency will be programed in subsequent years.

Air Force

Hamilton Air Force Base, Calif., airmen, dormitories..... \$418,000

This project is required to provide adequate airmen's dormitories. The airmen dormitories are two-story, open-bay, wood frame buildings constructed in 1941. They presently provide a minimum livable condition, and as such, their continued use as dormitories is unacceptable without major repair and alteration to correct the inadequacies. The latrine and shower rooms are deteriorated with cracked concrete floors, rusted metal shower walls, leaking joints, and obsolete fixtures. The roofs are leaking, window and door frames are separated at the joints, fire escape platforms and ladders are beginning to rot, and interior and exterior paint is faded or peeling. The open-bay condition creates a physical environment which offers no privacy of personal conduct, belongings, and rest. This unfavorable environment is further aggravated by the shift schedule of work necessary at this base. Failure to provide this project will result in either the loss of sorely needed dormitories due to health and safety hazards or the continued use of unsatisfactory dormitories with resulting morale and retention problems.

Bachelor officers' quarters

Army

Fort Knox, Ky., bachelor officers' quarters..... \$830,000

The proposed project is required to provide bachelor officers' quarters facilities for officers at this station. It provides 112 spaces to complete a 300-man bachelor officers' quarters authorized in fiscal year 1965 of which 188 spaces were funded. Due to lack of adequate facilities, students have been assigned space on a volunteer basis in unrehabilitated mobilization-type buildings, which have inadequate lighting, heating, ventilation; community-type toilets; unfinished walls; and no closet space. This type environment is not satisfactory for students. The only reason that these facilities are accepted on a volunteer basis is because there are no adequate private rentals within less than 30 miles. These inadequate facilities must be used until replaced by permanent construction.

Navy

Naval Station, Newport, R.I., bachelor officers' quarters..... \$1,258,000

Present facilities include 1 permanent bachelor officers' quarters with a capacity of 95 officers, and 4 converted barracks with a capacity of 349 officers, which were constructed in 1942. The four converted quarters are a serious fire hazard due to type of construction, deterioration and substandard spacing. Rooms are small, lighting is poor, and study facilities for student officers are inadequate. The fire hazardous condition of these buildings, lack of sprinkler systems, and close proximity to each other, pose a serious personnel danger as

evidenced by the loss of one of the senior officers' bachelor officers' quarters by fire in December 1960, which has reduced the capacity of the bachelor officers' quarters in Building 110. With the exception of the permanent bachelor officers' quarters, the poor condition of existing living facilities is deplorable. Existing facilities have deteriorated to where complete revamping of heating, fresh water supply, soil drain, and power system is required. If this item is not approved, the majority of naval officers at Newport will continue to be crowded into substandard, fire hazardous, temporary World War II-type structures which approach slum conditions.

Air Force

Craig Air Force Base, Ala., bachelor officers quarters..... \$880, 000

This project is required to provide housing for the bachelor officers assigned to Craig AFB. The undergraduate pilot training course has been increased from 361 students in third quarter fiscal year 1964 to 443 students in the first quarter fiscal year 1967. The permanent party bachelor officers and the student officers should be housed on base to meet the training schedule for the expanded pilot program. These facilities do not replace or duplicate any existing facilities but are a straight out deficiency in officers quarters space. If this project is not accomplished, the base will be required to provide officers with "certificates of nonavailability" and funds to lease private quarters on an individual basis in the local community. This project will result in increased student control and effectiveness with an atmosphere conducive to concentrated study or individual relaxation.

BARRACKS AND BACHELOR OFFICERS QUARTERS

Last year, the Congress authorized 57,700 new barracks spaces and 5,700 new bachelor officers quarters.

Three primary reasons existed for this substantial authorization: (1) recognition of the obsolescence of many of the existing barracks which were unsanitary, fire hazardous, and excessively expensive to maintain, (2) recognition of the presently overcrowded condition of barracks which presented health hazards, and (3) the increasing size of the Military Establishment caused by increasing world tensions.

The action of Secretary of Defense has resulted in the deferral of construction of 51,659 barracks spaces. To put it another way, the Department of Defense is planning to construct only 6,041 barracks spaces out of the 57,700 authorized.

Service:	Barracks spaces deferred
Army.....	22, 715
Navy.....	9, 215
Air Force.....	19, 729
Total.....	51, 659

Regulations issued by the Department of Defense prescribe a minimum of 72 square feet of floor space per man. This criteria was established by the Surgeons General of the three services.

Yet, information elicited at the hearings disclosed the fact that at 13 installations where construction of barracks has been deferred, 9,683 enlisted personnel will be living in less space, as the result of the deferrals, than currently provided by the DOD criteria.

But of even greater significance is the fact that at three installations, namely, Fort Knox, Ky.; Fort Gordon, Ga.; and Fort Jackson, S.C., where there were deferrals of barracks spaces, 4,460 personnel in basic training centers are required to live in tents. A witness also stated:

Due to the sharply increased training loads resulting from southeast Asia operations, it is probable that about this number of enlisted personnel will continue to be housed in tents at these and, perhaps intermittently, at some of the other major training centers. In the Navy, due to recent increases in the training load of the Marine Corps Recruit Training Depot, San Diego, Calif., it may be necessary for about 600 men to live in tents intermittently.

The importance of rigid adherence to the space criteria can be no better illustrated than a response from the Department of Defense to a letter from the chairman of the Armed Services Committee, which requested information concerning the outbreak of spinal meningitis. The letter reads as follows:

THE SECRETARY OF DEFENSE,
Washington, February 25, 1966.

HON. L. MENDEL RIVERS,
Chairman, Committee on Armed Services,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in reply to your recent letter on the subject of meningococcal disease within the Armed Forces.

As of February 18, the average sleeping space allocated to trainees at the installations cited was as follows:

Marine Corps Recruit Depot, San Diego, Calif.

In fixed structures.....	50 square feet.
In tents.....	51 square feet.

Fort Knox, Ky.

In fixed structures:	
Basic combat trainees.....	72 square feet or better.
Advanced individual trainees.....	60 to 72 square feet.
Common specialty trainees.....	60 square feet or better.
In tents.....	72 square feet or better.

Fort Gordon, Ga.

In fixed structures:	
Basic combat trainees.....	72 square feet or better.
Advanced individual trainees.....	40 square feet or better.
Signal school trainees.....	40 square feet or better.
In tents.....	72 square feet or better.

Fort Polk, La.

In fixed structures:	
Basic combat trainees.....	78 square feet.
Advanced individual trainees.....	89 square feet.
In tents.....	None used.

Lackland Air Force Base, Tex.

In fixed structures: Basic trainees.....	50 square feet.
In tents.....	None used.

Of the cases of meningococcal disease admitted at the cited installations, between January 1 and February 12, 1966, the sleeping space occupied on day of admission was as follows:

Marine Corps Recruit Depot

3 cases.....	34.3 square feet each.
1 case.....	38 square feet.
1 case.....	40 square feet.

Fort Knox

13 cases.....	72 square feet each.
1 case.....	Living off post.

Fort Gordon

4 cases.....	40 square feet each.
1 case.....	52 square feet.
5 cases.....	72 square feet each.

Fort Polk

4 cases.....	74 square feet each.
3 cases.....	76 square feet each.
2 cases.....	80 square feet each.
4 cases.....	82 square feet each.
3 cases.....	84 square feet each.

Lackland Air Force Base

4 cases.....	40 square feet each.
1 case.....	55.5 square feet.
1 case.....	60 square feet.

You will note that the Marine Corps Recruit Depot has managed to increase the space available to the basic trainee. This space will be 55 square feet by February 28, and continued efforts will be made to reach 72 square feet. A major step toward elimination of overcrowding has been the temporary cessation of trainee input to Lackland Air Force Base. New Air Force recruits are being assigned to Amarillo Air Force Base on a temporary basis for training. Lackland has now redistributed its trainees in order to afford them 72 square feet. At Fort Gordon it is planned to employ tents to bring the advanced trainees up to a minimum of 55 square feet. Tents are being utilized at other installations to acquire additional space. It may be seen from the above figures that, where space is limited, every effort is made to provide for the recruit even if at the expense of the advanced trainees. This policy is, of course, based upon the relatively reduced vulnerability of the "seasoned" individual to the disease.

At the the present state of the medical profession's knowledge of meningococcal disease there are, unfortunately, few specific measures which can be taken to control the outbreak. As I am sure you are aware, the causative organism is present in the nose and throat of a great percentage of the civilian population of this country throughout the year. As many as 30 percent of recruits examined at specific Armed Forces examining stations have been found to be carriers of the germ prior to exposure to the military environment. Each year sees an increased rate of the disease in the population from January through April, and this increase is reflected in the military population. The mechanism by which the healthy carrier suddenly becomes infected is not known.

Each installation at which the disease rate approaches critical proportions is visited by epidemiologists, microbiologists, and internists from the office of the appropriate Surgeon General. These specialists assure the use of the most effective treatment methods and control measures. The latter consists of improved space occupancy, between-bed curtains, restriction of association of trainees to small groups, and, when absolutely necessary, preventive treatment with sulfonamides.

In World War II it was found that sulfadiazine would eliminate the meningococcus from the healthy carrier. The drug, used in this preventive manner, was very effective in controlling the disease at training centers until 1963. In that year it was determined that there existed strains of the organism which were not affected by the drug. It was further determined that the continued use of sulfadiazine on a preventive basis may have led to an increase in the drug-resistant carrier rate. For this reason, the drug is now used only after careful evaluation of the circumstances present at the specific installation. The military medical services have been engaged in research to discover other means of reducing the carrier rate, as well as in investigations of the organism and the manner in which

it produces disease. In these efforts the Surgeons General have the cooperation of the Armed Forces Epidemiological Board, a group of eminent civilian consultants.

I would like to assure you that we will keep this problem under constant surveillance during the current period, and that we will continue to press our research efforts toward an ultimate control technique.

If there is any further information which you desire, I shall be pleased to provide it.

Sincerely,

(Signed) **CYRUS R. VANCE,**
Deputy Secretary of Defense.

The Secretary of Defense deferred construction of 5,068 bachelor officer spaces out of a total of 5,700 authorized. Stated another way, he is proceeding with the construction of only 632 spaces.

The same reasons exist for the construction of bachelor officers quarters as for barracks. But the authorization was predicated on two additional reasons. First, either adequate quarters or a quarters allowance is required to be presented to officers. As shown in the justification presented by the services, many of these quarters were requested because of nonavailability of adequate quarters and quarters allowances are being paid. Second, there is a serious retention problem among junior officers particularly, and these junior officers are the ones who primarily occupy these quarters. Often, during the early years of service life, the decision as to whether to make the military a career is made. Being provided adequate quarters is a vital factor in making that determination.

Bachelor officer spaces deferred are as follows:

Service:	
Army.....	1, 632
Navy.....	824
Air Force.....	2, 612
Total.....	5, 068

Medical facilities

Army

Fort Devens, Mass., hospital..... **\$4, 794, 000**

This project is required as a replacement for a World War II mobilization type hospital which was erected in 1942. The existing hospital is comprised of 83 separate one-story buildings of wood frame construction. These buildings were dispersed because of the danger of fire. During the period of wartime shortages, when the hospital was constructed, inferior materials and equipment were installed. Many labor saving devices and/or systems were not included in the original construction although the hospital was spread out. This hospital was built to meet a mobilization requirement and facilities were provided accordingly, but now that the requirement has changed to a peacetime operation, only a part of the plant is utilized and many facilities now required were not included in the original construction. This situation has caused many difficulties in operation. Regardless of the amount of maintenance and improvement attempted, the basic structures cannot be changed and are a continual problem to keep in operation. Therefore, a replacement facility is urgently needed and a well-integrated hospital providing modern facilities is required. Upon completion of the proposed hospital, 316,058 square feet of temporary building space will be demolished.

Fort Bragg, N.C., dental clinic..... \$454, 000

This project is required to provide dental service for 12,000 of the 38,675 military personnel at Fort Bragg. This clinic will be located in the new barracks area. An average of 254 of the personnel assigned to this area require dental care each day. Under present conditions, these patients must travel 2.1 miles each way to the nearest temporary clinic for a total of 1,066 miles per day with a resultant loss of training time. Experience has shown that the farther a patient must travel, the greater the number of broken appointments, and the same distance precludes the rapid refilling of canceled time from survey rosters. As a result, highly trained professional men are left idle resulting in loss to the Army and the patients. Upon completion of a permanent 24-chair dental clinic, 1 temporary dental clinic, building No. M-T-5556 (7,662 square feet) will be demolished.

Navy

Naval Hospital Corps School, Great Lakes, Ill., barracks..... \$1, 139, 000

Six temporary, cantonment-type buildings were constructed in 1942 to serve as barracks or hospital wards during World War II. Hospital corps student personnel are crowded into barracks designed for use of fewer men or are berthed in hospital wards which lack the standard facilities normally provided in barracks such as reading and study rooms, adequate shower and toilet facilities, laundry facilities, etc. Proper maintenance has been hampered by lack of adequate funds and personnel, and rapid deterioration has resulted from severe winter weather. Continued repair of buildings has become uneconomically sound. Due to deteriorated floor joists and dry rot, which is present in all buildings, the dangers inherent in fire and safety hazards are ever present. The archaic steam heating system in the buildings is noisy and inefficient. Electrical wiring is unsafe and definitely inadequate for lighting suitable for student personnel. Plumbing is outmoded and requires excessive, continuous maintenance. Ventilation of the barracks is virtually nonexistent, and the existing undersized windows, when they can be opened, offer little relief during summer months. On the basis of 50 percent of the 40 enlisted staff personnel and 40 students per week for 17 weeks, there is an urgent requirement for standard barracks accommodation for 700 men.

Air Force

Turner Air Force Base, Ga., composite medical facility..... \$2, 443, 000

This project is required to provide complete base-level medical support for approximately 7,100 military personnel, including Navy personnel assigned to the USMC Supply Center and 12,295 dependents of active duty military personnel. The existing facility, constructed from 1942 to 1944, is professionally obsolete and not functionally adaptable to the practice of modern medicine. A medical plant of the proposed size will greatly assist in the accomplishment of the base and command mission by providing modern facilities for a medical and dental care program which is comparable to and consistent with those facilities provided in the medical complex of a progressive civilian community. A joint survey by the Department of Defense and the Bureau of the Budget made in this area indicates that local civilian community medical facilities are not available for dependents under

medicare and cannot assume the dependent workload. Therefore, the construction of a 55-bed hospital for both military personnel and their dependents is necessary. It will conform to the standards of the various professional commissions concerned with the accreditation of medical facilities. This project is essential, and if disapproved, the Air Force will be required to maintain a facility which is not adaptable to the practice of modern medicine. Upon completion and occupancy of the new facility, all buildings will be disposed of with the exception of two buildings, one permanent and one semipermanent, recently renovated.

Medical facilities which were authorized and funded in fiscal year 1966 which have now been deferred by the Secretary of Defense without consultation with any of the Surgeons General, are as follows:

Army	
Fort Devens, Mass., hospital.....	\$4, 794, 000
Fort Dix, N.J., dental clinic.....	620, 000
Two Rock Ranch Station, Calif., dispensary and dental clinic.....	211, 000
Fort Stewart, Ga., hospital.....	1, 887, 000
Fort Leavenworth, Kans., dental clinic.....	303, 000
Fort Bragg, N.C., dental clinic.....	454, 000
U.S. Military Academy, hospital.....	4, 930, 000
Fort Jackson, S.C., dental clinic.....	477, 000
Fort Hood, Tex., dental clinic.....	431, 000
Fort Belvoir, Va., hospital addition.....	1, 619, 000
Location 12, medical facility addition.....	406, 000

Navy	
MCAS, New River, N.C., dispensary.....	243, 000
NAD, Charleston, S.C., dispensary.....	307, 000

Wright-Patterson Air Force Base, Ohio, composite medical addition..	2, 509, 000
Brooks Air Force Base, Tex., medical science laboratory (alternate)..	177, 000
Prestwick Moa Air Force Detachment, United Kingdom, dispensary..	327, 000

Yet, in announcing the deferral, the Secretary of Defense stated that he was not deferring any projects which are "urgently required for safety, health, or other compelling reasons * * *." It is obvious from an examination of the justifications presented that the committee was not told the true facts at the time of the submission of the projects or that the statement of the Secretary of Defense does not correctly reflect the fact that no projects essential for health were affected by the deferrals. The evidence before the subcommittee suggests the latter.

But, again, the record speaks for itself. The following are extracts from the colloquy that took place between the subcommittee members and Dr. Shirley C. Fisk, Deputy Assistant Secretary of Defense (Health and Medical):

Question. I think the thing that concerns the committee most is that in deferring some of this hospital construction we may actually be cutting into health and medical services which are of a combat character and could supply assistance either to those who are wounded in the Vietnam fighting or to assume the normal military load that might have to be deferred in those specific hospitals that are handling the Vietnam casualties. I am wondering if you would comment on that.

Dr. Fisk. I could expand on that. In my opening statement, I stated that

those hospitals that were deferred are in the areas in which we have existing hospitals, with the same bed capacity, in fact a greater bed capacity than the hospitals which are being deferred. So, from the standpoint of operating beds, there would be no lessening of the number of operating beds or in the quality of care being given.

Question. We have a small summary here of the medical facilities that were deferred. You are suggesting that in the case of the hospitals the program that was deferred, the program that had been funded, was a program primarily of improving facilities and beds?

Dr. Fisk. No, sir. There were four new hospitals that were programed for the fiscal year 1966 program which were deferred. These were for Fort Stewart, Ga.; Fort Devens, in Massachusetts, the U.S. Military Academy at West Point; and Turner Air Force Base in Georgia.

In addition, as you have already been supplied by your counsel, there are other facilities, largely in the clinical and dental outpatient department, that were also deferred at that time.

In addition, also, there were some additions to Wright-Patterson, Scott Air Force Base, and Davis that were also deferred. These were additional bed programs for these hospitals.

Question. The new hospital then is an attempt to replace outmoded facilities with newer facilities?

Dr. Fisk. Older facilities, that is right.

Question. Obviously, they wouldn't have been regarded as necessary unless the existing facilities are inadequate, isn't that true?

Dr. Fisk. I wouldn't quite agree with your term "inadequate." I think they are outmoded and think this is the term that is proper, in the sense that they are less efficient to run than a new hospital would be. From the standpoint of patient care, I don't think the care would differ one whit regardless of the hospital in which it was given.

Question. Perhaps the nursing care, but if these facilities are outmoded, then the equipment is outmoded?

Dr. Fisk. No, the equipment is not outmoded, sir. I would differ with that. I believe that the buildings certainly are in some instances; as has been mentioned, some of them are World War II construction.

Question. You mean to say that some of these might be firetraps, for example?

Dr. Fisk. No, I didn't imply that, sir. I didn't say that.

Question. We on this committee, I know, have seen enough of the Secretary of Defense to realize that it is pretty hard sometimes to get any project past him, and when a project does get past and does get included in the budget and does get funded, there is a very strong reason, military reason for including it. I would assume that this had applied in each one of these cases. I don't recall all of them specifically. Therefore, deferring them certainly would seem to me to impair to some extent—I don't see how we can have our cake and eat it, too—impair to some extent the medical job that the military service should perform.

Dr. Fisk. If I may amplify the question that you have asked me a little bit, even if these hospitals that you mentioned here as being deferred were implemented as of now, in other words, authorization, financing, and construction began, we wouldn't have any bed capability to take care of patients for about a 2- or 3-year period. It takes about that long to construct and equip a new hospital.

Question. Of course, we are being told in the press that this is going to be a long engagement in Vietnam. Two or three years is one of the smaller figures that I have read. What about the hospital at Fort Devens, how is that? Would it be a fair statement to say that that hospital is a firetrap?

Dr. Fisk. I wouldn't be able to make an opinion, sir.

Question. I might read just for the record the line item justification that we were given last year with respect to this hospital in Fort Devens: "This project is required as a replacement for a World War II mobilization-type hospital erected in 1942. The existing hospital is comprised of 83 separate one-story buildings of wood frame construction. These buildings were disbursed because of the danger of fire. During the period of wartime shortages when the hospital was constructed, inferior materials and equipment were installed. Many labor-saving devices and/or systems were not included in the original construction although the hospital was spread out. This hospital was built to meet a mobilization requirement, and facilities were provided accordingly." They called in a lot of draftees in Fort Devens I remember in World War II. We are now stepping up the draft. Aren't a number of them likely to be going to Fort Devens?

Dr. Fisk. Do you mean to the hospital or to Fort Devens for training? I didn't understand your statement.

Question. Aren't we actually impairing the medical facilities available to the overall defense of the country, including Vietnam, if we are not providing to those inductees who are coming in to serve in Vietnam what would seem to be a minimum type of medical facility, one that is clearly a firetrap?

Dr. FISK. I may differ from you somewhat in what you include in medical care. I am speaking about the actual care that can be rendered to the sick soldier at Fort Devens Hospital. I think that the care that can be rendered him there is just as good care now as it would be 3 years from now in a new facility. On the other hand, I would have to agree with you that the new facility would be more efficient to run, would certainly offer more comfort and shall we say grace to the soldier in having the bed there than would the Fort Devens present construction. On the other hand, I think the type of care that can be offered is exactly the same.

Question. I notice there is not a large number of dental clinics here. Does this mean that it is the judgment of the Department that dentistry is not as important a part of medicine as medicine itself?

Dr. FISK. I would not agree with that at all. I think dentistry is a very important part of medicine, of the general medical care of the entire person.

Question. But you can safely let your teeth go a little bit longer than you can hardening of your liver?

Dr. FISK. I don't want to be facetious, but at least you can buy new teeth and you can't buy a new liver. These are new dental facilities, new chairs, new equipment. They have old clinics there at the moment. They are all replacements or additions to existing clinics.

Question. This may be the case, but it might have had repercussions if it was thought that this was the official Defense Department position?

Dr. FISK. No, this is not the official position.

Consider, also, the following colloquy which took place during the subcommittee hearings:

Question. These hospitals are needed. I went in hospitals from Vietnam to Japan, to Clark, to Guam—at Clark, I went in the new hospital there at 6:30 in the morning. The old hospital which they abandoned was loaded with people because they had no other place to go. There wasn't room at the inn, in the words of the Bible.

Mr. VANCE. Mr. Chairman, with respect to construction related to Vietnam in the hospital field, we are proceeding with all of that construction which has been requested.

Question. You might need a hospital in Bangor, Maine; you may need one in Florida. I went to the Great Lakes the other day under great difficulties, and that hospital there has many, many Vietnam casualties in it. They are liable to be in any of our hospitals. We need the hospitals.

And observe also the following:

Mr. VANCE. In the southeast Asia supplement we have hospital provisions at Hickam and Johnson. I believe you need the whole picture on this, so let us provide you a witness that can give you the whole picture.

Question. I would like to pursue this hospital question a little bit further. Mr. Secretary. I noted your comment a little while ago that it would be a completely false implication if we were to conclude that the level of medical care for the men in Vietnam would be lower because of this decision that you and Secretary McNamara have jointly made.

First of all, let me say there is no question in my mind that you sincerely believe what you say and I wouldn't want to leave the implication that you are knowingly sacrificing the health and welfare of these boys. I don't mean that at all.

But if you came in here last year and you justified all of these requests for hospitals and hospital beds on the basis of what the Department said was a "bare bones" requirement, and if the number of men in the Military Establishment has markedly increased since that time and the need for medical care has markedly increased due to the battle casualties—how can you reach any other conclusion except that even though maybe the medical treatment may not have deteriorated that the overall level of care that you are able to provide is lower than it would have been except for this decision? If these deferred facilities were essential with a lower level of activity last year and we have increased the level of activity, how can you conclude anything else except that you have degraded the level of care which could be offered?

Mr. VANCE. I would like very much to speak to that question.

First, let me say with respect to those fighting in southeast Asia that I have talked to the Surgeon General of the Army who has visited out there recently. He tells me that there has never been in his view as good care of our boys as they are receiving out there now.

It is a fantastically good job which is being done in the medical service in treating people in the battlefield as casualties and bringing them back to the hospitals.

Question. Is he comparing it to World War II or the early part of Vietnam?

Mr. VANCE. He is comparing it to World War II.

With respect to the second part of your question, the facilities which were asked for were primarily replacements, and, therefore, they are not time urgent, and therefore it is possible to give the care even for the increased number of people that are required.

Question. Let me, from a very, very brief experience and one which admittedly is the experience of a novice, say that what you said earlier in your reply to me about the level of care being provided in Vietnam is absolutely true. We were privileged to spend a little while at Clark Air Force Base Hospital, and we were told that some of the splints, some of the tractions which were applied out in the field hospitals were so good that it wasn't even necessary to take them off before the men were sent back to the States. It is very good; it is excellent. There are a lot of reasons for that: improved technology, dedicated service, the fact that we have control of the air and can do things out in the open that you couldn't have done in World War II. There are a lot of reasons for it. But that isn't the question. Could the level of care be better? is the significant question. Now, I am going back to one hospital again, and I don't say this is typical, maybe it is or maybe it isn't, I don't know. But there is a 300-bed hospital at Clark Air Force Base in the Philippines with 250 admissions every night. Now, can we conclude without any doubt or hesitancy whatsoever that having to get people in one day and out the next, that we don't need more beds back here and that that doesn't have an effect on the medical care given to those fighting in Vietnam?

Mr. VANCE. Let's take Clark, for example. There is \$2,800,000 for additional hospital facilities at Clark in the supplemental bill as I recall. Actually, that is in the 1966 budget.

Question. How many beds will that be?

Mr. IGNATIUS. It is described in the line item as a composite medical addition. I think witnesses from the Air Force will have to speak more precisely as to the number of beds involved.

Question. The point I am trying to establish is that this is a hospital where they are given temporary treatment and they are shipped back to the United States as quickly as possible. Some of them are sent to San Antonio, some of them are sent to various hospitals all over the country. If you put a stopgap in that flow of patients as you are doing by deferring hospital construction in this country here you are bound to affect what is happening out there. I am not trying to contradict you, Mr. Secretary. I am just merely trying to ask you perhaps to qualify your statement a little bit and not be so firm in saying that the implication that medical care has been degraded by your decision is absolutely false.

I think you ought to admit that the overall capability is bound to be reduced because of this decision, and we need this capability now more than we ever needed it.

Mr. VANCE. I am not prepared to admit that. We are going forward with the items which we consider necessary, and there are a number of them. Letterman, Oakland—

Question. Some of them must not have been necessary last September.

Mr. VANCE. They were desirable; highly desirable, no question about it, but not vitally necessary at this particular moment in time.

Question. Highly desirable in the case of a hospital indicates that it is highly desirable for the care of patients. That is what a hospital is for. You have got more patients now than you have ever had before. Certainly the care of a patient is something above being desirable: it is essential. It certainly is to the patient. I am just raising a question that maybe this had to happen, but when you start talking about health or safety projects, there just isn't any justification whatsoever for the cutback of a hospital when we are at war. I know we have a difference of opinion. I am not going to try to pursue it any further.

*Messhalls***Navy**

Naval Air Station, Memphis, Tenn., messhall..... \$1,490,000

NAS Memphis supports the Naval Air Technical Training Center, a Naval Air Reserve training unit, and other smaller tenant commands providing messhall facilities for the assigned enlisted personnel. A messhall is required to support station barracks complement. Based upon an enlisted population of over 13,557 men, barracks space is required to house an average of 10,636 men. A 111,678-square-foot messhall is required to serve this complement (10.5 square feet per man \times 10,636). The existing facilities consist of one 4,000-man permanent-type building, one 2,500-man temporary building, and a portion of a temporary building used as a CPO mess (closed), both temporary structures of World War II construction. The latter two buildings are substandard from a sanitary, safety, maintenance, and operational standpoint. The operations in these buildings are seriously hampered by the lack of meat-preparation rooms and undersized, inefficient refrigerated spaces. Rehabilitation and modernization estimated to cost \$497,000 is now required. Even by retaining all of the existing facilities a deficiency of 23,659 square feet would remain; therefore, this item proposes to construct a standard design 4,000-man facility of 43,723 square feet to provide the additional space required and reduce the load on the existing substandard and inefficient facilities.

Air Force

Pope Air Force Base, N.C., airmen dining hall..... \$267,000

This project is required to provide adequate dining-hall facilities to feed all of the airmen assigned to this base. When completed, this project will replace an existing substandard World War II dining hall, constructed 1941, that has exceeded its life expectancy and is beyond economical repair. The floors in these buildings have deteriorated, due to rotting and buckling, and the design is not functionally adequate for either dining or food preparation. This project contributes directly to the health, welfare, and morale of the personnel, and unless constructed, the mission will continue to be adversely affected.

The subcommittee feels that service personnel deserve something better for messhalls than fire-hazardous buildings which are unsanitary and are substandard from a safety-maintenance and operational standpoint. The members believe now, as they did at the time of the original authorization, that proper messing facilities are vital since they contribute directly to the health, welfare, and morale of the personnel at these bases.

COMMUNITY SUPPORT FACILITIES*Chapels***Army**

Fort Lee, Va, chapel center..... \$700,000

This item is required to provide a chapel center to accommodate military personnel and their families. The post military population is 7,344 and has a total population of 14,057 military, civilian, and dependents. At present, temporary mobilization structures, built in 1941, are utilized. The post chapel has a seating capacity of 240.

The religious education facilities accommodate approximately 800 persons. The religious education facility is approximately 1.5 miles from the post chapel which is 1.4 miles from the family housing area. In these buildings, classrooms are divided by improvised partitions, having insufficient lighting because of the number and placement of fixtures; heating system utilizes soft coal, buildings were classified as fire hazards by the fire department. If this facility is not approved in this program, military personnel and their families will continue to attend worship services and religious education programs in unsafe and widely dispersed buildings. Upon approval of this project, three buildings: T-10100, T-10202, and T-10203, totaling 32,960 square feet, will be demolished.

Navy

Naval Radio Station, Sabana Seca, P.R., chapel..... \$229, 000

This station is in an isolated location, and religious services in English are held in San Juan, 17 miles distance from the station. Facilities for religious services are required for the programed population of approximately 1,241 persons consisting of 531 military, 66 civilians, and 644 dependents.

The present chapel is located in a temporary wood frame structure, 2,400 square feet in area, built by conversion of an ammunition loading platform constructed during World War II. A Sunday school education facility does not exist.

Upon construction of this new chapel, the present chapel will be converted to a Sunday school facility.

Air Force

Shemya Air Force Station, Alaska, base chapel..... \$525, 000

This project is required to provide an adequate religious facility at this remote station. The chapel was destroyed by fire in 1960. The religious needs of approximately 1,100 persons are being met in a 30- by 45-foot room and two small offices in the service club. This subtracts from an already undersized service club and the club activities, game room, music room, radio-record player, hobby shops must stop during religious services. Two Protestant and two Catholic services are held each Sunday. The chapel seats 48 on individual chairs. Approximately 100 persons attend each service; the overflow personnel must either stand or kneel on the floor. The altar is inadequate for serving the sacraments and for proper ministering of services. There is no confessional or sacristy. Office space is shared by the chaplains and their assistants. The assistants must be excused during periods of personal counseling, thus disrupting their work. There is no space for storing the chapel equipment and supplies. The lack of adequate chapel facilities on this remote and isolated station has created a double morale problem. The assigned chaplains cannot properly meet the religious needs of the personnel, and for much of their Sundays the use of the service club is severely restricted.

*Schools***Army**

Fort Buckner, Okinawa, elementary school..... \$2, 197, 000

This item is required to provide a typhoon-resistant dependent grade school (grades 1 through 6) in the Machinato/Naha family housing area for 1,650 students. The enrollment of 3,875 students as of September 1964 is being accommodated in the following facilities: 980 in Sukiran permanent elementary school, 120 in temporary facilities at Sukiran Elementary School, 1,800 in 2 temporary quonset-type huts in Camp Mercy, 346 in high school barracks at Naha Port, and 539 in Air Force schools at Kadena and Naha. The barracks at Naha Port now used for school facilities are needed to provide housing for the combat troops currently occupying delapidated quonset huts in Camp Kue. The projected enrollment by fiscal year 1967 is 4,470. The student capacity of 2,900 in existing Army facilities for grades 1 through 6 indicates a deficiency of 1,570 spaces by fiscal year 1967. The 2,900 existing spaces include 1,920 in temporary quonset-type huts which qualify only as substandard and the continued use of these inferior facilities deprive Army dependent children of even the minimum facilities provided in the most austere elementary schools in the United States.

Air Force

RAF Lakenheath, England, dependent school..... \$761, 000

This project is required to provide adequate classroom space for an estimated 1,080 elementary school dependents. The existing elementary school was completed for the SAC mission in September 1959. With the sudden influx of high school students from Bushy Park and other closed schools this building had to be used for junior grade high school activities. World War II Nissen-type huts on site No. 7 were converted for elementary school use. These buildings constructed in 1941 of sheet iron for an expected 10-year lifespan, adapted for Army dormitory space in 1950 and subsequently vacated in 1956. These buildings are used by 22 to 30 pupils each, comprising 575 square feet each. Without the construction of this proposed addition, the school will have to continue with the existing sheet iron huts, involving excessive repair and repainting costs and continued overcrowded unsatisfactory conditions.

*Commissaries***Army**

USASA location 12, Japan, commissary..... \$123, 000

This item is required to serve all U.S. personnel based on Hokkaido who are authorized commissary privileges. The need is now being met by use of former U.S. Air Force facility at Chitose I Airbase (4 miles away) which is scheduled for return to the Japanese Self-Defense Force. If this item is not provided, existing building will be retained. No buildings exist or are scheduled to become available which may be converted to meet this requirement. This item was planned as part of a community building, including the commissary, post exchange, post office, and bank. The commissary portion was deferred from the fiscal year 1962 MCA program; the balance of the community building was authorized and funded.

Four hundred and twenty-one families (over 1,500 personnel including dependents) of 3 services, State Department, Red Cross, and Foreign Broadcast Information Service will be served by this commissary in a remote location.

Navy

NAS, Barbers Point, Oahu, Hawaii, commissary..... \$267, 000

The commissary store at this station serves a base capacity of approximately 7,700 military personnel. These personnel account for 75 percent of the sales and Army, Air Force, and Navy personnel residing in the area provide the remaining 25 percent. The present commissary store is a conglomeration of quonset huts and wooden lean-to type structures located 17 miles from the nearest commissary store at Pearl Harbor. The wooden sheds represent a constant fire hazard. The cracks, holes, and openings throughout the quonset huts make the presence of bugs, rodents, and flies an extremely difficult sanitation problem. This constitutes a serious health hazard. Temperatures frequently exceed 100° in the uninsulated metal quonset huts and result in large losses of food products. The extremely high temperatures are demoralizing to the customers and employees.

The refrigerated storage boxes are old, inefficient, and badly deteriorated, requiring constant costly upkeep and repair. The insulation material of these boxes is wet and rotten, and waste food particles and dirty water are entrapped in the deck insulation causing an extremely unsanitary condition.

Air Force

Suffolk AFB, N. Y., commissary..... \$188, 000

This facility is required to replace several interconnected World War II buildings presently being used for the commissary. The existing facility of 7,981 square feet is inadequate, substandard, and deteriorated beyond economical repair. Compressor units for the refrigerators are located in six different sections of the structure. All units are hampered by the lack of proper cooling facilities. The numerous additions and changes to the buildings throughout the years has created a fire hazard and increased the maintenance problem. Despite strong measures, rats and vermin still infest the buildings creating a health problem and losses by chewing into boxed grocery items. The sales store occupies an area of 4,648 square feet. This size is normally sufficient to support sales from \$30,000 to \$35,000 per month. During the past 6 months, commissary sales have averaged over \$76,000 a month. No adequate facility exists on base which can be altered for this function. If this facility is not provided the base personnel and their dependents will continue to shop from limited food stock, narrow congested aisles, and encounter long waiting periods at the checkout counters. Existing building will be disposed of.

The subcommittee believes that community support facilities are vital whenever we send service personnel to distant lands or remote stations. Chapels, schools, and commissaries are as essential as adequate housing and medical facilities. The deferral of these items is in the opinion of the subcommittee, a grievous mistake.

*Utilities***Army**

Watervliet Arsenal, N.Y., sewage system..... \$1, 713, 000

This project is required to provide industrial waste collection and treatment facilities to preclude contamination of the Hudson River. Arsenal operations result in acids, oils, and other contaminants being emptied into storm sewers and then into the river, which is contrary to Federal and New York State antipollution laws. Rehabilitation and extension of the storm sewer system is also necessary to overcome flooding of roads and shop buildings during heavy rainfall. Storm sewer capacity has not increased during the past 20 years despite additional building construction and paving. If this project is not approved corrective action will not be possible.

Navy

Naval Shipyard, Portsmouth, N.H., sewage treatment..... \$2, 000, 000

The States of New Hampshire and Maine have enacted pollution control legislation which requires that municipalities and industry within the Piscataqua River and its tributaries and watershed have treatment facilities installed and in operation prior to October 1966. To comply with Executive Order 10014 the shipyard must meet the State controls imposed upon the civilian population and industry. This is required to comply with State programs for abatement of pollution of inland waters caused by dumping untreated human and industrial wastes directly into river waters. The present shipyard system is a combined sanitary and surface drainage system using approximately 37 individual outfalls dumping into the river around the island perimeter at the most convenient locations. If this is not completed a direct violation of the Executive order will exist and the effect of the antipollution measures adopted by the States of Maine and New Hampshire for the Piscataqua River and attendant tributaries will be compromised.

Air Force

Robins AFB, Ga., electrical power facilities..... \$36, 000

This project is required to provide electrical power to operate mobile vans and trailers containing communications and electronics equipment attached to the 5th Mobile Communications Group which was activated July 1, 1964. The power called for in this project will be installed in storage lot No. 43, which is used by the 5th Mobile Communications Group for security storage and testing of these vans and trailers. Continuous power is required to the filaments and to apply sufficient heat to fight corrosion. Auxiliary power units will have to be used until the project is complete. The use of auxiliary power units is neither economically feasible nor productive to the units mission, because extra wear and tear will be placed continuously on power units that are expected to be the primary source of power when deployed in the field. Auxiliary power units require much more service, maintenance, and refueling than primary power. Failure to provide this project will necessitate the continued use of mission auxiliary power units which would not be in a state of readiness when scheduled for deployment.

The subcommittee believes that the Military Establishment is duty bound to follow the State antipollution laws. Therefore, projects for utilities were authorized and funded by the Congress last year. Failure to construct these projects will result in a continued violation of State pollution control legislation. We think this is not only contrary to the wishes of Congress but it is also contrary to the President's program on cleaning up American streams. The subcommittee abhors this disregard by the Military Establishment of both Federal and State legislation.

FAMILY HOUSING

One area of tremendous concern to the committee was the deletion of all the family housing authorized and funded by the Congress last year. Again, let us review the statements made by the Department of Defense witnesses and the service representatives in justifying their request for 12,500 houses. The Assistant Secretary of Defense for Installations and Logistics told the committee:

Title V of the bill contains the authorization for the new appropriation required for the military family housing program. Although this is a military construction authorization bill, the costs of all components of military family housing are reflected in order that the committee may review and authorize this program as an entity.

For construction-related functions, we are requesting authorization for appropriation of \$245.9 million. This includes cost for construction of 12,500 new family units, improvements to adequate quarters, minor construction, construction of trailer court facilities, and planning.

For support of our existing housing inventory, and other support costs, we are requesting authorization for appropriation of \$489.7 million: These costs include operating expenses, leaving maintenance, payments of principal and interest on mortgage debts incurred, payments to the Commodity Credit Corporation, and servicemen's mortgage insurance premiums.

Thus, our total request for authorization for appropriation for military family housing for fiscal year 1966 is \$735.6 million.

Beginning in fiscal year 1964, we embarked on a 5-year plan to construct 62,100 family housing units in order that we could clear up the outstanding deficit of housing. The Congress, in the recent past, has not supported this program at the requested level. In lieu of our request for 12,100 units in fiscal year 1964, only 7,500 were funded. Last year the Congress funded only 8,250 units as opposed to our request for 12,500 units.

This committee reviewed our 5-year plan during the fiscal year 1964 hearings and agreed that a requirement for 62,100 units was valid. We have continued to review these requirements on a semiannual basis and our most recent analysis of our needs indicates a deficit of 49,000 units. However, the committee in its earlier review of the program felt that it would be more appropriate to accomplish the housing construction program on a 6-year basis rather than the proposed 5-year basis and accordingly authorized only about 10,000 units per year for the last 2 years.

In view of the level of funding for new units that the Congress has approved in the past 2 years, it is now apparent that it is impossible, without a "crash" building program, for the Department to obtain its objective within the original 5-year program. We have always felt that the best solution to the family housing program was an orderly annual level of construction. With this approach in mind, we have again requested a new construction program of 12,500 units for fiscal year 1966. A continuation of this annual level over the next several years will allow us to fulfill the original outstanding deficit in 6 years rather than the 5-year plan originally proposed.

The Deputy Assistant Secretary of the Army for Installations and Logistics stated:

In past years your committee has recognized the need to improve housing conditions for the Army and your authorizations have, at many locations, improved the deplorable conditions that have existed for many years. There continue, however, to be many instances where lack of adequate housing results in sep-

arated families. Other families, due to their eagerness to be together, are living under substandard conditions or are paying excessive costs.

As of 30 June 1964, our worldwide family housing requirements totaled 314,232 units. This excludes families of military personnel in grades not eligible for public quarters or assigned to duty where military quarters are not normally programed. After considering community support, existing and approved military housing and planned changes in strength, there are still 58,000 Army families who will be unsuitably housed. Our 5-year plan for coping with this situation calls for the construction of 11,290 units. It is anticipated that most of the remainder will be housed through our leasing and rental guaranty programs, and more especially through an expansion of what the private communities can provide.

Our request for 2,470 new housing units located at 13 Army locations is a very modest program when compared with the large existing deficit. We believe enforced separation and families living in substandard conditions contributes to lower morale and is a prime factor of dissatisfaction among Army families, thereby causing many good military personnel to leave the service.

The Deputy Assistant Secretary of Defense for Family Housing testified before the committee as follows:

In the realm of private support, many of the service families have been able to find satisfactory housing. However, we have concluded it is not reasonable to expect these servicemen to be forced to purchase homes in order to provide shelter for their families and as a consequence we do not classify "for sale" housing as a potential solution for the military family's housing problem.

We do not believe that the military family, which is subject to the call of their Government for reassignment every 2 or 3 years, should be required to assume the risks of homeownership which many people with an occupation that provides a more stable location readily assume. Accordingly, we consider only vacant rental housing as available for potential occupancy by military families when we survey a community. Naturally, if a military man chooses to purchase a house, we have no objection, and he is classified as being adequately housed.

Mr. Chairman, we attempt to utilize the community to the greatest extent possible. In fact, we prefer that the greater portion of our people live in the community. Our reliance upon the community is, of course, subject to several necessary exceptions.

First, there are certain military personnel who must live on base because of their military responsibilities.

Second, in many instances because of the remoteness of our military installations, there is little or no community support available.

Third, there are situations where either the quality of the community support, its location, or its cost create a distinct hardship for military personnel, and it becomes necessary to help alleviate these hardships.

It is these exceptions which cause us to have a sizable annual housing new construction program.

In the bill before you, we are requesting authorization for 12,500 new family housing units. This is about the same level that we have asked for in the past few years. The committees have not been able to support our total requests in the past, and we fully recognize that there are valid reasons from their point of view which have necessitated their position on the matter. We do hope that conditions will be such that we can gain approval this year for the allocation of resources which the Department believes is necessary.

We feel that there are three basic reasons why the Government should see that the military forces are adequately housed.

The first of these is that decent living conditions create a better professional military man—with his mind at ease regarding his family problems, he is better able to devote his entire being to his military mission. Although I am sure that we all can cite instances where a commendable performance by a military man was accomplished under adverse personal conditions, I think we would all agree that it is better if the men responsible for controlling our complex and sophisticated modern weapons systems are not beset with anxiety over their family's housing conditions.

Secondly, we feel that the Nation has an obligation to provide decent living conditions for the family of the military man who has pledged to risk his life for the common defense. We feel that adequate housing for his family is a small price to help pay for this type of dedication.

Thirdly, decent living conditions make a military career more attractive—it assists the military forces to retain qualified personnel in competition with higher paying civilian careers.

Capt. J. M. Marshall, head of the Family Housing Branch, Shore Activities, Development and Control Division, Department of the Navy, informed the committee:

The most recent Navy worldwide housing survey revealed that there are still some 85,000 eligible Navy and Marine Corps families unsuitably housed. This situation is detrimental to morale and effectiveness of our operating forces.

It is both unreasonable and unrealistic to expect peak performance of our military men when they are continually faced with the inability to provide suitable housing for their families at a price they can afford to pay. Retention of career personnel is being seriously affected by the lack of adequate family housing accommodations.

Adequate family housing and family security play a most significant role in the Navy when considering the amount of time our sailors and marines spend at sea or in deployed units overseas involving long separations from their families and loved ones. If these needs are not met during this separation, you can be assured that the welfare and well-being of their families will be uppermost in their minds, and that this cannot help but compete with their attention to military duties.

This year's program was specifically developed to meet our most critical housing needs in areas where immediate attention is most urgent. New construction is being proposed at those hard core installations where the lack of adequate housing for our Navy and Marine Corps families presents a continuing problem.

We are recommending the construction of 5,040 units at 21 Navy and Marine Corps installations. I have personally reviewed the housing requirement at each installation for which new construction is proposed, and have made onsite inspections at many of these locations to confirm our housing requirements and deficiencies.

When Secretary McNamara appeared before the committee last year on the subject of military pay bills, he stated:

Mr. Chairman, on the public works, if I may digress one second, I hope that our bill isn't cut, but if it is cut I hope, as I believe you do, that we will cut something other than this family housing. This has been a problem. This committee more than any other committee of Congress has recognized it as a problem. I think it is absolutely essential that we authorize those 12,500 houses we put in there, and I am willing to take a cut anyplace else in public works than that.

Yet, the Deputy Secretary of Defense, appearing on hearings connected with the deferral of construction, stated:

With respect to the family housing program, we concluded that the 8,500 units authorized and funded in fiscal year 1966 should be deferred. In announcing this decision to the press on December 20, the Secretary stated: "The decision on realignment of the military construction program, particularly as it affects military housing, was a most difficult one to make."

As each of you knows, Secretary McNamara has personally supported the military family housing program to the fullest extent possible. He and all of us in the Department are grateful to this committee for the support it has given to family housing. At his press conference on the 20th of December, the Secretary stated: "I don't want the action that we're taking today to, in any way, indicate a lessening of our interest in or support of the program, but rather a recognition that under today's circumstances there are many things we would like to have which we don't absolutely need for the short run and which, therefore, can be postponed."

To alleviate the impact of the deferral of the family housing units, we plan to request the Congress to support a greatly expanded leasing program for the coming year, that is, 6,075 units in addition to the 7,000 previously authorized.

Again, let us look at the record.

During these hearings, the Deputy Assistant Secretary of Defense for Family Housing, told this subcommittee:

1. Primary reliance is placed on use of adequate private rentals in the vicinity of military installations.

2. Onpost housing is programed only where required by military necessity or where there is a lack of adequate community support.

When asked the question "Since you depend primarily on housing facilities in local communities and you program housing only on the premise that adequate rental facilities are not available, how will the additional leasing authority which you plan to request in fiscal 1967 alleviate your current problem?" Mr. Reed replied:

We carefully selected the locations, Mr. Chairman. Basically it will enable the Government to lease units which are too expensive for the individual servicemen.

But again, from a review of the record, we find that in most instances, the plans of the Defense Department are not in accord with their previous request for family housing. And even more startling is the fact that approximately one-fourth of the proposed leasing program which will be requested is for locations which were specifically denied family housing by the Congress last year.

The conference report of last year contained the following language:

FAMILY HOUSING

A. The House authorized 12,300 units of family housing and the Senate approved 10,930 units, but placed a limitation of 8,000 units that can be built out of the number authorized. The Senate denied housing at Fort Myer, Va. (120 units); Fort Belvoir, Va. (300 units); naval complex, District of Columbia (300 units); Bolling Air Force Base, District of Columbia (300 units); Andrews Air Force Base, Md. (250 units); and Keesler Air Force Base, Miss. (100 units). Both the Senate and House were adamant in their position on family housing. Ultimately, however, the conferees agreed on the following compromise; 11,180 units of family housing authorized, including 250 units at Andrews Air Force Base, Md., with a limitation of 9,500 on the number of units that can be built. All other projects which were specifically denied by the Senate were deleted.

Yet, the Department of Defense now proposed, if the leasing authorization is granted, to lease 150 units for Fort Myer, Va.; 150 units for Fort Belvoir, Va.; 300 units at the naval complex, Washington, D.C.; 300 units at Bolling Air Force Base, District of Columbia; and 200 units for the naval complex, Johnsville, Pa. A project for 200 units of family housing at Johnsville, Pa., was denied by this committee last year.

The original request by DOD, the allocation of DOD, and the proposed allocation of leased units follows:

Housing request by DOD for fiscal year 1966 (12,500 units)	Units	8,500 housing units authorized and funded; allocated by DOD as follows:	Allocation of leased units if leasing program for 6,075 is approved

It is apparent on its face that the proposed leasing program not only will not fulfill the housing deficit at the specified location, but is in direct defiance of the expressed will of the Congress as shown in the conference report.

Even if the leasing program is authorized, it will provide 2,400 fewer houses than the postponed program would—6,075 units of family housing as against 8,500.

But can leased housing be found? For one thing, the law limits the Government outlay to an average of \$160 a month in rent to a top of \$180. More important, can the houses be obtained at nearly any price? It is in just these areas where housing of all types is in short supply that the military housing was to have been built.

The sentiment of the subcommittee is expressed in the comments taken from an editorial in the *Journal of the Armed Forces*, which appeared on January 1, 1966:

The action—regardless of the mounting costs of supporting the war in Vietnam—is impossible to reconcile with Secretary McNamara's previous stand. If the services required the housing on an "urgent" basis just a few months ago, the urgency is not dispelled by the war.

Secretary McNamara says the deferred family housing projects although necessary and desirable, can be undertaken at a later date without impairing military operations or effectiveness.

The nonsense of this statement is all too apparent. It is obvious that the Secretary is merely trying to put the best face on an awkward situation in which he has either decided or been told to cut costs whether he deems them wise or not.

He must know, as others do, that morale has an enormous impact on military operations and effectiveness, and that the housing cutback is as damaging a blow to morale as any action that could have been taken.

Surely, members of the Armed Forces should not have to fight the war in Vietnam, suffer the privations and discomforts of the war, be crippled or die in combat, and have to pay for the privilege by giving up decent living quarters for their families.

EFFECT OF DEFERRALS ON TRAINING PROGRAM

The subcommittee believes many of the deferrals have a direct effect upon troop preparedness for combat, and this is despite the statements made by the departmental and service witnesses.

Examine the following colloquy which took place during the hearing between a subcommittee member and Dr. Brooks, Assistant Secretary of the Army for Installations and Logistics:

Question. Let me read here, for example, from the justification for the dental clinic, 24 chairs at Fort Bragg; this project is required to provide dental service for 12,000 of the 38,000 military personnel at Fort Bragg. Under an average of 254 of the personnel assigned to this area required dental care every day. Under present conditions these patients must travel 2.1 miles each day to the nearest temporary clinic for a total of 1,066 miles per day, with a resultant loss in training time. Experience has shown that the farther a patient must travel, the greater the number of broken appointments. As a result, highly trained professional men are left idle, resulting in a loss to the Army and to the patients.

Doesn't this suggest an impairment in the training that is being provided if they are going to have to travel 1,066 miles instead of a lesser number of miles every day?

Dr. Brooks. If I may, I have with me General Shuler, with whom I am sure you are familiar, the Director of Installations, who is prepared to deal with the specific questions that you have on individual installations.

Question. I have asked a question here. This is your own statement, Mr. Secretary. If you are going to impair the effectiveness of a training center, and we are going to be in this operation for a long time to come—I do not think there is any doubt about that, this isn't just a one-shot deal where we only have to be concerned with the powder that is in the magazine on the line in Vietnam, we are

going to have to be concerned with a whole lot more the way we are drafting people and going to continue to draft them. Isn't the effectiveness of the areas in which those men are trained just as much a matter of combat readiness and capacity as how many guns that you have actually got out on the line in Vietnam?

Dr. Brooks. I don't believe, sir, that the effectiveness is impaired, although I agree that the efficiency with which the operation is conducted—training, housing, or others—may well be. That is, it may take more costs; we may have more people required to do the job than we would if we had an efficient installation. We still manage to provide the same training; we manage to provide the same medical care in this case, although it is less efficient to do so this way.

Question. There are only so many hours in the day, Mr. Secretary. If an enlistee is going to have to spend 3 hours a day getting his teeth fixed instead of 45 minutes, that is 2 hours and 15 minutes time that could be spent in training. That is going to impair his training, isn't it?

Dr. Brooks. No, sir; I do not believe that is necessarily so.

Question. You think you can take 2 hours and 15 minutes out of the day and it doesn't make any difference? You really don't believe that, do you, Mr. Secretary?

Dr. Brooks. Well, sir, there are other ways often in which this deficit can be made up.

Question. If because of the outmoded character of the installation you are going to reduce the scheduled training by a specified factor—I have just taken this number out of the air obviously—but let us assume that this is the situation, this is going to impair the resultant training? I don't see how you can have any other answer, can you?

Dr. Brooks. I have tried to give you the answer, as I see it, sir.

Question. Let me put it again: Suppose we have a base X where, because of outmoded facilities, the assigned training time is reduced by 3 hours. Isn't this going to mean that you are going to have less efficient training than you would have if you had a facility where the training didn't require this cutting into the training time?

Dr. Brooks. Less efficient, sir, perhaps, but not necessarily less effective in the sense of producing a trained soldier.

Question. Mr. Chairman, I don't want to take time if we have other witnesses, but this seems to me to be completely incredible. I can remember what happened at the time of the mobilization of World War II. We had people coming into Fort Devens and a lot of other places, where we weren't equipped to handle them, and the resultant was a lack of proper training. This was probably understandable. We hadn't been as prepared as we are now, but it seems to me that it is ridiculous to argue that something that may impair the efficiency of the training at one of our bases in this country doesn't impair our ability to defend ourselves in Vietnam. If these new recruits are going to go through this kind of a procedure and are going to come out of Fort Bragg, or out of Devens and go out to Vietnam under these conditions, I don't think they are going to be as good soldiers as they would be if they came out of something else. I don't think the Army would have included this recommendation in the 1966 budget if they didn't think the same thing.

I wonder whether maybe this is the kind of an item that should have been retained, and something else perhaps dropped out.

BUDGETARY CONSIDERATIONS

During the hearings, the Deputy Secretary of Defense insisted that there was no ceiling imposed by the Bureau of the Budget upon defense spending and that no ceiling or predetermined amount was set for the deferral program. The record shows:

Question. While you were answering Mr. Bennett's questions, I went over your statement again and I tried to condense the reasons for your decision into just a few words. I think maybe I have found the key sentence. Tell me if I am correct. It is on page 2, the third line from the bottom: "The magnitude of these costs, coupled with the signs of developing inflationary pressures * * *" In a nutshell, aren't those the two reasons?

Mr. VANCE. They are, and particularly the rising inflationary pressures as I expanded upon in answer to Mr. Bennett.

Question. Could you give them an order of priority?

Mr. VANCE. Yes; the rising and developing inflationary pressures was at the top.

Question. I have asked a question about that already, so I won't go into that, but I believe in the questioning you stated that budgetary considerations and the fact that you did have a shortage of money and the Government had a financial problem, didn't enter into the decision; is that right?

Mr. VANCE. Let me repeat what I believe I said previously. I said that as we put together the fiscal year 1966 supplemental and fiscal year 1967 budgets, saw the size of these budgets, saw the signs of increasing inflationary pressures, and recognized what these additional expenditures would do insofar as increasing inflationary pressures, we concluded that we should do two things: (A) spend every nickel that was required to preserve and improve our combat readiness, and (B) defer such items as were not time urgent.

The hearings disclosed that the line items to be deleted were determined in the Department of Defense, and then were submitted to the service Secretaries for concurrence as shown by the following colloquy:

Question. One other question, Mr. Secretary. As I understand it, you submitted a list of deferrals or deferred projects to each of the service Secretaries and that if they have one of these projects under contract, they came back and told you so, and that the deferral was adjusted accordingly. Were there any other deferrals made after conferences with the service Secretaries for reasons other than the fact that the project was under contract?

Mr. IGNATIUS. The bulk of the changes were for projects that were actually under contract. For example, all of the changes that were suggested by the Air Force were projects that had already been awarded or were just about to be awarded which we didn't have knowledge of until we got information from the field.

In the case of the Army, out of some 45 suggested changes, about half had to do with contracts that were already awarded or about to be awarded, and the same percentage applied in the Navy. About 50 percent of the Navy changes, some 15 out of 28, had to do with contracts already awarded or just about to be awarded, bid openings and that kind of thing.

Question. Is it safe to say, then, that after the list had been referred to the service Secretaries there were projects which were reinstated?

Mr. VANCE. Yes, sir. The primary reason, in terms of the number of projects, was the one I gave on contracts already awarded.

Question. I suppose that covers a hundred different reasons, but would you give me an example of one?

Mr. VANCE. One might be a difference of judgment with respect to the degree of essentiality and whether it was postponable. Changes were made of this kind. Where the services brought information to bear and changes were suggested, many of them were adopted, some of them were not. It was essentially a matter of judgment as to where the project fitted in these categories, and judgment can vary on these greatly.

The subcommittee desiring to pursue the matter of budgetary limitations, engaged in the following colloquy with Mr. Edward J. Sheridan, Deputy Secretary of Defense (Installations and Logistics):

Question. Who established the dollar amount of construction projects to be deferred and what criterion was used?

Mr. SHERIDAN. Nobody established any dollar amount. The criteria was developed on the basis of a discussion between Mr. Heard, our Director of Construction, our Project Division people who work on the construction programs, Secretary Ignatius and myself, on what appeared to be a logical breakdown of the balance of the 1966 program that had not yet been placed under contract.

Question. Was any specific percentage allocated to each of the services?

Mr. SHERIDAN. No, sir. There was no target at all.

The subcommittee pursued this matter with the Assistant Secretaries for Installations and Logistics of the Army and the Navy and the Deputy for Installations to the Assistant Secretary of the Air Force for Installations and Logistics. Again, let us look at the record. The following colloquy took place between the members of the subcommittee and Dr. Brooks, Assistant Secretary of the Army:

Question. Mr. Secretary, you spoke I believe briefly in your testimony about reclaims. In instances of any reclama that occurred, was the Department allowed

to obtain this benefit without giving up something else in some other activity that it had planned?

Dr. BROOKS. I believe I can answer your question in this way, that when we did submit our reclama there was a substitution for all items that were restored to the program by an equivalent dollar amount deleted from the program, so that the overall amount was the same as that on the list which the Department of Defense had given to us initially.

Question. Do you think this was true in the other two branches of the service, too?

Dr. BROOKS. I can't speak of that.

Question. Did you initiate the idea or did the Department of Defense initiate the idea?

Dr. BROOKS. In fairness, sir, I would have to say that we did not request an increase in the overall program: that is, a decrease in the deferrals. The reason for that was that on reviewing the list which we had received and on reviewing the criteria which we understood and supported; that is, the criterion principally of immediate contribution to combat readiness and operational effectiveness, we felt that we could live within the total program that had been given to us and with the substitutions, as I have indicated in my testimony, we could come out with a list which met those criteria.

Question. You thought you could live within this, and you made voluntary suggestions for cutting back to get an equal amount. Was this a matter of your initiative or someone else's suggestion or did you think you would win better if you did it this way, or why did you do it, sir?

Dr. BROOKS. As I say, we did it this way because we felt we could get a satisfactory list within the criterion.

Question. I understand you thought you could get a satisfactory list within that criterion. You mean the amount of dollars when you say criterion?

Dr. BROOKS. No, the criterion of contribution.

We did not want to defer anything which contributed to combat readiness or to operational effectiveness in the immediate future. We felt we could save those projects within the overall total of the list.

Question. I am not quite clear as to this. I understand from you that when you asked for the retirement, you also asked for places where you could defer some expenditures in other places that had not been suggested before and equalize the amount of money. What I am not clear in my mind about is, did you do this just on your own initiative, just to be cooperative, or was there a suggestion made to your department by the Department of Defense or how did you happen to do this? This is fairly unusual. When you ask somebody to let you have something done, you don't usually say, "I will make it up to you in something else," which sounds like what you did. I want to know why you did it, or do you know?

Dr. BROOKS. We agreed with the Department of Defense upon the reasonableness of the overall total. I would be unable to answer you as to where the initiative came from. We did not feel that this was an arbitrary ceiling imposed, although it was an agreed total.

Question. I think we have got a pretty good answer to my question now, but there is another one that arises in my mind. That is, how do you go about deciding it is a reasonable request that you spend certain money that doesn't seem to fit in with what Secretary Vance said about the fact that this budget for the military was made up on what was necessary to fight the war in Vietnam, that no considerations were given of a budgetary nature?

Dr. BROOKS. I should explain that this was not an amount of money that was stated to us without the concomitant listing of the specific projects which were suggested by the Department of Defense. In fact, the total amount of money was a product, it was simply pricing out these individual lines, these individual projects which were recommended or given to us as the deferral list.

Question. Where they given to you to begin with or did you initiate those?

Dr. BROOKS. They were given to us, sir.

Question. At the beginning. And they came out to a certain amount of money. Now I gather from you that you agreed that was a good amount of money, a reasonable amount of money to be deferred. And then you went back to the Department of Defense and said instead of giving us X—taking X away from us, take Y away from us which was not in their plan, and you wound up with the same amount of money, have I got the picture?

Dr. BROOKS. That is correct.

Question. Maybe this is your idea of freedom of choice but it sounds pretty much to me when you get all the words out of it and start looking at the facts as

distinguished from the semantics, that you wind up with the fact that somebody told you how much to spend and you had better cut it out somewhere in your budget or else.

I am not asking for a comment, but that is what it looks like to me, unless you have something to suggest why it is not so. It would seem to me that that is so. I am not trying to put you on a spot. It doesn't look to me quite like Secretary Vance thought it was. I am sure he stated what he thought to be the truth. I think by the time it got to your level, your level apparently didn't really feel free to object to the budgetary figure; you really felt that they were cutting back something in the national defense, but you agreed to it to go along with part of the team.

Dr. BROOKS. I would have to say in answer to the last comment that we do not feel that we were cutting back something that was under the criteria contributing to combat readiness or to operational effectiveness. That is one of the primary reasons we did not go back for an increase.

Mr. STRATTON. Mr. Chairman, I think I am beginning to understand why there was such difficulty in getting either Secretary Vance or Secretary Ignatius to use the word "budget" or "total amount of money" because this testimony now would seem to indicate that there was a figure indicated and that there is apparently some sensitivity admitting there was a figure.

Mr. Graeme C. Bannerman, Assistant Secretary of the Navy, in response to questions, testified:

Question. Who notified you of the deferral of military construction projects authorized and funded under Public Laws 89-188 and 89-202?

Mr. BANNERMAN. Mr. Ignatius called me. I attended the same meeting as Dr. Brooks mentioned.

Question. When was that notice to you?

Mr. BANNERMAN. I believe that first meeting was on the 9th of December.

Question. Were you given an opportunity to participate in the selection of the projects to be deferred?

Mr. BANNERMAN. Initial selection was made by personnel within the office of the Secretary of Defense. We were shown the list subsequently, and I had, as I remember, a very short time to look at it. Roughly, contracts for 15 items of that list had already been awarded. There were some additional 13 items, I believe, that had not been awarded but which we thought should definitely be retained; that is to say, should not be deferred.

I might say, parenthetically, that the second grouping, the items that we thought should not be deferred, were really about two-thirds of all the money involved, although a smaller percentage of items.

Question. Can you give us those specific changes that you recommended which, if any, the Department of Defense accepted, and which they rejected?

Mr. BANNERMAN. I can. You have already asked for it for the record, and I think in the interest of expediency I should put it in the record as the others did. Actually, we made certain recommendations, and we also, as the Army did, came in with a differing list of items to be deferred.

Question. You arrived at the same dollar figure?

Mr. BANNERMAN. We arrived within approximately a million dollars of the same dollar figure.

Question. How do you account for the fact that you and the other Departments used the same procedure? Was this sort of an SOP?

Mr. BANNERMAN. No, I think this is what we understood it was to be.

Question. What effect will this deferral action have on the overall program of your service?

Mr. BANNERMAN. I would like to make it very clear that we would much prefer there would be no deferrals at all. We came in with these items because we thought they were important. We still think they are important. We were asked whether any of the items in 1966, and the same procedure is going around for 1967, could be delayed without having a significant impact upon our operational capability at the moment. The answer is obviously, some are more urgent, but not necessarily more important, than others.

Mr. Lewis E. Turner, Deputy for Installations, Office of the Assistant Secretary of the Air Force, Installations and Logistics, testified as follows:

Question. Were you given an opportunity to participate in the selection of the projects to be deferred?

Mr. TURNER. We were given an opportunity to substitute items for items that had been recommended by the Secretary of Defense, yes, sir.

Even though it may be true that no dollar amount was established for projects to be deferred when the Secretary and the Deputy Secretary of Defense ordered their subordinates to accomplish the deferral actions, the dollar amount for deferrals determined in the Defense Department became an arbitrary ceiling when the list of specific projects was given to the respective services.

EXTENSION OF AUTHORIZATIONS

At the hearings, the Deputy Secretary of Defense concluded his prepared remarks by stating:

In summary, Mr. Chairman, the projects we have deferred are necessary and desirable, but nonetheless, postponable for the time being. We will seek authority from the Congress to extend the authorization of the deferred projects so that we may proceed with them at a later date.

But observe the following colloquy during the hearings:

Question. When and how do you plan to restore these items so deferred? With construction costs constantly increasing, would it not require a substantial increase in appropriation to carry out the construction at some future date?

Mr. VANCE. I cannot tell you at this time when we will actually proceed with these deferred projects. We are asking for continuing authorization for these projects in the fiscal year 1967 construction bill, and we will watch the matter carefully. When we believe that it is appropriate to proceed with them, we will proceed.

Question. How do you reconcile your action with the statement of the President in his recent state of the Union message: "This Nation is mighty enough, this society is healthy enough, its people are strong enough, to pursue our goals in the rest of the world while still building a Great Society at home." Is not your action in deferring military construction of all items which provides for the comfort, education, and religious training of service personnel, in essence, asking the same men to risk their lives to make the sacrifice so that the social experimental programs of the Great Society may go forward at an accelerated rate?

Mr. VANCE. Our decision had nothing to do with the Great Society or other domestic programs. This was a decision which Mr. McNamara and I reached on the basis of the facts which I have previously explained to this committee. It had nothing to do with the Great Society or other domestic programs.

Question. In the state of the union message, the President said:

"In some of our urban areas we must help rebuild entire sections and neighborhoods, in some cases 100,000 people. Working together, private enterprise and Government must press forward with the task of providing homes and shops, parks and hospitals, and all the other necessary parts of a flourishing community where our people can come to live the good life."

How do you reconcile your actions on deferral of the family housing projects while at the same time the Federal Government plans to expend funds for the major rebuilding of parts of our large cities?

Mr. VANCE. As I have said before, our decision was made independent of any domestic programs.

* * * * *

Question. When do you intend to proceed?

Mr. VANCE. May I continue?

Question. When do you intend to proceed?

Mr. VANCE. Mr. Chairman, I said before I do not know when we intend to proceed. But we do intend to proceed when we believe the time is ripe to do so. However, these are postponable, they are not time-urgent projects.

* * * * *

Question. I would like to say that my feelings and the feelings of most of my constituents were ones of disappointment when the American people were not asked to defer some of their nonmilitary expensive programs in order to more

vigorously pursue the Vietnam war. This is the sentiment which I think the vast majority of my constituents feel, and which I share. There was alarm at the continuing request for large funds in programs, some of which I don't think are sound programs, and most of which, if not all of which, could be at least postponed. You have, Mr. Secretary, told us that this is not the function of the Secretary of Defense to make this kind of decision, but there is one thing that did really kind of raise the question in my mind which has not yet been asked, so therefore I will ask it. I can understand how the Secretary of Defense doesn't make decisions as to whether or not you should have a rent subsidy program vis-a-vis whether or not you have a hospital in the military, but it seems to me that is the same sort of decision that you are precluding yourselves from making that was involved in inflation. I wonder why there is any more reason why the Secretary of Defense should be making decisions on the basis of inflation than there is on the basis of whether we should have a rent subsidy program or a poverty program. So I would like you to address your remarks to that, if you would.

Mr. VANCE. First, I would like to clarify what I think may be an incorrect implication from the comment which you made, and that is to make it very clear that we have asked for in the fiscal year 1966 supplemental and in the fiscal year 1967 budget all the money which we believe is necessary for the prosecution of the conflict in Vietnam in accordance with our present plans. I want to make this very clear. The money which we believe is required for that is in those budgets.

Now, coming to your specific question to me, with respect to the issue of why we were concerned with inflationary pressures. It seems to me that we, who have the responsibility for expending over 50 percent of the national budget, have this dual obligation, first making sure that we spend every nickel which is required for combat readiness, but in a period where inflationary pressures are becoming more and more severe, to defer those things which are not time urgent. We are not canceling them forever, but deferring them until such a time when those expenditures may be made so that they will not increase the heating up of the inflationary pressure.

* * * * *

Question. This fasting of fundings in this particular deferral program is going to make available under the statutes \$600 million or thereabouts which could under existing laws be utilized for other things. Will any of that be utilized for anything else?

Mr. IGNATIUS. Mr. Chairman, we intend to retain these funds and apply them toward the continuation of this program at such time as we go forward. This is our intention, to deapportion the funds that have already been apportioned to the military departments so that we can go forward with these projects at a later date.

Now Mr. Vance's statement had a phrase that there may be some routine changes over the passage of time that would cause changes in some of these programs. But it is our intent to reserve the funds, to seek from the Congress authority to extend the authorization, so that we may in fact go forward at an appropriate time.

Question. This certainly gives pause to the thought of a legislator. You realize that you have almost a billion dollars in the Department of Defense. With all the rules and flexibility that you have under the statutes, I would feel much more reassured if at some juncture the Secretary of Defense or somebody would tell us that a great deal of caution is going to be used or that the Congress would be considered in this. Otherwise it would seem to me it would be wise if we passed a little sudden law to cut all of these funds out. We do have checks and balances in this country, and if we are going to have almost a billion dollars floating around that you could spend anywhere where you just want to spend it within the limits of these flexible laws, this changes the rules of how our Constitution envisioned our Government to be set up. So I do have a rather strong feeling that somehow or other you and Chairman Rivers and some others ought to talk this aspect of it over, because it is alarming to me to consider that so much money could be available for transfer and flexible handling contrary to the thought that our forefathers had when they drew the Constitution.

Thus having assurances that the Department of Defense did not take into consideration anything other than the "signs of inflationary pressures" prevailing in the economy in December 1965 the subcom-

mittee questions the wisdom of extending the authorization until October 1, 1968, as requested by the Department of Defense.

It seems obvious that the decision as to whether military projects should be constructed should be vested in the hands of those who are required to exercise a sense of judgment over all areas of Government spending. Legislators are required every day to establish priorities of various programs. Since the decisions reached at the Pentagon do not take into consideration these programs, it seems inconsistent to vest in the Pentagon planners authority to determine when to build or when not to build. This determination should be retained by those who examine the total program of the Federal Government; namely, the Congress.

PHILIP J. PHILBIN,
Chairman.

CHARLES E. BENNETT.
SAMUEL S. STRATTON.
WILLIAM J. RANDALL.
JED JOHNSON, JR.
HERVEY G. MACHEN.
LESLIE C. ARENDS.
CHARLES S. GUBSER.
DONALD D. CLANCY.

I have read the foregoing report and find myself in full accord with the views and recommendations of the subcommittee.

L. MENDEL RIVERS, *Chairman.*

DEFERRED MILITARY CONSTRUCTION PROJECTS IDENTIFIED BY DEPARTMENT OF DEFENSE

Attached is a list of military construction projects which Secretary of Defense Robert S. McNamara has temporarily deferred.

In announcing the deferral, Secretary McNamara said "all projects that are essential immediately for the combat support of the Armed Forces and those which are urgently required for safety, health, or other compelling reasons will proceed as scheduled."

Not included in the attached list are 8,500 family housing units authorized under the Military Construction Act for fiscal year 1966. Construction of these units will be deferred. News release No. 713-65, dated October 22, 1965, identifies these units.

The total deferral amounts to \$620 million and involves projects located in 42 States and the District of Columbia.

Construction of \$686 million in Army, Navy, Air Force, and Marine Corps high priority military construction projects in 36 States, the District of Columbia, and at 16 overseas locations will be continued.

Fiscal year 1966 military construction execution program items to be deferred

LETTER OF TRANSMITTAL

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., March 23, 1966.

Hon. L. MENDEL RIVERS,
*Chairman, Committee on Armed Services,
House of Representatives, Washington, D.C.*

DEAR MR. CHAIRMAN: I have the honor to transmit herewith for consideration of the Committee on Armed Services, the report of Subcommittee No. 4 which, at your request, conducted hearings on the justifications for the base closures that were announced by the Secretary of Defense on December 8, 1965.

This report has been reviewed and unanimously approved by the subcommittee members.

Sincerely,

O. C. FISHER,
Chairman, Subcommittee No. 4.

[No. 53]

REPORT OF SUBCOMMITTEE NO. 4 ON BASE CLOSURES AND REDUCTIONS

INTRODUCTION

On January 11, 1966, the Honorable L. Mendel Rivers, chairman of the House Committee on Armed Services, in compliance with section 611, Public Law 89-188, assigned to Subcommittee No. 4 the responsibility of conducting an inquiry into whatever justifications there may be for the base closures that were announced by the Secretary of Defense on December 8, 1965.

According to this announcement, 149 military installations in the United States and overseas would be closed, reduced, or consolidated; 126 of these base actions involved military installations in 39 States and the District of Columbia. The remaining 23 installation actions affected overseas activities including Puerto Rico.

Subcommittee No. 4 consists of Hon. O. C. Fisher, Texas, chairman; Hon. James A. Byrne, Pennsylvania; Hon. Charles H. Wilson, California; Hon. Donald J. Irwin, Connecticut; Hon. Frank E. Evans, Colorado; Hon. E. S. Johnny Walker, New Mexico; Hon. Leslie C. Arends, Illinois; Hon. Charles E. Chamberlain, Michigan; and Hon. Richard S. Schweiker, Pennsylvania.

BACKGROUND

Since 1961, according to testimony received by the House Armed Services Committee, and from other sources, it has been determined that 852 separate closure or reduction actions have been initiated by the Secretary of Defense. No justification for such actions has been required by law prior to September 16, 1965.

We must bear in mind that the Congress established each of these bases, in some cases by authorization, in other cases just with appropriations, but in all cases money had to be appropriated for their construction and certainly their maintenance. In doing this, the Congress acted under article I, section 8, which gives to the Congress power to raise and support armies and provide for a navy.

In carrying out this responsibility, the Congress determined it was its obligation and responsibility to share in the review of conditions and facts which conclude that such military facilities and installations are no longer needed.

In order to insure that the Congress is properly informed and consulted prior to the closure or substantial reduction of any base, the House Armed Services Committee added section 611 to the 1966 military construction authorization bill, which was passed by Congress and subsequently became Public Law 89-188.

[5711]

This law specifies that no camp, post, station, base, yard, or other installation under the authority of the Department of Defense shall be closed or abandoned until after the expiration of 30 days from the date upon which a full report of the facts including the justification for such proposed action is submitted by the Secretary of Defense to the Committees on Armed Services of the Senate and House of Representatives. This provision applies only to facilities located in the United States and Puerto Rico having a total military and civilian complement of more than 250 personnel.

This section of law recognizes several principles which have not heretofore been explicitly spelled out. First, a reporting procedure on base closures is now required as a matter of law. Second, the reports will be made to the Armed Services Committee as agents of their respective bodies on military matters. Third, the reports will contain not only an announcement, but also a full report of the facts, including the justification for such proposed action. This enables the committees to study, analyze, and if necessary, to hold hearings on the reasons for such action.

BASED ACTIONS REPORTABLE UNDER SECTION 611

Of the total 149 base closures or reductions announced by the Secretary of Defense on December 8, 1965, only 16 represent the complete closure or abandonment of military bases in the United States and Puerto Rico having more than 250 personnel, and thus meet the requirements of section 611, Public Law 89-188. These 16 actions consist of 2 Army activities, 3 Navy activities, and 11 Air Force Activities. The Department of Defense estimates that when completed they will produce annual savings of \$145.5 million and will reduce military and civilian personnel by over 21,000.

The following table lists these 16 base closures, along with the Government's investment in each base and the estimated annual savings in personnel and dollars:

Summary of savings in personnel and dollars in 16 actions reported under sec. 611

Base	Total Government investment (millions)	Annual savings (millions)	Personnel savings	
			Military	Civilian
Boston Army Base, Mass.....	\$23.9	\$1.6	44	14
Fort Buchanan, P.R.....	40.8	11.4	536	57
Naval Air Station, Sanford, Fla.....	20.1

	477.6	145.5	16,872	4,280

¹ This facility is leased, not Government owned.

FORMAL JUSTIFICATIONS FOR THE 16 BASE ACTIONS

As required by section 611, the Secretary of Defense on January 10, 1966, submitted to the Armed Services Committees of the Senate and the House of Representatives individual reports on the rationale and justification in support of each of the 16 base closures. At the same time, the Secretary of Defense assured the Congress that as prescribed by law, no action would be taken to close or abandon any of the 16 installations until the expiration of the 30-day review period.

The justifications submitted by the Secretary of Defense indicate that the character of these most recent series of base closure announcements is considerably different from those of past announcements in that the majority of the 16 base closures are the direct result of force level and weapons systems decisions with accompanying effects on military forces which were previously occupying these bases. Of the 16 bases reported, the subcommittee notes that 11 are the direct result of force structure changes. The remaining five were justified as necessary consolidations or relocations brought about by the Department's attempt to pursue programs of cutting unnecessary cost, terminating unnecessary operations, and improving efficiency.

The subcommittee further noted that in the case of all 16 base closures the Department of Defense contends that the actual selection of these bases represented those which were either no longer geographically located to support retained operations, or were the least modern, and therefore most costly to operate. In all cases, the Department of Defense maintained that the selection of bases for closure represented that combination of facilities which would also produce the maximum savings to the departmental operating costs.

While 16 bases were reported as falling under the provisions of section 611, the Department of Defense reports show that only 11 will be completely closed or abandoned. Four bases will be retained for other military purposes in either the Active Forces or the Guard and Reserve Forces as follows: Biggs Air Force Base, El Paso, Tex., and Turner Air Force Base, Albany, Ga., will be transferred to the Army and Navy, respectively. Ellington Air Force Base, Houston, Tex., and the military facility at Portland International Airport, Oreg., will be transferred to the Air National Guard. The facilities now occupied by the 12th Air Force Headquarters in Waco, Tex., are not Defense-owned facilities, but are in leased office space provided by the General Services Administration.

COMMITTEE HEARINGS

After reviewing the reports submitted by the Department of Defense, the subcommittee conducted a series of hearings in which Army, Navy, Air Force, and Department of Defense witnesses appeared before the subcommittee to testify in support of the announced base closures.

During these hearings, additional testimony supplementing the reports was taken and contributed to the catalog of material available for the subcommittee's consideration. At the same time the subcommittee extended an invitation to testify to all congressional

representatives whose districts would be affected by these base closures and statements were received from the following Members of Congress: Hon. Charles E. Bennett, Florida; Hon. A. S. Herlong, Jr., Florida; Hon. Stanley R. Tupper, Maine; Hon. Richard White, Texas; Hon. Raymond F. Clevenger, Michigan; Hon. Maston O'Neal, Georgia; Hon. E. S. Johnny Walker, New Mexico; Hon. Thomas G. Morris, New Mexico; Hon. Joe L. Evins, Tennessee; Hon. Jed Johnson, Jr., Oklahoma; Hon. Lee H. Hamilton, Indiana; and Hon. Bob Casey, Texas.

SUMMARY OF JUSTIFICATIONS FOR THE 16 BASE ACTIONS

Boston Army Base, Boston, Mass.

The Boston Army Base, situated in the Boston Harbor area, was constructed in 1918 as an ocean terminal at a cost of \$25.7 million. All improvements are within a 57.6-acre area and the major building is an eight-story warehouse structure containing 1,620,000 square feet of floor space. Although the warehouse building has been partially used since the end of World War II as an administrative center, the facility is actually unsuitable for office purposes. The facility has not been used as an Army terminal since World War II.

The Boston Army Base will be disestablished and reported as excess to further requirements of the Department of Defense between January 1967 and before the end of 1969. There is adequate space for the U.S. Army Reserve Forces at the south annex or the Boston Naval Shipyard. Other military tenants will be accommodated at the U.S. Naval Station, Boston, and in General Services Administration space in the Greater Boston area. The residual support functions can be accomplished by personnel assigned to Fort Devens.

As the result of this action, a reduction of 146 civilian personnel positions and release of 44 military personnel for other assignment will be realized. Annual savings of \$1,670,000 will accrue.

The subcommittee interposes no objection to the proposed closure.

Fort Buchanan and Antilles Command, P.R.

Fort Buchanan is located on the south shore of San Juan Bay, P.R. This installation consists of 1,780 acres of land. In addition to this property, the Army Antilles Command is using Fort Brooke in San Juan comprising 66 acres and the 11,379-acre Salinas maneuver site. Headquarters, Antilles Command, is presently located at Fort Brooke. (Fort Brooke has previously been announced as excess.)

Fort Buchanan functions as a water terminal for military cargo and passengers and as an Army personnel processing and training center. The Salinas maneuver site functions as a training area for Reserve and National Guard units. The overall Army requirements in Puerto Rico have declined in recent years. Consequently, a determination has been made to reduce the Army activities to a force commensurate with the current induction, recruiting, and Reserve component training loads.

The Antilles Command will be inactivated and the major portion of Fort Buchanan declared excess by January 31, 1967. The Salinas maneuver site will be licensed to the Commonwealth of Puerto

Rico. The Rodriguez Military Hospital in San Juan will continue to be operated pending the provision of other Federal medical facilities.

As a result of these actions, 536 military personnel will be released for reassignment and there will be a reduction of 956 civilian personnel positions. Annual recurring savings will be \$11,400,000.

The subcommittee explored at length the question of reducing the Army's combat strength and influence in this important theater and was informed that the Army currently does not maintain combat forces nor train active combat forces in Puerto Rico and that this closure would in no way reduce our defensive strength in this area.

Defense Department witnesses testified that the closure of the Antilles Command and Fort Buchanan would not result in direct transfer of military-held property to the Commonwealth of Puerto Rico but that the property would be reported as excess to the General Services Administration for disposition as prescribed by the Federal Property Act of 1949.

To meet critical military housing needs, the dependent housing of Fort Buchanan, consisting of 600 units, would be transferred to the Navy. However, the Navy advised that 120 of these units would be transferred to the Coast Guard to meet, in part, their need for 150 units in the area. Furthermore, the Navy will continue to make available services and facilities to dependents and retired military personnel in the San Juan area. Testimony revealed there would be no reduction or interruption of support services to which these personnel are now entitled.

While the subcommittee interposes no objection to this proposed closure subject to the foregoing assurances, it is felt that because of the unrest in the entire Caribbean area for the past several years, that is is vital to maintain American presence in this important area, and for this reason the subcommittee wishes to indicate that requests for further closing of military installations in the San Jaun area will be viewed with considerable concern.

U.S. Naval Hospital, Portsmouth, N.H.

The U.S. Naval Hospital, Portsmouth, N.H., is located on the northeast corner of Seavey's Island in the Piscataqua River between Portsmouth, N.H., and Kittery, Maine. The hospital covers an area of 15.35 acres, sharing the island with two other major commands: The Portsmouth Naval Shipyard and the Naval Disciplinary Command. The main hospital building was constructed in 1913. The facilities are old; however, they are generally in good structural condition. Substantial repair and replacement would be required, however, within the next few years. It is estimated that approximately \$3 million would be necessary to modernize the hospital to accommodate its present patient load. The hospital is presently authorized 100 beds with an expansion capacity of 317 beds.

Since 1963, there has been a gradual decline in the patient load, and with the closing of the naval shipyard and the Naval Disciplinary Command, the patient load will decline even more. Current projections of the military population by 1973 justify a requirement of only 40 beds for this area. Operation of the naval hospital after the closing of the naval shipyard and Naval Disciplinary Command is uneconomical because of the decline in workload.

This closure action is necessary since it is more economical to program a new composite medical facility at Pease Air Force Base where 65 percent of the patient load will generate. Consolidating the Pease Air Force Base dispensary into a small 40-bed hospital will have distinct operational and economical advantages over the divided operation that now exists.

The Department of Defense concludes that the closure of the naval hospital and assumption of medical support by Pease Air Force Base about fiscal year 1973 will result in an annual saving of \$1,215,000. This action will permit the Navy to utilize 100 military personnel for other urgent medical requirements such as in southeast Asia, and at other undermanned U.S. naval hospitals. Personnel savings of 61 civilians will be achieved by this action.

The subcommittee interposes no objection to this proposed closure *U.S. Naval Disciplinary Command, Portsmouth, N.H.*

U.S. Naval Disciplinary Command, Portsmouth, N.H., is located on the southeast corner of Seavey's Island adjacent to the Portsmouth Naval Shipyard. This facility was established in 1898, occupies 28.39 acres and has 42 buildings containing 392,706 square feet. It was acquired at a cost of \$3,114,016.

The mission of the U.S. Naval Disciplinary Command is to confine sentenced prisoners and those pending appeals; making appropriate provisions for the custody, control, and basic needs of all prisoners. The command has the capability of confining 1,200 prisoners. The prisoner population varies from 500 to 700.

It has been determined by the Department of Defense to be more economical to confine these prisoners at the Army penal installation at Fort Leavenworth, Kans., and other Navy brig facilities at Norfolk, Va.; Great Lakes, Ill.; Camp Lejeune, N.C.; and Newport, R.I., and close the U.S. Naval Disciplinary Command, Portsmouth.

Closure of this facility will result in an annual savings of \$818,780 and a net personnel savings of 127. Action is to be completed by January 1969.

The subcommittee questions whether the Leavenworth Army facility, being the only remaining active location for Armed Forces serving major sentences, and the four naval brigs, would have sufficient capacity during a period of extensive buildup of the Armed Forces to absorb any appreciable increase in prisoner load with a correspondingly higher increase in funds to expand the four existing brigs.

The Navy estimates \$530,000 will be required to enlarge these four brigs. However, the Navy requested \$1,645,000 in fiscal year 1966 to construct a new brig complex located at Camp Lejeune, N.C. This request was authorized by the House Armed Services Committee. The Senate reduced this amount to \$1 million, which was subsequently deferred by the Secretary of Defense. Although the subcommittee considers the Navy's consolidation plan as justified, it nevertheless strongly recommends the Department of Defense insure that prior to this closure there will be available capacity at the selected installations to meet any increase in mobilization needs.

With this assurance the subcommittee interposes no objection to this proposed closure.

U.S. Naval Air Station, Sanford, Fla.

This facility was acquired in 1942. The base was used during World War II as a naval operational flight training installation and was closed in 1947. It was reactivated during the Korean war in 1951, and in 1955 began supporting the heavy attack program.

The base is now being used as the single site for supporting the reconnaissance attack squadrons of both the Atlantic and Pacific Fleets. The program is built around the sophisticated, high performance RA-5C Vigilante aircraft which requires extensive ground support facilities and equipment.

The Navy contends that the facilities at Sanford are marginal for this support and that to continue the mission would require an extensive expenditure of construction funds.

In fact, only last year \$7,249,000 was appropriated for Sanford construction. Before any of this was obligated, however, the Department of Defense decided to remove the SAC mission from Turner Air Force Base, Ga., 200 miles away, and it was decided to forego improvements at Sanford and move the entire mission to Turner, a larger and more modern facility. Moreover, it is contended that the colocation of the Atlantic Fleet Photographic Squadrons at Turner will help relieve base-loading problems of the naval air stations at Jacksonville and Cecil Field, Fla.

The proposed move to Turner Air Force Base is recommended by the Chief of Naval Operations, the Vice Chief of Naval Operations, by the Assistant Secretary of Navy for Installations and Logistics, and by the Secretary of the Navy, Hon. Paul H. Nitze.

Since the mission at Sanford is now meeting the Navy requirements, even though at a minimal level, and only a year ago \$7,249,000 was funded at the request of the Navy to update the facilities there, the subcommittee became curious as to the propriety of closing it down and going to the trouble, time, and expense of moving it to Turner. The subcommittee therefore undertook a most careful examination of the facts. An item-by-item comparison was made of the various facilities at the two bases, and a staff member made a trip to both bases for an on-the-spot inspection.

The facts, in some respects, are quite confusing. For example, in justifying the proposed move the Department of Defense estimates a need, over a 7-year period, of \$21,098,000 to bring Sanford up to adequate requirements. But the subcommittee has learned that in January of 1964, only 2 years ago, a Navy installations survey group estimated only \$12,841,000 in military construction would provide adequate facilities to support the same mission. That was a study to determine the feasibility at that time of relocating the Sanford mission to the Naval Air Station, Cecil Field, at Jacksonville, Fla. In that instance it was recommended that Sanford be closed and the mission be moved to Cecil Field.

But 2 months later the Navy decided to keep the mission at Sanford. It was held the survey was a bit too hasty and lacking in some basic information.

It is noted that the Department of Defense estimates \$5,573,000 will be needed for construction costs at Turner. But the Air Force has reported the need for \$9,790,000 in military construction over the next 5 years to replace existing facilities at Turner.

It was admitted during the hearings that the \$21,098,000 needed to make Sanford fully adequate was a bit high, and it was admitted that this figure could be scaled downward by around 10 or 15 percent.

Thus, there is some confusion as to the validity of the justifying cost estimates projected by the Department of Defense.

Here are a few comparative factors which were developed during the hearings with respect to the Sanford and Turner bases:

Needed construction costs.—Department of Defense estimate for Sanford, \$20,098,000; for Turner, \$5,573,000.

Runways.—At Sanford there are two runways, with a need to lengthen one, the north-south, at an estimated cost of \$4,377,000. The two runways are admittedly inadequate at present; one is 6,000 feet, the other 8,000 feet, with safety overruns. To extend the 8,000-foot runway might run into trouble because it leads over the town and FAA might not approve it. Also, the prevailing wind being what it is, the Navy would prefer to extend the north-south runway, which has been approved by FAA.

At Turner there is a 12,000-foot runway and a parallel taxiway, usable as a runway in emergencies, considered quite adequate; and no additional runway is contemplated.

Condition of buildings.—At Sanford 21 percent of the buildings are permanent type, 60 percent semipermanent, and 19 percent of temporary type.

At Turner 150 buildings are permanent type, 168 are semipermanent, and only 3 are temporary type.

Housing.—At Sanford there are only 10 on-base houses; at Turner there are 900, in good condition.

Hospitals.—At Sanford there is an inadequate 8-bed dispensary with use being made of nearby 135-bed hospital at Orlando Air Force Base, with some of the more serious cases being sent to Jacksonville.

At Turner there is a 45-bed hospital, in fair condition. While not programed at present, Department of Defense witnesses believe there may be a later requirement for a new or enlarged facility at Turner. A new \$2,443,000 hospital at Turner was funded for fiscal year 1965 but has been deferred.

Hangars.—There are four at Sanford, and a pending proposal to build a new one at a cost of \$664,000. At Turner there is an adequate number of hangars, with plans for a half million dollar expenditure for improvement of existing ones.

Cost of operation.—It was estimated that because of it being a larger facility the annual cost of operating the mission at Turner would be about \$1 million more than at Sanford.

Cost of moving from Sanford to Turner.—The estimated cost for this move is \$1,500,000.

Size of installations.—The Sanford facility is located on 1,813.9 acres of land; at Turner there are 2,638 acres.

Personnel.—There is to be a net personnel increase at Turner, upon closure of Sanford, of 246 military and 152 civilians.

Conclusion.—The subcommittee is aware of some deficiencies existing at Sanford, and recognizes that at present Turner is more adequate and provides more room for expansion, if needed, in the future.

However, the subcommittee questions the wisdom of closing the Sanford installation at this period of emergency. It is felt that before

any final decision is made in this regard, a fuller and more comprehensive study be made by the Department of Defense for either a continuation of the present mission at Sanford, or its use for some other mission.

CLOSURE OF STRATEGIC BOMBER BASES

The Department of Defense proposes to close over the next 5 years, six active Air Force bases as a result of the decision by the Secretary of Defense to phase out of the inventory the older models of B-52 bombers and all B-58 bombers.

These bases are Biggs Air Force Base, El Paso, Tex.; Clinton-Sherman Air Force Base, Enid, Okla.; Kincheloe Air Force Base, Kinross, Mich.; Sewart Air Force Base, Smyrna, Tenn.; Turner Air Force Base, Albany, Ga.; and Walker Air Force Base, Roswell, N. Mex.

Two of these bases, Biggs Air Force Base and Turner Air Force Base would be utilized by other military services. The remaining bases would be closed and declared excess to the General Services Administration.

The basic justification presented by the Department of Defense and Department of the Air Force witnesses for closing these bases is, that with the reduction in the number of bomber aircraft, the number of bases will necessarily have to be correspondingly reduced.

Furthermore, these bases planned for closure are either not in the appropriate geographic location or do not have suitable facilities to accommodate the followon FB-111 bomber force.

The subcommittee, recognizing the direct relationship between levels of forces and required bases, has not attempted to receive testimony from departmental witnesses relating to the proposed reduction in our strategic manned bomber force since this subject is being given a very comprehensive review by another subcommittee of the Armed Services Committee. However, the subcommittee recommends that no action be taken by the Department of Defense with respect to the proposed closure of the six Air Force bases previously mentioned until Subcommittee No. 2 has completed its hearings and reported its recommendations and conclusions.

Set forth below are summaries for each of the above-mentioned six base closures:

Biggs Air Force Base, El Paso, Tex.

Biggs Air Force Base is a Strategic Air Command (SAC) installation located at El Paso, Tex., 10 miles northeast of El Paso and 6 miles from the Mexican border. The base is bounded on the south by El Paso International Airport and on the remaining sides by the Fort Bliss Military Reservation.

The B-52B series aircraft are organized as two units with one each located at Biggs and March Air Force Bases. These aircraft are the oldest models in the B-52 fleet and would require extensive modification for continuation as an effective weapons system. As part of the modernization of the strategic bomber fleet, the 95th Bombardment Wing, the 334th Bombardment Squadron (15 B-52 aircraft), and the supporting units will be inactivated by July 1, 1966.

Since the basic Air Force mission of the base is being phased out, the 4758th Defense System Evaluation Squadron (F-100 and RB-57 aircraft) with necessary supporting personnel will be transferred to Holloman Air Force Base, N. Mex., by July 1, 1966, where the unit will remain near the White Sands Missile Range and the units which it supports.

With the phaseout of the Air Force strategic mission by July 1, 1966, Biggs Air Force Base will be transferred to the Army for a continuing mission of comparable size.

The phaseout and relocation of Air Force activities from Biggs will result in a release of 2,388 military personnel for reassignment, a reduction of 305 civilian personnel positions, and a recurring annual savings of \$19,692,000.

Clinton-Sherman Air Force Base, Clinton, Okla.

Clinton-Sherman Air Force Base is a Strategic Air Command (SAC) installation located approximately 22 miles southwest of Clinton, Okla. The base supports a bombardment wing and its supporting units.

The modernization and realignment of the strategic bomber force, including the phaseout of B-52C through F series aircraft, will reduce base requirements and allow the closure of excess installations with significant savings to the U.S. Government.

With the modernization and realignment of the strategic bomber force, the 70th Bombardment Wing, the 6th Bombardment Squadron (15 B-52 aircraft), and the supporting units will be inactivated by July 1, 1970. The AGM-28B Hound Dog missiles and the KC-135 aircraft will be relocated to other Air Force Bases. These actions will result in Clinton-Sherman Air Force base becoming excess to Air Force requirements, and the base will close by July 1, 1970.

The Department of Defense authorities advise that many of the buildings at Clinton-Sherman are nonpermanent-type construction, the cost of maintenance is high, and the ultimate replacement with permanent facilities would be expensive. As a result of this alleged expense factor and the absence of any specific operational requirement for continued use of the base, the retention of Clinton-Sherman cannot be justified, according to the Department of Defense.

The phaseout and relocation of Air Force activities will result in a recurring annual savings of \$18,576,000, a reduction of 303 civilian personnel positions, and will release 2,394 military personnel for other assignments.

Kincheloe Air Force Base, Kinross, Mich.

Kincheloe Air Force Base is an Air Defense Command (ADC) installation located approximately 19 miles southeast of Sault Ste Marie, Mich., 37 miles north of St. Ignace. The base supports a bombardment wing of Strategic Air Command (SAC) with B-52 bombers and KC-135 tankers, an air defense fighter interceptor squadron, and a missile squadron equipped with Bomarc missiles.

Modernization and realignment of the strategic bomber force will decrease the total number of squadrons required, allowing closure of several excess installations with significant savings to the U.S. Government.

The Department of Defense maintains that many of the buildings at Kincheloe are of nonpermanent construction. Cost of maintenance of such facilities is high, and the ultimate replacement by permanent facilities would be expensive. When this expense factor is viewed with the availability of other bases which are better suited to accommodate the remaining programed forces, and the absence of any specific operational requirement for continued utilization of the base, the retention of Kincheloe cannot be justified.

The 438th Fighter Interceptor Squadron, with its F-106 aircraft, will relocate to Wurtsmith Air Force Base, Mich., by July 1, 1969. The 438th will replace an F-101 squadron which is being inactivated there.

The 449th Bombardment Wing and its supporting units will be inactivated by October 1, 1970. The B-52 aircraft, the KC-135 aircraft, and the AGM-28B Hound Dog missiles will be relocated to other Air Force bases. These actions will result in Kincheloe Air Force Base becoming excess to Air Force requirements, and the base will close by October 1, 1970.

The 37th Air Defense Missile Squadron with Bomarc missiles will be continued at its separate site at Raco, Mich., some 20 miles from Kincheloe, with additional facilities provided to make the site self-sustaining.

As a result of these actions at Kincheloe, 2,128 military personnel will be released for reassignment, and there will be a savings of 253 civilian personnel positions. Recurring annual savings will amount to \$14,633,000.

Turner Air Force Base, Albany, Ga.

Turner Air Force Base is a Strategic Air Command (SAC) installation located approximately 3 miles northeast of the city of Albany, Ga. The base presently provides facilities for a strategic force consisting of an air division headquarters, a wing headquarters, a B-52 squadron with 15 aircraft, and a KC-135 squadron also with 15 aircraft. In addition to the supporting units for this strategic force, a photo-mapping wing is also located at Turner.

The modernization and realinement of the strategic bomber force, including the phaseout of some B-52's, will reduce the number of installations required for support of the programed strategic bomber force and allow the closure of excess installations with significant savings to the U.S. Government.

With the phaseout of the B-52's, the primary U.S. Air Force mission at Turner will be eliminated and most effective utilization of the base can be achieved by transferring it to the Navy for support of Navy missions. The 1370th Photo Mapping Wing and ancillary units will remain at Turner in tenant status until programed actions free facilities at the Air Force base to which it will be relocated.

The 822d Air Division, the 484th Bombardment Wing, the 824th Bombardment Squadron, and the supporting units will be inactivated by July 1, 1967. The B-52 aircraft, the KC-135 aircraft, and the AGM-28B Hound Dog missiles will be relocated to other Air Force bases.

The Department of Defense contends that after the phaseout of the Air Force strategic mission by July 1, 1967, Turner Air Force Base will

be transferred to the Navy for the reconnaissance attack mission currently being accomplished at Naval Air Station, Sanford, Fla. In addition, the Navy will transfer to Turner photographic squadrons from naval air stations at Jacksonville and Cecil Field, Fla.

According to the Department of Defense the phaseout and relocation of the Air Force activities from Turner Air Force Base will result in the release of 2,528 military personnel for other assignments and a reduction of 339 civilian manpower spaces. Recurring annual savings will amount to \$20,141,000.

Walker Air Force Base, Roswell, N. Mex.

Walker Air Force Base is a Strategic Air Command (SAC) installation located 6 miles south of the city of Roswell, N. Mex. Field elevation is approximately 3,600 feet above mean sea level. Units there include the 6th Bombardment Wing with two squadrons of B-52 aircraft (15 aircraft each), two air refueling squadrons, each with 15 KC-135 aircraft, and detachment 3, 727th Tactical Control Squadron.

Modernization and realinement of the strategic bomber force will require phasing B-52E aircraft out of the inventory as their useful service life ends. Therefore, the 6th Bombardment Wing with 30 B-52E aircraft and its supporting units will be inactivated by July 1, 1967.

Department of Defense officials maintain that although Walker has a large capacity, and structures are generally in good condition, a significant operational disadvantage makes it less desirable for a strategic mission than other bases which will be available during realinement. According to these officials, the high altitude and relatively high summer temperature limit the effectiveness of strategic aircraft. At high takeoff altitudes and temperatures, the KC-135 tankers cannot carry as much fuel as those taking off from bases more ideally situated. Less fuel available for receiving bombers limits their range and target coverage. With the realinement of the strategic forces, the KC-135 aircraft, the AGM-28B Hound Dog missiles, and the Tactical Control Squadron will all be relocated to other Air Force bases.

As there will be no operational requirement for the base after movement and inactivation of SAC units there, its retention cannot be justified. Therefore, Walker Air Force Base will be closed by July 1, 1967.

The Department of Defense maintains the phaseout and relocation of Air Force activities from Walker will result in recurring annual savings of \$25,186,000, a reduction of 354 civilian personnel positions, and 3,231 military personnel released for other assignments.

Sewart Air Force Base, Smyrna, Tenn.

Sewart Air Force Base is located one-half mile north of the town of Smyrna, Tenn. Its basic mission is to provide facilities for a tactical (C-130) troop carrier division headquarters, a troop carrier wing with three squadrons of C-130 aircraft, and a C-130 combat crew training group. In addition, an aerial support squadron, a communications detachment and a tactical hospital are located at Sewart Air Force Base.

The Department of Defense contends that the modernization and realinement of the strategic bomber force, including the phaseout of

of some B-52's, will reduce the number of installations required for support of the programed strategic bomber force and allow the closure of excess installations with significant savings to the Government.

Two of the Strategic Air Command (SAC) bases which will become available with the modernization and realinement of the strategic bomber force are readily adaptable to troop carrier missions. According to the Department of Defense, the availability of these bases, with more modern facilities, will allow the Air Force to close Sewart and take advantage of the excellent facilities at the other bases without the additional construction costs which would be required if the troop carrier units remained at Sewart.

The 839th Air Division, the 314th Troop Carrier Wing with its three squadrons of C-130 aircraft and supporting units, the 2d Aerial Support Squadron, detachment 1 of the 3d Mobile Communications Group, the 4442d Combat Crew Training Group (C-130), and its supporting units will all be relocated from Sewart Air Force Base by July 1, 1970. The 839th Tactical Hospital will be inactivated and Sewart Air Force Base will be closed and declared excess to the needs of the Department of Defense by July 1, 1970.

The economies associated with the relocations are significant. Projected construction costs over the next 5 years for Sewart Air Force Base of \$12.9 million will be avoided by using the other available facilities. This additional construction would be needed to provide the basic essential facilities required for mission accomplishment at Sewart.

The Department of Defense maintains that the relocation of Air Force activities from Sewart Air Force Base will result in a recurring annual savings of \$10,957,000, a release of 1,207 military personnel for other assignments, and a reduction of 206 civilian personnel positions.

The subcommittee is concerned over the quality of information in the case presented by the Department of Defense to justify the closure of Sewart Air Force Base.

An example of the lack of foresight in the use of this base discloses that 2 months prior to the announcement of the base closure the Air Force made a personal appeal to public officials of Rutherford County and the cities of Smyrna and Murfreesboro to provide additional and expanded community facilities for an increased complement at Sewart Air Force Base. On this same occasion the Air Force appealed to private builders and developers to construct 475 private dwelling units for additional Sewart personnel.

The Defense Department officials had assured as recently as last year that Sewart was a permanent base and was vital to the national defense of this country. At the same time the announcement was made construction in the amount of \$482,000 was proceeding on two dormitories as a part of a continuing modernization program. In addition, \$1,720,000 in construction had already been completed which consisted of 3 dormitories and an officers' quarters which will provide accommodations for over 1,000 personnel. Since fiscal year 1963, \$2,621,000 has been funded and expended for construction projects which, according to the Air Force, were required to eliminate basic deficiencies and replace substandard facilities.

The Department of Defense also advised the subcommittee that the closure of Sewart Air Force Base would result in an annual savings of \$10.9 million. However, additional evidence reflects the combination of the elimination of base support requirements associated with the B-52 units being eliminated at the bases to which the Sewart mission will move, combined with the closure of Sewart Air Force Base, would result in the alleged savings of \$10.9 million. There appears to be some conflict in the actual amount to be saved and the estimates made by the Department of Defense.

The Department of Defense justification further fails to take into account the support provided by Sewart for the Arnold Engineering Development Center, a nearby Air Force facility at Tullahoma, Tenn. It is interesting to note that Sewart entered into written contract with AEDC to provide the following services: (1) handling all pay records for military personnel; (2) providing parachute instruction and testing of aircraft equipment; (3) providing dental services and flight physicals; (4) providing firefighting and crash rescue equipment and (5) providing equipment, transportation, and personnel to assist with unloading and loading of test articles such as rocket motors which are flown into Sewart because of airport limitations at Tullahoma. The subcommittee is left in the dark as to the additional cost the provision of these services at Tullahoma will amount to if Sewart is closed.

Another point of interest which the Department failed to disclose to the subcommittee is that last year the Air Force requested \$1,861,000 to construct a runway at the AEDC which is located approximately 50 miles from Sewart.

The subcommittee questions the wisdom of closing a vital airbase with two adequate runways when at the same time the Air Force is requesting additional funds to construct a runway for the use of another facility only 50 miles away.

Based upon the incomplete justification submitted to the subcommittee it appears that an additional review of this decision should be made prior to any final action on the proposed closure of this base.

REDUCTION IN AIR RESERVE AND GUARD AIRLIFT BASES

The Department of Defense proposes to close Bakalar Air Force Base, Columbus, Ind., and discontinue active Air Force operations at Ellington Air Force Base, Houston, Tex., and at Youngstown Municipal Airport, Ohio, effective January 1968. The reason given for these closures is the decision by the Secretary of Defense to reduce the Air Reserve and Guard Troop Carrier forces.

The Department of Defense justification indicates that the introduction of new long-range military air transport aircraft into the inventory is making it possible to transfer to the remaining Air Reserve and Air Guard Forces a number of the existing C-124 aircraft. As a result, the older and less efficient C-119 aircraft can be discontinued. Department of Defense witnesses insist that even though the number of aircraft and squadrons in the Active Reserve and Guard are being reduced, the total airlift capability will be increased significantly. The selection of these three bases for closure was made primarily because facilities did not exist at these locations to accommodate the

heavier C-124 aircraft. These three locations are not major generation points for airlift, and Air Reserve or Air National Guard airlift forces in the area could cover the predicted cargo or troop generated workload.

The subcommittee is aware that a number of these Air Reserve and Guard units are some of the more outstanding and efficient units available to the Air Force and, in fact, in recent months have been making major contributions to the airlift requirements of the Armed Forces. The subcommittee, therefore, has reservations about the wisdom of the Secretary of Defense's decision to phase out Air Reserves and Guard Troop Carrier forces, especially at a time when military air support aircraft are vitally needed to fulfill our airlift requirements for southeast Asia.

The subcommittee also expresses concern over the reduction of any part of our airlift capability during a time of international crisis. However, this subject is being explored in depth by the Special Subcommittee on Military Airlift of the House Armed Services Committee and their conclusions and recommendations will be covered more extensively in their report.

While it may be justifiable to close or consolidate some bases, the subcommittee does not concur in the reduction of our Air Reserves and Guard airlift capability.

Set forth below are summaries of the above three proposed closures:

Bakalar Air Force Base, Columbus, Ind.

Bakalar Air Force Base, near Columbus, Ind., is assigned to the Continental Air Command with the sole function of Reserve training. The base was first acquired during World War II and most of the facilities, dating from that period, have served their useful lives. The base was closed after World War II but was reopened in 1949 and has continued since that time as a Reserve training installation. The Department of Defense plans to close the base by October 1, 1967.

The Defense Department indicated that the decision to inactivate the 930th and 931st Troop Carrier Groups and close the base resulted from an evaluation of the comparative operational capability and cost effectiveness of all the units in the force. On the basis of that evaluation, which considered all airlift force deployment criteria factors, the units at Bakalar placed lower than did those units which will be retained in the force.

Because of its single function of Reserve training, annual operating costs at Bakalar are approximately \$1.5 million more than for comparable units located on Active Force bases. Therefore, according to the Department, it cannot be operationally or economically justifiable to retain such a base. In addition, the support facilities at Bakalar have long surpassed their life expectancy. Maintenance costs are excessive and would increase in the future. The airfield pavements are not strong enough for long-term support of heavy aircraft such as the C-124, and additional construction or reinforcement would be unnecessarily expensive.

The closure of Bakalar Air Force Base will result in savings of 40 active duty military and 356 full-time civilian manpower authorizations. In addition, 1,642 Reserve manpower authorizations will be saved. Total manpower and operating and maintenance savings will be \$4.7 million annually.

Ellington Air Force Base, Houston, Tex.

Ellington Air Force Base is located at Houston, Tex. It has been used as an Active and Reserve training base since World War II. In 1962 the National Aeronautics and Space Administration (NASA) was licensed to use portions of the base in support of the manned space center at Houston. In addition to NASA functions, the base currently accommodates the 924th and 925th Reserve Troop Carrier Groups, Headquarters Civil Air Patrol (CAP), a fighter interceptor group of the Texas Air National Guard, and an air defense radar unit. By October 1, 1967, the Department of Defense plans to inactivate the 924th and 925th Troop Carrier Groups. Prior to the inactivation of these units, the Department will relocate the CAP headquarters to Maxwell Air Force Base, Ala., and transfer jurisdiction of the base to the Air National Guard.

The decision to inactivate the 924th and 925th Troop Carrier Groups resulted from an evaluation of the comparative operational capability and cost effectiveness of all the units in the force. On the basis of that evaluation, which considered all airlift force deployment criteria factors, the units at Ellington placed lower than did those units which will be retained in the force.

Since Ellington is of World War II vintage, it is costly to maintain. Annual operating costs for the troop carrier units there would be greater than for comparable units located on active force bases. In addition, maintenance costs of facilities used by the units are excessive and would increase in the future.

With the inactivation of the 924th and 925th Troop Carrier Groups, and the move of the CAP, the base population will decrease by approximately 70 percent. As a result there will be savings of 263 military and 609 civilian manpower authorizations. In addition, there will be a savings of 1,642 Air Reserve manpower authorizations. Recurring annual manpower and operating and maintenance savings will be \$10.1 million.

Youngstown Municipal Airport, Vienna, Ohio

The Air Force commenced activities at Youngstown in 1951 with the assignment of an Air Defense Command fighter squadron. This squadron was inactivated in 1960 and jurisdiction of the Air Force installation at this location passed to the Continental Air Command. It has been in continual use as a Reserve training facility since that time. The Department of Defense plans to inactivate the 910th Troop Carrier Group by October 1, 1967.

The decision to include the troop carrier group at Youngstown among the units to be eliminated, in view of the reduced airlift force requirement, resulted from the evaluation of the comparative operational capability and cost effectiveness of all of the units in the force. On the basis of that evaluation, which considered all airlift force deployment criteria factors, it was determined that the operational capability/cost effectiveness of the unit at Youngstown was less than that of the units which will be retained in the force. The principal factors affecting the unit at Youngstown are discussed below.

Operating costs at this installation run over \$1.5 million more per year than for similar units located on active bases. Present facilities are not capable of accommodating C-124 aircraft. The limited

amount of parking apron available is light-duty pavement. Construction costs, therefore, to reequip the 910th Troop Carrier Group with C-124 aircraft would be inordinately high. Such an excessive expenditure of construction funds cannot be economically justified when other operationally suitable bases are available which can be adapted much more economically to accommodate all of the units of the reduced Reserve airlift force.

The phaseout of the 910th Troop Carrier Group at Youngstown will result in eventual annual savings of \$3,162,000 and a reduction of 3 military and 260 civilian manpower spaces.

Portland International Airport, Oreg.

The basic mission of the Air Force units stationed at Portland International Airport is the support of air defense force operations. The primary unit at Portland is the 460th Fighter Interceptor Squadron (FIS) equipped with F-102 aircraft.

The size, composition, and deployment of ADC combat units is determined by the threat. As this threat has evolved from bombers to a mixed force of bombers and missiles, the need for manned interceptors has been reduced. Remaining units will be positioned to provide a protective perimeter around the United States and along major threat routes. In evaluating interceptor force deployments, the Department of Defense determined that the predicted threat routes can be adequately defended without an interceptor squadron at Portland.

The 460th FIS is one of the seven F-102 squadrons scheduled to phase out and therefore will inactivate by April 1, 1966. The F-102 aircraft will be transferred to the Air National Guard unit at Portland International Airport to replace their older F-89 aircraft. Regular Air Force activities at Portland International Airport will terminate with the phaseout. Air Force facilities at Portland International Airport will be available for use by the Reserve Forces.

As a result of this action, 1,424 military personnel will be released for reassignment, and there will be a reduction of 82 civilian personnel positions. Recurring annual savings will amount to \$9,699,000.

Under these circumstances the subcommittee interposes no objection to this planned realignment of fighter forces.

Headquarters, 12th Air Force, Waco, Tex.

Headquarters, 12th Air Force is currently located in facilities leased and operated by General Services Administration in the city of Waco. Logistical support is provided by the Air Training Command from James Connally Air Force Base. All of the Air Training Command missions and functions will be phased out of James Connally by June 30, 1966, at which time new support arrangements for Headquarters, 12th Air Force, will be required. Alternatives are to establish a support activity and facilities at Waco (James Connally) or to move Headquarters, 12th Air Force, to a new location.

The location of Headquarters, 12th Air Force, at Waco, Tex., as opposed to alternate locations, does not fulfill operational requirements or provide any economic advantages. The urban location generates a requirement for special command communications arrangements, duplicating much of the system available on most bases. Personnel support facilities will not be readily available after the closure of

James Connally Air Force Base, thereby creating a requirement for special support in such areas as medical, commissary, chaplain services, and finance.

In the past, the support requirements generated by Headquarters, 12th Air Force, have been satisfied by the Air Training Command from James Connally Air Force Base. Although less than optimum, this arrangement has been acceptable, since essential support could be provided at a reasonable cost. However, with the programmed closure of James Connally Air Force Base, Headquarters, 12th Air Force support at its present location will become extremely costly.

The most acceptable course of action is to relocate Headquarters, 12th Air Force, to an active Air Force installation to provide long-term support at minimal cost and for enhancement of mission accomplishment. Therefore, Headquarters, 12th Air Force, will be relocated to Bergstrom Air Force Base, Tex., by June 30, 1968.

In the interim, James Connally Air Force Base will be operated in an expanded caretaker status to provide essential support for the headquarters, which cannot be provided economically from Bergstrom or other military installations in the vicinity of Waco. Initially, Texas A. & M. College will be supported on a reimbursable basis as a tenant of the Air Force at James Connally, and will take over and operate James Connally as the Headquarters, 12th Air Force, is phased out.

The relocation of Headquarters, 12th Air Force, will result in recurring annual savings of \$3,030,000, a reduction of 30 civilian personnel positions, and the release of 475 military personnel for other assignments.

The subcommittee interposes no objection to this proposed relocation.

CONCLUSIONS

The subcommittee seriously questions the wisdom of proceeding with any significant base closures or reductions during this critical period of increasing demand on our Armed Forces, particularly with an unpredictable and growing conflict in southeast Asia. During such an unsettled period, the subcommittee believes there may be not only severe psychological disadvantages to closing more major military bases but also real doubts as to the actual realization of alleged economies. On balance, it would be wiser to opt on the side of a possible surplus than to dispose of hundreds of millions of dollars in facilities for projected savings which may never materialize. Closing these facilities now might only mean replacing them in the future at equal or greater cost and the vaunted "savings" might prove nothing more than bookkeeping interests.

Also, as previously stated, the subcommittee wishes to reiterate that it would view with grave concern any future decisions to close additional military bases in the San Juan area of the Caribbean.

The subcommittee notes with concern that over \$12.8 million in new construction was authorized and funded by the Congress in fiscal year 1966 for military bases announced for closure on December 8, 1965. Over \$30 million in new construction has been completed or is near completion and approximately \$48 million has been authorized for new construction at these bases since 1962.

This clearly indicates to the subcommittee that, despite previous assurances by military construction experts and Department of Defense authorities, the Department of Defense's planning has been seriously inadequate.

Many of the same representatives who appeared before this subcommittee to justify the base closure actions had, a few months previously, testified before the full House Armed Services Committee in support of the military construction projects for the same bases.

In summary, the subcommittee would hope that when additional closures are undertaken in the future the Department of Defense will exercise the highest care in its decisions, and give increased awareness to possible contingent requirements that may result in our involvement in South Vietnam.

**SUBCOMMITTEE NO. 2 CONSIDERATION OF MILITARY MEDICAL
BENEFITS AS PROPOSED IN H.R. 9271, H.R. 13582, AND H.R.
13583**

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
SUBCOMMITTEE No. 2,
Washington, D.C., Thursday, March 24, 1966.

The subcommittee met, pursuant to call, in room 2212, 10:10 a.m., Rayburn House Office Building, Washington, D.C., Hon. F. Edward Hébert, (chairman of the subcommittee) presiding.

Mr. HÉBERT. The committee will be in order.

Members of the subcommittee, this morning we begin hearings on three bills which, if enacted, will significantly increase the availability of medical care to the families of members of the uniformed services, both active and retired.

(The bills referred to, H.R. 9271, H.R. 13582 and H.R. 13583, with accompanying letters from Department of Defense read as follows:)

[H.R. 9271, 89th Cong., 1st sess.]

A BILL To amend title 10, United States Code, to provide resident care for mentally retarded children of members of the armed forces under certain conditions, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 53 of title 10, United States Code, is amended by adding the following section after section 1039:

"§ 1040. Resident care for mentally retarded children

"(a) Under uniform regulations prescribed by the Secretaries concerned, a person—

"(1) who is an unmarried legitimate child, including an adopted child or a stepchild, of a member of the armed forces who is on active duty for a period of more than thirty days; and

"(2) who is determined by competent authority to be mentally retarded and to need resident care because of that condition;

may be provided resident care while the member is on active duty in facilities of the armed forces established solely for the purpose of providing resident care under this section.

"(b) Charges may be imposed for resident care provided under subsection (a). Amounts received in payment of those charges shall be deposited to the credit of the appropriation supporting the maintenance and operation of the facility providing the care. If a person receives resident care in a facility of an armed force other than that of the member concerned, the appropriation for maintaining and operating that facility shall be reimbursed at rates established by the Bureau of the Budget to reflect the average cost of providing that care, less amounts received in payment of charges imposed for that care under this subsection.

"(c) Under uniform regulations prescribed by the Secretaries concerned, a public or private facility may be reimbursed for all or any part of the resident care that has been provided in that facility to a person described in subsection (a) (1) and (2) and for which the facility has not been paid by the member concerned. Amounts paid to a facility under this subsection may be recovered by monthly deductions from the basic pay of the member concerned and from any amount otherwise due the member upon final settlement of his accounts.

"(d) Regulations that are prescribed by the Secretaries of the military departments under this section shall be approved by the Secretary of Defense."

SEC. 2. The analysis of chapter 53 of title 10, United States Code, is amended by adding the following item:

"1040. Resident care for mentally retarded children."

GENERAL COUNSEL OF THE DEPARTMENT OF DEFENSE,
Washington, D.C., March 8, 1966.

HON. L. MENDEL RIVERS,
Chairman, Committee on Armed Services,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Reference is made to your request for the views of the Department of Defense with respect to H.R. 9271, 89th Congress, a bill to amend title 10, United States Code, to provide resident care for mentally retarded children of members of the Armed Forces under certain conditions, and for other purposes.

The purpose of H.R. 9271 is to provide resident care for mentally retarded children of members of the Armed Forces while the latter are on active duty for a period of more than 30 days. Eligible children of members of the Armed Forces would be those determined by competent authority to be mentally retarded and in need of resident care because of that condition. The bill provides that resident care, for such children, may be provided in facilities of the Armed Forces established solely for that purpose. Charges may be imposed for the resident care provided. Uniform regulations, prescribed by the Secretaries concerned, may provide for reimbursing a public or private facility providing resident care for eligible children. The bill provides that amounts paid to a facility may be recovered from members by monthly deductions from their basic pay and from any amount due upon final settlement of their accounts.

While the Department of Defense supports the purpose of H.R. 9271, we recommend the enactment of the more comprehensive draft attached.

The purpose of the substitute draft is to provide a special program for mentally and physically handicapped children of active duty members of all seven of the uniformed services to the end that the heavy and, at times, unbearable burden of providing continuing care for such children will be lightened for the serviceman.

The Department of Defense recognizes that the basic obligation of providing for the needs of its members, in terms of acceptable living standards, must be fulfilled by the uniformed services if they are to attract and retain a competent, dedicated, and professional force. It is further recognized that payment for the care, treatment, and special education of mentally and physically handicapped children is frequently such a drain on the financial resources of an active duty member as so make it impossible for him to maintain an acceptable standard of living.

The services required by mentally or physically handicapped children of members of the uniformed services are generally not available at uniformed services facilities. Moreover, such children are often unable to receive civilian care and treatment, or special education, because of State residence requirements. The proposal is intended to make public and private nonprofit facilities readily available to children of members of the uniformed services, regardless of the assignment of the member.

The proposal would establish, effective July 1, 1967, a program for the care, training, rehabilitation, and special education of children who are moderately, severely, or profoundly retarded mentally or who have a serious physical handicap.

The care, training, and special education covered by the proposal would all be obtained from civilian institutions and facilities. This provision stems from the conclusion of the Department of Defense that it would be impractical to attempt to solve this problem through the construction of additional military facilities or the augmentation of military staffs.

Under the proposal, active duty members would be required to pay a share of the cost of the benefits provided their children. Members in the lowest enlisted pay grade would be required to pay the first \$25 incurred each month. Members in the highest commissioned pay grade would similarly pay \$250. The amounts to be paid by members in all other pay grades would be determined administratively, except that the amounts so determined could not be less than \$25 or more than \$250 per month.

In an effort to overcome the effects of the residence requirements imposed by some States in connection with their child welfare and crippled children programs, the proposal would, in effect, require such States to waive residence requirements for the children of active duty members (and for a period of 1 year following the member's retirement) in order to obtain Federal grants for their programs.

Except for adding a special new program limited to handicapped children, the proposal would not make any changes in the existing dependents' medical care program.

COST AND BUDGET DATA

It is estimated that enactment of this proposal will result in the following additional annual costs (in millions):

	Fiscal year 1968	Fiscal year 1969	Fiscal year 1970	Fiscal year 1971	Fiscal year 1972
Army.....	9.2	9.6	10.0	10.5	11.1
Navy and Marine Corps.....	7.1	7.4	7.8	8.1	8.6
Air Force.....	11.5	11.9	12.3	12.8	13.5
Coast Guard, Environmental Science Services and Personal Health Services.....	.4	.5	.5	.5	.6
Total.....	28.2	29.4	30.6	31.9	33.8

The Bureau of the Budget advises that, from the standpoint of the administration's program, there is no objection to the presentation of this report for the consideration of the committee.

Sincerely,

L. NIEDERLEHNER,
Acting General Counsel.

A BILL To amend chapter 55 of title 10, United States Code, to authorize a special program for the handicapped children of members of the uniformed services, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 55 of title 10, United States Code, is amended as follows:

(1) The second sentence of section 1079(a) is amended by striking out "subsection (b)" and inserting in place thereof "subsections (b), (c), and (d)".

(2) Section 1079 is amended by adding the following new subsections at the end thereof:

"(c) Under joint regulations to be prescribed by the Secretary of Defense and the Secretary of Health, Education, and Welfare, in the case of a child, as defined in section 1072(2)(E) of this title, who is moderately, severely, or profoundly retarded mentally or who has a serious physical handicap, the plans covered by subsection (a) shall, with respect to such retardation or handicap, include the following:

"(1) Diagnosis.

"(2) Inpatient, outpatient, and home treatment.

"(3) Training, rehabilitation, and special education necessitated by the child's mental or physical handicap.

"(4) Institutional care in private nonprofit, public and state institutions and facilities and, when appropriate, transportation to and from such institutions and facilities.

"(d) As their share of the cost of any benefits provided under subsection (c), members in the lowest enlisted pay grade shall pay the first \$25 incurred each month and members in the highest commissioned pay grade shall similarly pay \$250. The amounts to be similarly paid by members in all other pay grades shall be determined under joint regulations to be prescribed by the Secretary of Defense and the Secretary of Health, Education, and Welfare. The amounts so prescribed shall not be less than \$25 or more than \$250. A member who has more than one child incurring expenses in a given month under a plan covered by subsection (c) shall not be required to pay an amount greater than he would be required to pay if he had but one such child.

"(e) To qualify for the benefits provided by subsection (c), members shall be required to use public facilities to the extent they are available and adequate as determined under joint regulations of the Secretary of Defense and the Secretary of Health, Education, and Welfare."

SEC. 2. Title V of the Social Security Act is amended as follows:

(1) Section 503 (42 U.S.C. 703) is amended by striking out the word "and" immediately preceding clause 8, by changing the period at the end of clause 8 to a semicolon, and adding the following:

"and (9) provide that children of active-duty members of uniformed services (and the children of those retired members covered by section 1074(b) of title 10, United States Code, for a period of one year following the effective date of the member's retirement) shall not be denied services covered by the plan on the grounds that the member is not a resident of that State or that such children are members of a class eligible for benefits under chapter 55 of title 10."

(2) Section 513 (42 U.S.C. 713) is amended by striking out the word "and" immediately preceding clause 7, by changing the period at the end of clause 7 to a semicolon, and adding the following:

"and (8) provide that children of active-duty members of the uniformed services (and the children of those retired members covered by section 1074(b) of title 10, United States Code, for a period of one year following the effective date of the member's retirement) shall not be denied services covered by the plan on the grounds that the member is not a resident of that State or that such children are members of a class eligible for benefits under chapter 55 of title 10."

SEC. 3. This Act becomes effective July 1, 1967.

[H.R. 13582, 89th Cong., 2d sess.]

A BILL To amend chapter 55 of title 10, United States Code, to increase health benefits for dependents of members of the uniformed services

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 55 of title 10, United States Code, is amended as follows:

(1) Section 1077 is amended to read as follows:

"§ 1077. Health benefits for dependents; authorized care in facilities of uniformed services

"(a) Except as provided in subsection (b), health benefits provided under section 1076 of this title may not exceed those provided under the high option of the Government-wide plan covering the larger number of civilian employees contracted for by the Civil Service Commission under section 3003 of title 5.

"(b) The following types of health benefits may also be provided under section 1076 of this title:

"(1) Physical examinations.

"(2) Immunizations.

"(3) Care of the newborn.

"(4) Routine dental care may be provided outside the United States, and in remote areas inside the United States where adequate civilian facilities are unavailable. Emergency dental care, but not including permanent restorative work or dental prosthesis, and dental care as a necessary adjunct to medical or surgical treatment, may be provided worldwide."

(2) Section 1079 is amended as follows:

(A) Subsection (a) is amended to read as follows:

"(A) To assure that medical care is available for spouses and children of members of the uniformed services who are on active duty for a period of more than 30 days, the Secretary of Defense after consulting with the Secretary of Health, Education, and Welfare, shall contract, under the authority of this section, for medical care for those persons under such insurance, medical service, or health plans as he considers appropriate. Health benefits provided under these plans may not exceed those provided under the high option of the Government-wide plan covering the larger number of civilian employees contracted for by the Civil Service Commission under section 3003 of title 5."

(B) Subsection (b) is amended to read as follows:

"(b) Plans covered by subsection (a) shall include provisions for payment by the patient of the following amounts:

"(1) \$25 for each admission to a hospital, or the charge prescribed under section 1078(a) of this title multiplied by the number of days of hospitalization, whichever amount is the greater.

"(2) 20 per centum of the charges for outpatient care, including supplies and services provided in connection with that care."

(C) The following new subsection is added at the end thereof:

"(c) The methods for making payment under subsection (b) shall be prescribed under joint regulations issued by the Secretary of Defense and the Secretary of Health, Education, and Welfare."

(3) The analysis is amended by amending the item relating to section 1077 to read as follows:

"1077. Health benefits for dependents; authorized care in facilities of uniformed services."

SEC. 2. This Act becomes effective July 1, 1967.

THE SECRETARY OF DEFENSE,
Washington, March 2, 1968.

Hon. JOHN W. MCCORMACK,
Speaker of the House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: A draft of legislation "To amend chapter 55 of title 10, United States Code, to increase health benefits for dependents of members of the uniformed services" is enclosed.¹

This proposal is part of the Department of Defense legislative program, and the Bureau of the Budget has advised that, from the standpoint of the administration's program, there is no objection to the presentation of this proposal for the consideration of the Congress. It is recommended that the proposal be enacted by the Congress.

PURPOSE OF THE LEGISLATION

The purpose of the proposed legislation is to increase the attractiveness of a military career by improving the health care program for the dependents of active-duty members of the uniformed services, to the end that the benefits available to such persons will be more comparable to those offered in the health care plans of industry and labor, and those offered under the Federal employees health benefits program.

Since early in the 19th century, the Armed Forces traditionally have provided medical care for the dependents of their active duty members on a "space-available" basis. In the case of Army dependents, this historic practice was recognized by statute in 1884 when the 48th Congress provided in an appropriation act "That the medical officers of the Army and contract surgeons shall whenever practicable attend the families of the officers and soldiers free of charge" (23 Stat. 112).

Concern by the Congress and the Department of Defense over the fact that approximately 40 percent of the dependents of active duty members did not live in areas where military medical facilities were available, led to the enactment in 1956 of the Dependents' Medical Care Act (now codified as chapter 55 of title 10, United States Code). In addition to establishing a uniform program for health care for dependents in all uniformed services treatment facilities, the act, in effect, authorized dependents to use civilian hospitals at a cost of \$25 per admission or \$1.75 a day, whichever is greater.

Since medical care from civilian sources is, for the most part, limited under the present dependents' medical care program to inpatient hospital care, it follows that the goal of the 1956 statute of equalizing health care benefits as between those dependents who had access to military medical facilities and those lacking such access was not fully realized. The inclusion of civilian outpatient care in the benefits covered by the new program was considered during the hearings on the bill (H.R. 9429, 84th Cong.) which became the Dependents' Medical Care Act. The two main reasons for its exclusion appear to have been concern over the estimated cost of adding it to the benefits authorized under the bill, plus the fact that the inclusion of such benefits was not a common practice in the group health plans then being offered by industry and labor. Regarding the latter reason, the Health Insurance Association of America reports that the number of persons with some form of outpatient coverage has increased by almost 500 percent between 1956 and 1965 to a current total of 47 million.

Another fact to consider is that since 1956, the practice of medicine has changed; many types of cases which 10 years ago would have been treated on an inpatient

¹ Same as H. R. 13582.

basis are now treated on an outpatient basis. For example, in fiscal year 1956, the average daily patient load in military hospitals was 40,019, coupled with a total of 39 million outpatient visits for the year. For fiscal year 1965, the inpatient figure was down 23 percent to 30,452, while the outpatient figure had increased 11 percent to 44 million.

Another significant development during the interim was the establishment of the Federal employees health benefits program, under which the dependents of civilian employees of the Government receive civilian outpatient care.

Thus, it is clear that while the practice of medicine has changed and the benefits, including outpatient coverage, offered by most health plans have been expanding rapidly, the benefits provided under the dependents' medical care program have remained frozen at the 1956 level.

The proposal would remove the statutory restrictions on the types of health care which may be provided dependents of active duty members, both in uniformed services and civilian facilities, effective July 1, 1967. Under the proposal, the Secretary of Defense and the Secretary of Health, Education, and Welfare would determine administratively the benefits to be provided dependents, except that, in general, benefits would not be provided at a level which would exceed those provided under the larger Government-wide plan of the Federal employees health benefits program.

It is contemplated that if the proposal is enacted, all health benefits covered by the plan of the Federal employees health benefits program referred to above will be authorized dependents of active duty members in uniformed services facilities on a space-available basis.

The principal result of enactment of the proposal would be to authorize civilian outpatient care for dependents under the same general circumstances as such persons are now eligible for civilian inpatient care. Under the proposal, dependents would be required to pay 20 percent of the charges for outpatient care, an amount commonly specified in many civilian group health plans. No change would be made in the charges established in 1956 for inpatient care.

COST AND BUDGET DATA

It is estimated that enactment of this proposal will result in the following additional annual costs:

[In millions of dollars]

	Fiscal year 1968	Fiscal year 1969	Fiscal year 1970	Fiscal year 1971	Fiscal year 1972
Army.....	15.4	15.5	15.7	16.1	16.4
Navy and Marine Corps.....	12.5	12.5	12.7	13.0	13.2
Air Force.....	19.2	18.9	18.9	19.4	19.7
Coast Guard, Environmental Science Services and PHS.....	.7	.7	.8	.8	.8
Total.....	47.8	47.6	48.1	49.3	50.1

Sincerely yours,

(Signed) CYRUS VANCE.

[H. R. 13583, 89th Cong., 2d sess.]

A BILL To amend chapter 55 of title 10, United States Code, to authorize a civilian health benefits program for retired members of the uniformed services and their dependents

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 55 of title 10, United States Code, is amended as follows:

(1) Sections 1071, 1072, 1073, and 1084 are each amended by striking out "1085" wherever it appears (in catchline or text) and by inserting in place thereof "1086".

(2) Section 1074(b) is amended by adding the following sentence at the end thereof: "The Secretary of Defense and the Secretary of Health, Education, and Welfare may, with the agreement of the Administrator of Veterans' Affairs, provide care to persons covered by this subsection in facilities operated by the Administrator and determined by him to be available for this purpose on a reimbursable basis at rates approved by the Bureau of the Budget."

(3) The following new sections are added after section 1085:

“§ 1086. Contracts for health benefits for certain members, former members, and their dependents

“(a) To assure that health benefits are available for the persons covered by subsection (b), the Secretary of Defense, after consulting with the Secretary of Health, Education, and Welfare, shall contract under the authority of this section for health benefits for those persons under such insurance, medical service, or health plans as he considers appropriate. Benefits provided under these plans may not exceed those provided under the high option of the Government-wide plan covering the larger number of civilian employees contracted for by the Civil Service Commission under section 3003 of title 5.

“(b) The following persons are eligible for health benefits under this section:

“(1) Those covered by sections 1074(b) and 1076(b) of this title, except those covered by section 1072(2)(F) of this title.

“(2) A dependent of a member of a uniformed service who died while on active duty for a period of more than thirty days, except a dependent covered by section 1072(2)(F) of this title.

However, a person who is entitled to hospital insurance benefits under title I of the Social Security Amendments of 1965 (79 Stat. 286) is not eligible for health benefits under this section.

“(c) The Secretary of Defense, after consulting with the Secretary of Health, Education, and Welfare, shall prescribe the amounts payable by the persons covered by subsection (b) and the methods of making payment for benefits, including supplies and services, provided under plans covered by subsection (a). He shall base such payments on his estimate of the amounts necessary to assure that the Government's share of the cost of the benefits provided under the plans covered by subsection (a) shall approximate, but not exceed, 75 per centum of the total costs incurred under those plans.

“(d) No benefits shall be payable under any plan covered by this section in the case of a person enrolled in any other insurance, medical service, or health plan provided by law or through employment, except for benefits not payable under the other plan.

“(e) A person covered by this section may elect to receive benefits either in (1) Government facilities, under the conditions prescribed by sections 1074 and 1076-1078 of this title, or (2) the facilities provided under a plan contracted for under this section. However, under joint regulations issued by the Secretary of Defense and the Secretary of Health, Education, and Welfare, the right to make this election may be limited for those persons residing in an area where adequate facilities of the Government are available.

“§ 1087. Programing facilities for certain members, former members, and their dependents in construction projects of the uniformed services

“(a) Facilities for inpatient and outpatient care for persons covered by sections 1074(b) and 1076(b) of this title may be programed in uniformed services construction projects by the Secretary concerned only on a case-by-case basis under joint regulations to be prescribed by the Secretary of Defense and the Secretary of Health, Education, and Welfare.

“(b) The extent to which space covered by subsection (a) may be provided will be based on the teaching and training requirements of the medical interns and residents assigned to the facility, using standards prescribed by medical specialty boards and the American Medical Association as guidelines, and taking into account those patients who would otherwise be provided care in the facilities.

“(c) The Secretary concerned may also consider programing a reasonable number of hospital beds for persons covered by this section in extreme cases where he determines that all of the following conditions exist in an area within one hour's traveltime of a uniformed services hospital:

“(1) The persons covered by this section constitute a large concentration.

“(2) There is an existing demonstrable critical shortage of beds at civilian hospitals.

“(3) There are no plans for eliminating the critical shortage of civilian hospital beds by the time the programed uniformed services hospital is constructed.

“(d) Facilities programed under this section shall be the minimum necessary for the purposes specified in subsections (b) and (c).”

(4) Section 1082 is amended by inserting "and 1086" immediately after "1081" and by amending the catchline to read as follows:

"§ 1082. Contracts for health care: advisory committees"

(5) The analysis is amended by striking out the following items:

"1071. Purpose of sections 1071-1086 of this title."

"1073. Administration of sections 1071-1086 of this title."

"1082. Contracts for medical care for spouses and children: advisory committees."

and inserting the following items:

"1071. Purpose of sections 1071-1086 of this title."

"1073. Administration of sections 1071-1086 of this title."

"1082. Contracts for health care: advisory committees."

"1086. Contracts for health care for certain members, former members, and their dependents."

"1087. Programing facilities for certain members, former members, and their dependents in construction projects of the uniformed services."

SEC. 2. This Act becomes effective on July 1, 1967.

THE SECRETARY OF DEFENSE,
Washington, March 3, 1966.

Hon. JOHN W. McCORMACK,
Speaker of the House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: A draft of legislation "To amend chapter 55 of title 10, United States Code, to authorize a civilian health benefits program for retired members of the uniformed services and their dependents" is enclosed.¹

This proposal is part of the Department of Defense legislative program and the Bureau of the Budget has advised that, from the standpoint of the administration's program, there is no objection to the presentation of this proposal for the consideration of the Congress. It is recommended that the proposal be enacted by the Congress.

PURPOSE OF THE LEGISLATION

The purpose of the proposed legislation is to provide a program of health benefits equally available to all retired members of the uniformed services and their dependents. Such a program is required to provide equitable benefits to our rapidly increasing retired population. In future years, these benefits must increasingly be provided by civilian institutions due to the declining coverage of space-available care in military facilities.

Under the Dependents' Medical Care Act (now codified as chapter 55 of title 10, United States Code), any person entitled to retired pay or similar pay (other than a person entitled to retired pay under chapter 67 of title 10, United States Code, who served less than 8 years of active duty) may, upon request, be given health care in any facility of any uniformed service, subject to the availability of space and facilities and the capabilities of the professional staff. The dependents of such persons and of certain deceased active duty, retired or former members may also be given care in such facilities. In general, the dependents in question are provided care subject to the same conditions as apply in the case of retired members. These groups are not presently authorized care from civilian sources at Government expense.

Space has generally been available in military facilities for those retired members and their dependents who reside near or are able to travel to such facilities. The Department of Defense recognizes, however, that the projected increase in the size of the retired population will eventually result in large numbers of retired military personnel whose health care needs cannot be met by military medical facilities.

When the bill (H.R. 9429, 84th Cong.) which became the Dependents' Medical Care Act was under consideration by the Congress, the question arose as to whether retired personnel and their dependents should be entitled to medical care from civilian sources at Government expense. The bill passed by the House granted the Secretary of Defense discretionary authority to arrange for such care. The Senate amendment contained no similar provision. During the meeting of the committee of conference, the House managers agreed to the exclusion of this discretionary authority with the understanding that it might be possible later to

¹ Same as H. R. 13583.

extend the civilian program by including the retired group after a certain amount of cost and experience data had been accumulated (p. 9, H. Rept. 2195, 84th Cong.).

Early in 1964, the Special Subcommittee on Construction of Military Hospital Facilities of the House Armed Service Committee held extensive hearings on the retired military health care problem. In its report (No. 67) issued on September 30, 1964, the subcommittee stated (p. 10377): " * * it is clear to the subcommittee that in future years a major portion of care must come from civilian facilities if it becomes governmental policy to provide such care." The subcommittee recommended that the Department of Defense promptly submit recommendations for the necessary legislation to resolve the retired military health care problem in an equitable and feasible manner, and that some beds be programed in military hospitals for the retired group.

The proposal would establish a civilian health benefits program for retired members and their spouses and children, and for the spouses and children of deceased active duty and retired members, effective July 1, 1967. With one exception, eligibility for benefits for civilian care for all persons covered by the program would end when they reached 65 years of age, at which time they would become eligible for participation in the health care program for the aged established by title I of the Social Security Amendment of 1965 (79 Stat. 286). With respect to the exception, while no specific cases have been identified, it is theoretically possible that a small number of retired members and dependents may never qualify for benefits under the new health insurance program for the aged. The proposal takes this into account by providing, in effect, that the persons in question shall remain eligible for civilian health care benefits under the military retiree program beyond age 65.

Under the program, the Secretary of Defense and the Secretary of Health, Education, and Welfare would have the same wide latitude in selecting a specific method of providing care as they now have under section 1079(a) of title 10 in the case of dependents of active duty members of the uniformed services. It is contemplated that if the proposal is enacted, the retired group will be added to the civilian care segment of the existing dependents' medical care program, effective July 1, 1967, and that the program for retirees would be administered in the same manner and by the same organization that administers the present program, thus taking advantage of the low administrative costs and valuable experience obtained under the present program. There would be only two departures from the present program. The first departure would be a requirement that the Secretary of Defense, after consulting with the Secretary of Health, Education, and Welfare, would prescribe the amounts to be paid by the persons covered by the program and the methods of paying the amounts so prescribed. Under the proposal, the Secretary of Defense would, in effect, be required to establish a cost-sharing system under which the Government would pay approximately 75 percent of the total costs of the benefits provided, with the beneficiaries paying approximately 25 percent of such costs. The second departure involves the so-called free choice concept. Under the present program, dependents who reside apart from their sponsor have free choice as between using uniformed service or civilian facilities, whereas in the case of those who reside with their sponsor this freedom may be restricted. Since retirees and their dependents are not normally separated, their freedom of choice could under the proposal be restricted in the interests of continued economical utilization of Government facilities.

The proposal would make no changes in the existing programs in uniformed services facilities for various categories of personnel which are based on the Dependents' Medical Care Act. All persons eligible for benefits under the new program would continue to be eligible for space-available care in uniformed services facilities.

The proposal also provides for the programing of some space for the retired group in medical construction projects of the uniformed services. The amount to be programed would be determined by the Secretary concerned on a case-by-case basis. In making such determinations, consideration would be given to teaching and training requirements prescribed by specialty boards and the American Medical Association.

In extreme cases, determinations would be made on the basis of a demonstrable critical shortage of beds in a particular community which warrant some reasonable supplementation to serve a large concentration of retired uniformed services personnel.

The proposal would also authorize retired members as such (rather than as veterans) to obtain care in facilities of the Veterans' Administration on a space-available basis. Under the proposal, the Department of Defense would reimburse the Veterans' Administration for care provided retired members at rates approved by the Bureau of the Budget.

COST AND BUDGET DATA

It is estimated that enactment of this proposal will result in the following additional annual costs (in millions of dollars):

	Fiscal year—				
	1968	1969	1970	1971	1972
Army.....	46.1	52.1	59.6	65.8	72.2
Navy and Marine Corps.....	47.2	53.2	60.5	67.3	74.3
Air Force.....	22.5	25.4	29.0	31.9	37.9
Coast Guard, environmental science services and PHS.....	3.5	4.0	4.6	5.4	6.2
Total.....	119.3	134.7	153.7	170.4	190.6

Sincerely,

(Signed) CYRUS VANCE.

Mr. HÉBERT. As the members of this subcommittee are well aware, the Congress, in 1956, made a very determined effort to assure the availability of health care benefits to the dependents of uniformed services personnel by the enactment of the Dependents Medical Care Act, Public Law 84-569.

That act, first drafted by this subcommittee under the chairmanship of the distinguished Paul J. Kilday, of Texas, was one of the most forward-looking pieces of legislation passed by the Congress. It establishes medical care as a statutory right for the dependents of military personnel and—for the first time—authorized health care for dependents in nonmilitary hospitals.

It is important to note that at the time there was no precedent for providing this type of civilian medical care coverage to either military dependents or to Federal employees. Therefore, the program developed by the Congress and the Department of Defense was entered into with great care and reservations so as to avoid the possibility that the program would prove so expensive that it would be abandoned.

All segments of the civilian community cooperated magnificently with the Department of Defense and the Congress in developing a program that eventually became the model for the health benefits program subsequently authorized by the Congress for Federal employees and their dependents.

Since 1956 our Nation has experienced a tremendous increase in the growth of health care benefits programs, both in the numbers of individuals covered and the scope of benefits available. Unfortunately, despite these expanded programs in the civilian community, the benefits provided under the Dependents Medical Care Act for uniformed services personnel have remained frozen at the 1956 level.

The bills before us today will provide a realistic expansion of these health care benefits for the families of our uniformed services person-

nel. This would be accomplished by the following bills, and I will enumerate them as now before us:

H.R. 13582 would permit a general expansion of medical care benefits available to dependents in uniformed services facilities and would permit civilian outpatients care for dependents.

In H.R. 13583 there would be authorized a program of assured medical care for the retired members of the uniformed services and their dependents. This program would, for practical purposes, be identical to that provided the families of active duty members of the Uniformed services.

In H.R. 9271, which I introduced in June of last year, there would be authorized, with the Department of Defense's recommended changes, a specific program for the mentally and physically handicapped children of active duty members of the uniformed services. This program for the care, training, and special education of handicapped children is, in my judgment, particularly important since there are more than 100,000 handicapped children of active duty personnel.

Approximately 7,000 of these are mentally retarded children. The bill grew out of the fact that retarded children of service personnel are generally unable to participate in existing programs of special care because of State residency requirements.

I may interpose here and say that this came to my attention in a case involving some Navy personnel being transferred to the city of New Orleans and the difficult time I had at that time to obtain the proper care for this officer's child. And, while the bill is introduced under my name and will be reported out of this committee if it is found to be agreeable, I do want to pause here to give particular credit to my young assistant at that time, Mr. William Billeter, who has left now and is with the Courier General. But, Mr. Billeter was handling this and Bill became so involved with it, and discussed this with the people in the Defense Department that this legislation is a result.

The cost of care for these unfortunate children is extremely high and can lead to tragic situations for service families denied help.

My bill would have authorized the care in either military or civilian facilities. The Department, in supporting the bill, proposed a program using civilian institutions alone and requiring States to waive the residency requirements for military personnel in order to obtain Federal grants.

I am happy to note that all these recommended improvements to the health benefits program of the uniformed services have been endorsed and supported by the executive branch. This, as we all know, is particularly important since we are discussing legislation which will involve an expenditure of an additional \$1 billion over the next 5 years.

In conducting these hearings we are building on the considerable foundation laid by the Special Subcommittee on Construction of Military Hospital Facilities which, under the leadership of our able committee chairman, L. Mendel Rivers, carried out so important a study in 1965.

The Department of Defense's proposals for retired medical care in H.R. 13583 are in response to a mandate from that special com-

mittee. And, I again may pause to say that it is refreshing to know that this committee is receiving cooperation from the Department of Defense in the medical area. I wish I could say the same in other areas.

For purposes of the record, I have attached to my statement a copy of the recommendations made by the Rivers subcommittee in respect to proposed legislative and policy changes required in the area of medical care. The bills being considered by the subcommittee today would generally appear to satisfy the legislative objectives recommended by the Rivers subcommittee which were as follows:

[From Committee Document 67, "Military Hospital Construction and Utilization Policies," Sept. 30, 1964]

RECOMMENDATIONS

Legislative

1. That the Department of Defense promptly submit recommendations for the necessary legislation to resolve the retired military health care problem in an equitable and feasible manner.

2. That such legislation be considered promptly by the Congress.

3. That amendatory language be added to the present Dependents' Medical Care Act, making it unmistakably clear that the so-called space-available concept may not be used as a vehicle to limit or eliminate space available for retired military personnel and their dependents in military facilities.

Changes in Department of Defense policy:

1. That the Department of Defense program beds for retired military personnel and their dependents in new military hospital construction on the basis of projected workloads, but not to exceed 10 percent of the beds otherwise programed for each hospital. Even in the case of teaching hospitals, or under special circumstances, the subcommittee believes that not more than 20 percent additional should be programed.

2. That the Department of Defense program beds for dependents of active-duty personnel in new military hospital construction on the basis of projected mission, and not depend on civilian hospitals in nearby communities which are subject to local fluctuating conditions.

3. That the Department of Defense keep always in mind potential mobilization usefulness which will be met by beds programed for other than active-duty military personnel.

4. That the services revise their recruitment and retention literature to make it conform to present governmental policy that service-provided health and medical care is available to military retirees and their dependents only in military facilities on a space-available basis.

In these hearings we will not have to go over ground already covered by that early subcommittee. I also may indicate here I will ask the subcommittee to consolidate all of the bills that we approve, if we approve them. Instead of submitting the bill under the chairman's name, it will be submitted under Mr. Rivers' name because of the magnificent work he did when he was chairman of this committee.

In the matter of medical care for retired personnel, for example, the earlier subcommittee established that the Government has a moral obligation to provide the care for retired military personnel and their dependents. The basic objective of the present hearing, therefore, is to determine how best to meet that obligation. I trust those who testify will address themselves to these current problems.

I was going to say I will take the witnesses of the executive first. However, we have present with us this morning a very valuable member on the Committee on Armed Services who is present and we will hear from our distinguished colleague, Senator Charles E. Bennett of Florida. [Laughter.]

Mr. HÉBERT. If you want to make the announcement today, we will express our sadness at losing you and express our happiness in the Senate gaining some knowledge.

**STATEMENT OF HON. CHARLES E. BENNETT, REPRESENTATIVE
FROM FLORIDA**

Mr. BENNETT. Thank you.

Mr. Chairman, I appreciate this opportunity to appear in support of medical care benefits for retired military personnel.

As you may know, the number of retired military personnel and their dependents in my own congressional district numbers more than 42,000, and as long as military personnel continue to retire in such great numbers in Duval County, Fla., the number of retirees there can only accelerate. I point this out because the new Navy hospital now under construction at Jacksonville will provide space for only 400 beds, and additional beds will be needed for retired military personnel and their dependents. All in all, the new hospital will not be able to meet the medical needs of active-duty personnel, retirees, and others who make up the more than 95,000 people it must presently serve. It will clearly not be able to render the care promised military retirees, so long as this care remains on a space-available basis.

As an early introducer of legislation to provide more adequate medical facilities for retired members of the uniformed services and their dependents, I cannot overemphasize the urgency for enacting such a program. The Department of Defense has recently stated that by 1970 there will be 25 military retirees for every 100 persons on active duty, and that by 1977 military retirees will equal 40 percent of the total number of active-duty personnel. These retired and active-duty personnel, together with an additional one and a half million dependents, vividly demonstrates the immediate need for increased care and facilities.

It has been charged in some quarters that medical care is not due these retirees.

Maybe we should just ask those who have served on active duty how the recruiter and the Defense Department as far back as they can remember promised them medical care would be provided upon their retirement. The fact of the matter is that as far back as the Civil War our Government provided these benefits, and they were established of right by statute in 1884.

In an effort to begin remedial action I introduced in the beginning of the 88th Congress H.R. 178 and subsequently, at the request of the Fleet Reserve Association, H.R. 10763. In this Congress the earlier bill is now numbered H.R. 279, and the Fleet Reserve bill H.R. 1525. From the time I initially introduced H.R. 178, I have heard only favorable testimonials on the merits of the proposal.

I believe it once had, and perhaps still has, departmental favor.

Since H.R. 1525 has met the "test of fire" by its endorsement from a major military retirees association, it seems to me that serious consideration should be given to it.

I know that there is strong support in Congress and among the service and veterans organizations for this legislation, and I urge the members of this subcommittee and the full committee, to give the matter their usual careful consideration, reporting favorably

my bill H.R. 279 or as an alternative, the more specific plan H.R. 1525.

Mr. HÉBERT. Thank you very much, Charlie. We always appreciate the opportunity to get your views.

Any questions of the members of the committee, except how big the vote will be in Florida?

Mr. PIRNIE. It will be good.

Mr. HARDY. Mr. Chairman, if I might just compliment our colleague as I was thinking of this. He has always been in the forefront of this activity.

Mr. HÉBERT. You may quote that. It is in open session. [Laughter.]

Now, members of the committee, we will proceed in the regular order and I will ask that Secretary Morris come forward with the three Surgeons General and Dr. Fisk from the Department of Defense so we will have all the gentlemen at the table at the same time.

Secretary Morris, may I welcome you back before the committee. You are an old friend of ours, and have been here many, many times before, but you come here today I think for the first time in a new role as Assistant Secretary of Defense in charge of personnel, and we wish you well and offer you our full cooperation and we feel so certain that in this area of personnel the obstacles and hills won't be as pointed as they were in your previous operation where you had to close the bases down.

Mr. HARDY. That is a promise, Mr. Chairman.

Mr. HÉBERT. Here you will find out that dealing with human beings is a little different than dealing with figures and computers, so we welcome you here today and you may proceed.

STATEMENT OF HON. THOMAS D. MORRIS, ASSISTANT SECRETARY OF DEFENSE (Manpower)

Mr. MORRIS. Mr. Chairman and members of the subcommittee, we are pleased to have this opportunity to present for your consideration three interrelated legislative proposals designed to modernize and liberalize health benefits for active duty dependents of military members; and for retired members and their dependents. I have with me today the Surgeons General of the military Departments, and Dr. Fisk, Deputy Assistant Secretary of Defense, Health, and Medical. We appear before you as a team to describe these proposals which have been jointly developed.

These three bills represent the major military personnel legislation proposed to the Congress this year. In fact, the Secretary of Defense instructed me last October, when I assumed my present duties, to give the solution of these medical care problems first priority. In developing the proposals we have given particular study and attention to the reports of the House Armed Services Committee on these problems.

The scope and significance of the three proposed bills are highlighted by the contribution which we believe that they will make to the morale of our military families, and particularly to our men serving in Vietnam who need the assurance that their dependents—many of whom do not reside in convenient proximity to military facilities—receive first-class medical care at minimum cost. Another measure of the significance

of the legislation is its contribution to the economic welfare of our people. The first year cost is estimated at \$191 million to the DOD, rising to \$267 million in the fifth year. This is the equivalent to about a 1-percent increase in military compensation for active-duty personnel.

We are aware, of course, that these bills do not accomplish all of the improvements which may be ultimately required. One important area which is still not covered in either civilian or military health-care programs generally is dental care. We are giving this matter further study. We believe, however, that these proposals are a significant step forward in maintaining a progressive health-care program for military families—equal or superior to those available to civilian employees in Government and industry.

First, we would like to discuss H.R. 13583.

Civilian health benefits program for retired members and their dependents.

The first of the three bills has as its objective the provision of a program of DOD-sponsored medical care benefits—both hospital and outpatient care—equally available to all retired members and their dependents until they attain age 65 and become eligible for the new social security medical care program.

Today, as you know, the only care available to retired personnel is in our own facilities on a "space available" basis.

We estimate that only about half of the military retired population is geographically located so as to use military facilities. While in the past we have been able to accommodate most of the group who live near our facilities and request such service, our capability to do so is diminishing due to the rapid increase in the retired population.

In 1964 a special subcommittee of the House Armed Services Committee made an intensive study of this problem and reached the following conclusions which are the foundation for the program we are proposing.

First—

that the traditional benefit of hospital care to military retirees and their dependents must be continued.

Second, that—

the best solution to the retired health problem is to use civilian facilities, as well as military facilities.

The provision of care to retirees dates back into the 19th century and for many years was stressed as a major fringe benefit in personnel recruiting literature.

A survey made of a large cross section of retirees in 1963 revealed that:

First, almost 6 out of 10 said that the availability of medical care was important to their joining and making the military service a career.

Second, a similar number expressed the view that retired personnel should receive the same scope of medical care as those on active duty.

Third, almost all of those using military medical facilities stated that the availability of such facilities was an important consideration in selecting their residence on retirement.

Fourth, of those not using military facilities, two-thirds said that the reason was because of distance.

The growing urgency and seriousness of today's problem is highlighted by the following:

First, the number of retirees has doubled since 1960 and will almost treble by 1970.

The average number of retired military personnel drawing retired pay in each of these periods is shown in the table below, growing from 242,904 in 1960 to over 500,000 in this fiscal year and projected for over 722,000 in 1970.

In this fiscal year, we estimate that about 57,000 members will retire, and that this number of retirements will continue at this or a higher level in the future.

But this, of course, is only part of the problem, since today there are approximately 2 million members and their dependents in the retired population, and this number is expected to reach almost 3 million by 1970.

A second consideration is that medical care is believed to be particularly important to military families during their first retirement years.

The average career member retires after about 22 years of service—typically in his early forties—at which time he must start a second career. While it appears that he leaves service with a generous retirement income—50 percent of his base pay—it must be pointed out that base pay is, in fact, only part of the total compensation earned by military personnel. In fact, the average military retirement income this year is just over \$250 per month. Hence, we are requiring the military member to leave service at the point in his life when his financial responsibilities may be the greatest, with much less than half of his active-duty income to sustain him while he reestablishes his second career.

Third, it is impractical to meet the rapidly expanding retired medical care requirements in military facilities.

Last year, we were able to accommodate most of the inpatient-outpatient retired workload requested by retired personnel in our own facilities. By 1970, we estimate that we can meet less than two-thirds of the requested outpatient workload, and only one-half of the requested inpatient workload.

Furthermore, our military facilities must be maintained at those locations which support active-duty military missions, with the result that we cannot possibly hope to provide enough facilities nationwide to assure adequate availability to the entire retired population. We believe that this factor, along with the scarcity of medical personnel, led the special subcommittee of the House Armed Services Committee to conclude in its 1964 report, and I quote, "that in future years a major portion of care must come from civilian facilities."

H.R. 13583 proposes that the problems outlined above be alleviated by a program incorporating the following features:

First, continue the provision of medical care to retired personnel and their dependents in military facilities, to the extent that space is available, throughout their retired lifetimes. We believe this is wise because the professional growth of our physicians requires a full range of patient content, and accrediting bodies insist upon this in our teaching hospitals; and (2) it is more economical to provide such care, to the extent that it is available, in our own facilities. No charge is made for outpatient care, and only minimal charges for

inpatient care, that is, \$1.10 per day for the commissioned member, nothing for the enlisted member and \$1.75 per day for the dependents of both.

Second, the retired group would be eligible for both inpatient and outpatient care from civilian physicians and hospitals on a cost-sharing basis. Although the bill gives the Secretary of Defense, after consulting with the Secretary of HEW, latitude in determining the retiree's and the Government's share, it provides that the Government's share shall approximate but not exceed 75 percent of the total cost of the civilian-care segment of the program. This percentage would apply to both inpatient and outpatient care costs.

The third feature is the eligibility of the retired group for both inpatient and outpatient care from civilian physicians and hospitals under our proposed program would begin at the time of the member's retirement and end, in the case of the retired member himself, when he reaches age 65, at which time he becomes eligible for participation in the new health care program administered by the Social Security Administration. His spouse would also remain eligible for civilian care under the DOD-sponsored program until she reached age 65. His unmarried children would, with one exception, remain eligible for care from civilian sources until reaching age 21, or age 23 in the case of those dependent children who are enrolled in an approved college or university. The exception involves unmarried dependent children who are incapable of self-support because of a mental or physical incapacity that existed before reaching age 21. Such children would retain their coverage so long as they remained unmarried and incapacitated.

Fourthly, the bill provides for the programing of beds and outpatient facilities for the retired group in new medical construction projects to meet two specific objectives. The amount to be programed would be determined by the Secretary of the military department concerned on a case-by-case basis. The first consideration is the teaching and training requirements of interns and residents assigned to the hospitals, using standards of the American Medical Association as guidelines. The second consideration is the availability of civilian capacity in the community. Here the bill provides that determinations would be made on the basis of a demonstrable critical shortage of beds in a particular community which warrant some reasonable supplementation to serve a large concentration of retired uniformed services personnel.

Fifthly, our proposal would authorize retired members to obtain care in facilities of the Veterans' Administration on a space-available basis.

We estimate the costs of the above proposed program to be as follows:

In the first year, DOD cost would be \$115.8 million. That of other uniformed services would be \$3.5 million, for a total program of \$119.3 million, while in the fifth year these amounts would grow to \$184.4 million and \$6.2 million, for a total of \$190.6 million.

Next we would like to discuss H.R. 13582, providing increased health benefits for dependents of active-duty members of the uniformed services.

The purpose of this bill is to increase the attractiveness of a military career by providing benefits to the dependents of active-duty military

personnel, comparable generally to those offered in the health care plans of industry and labor, and those offered under the Federal employees health benefits program.

The medical care presently authorized by law for dependents of active-duty members of the uniformed services in civilian facilities is limited for the most part to inpatient hospital care. Hence, the goal of the Dependents' Medical Care Act of 1956—which was to equalize health care benefits between those dependents who had access to military medical facilities and those lacking such access—is not being fully realized.

The inclusion of civilian outpatient care in the benefits covered by the dependents' program was considered during the hearings on the 1956 bill. The main reasons for its exclusion appear to have been concern over the estimated additional cost of adding it to the benefits authorized under the bill, plus the fact that the inclusion of such benefits was not then a common practice in the group health plans being offered by industry and labor.

In the 10 years which have elapsed since passage of the Dependents' Medical Care Act, the practice of medicine has changed significantly. Many types of cases which 10 years ago would have required hospitalization are now treated on an outpatient basis. Second, the Health Insurance Association of America reports that the number of persons with some form of outpatient coverage has increased almost six times between 1956 and 1965—to a current total of 47 million people. Another significant development has been the establishment of the Federal employee health benefits program, under which the dependents of civilian employees of the Government receive Government-sponsored civilian outpatient care.

Thus, while the practice of medicine has changed and the benefits—including outpatient coverage—offered by most health plans have expanded rapidly, the benefits provided under our dependents' medical care program have remained at the 1956 level.

Recognition of this, plus concern over the present situation confronting some military dependents who find Government-sponsored medical care unavailable at home while their sponsors are engaged in the struggle against the Vietcong, has led to the development of the legislative proposal contained in H.R. 13582.

This proposal would remove the present statutory restrictions on the types of health care which may be provided dependents of active-duty members of the uniformed services, both in uniformed service and civilian facilities. Under the proposal, the Secretary of Defense and the Secretary of Health, Education, and Welfare would be authorized to provide all of the benefits available under the high option of the Government-wide service plan of the Federal employees health benefits program.

Under the proposed plan, these benefits will be authorized from civilian sources, as well as on a space-available basis in uniformed services medical facilities.

The principal result of enactment of this proposal would be the establishment of a civilian outpatient care program for some 3.8 million active-duty dependents, under the same general circumstances as they are now eligible for civilian inpatient care. Under the proposal, dependents would pay 20 percent of the charges for outpatient care, an amount commonly specified in civilian group health plans.

No change is proposed in the present inpatient charges in civilian facilities, that is, \$25 per admission, or \$1.75 per day, whichever is greater.

We estimate that the costs to the Government for expanded civilian outpatient care would be as follows:

To DOD, \$47.1 million in the first year, rising to \$49.3 million in the fifth. The other uniformed services, \$0.7 million to \$0.8 million, for a total from \$47.8 million to \$50.1 million.

To put the above costs in perspective, our expenditures for dependents' medical care in fiscal year 1966 were \$372,600,000. Hence, by increasing these costs 12 percent we can provide care comparable to that presently available to a large segment of the civilian work force, and assure that this care is available to all dependents. This is equal to about \$12.60 per person per year—the equivalent of two visits to a doctor's office per year.

Thirdly we would like to address H.R. 9271, which involves a special program for mentally and physically handicapped children of active duty dependents.

While this is the smallest of the proposals being made, it can make a very significant contribution to relieving serious and distressing problems faced by thousands of military families.

The magnitude of this problem is indicated in the following table. It shows in connection with mentally retarded dependents of active duty personnel that there are almost 7,000 today, 6,964. In the area of our dependent children who have a serious physical handicap, the total is 94,144, for a grand total of children with serious problems of this type of 101,108.

We have been aware for some time that we lack an adequately funded, comprehensive and uniform program among the military services to meet the special problems of active duty members who have mentally or physically handicapped children. Service facilities are generally limited in providing care for these children to diagnostic services on a space-available basis. Treatment of chronic conditions on an inpatient basis is only authorized in certain acute situations.

For the most part, the nonmedical services offered handicapped children of servicemen are through local projects and of scattered and limited scope. As a result, the serviceman with handicapped children must turn to State or voluntary programs for financial assistance. Voluntary agencies normally refer those without adequate funds to public agencies. State laws generally provide benefits only to persons who have legal settlement within their borders. These laws vary widely from State to State, but, in general, they operate to deny State treatment programs and institutional facilities to children of service personnel whose residence in a given State is temporary, being determined by the serviceman's duty assignment.

After studying a number of approaches offering some solution to this problem, we recommend approval of H.R. 9271, with several substantive amendments which have been developed to assist the subcommittee in this matter. If enacted, the bill would establish a satisfactory program for the care, training, rehabilitation, and special education of children who are moderately, severely, or profoundly retarded mentally, or who have a serious physical handicap.

The care, training, and special education for handicapped children of active duty members would all be obtained from civilian institutions and facilities. This approach stems from the conclusion that it would be impractical to attempt to solve this problem through the construction of additional military facilities on the augmentation of military staffs with the required specialists.

Active duty members would be required to pay a share of the cost of the benefits provided. Members in the lowest enlisted pay grade would be required to pay the first \$25 incurred each month. Members in the highest commissioned pay grade would similarly pay \$250. The amounts to be paid by members in all other pay grades would be determined administratively, except that the amounts so determined could not be less than \$25 or more than \$250 per month.

In an effort to overcome the limitations of the residence requirements imposed by some States in connection with child welfare and crippled children programs, the proposed amendments would require such States to waive residence requirements for the children of active duty members, and for a period of 1 year following the member's retirement, in order to obtain Federal grants for their programs.

We estimate the cost of H.R. 9271, as amended, to be as follows: First year, \$28.2 million, rising in the fifth year to \$33.8 million.

Mr. Chairman, the above proposals result from the efforts over the past several years—both by this committee and the Department of Defense—to design acceptable solutions to problems which are becoming increasingly urgent and complex. My associates and I will be pleased to answer the subcommittee's questions regarding these bills and those dealing with our health care problems generally, after you have heard from each of the Surgeons General.

Mr. HÉBERT. We thank you very much, Secretary Morris, and we will comment after we have heard from the three Surgeons General.

General Heaton, Surgeon General of the Army.

STATEMENT OF LT. GEN. LEONARD D. HEATON, SURGEON GENERAL OF THE ARMY

General HEATON. I have a statement, Mr. Chairman.

Mr. Chairman and members of the committee, I appreciate the opportunity to speak in support of H.R. 9271, with proposed amendments, H.R. 13582, and H.R. 13583. These three bills will correct deficiencies and inequities in the present program of medical care for the dependents of active duty members of the uniformed services, retired members and their dependents, and the dependents of deceased personnel.

As Secretary Morris mentioned, when the Dependents' Medical Care Act was passed by the Congress 10 years ago, benefits provided by private health insurance programs were much more limited than they are today. The coverage then provided was primarily for hospitalization and physician services during hospitalization, and this concept was followed in enacting the legislation for the medical program for dependents of uniformed services personnel. The dependents' medical care bill as originally proposed by the Department of Defense in 1956 included outpatient care from civilian sources but the act, as passed, specifically excluded treatment normally considered to be outpatient care. It was the judgment of the Congress that the

money should be placed where it was needed the most; that is, to handle large hospital costs that so often are catastrophic to families of limited income.

The inclusion of authority in that act for the Secretary of Defense to contract for civilian medical care for retired members of the uniformed services and their dependents was also considered. The Congress felt, however, that our first obligation must be to the wives and children of active duty personnel. The conference report on the Dependents' Medical Care Act contains a statement that the House managers agreed to the exclusion of this authority with the knowledge that after the program had been in operation for spouses and children for a period of time it might be possible to later extend the plan by law to retired personnel and their dependents. Our inability to program beds for retired personnel and their dependents and the dependents of deceased personnel has resulted in our new hospitals lacking the capability to provide care for some of these individuals.

Outpatient care frequently constitutes the primary medical service required by many military families. Dependents who are not located near a uniformed services medical facility must obtain outpatient treatment and medicines from civilian sources at personal expense. The inability to secure these services from civilian sources under the "Dependents' medical care program" is a very serious limitation. The lack of these services for their dependents is the subject of the majority of letters that we receive today from servicemen in Vietnam. We had a letter recently from an enlisted man whose wife had taken their five children and returned to her parents' home when he was sent to Vietnam. None of the children was seriously ill, but they did have the usual childhood diseases and upper respiratory infections and their medical bills had risen to the place where his wife was working as a waitress to help pay the family medical expenses.

Likewise, our inability to pay for civilian care obtained by retired personnel and their dependents, even in an emergency creates extreme financial hardship for these good people. These are often cases which are admitted to a civilian hospital on an emergency basis and later transferred to a military hospital. The widow of a retired member who communicated with us recently owed over \$800 for just such treatment and had no means of paying it. Further, the increasing numbers of active duty personnel who must be furnished medical services are making it necessary to sometimes reschedule and restrict routine medical and dental treatment for retired personnel and their dependents in uniformed services facilities. The numbers of retired personnel are also increasing rapidly and soon will far exceed the capability of our present medical facilities.

For many years we have been concerned about military families who have mentally retarded and physically handicapped children. We are unable to assist these families since Army medical facilities are neither staffed nor equipped to provide long-term institutional type care and the special training which these children require. A tragic case was brought to our attention recently by the father of a 6-year-old boy. This child is severely retarded mentally, he is partially blind, and has uncontrolled epilepsy. A civilian physician has recommended that he be placed in an institution for the good of the family as well as the child. However, the father is an enlisted man

and cannot afford the charges for institutional care. Care for such children even in facilities of State or local governments ranges from approximately \$150 to \$250 a month.

Since passage of the Dependents' Medical Care Act in 1956, private health insurance programs have expanded their benefits and now include almost complete medical coverage. During this same period three Government-sponsored health programs have been authorized by the Congress—the Federal employees health benefits program, the retired Federal employees health benefits program, and the new social security health program for the aged. All of these programs provide more liberal benefits than the dependents' medical care program, such as outpatient treatment and drugs. The new social security program also includes convalescent hospital and nursing-home care.

In summary, I feel that the dependents' medical care program should be expanded as contemplated by these three bills in justice to our fighting men and those who have given the major portion of their working years to the military service. I have discussed this legislation with the Secretary of the Army, the Chief of Staff of the Army, and the Deputy Chief of Staff for Personnel, and they all wholeheartedly support the proposed programs.

Thank you for your kind attention and the courtesy that has been extended to me by this committee.

Mr. HÉBERT. Thank you very much, General Heaton.

Now, Admiral Brown.

STATEMENT OF VICE ADM. ROBERT B. BROWN, SURGEON GENERAL OF THE NAVY

Admiral BROWN. Mr. Chairman and members of the subcommittee, as Surgeon General of the Navy, I am grateful for the opportunity to appear before you today in support of these legislative proposals dealing with health benefits for dependents of military members on active duty, retired members, and dependents of retired and deceased members. In spite of the splendid support we have received from Congress for the operation and maintenance of medical facilities, for new construction, and specifically for the Dependents' Medical Care Act of 1956, the Navy Medical Department is finding it increasingly difficult to provide medical care for the categories of patients just mentioned. The legislation proposed is designed to remedy untoward situations which, if uncorrected or allowed to progress, may be expected to have an increasingly adverse effect upon the morale and economic welfare of our service families, enlistment and retention rates, and ultimately the very scope and quality of medical care itself.

The ever widening disparity between the outpatient workload and our resources to handle it is a major problem. Particularly in areas of high concentration of retired and dependent patients, this is evidenced by protracted waiting periods with resultant irritation and inconvenience for the patient, working hours and patient appointment lists that are unreasonably long and professionally frustrating for the doctor, and a resultant deterioration of the patient-doctor relationship with all that this implies. The provisions in these proposals dealing

with outpatient care will allow us to modify the character and magnitude of our outpatient workload so as to bring it into line with our resources and our patients' needs. Equally important, retired members and dependents will be entitled to outpatient care from civilian sources when residing in areas distant from service medical facilities or where an existing facility lacks the required capability.

While it is not easy to fully forecast any program of this character and magnitude, there are certain effects that appear most likely from the point of view of Navy medicine. More and more diseases and injuries are being treated on an outpatient basis. The advantages, both in time savings and quality of care, are becoming increasingly evident. As a consequence of this factual experience and given the fundamentals of these proposals, I visualize that our outpatient facilities will become much more efficient and thus more capable of handling an even wider range of medical problems on an outpatient basis.

With respect to our capability to handle the retired and dependent inpatient load in naval medical facilities, the problems are similar in kind but not of the same magnitude as those relating to outpatients. The existing dependents' medical care program has provided us the means for balancing the inpatient load of dependents of active duty members with our resources and still assure that none are denied the medical care that is their right. A similar program for retired members, their dependents and the dependents of deceased members is urgently needed. H.R. 13583 provides such a program.

The proposed legislation deals very specifically with a most important subject, the extent to which we will retain our present capability to care for the retired group in our naval medical facilities. It provides that outpatient facilities and beds will be included in new construction to the extent necessary to support the training of interns and residents; also, to compensate for a demonstrable critical shortage of beds in the adjacent civilian community. The authority to continue medical care for the retired group in all naval hospitals on a space available basis, combined with the foregoing provisions, should assure maximum utilization of our facilities and also preserve and improve our medical capabilities.

The ever growing national interest in the handicapped child serves to highlight and emphasize our responsibility to our service members with children so afflicted. We are not meeting this responsibility. On the one hand, we do not have in our service facilities the specialized capabilities to care for the needs of these children. On the other hand, and for various reasons, the service family is ill equipped to cope with this problem by utilizing civilian institutions. Financial considerations and the inability to meet the residency requirements for use of State or local facilities are major difficulties. The proposed legislation recognizes these problems and contains provisions for handling them.

I speak also for the Secretary of the Navy, Chief of Naval Operations, Commandant of the Marine Corps, and the Chief of Naval Personnel in recommending strong support for these legislative proposals. I thank you for your courtesy.

Mr. HÉBERT. Thank you very much, Admiral.
General Bohannon.

STATEMENT OF LT. GEN. RICHARD L. BOHANNON, SURGEON GENERAL OF THE AIR FORCE

General BOHANNON. Mr. Chairman and members of the committee, as Surgeon General of the Air Force, I am glad to have the opportunity to press for improvement of the health services that we make available to our active and retired military communities that we serve. I fully support the proposed legislation and the presentations of Secretary Morris and General Heaton and Admiral Brown. I should like to add that Secretary Brown and Lieutenant General Stone, Air Force Deputy Chief of Staff, Personnel, are also in complete agreement with the proposals.

The justification for a program of health care for dependents and retired members of the uniformed services was established a decade ago, and the acceptance by the Congress of that justification resulted in the dependents' medical care program much as we know it today. Section 1071 of title 10 states the purpose of that program:

* * * to create and maintain high morale in the uniformed services by providing an improved and uniform program of medical and dental care for members and certain former members of those services, and for their dependents.

This program has certainly done much to create and maintain high morale, and we in the medical services recognize it and give thanks for it every day. We acknowledge that for a variety of reasons we are frequently unable to provide the care that is essential and deserved. In many instances it is just plain geography—the patients are there and we are here.

In others we just do not have the capability to handle the volume of authorized care, and we must issue statements to that effect.

In others again we do not possess the capability and we believe it would be unwise to develop it—for instance, we do not believe that long-term care associated with treating and training retarded children is properly a permanent mission of the uniformed medical services.

In sum, we have been able to offer certain health care from outside sources under the medicare program; and morale of the forces has been enhanced thereby. But, that care that we have been able to offer fell short of need in many instances. Many bills incurred by service families have impaired morale.

The family that is separated by service demands is the one most entitled to maximum assistance; but it is that very family that would be most likely to live at a place where no service medical facility is located. This is the typical wife and children who have gone back home to live with the old folks while "Dad" is away on an overseas tour.

As to the family with a retarded child, the tragedy itself is of such magnitude that it influences every phase of family life. But when that problem is aggravated by the closed door when aid is sought—usually through failure to qualify for benefits because of lack of permanent residence, in the case of a military family—the enormity of the burden seems beyond limits.

And then the retired community—I believe that the obligation of the Government to this group has been acknowledged in various studies; and some relief is essential. We are already being bombarded with complaints, despite our earnest effort to provide care to the retirees and their families. Members of Congress, particularly those

representing California are as aware as we are that every day brings additional complaints about service inability to provide care to the exploding population of retirees—and many other areas are rapidly approaching the same situation. Additionally, and more importantly, retention of our skilled members is much influenced by what they see as the whole package of fringe benefits, particularly those that will be available after completion of a full career in the service of their country.

Gentlemen, enactment of the proposed legislation will have a positive effect for good on the morale and effectiveness of the Armed Forces, and we see passage of the proposals as being directly in the national interest.

Mr. HÉBERT. Thank you very much, General.

Mr. Secretary and Surgeons General, I want to say that I think today there is, indeed, building a recognition of a milestone of co-operation, understanding, and partnership between the Defense Department and the several services. As one who has been perhaps one of the most vocal if not the most vocal in critical examination of what I consider the lack of a partnership in arrangement and co-operation, today I think demonstrates clearly an entirely complete picture of exactly what can be accomplished in an understandable arrangement and a mutual cooperation between the Defense Department and the members of this committee and the Congress. I say this to you, Mr. Secretary, not facetiously, nor in any derogatory or needling manner, because you have stood on the battlefield on both sides and you know what I am talking about. You have taken the brunt of a lot.

So, it is I think most important that you or the Secretary and representative of the Defense Department come in here today with this type of cooperation and this type of understanding. As you know, and the members of the services know, this legislation was not developed overnight. It has been in the making over a year or longer, particularly in the retarded children's area with which I am more closely familiar.

The legislation which we hope to report out of this committee will be the result of this cooperative effort and complete partnership. These matters have been discussed at length. There have been differences in the beginning which have been attempted to resolve, particularly in the retarded children's area which now brings before us the presentation of the bills by the Congress, the discussion of these bills by you, the Secretary of Defense, and the Surgeons General in uniformity whereby we come to a meeting point where we can publicly discuss the matters and resolve whatever problems there are.

This is why today I believe is a milestone. If this same procedure had been obtained in the past, we would not have had the difficulties that we have had.

The military medical services is out of this service, that's why I address my remarks to the Secretary who is more knowledgeable. But, this, Mr. Secretary, I think is something you can bring back to the Department as a demonstration of the desire and willingness of this committee to cooperate and particularly this committee which has been perhaps the most vocal besides the big committee. I thank you personally. I acknowledge it publicly.

Mr. MORRIS. Thank you very much, Mr. Chairman.

Mr. HÉBERT. This is something.

Now, to the Surgeons General, let me say to you gentlemen, you appear here today for the first time wearing three stars, all of you, together. General Heaton took a lead on you, but he wears his stars today which he so adequately and justly deserves, through stature and not through the individual recognition of a President.

President Eisenhower gave him the third star. But, this committee is cognizant of the job you are doing. The President, of course, has signed the bill which makes you all three stars. Today, this is an honor, I think, that you justly deserve and was late in arriving. I'm glad that the opportunity had been here today to have you three appear before Congress for the first time wearing those statutory stars.

To you, Admiral Brown, and you, General Heaton, on behalf of the committee let me commend both of you for the fine establishment which you operate.

General Bohannon realizes he is a youngster in this. The Air Force has come up in recent years and he maintains your aim and may even pass you.

[Laughter.]

But, seriously, and with great sensitivity and great sincerity, I do want to congratulate you, particularly those two great institutions which are taking such wonderful care of our people and particularly the soldiers and sailors on that level who receive equal attention of any individual at either institution in your limited capacity.

I think General Heaton, and Admiral Brown, you are to be highly complimented for the care you take of these returning boys and the attention you give them. Kind words is not my business.

[Laughter.]

So, I hope you will realize what compassion I have in making these public admissions.

General BOHANNON. We appreciate them very much.

Mr. HÉBERT. I will just have one question or two to ask the Secretary in this connection. Then I would like Mr. Slatinshek who has been working on it to talk for me through this area so that everything can be developed and we know what we are talking about. The members of the committee will have the benefit of these discussions and perhaps the benefit of the disagreements which exist which can be resolved and then they can more intelligently inquire.

Only two areas, Mr. Secretary. In one area I understand that there is a differential contribution from the retiree to the active duty or the active duty to the retiree. One pays more than the other. What is the rationale of that?

Mr. MORRIS. Sir, the program for the dependents of the active-duty personnel that we are proposing builds upon the foundation of the 1956 act which provided the very excellent care of hospital care in civilian facilities with certain rather modest charges, \$25 per admission, or \$1.75 per day, whichever is greater. To this we are proposing now to add a program of outpatient care.

The proposed charge to the beneficiary for the outpatient service is 20 percent. This percentage happens to be the same as that which is present in the Government-wide service plan of the civilian Federal employees health benefits program. We are more liberal, however, than the Government program in that no deductibles would be applied

to our dependent program. The Federal civil servant must deduct the first \$200 per year, whereas we require no deduction.

Now, it is true that the retired program, both for the member and his dependents, in outpatient facilities and civilian hospitals requires a higher contribution—25 percent instead of the 20 percent—which I mentioned.

We developed this program separately on its own merits. We felt that it did make sense for the retired family to pay a somewhat higher charge than the active-duty member, this being consistent with the general philosophy of approach in retired income payments versus active-duty income.

However, again we feel we have set a very modest standard of payment for the retired family, and one that can be preserved over many years without challenge. These were the basic judgments that went into the selection of these charges.

Mr. HÉBERT. Well, now, wouldn't it be logical to assume that the retiree receiving less income would be in a less advantageous position to contribute more than he did as an active duty man?

Here, in other words, the man on active duty receiving his full pay, contributes less than the individual receiving a retired pay who receives less income, but has to contribute more. Now, wouldn't it be much better to take that into consideration since we do acknowledge and admit a definite obligation to take care of the hospital needs and care of the man in uniform?

Mr. MORRIS. Sir, this is certainly an important consideration. We were influenced in our thinking by the fact that the general practice in the development of retired health coverage programs both in the civilian government and in private industry is to require a somewhat higher contribution.

This is the practice we followed, but on a very modest basis.

Mr. HÉBERT. What would the cost be if we made it all equal?

Mr. MORRIS. Sir, if we use the same scale of hospital deductions for the retired member and his dependents in civilian facilities; namely, \$25, or \$1.75, whichever is greater per admission, I believe that would add about \$10.5 million to our proposed program of \$119 million in the first year.

Mr. HÉBERT. Wouldn't it, \$10 million against \$190 or \$200 million—use your computer brain—what percentage of \$10 million against \$200 million? Less than what? Just about 5 percent—we have some computers up here.

[Laughter.]

But, only \$10 million, then against the \$200 million, and wouldn't it be more simple in administration? Wouldn't you recoup or regain perhaps some of that \$10 million in less expensive administration by not needing additional bookkeeping, et cetera?

Mr. MORRIS. I don't think that would be much of a factor, sir. The straight 25-percent principle which is proposed in the bill, I believe, is the simplest.

Mr. HÉBERT. Administratively you think?

Mr. MORRIS. Yes, because it is a single standard that applies to all kinds of costs whereas so many of these plans have a whole series of deductibles and special schedules of fees, particularly for surgeon's work and so on. We are suggesting one standard which we hope by law would work in perpetuity.

Mr. HÉBERT. Well, is it one standard when you pay more as a retiree than you pay as an active duty of the uniformed services?

Mr. MORRIS. No, admittedly the retired program is somewhat less generous than the provision of care today to our active-duty dependents. To that extent I must admit your point is completely correct.

Mr. HÉBERT. What would be the position of the Department if the committee in its judgment decided to equalize everything? Would you strongly oppose that or would you accept our judgment?

Mr. MORRIS. We would naturally accept the judgment of the committee, sir, and the Congress on these matters. We are bringing forward the product of the best judgments we have to bring to bear within the executive branch. We believe these are sound and proper conclusions for the reasons I have stated.

Mr. HÉBERT. But, if we decided otherwise, you would accept what we decided?

Mr. MORRIS. We would, sir.

Mr. HÉBERT. That is again refreshing.

Now, another area I want to cover. It seems to be a great area. In connection with your statement, I don't know whether to amend the law, change the law, or tell the States that these people in effect, while being resident, are in reality residents of the State. We are not getting down to the voting area, I know, but we are getting down to the distribution of Federal funds where you have individuals who are not in reality residents of the State. However, by edict or law you do make them residents of the State for the purpose of receiving Federal money. Is that correct?

Mr. MORRIS. Sir, the technical language is to waive the residency requirement.

Mr. HÉBERT. Then to waive the residency requirement.

Mr. MORRIS. Yes, sir.

Mr. HÉBERT. This is the very point of the whole thing. Is that in the Federal regulations in giving or granting the Federal moneys to the States? The Congress has passed certain laws giving the Executive the power to grant to the States certain Federal moneys. In addition to that it has given to the executive department the power to regulate and issue regulations which will determine how that money shall be granted. Now, wouldn't it be in that area where the regulations would be amended? In other words, tell the States, "Now we give you this money and you administer this money in this fashion." However, in one area where the man in uniform is concerned you waive that part of the regulation, necessity for law? I mean, this is a regulation, isn't it?

Mr. MORRIS. This is my understanding.

Mr. HÉBERT. It is a regulation?

Mr. MORRIS. Of HEW, yes.

Mr. HÉBERT. That it is a regulation?

Mr. MORRIS. I believe so.

Mr. HÉBERT. So, in other words, where you find your result and your decision would not be in amending the law, but in going to HEW to have them amend their regulation and legislation is not necessary.

Mr. MORRIS. Pardon me, my earlier answer was incorrect. Dr. Fisk advises me that present practices would have to be corrected by law, as we are suggesting.

Mr. HÉBERT. Again, a refreshing admission.

I just want to be sure what we are doing.

Mr. MORRIS. Right, sir.

Mr. HÉBERT. Now, Mr. Slatinshek, if you will proceed now in developing these matters.

Does any member want to ask anything before Mr. Slatinshek? I don't want to hold any member except I want the whole area to be developed before we start asking questions.

Mr. HARDY. I don't want, Mr. Chairman, to disrupt your program, but there were a few questions that came to mind as we went through here and if Mr. Slatinshek—

Mr. HÉBERT. That is what I am wondering. I am trying to do this for the sake of expediency so we can get through with this business and Mr. Slatinshek can develop these things.

Mr. HARDY. I had a couple points I wanted to add to some of your very erudite comments. It is very refreshing to have the Secretary back. I would like to welcome you back this time in your different capacity.

Actually, you are on the other side of the table from what your position had been before. It is really delightful to see you proposing to add to consideration the construction of military hospitals now and you and Dr. Fisk were both on the other side of the table last year as I remember it.

Mr. HÉBERT. Dr. Fisk hasn't recovered yet.

He is still silent.

Mr. HARDY. I notice he is still silent and I was wondering if he was going to stay that way.

[Laughter.]

But, this is a most refreshing situation, and I would like to commend you for seeing the light that we tried to point out a year ago.

Of course, Admiral Brown, and General Heaton to the extent that they were permitted to express their own views are consistent with where they were before, but it is real fine. I compliment you on some of your points that you raised.

There are one or two points in connection with one of the bills before us and, also in connection with your statement, Mr. Secretary, that I'm a little bothered about. This is H.R. 13583 where you are talking about facilities. That's the subject I was particularly concerned with, and Mr. Chairman, if I might, I would like to just get right to the language that they put in this bill.

It is in section 1087. I don't know what page it is in the bill, but page 8 of the committee print, line 23, it says: "this title may be programed in uniformed services construction projects by the Secretary," facilities for inpatient and outpatient care for persons covered by sections 1074(b) and 1076(b). You put "may be" in there. Are you trying to get all the discretion? Why don't you put "shall" in there like you should have done to start with?

Mr. MORRIS. I wasn't aware, sir, that we were not expressing a firm intention because indeed it is our intention to program space under the two conditions outlined. It is on page 19 of the committee print.

Mr. HARDY. You don't mind if we just right now go ahead and think in terms of "shall" instead of "may be." It is all right?

Mr. MORRIS. The intent is to apply the conditions as outlined later in this section—

Mr. HARDY. You folks are just used to writing that kind of language to give you all the latitude in that matter.

Mr. HÉBERT. You will accept "shall" as Mr. Hardy suggests?

Mr. MORRIS. Yes.

Mr. HARDY. Let's turn over to the next page, line 7, of my print it says:

The extent to which space covered by subsection (a) may be provided will be based on the teaching and training requirements of the medical interns and residents assigned to the facility, using standards prescribed by medical specialty boards and the American Medical Association.

How can you put the AMA in there?

Mr. MORRIS. Because, sir, they are the authorities who we look to in the accreditation of our teaching hospitals and we thought it wise to cite the standards.

Mr. HARDY. I'm not sure that makes any sense. I think I will probably want to explore that a little bit more. It seems this is an area where you ought to make your own determination. You have your own boards set up for this purpose, haven't you?

Mr. MORRIS. If I may, sir, I would like to suggest that Dr. Fisk comment on this.

Mr. HARDY. I know how his bias would run on this. If he hasn't been indoctrinated into DOD long enough—but maybe he has. So go ahead, I would be glad to have you comment on it.

Dr. FISK. Sir, military hospitals seek accreditation by the Joint Commission on Accreditation of Hospitals, of which the American Hospital Association and the AMA are member organizations. This is the reason that the language was used. This allows hospitals that are so accredited to function as training and teaching hospitals for interns and residents.

Mr. HARDY. Now, are we going to get into conflict here between the views of the AMA and the American Hospital Association?

Dr. FISK. They are pretty well joined together.

Mr. HARDY. They don't always stay together.

Dr. FISK. No; but in this particular instance I believe they do, sir.

Mr. HARDY. How can we depend on their being, thinking in conformity with each other on this thing? You know, we had a little hassle here over this bill, medicare bill, we had last year and the American Hospital Association was a long way away from the AMA. You remember that situation? As a matter of fact, I don't think it has been resolved satisfactorily yet.

Dr. FISK. I don't recall that, sir, to be honest.

Mr. HARDY. You didn't?

Dr. FISK. No.

Mr. HARDY. Many people in the AMA didn't appreciate the view of the American Hospital Association either.

Mr. MORRIS. Mr. Hardy, as I understand it, there is a joint committee or commission of the AMA and the AHA. They are the accrediting authorities for teaching hospitals and it is very important to our physicians that they work in accredited institutions.

Mr. HARDY. I can understand that and I won't press this further at the moment, but I think it is something that we are going to want

to look into, Mr. Chairman, as we proceed with the consideration of this bill.

Now, continuing on down on line 17, and this relates to comments that I noted in several of the statements, yours particularly, Mr. Secretary, on line 17, you said "There is an existing demonstrable critical shortage of beds at civilian hospitals." This is one of the conditions.

Mr. MORRIS. Yes, sir.

Mr. HARDY. I am trying to tie it back to—you have a "may" in that section on line 10. I got a little ahead of myself:

The secretary concerned may also consider programing a reasonable number of hospital beds for persons covered by this section in extreme cases where he determines that all of the following conditions exist.

Now, if he determines all these following conditions exist, why do you want to give him discretionary authority by putting "may" in there? So we will change that one to "shall," all right?

Mr. MORRIS. I don't believe there was any intent to avoid a positive decision under such conditions.

Mr. HÉBERT. It is just habit. We know that.

Mr. HARDY. That is good. We will change that.

Now, we get down to this line 17 and one of the conditions that he determines, that there is existing demonstrable critical shortage of beds in civilian hospitals. Is there any area in the United States today close to a thickly populated military population that doesn't have a critical shortage of hospital beds today?

Mr. MORRIS. I can't honestly answer that. I am sure the surgeons general know better.

Mr. HARDY. The Surgeon General is here and Admiral Brown is here, and I think I know a little something about one of your most densely populated naval areas, sir.

Admiral BROWN. I agree with you.

Mr. HARDY. You stick this kind of thing in here and who determines what is critical? This is one of the key problems to the arguments you are making. I don't disagree with your point of view in providing for some civilian hospitals, but how are you going to get the civilian hospitals that have got the space to take care of them?

Mr. MORRIS. If I may comment just briefly, sir. We agree with the point you are making. We wanted this section of the law to be very explicit in terms of the condition about which no one could raise a question as to when retired beds should be programed.

We are quite aware there has been a long debate as to whether we should program beds for retired personnel, both within Congress as well as the executive branch. So, we wanted to write language that would be understandable to all concerned.

In so doing, we wrote rules in very strong language here.

Mr. WILSON. We can understand there isn't going to be any beds.

Mr. HARDY. As of right now, and I think maybe you said this is very strong language. I think in order for us to understand whether or not it is strong, I would like to have a definition of the word "critical."

Mr. MORRIS. I agree, sir, all these phrases have to be approached with commonsense and the application of good judgment in analyzing situations.

Mr. HARDY. What do you mean by critical? What does it mean to you, Mr. Secretary?

Mr. MORRIS. The meaning to me in this case is that given an area where there is a definable deficit in hospital beds in relation to both civilian and military workloads over a foreseeable period of time, that we should supplement our hospital construction plans to make up for that deficit in order to care for the retired population.

It is simply a matter of getting the facts in each case, looking as far ahead as our programmers and the civilian community can look ahead, and proving that we need that number of beds.

Mr. HARDY. Of course, all of us, Mr. Secretary, are inclined to think of these things in terms of what our own experience is—our own areas—and I have a little knowledge of situations in my own backyard.

We at the moment have a new wing being constructed on the biggest hospital in Norfolk today. It has been under construction for 2 years. We have been bothered with some strikes and a few other things. I'm just looking now, you are talking about, I think you used the term "reasonable foreseeable future." I don't know what that means.

You try to explain one word that I don't know there what it means, "critical," by using a flock of others that fall in the same category. So when you are going to program construction of a new hospital and going to take into account these factors, I think we have got to have them a little clearer, spelled out a little clearer. I don't think you did such a fine job of spelling this thing out here that it won't be contravened by somebody's arbitrary action right back there in the spot that you are sitting in today. I'm talking now about the future. There is no use you shaking your head, Dr. Fisk, you would have done this yourself last year. I would hate to operate under the instructions you were under last year.

We wouldn't have gotten a thing. We didn't get a thing. We are talking about trying to get a little increase in the construction in last year's bill, and we didn't get any, remember? We didn't get a bit of help out of you, not any, and if you were working on these guidelines we still wouldn't have gotten any because you had your orders and Mr. Morris was sitting in the installations office at that time. Isn't that right, Mr. Secretary?

Mr. MORRIS. That is right. Since 1962 and up until now sir, we have had a policy against any such programing.

Mr. HARDY. Yes, thank goodness you got a little sense finally, but I am still worried about this kind of language, Mr. Secretary. I think we have to do something with it, and maybe you folks can come up with something that won't be susceptible to arbitrary interpretation by somebody who might be occupying your job a year or two from now.

You follow what I am worrying about, don't you?

Mr. MORRIS. I know what you are worrying about, sir, because we worried about it for a good many weeks and debated among ourselves as to how to write the language.

Mr. HARDY. Let me proceed a little further. You have in the next one of these conditions that have to be determined, the same words, "critical shortage of civilian hospital beds" again. Now, I think, Mr. Chairman, I would like to ask the Secretary and his

associates to come up with some improvement in this language for us to understand, recognizing the problem that we have ahead of us, and the fact that we want to try to see that we have a reasonable approach to this thing.

Mr. HÉBERT. I suggest, Mr. Hardy, you pursue the definition of "critical" at this moment.

Mr. HARDY. I was trying to get that a minute ago, but Mr. Morris came out with such devious definitions of it, it didn't help us very much.

Mr. HÉBERT. Let's ask each witness. We will ask General Heaton what is your idea of "critical shortage"?

General HEATON. A critical shortage of beds in a hospital exists when that hospital runs over 80 percent of beds occupancy. That is what we in the Army utilize.

Mr. HÉBERT. Admiral Brown, what is your interpretation?

Admiral BROWN. We use the same criteria for occupancy. Sometimes we use an alternate, and that is a dispersion factor which is 1.33. This enables us to dispurse the cases, and sexes and so forth, and come out with about the same figure.

Mr. HÉBERT. Are you in agreement with General Heaton?

Admiral BROWN. Yes.

Mr. HÉBERT. Do you agree?

General BOHANNON. Yes, I do agree.

Mr. HÉBERT. We have the three services agreeing and we have solved your problem, Mr. Secretary.

Mr. HARDY. Let's look at that. I don't know whether that might be a pretty good guideline for programing purposes. I don't know. Now, critical shortage of beds still might not give us, I mean using this definition, might not give us a projection that would be realistic, looking at the situation again right in my own backyard. One of my close neighbors, an elderly woman, fell and broke her hip about 2 weeks ago and she just got in the hospital the day before yesterday. I had a situation where the wife of a member of the hospital board of the Norfolk General Hospital was taken critically ill and it took them over a week to get her in the hospital.

We have a fine naval hospital down there too, Admiral Brown, one of the best, and one of the largest, but the community facilities—and if we are going to throw these additional retirees and their dependents on civilian facilities and the facilities aren't there, what are you going to do about increasing the military facilities to take care of them, or are you going to wait for HEW to find some way to increase the civilian facilities?

This is a fine approach, but I'm not sure we have the answer to it.

Mr. HÉBERT. Mr. Hardy, may I ask you this question in trying to develop this. We do not have the definition now in existence of what is "critical" except in the discussion here, and we know it has existed in the past. Now, to the three Surgeons Generals, I will address this: Would this formula which you have suggested relieve the situation and give you the room area, the elbow room to take care of many of these cases? You don't have it now. That is correct, isn't it? I mean, you don't have that formula applied now. You do have a shortage of critical beds in your military hospitals as Mr. Hardy has suggested. All I am trying to do at the moment in the discussion is to get your thinking that would help us in writing the legislation; is that correct, Mr. Hardy?

Mr. HARDY. That is right. I think, though, Mr. Chairman, I would hope that we can come up with something that is better than the language we have here now, either that or find some way to spell it out.

Mr. HÉBERT. But, are you in agreement that at the starting point the three Surgeons General have indicated, we are enabled to write the legislation?

Mr. HARDY. Yes; I think they have given us a guideline.

Mr. HÉBERT. That is a guideline and we can take that guideline and use that in writing the legislation.

Mr. HARDY. I think that is right.

Mr. HÉBERT. That is our objective.

Mr. HARDY. That is right, and I hope they would give us some help in trying to get this worked out.

Mr. Chairman, I don't want to pursue these things very much further, but there is one other thing I think I maybe ought to bring up.

When you talk about outpatient care again I congratulate you on that approach, but outpatient service is in pretty bad shape too. I believe General Bohannon brought this out about the effect on patient-doctor relationship of the long waiting periods. This is a terrible situation. How are we going to make provisions for reasonably taking care of these dependents on an outpatient basis?

How far have you gone in your thinking on that, Mr. Secretary?

Mr. MORRIS. Sir, we feel that the same approach in principle must be applied to both outpatient space and hospital beds.

Mr. HARDY. I don't find any problem with the principle, but I am trying to look at the practical application of it and if you already are overloaded in your outpatient facilities, now, in your military establishments, and your civilian facilities are also so overloaded, then what have you done about adding to the total load which you will make available as to use both civilian and military facilities unless you provided additional facilities?

Dr. Fisk, you can take that.

Dr. FISK. I would like to answer that, Mr. Hardy. I think that the hospital beds situation and outpatient facilities situation in civilian communities may be totally different.

Mr. HARDY. It may be totally different, but they can both be totally critical too.

Dr. FISK. No; the outpatient facilities as exemplified in the bill, in civilian doctor's offices, now granted this may be overcrowded also. It doesn't mean the facilities in the hospital in the usual sense.

Mr. HARDY. I understand that.

Dr. FISK. So, you may have a very critical bed situation in a hospital but you might conceivably have space in outpatient facilities, that is, in the doctor's office or house calls.

Mr. HARDY. That is conceivable, but in fact, if it doesn't exist then what are you going to do? Have you made any provision for correcting this? The outpatient facilities in the Norfolk area of the military establishments are so overtaxed now that it is really pathetic and private doctors' offices in most cases are just as bad.

Mr. MORRIS. We must meet these situations, sir, as they develop.

Mr. HARDY. They are already developed and I expect that some of your California situations are just as bad if not worse. I think this is a fine approach and I really congratulate you all on having

worked this thing out. I'm afraid there are some practical implementation problems that haven't been adequately thought through, and that we are going to have to think through when we get this legislation in its final form.

Thank you, Mr. Chairman.

Mr. HÉBERT. All right, I suggest that Mr. Hardy has developed this and I'll ask the members to discuss this area and confine themselves to this area alone so that we can do as much as we can to dispose of it.

Mr. Wilson of California has been named as a state of explosive—

Mr. WILSON. First, Mr. Chairman, I think I should associate myself with the floodtide of good will that you exuded this morning.

Mr. HÉBERT. You notice it weakened a little bit as we went along. [Laughter.]

Mr. WILSON. You reminded me of the spring tides of the Mississippi down past New Orleans and I would like to float along with them. But, 10 years ago I helped work on this Dependents' Medicare Act and it had a lot of promise too in those days and everybody was happy because everybody was going to be taken care of and in a very short time we ran into funding problems and that act, frankly, was a disappointment in the minds of a lot of us.

It didn't give the care, and I notice in General Bohannon's statement that he said he acknowledged that frequently the dependents didn't get the medical care they were entitled to, particularly because of geography. I want to know from the three Surgeons General if they felt there was adequate funding of the Dependents' Medicare Act over the past 10 years? Have you gotten all the money you needed to take care of the responsibilities given you by the act?

General BOHANNON. I would say that on the whole we have not, when you consider all the requirements.

Mr. WILSON. In other words, there were a lot of people that were actually entitled, but you didn't have enough funds to give them the required treatment?

General BOHANNON. But we tried to take care of them in our own places where possible. We refer them to the civilian professional when we could not.

Mr. WILSON. I would say that the major change that is going to be important, the fact that you are providing for outpatient care outside the military hospital to take care of those who are not in an area where they can't be serviced. Also, and I hope you intent it so as to provide such outpatient care in areas where there are military hospitals but completely crowded and unable to give the proper outpatient treatment. I have one of the largest outpatient facilities in San Diego and outpatient is one of the most critical problems we have there. We are building a new facility to improve it, but this is one of the big problems as far as service personnel is concerned, and I am very much encouraged. I would say this, Mr. Chairman, just one point. You talked about the encouragement of having the witnesses come forth finally with a program that is going to solve a lot of these problems. I certainly agree. I think the important point that is taken here as far as military retirees is that if we adopt this legislation pretty much as written, it will be the first time that the basic right of military care for military retirees is acknowledged.

It has been on a privileged basis so this is historic and it will be a tremendous help for us in our morale problem.

Thank you.

Mr. HÉBERT. May I pursue what you asked General Bohannon on this subject and this is the area where Mr. Hardy was developing the "may" and the "shall" business. Did you ask so far as the Air Force is concerned, for any implementation of the law as we wrote it by way of appropriation in funds? Did you ask any?

General BOHANNON. Yes, we did.

Mr. HÉBERT. Who turned it down? Did the Congress turn it down or were you able to get beyond the Bureau of the Budget and Secretary of Defense?

General BOHANNON. We did not get beyond that, I believe.

Mr. HÉBERT. That is correct, beyond the Secretary of Defense and Bureau of the Budget.

Admiral?

Admiral BROWN. Our situation, I believe, is somewhat different. I don't believe that we have ever been denied any significant amount of funds needed to take care of the Medicare Act of 1956 as it deals with inpatients.

Mr. HÉBERT. We are going beyond that. This act deals with outpatients, too.

Mr. WILSON. We are talking about the medicare aspect——

Mr. HÉBERT. This law we thought was encompassing and we found an interpretation which was not new.

Mr. WILSON. For dependents away from a military hospital?

Mr. SLATINSHEK. Perhaps, I can clarify it. I think what the members are pursuing, Admiral, is the fact that granted Dependents' Medicare Act did not permit you to contract for outpatient care from civilian facilities, however, it did provide outpatient care in uniformed services facilities and the question therefore is, Have your uniformed services facilities been adequate to provide outpatient care required of your active duty dependents? This is the question.

In other words, have you been getting enough money to build facilities which will take care of your civilian outpatient loads?

Admiral BROWN. I can answer that. I misunderstood you.

Our present uniformed services facilities are not adequate to take care of the outpatient load as it exists. We have been able in our new construction, as it has been approved under the existing rules, to program for outpatient care, including dependents and retired. And, we have had outpatient facilities approved on this basis.

Mr. HÉBERT. What you are saying, Admiral, and I like these phrases, I'm always intrigued by them. Under existing rules. Now, as a matter of fact, the existing rules don't let you ask, don't let you come before us for what you want; isn't that right? Those are the existing rules. You can't come up here unless you are cleared by the Department of Defense. You can't go beyond what they tell you to tell us unless we are a little bit more knowledgeable and ask you some questions. Under the guidelines they say now you can give your personal opinion. The stars will fall pretty heavily if you do give them.

Admiral BROWN. I stand corrected on semantics. [Laughter.]

Mr. HÉBERT. These are facts of life.

Admiral BROWN. I restate that we have had to date approval by and large for adequate outpatient facilities in our newly programed construction.

Mr. HÉBERT. We will go by your words again. By and large, it is always qualifying.

Are you satisfied with what you are getting as to what you really need and what you want?

Admiral BROWN. Well, we have, in answer to that, and directly as possible——

Mr. HÉBERT. Again, qualifying. I will accept the qualification.

Admiral BROWN. Yes, sir. We have had some disagreements as to total space and as to the programing of particular space, but these have been honest disagreements based on——

Mr. HARDY. Guidelines.

Mr. HÉBERT. They are all honest. I have never challenged the integrity from Secretary McNamara down.

Admiral BROWN. I would like to restate that we feel we have come out with quite practical and usable outpatient facilities.

Mr. HÉBERT. Then you are happy now you have taken care of everything.

Mr. HARDY. Mr. Chairman, could I make an aberration on that? It reminds me of this marine we had testify over in Naples who said he could carry out his mission even though he didn't have certain equipment that was essential but he could carry out his mission if he didn't have a thing in the world except a rifle.

Mr. HÉBERT. Maybe not be successful. You mean attempt.

General HEATON, you always have something to add.

General HEATON. Well, I can give you two concrete examples of how we feel. Within the last few months I have personally participated in the dedication and opening of two brand new army hospitals, one at Fort Leonard Wood, Mo., a huge post, and one at Fort Sill, Okla., another post that is huge, and I was very favorably impressed with the new ideas of outpatient construction.

Mr. HÉBERT. I am not talking about construction. I am talking about getting the money for what you want.

General HEATON. I got it.

Mr. HÉBERT. You got everything you wanted?

General HEATON. Yes, sir, I got it. One of the most important things today in new hospitals is the outpatient facilities.

Mr. HÉBERT. You got enough of them?

General HEATON. And, we got them in those two hospitals.

Mr. HÉBERT. I know you got 2, but did you ask for 10 of them?

General HEATON. Sir?

Mr. HÉBERT. How many did you ask for, two?

General HEATON. No, I'm giving you concrete examples of these hospitals.

Mr. HÉBERT. We are not talking about the physical—when you produce a hospital or build a hospital, we are very well satisfied that it is what you want, but do you get as much as what you need?

General HEATON. Yes, sir; we certainly got it in these two hospitals for outpatients.

Mr. HÉBERT. I admire you more every time I talk with you. [Laughter.]

Mr. LONG. Mr. Chairman, could I ask one question? Have you asked for any hospital facilities at Fort Polk, La.?

General HEATON. We have not put in for Fort Polk yet.

Mr. LONG. Why?

Mr. HÉBERT. You don't need them?

We are not being provincial, we are just covering everything.

Mr. LONG. You speak for yourself.

General HEATON. We have not yet put in for a new hospital at Fort Polk, La.

Mr. LONG. You say you have not?

General HEATON. Not yet.

Mr. HÉBERT. Would you like to have one?

General HEATON. We would like to replace all of our old hospitals, Mr. Chairman.

Mr. LONG. Well, if the need exists, why don't you ask for it?

General HEATON. We are, yes, sir.

Mr. LONG. You are going to ask for one for Fort Polk?

General HEATON. We are going to ask for a new hospital everywhere until all of our old ones are replaced.

Mr. HÉBERT. Are you going to ask for one at Fort Polk?

General HEATON. Yes, sir.

Mr. HÉBERT. Mr. Pirnie?

Mr. PIRNIE. Mr. Chairman, I was interested in having served on that special committee that gave some thought to this general subject in a different climate. Remember we suggested that there should be some programing in military construction for retired personnel and we selected a percentage in that report. What is the reaction now to that proposal?

Mr. MORRIS. Sir, we gave this very great thought, decided that it was wiser to state the objectives and the conditions under which we should include this without regard to a given percentage target or ceiling or floor; 10 percent is suggested in the report, but it could be too little in some cases. So it was the judgment of all of us that if we stated the reasons for including such beds, not being bound by any specific percentage, which might be taken as an arbitrary goal or ceiling—that we would be better off. It is that simple.

Mr. PIRNIE. I wouldn't want to take the position that any of us on the committee should be arbitrary with respect to that because we were only seeking to fulfill a requirement.

Mr. MORRIS. Yes.

Mr. PIRNIE. When we stated that there might be a different requirement in the case of teaching hospitals, we were just recognizing something that I assume you would consider appropriate. That is right.

Dr. FISK. Yes, sir.

Mr. PIRNIE. So in effect you are telling us now the theory which prompted that recommendation is now accepted by you and that there is no real conflict even though you do not happen to pick up the percentage which we suggested; is that correct?

Mr. MORRIS. We think we are completely consistent with what we understand the intent of your recommendation to be; namely, that we must provide proper training and professional development for our physicians from a self-interest point of view and, secondly, we must provide the capacity where the civilian community cannot do so, to meet our retired workload.

Mr. PIRNIE. So, we can contemplate that at the time of construction?

Mr. MORRIS. Yes, sir.

Mr. PIRNIE. So, there will be an excess for that purpose?

Mr. MORRIS. Yes.

Mr. PIRNIE. We had another recommendation, you remember, that related to considering the mission of the hospital. Giving that a priority perhaps even over local conditions which might fluctuate and be subject to the control of others than ourselves. Do you recall that recommendation?

Mr. MORRIS. Not quite as clearly, sir; I'm sure.

Mr. PIRNIE. Let me quote.

Mr. MORRIS. Fine.

Mr. PIRNIE (reading):

That the Department of Defense program beds for dependents of active duty personnel in new military hospital construction on the basis of projected mission and not depend on civilian hospital in nearby communities which are subject to local fluctuating conditions.

Now, I never took that to be exclusive, but to make your planning basic with respect to the military mission to be served by that hospital. Don't you feel that there is a thought there that should be given considerable priority and planning so as to assure that the mission of that military hospital is completely fulfilled which means the protection of the morale and the needs of the military identified with that hospital?

Mr. MORRIS. By all means, sir, our programing for construction at our long-term installations should be based upon their long-term missions and their long-term active strength as best we can judge them.

Mr. PIRNIE. Thank you, Mr. Chairman.

Mr. HÉBERT. Mr. Nedzi?

Mr. PIRNIE. Excuse me, Mr. Chairman, I would be remiss if in view of having served on that committee, I didn't express my personal pleasure at the change of atmosphere and I'm sure it is going to be healthy for us all.

Mr. HÉBERT. I can also share that too, Mr. Pirnie, because every time I attend a wedding I just wonder how long the beautiful honeymoon is going to last.

Mr. Nedzi?

Mr. NEDZI. Mr. Chairman, I think you had an eminently reasonable suggestion in asking Mr. Slatinshek to develop the record, and I won't take up any time by asking any questions now.

Mr. HÉBERT. You are always most cooperative and I am sure you enjoy the atmosphere on this side.

Mr. Lennon?

Mr. LENNON. Mr. Chairman, I would like to address a question or two to the Secretary.

I note that you say that the average career member has about 22 years of service and typical retirement is in his early forties.

Mr. MORRIS. Yes, sir.

Mr. LENNON. And that the average military retirement income is just over \$250 a month.

Mr. MORRIS. Yes, sir.

Mr. LENNON. And you do think there ought to be a distinction in the benefits to the retiree's dependents as distinguished between active military personnel's dependents?

Mr. MORRIS. We have felt so, sir; yes.

Mr. LENNON. Now, what percentage of your retirees in the early forties establish a new career or new profession?

Mr. MORRIS. After leaving with 20 year service?

Mr. LENNON. The average is in the forties. What percentage of them establish a second career?

Mr. MORRIS. I don't have precise figures, but I would expect a very high figure in the nineties.

Mr. LENNON. A preponderance of them certainly would in retiring in early forties establish some subsequent career?

Mr. MORRIS. I'm certain; yes, sir.

Mr. LENNON. I am impressed with your total statement. It is heartening to see what the military, Department of Defense has finally come up with. Hopefully we can believe that this implementation of the passage of this legislation or the implementation after passage will bring the desired results. I say "hopefully." We don't know that it will. We do know that beginning July 1 our hospitals are going to be crowded, our civilian hospitals everywhere.

Mr. MORRIS. Yes.

Mr. LENNON. You state here with respect to retirees that no charge would be made for outpatient care and only minimal charges for inpatient care of \$1.10 for the commission member only and nothing for the enlisted member, and \$1.75 per day for the dependents of both.

Since this is going to be a program that will ultimately affect so many civilian hospitals across the country, have you by any chance conferred with the executive director of the American Hospital Association with respect to their views on the effect that the passage of this legislation would have on the members of the American Hospital Association?

Mr. MORRIS. I would like to ask Dr. Fisk to comment on this.

Dr. FISK. I don't believe, sir, that we have directly given them or let them see this legislation or the changes that are attended to it.

Mr. LENNON. Well, I think they have seen it.

Dr. FISK. They have not discussed it with us. I was at a meeting last week with the American Hospital Association among other groups.

Mr. LENNON. They suggest a different approach.

Dr. FISK. Yes.

Mr. LENNON. From what this bill provides. They suggest a program comparable to our civilian component, with respect to hospital care for your retirees, particularly in the aspect of the dependents.

They raise a question too of the benefits for medical care not exceeding 75 percent repaid by the DOD or the Federal Government as related to the amount that is paid for civilian retirees for medical benefits.

Were you impressed with the argument that they present there in that?

Dr. FISK. Sir, I unfortunately didn't get that argument from them. They made no comment at the time I was there.

Mr. LENNON. I just happened to read the letter that was addressed to the chairman of this committee in which they make an analysis of each of the three bills that are being considered here today and a copy of it was sent to my colleague here and he permitted me to read it during your testimony.

I think it would be worth while to read that letter. I am sure that the chairman of the committee would furnish it to you gentlemen and in order that you might show them why you took this approach rather than the approach that they have advocated because this is going to resolve itself into ultimately personal relationship with members of the American Hospital Association.

Now, the chairman has indicated, and I think Mr. Hardy too, that they were looking with some favor upon the treatment of your dependents of your retirees for hospitalization and medical care and the same method that we treat the members of dependents of those on active duty service, and I believe you indicated it would cost approximately \$10 million more on an annual basis.

Mr. MORRIS. That is correct, for hospital care.

Mr. LENNON. Would that be the first year in the time frame?

Mr. MORRIS. Yes.

Mr. LENNON. Would that have a tendency to accelerate over the 5-year period that you projected the total cost for that program for that time?

Mr. MORRIS. Yes.

Mr. LENNON. Other than the cost factor, Mr. Secretary, would you tell us why you had arrived at the judgment that there ought to be a distinction between the benefits to the retiree's dependents as contrasted to the dependents of those on active duty?

Mr. MORRIS. Sir, as I indicated earlier we followed what we thought was the best and most modern practice in the development of charges for such health care programs. We have come up with what is a more liberal program than the Federal Government for its civilian retirees and more liberal, we believe than that available in private industry, generally. It is a little less liberal than that for our active duty dependents, but we think it is consistent with good practice.

After all, our retirement incomes are also scaled down based on the years of service of the individual.

Two and a half percent a year in terms of his base pay.

Mr. LENNON. If the average retiree is drawing as you stated here, \$250 a month, he could acquire for his dependents a policy that would pick up this approximately \$1.75 per diem for hospitalization, could he not? Couldn't he buy a policy which would put him in a position at a reasonable premium that would pay the difference between, well, would pay \$1.75 per day for hospitalization and pay the 25 percent for medical services both inpatient and outpatient which is what he would pay under this bill for his dependents?

Mr. MORRIS. Sir, many of our retirees, of course, when they start their second career, join companies that have health care programs and they also participate in them. So, that ours is a supplementary program where they do elect to take out other health care plans.

Mr. LENNON. In other words, the retiree, even though he was a commissioned officer retiree, would be subject to a cost of only \$1.10 per day?

Mr. MORRIS. In our facilities, in military facilities.

Mr. LENNON. In military facilities?

Mr. MORRIS. Otherwise, he pays 25 percent of the cost, and the Government pays 75 percent of the cost which is a very generous arrangement.

Mr. LENNON. If that commissioned member is confined necessarily because of distance to a hospital, civilian hospital, how do you participate in that?

Mr. MORRIS. 75-25 cost sharing is proposed under the bill.

Mr. LENNON. 75-25?

Mr. MORRIS. Yes, sir.

Mr. LENNON. The Government up to but not exceeding 75.

Mr. MORRIS. Yes, sir.

Mr. LENNON. How would the determination be made as to whether or not the Department of Defense picked up 75 percent of the cost or 50 or 60?

Mr. MORRIS. Under the bill as written, the Secretary of Defense and Secretary of HEW would develop administratively the scale of charges from year to year.

Mr. LENNON. Would it be based on a man's retirement pay or his income from his second profession or what?

Mr. MORRIS. At the outset our feeling has been that we would probably adopt a straight 75-25 across the board for all eligibles under the program; but that as we accumulated experience we might find it desirable to make it possible for some personnel with more severe problems to pay less than 25 percent and others to pay more than 25 percent. This flexibility would be permitted under the law, and we think it is a wise principle to have in a permanent statute.

But, on the average the 25-75 would be the cost to all retirees on the one hand and the Government on the other.

Mr. LENNON. Now hospital costs can be as much as 50- to 60-some-odd dollars a day; can't it?

Mr. MORRIS. Yes, sir. Again, I must stress this is an extremely generous program.

Mr. LENNON. Sir?

Mr. MORRIS. I would like to stress this is an extremely generous program from the point of view of the retired member and his dependents.

Mr. LENNON. Are the Surgeons General of the three Departments normally the Army, Navy, and Air Force, are they in total agreement with respect to you and this difference as provided for the retirees' dependents as contrasted to the active service dependents?

Mr. MORRIS. I would like them to speak for themselves, sir.

Mr. LENNON. I would like, sir, do you make that as a flat categorical statement?

General BOHANNON. Yes, sir.

Mr. HÉBERT. And you, sir, Admiral?

Admiral BROWN. Yes.

Mr. HÉBERT. And you, General?

General HEATON. Yes, sir.

Mr. LENNON. I think that is all at the moment.

Mr. HÉBERT. Thank you. I do have to say this because it has come to my mind when discussing these things, I think it would be of interest, this is what the public doesn't get, and the columnists don't particularly say anything about is our great fringe benefits for Mem-

bers of Congress. The dependent who enters any of our military hospitals pays \$1.75 a day, isn't that right, Dr. Heaton?

General HEATON. Yes, right; \$1.75.

Mr. HÉBERT. What do I pay?

General HEATON. \$46 a day.

Mr. HÉBERT. They pay. And every time I go out to Walter Reed, it costs me \$46 a day.

Mr. MORRIS. I am in the same boat.

Mr. HÉBERT. I agree, you should be, but what I am trying to find out here, the concern we have for the man in uniform and the false impression so many people have on the outside. I am glad to have you associated with me in this because certainly every time a Member of Congress goes and enters a hospital, it is \$46 a day. We do not get this for nothing. There are no franks on that medical care out there at all. We come up with that cash. I know the time that I have been out to General Heaton's hospital out there, people thought that here is a Congressman out there and he is getting everything for nothing, but I get those bills and I have to pay them.

It is \$46 a day, and it is based as I understand it, General Heaton's and other hospitals too, on a cost estimate, that figure.

General HEATON. Average cost estimates for a fiscal year.

Mr. HÉBERT. Average cost estimates, because I remember years ago it was something like \$20 a day and it is now \$46 a day and as you say, Mr. Secretary, if you go out there, you don't get a free ride.

Mr. MORRIS. No, sir.

Mr. HÉBERT. No, but I really think this is something important that people should really know. Many times people in the Executive are identified as being at Bethesda or Walter Reed and I'm sure the general impression is that these people are out there as freeloaders, and they are not out there as freeloaders. They are paying the price of \$46 or whatever the going rate is, and in comparison to that figure I think it should be indicated now to show exactly what consideration we are giving for those dependents. There is a big difference between \$1.75 and \$46.

I'm not complaining about the money. That is all right. I'm willing to pay it, but I think this should be pointed out and brought into focus, the thoughts that we have in giving our man in uniform every advantage that we can possible give him.

Now, we have Mr. Hagan.

Mr. HAGAN. Mr. Chairman, I want to say I regret very much my unavoidable delay in arriving this morning, but I consider of great importance the increased availability of medical care to the men in uniform, both to retired and to active duty as I will acquaint myself fully with everything that has transpired here this morning.

Mr. HÉBERT. Thank you, Mr. Hagan.

Mr. Long, you have some more questions?

Mr. LONG. If it would be appropriate at this time I would like to direct a few questions in regard to H.R. 9271.

Mr. HÉBERT. Before you get into that, may I say for the record it is important to identify the fact that you have been associated with this type of legislation some years as a legislator in Louisiana.

I always like to qualify the people on my team with their expertise.

Mr. LONG. Thank you, sir, I don't know how expert I am in this field, but I am interested in it, and I hope however none of my questions are interpreted to mean that I'm not in complete sympathy and accord with legislation in this field as long as it is legislation that might do some good, so that I might not be misleading.

Now, if you will turn to page 12, I see where you have the mentally retarded defined, pointed out here.

Profoundly or severely. Do you mean by that, those cases which require institutionalized care? And, those that have criminal tendencies also in your definition and understanding of it, Mr. Secretary, or maybe one of the Surgeons General?

Mr. MORRIS. I would like to ask Dr. Fisk to comment on this if he would.

Dr. FISK. I think the general term of retarded and mentally handicapped child doesn't necessarily include those that have criminal tendencies, Mr. Long.

Mr. LONG. No; not necessarily, but it could and that is because some retardees do, you know, and in this program is it intended to cover those also, sir?

Dr. FISK. I think if they qualify as a dependent child and were mentally retarded in the sense, medical sense, of word, severely medically, mentally retarded, they would qualify for the plan. I don't know how many of these have criminal tendencies. If they were severely retarded they would probably not be intelligent enough to have criminal tendencies.

Mr. LONG. Some do because I know in Louisiana we have several institutions, in fact one in my own congressional district, in which provision had to be made that although some did not require institutionalized care from the standpoint that they were uncontrollable, merely because they were retardees, but because they also had criminal tendencies, also.

Maybe not as a general proposition but many are. A large percentage and maybe the larger percentage of our mental retardees are the docile type. At least it has been my experience.

Dr. FISK. More what?

Mr. LONG. Docile, and well behaved. There are some that are not. Some that have criminal tendencies that cannot be controlled by their parents. Cannot be turned loose on society.

Now, my question is in this profound or severe case, does that also include that type or just those that require institutionalized care?

Dr. FISK. I don't believe this legislation as it was written contemplated this type of individual. I think the criminally insane, if this is what you are referring to——

Mr. LONG. No; I am talking about a retardee, mentally retarded child.

Dr. FISK. I would think they would include this. I would think very definitely.

Mr. LONG. Now on your moderately, your definition of the moderately, is that just restricted to those trainable and those that are educable?

Dr. FISK. I think in trying to define the three groups, we did go through certain exercises which I grant didn't give a very clear line because I don't believe there are these clear lines of theory. In the mildly retarded and mildly handicapped I think we considered these

individuals to be those who could be cared for at home provided they got certain outpatient care, say from the standpoint of teaching and training.

Those that were not able to be controlled at home, in other words, it would be a hardship on the family and the children associated with it. Those who would be moderately or severely handicapped or retarded, obviously would have to be institutionalized for their proper care.

Mr. MORRIS. We have some definitions of these adjectives. They are used in the literature of the National Association for Retarded Children.

Moderately retarded are defined as those who under sheltered conditions are able to perform simple tasks and enjoy simple recreational activities and usually not capable of self-maintenance.

Whereas, severely retarded persons have some understanding of speech and are capable of some response, however, these children require continuing direction, and supervision in a protected environment.

Mr. LONG. I have to speak in reference to my own experience in my own State. We have an institution in my own area where they are institutionalized to take care of approximately 1,400 of these retarded and we also have a school in another section of my area which is near an Army center whereby they give them some educational training up to the level that they can be trained.

We have it broken down in our State. We do have those that are trainable, who require institutionalized care and those that are educable up to a certain grade level, we will say fifth, sixth or seventh grade.

What I am trying to say is, will those classes be eligible under the provisions of this act?

Mr. MORRIS. Yes.

Mr. LONG. Now, speaking about what we are going to accomplish by this proposal as I understand it, is that in effect all it does is say that a State cannot refuse admittance or treatment of one of these children simply because his father or dependent is in the military?

Mr. MORRIS. No, sir, that is only one provision. One tool to make this possible. It is the preferred way where it is possible but the funds proposed in the bill could be used for care in private institutions, for special training and special training institutions and for help to the sponsors of the child in various ways.

It is a flexible program, in other words.

Mr. LONG. I have seen statistics in the past that about 3 percent of any given community would fit under the mentally retarded and then your physically handicapped; either paralysis, speech, or spastics, or, epilepsy, an all in one of these exceptional categories. The State of Louisiana, for instance, which has over 3 million people, has over 90,000 children who unfortunately would fit into this category, and of course, Louisiana has several schools for these exceptional children both private and public.

We have workshops for those that can be trained.

We have various facilities but nowhere do we come up to what is needed within that State. I'm sure you are going to find nowhere in the United States that there are adequate facilities, just page after page of waiting lists. So, what I'm trying to find out is in effect,

what good is this act going to do in those areas where a waiting list is long and will it be enforced to the extent that the States will be forced to give military or people eligible under this act first preference?

Mr. MORRIS. There is no intent, sir, to crowd out other worthy cases. The intent of our proposal is to make fully available to our military person all the benefits available to the citizens in a community and in addition make it possible for the Government to help the parents in financing this.

Mr. LONG. Within that particular given community, or can they send their children from one community to another?

Mr. MORRIS. They may well have to.

Mr. LONG. Or from one State to another where a facility may be available?

Mr. MORRIS. Yes.

Mr. LONG. Either private or public?

Mr. MORRIS. Yes, sir.

The first preference where it is available is the public institution which is usually Government financed in some degree. Where those arrangements are not adequate to meet the needs, the funds available under the act could be used for the other purposes you suggest.

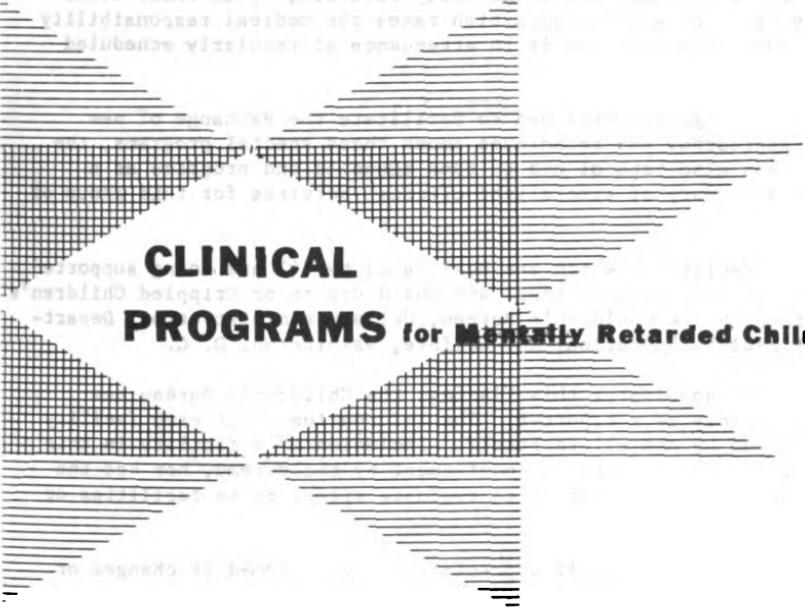

Mr. HÉBERT. Would it be possible, Mr. Secretary, to supply for the record a full list of federally supported institutions in this area that would be affected because I think that's what you have in mind.

Mr. LONG. Yes, I would like that.

Mr. HÉBERT. Would you supply that?

Mr. MORRIS. We will work with the Department of HEW.

(The following material was received for the record:)

**CLINICAL
PROGRAMS for Mentally Retarded Children**

(5777)

This is the sixth listing of special clinical facilities for mentally retarded children compiled by the Children's Bureau. In general, the clinics which have been listed are those which can be defined as outpatient medical facilities providing comprehensive evaluation, treatment, or follow-up services primarily to children suspected of or diagnosed as mentally retarded, by an inter-disciplinary team, of which a physician takes the medical responsibility for all patients seen and is in attendance at regularly scheduled hours.

Initially developed to facilitate the exchange of new ideas, approaches and techniques among these special programs, the listing has also been of use to some agencies and programs as a partial directory of specialized clinical services for this group of children.

Facilities which are designated by (*) are being supported fully or in part with Maternal and Child Health or Crippled Children's Funds through the Children's Bureau, Welfare Administration, Department of Health, Education, and Welfare, Washington, D. C.

In developing this listing, the Children's Bureau has functioned only as a reporter. The information about each facility was provided by the clinic itself. Inclusion of a facility in this list does not constitute an endorsement by the Bureau, nor has the Bureau necessarily attempted to evaluate either these facilities or their services.

The Bureau would appreciate being informed of changes or additions to this compilation.

October 1965

**NOTICE OF ADDITIONS AND CHANGES IN 1965 LISTING
CLINICAL PROGRAMS FOR MENTALLY RETARDED CHILDREN**

ADDITIONS:

MISSOURI

***MULTIPLE HANDICAP CLINIC**

University of Missouri School of Medicine
Medical Center
Columbia, Missouri

Telephone: Gibson 2-5111
Ext. 296

Medical Coordinator: James M. Pickens, M.D.
Area Served: State of Missouri
Ages Accepted: Birth to 21 years
Sponsored by: University of Missouri School of Medicine
Clinic Hours: By appointment

***MULTIPLE HANDICAP CLINIC**

Children's Mercy Hospital
1710 Independence Avenue
Kansas City, Missouri

Telephone: Grand 1-5250

Clinic Director: Ned W. Small, M.D.
Area Served: Kansas City area and Western part of Missouri
Ages Accepted: Birth to 14 years
Sponsored by: University of Missouri School of Medicine
Clinic Hours: By appointment

VIRGINIA

***CHILD EVALUATION CLINIC**

13 Midway Street
Bristol, Virginia 24201

Telephone: 669-3031

Clinic Director: Nellie Dorsey Wright, M.D.
Area Served: State of Virginia Southwest Area (Dickenson, Lee, Scott, Wise, Russell, Buchanan, Tazewell, Washington, Smyth, Grayson, Wythe, Bland and Carroll Counties and the Cities of Bristol and Galax)
Ages Accepted: Children up to 10th birthday
Sponsored by: State Department of Health, Bureau of Crippled Children
Clinic Hours: 8:15 a.m. to 5:00 p.m. Monday through Friday - by appointment

Application is made through the local health department in the area in which the patient resides.

CHANGES:

NEBRASKA

MENTAL RETARDATION EVALUATION AND COUNSELING CLINIC
Omaha, Nebraska

From: Clinic Director: Steven Dutch, M.D.

To: Clinic Director: Richard L. Cohen, M.D.

NEW MEXICO

CHILD STUDY CENTER FOR RETARDED CHILDREN
Albuquerque, New Mexico

From: 1111 Stanford, N. E.

To: 605 Copper, N. E.

ALABAMA***DIAGNOSTIC SERVICE FOR MENTALLY RETARDED CHILDREN**

University of Alabama Medical Center
Birmingham, Alabama

Telephone: 323-8811

Medical Director: Frieda Lehmann, M.D. (Acting)
 Area Served: Alabama State except eight counties served
 by Montgomery Project
 Ages Accepted: Birth to 5 years (older children seen under
 special circumstances)
 Sponsored by: Alabama Department of Public Health, Bureau of
 Maternal and Child Health; Jefferson County
 Health Department; Medical College of Alabama
 Department of Pediatrics
 Clinic Hours: Monday through Friday by appointment

***DIAGNOSTIC AND GUIDANCE CENTER**

Children's Center of Montgomery, Inc.
310 Madison Terrace
Montgomery 7, Alabama

Area Served: Approximately 30 counties in Southwest Virginia
Ages Accepted: Children of preschool age
Sponsored by: State Department of Health, Bureau of Crippled
Children; and City Health Department
Clinic Hours: 8:00 A.M. to 4:30 P.M. Monday through Friday -
by appointment

WASHINGTON

***KITSAP CLINIC FOR CHILD STUDY**
 Kitsap-Bremerton Health District
 Bremerton, Washington

Telephone: ESsex 7-3911

Clinic Director: Shirley Benham, Jr., M.D., M.P.H.
 Area Served: Kitsap County
 Ages Accepted: Birth to 21 years
 Sponsored by: State Department of Health and Kitsap-
 Bremerton Health District
 Clinic Hours: By appointment

***CLINIC FOR CHILD STUDY**
 University Hospital
 University of Washington
 4115 - 15th Avenue, N. E.
 Seattle, Washington 98105

Telephone: 543-3375

Acting Director: S. L. Hammar, M.D.
 Area Served: State of Washington
 Ages Accepted: Birth to 8 years
 Sponsored by: State Department of Health, Division of
 Child Health Services; and University of
 Washington
 Clinic Hours: 8:00 A.M. to 5:00 P.M. Monday, Tuesday, and
 Wednesday

DIAGNOSTIC AND COUNSELING CLINIC
 Out-Patient Department
 Children's Orthopedic Hospital and Medical Center
 Seattle, Washington

Telephone: LA 4-4300

Clinic Director: John T. Chapman, M.D.
 Area Served: Seattle, King County - patients from the
 entire State
 Ages Accepted: Birth through 18 years
 Sponsored by: Washington Association for Retarded Children;
 State Division of Child Health Services;
 Seattle Area Guilds for Retarded Children;
 and Children's Orthopedic Hospital and
 Medical Center
 Clinic Hours: By appointment at Orthopedic Hospital and
 Medical Center

***TACOMA-PIERCE COUNTY MENTAL RETARDATION CLINIC**

by appointment**

Mr. LONG. Yes. Since we are dealing with this area, if I may proceed, generally I would think you would classify these children as exceptional children. I think most of the associations, public and also private, that deal with this particular area of mental retardation and handicapped, have a tendency at times and some do, classify these particular children as exceptional children. This takes in the range all the way from the lowest retardation and the worst possible physical cases up to and including those children that are geniuses who present problems in schools now. In your definition of those, emotionally disturbed and major learning difficulties ability, you give the numerical number of how many of those would be affected. In those particular two, are you including the genius category in which the school system, the public school system or whatever school system is available, cannot cope with a certain child because of his extremely high IQ? Therefore he becomes a problem child and should be placed in a private institution that is perhaps geared up to a higher degree of learning.

Mr. MORRIS. No, sir; the act is not aimed at that type of problem.

Mr. LONG. Do you have any provision for including those in the act?

Mr. MORRIS. Sir, I'm a layman in this field, but it would seem inconsistent with the particular purpose of this bill to deal with that end of the spectrum of the problem.

Mr. HÉBERT. Mr. Long, in that connection we are going to have witnesses here from HEW who I think are more competent than the Secretary in this field. As he indicates, he doesn't possess the competence, and at that time we should resolve that problem.

Mr. LONG. There is one other point I just want to point out more for the record and maybe to refer this back to the attention of the medical officers in charge of the medical facilities and training, and so forth, of your interns and your doctors.

These speech handicaps, I'm sure you are referring to what I call spastics. Am I right in that?

Dr. FISK. Some would come under that category. Others come under difficulties in the use of language other than spastics.

Mr. LONG. This figure of 11,607 are children of active-duty military personnel?

Dr. FISK. Yes, sir.

Mr. LONG. Do you have any idea what percentage of those children were delivered in military or private hospitals?

Dr. FISK. No, sir.

Mr. LONG. The reason I'm just mentioning this at this particular time, one-time figures were submitted to us on our State legislative committee relative to spastic children in one parish or county, if you please. In our State they had birth certificates that reflected that 90 percent of these spastic children in that particular county had been delivered by the same doctor. I just might call your attention to that, and see if there has possibly been any research from the military standpoint and see if there might be some connection between the actual delivery and spastic children. But, all in all, Mr. Chairman, I want to point out this: Based on my experience this is good. I think the approach is good. I'm in complete sympathy and accord with it, but I can't see how this particular legislation is going to give the military people what they are looking for and really what they need. I'm afraid it may be a little misleading. I think the proper approach

to this problem would also be to include this and then also have a greater participation by the Federal Government either from the Defense Department or HEW to the States.

Mr. HÉBERT. Mr. Long, I suggest this. The idea behind every legislation which I sponsor in this area is the nomad existence of the military man where he goes from one community to another and finds it most difficult to move his family when he has no provisions in the area. I pointed out in particular the case of the Navy man in my own area where I was successful in obtaining a position for his child who was a retarded child.

At the post from where he came he had no problem. He had the child there, but he moved into a community where there are no facilities nor anything at all provided for him.

This was my thinking. I think the general thinking behind the whole proposition is to take care of this officer or enlisted man, anybody in a military hospital under compulsion to travel, and to be a nomad and go to different areas.

When he gets to that area he finds a complicated situation not of his own making. He is following the uniform and goes where he is ordered to go and this facilitates the handling. I think we share that opinion, don't we, Mr. Secretary?

Mr. MORRIS. Right.

Mr. LONG. I am quite in accord and in complete sympathy. I come from an area that has two military installations. It has a spastic institution and a retarded children institution that has 1,400 children in it. The area also has a retarded children's school that goes up to a certain grade level, whatever they can acquire or reach. I could understand the plight and really, you might say, even the sinful attitude or approach to it that could result if some military person stationed at someplace in that area could not enroll the child in that institution if there happened to be a space available just because he was not a resident.

Mr. HÉBERT. Given the population of 3 million, and 90,000 retarded children, in the general figure your military population is around 3 million today, you have a hundred thousand, or physically handicapped. What intrigues me is the comparability of the two totals.

Mr. LONG. My figure is based on information that we received several years ago. Approximately 3 percent of your population would fit into one of these categories which we classify and I classify as exceptional children.

Mr. LENNON. Mr. Chairman, I would like to ask a question or two about the bill H.R. 9271.

You are suggesting that the bill be amended to require such States to waive the residency requirements for children of active-duty members and for a period following 1 year following the member's retirement. You suggested that in the form of an amendment. I believe you said earlier in your colloquy with the chairman that it could not be done by regulation but would have to be done in the basic law.

Mr. MORRIS. Yes, sir.

Mr. LENNON. I'm wondering if it could be done through a contract with HEW with the mental care commission, which is a State agency in every State that I can think of, where you have a military installation?

I hate to put my approval to legislation that says funds shall be withheld unless and until that State waives the residency requirements of a person in the military personnel.

Your objective here that you are seeking is excellent but it occurs to me that in these States where we have these military installations that people are so grateful to have them there—Members of Congress sometimes are not because they create a problem—but the States are grateful to have them there, that the State would enter into a contract with HEW that would waive the residency requirement with respect to the admission of any of our institutions involving military personnel or their dependents.

Of course, you make the provisions for the payment at the normal fee, whatever that is. I wonder if that could be explored?

Mr. MORRIS. If HEW is to appear, you may wish to address the question to them.

Mr. LENNON. Rather than spelling it out in the law.

Now, that leads me to this question: Fort Bragg is in my district. Polk Air Force Base is within my district. Suppose a member of the Armed Forces is sent to Fort Bragg and he is a resident of California and while he is there his child develops a mental condition that is essential to institutionalize that child. Now then, he is transferred and the child is put in that institution and he is transferred to some other State. He doesn't want to take that child out because the child is there and the institution is doing a good job, we believe, and the child has been satisfied and we see a good future for the child.

Then 2 years later he moves to another State and another State. Now, you only say that that child can be then moved by the State 1 year after his retirement, so that child could be there 20 years or 15 years or 18 years, God forbid, but they do, you know, for a lifetime. Is that what you mean by this language?

Mr. MORRIS. The retirement language, sir, was specifically to provide for the case of the individual who retires, giving him this privilege for 1 additional year so he could establish residency.

Mr. LENNON. At time of retirement?

Mr. MORRIS. Yes.

Mr. LENNON. Let's illustrate this. Here is a man sent to Seymour Johnson Air Force Base or Fort Bragg or Fort Polk and they finally decided that the child has to be institutionalized and he participates in this program.

How long can that child stay there in the custody of that State institution under this act?

Mr. MORRIS. I believe, sir, indefinitely under these provisions of this act.

Colonel McKenzie has done a great deal of research on this and worked with HEW.

Mr. LENNON. I think that is what this language means.

Colonel McKENZIE. The child would be able to remain there so long as the institution considered the child eligible to remain there. The one thing that the institution could not force the child out for would be failure to meet residency requirements. If there were other

reasons why, under the institution's policy, the child was no longer eligible, then the child couldn't remain.

Mr. LENNON. It wouldn't make any difference whether the parents have a legal residence or were actually physically in the State, would it?

Colonel MCKENZIE. That is right.

Mr. LENNON. That's what I want all of us to thoroughly understand. That's the reason it comes back to my thinking of a contract, of course, the difficulty there is where the mother takes the children and goes back to the old folks, as one of you gentlemen used that phrase, there may not be a military installation and she might have trouble there. I can see that we are in the twilight or gray zone of this matter, but I am concerned about spelling out categorically in the basic law the Federal Government's right to withhold Federal funds. We are in trouble in enough areas of other areas that I am thinking about in certain section of the country without the arbitrary withholding of funds.

Mr. HÉBERT. Mr. Slatinshek?

Mr. SLATINSHEK. If I may, Mr. Chairman, clear up for the record some questions I think will inevitably arise.

Mr. Secretary, and I would like you to interrupt me if I am incorrect.

The changes here incorporated in the three bills and essentially in the expansion of medical care by and large represent an expansion of the dependent medical care program. Therefore, the dependents who are eligible for care have not been changed under the terms of your recommended changes.

In other words, and I want the committee to clearly understand this, all of the dependents who are eligible for care in uniformed services facilities will, of course, continue to be eligible for such care.

Now, in the case of civilian facilities, the law originally enacted limited or deleted one of the type of dependents from eligibility, and that was parents and parents-in-law. This is also carried forward into your new program; is that correct?

Mr. MORRIS. That is correct; they remain status quo in that they still have entitlement to space available in military facilities.

Mr. SLATINSHEK. The same thing would apply to retired personnel?

Mr. MORRIS. Yes.

Mr. SLATINSHEK. Their parents and parents-in-law?

Mr. MORRIS. That is correct.

Mr. SLATINSHEK. Now, therefore, I will not attempt to develop who is precisely eligible, this is a matter of general knowledge. However, what is provided in the way of benefits? You allude to it in the language change under existing law, the law specifies in general terms what is provided and also specifies in general terms what shall not be provided and under the new language you would delete all of these exclusions and provisions and substitute the high option of the Government-wide plan covering the larger number of civilian employees.

In very general terms could you tell the committee what this envisions and perhaps to assist in this regard the Department has provided the committee with a comparative table which sets in tabular form the benefits that are provided to people today under the dependents medicare act and the provisions providing for Federal employees and also the provisions which will apply in the case of retired personnel who reach age 65. You have been provided with a copy of that, Mr. Secretary. Is that table accurate?

Mr. MORRIS. Yes, sir; it is.

Mr. SLATINSHEK. Now, can you make some general observation concerning the table to begin with. Is it the Department's intention to grant all of these benefits at approximately the same level as that provided Federal employees?

Mr. MORRIS. That is correct, this being a benchmark which we think is established as a very liberal one and one that will be kept modern because of the desire of the total executive branch to provide well for its employees.

Mr. SLATINSHEK. Being the Devil's advocate here, the language as it is written, however, could conceivably result in an arbitrary decision on the part of the executive or even for that matter on the part of the Congress in a future year by virtue of cutting back appropriations so that no care would be made available in these programs; isn't that correct?

Mr. MORRIS. I suspect that could be the interpretation but I would be amazed if this were ever the result.

Mr. SLATINSHEK. I don't think it will occur either, but I am concerned with the legal possibility that there might be a future substantial diminishment of these benefits despite the executive branch's present desire to provide all these to our military dependents.

In the event costs might rise, I think there would be an inevitable tendency to reduce these costs by cutting back benefits.

Despite the fact that this might not occur in the Federal employees area, how would you propose that we preclude this possibility? Do you feel that perhaps some sort of floor might be placed in this language in respect to the general level of benefits?

Mr. MORRIS. In terms of dollar floor?

Mr. SLATINSHEK. No, sir; I am speaking in terms of something of this sort and I haven't worked on it myself, but you indicate that you intend to provide the highest level of benefits provided under the Blue Cross-Blue Shield program or the high option program.

Mr. MORRIS. Right, sir.

Mr. SLATINSHEK. And, this, of course, is subject to change from year to year. This might very conceivably be increased in the future years for Federal employees. Presumably you would do the same thing.

Mr. MORRIS. Right, sir.

Mr. SLATINSHEK. So, it is not contemplated that there be a reduction but on the other hand, we would like to make sure it doesn't fall below a certain level. Could we do this by indicating that the level of benefits now effective in the Federal employees benefit program would be the floor?

Mr. MORRIS. We certainly would have no objection to this and would be happy to work with you in considering language.

Mr. SLATINSHEK. I don't know that it is necessary, Mr. Secretary, but I wanted to explore that.

Mr. MORRIS. Our own image of what we are suggesting here is just so opposite to that which you suggested it never occurred to us that this could be the construction. We are proposing as you know, removal of certain prohibitions in the Dependents' Medical Care Act—chronic diseases and emotional disturbances and disorders—so our whole concept is a modern and liberal one and I hope that is what the legislative history of this act will reflect.

Mr. SLATINSHEK. In other words, you intend at this reading to use this as the benchmark as you put it for the level of benefits and this will certainly not account for the limitation as Federal employees benefits are expanded and changes in programs, this too will accompany the dependents' program?

Mr. MORRIS. I think we are dedicated to maintaining full comparability between our military employees force and our civilian-employed force in the Government, and this is one way of stating that principle.

Mr. SLATINSHEK. Just a brief question. Has the Department considered the possibility of utilizing a deductible other than the 20-percent deductible on out-patient care for dependents care from civilian sources?

Mr. MORRIS. This seemed to us to be the most logical figure inasmuch as it is well established in the Federal Health Care programs and in others. Hence, we have not considered any other percentage.

Mr. SLATINSHEK. This latter question is intended to point out that in the Federal Health program, there is a substantial annual deductible of \$200 which must be reached before the 20-percent contribution is applied. Whereas in the case of military personnel and their dependents no preliminary deductible is required and it will apply from the first instance of outpatient care and therefore it is very generous in that regard.

Mr. MORRIS. That is correct.

Mr. SLATINSHEK. In other words, the benefits provided, even though they might in the way of medical services be comparable to those provided Federal employees are, actually, on the basis of a fiscal comparison, much more generous than those provided Federal employees?

Mr. MORRIS. That is correct, sir; and we would like to keep them that way.

Mr. SLATINSHEK. I would like to turn briefly to 13583, the bill providing for retired changes, and I would like to inquire as to the significance of the language changes in section 1074(b) which would permit retired members to receive care in VA facilities. Could you elaborate on that?

Mr. MORRIS. Yes, just briefly I believe this is covered on page 5 of your text. This opens up the availability on a space-available basis of VA facilities to our retired members. The amendment has the effect of removing the disability and inability to pay requirements which as I understand it now exist in respect to the VA facilities. It makes them fully available without such restrictions if space is available.

Mr. SLATINSHEK. We are talking about the retired member alone, now, and not his dependents in any way?

Mr. MORRIS. That is right.

Mr. SLATINSHEK. Now, vis-a-vis this would eliminate the present requirement that he signs a pauper's oath to obtain treatment?

Mr. MORRIS. Yes.

Mr. SLATINSHEK. Would there be any priority provided him in the way of availability of service in a VA hospital?

Mr. MORRIS. I do not believe so.

Mr. SLATINSHEK. Well, I have reference to a circumstance where where we have a retired member with a physical disability of some

kind. He would nonetheless be simply accorded treatment as a veteran with a disability, as opposed to a retired member with a disability?

Mr. MORRIS. I believe that is correct.

Colonel McKENZIE again has studied this feature in depth. If he has other comments, I would appreciate his making them.

Colonel McKENZIE. This would, in effect, create a new priority for admission to VA hospitals and this new group would have the bottom priority.

Mr. SLATINSHEK. The bottom priority, but above a veteran.

Colonel McKENZIE. Who had no priority at all.

Mr. SLATINSHEK. Who had no priority at all?

Colonel McKENZIE. That is right, sir.

Mr. SLATINSHEK. Who signed a pauper's oath?

Colonel McKENZIE. Of the priorities that now exist; namely, the person who has a service-connected disability and requires care for it, or who has such a disability but requires care for something else, and the veterans of a war who is unable to pay, if you count those as three priorities, this would be the fourth priority.

Mr. SLATINSHEK. It would be after the veteran who was a pauper?

Colonel McKENZIE. That is correct.

Mr. SLATINSHEK. That will not give him very much?

Colonel McKENZIE. In certain locations it would. In other crowded areas it would not.

Mr. SLATINSHEK. Does the Veterans' Administration contemplate programing beds to meet this requirement? Has the Department discussed that?

Colonel McKENZIE. We have not discussed that with them.

Mr. MORRIS. The intent here is simply to open up additional available capacity on a proper basis.

Mr. SLATINSHEK. In the event a retired member required medical care and there was available a VA facility, not a uniformed service facility, in the implementing regulations which you issued, would you require that the first exhaust the possibility at a VA hospital before attempting to get care at a civilian facility, or would he have freedom of choice?

Mr. MORRIS. That is a good question and in our general program the freedom of choice is reserved to the Department's regulations in connection with military facilities where they are available.

Mr. SLATINSHEK. In other words, freedom of choice would only be restricted in the event uniformed services facilities were available and not Government medical facilities in the term inclusive of VA hospitals?

Mr. MORRIS. I believe that is correct. Let me ask Colonel McKENZIE again.

Colonel McKENZIE. No, sir; as the bill is now written, the Secretary of Defense and the Secretary of Health, Education, and Welfare would have authority that could be invoked if they wished to, at some future date, to require the retired member to first seek available care not only in uniformed services facilities but also in VA facilities, and this would follow from the fact that the language is "Government" in the bill rather than "uniform services."

Mr. SLATINSHEK. The committee has explored the rationale of the 20- and 25-percent contribution difference and I will not get into that.

The committee has also discussed the American Medical Association language.

Mr. Hardy discussed the programing, and you have responded, I believe, adequately to the question of your interpretation of a mildly retarded child.

For purposes of the record, pursuing the retarded or handicapped children bill, I understand that the contribution of the Federal Government to the States for crippled and handicapped children amounts to approximately \$35 million of the total of approximately \$88 million spent in this area for facilities of this kind. It is a very substantial contribution.

Mr. MORRIS. Yes.

Mr. SLATINSHEK. On the change in the availability of medicare of the coverage provided under your program to the Social Security Act at age 65, is it your opinion and belief that the level of benefits provided under the social security program at age 65 will be equal to the benefits provided under your program? Or, will there be a loss of some benefits as a consequence of the change from one coverage to the other?

Mr. MORRIS. For the most part from my analysis they appear to offer the same coverage. The principal exception seems to be in the area of prescription drugs.

However, there is an additional feature available under the social security program in the form of nursing home care and home visits, which is an additional benefit.

Mr. SLATINSHEK. Well, may I ask this question, then: For instance, the loss is in the area of prescriptions. Am I to understand that nonetheless if I were a retired member and I had reached age 65 and I am now covered under the social security program, despite the fact that I am covered by the program, I would still, if physically or geographically located near a uniform services facility still have access to that facility?

Mr. MORRIS. That is correct.

Mr. SLATINSHEK. Therefore, would I not also have the right to obtain prescription drugs?

Mr. MORRIS. That is right.

Mr. SLATINSHEK. Would that also apply in case of dependents?

Mr. MORRIS. Yes.

Mr. SLATINSHEK. So that disadvantage, at least in instances where they are geographically well located, is diminished.

Mr. MORRIS. Is greatly modified.

Mr. SLATINSHEK. With the permission of the Chair, I would like to include in the record at this point the table which the Department has graciously provided the committee, outlining these benefits, the manner which they are presently applied and the level of benefits for Federal employees under the Blue Cross-Shield Plan, this being indicative of the reference point the Department intends to use in the establishment of its new program if this is enacted into law.

Mr. HÉBERT. Without objection, at this point it will be included in the record.

(The information referred to follows:)

Comparison of health benefits

	Existing dependents medical care program (civilian segment)	Federal employees health benefits program		Social security health insurance for persons 65 years of age	
		Service benefit plan (Blues) high option	Indemnity benefit plan (Aetna) high option	Basic hospital	Supplementary medical
1. Premium cost.....	No premiums. Patient pays portion of charge when care is received.	Beneficiary portion of premium cost: \$17.07 a month (\$204.84 a year) per family.	Beneficiary portion of premium cost: \$19.15 a month (\$229.80 a year) per family.	No premiums. Patient pays portion of charge when care is received.	Beneficiary portion of premium cost: \$3 a month (\$36 a year) for each person.
2. Hospital charges.....	Patient pays 1st \$25 of hospital charges or \$1.75 a day, whichever is greater, for each admission. Medicare pays remainder of hospital charges for 365 days in semiprivate room except hospitalization for acute emotional disorders which is normally limited to 21 days.	In Blue Cross member hospitals, plan pays all hospital charges for 365 days in semiprivate room for each confinement as part of basic benefits. In nonmember hospitals in United States payment under basic benefits is limited to \$12 a day for room and board charges, plus 90 percent of other charges, for 365 days per confinement. Outside United States plan pays in full hospital usual charges. After annual deductible of \$100 has been met, plan pays 80 percent of hospital charges not covered by basic benefits.	Room and board charges: Plan pays charges for semiprivate room up to \$1,000 a year, plus 80 percent of any hospital charges over \$1,000. Other hospital charges: These charges are lumped with physician fees and other authorized services. The lumped charges are subject to an annual deductible of \$50 per person (\$150 per family). After deductible has been met, plan pays 80 percent of "Other hospital charges."	Basic hospital plan pays up to 90 days of hospitalization in semiprivate room for each spell of illness, less the patient payments of \$40 for the first 60 days and \$10 a day for days in excess of 60. (There is a limitation of 190 days on treatment in mental hospitals.)	Not covered by supplementary medical insurance.
3. Private room charges.....	When physician certifies that private room is needed, Medicare pays average cost of semiprivate room, plus 75 percent of difference between cost of private room and average cost of semiprivate room. In the absence of such certification, Medicare pays average cost of semiprivate room only.	Plan pays average cost of semiprivate room only as basic benefit. Difference allowable as supplementary benefit. After annual deductible of \$100 per person (\$200 per family) has been met, plan pays 80 percent of excess over semiprivate room charges.	Plan pays average cost of semiprivate room only.	Payment of private room charges authorized when required for medical reasons.	Do.

<p>4. Posthospitalization, convalescent hospital, and nursing home charges.</p>	<p>Excluded.....</p> <p>Medicare pays surgeons and physicians for in-hospital treatment in accordance with fee schedules which surgeon or physician accepts as full payment for his services. For home delivery or for treatment of injuries on an outpatient basis, Medicare pays all but the 1st \$15 of the allowance for the procedure established in the fee schedules. When hospitalization is for surgery or treatment of an injury, Medicare pays up to \$75 for diagnostic tests and procedures before hospitalization, and up to \$60 for necessary tests and procedure after hospitalization. Excludes payment for other care furnished on outpatient basis.</p>	<p>Excluded.....</p> <p>Plan pays in accordance with fee schedules for inpatient medical and surgical treatment, outpatient surgery, emergency first aid and treatment of injuries. Surgeons and physicians in service areas accept these amounts as full payment if family income is below \$6,000. In nonservice areas or if family income exceeds \$6,000 and fee exceeds that shown, plan pays 80 percent of the amount in excess of the fee schedule as a supplementary benefit after annual deductible has been met. The plan also pays as supplementary benefits 80 percent of physicians charges for treatment in a home, office, or hospital to the extent that such charges are not covered by basic benefits.</p>	<p>Excluded.....</p> <p>After annual deductible has been met, plan pays 80 percent of charges for professional services of physicians, including surgery, consultations, and home, office, and hospital calls.</p>	<p>Excluded.....</p> <p>Basic hospital plan pays for 20 days of nursing home care following a hospital stay of at least 3 days. The plan also provides for an additional 80 days of nursing home care with the patient paying \$5 a day and the plan paying the remainder.</p>	<p>Excluded.</p> <p>After annual deductible of \$50 has been met, supplementary plan pays 80 percent of surgeon and physician charges for treatment provided in a home, office, or hospital.</p>
<p>6. Services of private-duty nurses.</p>	<p>When physician certifies that private-duty nursing care is required during hospitalization, Medicare pays 75 percent of charges in excess of \$100. (Patient pays 1st \$100, plus 25 percent of charges in excess of \$100). Private-duty nursing care is not authorized outside a hospital.</p>	<p>When ordered by attending physician, services of special nurses in or out of a hospital are payable as supplementary benefits. After annual deductible has been met, plan pays 80 percent of special nurse charges.</p>	<p>When ordered by attending physician, services of special nurses in or out of a hospital are payable as other hospital and surgical and medical expenses. After annual deductible has been met, plan pays 80 percent of special nurse charges.</p>	<p>Excluded. (Services of visiting nurses are included in posthospital home health care services.)</p>	<p>Excluded. (Services of visiting nurses are included in home health visits under the supplementary plan.)</p>

Comparison of health benefits—Continued

	Existing dependents medical care program (civilian segment)	Federal employees health benefits program		Social security health insurance for persons 65 years of age	
		Service benefit plan (Blues) high option	Indemnity benefit plan (Aetna) high option	Basic hospital	Supplementary medical
7. Services of self-employed anesthesiologists.	When doctor certifies that the services of a self-employed anesthesiologist are required, medicare pays full charge.	Plan pays in accordance with fee schedule. Excess allowable as supplementary benefits; that is after deductible has been met, plan pays 80 percent.	After deductible has been met, plan pays 80 percent of charges.	Excluded.	After deductible has been met, supplementary plan pays 80 percent of charges.
8. Maternity and infant care.	Medicare pays for complete obstetrical and maternity services (less patient contribution) in or out of a hospital, including prenatal care, delivery, and postpartum care, and necessary infant care during period of hospitalization following delivery. Infant care on an outpatient basis is authorized for 10 days following delivery outside a hospital.	Plan provides for payment of hospital charges on the same basis as for illness or injury and for payment of physician fee for delivery and/or complications of pregnancy in accordance with fee schedule.	Plan pays for maternity care on the same basis as for illness or injury. Benefits include expenses for the care of pregnancy, including any conditions related thereto, and resulting childbirth or miscarriage.	do.	Excluded.
Routine care or examination of a newborn child.		Excluded.	Excluded.	do.	Do.
9. Treatment of nervous or mental disorders: (a) Inhospital treatment.	Medicare limits hospitalization to acute emotional disorders constituting an emergency, complicating pregnancy, or required while patient is hospitalized for medical or surgical treatment; and to 21 days except that extension for a 2d 21-day period may be granted under unusual circumstances. Excluded.	Regular hospital benefits apply.	Regular hospital benefits apply.	Regular hospital benefits apply except there is a lifetime limitation of 190 days on payment for treatment in mental hospital.	Regular benefits apply.
(b) Outpatient treatment of nervous or mental disorders.		After deductible has been met, plan pays 80 percent of charges for outpatient treatment of nervous and mental disorders.	After deductible has been met, plan pays 80 percent of charges, or \$200 per person per year, whichever is less, for physician services and psychologist services.	Excluded.	Supplementary plan will pay \$250 or 60 percent of expenses, whichever is smaller, during any calendar year.

10. Outpatient treatment for accidental injury.	After patient has paid the 1st \$15 of the physician's charges, medicare pays the remainder of costs including charge for use of hospital outpatient facilities. Payment for laboratory tests, pathology, and radiology examinations is limited to \$75.	Plan pays in full for use of hospital outpatient facilities. When treated as hospital outpatient or in physician's office, plan pays physician in accordance with fee schedule. For procedures not covered in fee schedule, plan pays \$5.	After deductible has been met, plan pays 80 percent of charges.	After deductible has been met, supplementary plan pays 80 percent of charges and 80 percent of such services as X-ray, splints, casts, etc.	do
11. Outpatient surgery	Excluded.	Plan pays surgeon in accordance with fee schedule as part of basic medical-surgical benefits.	After deductible has been met, plan pays 80 percent of charges.	After deductible has been met, supplementary plan pays 80 percent of physician charges and related costs.	do
12. Routine outpatient treatment in home or doctor's office.	do	After deductible has been met, plan pays 80 percent of physician charges except that the following services are excluded: Routine physical examinations, immunizations, removal of corns or callouses, and routine well-baby care, immunizations, and removal of corns or callouses.	After deductible has been met, plan pays 80 percent of physician charges except that the following services are excluded: Routine or periodic physical examinations, immunizations, removal of corns or callouses, and routine care or examination of a newborn child.	After deductible has been met, supplementary plan pays 80 percent of physician charges.	do
13. Hospitalization for diagnostic procedures.	Medicare pays only when patient is acutely ill or when diagnostic surveys are followed by surgery. When hospitalization is for surgery or for bodily injury, medicare pays up to \$75 for diagnostic tests and procedures before hospitalization, and up to \$50 for necessary tests and procedures after hospitalization. Otherwise excluded, except for maternity and bodily injury cases.	After deductible has been met, plan pays 80 percent of hospital charges.	Plan pays regular hospital benefits.	Do.	Regular hospital benefits apply.
14. Outpatient diagnostic and therapeutic tests and procedures.	When hospitalization is for surgery or for bodily injury, medicare pays up to \$75 for diagnostic tests and procedures before hospitalization, and up to \$50 for necessary tests and procedures after hospitalization. Otherwise excluded, except for maternity and bodily injury cases.	In bodily injury cases, plan pays as part of basic benefits. In other cases, plan pays 80 percent of charges in excess of \$20. Regular deductible does not apply.	After deductible has been met, plan pays 80 percent of charges.	After deductible has been met, supplementary plan pays 80 percent of physician charges and related costs.	Basic hospital plan pays 80 percent of cost of diagnostic services received as a hospital outpatient during a 20-day period, except for the 1st \$20 for each 20-day period.
15. Outpatient X-ray, radium, and radionuclide therapy.	Medicare pays for such treatment if it is begun or prescribed during a period of hospitalization.	Plan pays hospital outpatient facility charges as part of basic benefits not subject to deductible. Physician fees are paid in accordance with fee schedule.	After deductible has been met, plan pays 80 percent of cost of treatment.	After deductible has been met, supplementary plan pays 80 percent of charges.	Excluded

Comparison of health benefits—Continued

	Existing dependents medical care program (civilian segment)	Federal employees health benefits program		Social security health insurance for persons 65 years of age	
		Service benefit plan (Blues) high option	Indemnity benefit plan (Aetna) high option	Basic hospital	Supplementary medical
16. Home health care services.	Not authorized except treatment of bodily injuries and maternity care. In home delivery, payment for the following services is not authorized: Rental or purchase of beds, bassinets, or similar equipment, nor for services of private-duty nurses.	After deductible has been met, plan will pay 80 percent of physician treatment and 80 percent of special nurse charges when ordered by attending physician.	After deductible has been met, plan pays 80 percent of charges of physicians, nurses, and therapists.	Basic plan pays cost of up to 100 visits by health personnel in the 365 days following discharge from a hospital after a stay of 3 days or more or from a nursing home. Services include visiting nurses, physical therapists, and other health workers (except physicians).	After deductible has been met, supplementary plan pays 80 percent of charges for up to 100 home health visits by health personnel (in addition to physician visits) with no requirement for prior hospitalization.
17. Dental care:	Medicare pays for hospitalization and dentists fees for surgery normally performed by a dentist except that surgery for harelip and/or cleft palate is limited to repairs known and established as a requirement at time of original surgery; and subsequent revisions are not included. Also excluded are removal of teeth, gingivectomies and alveolotomies unless they qualify as adjunctive surgery.	Basic benefits (no deductible) cover hospitalization and fees of surgeon (including dental surgeon) for oral surgery, limited to surgical procedures related to the jaws and structures contiguous to the jaws but excluding procedures involving the teeth or the structures directly supporting the teeth. Basic hospital benefits are provided if hospitalization is for dental surgery for the removal of impacted teeth. Payment to the dental surgeon is also included.	Plan pays regular hospital room and board charges when hospitalized for oral surgery. In addition, after deductible has been met, plan pays 80 percent of other hospital and surgical and medical expenses, plus charges for dental materials (fillings, crowns, false teeth, etc.) for:	Basic plan pays regular hospital benefits for oral surgery related to the jaw or a contiguous structure. May be performed in home, office, or hospital.	Supplementary plan pays regular surgical benefits for oral surgery performed by a dental surgeon which is related to the jaw or a contiguous structure. May be performed in home, office, or hospital.
(a) Oral surgery	Medicare will also pay for hospitalization of dependents with chronic diseases for the purpose of performing oral surgery which is a necessary adjunct to and required for the proper treatment of recurrently progressive debilitating diseases.		(a) Surgical correction of harelip, cleft palate, or protruding mandible. (b) Removal of stones from salivary ducts. (c) Excision of impacted teeth that are not completely erupted, bony cysts of the jaw, torus palatinus, leukoplakia, or malignant tissue. (d) Freeing of muscle attachment. (e) Other cutting surgery on tissues of the mouth, other than the gums, when not performed in connection with the extraction or repair of teeth.		

(b) Accidental injury --	In accidental injury cases, medicare will pay a dentist for treatment in or out of a hospital for fractures, dislocations, lacerations, and compound wounds customarily treated for by a dentist. The patient must pay the 1st \$15 of the dentist charges when treated on an outpatient basis.	Plan pays hospital in full for services which are provided within 72 hours after an accident as a part of basic benefits. Charges for dental work (other than oral surgery) in connection with accidental injury, regardless of where provided, are allowable only as supplementary benefits; that is after deductible has been met. Plan pays 80 percent of charges. Basic hospital benefits are provided for dental treatment if a physician certifies that the patient has a nonidental organic impairment which makes hospitalization necessary to safeguard the health of the patient from the effect of dentistry. Payment for the dental work is excluded except for the oral surgery listed above.	After deductible has been met, plan pays 80 percent of charges: (a) Payment for repair of dental injury to natural teeth. (b) Reduction of fractures of the jaw or facial bones. Includes charges for dental materials (fillings, crowns, false teeth, etc.). Except for the oral surgery and treatment of accidental injury cases as listed above, the only allowable expenses under the plan for dental work and oral surgery are hospital charges.	Basic plan pays regular hospital benefits for treatment of accidental dental injury.	Supplementary plan pays regular benefits for treatment of accidental dental injury (fractures of the jaw or facial bones) by a dentist or dental surgeon.
(c) Other authorized dental treatment.	Medicare pays for dental care which is a necessary adjunct to medical or surgical treatment provided in a hospital to a dependent who is a hospital patient. Such dental care excludes removable or fixed prosthodontic restorations, orthodontics, restorative dentistry, and prolonged periodontal treatment.	After deductible has been met, plan pays 80 percent of cost of ambulance service to or from a hospital for inpatient, or for outpatient accident care.	After deductible has been met, plan pays 80 percent of cost to the 1st hospital where treated, from that hospital to another in the area if necessary treatment is not available at the 1st hospital, and from the hospital to the home if required by the patient's condition.	None.....	None.
19. Professional ambulance service.	Excluded in United States. Authorized outside United States when Government ambulance is not available.	After deductible has been met, plan pays 80 percent of cost of ambulance service to or from a hospital for inpatient, or for outpatient accident care.	After deductible has been met, plan pays 80 percent of cost to the 1st hospital where treated, from that hospital to another in the area if necessary treatment is not available at the 1st hospital, and from the hospital to the home if required by the patient's condition.	Excluded.....	After deductible has been met, supplementary plan pays 80 percent of ambulance charges where the use of other methods of transportation is contraindicated by the individual's condition.
19. Prescription drugs procured from civilian pharmacy.	Excluded.....	After deductible has been met, plan pays 80 percent of cost of prescription drugs.	After deductible has been met, plan pays 80 percent of cost of prescription drugs.	do.....	Excluded.
20. Artificial limbs and artificial eyes.	do.....	After deductible has been met, plan pays 80 percent of cost of these items, including their replacement, repair, or adjustment.	After deductible has been met, plans pays 80 percent of cost of these items, including replacements if required because of a change in the patient's physical condition.	do.....	After deductible has been met, supplementary plan pays 80 percent of cost of following items: Prosthetic devices (other than dental) which replace all or part of an internal body organ; braces and artificial legs, arms, and eyes.

Mr. Nedzi?

Mr. NEDZI. If I may ask a question or two at this point. I'm concerned just a little bit about what this bill is going to do to the rights of other veterans if we use VA facilities? Isn't there a provision now with respect to VA hospitals that certain facilities are available to veterans on a space-available basis?

If you inject an additional priority here, obviously that is going to lessen the spaces available.

Mr. MORRIS. I think Colonel McKenzie has answered that in the sense that this becomes the lowest order of priority so we would not be infringing upon the benefits already available to the veteran population, but only in those cases where space is otherwise available would we then plan to make use of it.

Mr. NEDZI. But, isn't there a priority over other veterans?

Mr. MORRIS. No; it would be the lowest order.

Mr. NEDZI. So really there is no priority?

Mr. MORRIS. Just the ability to make greater use where available.

Mr. NEDZI. I was under the impression that there was lower. If not, all right.

Mr. SLATINSHEK. If I may interrupt, the present law does provide them with a statutory right, but only as a veteran. This provides it to them as a retired member, but apparently this is a change of really no substance. It is more apparent than real.

Mr. NEDZI. I agree with that concept. I think retired personnel certainly should be accorded equal treatment with veterans but under the circumstances not preference, is all, and this does not accord them any preference treatment.

Mr. MORRIS. Right.

Mr. NEDZI. No further questions.

Mr. HÉBERT. I want to thank you gentlemen very much for your cooperation, we do appreciate it.

And, you doctors here, surgeons general, if there is any concern on your part, we didn't use any of your needles from your inventory this morning. Before we conclude this morning we shall hear from our good friend and colleague on the committee, Congressman Gubser.

Mr. GUBSER. Mr. Chairman, I deeply appreciate the courtesy you have extended to me as a member of the full Armed Services Committee in allowing me to sit with the members of this subcommittee during your consideration of this important subject. I also appreciate the opportunity to present this testimony.

The pending legislation, in my opinion, is the most important matter affecting military and retired personnel which has come before the House in my 14 years of service. I am delighted that it is to be considered by such a competent and knowledgeable chairman in charge of a committee which possesses an outstanding weight of knowledge on this subject.

You are familiar with the repeated statements I have made over the years expressing concern over the gradual erosion of traditional fringe benefits which have served to attract dedicated Americans to a career of military service. I have often called attention to the injustice of the abolition of the principle of recomputation of retired pay. This had been impliedly promised to retirees by accrual practice for more than 100 years. It is a principle which should be restored and one which I shall always favor.

But the fringe benefit which may be of even greater concern to the military retiree than recomputation is the assurance that, following his retirement, he will receive medical care and hospitalization. In my opinion, there is a legal obligation on the part of the Government to provide such care. Certainly, there is no question that there is a moral obligation to provide it. And yet in recent years it appeared that, because of the failure to program retired beds in new hospital construction, medical care for retirees would diminish to nothing because space was not "available."

Along with the other members of the Armed Services Committee, I have consistently called for action in this field which would fulfill the Government's admitted moral obligation. Some of these efforts were climaxed in the hearings held 2 years ago by a special subcommittee chaired by the present chairman of the full committee, Mr. Rivers. It urged that the Department of Defense submit recommendations for consideration by Congress which would provide the means of fulfilling this obligation.

In the meantime, the Fleet Reserve Association worked long and hard to make constructive suggestions, which I was proud to introduce in bill form.

To the credit of the Department of Defense, an honest study of the problem was made. All of these efforts are climaxed by this hearing today. In one sense, this hearing and the legislation which I am confident it will produce are in the finest tradition of democracy and our legislative process.

With only minor exceptions, I am delighted with the recommendations of the Department of Defense. They clearly establish a legal right of military retirees and their dependents to medical care. Furthermore, they make such care possible for the millions of retirees who are not fortunate enough to live in close proximity to a military hospital. These rights are given in addition to those currently available to retirees and as such are distinct improvements over the status quo.

The further provisions for outpatient care for active duty dependents and for physically handicapped and mentally retarded children of active duty members of the uniformed services are outstanding.

As a frequent critic of the Department of Defense, I want to say that those responsible for these recommendations have squarely faced up to a responsibility in a constructive and realistic manner.

As Chairman Hébert and Congressman Hardy have so ably pointed up in their questioning of departmental witnesses, there is a need for occasional usage of the mandatory word "shall" in place of the permissive word "may." As they have indicated, some of the definitions and criteria need to be tightened.

I would hope that the committee would not discriminate against the retiree and require his dependent to pay a larger percentage fee than the active duty dependent. I would also hope that it could be made absolutely certain that the bill will not diminish any entitlement to medical care which a retiree presently enjoys.

I am sure the subcommittee will desire to make certain that, in future construction of medical facilities, provision will be programed for retired military personnel and their dependents.

With these suggestions, which the subcommittee has already indicated it will approve, I would like to wholeheartedly endorse the

three pending bills and express my appreciation to those who have spent many months in preparing the way for this just and fair solution to a serious problem.

Thank you, Mr. Chairman and members of the committee, that concludes my statement.

Mr. HÉBERT. Thank you, Mr. Gubser, for an excellent statement—the chair will recess until 10 tomorrow morning.

(Whereupon, at 12:50 p.m. the subcommittee adjourned until 10 a.m. Friday, March 25, 1966.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
SUBCOMMITTEE No. 2,
Washington, D.C., Friday, March 25, 1966.

The subcommittee met, pursuant to adjournment, at 10:10 a.m. in room 2212, Rayburn House Office Building, Washington D.C. Hon. F. Edward Hébert (chairman of the subcommittee) presiding.

Mr. HÉBERT. The committee will be in order.

Members of the committee, this morning we have the second phase of the hearings on the three bills which we began hearings on yesterday morning, at which time we heard members of the Department of Defense and several services.

Today we are going to have some other Government witnesses beginning with the Public Health Service, then we will go to the Fleet Reserve Association, Retired Officers Association, Reserve Officers Association, and the Coast Guard; in that order, as many as we can hear, and if we are unable to complete their testimony today we will go over until Monday at 10 o'clock, but we will continue the hearings right on through until such time as the committee is in a position to take under consideration the acceptance, the amending, and the reporting out of the legislation.

So will the representatives of the Public Health Service please step forward.

Mr. Slatinshek.

Mr. SLATINSHEK. Dr. Sackett, Mr. Friedman, and Mr. Ray are here representing both the Public Health Service and the Social Security Administration.

Mr. HÉBERT. Gentlemen, do you have a prepared statement?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. You may proceed.

Do you have copies of the statement, by the way?

Mr. SACKETT. I do not have them personally with me, I believe they are here. Someone should have brought some.

Mr. HÉBERT. Did anybody from the Public Health Service bring any copies? We will have to proceed, and you run the hazard of being misquoted.

Mr. SACKETT. I will supply some later in the day, sir.

Mr. SLATINSHEK. Excuse me, Mr. Johnson is here with Public Health Service. If I may, Mr. Chairman, I would like to have Mr. Johnson up in the table here.

Mr. HÉBERT. Will Mr. Johnson come around?

STATEMENT OF ANDREW P. SACKETT, PUBLIC HEALTH SERVICE

Mr. SACKETT. Mr. Chairman and members of the committee, all three of the bills now under consideration by this committee (H.R. 9271, H.R. 13582, and H.R. 13583) have the common purpose of improving the present program of medical care for dependents of members of the uniformed services and also of retired members and their dependents. We strongly support this purpose. We believe, however, that H.R. 9271 is defective in certain respects, and support the substitute bill proposed by the Department of Defense. We also support H.R. 13582 and H.R. 13583. The Public Health Service and the Department of Health, Education, and Welfare are in accord with the Department of Defense in this position. I will comment on each of the three numbered bills in sequence.

H.R. 9271

H.R. 9271, which was introduced June 21, 1965, would provide resident care for mentally retarded children of members of the Armed Forces on active duty but only in facilities of the Armed Forces established solely for the purpose of providing such resident care.

We believe that this bill is too restrictive in being limited to mentally retarded children and that physically handicapped children of members of the uniformed services on active duty should also be covered by the proposed legislation.

We also believe that the types of care to be provided should not be limited to resident care. In the care of mentally retarded children, one of the great advances in current treatment methods is the greater use of community services which makes it possible to give the children all the benefits possible of normal family and other relationships. It is estimated that only about 5 percent of the children will require resident or institutional care, the remainder can receive care in community facilities.

H.R. 9271 is also too restrictive in limiting the care provided for children to care in facilities of the Armed Forces. Suitable facilities of the Armed Forces for the care of mentally retarded and other mentally or physically handicapped children are frequently unavailable. It should be possible to obtain the necessary services in civilian facilities.

The substitute draft bill proposed by the Department of Defense would correct these deficiencies in H.R. 9271. It would also follow the present Dependents Medical Care Act in providing the proposed benefits for active duty members of all of the "uniformed services," and not just the "Armed Forces." The Public Health Service and the Coast and Geodetic Survey (now merged in the Environmental Science Services) would be included as "uniformed services."

Members of the uniformed services on active duty are frequently unable to provide proper care for their mentally or physically handicapped children. The proposal would make such care available by authorizing diagnostic, inpatient, outpatient, and home treatment, and training, rehabilitation, and special education as necessary for the child's mental or physical handicap. Institutional care in private nonprofit and in public facilities would also be authorized, with necessary transportation.

Members of the uniformed services would be required to pay a fair share of the costs of the benefits provided for their children. Payment would range from a minimum of the first \$25 incurred each month to a maximum of \$250 per month according to the grade of the uniformed service member.

Members would also be required to use public facilities to the extent that they are determined to be available and adequate under joint regulations of the Secretary of Defense and the Secretary of Health, Education, and Welfare.

An amendment of the Social Security Act would require States to waive residence requirements for their maternal and child health and crippled children programs so as not to deny services under those programs to children of uniformed services personnel on active duty.

H.R. 13582

H.R. 13582 would amend chapter 55 of title 10 of the United States Code to increase health benefits for dependents of active duty members of the uniformed services. The dependents include spouses and children of active duty personnel. The Public Health Service has responsibility for providing health services to the uniformed members and dependents of the Coast Guard, the Coast and Geodetic Survey (ESSA) and the Public Health Service.

The Public Health Service concurs essentially with the position of the Department of Defense in respect to this bill. The bill would permit medical services, inpatient and outpatient, at Government expense, for dependents to the extent now authorized under the high-option of the Government-wide plan for Federal civilian employees. In addition, physical examinations, immunizations, care of the newborn, and routine dental care under certain circumstances would be authorized.

This additional coverage, in effect, remedies some of the defects of the basic Dependents' Medical Care Act. Our experience with the program since its inception in December 1956 has repeatedly and forcibly reflected the inequity of the unavailability of certain medical benefits to dependents residing in areas having no proximate uniformed services medical facilities. The present limitations on outpatient services in such areas, as authorized under the Dependents' Medical Care Act, have been particularly distressing to dependents since only emergency outpatient care, including dental, may be provided at Government expense. H.R. 13582 would rectify this disparity among uniformed services dependents in large measure by authorizing hospitalization in contract facilities for which a minimum charge of \$25 will be imposed for each admission. In addition, more extensive outpatient services from contract sources would be authorized on the basis of a 20-percent charge to the dependent and, importantly, without regard to the emergent or nonemergent nature of such care. The provisions of the bill are considered desirable from the standpoint of serving to promote the recruitment and retention program of the Public Health Service, the Coast Guard, and the Coast and Geodetic Survey (ESSA).

Thank you for your attention and this opportunity of appearing before this committee.

I will be glad to attempt to answer any questions you may have, sir.

Mr. HÉBERT. Thank you very much, sir.

There are just one or two questions I would like to ask and then the members of the committee will continue the interrogation.

The function of the Public Health Service hospitals is, of course, inherent in its own name. But now as I understand it, in various areas of the country, where there are no military facilities, the function of the Public Health Service hospital there is to serve in that capacity.

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. That is correct?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. How many areas of the country do you find the Public Health Service hospital the lone source of relief for these eligible people?

Mr. SACKETT. In the majority of the areas where we have a facility, there is also a Department of Defense or Veterans' Administration facility. However, there are in many of these areas, even the total of these is not adequate to meet the problem.

Mr. HÉBERT. I am not addressing myself to the Veterans' Administration hospitals. I am addressing my question as authorized under the present law.

Mr. SACKETT. Sir, in all of the areas where our facilities exist, we feel that the need is manifest for Public Health Service to provide—make provision for care for dependents, because of the inadequacies, even of the combined Public Health Service, military facilities.

Mr. HÉBERT. We recognize that. I am trying to find out, in what areas do you have hospitals of this nature where there are no military hospitals to take care of them? Do you have a breakdown on that?

Mr. SACKETT. I don't have that with me. I think Galveston is one example, New Orleans is another, where the military facility consists possibly of a very small clinic, and ours consists of the only facility capable of providing comprehensive inpatient, outpatient service.

Mr. HÉBERT. I can say that categorically about New Orleans, but I don't want to point out an area I am not vitally interested in. But we can certainly use it as a model. I think that would be permissive.

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. Now, in the retarded children's bill, you mention that you desire the expansion of the benefits now.

Let's take New Orleans, and I hope I am not being provincial in that area, but as an example with which I am familiar and you undoubtedly are too, there you have no facilities at all in the military except a small clinic, and you have a magnificent veterans' hospital there. You would have no facilities there in that area at all?

Mr. SACKETT. Not specifically for retarded children; no, sir.

Mr. HÉBERT. Let's move to the other parts of the other two bills introduced by Mr. Rivers. This is an expansion of the dependency care. Do you have any facilities there at all to take care of the provisions of this bill, if enacted into law?

Mr. SACKETT. Sir, we do have a hospital there which has an outpatient clinic which is totally inadequate to meet the problem.

Mr. HÉBERT. That is what I am trying to find out. In other words, as Mr. Long pointed out yesterday, what is the good if we pass this

bill or have limitation and we have nothing to do about it, we have no facilities, we simply can't do anything about it; we want to do more than that. That is what I am trying to develop, and you mentioned New Orleans, so I naturally picked it up. What I am trying to develop now is, is this an exceptional case, or is it the rule in the country where you do have the Public Health hospitals?

Mr. SACKETT. Sir, all of our hospitals are in need of renovation.

Mr. HÉBERT. All of them?

Mr. SACKETT. All of them. You may know the Public Health Service hospitals have suffered from attrition for a number of years. I would say this, that the hospital at New Orleans, with the workload that exists there, is probably worse off than most of them.

Mr. HÉBERT. I would say woefully.

Mr. SACKETT. Woefully; yes, sir.

Mr. HÉBERT. Let's explore that. Do you have any particular plans in the overall picture, and now we are talking about the New Orleans area, for the construction or rehabilitation of your present facilities which would bring it into consonance with the provisions of this bill for example?

Mr. SACKETT. Yes, sir, we do have plans for bringing the New Orleans hospital up to becoming a center of excellence. The charge the President has placed on us this past year is to make our hospital centers of excellence, after the decision was made to continue to operate them under the Public Health Service. We are going to operate them——

Mr. HÉBERT. Of course, the plans that would apply at New Orleans would also apply at Galveston, and in other areas, where this condition exists and where it should be remedied?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. What priority do you have, or do you have any priorities on the rehabilitation of your hospitals?

Mr. SACKETT. Well, in terms of time, is that what you are getting at?

Mr. HÉBERT. In other words, I'm trying to bend over backwards, Doctor, to not appear provincial on the thing. I really am.

Mr. WILSON. Go ahead and be provincial.

Mr. SACKETT. Sir, we do have a schedule.

Mr. HÉBERT. No, I know the situation down there.

Mr. WILSON. It is a good example then.

Mr. HÉBERT. I'm trying to set it as an example of a situation I know about to develop the point in other sections in the country that isn't right. You have a hospital there in New Orleans, I'm familiar with it, of course. It is a dilapidated, inadequate building and a disgrace to the Public Health Service as a physical institution, not as to the contents of its personnel. The personnel is absolutely wonderful and marvelous down there. They don't have the weapons, they are driving the horse and buggy in the jet age down there. This is not to the benefit of the people we are trying to help, the military and the other people. Now, it becomes very obvious, this particular building, I don't know how large it is, I couldn't describe it, on a certain acreage of ground is woefully inadequate, can't serve its purpose. Obviously you must reconstruct that building on that particular ground or move elsewhere.

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. Now, with that foundation—or do you have any plans, or are you in any conversation stage now that would indicate you can come up with a plan to either rebuild that building, keeping in mind what this legislation provides, exercising a privilege or right of acquiring land elsewhere, and building a real adequate community?

Mr. SACKETT. Yes, sir, we have developed a program.

Mr. HÉBERT. That is what I am talking about now. And again I say, this is a model program you are talking about?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. That is what I want to get.

Mr. SACKETT. The site at which this program will be carried out has not yet formally been decided upon. I would like to give you my personal professional judgment, and that is, this facility needs to be entirely rebuilt from the ground up and on a different site.

Mr. HÉBERT. You would move it and build it from the ground up. Dollarwise, would that be cheaper?

Mr. SACKETT. I think it would, sir.

Mr. HÉBERT. You have land where you are. So you would have to acquire new land, wouldn't you?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. Wouldn't that be costly?

Mr. SACKETT. Well, we have some hopes of acquiring land that is currently in the possession of other Federal agencies.

Mr. HÉBERT. Well, would you be more specific? That is 100 acres on the Coast Guard ground.

Mr. SACKETT. Thank you, sir.

Mr. HÉBERT. Really, this is something that I want to develop very well, and for the benefit of the committee, so we can show how we can develop this. In the area where the Public Health Hospital is they are examining a site which is removed from the present site, in which the Coast Guard has some 2,000 acres of land on which is located a radio station. The Coast Guard witnesses are here, we will be around to see them later. It becomes perfectly obvious the Coast Guard doesn't need 2,000 acres to operate a radio station. They are giving up and conveying under the law to the Public Health Service, what would be approximately 100 acres of ground which would be acquired, just a transfer. Then you would be able to build the Public Health Hospital more economically on that area.

Also, to indicate in the record what the advantages are and how this can be applied to other sections of the country: Immediately adjacent is a retarded children's hospital, by the State of Louisiana, on property acquired under the Surplus Property Act. Immediately next to that is the Tulane University area where there would be a great research center which would again lend itself to what we are talking about in this bill. The reason I'm saying these things is to illustrate a planning that can be profound, understandable, and logical, which would contribute to carrying out the purposes of this legislation, because as you indicate, you don't have the facilities. This is prevalent all over the country as far as Public Health Service is concerned.

Can you say that the Public Health Service—and I assume you can say quite categorically and authoritatively you do agree with this type of procedure in order to build up your institutions which are so badly needed to be built up?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. With the specific of the New Orleans area, you would recommend this type of operation?

Mr. SACKETT. Yes, sir.

Mr. HÉBERT. And the building of a new building?

Mr. SACKETT. Yes, sir; no question about it.

Mr. WILSON. Mr. Chairman.

Mr. HÉBERT. Yes, Mr. Wilson.

Mr. WILSON. I would like to ask some questions specifically about the bill.

I think for the record we might clarify the present medicare act, and I have a few questions, Frank, it might be up to you to answer. But under the present law, are dependents of military active-duty personnel entitled to go to Public Health Hospitals?

Mr. SLATINSHEK. Yes, they are.

Mr. WILSON. Veterans' Administration hospital?

Mr. SLATINSHEK. No.

Mr. WILSON. I am trying to clarify it. Under the proposed legislation, dependents will be entitled to go to all three hospitals?

Mr. SLATINSHEK. No, sir, it will only apply to retired members. At the present time, retired members have access to VA facilities in a veterans' status. These bills here would change this concept and permit them access as a retired member, but would give them no higher priority than they have right now. It would simply preclude the necessity of their signing a statement equivalent to a pauper's oath to get in. It would give them no priority.

Mr. WILSON. Retired personnel under the new provisions would be entitled, and their dependents, to care at Public Health Service Hospitals?

Mr. SLATINSHEK. As they are today. They are today. They are all part of uniformed services medical facilities.

Mr. WILSON. Except on a space available basis?

Mr. SLATINSHEK. On a space available basis.

Mr. WILSON. Let's go a little further then.

Will they be entitled to outpatient treatment at such hospitals?

Mr. SLATINSHEK. On a space-available basis.

Mr. WILSON. But if such outpatient facilities are inadequate they will then be entitled to outpatient care at the doctor's offices throughout the country.

Mr. SLATINSHEK. Precisely. That is the purpose of this legislation.

Mr. WILSON. I thought it was well to clarify this point, particularly that about the Veterans' Administration. I think there might have been some misconception as to what treatment they were entitled to at the present time.

Mr. HÉBERT. That was gone into yesterday.

Mr. Nedzi?

Mr. NEDZI. I have no questions, Mr. Chairman.

Mr. HÉBERT. Mr. Pirnie.

Mr. PIRNIE. Thank you, Mr. Chairman.

I'm concerned as to whether the Public Health Service has made a recent study which might indicate the requirements for this expansion of facilities in other sections than you now operate in?

Mr. SACKETT. No, sir; we haven't projected any plans to construct facilities solely to take care of dependents. This legislation would permit us, where there is a need, and under certain conditions, to

expand facilities, however, or to include provision for this in our facilities planning.

Mr. PIRNIE. I understand you wouldn't have planned specifically until you perhaps had some guidelines. But haven't you made some study of the potential requirements which would give us an idea as to what must be undertaken in order to meet this need?

Mr. SACKETT. No, sir. Our planning to date under the requirement; under which we have done our planning, has included only provision for beneficiaries who were statutory prime beneficiaries. We weren't allowed to plan for facilities to meet the needs of dependents alone. They were accommodated on a space-available basis.

Mr. PIRNIE. Then all during this period you have been required to mark time with your study, so that we wouldn't have any benefit of your guidance as we approached the solution of the problem?

Mr. SACKETT. Sir, we do not have definitive figures on the needs for dependents.

Mr. PIRNIE. Not even in regard to the areas which might have special requirements or some category of our deficiencies so that we can in some way envision what must be undertaken in order to make this legislation actually operative?

Mr. SACKETT. Sir, the legislation can become operative.

Mr. PIRNIE. Like space available, but unless space is available, it isn't very effective, is it?

Mr. SACKETT. No, sir. We do have program plans, but we have not made additions to them for dependents alone. We can do this now. In the places where we do have facilities, we have a pretty good ideas as to what the need is. I don't have figures with me today, but we are quite familiar with the needs in our areas.

Mr. PIRNIE. You are quite familiar with the needs in your areas?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. Does that necessarily carry with it the limitation which it expresses, that the areas just in which you now operate, but it may not take into consideration the withdrawal of facilities which have occurred through the closing of bases and base hospitals, and places of service of that type, is that correct?

Mr. SACKETT. That is correct, sir. I'm sure between the Department of Defense and Public Health Service we have a pretty good picture of the whole.

Mr. HÉBERT. Will you yield, Mr. Pirnie?

Mr. PIRNIE. Yes, Mr. Chairman.

Mr. HÉBERT. You put your finger on something there which I know about. In the New Orleans area, two hospitals were closed down in base closures, and no provisions made to take care of the retired people in that area except through the Public Health Service—exactly what you are saying. So we were pouring in more people and getting less facilities, adequate facilities, to take care of these people.

Mr. PIRNIE. Thank you, Mr. Chairman. That is exactly what I was driving at.

Mr. HÉBERT. This is a specific case I know of.

Mr. PIRNIE. This is what I was trying to explore. I have been sensitive to this situation, and I just felt we were not forward-looking enough, especially in view of the steps that we were taking legislatively to create additional obligations, isn't that true? Particularly

in view of the expansion of our armed services. We know we are going to have a pretty broad spectrum of obligation, isn't that true?

Mr. SACKETT. Yes, sir; and as far as Public Health Service is concerned I would agree we have not taken this into account. And we should.

Mr. PIRNIE. Thank you, Doctor.

I don't need to press this further if I understand your last answer. You view this as an area of urgency, and you do anticipate that you will be taking the steps?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. That will provide the guidance we feel is required?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. And it will embrace other areas than those in which you are presently operating?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. To review the needs of the country as a whole?

Mr. SACKETT. Yes, sir. We feel this proposed legislation for the first time gives us a charter to plan in this area.

Mr. PIRNIE. Then if I were to sum it up, you have been in a status of marking time. Even though you did feel there was a need you hadn't been given the green light to go ahead and undertake the programing or the solution, is that correct?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. But you now feel that roadblock is removed?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. Especially if we go ahead, as this legislation contemplates?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. I assume, also, the action that we took with respect to medicare has cast this in a new perspective, isn't that true?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. As far as your planning?

Mr. SACKETT. Yes.

Mr. PIRNIE. Could you tell me whether you consider the facilities that do exist to be adequate for inpatient, outpatient care? I think it is probably obvious they are not, isn't that true?

Mr. SACKETT. Yes, sir; they are grossly inadequate.

Mr. PIRNIE. Grossly?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. So you are underscoring the urgency?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. I think that is all.

Mr. HÉBERT. Thank you.

Mr. LENNON. Dr. Sackett, do you anticipate the passage of this legislation will accelerate the admission of either retirees or dependents or the persons in uniform and their dependents into public service hospitals, or will it have the effect of lessening the need for the public service hospitals?

Mr. SACKETT. Sir, I think the unmet need, as it exists today, is so substantial, that I don't feel that the provisions of this bill will cut down necessarily on the utilization of Public Health Service hospitals. I have no concern on that score.

It is difficult to predict, actually, what the impact will be. There will be an element of control, of course, in that the Secretary of Defense, and the Secretary of Health, Education, and Welfare, by

regulation, may restrict the use of civilian facilities where there are uniformed service facilities available. So we would visualize any facilities that are constructed for this purpose, and they would only be constructed where they are needed, would be fully utilized.

Mr. LENNON. I'm sure that you recall early last year, when we were confronted with the proposal of the Public Health Service to close the hospitals, and through an agreement with the Veterans' Administration, and open the Veterans' Administration's hospitals to seamen, and those individuals who historically have been authorized to go or be admitted to the Public Health Service hospitals?

Mr. SACKETT. Yes, sir.

Mr. LENNON. Of course, the Public Health Service, at that time, took the very strong position that that was the feasible thing to do. Do you recall that?

Mr. SACKETT. You didn't talk to everyone in the Public Health Service.

Mr. LENNON. Well, we talked to those who appeared before the committees of the Merchant Marine and Fisheries, who had the responsibility for the seamen, and that was a flat categorical position that the hierarchy, that the Public Health Service officials took, the agreement had been made with the Veterans' Administration, and we were faced with the situation where seamen would have, in a sense, priority over veterans in Veterans' hospitals.

Of course, that was finally resolved by the administration very tactfully recognizing it was headed in the wrong direction. I'm just wondering now, when we may be again faced with the administrative determination that the Public Health Service hospitals should be closed, and their load transferred to the Veterans' Administration hospitals?

We were faced with it flatly last year, but fortunately there were some people—I'm thinking of Congressman Clark Thompson from Texas, and others, who were very articulate and eloquent on the subject and very persuasive for 1600 Pennsylvania Avenue to cause our President to reverse his approval of that. But I wonder if we might not be faced with it again?

Mr. SACKETT. Sir, this issue is one we faced for over a decade, and the problem was studied by the Office of Science and Technology last year at the request of the President, and recommendations were made that these hospitals, for a number of reasons, be continued to operate—that the Public Health Service continue to operate these facilities.

Mr. LENNON. But the decision first was made to get rid of them, close them, and phase them out and transfer the inpatient load over to the Veterans' Administration hospitals?

Mr. SACKETT. This was in relation to three hospitals. That decision with respect to those three was reversed.

At present the administration is taking a very firm, definite position, all down the line, from the President on down, that the Public Health Service will continue to operate these hospitals that will be put in the condition of models of excellence and will be operated as such.

There are many good reasons for the Public Health Service to do this that relate to its responsibilities right across the board.

You can't run a first rate health program unless you have intermural confidence.

Mr. LENNON. So from what you say at this point, it is likely the passage of this legislation will to a degree accelerate the use of these

modernized and brought-up-to-date public health services, in the location where the serviceman is.

Mr. SACKETT. Yes, sir.

Mr. LENNON. I would think from what you just said, you can reasonably foresee there will be accelerated use of them?

Mr. SACKETT. Yes, sir.

Mr. LENNON. That is the interpretation put on it. Thank you.

Mr. HÉBERT. Mr. Long.

Mr. LONG. Doctor, I came down a little late. This question may have been asked already. In the area of retarded children, who is to determine whether a child is moderately or severely retarded? Who is going to make that determination?

Mr. SACKETT. Sir, the bill makes provision for care of these children. There will be regulations which will be developed by the Secretary of the Department of Defense and the Secretary of HEW which will spell this out. I have with me Mr. Ray, who is a special assistant to the Secretary in the field of mental retardation who possibly could also add to that.

Mr. RAY. I think the bill says profoundly, severely, and moderately, and this type of terminology is acceptable to the American Association of Malnutrition and the Association of Retardation of Children. The people that work in the field, this is a definition that would mean the same I believe in all 50 States. So regulations could come out jointly, as Dr. Sackett has said, and then on a State level, or a local level, in New Orleans, or California, wherever it might be, this evaluation could be made and could be determined.

Mr. LONG. You mean through State and/or local evaluation centers?

Mr. RAY. Right.

Mr. LONG. You have no indications under the provision of this bill, establishing evaluation centers, from the Federal standpoint?

Mr. RAY. I would say no.

Mr. SACKETT. I heard no mention of such proposal. I see no need for it. The competence exists in the large centers that exist throughout the country to make the standard evaluation.

Mr. LONG. In other words, you are supposing there will be regulations handed down through Department of Defense and HEW, and certain standards will have to be met, either at the State's board evaluation center or—you won't let the State doctor, or some particular individual say a child is retarded?

Mr. SACKETT. No, sir. I would guess the regulations will prescribe procedures that will make it certain that a very careful and accurate professional diagnosis is made in every case.

Mr. RAY. Congressman, I will say if I could add one other point to that. Let's take the fine institution, the Hammond State School in Louisiana. Any facility that a child or a person that is being evaluated for, there would be an evaluation unit connected with that. In California, or any such facility, would have its own evaluation and diagnostic team. And so when a person came into this unit for an evaluation, it could be determined right there if they need the requirements as set out by the Secretary of HEW, and the Secretary of Defense.

Mr. LONG. Under this bill the State or institution could not refuse to evaluate that particular child?

Mr. RAY. I think in all States you can evaluate a child. You will

run into problems. We feel this will be overcome. The problem is residents.

Mr. LONG. That is all.

Mr. HÉBERT. Mr. Wilson, any questions?

Mr. PIRNIE. Excuse me, just a minute, before you leave that. I would like to understand the answer.

Is it evaluation upon admission for the care that is going to control, or the reverse?

Mr. RAY. Well, it would be—in other words, it would be reverse. I think in any State, in any facility, a parent can make a contact to a facility and have their child evaluated. Now, whether the child is acceptable or not, will be based on that evaluation, and whether they meet the requirements as set up by facilities.

Mr. PIRNIE. Where we are under the law going to accept the obligation, we would also reserve the right to make the evaluation, to be sure that it conforms, is that correct?

Mr. RAY. That would be correct.

Mr. SACKETT. This would be a part of the regulations; as far as I know no regulations—

Mr. PIRNIE. You don't anticipate that is going to be a very serious problem, because there is a referral, according to your language, which is going to be predicated upon relatively well understood criteria throughout the profession; is that right?

Mr. RAY. I would say generally so.

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. Thank you.

Mr. HÉBERT. Mr. Wilson.

Mr. WILSON. Mr. Chairman, I would like to get Dr. Sackett's opinion on the question raised by our colleague, Mr. Hardy of Virginia, yesterday, relative to the section of the proposed bill which provides that certain space will be available at hospitals based on teaching and training requirements of the medical interns and residents assigned to the facility using standards prescribed by medical specialty boards and the American Medical Association as guidelines. Do you take any exception to using such guidelines?

Mr. SACKETT. No, sir. The standards for training and the accreditation thereof in the medical profession have been developed and are administered by the American Medical Association and various accrediting bodies related to it.

Mr. WILSON. This is normal procedure for getting the space as it should be outlined?

Mr. SACKETT. Yes, sir. The standards are high.

Mr. WILSON. Are these the standards you use in the Public Health Service hospitals?

Mr. SACKETT. Yes, sir. This is a very satisfactory arrangement.

Mr. WILSON. No further questions.

Mr. HÉBERT. Mr. Nedzi.

Mr. NEDZI. Thank you, Mr. Chairman.

Dr. Sackett, following your colloquy with Congressman Lennon, I had the impression that the conclusion was that because of this legislation, the impact on the Public Health Service facilities would be greater. Is this correct?

Mr. SACKETT. Sir, this bill does give authority to include provision for dependents in program planning, which authority we haven't had in the past.

Mr. NEDZI. I see.

Mr. SACKETT. So we will need then to look at the communities in which these facilities exist and make an assessment of the plans of the communities in relation to the need. And if there is indication under the criteria spelled out in the bill, then we will include provision for such facility construction and operation in our program planning.

Mr. NEDZI. I see. So this is where it changes the relationship between retired personnel and their dependents and the Public Health Service under the present law, and under this law?

Mr. SACKETT. Yes, sir.

Mr. NEDZI. I have no further questions.

Mr. SLATINSHEK. For the record I would like to develop certain facts alluded to, Doctor.

What medical facilities are provided by the U.S. Public Health Service to facilitate uniform medical facilities? In other words, how many facilities do you have, and where are they located? Perhaps to save time, you could insert this information in the record.

Mr. SACKETT. Yes, sir; I would be glad to do that.

(The following information was received for the record:)

Average daily patient load, operating bed capacity, and outpatient visits in PHS hospitals,¹ fiscal year 1965

	Operating beds ²	Average daily patient load	Outpatient visits

SUMMARY

For the latest year in which complete data are available, 16 percent of the average daily patient load of PHS hospitals was made up of dependents' medical care beneficiaries and 29 percent of all outpatient visits were made by them. The proportion in hospital outpatient departments was 38 percent and in the independent outpatient clinics it was 19 percent.

¹ Separate data on active and retired personnel and their dependents are not available for fiscal year 1965. The distribution between active and retired is based on fiscal year 1964 data, the latest available.

Mr. SLATINSHEK. Could you tell me also, at the same time, and for inclusion in the record, the number of personnel in the Public Health Service who will be affected by this legislation, including their dependents, and this includes of course, retired personnel.

Mr. SACKETT. And I presume Coast Guard, and Coast and Geodetic Survey.

Mr. SLATINSHEK. Right, if you have that information.

Mr. SACKETT. Yes, sir.

Mr. SLATINSHEK. Now, on an extension of this concern, to what degree have military personnel and their dependents utilized your facilities? Do you have any measure or any way of reflecting this utilization in the past?

Mr. SACKETT. Yes, sir. Last year we had approximately 47,000 admissions to our general hospitals, and of these, 16 percent approximately were dependents of the uniformed services.

As you know, the Public Health Service and Coast and Geodetic Survey together comprise less than 2½ percent of the total personnel of the country.

Our outpatient workload similarly reflects an even greater utilization; proportionate utilization. Here, of all outpatient visits, 29 percent were made by dependents of members of the uniformed services.

Mr. SLATINSHEK. Does this distinguish between active-duty and retired personnel?

Mr. SACKETT. No, sir. I don't have that breakdown with me.

Mr. SLATINSHEK. Do you have it available?

Mr. SACKETT. I'm not positive. If we have it, I would be very glad to submit it.

Mr. SLATINSHEK. Would you say the quality of care provided through Public Health Service facilities is generally speaking both on an outpatient and inpatient basis, equal to the care that is provided through civilian facilities in the areas in which you are located?

Mr. SACKETT. Yes, sir, I don't think there is any question about it. The problem has been not one of quality of professional care, but rather adequacy of facilities—crowded waiting rooms, and all of the awkwardness, and inconvenience to patients that comes with this, and also inconvenience to staff.

Mr. SLATINSHEK. Well, assuming a patient obtains admission, either on an outpatient or inpatient basis, the quality of medical care provided will nonetheless be then equal to or better than that available in the civilian community?

Mr. SACKETT. Yes, sir. We have had assessments of this made by the outside experts, who have commented very favorably on the quality of medical care provided.

Mr. SLATINSHEK. Speaking of the inpatient costs, do you have a per day cost for inpatient care, provided through the Public Health Service? Before you reply, let me point out that in 1965 or 1964, a subcommittee of this committee made a general inquiry into the availability of medicare to military personnel and to retired personnel and their dependents, and found that the average per day cost in military hospitals was \$46.99 a day per patient-day, whereas the cost per patient-day in civilian hospitals under the Medicare Act was \$54.07.

So there is reflected a distinct savings in those instances in which our dependents and our military personnel were able to utilize uniformed services medical facilities.

Does this general cost picture apply also to the Public Health Service facilities?

Mr. SACKETT. Yes, sir.

Mr. SLATINSHEK. In other words, this per patient-day cost is approximately the same—was the same in 1963 as it was in—military medical facilities, and it is probably pretty much the same today?

Mr. SACKETT. Yes, sir; there may be shadings of differences, but our cost would be in the same ball park with those of the other services and the Veterans' Administration.

Mr. SLATINSHEK. In other words, this subcommittee could be led to believe that to the extent that we can provide care through our Public Health Service facilities, we are doing it more economically than if we provide it in civilian facilities?

Mr. SACKETT. Yes, sir. All the information we have obtained would point in that direction.

Mr. SLATINSHEK. And you pointed out for the record previously that up until now you have not programed in developing your facilities for this type of care, but under the language contained in these bills, you would prospectively program for this type of care?

Mr. SACKETT. Yes, sir.

Mr. SLATINSHEK. I would like to get into the question of medicare for personnel of 65 and over. However, perhaps some of the members would like to develop that. I know Mr. Pirnie is particularly interested in that subject.

Mr. PIRNIE. If you think this is the appropriate time.

Mr. HÉBERT. Any time is appropriate for you, Mr. Pirnie.

Mr. PIRNIE. Thank you, Mr. Chairman.

May I ask whether the benefits that are provided under medicare for persons 65 or over will be equal or better than those presently offered under the high-option Federal employees' health benefits program?

Mr. SACKETT. Sir, they will not be exactly the same. It is a matter of judgment as to whether they are better or not.

My own assessment is that this bill would be somewhat more favorable, all in all, than Social Security Administration. For example, in Social Security Administration, hospital care is limited to 90 days per spell of illness. Here we have 365 days.

Mr. PIRNIE. Right.

Mr. SACKETT. On the other hand, Social Security Administration would provide for some extended care benefits which this bill might not.

I have with me Mr. Alvin Friedman of the Social Security Administration, who is certainly in a position to give you a definitive answer to that question.

Mr. PIRNIE. I wonder if you would care to just characterize the areas in which these benefits would be substantially different?

Mr. FRIEDMAN. One other example, other than the 365 days of hospital care, versus 90 days under the social security program, there are other things.

For example, under the Federal service life plan there would be provisions for payment of prescription drugs. This is not covered under the medicare, the Social Security Administration program. prescriptions are not covered. There are other things that are not comparable. Private duty nursing is not covered under the social security program, it can be covered under the Government service-wide plan.

Mr. PIRNIE. In general, would it be fair to say that you feel the coverage is more adequate than it was proposed by this measure?

Mr. FRIEDMAN. I think it would depend on the individual's case, as to whether the coverage he might have under the one or the other—

Mr. PIRNIE. Those which you singled out the benefits of, it wouldn't

require professional judgment even to say it is perferable, isn't that true?

Mr. FRIEDMAN. Yes, sir.

Mr. PIRNIE. What are the areas in which this proposal might be deemed deficient in your comparison?

Mr. FRIEDMAN. I would not say it would be deemed deficient. I might say, as Dr. Sackett indicated in his testimony, that the administration will certainly consider all types of health protection that the retiree might have in determining what provision should be provided under the various programs to assure a good protection.

Mr. PIRNIE. Maybe I'm just taking too seriously your failure to respond, as I rather anticipated, that this was a preferable and more adequate provision. You said it was a matter of judgment, or it might say yes on this side and no on the other. But I'm just asking for an overall evaluation which might help us determine what we are accomplishing by this in the minds of people like yourself who are experienced in the field.

Mr. SACKETT. Sir, if I might give an answer to that, a general answer. In my opinion, the provisions of this bill would be for most beneficiaries more favorable.

Mr. PIRNIE. Generally speaking, it would be preferable?

Mr. SACKETT. Yes, sir.

Mr. PIRNIE. I think, unless we were going to explore it in detail, we have received the response which would indicate that we moved in a more considerate direction in providing the scope of care for dependents under this measure than under the other program, is that correct?

Mr. SACKETT. Yes, sir.

Mr. WILSON. I would like to ask a question about this.

Mr. HÉBERT. Mr. Nedzi.

Mr. NEDZI. I have no questions.

Mr. HÉBERT. All right.

Mr. WILSON. After a military retiree becomes 65, will he be automatically excluded from service hospitals under this act?

Mr. SLATINSHEK. I can answer that, sir. Actually he will not be. He will continue to retain his entitlement and access to the facilities in uniformed services medical facilities, including military as well as public health service hospitals. He will continue to have entitlement as I understand it to certain prescription drugs, for instance. However, he will not be a beneficiary, legally, under the medicare program that will be established for civilian facilities under this legislation. He will at that point be covered under the broad blanket, or umbrella, of the Social Security Act.

Mr. HÉBERT. Mr. Lennon.

Mr. LENNON. Mr. Chairman, just for the legislative history, I would like the counsel to answer the question as to whether or not each of these three bills, H.R. 9271, H.R. 13582, and H.R. 13583 are applicable to the Coast Guard, both active service and their dependents, and retirees?

Mr. SLATINSHEK. Yes, they are. All three bills cover all uniformed services personnel and their dependents in a same manner.

Mr. LENNON. I am concerned about the title of H.R. 9271, which refers to armed forces, and designates the Secretary of Defense; might make the determinations, and the Coast Guard is not under the Secretary of Defense.

Mr. SLATINSHEK. Mr. Lennon, you are quite correct in that observation. But the language we included in the committee print embodies the changes recommended in H.R. 9271 by Defense. The incorporation of these changes and the language they have submitted does include the uniformed services, as distinguished from the armed services.

Mr. LENNON. Thank you very much. Now, Mr. Chairman, I would like to ask one question of the witness with respect to H.R. 9271.

It was suggested yesterday by the witnesses that this legislation would have to be amended to provide a State participation regarding the mentally retarded children's acceptance into the State institutions and local institutions, based on a residency factor.

Do you have the amendment with you that the committee should consider to implement what you have in mind with respect to this?

Mr. SACKETT. No, sir, I don't have any specific language. I would like to say we are heartily in accord with the purpose for which there would be an amendment.

Mr. LENNON. Well, without such amendment, is it your thinking that the purposes of the legislation, H.R. 9271, could not be fully implemented and carried out as a program?

Mr. SACKETT. Either without the amendment or some alternative mechanism that might achieve the same result.

Mr. LENNON. Could you suggest an alternative mechanism that might be a little more desirable than the mandatory provision in the bill? I was thinking in terms of HEW contracting with the various States that had military installations within their State boundaries, and there is not a medical care commission in any one of the States where there is a military installation that wouldn't be happy to contract, that it would recognize the residency of any armed services person who was living there. I thought about that. And then I raised the question and attempted to illustrate it yesterday by saying, "Suppose a young man were moved into North Carolina at Fort Bragg, or Seymoure Johnson Air Base, or Pope Air Force Base, or Camp Lejeune, and his child developed a condition that necessitated hospitalization, being institutionalized in a mental hospital, and that child was kept there for a period of 5 or 6 years, or maybe longer, because the child was responding to the treatment."

Is that what you had in mind, even though the person would move to some other base in some other State? In other words, you would have to draw this amendment in such a way that residency would be waived regardless of where the parents or stepparents of that child might be living, because he might be in a hospital in North Carolina and he might be resided in California, or some other State.

Mr. SACKETT. I would think so. The members of the uniformed services are mobile, in their condition of employment, and this puts them at a substantial disadvantage with respect to benefits that accrue only by becoming a resident of a community, or a State. And the purpose of this amendment would be to correct this and put them on a par with the rest of the citizens of the country in this respect.

Mr. LENNON. I am thinking about where the parents, or stepparents are not either legal residents or physical residents, which certainly would be so if a child would be in an institution in one State and the parents would be physically resided in some other State

or legally resided in some other State. Just how would we meet that situation?

Mr. SACKETT. The members of the uniformed services are moved so frequently.

Mr. LENNON. I know that.

Mr. SACKETT. That I should think if this amendment were worded in such a way they had to take the child with them, and make arrangements in the new State to which they were assigned, that this would be creating a hardship, and I should think it would be preferable.

Mr. LENNON. You have to assume every State, and I think it would be true to varying degrees, has a mental retardation center, or hospitals and institutions of that kind, because the mother of the children might be living with her people somewhere, in some State that was a thousand miles away from where the serviceman happened to be stationed.

Mr. SACKETT. Yes, sir.

Mr. LENNON. I think we have to be very careful about that amendment. I recognize the necessity for an amendment that would be broad enough to cover wherever that child may be, or wherever its parents or stepparents may be, but I think we are going to have to give some serious thought to that amendment.

Mr. SACKETT. Yes, sir.

Mr. LENNON. I was hoping it would be done through a contract with the mental care commission of the several States, and most of them have them, through HEW.

But I recognize that would not be altogether practical, because of what I just said, that the child might be in this State, and the parents in this other State a year from now, and 2 years from now the parents might be still in another State, but still it was necessary to keep that child in the first institution it was placed in because of the care it was receiving.

Mr. SACKETT. Sir, I think the feasibility of that mechanism would relate to how the contract was drawn up. I might say this: that you mentioned the Secretary of HEW as being the contractor. I wouldn't know any reason offhand why the Secretary of Defense would not also have the capability of entering into such a relationship.

Mr. LENNON. I wish it could be done that way. But I recognize it is possible that it can't be done that way, because the question of residency may not come up at all. Just a question of whether or not they will accept that child. It is something if we are going to make H.R. 9271 to do the job that the witnesses said yesterday was necessary to give help to some 11,000 who were severely or moderately severely retarded that needed institutionalized care. We are going to have to get the language that will fit the need. I hope you gentlemen will provide it for the committee.

Mr. SACKETT. Sir, Mr. Ray indicated he might have something.

Mr. RAY. Speaking as the former superintendent of an institution, in fact, we had a case that came from North Carolina that had this same problem. In North Carolina you have 1 year's residence. In Arkansas where I was a superintendent we had a 3 year's residence.

Mr. LENNON. We beat you about 2 years, go ahead.

Mr. RAY. My feeling is, Congressman, knowing the superintendents in the States around the country, if this bill passes I am sure you are going to need a hammer in the bill for about 5 percent of the States,

but I would say 95 percent of the institutions would cooperate fully on this. That is my personal opinion.

Mr. LENNON. In spite of all we can do, we still have a waiting list in some of our institutions?

Mr. RAY. Yes, in some of the institutions. Up to 1,500 in some of them. This is correct.

Mr. LENNON. It would be unfortunate to have it understood that the child of a serviceman would have preference over someone else who has been living in that State for years, and you gentlemen would say, well, now, unless that child is accepted, even though there are 300 or 400 on the waiting list who are equally in need, that we are going to withhold all the funds from this institution. We want to avoid such a situation as that, if we can, in the language of this amendment.

Mr. RAY. Right. I would think by working with the Governors of each State, plus the HEW contracts with the mental retardation authorities, that most of these problems could be taken care of.

Mr. LENNON. What I want to avoid is an amendment to this bill that would avoid putting some arbitrary and nearsighted person downtown in the position to say, "Well, now, you take this child. We are concerned, but we are not too concerned about how many lifelong residencies there are waiting for admission. You take this child from serviceman John Doe or else we are going to cut off the funds of that institution." Do you see what I mean? We don't want that to happen. That may happen in the years to come. You gentlemen might not be there to help us out with it. Let's be careful about this amendment.

Thank you.

Mr. HEBERT. Mr. Slatinshek.

Mr. SLATINSHEK. Mr. Chairman, there apparently is a conflict in some of the testimony the committee has received to date in respect to the coverage provided by medicare for persons 65 and above, and that in the Federal employees' health benefit program high option. And in order to resolve that conflict, which I think is an innocent conflict, I would suggest that representatives from the Department of Defense and representatives from HEW get together to review these various benefits and pinpoint those particular areas in which the medicare program for personnel over 65 will be deficient in respect to that which is provided in this bill, and which is reflected in the present level of benefits offered Federal employees in the high-option area.

The subcommittee, I am sure, would like to identify these areas, and perhaps add some language to the legislation which will compensate for this apparent loss of benefits.

Since the subcommittee is interested in completing its efforts very, very soon, I would urge you to have something in perhaps Monday.

(The following information was received for the record:)

BENEFIT VALUES OF HEALTH INSURANCE UNDER SOCIAL SECURITY AND FEDERAL EMPLOYEES HEALTH BENEFITS PROGRAM

The Chief Actuary of the Social Security Administration has made the following estimates of the value for people aged 65 and over of benefits under the new social security health insurance program and of high-option benefits under the Government-wide service benefit plan (which has the largest enrollment of all the health plans for Federal civilian employees):

Estimated monthly benefit costs (administrative costs excluded)

Social security:	
Hospital insurance.....	\$10. 00
Medical insurance.....	5. 00
Total.....	15. 00
High-option Government-wide service benefit plan:	
Hospital service.....	11. 50
Medical service.....	8. 50
Total.....	20. 00

While the estimates given above would indicate that for all persons who are age 65 or older generally, the Government-wide plan would offer benefits of significantly greater value, there are some people who would find the social security health insurance protection of more value because of the nature of their individual health problems and the kind of health services they most need. This would be the case when the kind of health expenses such person has happens to be mainly of a kind against which social security offers better protection, such as, for example, expenses for posthospital convalescent care in an extended care facility. As an example of the opposite situation, a person whose major health expense is for special duty nursing or for drugs would find the Government-wide plan more beneficial. In addition, evaluation of the net value of a plan to a person, or to a group of persons, depends on the amounts which must be paid for the protection. For example, a person must pay a monthly premium of \$3 for medical insurance benefits under social security.

The estimates and the attached comparison do not, of course, reflect any modifications that might be made in the overall protection (including protection under the Government-wide service benefit plan) that may be afforded Federal employees if legislation is enacted to effectuate recommendations to take account of social security health insurance which were recently made by the President's Cabinet Committee on Federal Staff Retirement Systems.

Comparison of major benefits under the Government-wide service benefits plan (high option) of the Federal employees health benefits program and the health insurance for the aged program

	Federal employees health benefits program—Government-wide service benefit plan (high option).	Health insurance for the aged program—title XVIII of the Social Security Act.
Inpatient hospital benefits.	Up to 365 days of care for each hospital confinement. Hospital services include virtually all those ordinarily furnished by a hospital to its inpatients. Services of special nurses are covered. (Subject to deductible and coinsurance provisions. See below.) Inpatient psychiatric hospital service covered, but subject to special limitations, and in part subject to a deductible and coinsurance, as described below.	Up to 90 days in each spell of illness with patient paying a deductible of \$40 for the first 60 days plus a coinsurance amount of \$10 a day for each day in excess of 60 during a spell of illness; hospital services include virtually all those ordinarily furnished by a hospital to its inpatients; payment will not be made for private-duty nursing. Inpatient psychiatric hospital service will be included, but a lifetime limitation of 190 days will be imposed.
Outpatient hospital benefits.	Full coverage for emergency care rendered within 72 hours after an accident; radiation therapy; services rendered within 72 hours of the use of operating room for outpatient surgical care, outpatient X-ray and laboratory examinations even though the surgery is performed in a physician's office. Diagnostic examinations, subject to deductible and coinsurance provisions. (See below.)	Outpatient hospital diagnostic services, with the patient paying a \$20 deductible amount (which may be counted toward the deductible applicable to covered medical expenses) and 20 percent coinsurance for diagnostic services furnished during a 20-day period. Other outpatient services are also covered as physicians' services or other medical services subject to deductible and coinsurance of medical insurance plan.
Posthospital extended care.	Convalescent care excluded.....	Up to 100 days in a spell of illness for continued treatment in an extended care facility after transfer from a hospital where the patient stayed 3 or more days. The first 20 days of care are covered in full. In each of remaining 80 days patient pays \$5 coinsurance.
Home health services....	No specific provision. However, services furnished outside a hospital by a professional registered nurse, and, under special circumstances, by a licensed practical nurse, and physical therapy rendered by a qualified professional physical therapist are covered. (Subject to deductible and coinsurance provisions. See below.)	Hospital insurance plan: posthospital home health services for up to 100 visits in a year after discharge from a hospital or extended care facility. If services are furnished under an approved plan. Services of visiting nurses, physical therapists, and other health workers are covered.
Physicians' and surgeons' services.	Covered.....	Medical insurance plan: up to 100 visits during a calendar year with no requirement of prior hospitalization. (Subject to deductible and coinsurance provisions. See below.)
Private duty nursing....	Services of a professional registered nurse furnished in or outside a hospital are covered. Services of a licensed practical nurse furnished in a hospital, and, under special circumstances, outside a hospital are covered. (Subject to deductible and coinsurance provisions. See below.)	Covered. (Subject to deductible and coinsurance provisions. See below.) Excluded.
Prescription drugs.....	Covered in or outside a hospital. Prescription drugs outside a hospital are subject to deductible and coinsurance provisions. See below.	Covered only when furnished in a hospital, extended care facility or by a physician in his office. When provided in the physician's office, coverage is limited to those drugs which cannot be self-administered and are incidental to the physician's service. Generally excluded with minor exception related to emergency occurring in the United States.
Payment for services outside the United States.	Inpatient and outpatient hospital benefits are covered in full. Payments for physicians' services are made according to a fee schedule.	
Deductible and coinsurance payments.	Individual pays \$100 deductible and 20 percent coinsurance in each benefit period for covered services and supplies not covered under the basic hospital and medical-surgical part of the program.	Hospital insurance plan: in each spell of illness, individual pays \$40 for first 60 days of care in a hospital plus \$10 a day for the remaining 30 days of care; patient pays \$20 plus 20 percent of the cost of diagnostic services furnished an outpatient of a hospital during a 20-day period; in each spell of illness, patient pays \$5 a day for 21st through 100th day of care in an extended care facility. Medical insurance plan: patient pays \$50 annual deductible, plus 20 percent coinsurance.

Pursuing Mr. Lennon's area of questioning on handicapped children. Mr. Long had developed the fact that regardless of what this legislation will do in the way of financial assistance to the member and the waiving of the residency requirement, we still have the problem of apparently a lack of facilities.

Can you tell the subcommittee what programs are in effect now, and what are contemplated, both on a Federal and a State level, which will perhaps in the future overcome this deficiency? Perhaps Mr. Ray, or yourself, Dr. Sackett, may speak to that question.

Mr. SACKETT. Sir, I can give a general answer.

I agree with what I think is the thesis of your question, the answer to this problem is to make the facilities adequate. There has been a great deal done in this direction. The Congress has passed the Maternal and Child Health and Mental Retardation Planning Amendments of 1963; the Mental Retardation Facilities and Community Health Centers Construction Act of 1963; and the maternal and child health and crippled children's program; and all of these, when fully implemented, will go a long way toward making facilities more adequate to the need.

The Health Education Assistance Act, and its various provisions, will increase the numbers of skilled health manpower to work in these areas. There are a number of features in the administration program for this current year that relate to this. For example, the proposal that programs be developed to modernize urban hospitals would have some relevance to this program.

We do feel that a great deal has been done, although a great deal more needs to be done.

Mr. SLATINSHEK. Well, can you provide something perhaps a little more definitive than that? This reflects the general desire on the part of the executive branch to assist the States in coping with this problem, but it doesn't identify any specifics, that is, when will this program perhaps meet this requirement? What is the deficiency in general? Can you speak to that?

Mr. RAY. I will try to speak to part of this.

Under 88164, which had a number of provisions for mental retardation and mental illness—

Mr. SLATINSHEK. When you speak of Public Law 88-164?

Mr. RAY. Public Law 88-164. Part of this each State would come up with a State construction plan based on their needs; 88-156, Public Law, each State would come up with a total plan in meeting the needs of the mentally retarded.

Now, States are beginning to implement these plans. As Dr. Sackett said, we have a long way to go. The State of California is a good example. They are beginning to develop a series of community centers to meet the needs of the retarded. In New York they have got several institutions on the drawing boards. They are also beginning to develop community services. The State of Missouri has divided its State into 11 regions, and each region will have a community center for the mentally retarded that will have both inpatient and outpatient beds. The State of Alabama has divided its State up into regions. I could go on and give you a picture of almost every State. This is not here today, but it is moving. We are on the threshold of really moving on behalf of the mentally retarded. This doesn't mean to say to the committee that tomorrow some one would not be on a waiting list. But we are on the threshold.

Mr. SLATINSHEK. In other words, there is aggressive action to eliminate this problem, hopefully within the very near future, 5 or 10 years, something of that kind.

Mr. RAY. That is correct; \$313 million is being spent by HEW this year in grants to the States in mental retardation. Next year's budget reflects about \$334 million.

Mr. SLATINSHEK. Can you also supply for the record the funds expended by the various States in this regard or whatever figures you have available in this area, to reflect the total effort being made nationwide to combat the problem?

Mr. RAY. I will tell you what, we will do the best we can on it. HEW, in relationship to a new section on program analysis, is in the process now of developing those figures. I don't know how quick they will be ready, but we will submit to you what we may have.

Mr. SLATINSHEK. Have the States, by inaction, or failure to complete their planning on time, permitted some of these Federal funds to lapse?

Mr. RAY. Out of the \$313 million we might possibly lose \$1 million this year. That is because the State plan—a few States because of some problems, civil rights and so forth, had not complied with the plans. People are visiting those States now, and we feel that these problems will be overcome.

Mr. HÉBERT. Any other questions by any members of the committee?

Thank you, gentlemen, very much for your appearance and cooperation.

Mr. SACKETT. Thank you, sir.

The next witness to appear before the committee is Robert W. Nolan, national executive secretary of the Fleet Reserve Association.

Mr. Nolan's statement has been presented to the members of the committee.

Mr. HÉBERT. Come around, Mr. Nolan.

Mr. Nolan, will you identify yourself for the benefit of the reporter and the committee?

STATEMENT OF ROBERT W. NOLAN, NATIONAL EXECUTIVE SECRETARY OF THE FLEET RESERVE ASSOCIATION

Mr. NOLAN. Mr. Chairman and members of the committee, I am Robert W. Nolan, the national executive secretary of the Fleet Reserve Association, an organization composed of 64,000 career enlisted men, active duty and retired, of the U.S. Navy and Marine Corps. On behalf of my 64,000 shipmates, I thank you for the opportunity to present their views on this vital legislation, H.R. 13582, H.R. 13583, and H.R. 9271. As you are aware, the Fleet Reserve Association has a wealth of experience and knowledge on this subject. We were privileged to appear before your special subcommittee during your comprehensive hearings on this topic in 1964. Our testimony at that time was based on the exhaustive study we conducted during the preceding 2 years. The findings of our study were published in our 64-page booklet, "Military Retirement Hospital Rights." A condensed version of this study appeared in the 1964 hearings of your special subcommittee. We conducted a survey of our then 54,000

members and received 24,581 complete replies. Legislative measures—H.R. 10707, H.R. 10737, and H.R. 10763—introduced by Congressman Charles S. Gubser, former Congressman Richard E. Lankford, and Congressman Charles E. Bennett, respectively, outlining our solution to the problem were introduced during the 88th Congress and reintroduced as H.R. 1525 by Congressman Gubser and H.R. 1697 by Congressman Bennett in the 1st session of this Congress. Therefore, we feel that we speak with some authority on this subject and we know that we speak for the career enlisted men, not only of the U.S. Navy and Marine Corps, but of all services.

MORAL AND LEGAL ENTITLEMENT TO CARE

The Fleet Reserve Association is pleased to see that your previous hearings have established the Government's moral obligation to provide medical care to military retirees and their dependents. We still maintain that the Government has a clear legal obligation to provide that care. We cite, as evidence, the Department of Defense's study, "Medical Care for Retired Military Personnel and Their Dependents" dated June 1, 1964. On page 21 of that study are the following quotations from official service recruiting publications:

He retires—while still a young man—equipped to start a second career. He has retirement pay, benefits, and full medical care. (From "Your Son's Future?" Department of Army, 1962, ME 62-125B, 250M.)

And let's not forget those many other benefits of this act which go a long way toward providing the security that both you and your family want, and lifetime security and protection for you and yours, even after retirement, through guaranteed medical care at military facilities. (From "Army Benefits," Department of Army, 1956, 611-180-RPC.)

The Navy told its men—

As a Navyman, you * * * receive free medical and dental care now and after retirement. (From "Figuring Your Future," Department of Navy NRAF-26502.)

Just think when you do retire or go into Fleet Reserve, you retain almost all of the benefits you enjoyed while on active duty, including hospitalization for you and your dependents for life. (From "Navy Career Appraisal Team Representation Guide," Department of Navy, NAVPERS 15897-A.)

Notice these publications said nothing about paying a percentage of the cost of care in retirement. If these statements do not imply a legal obligation on the Government's part, then why were the services instructed to delete these statements from future recruiting literature? The same Department of Defense study concedes that there is a legal obligation on the Government's part to provide care to those retirees who paid into the old naval hospital fund. (See bottom of p. 19 of the study.) We contend that all military personnel have earned the same right to medical care through career employment at sub-standard salaries for the most productive years of their lives. Surely, this benefit was taken into account in establishing military pay scales.

The Department of Defense conducted a survey of retired and active duty military personnel on the subject of medical care in retirement. In their survey of retirees, question No. 30 asked, "Was medical care for yourself and dependents at a uniformed services medical facility after retirement one of the considerations that attracted you to a military career?" 48.7 percent answered "yes" and 15.5 percent said "it was something they took for granted and did not give further consideration."

--In the survey of the active duty personnel, question No. 10 asked, "To the best of your knowledge, what medical care is the Government required to furnish retired military personnel?" 84 percent answered, "care in uniformed services hospitals," and 15 percent said that they did not know.

In answer to question 9, "To the best of your knowledge, what medical care is the Government required to furnish the dependents of retired military personnel?" 78 percent said "care in uniformed services hospitals" and 17 percent stated that they did not know. The results of our survey shows that 93.52 percent of our retired, and 92.05 percent of our active duty shipmates stated that assurance of full medical care in retirement influenced their becoming career military personnel.

Further, in the Department of Defense's survey, five questions were asked about participating in a contributory type program providing medical care in retirement. One-third of the career oriented active duty personnel queried and 53.5 percent of the retirees questioned stated they would not participate in such a program. Our survey revealed that 27 percent of our retired members and 35 percent of our active duty members who answered are against our minimal contributory program. This clearly shows that the men feel they are entitled to this care at no cost to themselves. Fifty-eight percent of our members who replied stated that such a contribution would constitute a pay cut for them.

ANALYSIS OF THE PROVISIONS OF H.R. 13583

After careful study of the Secretary of Defense's proposal to provide medical care for retired military personnel and their dependents, we find that the proposal does not address itself to the correction of the inequities of the space-available language of chapter 55, title 10, United States Code, specifically, sections 1074(b), 1076(b), and 1083. The problem of medical care for retirees came about because of a legislative misinterpretation of the language in those sections. The special subcommittee in its report No. 67 dated September 30, 1964, stating the subcommittee's findings of its comprehensive hearings recommended, "That amendatory language be added to the Dependents' Medicare Act, making it unmistakably clear that the so-called space-available concept may not be used as a vehicle to limit or eliminate space available for retired military personnel and their dependents in military facilities."

Therefore, the language should be changed from its present permissive nature by substituting the word "shall" for the word "may" in those sections. This change would clarify and establish the right to such care for military retirees and their dependents.

The language of the proposed new section 1087, as proposed by the Department of Defense, will not alleviate the shortage of retiree beds in military medical facilities to any great degree. Once again, the word "may," in line 18 on page 4 of the bill, will lead to misinterpretation in the future. It further relinquishes what we believe to be congressional authority to the executive branch of the Government. The wording, "reasonable number of hospital beds" on line 8 of page 5 of the bill also relinquishes congressional prerogative to the executive branch. In its Report No. 67, the special subcommittee recommended that "the Department of Defense program beds for retired military

personnel and their dependents in new military hospital construction on the basis of projected workloads, but not to exceed 10 percent of the beds programed for each hospital. Even in the case of teaching hospitals, or under special circumstances, the subcommittee believes that not more than 20 percent additional should be programed."

The Fleet Reserve Association, after consulting with the Department of Defense and the Surgeon General of the U.S. Navy, can appreciate the need to program retiree beds where they are most needed. Especially so, since the Navy has found that its retiree bed requirements vary from 3 to 24 percent of total beds available in different geographical areas. However, past experience has taught us that without clearly worded provisions of the law, the intent of Congress and the earned rights of military personnel are often circumvented. Therefore, we suggest that the proposed section 1087 be changed to provide for a minimum of 10 percent of all beds programed for new constructed military hospitals be programed for military retirees and their dependents; giving the service Secretaries concerned the authority to allot the beds where needed on a case by case basis.

We welcome the action of providing military retirees and their dependents medical care in civilian hospitals by including them under the provisions of the Dependents' Medicare Act. However, we question the wisdom of the provisions for accomplishing this. I speak specifically of two points: (a) that the retiree will pay approximately 25 percent of the costs of such care; and (b) that the Secretary of Defense will prescribe the amounts payable by the retiree to assure that the Government's portion of the costs does not exceed 75 percent of the total costs.

We feel that requirement (a) will negate the considerable advantage of being able to receive this care instead of having to retire near a military medical facility to assure oneself of his earned right to medical care in retirement.

Inasmuch as the proposal does not call for a specific fixed fee, we wonder if this will not encourage a sudden increase in medical costs for retirees and their dependents because of a philosophy that, Uncle Sam is paying the bills. I do not need to remind the committee members of our past experience in this area during the implementation of the Dependents' Medicare Act. Government-set maximums immediately became minimums.

Now, to discuss the validity of the retiree assuming 25 percent of the cost of medical care received in civilian hospitals, our study shows that a person under the age of 65 has a 1-in-9 chance of being hospitalized in a year. The average length of that stay in the hospital is 8 days. The average cost of 1 day in a civilian hospital in 1967 is projected at \$62.51 per day. Thus, an 8-day stay would cost \$500.08. Twenty-five percent of that is \$125.02. The retired enlisted man's median income is \$379.00 a month, of which \$125.02 is a large share. This includes his retired pay and his salary if he is employed. Obviously, these costs to a widow existing on Dependents' Indemnity Compensation would be even more prohibitive.

We feel that the provisions of (b) which allows the Secretary of Defense the discretionary authority to fix the Government's share of the cost of this program is fraught with future dangers. Needless to say, we are in a time of spiraling costs and this is not likely to change in the foreseeable future. It is obvious that when the execu-

tive branch of the Government strives to maintain reasonable budget limitations and with the costs of this program very possibly increasing beyond present expectations, the executive branch would feel justified in changing the ratio of sharing the cost from the proposed 25-75 ratio to possibly a 30-70 or 40-60. But more important, the cost would be steadily rising for the retiree and the cost of hospitalization would soon get prohibitive.

Also, we feel the setting of the share of costs is a congressional prerogative. The law should state the authority for the control of the costs of any program to provide medical care to retirees and their dependents be vested in the Congress.

CARE FOR RETIREES OVER 65 YEARS OF AGE

The Secretary of Defense's proposal to place all retirees and their spouses, age 65 and over, under the Federal program for medicare for the aged, will, we realize, provide some very desirable benefits not previously available. Nevertheless, in its present form, it is in some ways most inequitable. At present, these are the men who paid for their care in retirement under the old naval hospital fund. The care provided under the Federal program does not provide full medical coverage and places an added financial burden on the aged retiree's already meager income. Certain contributory factors of the Federal program can result in extremely heavy financial burdens to the retiree. Presently, the various firms engaged in health insurance coverage have recognized the limitations of the so-called social security medicare program and are arranging for coverage that will protect against the contributory charges made by the Federal program.

Few of the military retirees have health insurance coverage, as they have depended on the total medical care of the Services in the past. At the age of 65, it will be impossible for this group to obtain health insurance that would protect them from the contributory charges of the Federal program because the premiums of such insurance would be prohibitive.

I ask that you bear in mind that the Department of Defense's proposal does not give the retiree over 65 years of age anything that he has not already earned. The entitlement to military medical care notwithstanding, the vast majority of the military retirees have already earned the right to participate in the social security medicare program. For the retiree of the future, he commenced paying for his right as of January 1, 1966. The active duty military man has been paying into the social security fund since January 31, 1957. Clearly, this feature of the proposal does not give the retiree any benefit he has not already paid for and will continue to pay for as his future illnesses occur.

If the retiree and his spouse must be transferred to the social security medicare program, he should be assured that he will receive at least the same care that he is entitled to in a military facility. He would receive equal care if he enrolls in the supplemental program at the personal cost of \$3 a month each for he and his spouse. We recommend to you that he and his spouse be included in the supplemental program at the Government's expense. We are confident that this alternative would prove more equitable when all factors are weighed.

The Fleet Reserve Association wonders why the language of the proposal does not spell out the availability of medicines, drugs, and prosthetics under the provisions for care. We are happy to see the committee's counsel, Mr. Slatinshek, brought this out clearly in yesterday's testimony.

Are the costs of these items to be included in the coverage assured by the law? We have been told that it is possible to spell this out clearly. We certainly hope that this is done.

The Fleet Reserve Association applauds the provisions of H.R. 13582 which will provide the dependents of active duty personnel, out-patient care in civilian hospitals under the Dependents' Medicare Act. While this is a most needed benefit and we recognize that it is one which has not been enjoyed before, we still wonder if the charge of 20 percent of the total costs for such care is not too high. We grant that a cost must be included to prevent the abuse of this provision. Nevertheless, we feel the figure is too high and possibly a flat cost rather than a percentage cost should be used. This would aid in controlling the costs in the future.

Analysis of the provisions of H.R. 9271: The Fleet Reserve Association applauds the provisions of H.R. 9271 and commends you, Chairman Hébert, for its introduction. The need for this legislation to care for the handicapped dependent children of active duty military personnel is one of long standing. The need is a special one indeed, and calls for special provisions to assure this care. We feel that H.R. 9271 provides these provisions.

(The full statement of Mr. Nolan as inserted into the record reads as follows:)

STATEMENT CONCERNING MEDICAL CARE FOR DEPENDENTS OF ACTIVE DUTY PERSONNEL, RETIRED PERSONNEL AND THEIR DEPENDENTS AND MENTALLY RETARDED CHILDREN OF ACTIVE DUTY PERSONNEL (H.R. 13582, H.R. 13583, H.R. 9271) BY ROBERT W. NOLAN, NATIONAL EXECUTIVE SECRETARY, FLEET RESERVE ASSOCIATION

Mr. Chairman and members of the committee, I am Robert W. Nolan, the national executive secretary of the Fleet Reserve Association, an organization composed of 64,000 career enlisted men, active duty and retired, of the U.S. Navy and Marine Corps. On behalf of my 64,000 shipmates, I thank you for the opportunity to present their views on this vital legislation, H.R. 13582, H.R. 13583, and H.R. 9271. As you are aware, the Fleet Reserve Association has a wealth of experience and knowledge on this subject. We were privileged to appear before your special subcommittee during your comprehensive hearings on this topic in 1964. Our testimony at that time was based on the exhaustive study we conducted during the preceding 2 years. The findings of our study were published in our 64-page booklet, "Military Retirement Hospital Rights." A condensed version of this study appeared in the 1964 hearings of your special subcommittee. We conducted a survey of our then 54,000 members and received 24,581 complete replies. Legislative measures (H.R. 10707, H.R. 10737, and H.R. 10763) introduced by Congressman Charles S. Gubser, former Congressman Richard E. Lankford, and Congressman Charles E. Bennett, respectively, outlining our solution to the problem were introduced during the 88th Congress and reintroduced as H.R. 1525 by Congressman Gubser and H.R. 1697 by Congressman Bennett in the 1st session of this Congress. Therefore, we feel that we speak with some authority on this subject and we know that we speak for the career enlisted man, not only of the U.S. Navy and Marine Corps, but of all services.

MORAL AND LEGAL ENTITLEMENT TO CARE

The Fleet Reserve Association is pleased to see that your previous hearings have established the Government's moral obligation to provide medical care to military retirees and their dependents. We still maintain that the Government has a clear legal obligation to provide that care. We cite, as evidence, the De-

partment of Defense's study, "Medical Care for Retired Military Personnel and Their Dependents," dated June 1, 1964. On page 21 of that study are the following quotations from official service recruiting publications:

"He retires—while still a young man—equipped to start a second career. He has retirement pay, benefits, and full medical care." (From "Your Son's Future?" Department of Army, 1962, ME 62-125B, 250M.)

"And let's not forget those many other benefits of this act which go a long way toward providing the security that both you and your family want, and lifetime security and protection for you and yours—even after retirement—through guaranteed medical care at military facilities. (From "Army Benefits," Department of Army, 1956, 611-180-RPC.)

The Navy told its men—

"As a Navymen, you * * * receive free medical and dental care now and after retirement." (From "Figuring Your Future," Department of Navy NRAF-26502.)

"Just think when you do retire or go into Fleet Reserve, you retain almost all of the benefits you enjoyed while on active duty, including hospitalization for you and your dependents for life." (From "Navy Career Appraisal Team Representation Guide," Department of Navy, NAVPERS 15897-A.)

Notice these publications said nothing about paying a percentage of the cost of care in retirement. If these statements do not imply a legal obligation on the Government's part, then why were the Services instructed to delete these statements from future recruiting literature? The same Department of Defense study concedes that there is a legal obligation on the Government's part to provide care to those retirees who paid into the old Naval Hospital Fund (see bottom of p. 19 of the study). We contend that all military personnel have earned the same right to medical care through career employment at substandard salaries for the most productive years of their lives. Surely, this benefit was taken into account in establishing military pay scales.

The Department of Defense conducted a survey of retired and active duty military personnel on the subject of medical care in retirement. In their survey of retirees, question No. 30 asked, "Was medical care for yourself and dependents at a uniformed services medical facility after retirement one of the considerations that attracted you to a military career?" 48.7 percent answered "yes" and 15.5 percent said "it was something they took for granted and did not give further consideration."

In the survey of the active duty personnel, question No. 10 asked, "To the best of your knowledge, what medical care is the Government required to furnish retired military personnel?" 84 percent answered, "care in uniformed services hospitals", and 15 percent said that they did not know.

In answer to question 9, "To the best of your knowledge, what medical care is the Government required to furnish the dependents of retired military personnel?" 78 percent said "care in uniformed services hospitals" and 17 percent stated that they did not know. The results of our survey shows that 93.52 percent of our retired, and 92.05 percent of our active duty shipmates stated that assurance of full medical care in retirement influenced their becoming career military personnel.

Further, in the Department of Defense's survey, 5 questions were asked about participating in a contributory-type program providing medical care in retirement. One-third of the career-oriented active-duty personnel queried and 53.5 percent of the retirees questioned stated they would not participate in such a program. Our survey revealed that 27 percent of our retired members and 35 percent of our active-duty members who answered are against our minimal contributory program. This clearly shows that the men feel they are entitled to this care at no cost to themselves. Fifty-eight percent of our members who replied stated that such a contribution would constitute a pay cut for them.

ANALYSIS OF THE PROVISIONS OF H.R. 13583

After careful study of the Secretary of Defense's proposal to provide medical care for retired military personnel and their dependents, we find that the proposal does not address itself to the correction of the inequities of the space-available language of chapter 55, title 10, United States Code, specifically, sections 1074(b), 1076(b) and 1083. The problem of medical care for retirees came about because of a legislative misinterpretation of the language in those sections. The special subcommittee in its report (No. 67), dated 30 September 1964, stating the subcommittee's findings of its comprehensive hearings recommended, "That amendatory language be added to the Dependents' Medicare Act, making it unmistakably

clear that the so-called space-available concept may not be used as a vehicle to limit or eliminate space available for retired military personnel and their dependents in military facilities."

Therefore, the language should be changed from its present permissive nature by substituting the word "shall" for the word "may" in those sections. This change would clarify and establish the right to such care for military retirees and their dependents.

The language of the proposed new section 1087, as proposed by the Department of Defense, will not alleviate the shortage of retiree beds in military medical facilities to any great degree. Once again, the word "may," in line 18 on page 4 of the bill will lead to misinterpretation in the future. It further relinquishes what we believe to be congressional authority to the executive branch of the Government. The wording, "reasonable number of hospital beds" on line 8 of page 5 of the bill also relinquishes congressional prerogative to the executive branch. In its Report No. 67, the special subcommittee recommended that "the Department of Defense program beds for retired military personnel and their dependents in new military hospital construction on the basis of projected workloads, but not to exceed 10 percent of the beds programmed for each hospital. Even in the case of teaching hospitals, or under special circumstances, the subcommittee believes that not more than 20 percent additional should be programmed."

The Fleet Reserve Association, after consulting with the Department of Defense and the Surgeon General of the U.S. Navy, can appreciate the need to program retiree beds where they are most needed. Especially so, since the Navy has found that its retiree bed requirements vary from 3 to 24 percent of total beds available in different geographical areas. However, past experience has taught us that without clearly worded provisions of the law, the intent of Congress and the earned rights of military personnel are often circumvented. Therefore, we suggest that the proposed section 1087 be changed to provide for a minimum of 10 percent of all beds programmed for new constructed military hospitals be programmed for military retirees and their dependents; giving the service Secretaries concerned the authority to allot the beds where needed on a case-by-case basis.

We welcome the action of providing military retirees and their dependents medical care in civilian hospitals by including them under the provisions of the Dependents' Medicare Act. However, we question the wisdom of the provisions for accomplishing this. I speak specifically of two points; (a) that the retiree will pay approximately 25 percent of the costs of such care; and (b) that the Secretary of Defense will prescribe the amounts payable by the retiree to assure that the Government's portion of the costs does not exceed 75 percent of the total costs.

We feel that requirement (a) will negate the considerable advantage of being able to receive this care instead of having to retire near a military medical facility to assure oneself of his earned right to medical care in retirement.

Inasmuch as the proposal does not call for a specific fixed fee, we wonder if this will not encourage a sudden increase in medical costs for retirees and their dependents because of a philosophy that, "Uncle Sam is paying the bills." I do not need to remind the committee members of our past experience in this area during the implementation of the Dependents' Medicare Act. Government-set maximums immediately became minimums.

Now, to discuss the validity of the retiree assuming 25 percent of the cost of medical care received in civilian hospitals, our study shows that a person under the age of 65 has a one in nine chance of being hospitalized in a year. The average length of that stay in the hospital is 8 days. The average cost of 1 day in a civilian hospital in 1967 is projected at \$62.51 per day. Thus, an 8-day stay would cost \$500.08. Twenty-five percent of that is \$125.02. The retired enlisted man's median income is \$379 a month, of which \$125.02 is a large share. Obviously, these costs to a widow existing on dependents' indemnity compensation would be even more prohibitive.

We feel that the provisions of (b) which allows the Secretary of Defense the discretionary authority to fix the Government's share of the cost of this program is fraught with future dangers. Needless to say, we are in a time of spiraling costs and this is not likely to change in the foreseeable future. It is obvious that when the executive branch of the Government strives to maintain reasonable budget limitations and with the costs of this program very possibly increasing beyond present expectations, the executive branch would feel justified in changing the ratio of sharing the cost from the proposed 25-75 ratio to possibly a 30-70 or 40-60. But more important, the cost would be steadily rising for the retiree and the cost of hospitalization would soon get prohibitive.

Also, we feel the setting of the share of costs is a congressional prerogative. The law should state the authority for the control of the costs of any program to provide medical care to retirees and their dependents be vested in the Congress.

CARE FOR RETIREES OVER 65 YEARS OF AGE

The Secretary of Defense's proposal to place all retirees and their spouses, age 65 and over, under the Federal program for medicare for the aged, will, we realize, provide some very desirable benefits not previously available. Nevertheless, in its present form, it is in some ways most inequitable. At present, these are the men who paid for their care in retirement under the old naval hospital fund. The care provided under the Federal program does not provide full medical coverage and places an added financial burden on the aged retiree's already meager income. Certain contributory factors of the Federal program can result in extremely heavy financial burdens to be retiree. Presently, the various firms engaged in health insurance coverage have recognized the limitations of the so-called social security medicare program and are arranging for coverage that will protect against the contributory charges made by the Federal program.

Few of the military retirees have health insurance coverage, as they have depended on the total medical care of the services in the past. At the age of 65, it will be impossible for this group to obtain health insurance that would protect them from the contributory charges of the Federal program because the premiums of such insurance would be prohibitive.

I ask that you bear in mind that the Department of Defense's proposal does not give the retiree over 65 years of age anything that he has not already earned. The entitlement to military medical care notwithstanding, the vast majority of the military retirees have already earned the right to participate in the social security medicare program. For the retiree of the future, he commenced paying for his right as of January 1, 1966. The active duty military man has been paying into the social security fund since January 31, 1957. Clearly, this feature of the proposal does not give the retiree any benefit he has not already paid for and will continue to pay for as his future illnesses occur.

If the retiree and his spouse must be transferred to the social security medicare program, he should be assured that he will receive at least the same care that he is entitled to in a military facility. He would receive equal care if he enrolls in the supplemental program at the personal cost of \$3 a month each for he and his spouse. We recommend to you that he and his spouse be included in the supplemental program at the Government's expense. We are confident that this alternative would prove more equitable when all factors are weighed.

The Fleet Reserve Association wonders why the language of the proposal does not spell out the availability of medicines, drugs and prosthetics under the provisions for care. Are the costs of these items to be included in the coverage assured by the law? We have been told that it is possible to spell this out clearly. We certainly hope that this is done.

The Fleet Reserve Association approves of the language providing that care must be sought in military hospitals if it is available. The vast majority of the career military regard the Service physician as their "family" doctor. We further agree to the provision placing the Government's share of the cost on a last pay plan if the military retiree is covered by another health insurance plan.

The Fleet Reserve Association heartily applauds the proposed amendments of Section 1074(b) to allow the military retiree to receive care in the medical facilities of the Veterans Administration, based on the fact that he is a "veteran" by the nature of his long and faithful service to his country. This removes the stigma of the indigent retiree from signing a pauper's oath to receive the care that he is entitled to.

ANALYSIS OF THE PROVISIONS OF H.R. 13582

The Fleet Reserve Association applauds the provisions of H.R. 13582 which will provide the dependents of active duty personnel, outpatient care in civilian hospitals under the Dependents' Medicare Act. While this is a most needed benefit and we recognize that it is one which has not been enjoyed before, we still wonder if the charge of 20 percent of the total costs for such care is not too high. We grant that a cost must be included to prevent the abuse of this provision. Nevertheless, we feel the figure is too high and a flat cost rather than a percentage cost should be used. This would aid in controlling the costs in the future.

ANALYSIS OF THE PROVISIONS OF H.R. 9271

The Fleet Reserve Association applauds the provisions of H.R. 9271 and commends you, Chairman Hébert, for its introduction. The need for this legislation to care for the handicapped dependent children of active duty military personnel is one of long standing. The need is a special one indeed, and calls for special provisions to assure this care. We feel that H.R. 9271 provides these provisions.

ADVANTAGES OF THE FRA'S PROPOSAL

In reference to the proposals of H.R. 13583, we feel that our contributory proposal outlined in H.R. 1525 and H.R. 1697, would provide a less expensive and more equitable solution to the problem of providing medical care to military retirees and their dependents. Our proposal, coupled with the suggested amendments to the space available language of the law, calls for a turn to the old naval hospital fund contributory concept. We suggest that all military personnel, active duty and retired, contribute to a fund on the following formula: All personnel who have over 2 years of service or who are above the grade E-3 in the enlisted corps or O-1 in the officer corps, pay a monthly contribution of \$2 and a monthly contribution of \$1 for all personnel in pay grades E-1, E-2, E-3, or O-1 with less than 2 years of service.

These contributions can be deducted from the personnel's pay with a minimum of effort with today's automated procedures. Our study was based on Department of Defense estimates and reveals that in the first 12 years of operation, the retirees' contributions would save the Government approximately \$1 billion.

Aside from the advantages of low cost to both the Government and the military man, our proposal has other distinct advantages: (1) It is based on time proven, sound principles; (2) By providing maximum care in military medical facilities, it provides—

- (a) Care at the lowest cost the Government can provide and control.
- (b) The retiree beds give the military hospitals the flexibility they require for emergencies.
- (c) Gives the doctors comprehensive experience in all age groups of patients.
- (d) The retiree and his dependents receive care from their family doctor.

One of the greatest benefits of an equitable solution to this problem will be the morale factor. Without a doubt, next to retired pay, medical care in retirement is the single most important benefit a military retiree receives. The protection of that benefit; yes, even the improvement of it would produce a most beneficial reaction to our Nation's armed services, hence, to our Nation's future security.

We concur most heartily with the following recommendation quoted from the Department of Defense's October 1964 study, "That appropriate actions be initiated to arrest the trend of recent years which has seen the reduction in certain military benefits and complete elimination of others. Specifically, the study group recommends, for immediate attention, the restoration of dental care for dependents, improved medical services for dependents of active duty members, assured medical care for retirees and dependents, a life insurance program for all active duty members, vestment rights and survivor benefits for military retirement pay and college tuition aid programs for children of active duty members."

SUMMARY

In summary the Fleet Reserve Association recommends:

- (a) The permissive language of the Dependents Medicare Act be changed to mandatory language to clarify the military and retiree and his dependents right to medical care.
- (b) Ten percent of the total of all beds programed in new constructed military hospitals be programed as retiree beds.
- (c) Military retirees and their dependents receive full medical services to the maximum in military medical facilities where possible and in civilian hospitals when such services are not available in military hospitals.
- (d) The cost of this care be borne by the Government and subsidized by a monthly contribution of \$2 by all personnel who have 2 years of service, or who are above the grade E-3 in the enlisted corps or O-1 in the officer corps and a monthly contribution of \$1 for all personnel in the grades E-1, E-2, E-3, or O-1 with less than 2 years of service.
- (e) The authority for the establishing the share of cost for the above stated services be vested in the Congress not the executive branch.

(f) If military retirees and their spouses over 65 years of age are placed under the Federal medicare for the aged program that the Government assumes the monthly cost of their participation in the supplementary program.

(g) Assurance that the cost of drugs, medicines, and prosthetics are included in the services available under this legislation and that the assurance be clearly spelled out.

(h) The cost of active-duty dependents' outpatient care under the Dependents, Medicare Act be set at a fixed fee rather than a percentage of the total cost.

(i) Care for retarded and handicapped children of active duty personnel be provided as outlined in H.R. 9271.

The Fleet Reserve Association wishes to thank the House Armed Services Committee for its fruitful endeavors in this field. We commend the Department of Defense for their efforts. We recognize and applaud their innovations that will provide military personnel with medical benefits that did not exist before.

We sincerely hope that this problem's solution, once it is arrived at, will be of a continuing unchanging nature. For as we stated in our study—

"There is a lesson in the personnel actions of the last decade that should not be lost on the Congress and the Defense Department: the changing of benefits, even at times when done as part of attempts at improvement, can often have as adverse an effect on morale as the cutting of them. What the serviceman, active and retired, wants is not just to get a benefit, but to be assured that he will continue to get it."

Gentlemen, I thank you.

Mr. HÉBERT. Thank you very much, Mr. Nolan. We appreciate your presentation this morning, and your definitive statement which you have made and summarized.

May I say to you in the inclusion of your shipmates, I have the distinction of being one of them?

Mr. NOLAN. We are proud to have you as a member.

Mr. HÉBERT. I want you to take cognizance of the fact that this committee, will consider the previous proposals of our former colleague Lankford of Maryland, and our present colleague, Congressman Gubser, of California, and Congressman Wilson of California, and Mr. Bennett of Florida.

I also want to observe at this particular time, at your last national convention, our distinguished chairman, the gentleman from South Carolina, Mr. Rivers, made a pledge to your group that legislation of this nature would be considered at this session and some form of legislation enacted certainly as reported out by this committee, to the extent of our responsibility.

The keeping of that word is evidenced here by this committee hearing, and I individually and the committee collectively are under direction by Chairman Rivers to have a go at it and get this business over with. We intend to do it.

A last comment: I assure you that so far as this committee is concerned, every effort is made to retain in the Congress its authority and its prerogatives. As far as possible, any legislation that will be reported out of this committee shall have mandatory language, and not permissive language.

Mr. NOLAN. Thank you, Mr. Chairman.

Mr. HÉBERT. This is the definite trend of this committee, and I think if any permissive language slips through it will be in spite of the alertness of the committee.

Mr. Nedzi.

Mr. NEDZI. Thank you, Mr. Chairman.

Mr. Nolan, do you have any actuarial studies on this proposal that the Fleet Reserve Association has for a naval hospital fund?

Mr. NOLAN. Yes, sir. It would be based on the concept of the old naval hospital fund, wherein it was in existence for a period from 1799 to 1943, where in every man in the active duty in the Navy or Marine Corps paid 20 cents a month into the fund for his retired military medical care.

We have our study here, and I have the estimated amounts based on our proposal of \$2 a month for persons with more than 2 years of service, and \$1 a month for persons under 2 years, just what the revenue would be derived, based on DOD's projected figures for the type of people—the amount of people that would be on active duty.

If you would like, I would be only too happy to leave you a copy of this.

Mr. HÉBERT. Mr. Nedzi, I think you know the members of the committee would be very interested in the book the witness has in front of him. A present member of our staff, John Ford, I think had a great deal to do with the writing of that book.

Mr. NOLAN. Yes, sir.

Mr. HÉBERT. Again, I think it indicates the desire of the committee to get the most intelligent people we can on any subject.

Mr. NOLAN. Our loss is your gain, sir.

Mr. HÉBERT. We appreciate it, and are very grateful. Mr. Nedzi, continue, please.

Mr. NEDZI. Mr. Slatinshek indicated this is an area with which he is familiar. I will be glad to yield to him for this purpose.

Mr. SLATINSHEK. Can you tell the subcommittee, since this subject has been raised, what this naval hospital fund is—when it existed and what the contributions were of enlisted members of the naval service?

Mr. NOLAN. As I said, it existed from 1799 to 1943. Each member of the Navy and Marine Corps on active duty paid 20 cents a month into the fund. And these funds were supplemented, of course, by the Government, to provide the medical care, to build various military medical hospitals, and things of this nature.

It was abolished in 1943 at the request of the Secretary of the Navy, with the onslaught of World War II, they felt it was just too complex a program to continue, and they used as a basis for the argument, that the Army did not pay for its care.

As we stated in this study, at this time the great chairman, Chairman Vinson, predecessor of the chairman of this committee, questioned the wisdom of doing it at this time, because he felt the 20 cents a month contribution was a vested right, and gave the men of the Navy and Marine Corps a vested right to military care. Needless to say, his words proved very prophetic.

Mr. SLATINSHEK. May I interrupt you at that point to accelerate this. What we are talking about is a total contribution of something less than \$50 over the average career of an average enlisted man up to 1943.

Now, the subcommittee that had previously considered this question, made the observation that there was no legal entitlement to care, there was a moral obligation, however, to care.

I wanted that in the record.

Now, you point out that this takes care of retired care. However, has this any application to dependent care?

Mr. NOLAN. No, sir. It did not have application.

Mr. SLATINSHEK. This bill, of course, will extend significant benefits to dependents?

Mr. NOLAN. We recognize that as being true.

Mr. SLATINSHEK. With regard to the premium charges. You suggest perhaps the percentage contribution on the part of the member might be somewhat high.

Can you tell the committee what premium charges, either active duty dependents, or retired members, or their dependents, will have to pay for this program?

Mr. NOLAN. You mean if they were to get supplemented from a group health insurance plan?

Mr. SLATINSHEK. In other words, let's assume we have a retired dependent—a dependent of a retired member, and they received medicare under this program. What sort of premiums will they have to pay to participate in the program?

Mr. NOLAN. They would have to pay 25 percent of the total cost of care as provided for in the bill.

Mr. SLATINSHEK. Provided they get care?

Mr. NOLAN. Yes.

Mr. SLATINSHEK. In other words, they pay no premiums unless they get care; isn't that correct?

Mr. NOLAN. That is true.

Mr. SLATINSHEK. Yes. In the case of people who participated in the Federal employee's program, they make a monthly contribution of anywhere between \$17 and \$18 a month; isn't that correct?

Mr. NOLAN. That is true.

Mr. SLATINSHEK. That amounts to roughly \$200 a year.

In the case of outpatient care, what payment will be made by a dependent of a retired member when he gets outpatient care?

Mr. NOLAN. Twenty-five percent of the total cost.

Mr. SLATINSHEK. In other words, if the fee is \$8 he will be paying \$2.

Mr. NOLAN. That is true.

Mr. SLATINSHEK. What will apply in the case of Federal employees and their dependents in the event they take advantage of outpatient care?

Mr. NOLAN. It depends on which option program they choose, but they would be paying a deductible and then a percentage of care.

Mr. SLATINSHEK. In other words, they would pay all of the outpatient care, until it achieved the deductible generally of \$200?

Mr. NOLAN. Yes, sir.

Mr. SLATINSHEK. Therefore, what we are talking about is, to put it in perhaps simple perspective, but fairly accurate perspective, the benefits provided dependents of active-duty personnel as well as retired members will require no premium payment, whereas in the case of employees, Federal employees, and their dependents, the actual charges to them on an annual basis will approximate \$400 a year.

I wanted that in the record to indicate the nature of the program that the committee is discussing.

Mr. HÉBERT. Mr. Nedzi.

Mr. NEDZI. Have you considered a naval fund-type program for all the services or are you advocating one just for the Navy?

Mr. NOLAN. Our proposal was originally for all services, not just the Navy or Marine Corps, but all services to participate in the program.

Mr. NEDZI. This is what you are advocating?

Mr. NOLAN. This is what we advocated for 3 years, until we got to this state. As I stated in my testimony, now in view of the light of the events of the last few weeks here, we would be pleased at any equitable solution.

Mr. NEDZI. I see. I have no further questions, Mr. Chairman.

Mr. HÉBERT. Mr. Wilson?

Mr. WILSON. Mr. Chairman, I want to join you in commending the witness. I am myself a member, a shipmate of the Fleet Reserve Association. I think through the years——

Mr. HÉBERT. That's not going to disqualify us from considering the legislation.

Mr. WILSON. I don't think so. I would say through the years Fleet Reserve Association on personnel problems has been most constructive. I would say your statement today is in the same category.

I'm interested very much in the proposal Mr. Nedzi was discussing, this contributory idea, the deduction for the life of the service, for the length of service, which could build up into a substantial contribution.

I think we are taking care of the vested interest that the servicemen would have in this by making him entitled to care as a retiree, and his dependents, for the rest of his life.

It would seem to me, Mr. Chairman, we ought to seriously consider—I would like to study a little bit further the proposal they made—but we ought to seriously consider this as a basic part of the legislation, if we can, and make this or put this contributory system in effect. It would help to a great extent to fund the whole program and perhaps provide more benefits.

If service personnel would willingly give \$2 a month out of their pay for the length of their total service, with the understanding they are getting all the time they are on active duty the entitlement they have always gotten, but assuring that they would get after retirement a substantial amount of pay, I think it is a very good proposal.

Mr. HÉBERT. Mr. Wilson.

Mr. WILSON. Yes.

Mr. SLATINSHEK. Although I have not attempted to run out the cost on this, actually on the basis of the information I have now, and what I attempted to get into the record, they will be getting a level of benefits as high as any that could conceivably be available today, and it won't cost them anything unless they actually use it, and then if they use it, it will be a minimal cost.

So I frankly question whether a contributory system would not be to the disadvantage of the participating members, because we would be establishing this by statutory right in this legislation.

Mr. WILSON. Well, we are establishing it by statutory right anyway, that is my understanding of it. It would sweeten it up somewhat by having military contributions, which I think would help to provide even more.

I want us to get into a very close analysis of what benefits and comparative benefits we have at the time we finally mark up the bill. But certainly it would be obvious that if such a contribution were made that the benefits to accrue could be made better and therefore the service would benefit from it, the service personnel would all benefit from it. That is all.

Mr. HÉBERT. Mr. Lennon.

Mr. LENNON. No questions.

Mr. HÉBERT. No questions?

Mr. LENNON. I would like to ask you this question, however, Mr. Nolan.

Do you have the figures which indicate the number of retirees, both in the Navy and the Marine Corps, in addition to those who are members of the Fleet Reserve Association?

Mr. NOLAN. Approximately we have about 20 to 25 percent of the men in the Navy and Marine Corps on active duty today who would meet our eligibility requirements, which is to have at least 4 years of service.

Our 64,000 members, just may be about 20 percent of the total possibility.

Mr. NEDZI. Those of 4 years of service or over.

Mr. LENNON. Yes, four years of service in the corps. What percentage of the retirees are commissioned officers, and what percentage are they not commissioned officers?

Mr. NOLAN. I can't speak for the total number of retired officers of the retired personnel, because ours is mainly an enlisted man's organization. Members who were enlisted, and then made commissions, can still belong, but by that rule we don't have very many, really. It makes up a small percentage of ours. I have no idea of how many other retired population are officers.

Mr. LENNON. The Assistant Secretary, Mr. Morris, addressing himself to this subject matter yesterday, stated the average age for retirement was in the early forties. And that the average retiree income on a monthly basis was \$250 per month.

Mr. NOLAN. I think I recall that, I was watching that statement yesterday.

Mr. LENNON. He also stated that his best judgment was that approximately 90 percent or better of those retirees established new careers, subsequent to their retirement.

Now, actually, when you come to this question of a contribution, there was a poll, was that by your association or the DOD?

Mr. NOLAN. Our association, sir.

Mr. LENNON. You found opposition to that idea, I think you said, about 37 percent?

Mr. NOLAN. Yes, sir.

Mr. LENNON. Of the active felt it would be a penalty imposed on them by reason of making any contribution.

Of course you proposed the retirees too, not on active duty, and you found them similarly opposed, about 27 percent?

Mr. NOLAN. Yes, sir; 27 percent.

Mr. LENNON. As I recall the figure used in your testimony, that was about it.

You could not have an equitable program where you picked out one branch of the service, the Navy, and the Marine Corps, for voluntary contribution, without running into a problem, if you didn't include the Army and the Air Force, and the other services, even the Coast Guard, could you?

Mr. NOLAN. No, sir. Our program called for total.

Mr. LENNON. Total?

Mr. NOLAN. Yes, sir.

Mr. LENNON. What do you think the attitude would be, if it were possible—and of course it isn't probable it will ever be done—

if all the people in military service today were polled on this question?

Mr. NOLAN. I would suspect it would probably come out just about the same as it did on ours, sir.

Mr. LENNON. On your individual polls?

Mr. NOLAN. Our members who objected to this objected on the fact that they had a statutory right to care. That was their main objection. It wasn't the matter of \$2. But it was the fact they felt they were entitled to this care.

Mr. LENNON. I believe counsel commented on that by saying in 1964 one of the conclusions reached by the then subcommittee was that it was clearly a moral right, but the statutory right was questionable?

Mr. NOLAN. Yes, sir.

Mr. LENNON. I certainly agree from the literature that has been used from the past that it is clearly a moral obligation. But basically the three bills that you have addressed yourself to are a vast improvement over existing conditions with respect to retirees and active duty.

Mr. NOLAN. I would say with the change of the language to be mandatory, I would definitely agree.

Mr. LENNON. You say mandatory language is changing the word "may" to "shall"?

Mr. NOLAN. Yes, sir.

Mr. LENNON. With respect to the construction of the programing, I believe at least you said 10 percent, in the newly constructed hospitals?

Mr. NOLAN. Yes, sir.

Mr. LENNON. For retirees and their dependents. But that is basically the amendment you feel ought to be included.

Were you here yesterday when Mr. Hardy of Virginia raised that question?

Mr. NOLAN. Yes, sir.

Mr. LENNON. I wondered if you had prepared this since his colloquy?

Mr. NOLAN. No, sir; this was prepared before Mr. Hardy's presentation.

Mr. LENNON. I think you hit it right on the head. Thank you, sir, that is all.

Mr. HÉBERT. Mr. Pirnie?

Mr. PIRNIE. No questions.

Mr. HÉBERT. Mr. Hagan?

Mr. HAGAN. No questions right now, Mr. Chairman.

Mr. HÉBERT. Thank you, gentlemen, very much for your appearance this morning.

Mr. NOLAN. Thank you, sir.

Mr. HÉBERT. You have been most helpful. The next witness, Mr. Slatinshek.

Mr. SLATINSHEK. The next witness is Col. James W. Chapman, and Lt. Col. Thomas A. Kelly.

A copy of the statement is before each member.

Mr. HÉBERT. Will you identify yourself for the benefit of the reporter and the committee—both gentlemen.

Colonel CHAPMAN. Mr. Chairman, my name is James W. Chapman, colonel of the U.S. Air Force, retired. I am the legislative counsel for Retired Officers Association, and I am accompanied by Lt. Col. Thomas A. Kelly, Army, retired, who is also with the association as assistant legislative counsel.

We have each of us joined the association staff comparatively recently, replacing Admiral Houser and Colonel Saunders. I know they were very well known to the staff.

Mr. BOB WILSON. Mr. Chairman, before the witness begins, may we stipulate many of us are members of the Retired Officers Association at this point?

Mr. HÉBERT. Unless I am in the deal, I will not stipulate.

Mr. BOB WILSON. I will admit you are.

Mr. HÉBERT. I don't want to get disqualified right along. Continue, please.

Colonel CHAPMAN. I would like to say I am personally glad to be back here. It has been quite a few years since I have been before the committee, having quite a few years ago been with the Air Force Legislative Office. I did some work with the committee at that time.

Mr. HÉBERT. Then you know our problems?

Colonel CHAPMAN. Yes, sir.

STATEMENT OF COL. JAMES W. CHAPMAN, U.S. AIR FORCE, RETIRED, RETIRED OFFICERS ASSOCIATION

Colonel CHAPMAN. The Retired Officers Association greatly appreciates the opportunity of appearing before this committee in support of legislation designed to provide a civilian health benefits program for retired members of the uniformed services, their dependents, and their survivors.

I would like to add here, Mr. Chairman, our statement is confined to this one particular bill. However, the association strongly supports the enactment of H.R. 9271 and H.R. 13582, or bills of that general type.

Our more than 70,000 members join with me in gratefully recalling that 10 years ago this committee recommended that provisions, similar in most respects to the present proposal, be made for military retirees and their dependents. In the legislative process at the time, however, this provision was removed and applicability of the civilian health care aspects of the Dependents' Medical Care Act was limited to the active duty element. Retirees and their families were authorized care in military facilities on a space-available basis, providing legal authority for continuation of a practice that had been followed in the past.

We are also mindful and appreciative of the fact that this committee has continued to advocate some practical solution to the problem of providing medical attention for retirees and their families and has insisted upon consideration of their needs in military hospital construction.

Since the early days of the Republic, Army retirees and their dependents have been granted medical care at no expense, other than hospital subsistence charges. Navy and Marine Corps personnel, for many years until 1943, contributed monthly payments to a hospital fund for the establishment and support of naval medical facilities for their own treatment and that of their dependents, both before and after retirement.

In my statement I assumed that also applied to dependents; I stand corrected, having heard the colloquy here.

Recruitment brochures and briefings have been rife with promises for medical care extending into retirement. This right was recog-

nized and firmly established on a space-available basis by the Dependents' Medical Care Act of 1956.

Experience over the past 10 years has shown that entitlement of retired personnel and their dependents to medical care only upon a space-available basis presented many problems, the solution to which requires remedial legislation.

Indeed, the need for legislation of this type has been growing as the retired lists have lengthened, as military installations, with their supporting medical facilities, have been closed, and as the input of wounded servicemen from Vietnam, and space requirements for the currently increasing active duty force have filled hospital space and taxed medical staffs, which previously could have been utilized for the treatment of retirees.

Two members at least of the committee yesterday brought out two specific examples. Mr. Hardy spoke of the situation in Norfolk and Mr. Wilson spoke of the situation in California.

Typical of this increasing problem has been the situation in the area contiguous to Los Angeles where there is a large concentration of retired military families. Many of these people had been commuting to Norton Air Force Base for medical treatment at their 60-bed general hospital, because of the earlier closing of other military medical facilities in that area.

Recently that facility was reduced to a 15-bed dispensary, with a consequent reduction in the medical staff. This situation has forced the Norton Air Force Base dispensary commander to advise retired personnel recently that, because of the shortage of professional staff, he would be unable to provide medical care to retired personnel during the summer months, that he would be unable to provide any inpatient care for female patients, and very probably no inpatient care for retired personnel. I have here a copy of the notice which I would like to file with the committee for its records. It is appended at the bottom of your statement.

(The document above referred to is as follows:)

DEPARTMENT OF THE AIR FORCE,
2796TH USAF DISPENSARY (AFIC),
Norton Air Force Base, Calif., January 22, 1966.

Subject: Curtailment of medical services.

To: All retired military personnel and their dependents.

1. Just about 6 months ago I sent a letter to each of you about the change in our status from a 60-bed general hospital to a 15-bed military dispensary with limited capabilities and no specialty services. At that time I explained that the time might come when it would be necessary to impose limitations upon the numbers of patients we could provide care for. I also pointed out that under title 10, United States Code (the laws governing the provision of medical care in U.S. military medical facilities) medical care may be provided to retired military personnel and their dependents only when space and facilities remain after all active duty personnel and their dependents have been provided needed medical care.

2. Due to excessive workload for the manning available, other military medical facilities in this area have had to reduce the quantity of care they have provided retired personnel in the past. As a result, larger and larger numbers of retired personnel and their dependents have sought medical care at the Norton AFB medical facility. Most of these have come to us without appointments. This has resulted in an excessive number of "walk-in" patients which has diluted our efforts so that the quality of care provided must inevitably suffer. It has become necessary, therefore, to establish the policy that beginning February 1, 1966, retired personnel and their dependents will be seen only by appointment at this medical facility.

3. At the same time I would like to point out that in April 1966 our manning document will be reduced 34 spaces and we will certainly no longer be able to provide inpatient care for female dependants and very probably no inpatient care at all.

4. During the summer months our professional staff will be reduced by transfers, separations, and loss of authorizations to the point that we will very likely be unable to provide any retired care at all between June 15 and September 1. During this period we may well be able to provide care to active duty military personnel only.

5. Because of the increasing workload and decreasing medical staff with the resulting fact that less medical care will be available at this facility for retired personnel and their dependents, I would strongly urge those of you who can qualify to make application for coverage under the Federal medicare bill which becomes law on July 1, 1966. Application must be made before March 31, 1966, or you may be ineligible for 2 years.

6. We desire to provide medical support to our retired military population and will always make available the maximum services possible. Within the limits of our budget and manning, we shall strive to provide at least needed medication and laboratory studies when we are unable to provide medical care ourselves.

WILLIAM H. BEHRENS, Jr.,
Major, MC, USAF, Commander.

I would like to say we mean no criticism of the commander of that dispensary or that base. It is simply the fact they did not have the facilities to take care of the people.

It appears that this present legislative proposal offers an opportunity for an equitable resolution to this problem.

In principle we support this bill, which represents the culmination of the efforts of those who have contributed to the development of practical solution to one of the more serious problems faced by all military families. While the problem exists at any moment only for those on the retired rolls, it exists prospectively for those on the active rolls as well. Thus, the provision of adequate medical care for the retired element is a matter of increasing concern to the active duty force and can well be a major factor in the overall active duty retention problem.

Now, Mr. Chairman, I would like to comment and make recommendations upon certain specific aspects of the bill.

First, care in Veterans' Administration facilities:

We are pleased to note that the bill contemplates the use of Veterans' Administration facilities by military retirees, since VA hospital facilities are widely dispersed in areas where no military facilities are available, and perhaps more importantly, because it opens the way for care for older retirees who may be suffering from chronic diseases requiring extended hospitalization or domiciliary care.

However, the benefits of this section of the bill will be quite limited in practice if retired military personnel are placed in the lowest category for admission, following not only disabled veterans but also those who state that they are unable to pay for care in a civilian facility, as proposed yesterday by a Defense spokesman.

We therefore propose that military retirees be considered for admission on an equal basis with the currently authorized category 3, but without the necessity of taking a "pauper's oath."

Second, proposed rates:

We submit that the rates for medical care for retirees and their dependents and survivors should be the same as those established for active duty personnel and their dependents.

A man on active duty pays no part of his hospital costs, except subsistence charges, even when he is in a civilian facility, and under cur-

rent law and the related legislative proposal (H.R. 13582), he pays only a nominal deductible hospital cost and 20 percent of the costs of outpatient care for his dependents.

We consider that establishment of a higher rate for retired personnel is inequitable and that it would place a financial burden upon them at the very time that their income is reduced substantially. The average retiree's pay is probably somewhat less than 40 percent of the total compensation drawn immediately before retirement.

We much appreciate the Chairman's comments and questions yesterday upon the different rates which have been proposed, during which he developed the fact that the additional cost of providing the same rates for retiree families as for active duty families would raise the cost only by a small percentage factor.

We further propose that the Congress establish precise rates in the bill to be charged for medical services, rather than to leave their establishment to the discretion of the Secretary of Defense, whose spokesman indicated yesterday that they might be arbitrarily adjusted after imposition of a modified "means test." Or perhaps on some other arbitrarily imposed standard.

Specifically, we recommend that rates for hospitalization for retirees and their dependents be set at \$25 (or \$1.75 per day), as now established for the dependents of active duty personnel and that outpatient care be provided at the same rates proposed for active duty families, i.e., the patient would pay 20 percent and 80 percent would be paid by the Government.

Third, proposed limitation upon care:

While it may well be that the Secretary would not consider it appropriate to provide benefits under health contracts exceeding those provided under the high-option plan applicable to civil service employees, we see no reason to include a specific prohibition against his doing so, as proposed in the last sentence of section 1086(a), on page 2, lines 16 through 20 of the bill.

I think this is somewhat the same point Mr. Slatinshek was getting at yesterday when he proposed possibly imposing a floor, below which the benefits should not be reduced.

Fourth, programing space for retirees in military facilities:

We are particularly pleased with the proposal to grant authority to the Secretaries of the Army, Navy, or Air Force to take the following factors into account in programing medical facilities.

1. The teaching and training requirements of the medical interns and residents assigned to the facility, and

2. Large concentrations of retirees in an area where there is a critical shortage of beds in civilian hospitals, and no immediate prospect for alleviation of the shortage. In this particular section, however, we see no need to include the limitation that such consideration can be given only "in extreme cases" as proposed in section 1087(c), page 5, line 9, of the bill. It appears to us that if the three proposed criteria are met, the situation would warrant consideration without the added hurdle of requiring the Secretary to find that an "extreme case" exists.

This is also, I think, somewhat the same point Mr. Hardy made yesterday. He suggested perhaps the word "critical" should come out. We are getting at the same idea, that if the requirement exists, the facilities should be provided.

Fifth, provision for certain retired Reserve officers:

The Retired Officers Association also calls the committee's attention to the fact that this proposal makes no provision for medical care for those retired Reserve officers who have less than 8 years active service, and their dependents. We propose that such personnel, as a minimum, should be entitled to treatment in military facilities on a space available basis.

I would like to add one point here, if I may, Mr Chairman, that is not in this prepared paper. It is a bit hard to compare the social security provisions with this active duty medical care, and we can appreciate the puzzlement of previous witnesses in talking about this. However, we were a little disturbed at Dr. Sackett's conclusion that the medical care that will be provided up to age 65 is better than that which will be provided after age 65.

I commend that to the committee's attention. We do feel medical care should not be reduced for people at the time they reach age 65. I would point out, also, and this is somewhat the same point Mr. Nolan made, that we consider that we have at least a moral right to treatment by the Government facilities, and that in addition to that, active duty people are actually paying social security taxes now, and so are those of us who are employed who are on the retired list. We are paying the tax to provide a service to which this committee has recognized, and so has Defense, that we are entitled. We commend that to your consideration as you work on this bill.

As I indicated earlier, Mr. Chairman, we endorse the principle which the bill seeks to establish. We are confident that when this committee has completed its work and reports a final bill for consideration it will be one that will provide a fully equitable solution to the problem.

Thank you, Mr. Chairman, for giving us this opportunity to be heard.

Mr. HÉBERT. Thank you very much, sir.

Mr. Nedzi.

Mr. NEDZI. Thank you, Mr. Chairman.

Colonel, have you or your organization considered a voluntary contribution plan along the lines Mr. Nolan has suggested?

Colonel CHAPMAN. We have not considered it, at least currently we have not considered it. I would point out to you if such a thing should be adopted, and that would pay the cost of medical care, perhaps we should be exempted from the social security medical care tax, that should be considered.

Mr. NEDZI. Do you have any comment on such a plan or proposal you would like to make? Is it something you are inclined favorably toward, or would you just as soon not get involved with it?

Colonel CHAPMAN. If I might speak personally, because I do not have instructions from our organization, if this would accomplish the purpose of giving us a real right which we would have which would be firmly established, and which we could count on for all time forward, I would not oppose it. I think it has some merit.

Mr. NEDZI. I am afraid all of us are going to be subject to the laws of Congress, and it is going to be pretty hard to get a vested right of any sort. But I thank you for your answer.

I have no further questions, Mr. Chairman.

Mr. HÉBERT. Mr. Wilson.

Mr. BOB WILSON. I have no questions.

Mr. HÉBERT. Mr. Lennon.

Mr. LENNON. Colonel Chapman, what percentage of the retired officers—and I guess the answer would be the same approximately that Mr. Nolan gave—does your association represent? I see it is over 70,000 members.

Colonel CHAPMAN. There are approximately 200,000 retired officers. That is a general round figure. We have somewhat over 70,000.

Mr. LENNON. What percentage would that 200,000 hold to the total retirees, both enlisted and other?

Colonel CHAPMAN. There are about 300,000 retired.

Mr. LENNON. 300,000?

Colonel CHAPMAN. Yes.

Mr. SLATINSHEK. May I interrupt?

There are roughly 628,000 retired members contemplated in the year 1967, slightly less than that, of course, for this current period.

Mr. LENNON. The testimony yesterday was the average age of retirement was in the early forties. Do you believe in that figure?

Colonel CHAPMAN. I imagine that is true.

Mr. LENNON. The average retirement pay on a monthly basis was \$250 a month?

Colonel CHAPMAN. Yes.

Mr. LENNON. The statement was also made yesterday that approximately 90 percent or better of the retirees had entered into other careers, and were gainfully employed.

Colonel CHAPMAN. I heard that statement yesterday.

Mr. LENNON. It was a little large, in my opinion. That is the reason I asked you the question today.

Colonel CHAPMAN. I believe it was in the medical-care study which the Department of Defense conducted about a year or so ago. I believe they had a figure of 70 percent of retirees who were gainfully employed.

Mr. LENNON. Gainfully employed in new careers?

Colonel CHAPMAN. Yes. This, of course, is true of the younger retirees, by and large all get jobs. The older ones, a lot of them do not.

Mr. LENNON. I know you wouldn't be able to project the income of even those 70,000 members that you have on an annual basis per member. Would you hazard a guess of what it was?

Colonel CHAPMAN. I would just be unable to do it.

Mr. LENNON. We will come back to the 70,000 that you represent. What percentage of those are gainfully employed in a so-called new career?

Colonel CHAPMAN. I don't know, I would think it is probably somewhat less than the 70 percent, because I suspect maybe the older group, those who are 50 or more, when they retire probably more of them join our association.

Mr. LENNON. You do not, then, agree with the testimony of the Assistant Secretary, Mr. Morris, or the Surgeons General of the three branches of the armed services, that there ought to be a distinction with respect to the benefits paid of medical and hospital to the retirees and their dependents as distinguished between the active employees and their dependents?

Colonel CHAPMAN. No, sir; I do not agree.

Mr. LENNON. Is that based on the long understanding, particularly in the Department of the Navy and the Marine Corps, there was an assurance of medical care after retirement?

Colonel CHAPMAN. Yes, sir; primarily upon that factor. I think that is true also of the Army, and, of course, now of the Air Force. It is the same situation. The Navy people paid for theirs.

Mr. LENNON. The man who was retired was entitled to the same medical care, hospitalization and medical care, as such, as the active duty. But the chances are, Colonel, that those retirees' income, private income, particularly in the relatively medium age bracket—supplemented or added to their retirement income, is considerably greater, isn't it, than the average person in the active duty? That is a great majority of them?

Colonel CHAPMAN. I am not sure, Mr. Lennon, that that is true. In some cases certainly they earn a considerable amount more. But actually I think you hear more of the inflated—the big salaries that people get—and not so much about those who take routine jobs.

Mr. LENNON. I see you stated here immediately following retirement, the average retirees' income was about 40 percent of his total income prior to his retirement. When you say 40 percent you mean the total emoluments, fringe benefits, and so forth?

Colonel CHAPMAN. Total pay, Mr. Lennon. I mean allowances, and so on—money.

Mr. LENNON. Housing?

Colonel CHAPMAN. No, sir.

Mr. LENNON. You are talking about the base pay?

Colonel CHAPMAN. I am talking about the base pay, subsistence allowance, housing allowance, any other pay for hazardous duty, and so on.

Mr. LENNON. What is the average time from your own experience that a person is retired before assuming he is in the age bracket from, say, 42 to 55—what is the average time that that officer—and that is what you represent—elapsing from the time he retires before he obtains other employment, from your own personal observation and experience, of your associates in your association?

Colonel CHAPMAN. Those who get jobs usually do so in probably six months, I imagine, or close to that.

Mr. LENNON. Of your own personal acquaintance in your association, that has been true, hasn't it?

Colonel CHAPMAN. By and large, yes.

Mr. LENNON. In your own personal acquaintance with those in your association, they have been able, because of their training, and their experience, and their judgments, have been able to project themselves rather successfully in the private enterprise system?

Colonel CHAPMAN. One of the things which the association does, Mr. Lennon, is to provide an employment clearinghouse, as we call it, in which people, members of our association, submit résumés, and we keep in contact with business and try to find jobs for them.

Mr. LENNON. That is one of the advantages in belonging to the association?

Colonel CHAPMAN. That is one of the advantages in belonging to the association; yes, sir. We have on file down there at all times I would say well over a thousand or more, of people who are actively seeking jobs through us, that have not been able to find them.

Mr. LENNON. They are selective in the sense they are seeking the job that they want—seeking the job that they are qualified to do, and the pay scale they are willing to accept?

Colonel CHAPMAN. Yes.

Mr. LENNON. What is the average time those applications are on file, before you have some request for such an individual based on his résumé?

Colonel KELLY. About 3 to 4 months.

Colonel CHAPMAN. Some of them I know are there for a long time. Of course, Mr. Kelly is suggesting it is in the average of maybe 3 or 4 months, something like that. Some of them I know stay in there for a long time. People just don't find jobs. This is the trouble with trying to talk about the average, that you have a lot of these people who never find anything.

Mr. LENNON. We got part of it down to 3.4 at the national level—that is the unemployment level. That 3.4 represents the so-called dropouts. So most of the retired officers on that basis, I would think, were employed today. And most skilled technicians, at the enlisted level who retired, I would think would be employed from what industry says its problem is in getting skilled hands, for skilled employment.

Mr. BOB WILSON. Retirees normally aren't counted in determining the labor force.

Mr. LENNON. That would be interesting to have that statement, if we could obtain it from the Department of Labor and put it in the record.

Mr. BOB WILSON. Yes.

Mr. LENNON. That is the reason I asked the question. I don't know.

Colonel KELLY. Speaking personally, I was able to get a job the day after I retired with the association, yet I have friends who have retired either at the same time or earlier than I did, who are still looking for jobs. Many of them have been out of the Army for at least a year or a year and a half, still looking for that particular job for which they are qualified, you see.

Now, we might speak to this dual compensation act of 1964, which precludes a retired officer of the military services from going to work for the Department of Defense for 6 months after his retirement. Many of the people feel this is the area in which they are most qualified, working for the Government, in the transition from the military to a civilian governmental job.

Mr. LENNON. Maybe you can categorically answer the question posed by Mr. Wilson of California, that the retirees, regardless of their age, from the military, are not considered in the labor force.

Colonel KELLY. I wouldn't know the answer to that.

Mr. NEDZI. I think so.

Mr. LENNON. I thought maybe you would know.

Colonel KELLY. I might also point out—

Mr. LENNON. Can you answer that question?

Colonel KELLY. I cannot answer that question.

I might also point to the average figure that Mr. Morris mentioned yesterday, average of 42, I think he said, an average of \$250. When we are talking about the average, we are talking about the median point where you have people on both sides of the spectrum, you see.

So we do have members of the association who are young officers, retired for physical disability.

Mr. LENNON. What I am trying to do is explore the philosophy under the statement here yesterday on the part of the Secretary, and Surgeons General of the three Departments, saying that in their judgment it was an equitable distinction. I am just trying in my own mind to rationalize it. I personally know a lot of retirees in my own State, and own area, who are very successful, and some of the others were not.

That is all I have. Thank you, Mr. Chairman.

Mr. HÉBERT. Mr. Hagan.

Mr. HAGAN. No questions at this time.

I want to commend Colonel Chapman on his statement, Mr. Chairman.

Mr. SLATINSHEK. Colonel Chapman, just for the purposes of the record, you had indicated some concern about the coverage of retired officers under the medicare program and Social Security Administration at page 65, and you pointed out this was a coverage that you were paying for by virtue of the fact you were an employee under the Social Security Act now, and contributed, and suggested perhaps you should be exempted from this \$3 requirement, which would of course ensue if you came under the coverage of the act.

I would like to emphasize for the purposes of the record that the retiree would continue to have access to a space-available basis to military and to uniformed services medical facilities, which would include both inpatient and outpatient care, and would include prescription drugs, et cetera.

Colonel CHAPMAN. That is right, sir, and we think that is a very valuable right.

Mr. HÉBERT. Thank you gentlemen, very much. We appreciate your appearance and cooperation.

The next witness, Mr. Slatinshek.

Mr. SLATINSHEK. The next witness is Col. John T. Carlton, Executive Director of the Reserve Officers Association.

Colonel CARLTON. If the committee would like we would be glad to put our statement in the record and make very brief comments on it. As a matter of fact, knowing of the deep and committed and objective study of this committee, and the interest in this subject, and knowing of the information that you have, I'm perfectly willing to let you read our statement at your pleasure, if you would like to stop and go to lunch.

Mr. HÉBERT. Thank you very much.

Colonel CARLTON. We have some very important points, and I'm sure Mr. Slatinshek is familiar with them and the members of the committee are familiar with them and we would be glad to just file it. I would like to call attention to the fact Colonel Brackett, Admiral Jackson, and General Lodoen are here with me, we have given the names to the reporter.

Mr. HÉBERT. You are always surrounded with competent backups.

Would you state, though, Colonel, for the record now, your general statement in connection with the legislation? In other words, are you for it?

Colonel CARLTON. Oh, yes, our association is supporting very strongly the three principal areas we are seeking to cover here.

One point that we feel very strongly about is that the committee should write into the bill provisions for retired reservists, who could only benefit, mostly from the age 60 to the age 65, and whom we feel should not be discriminated against.

We support the bill. We support the committee in its approach to this subject. We hope that you will consider active and retired people in the military, on the same status insofar as medical care is concerned.

Mr. HÉBERT. Thank you, Colonel.

Your statement will appear at this point in the record as having been read in the record.

(The statement of Colonel Carlton is as follows:)

**STATEMENT OF COL. JOHN T. CARLTON, EXECUTIVE DIRECTOR,
RESERVE OFFICERS ASSOCIATION OF THE UNITED STATES**

Colonel CARLTON. Mr. Chairman and members of the committee, we appreciate the opportunity to express our views to you concerning these three important bills so vital to the health and morale of the members of our military services.

We support with enthusiasm the intent and purpose of H.R. 9271, which will enable our military personnel to properly care for their retarded children while serving their country. The substitute for H.R. 9271 proposed by the Department of Defense is a much improved bill in that it provides that only a part of the costs of such care will be assessed against the member, on a graduated scale according to his pay grade. However, we do feel that the maximum charge of \$250 provided in the substitute bill is excessive and may well equal the total costs of such care. Therefore, we would recommend scaling down this maximum charge. Your committee might also wish to consider establishing in law the rate of payment by the serviceman for each pay grade.

We also support the proposal contained in H.R. 13582, which would enlarge the civilian medicare program for dependents of active duty personnel. The broadening of this program to provide for outpatient care from civilian doctors is of great importance since so many dependents of our military personnel are either separated from the serviceman or are living in areas where medical care at military facilities is not available.

We are, of course, most interested in the proposals contained in H.R. 13583, which would provide a broader basis for the medical care of our retired personnel and their dependents, and would clarify the circumstances and means by which they will be provided this care. We wish to compliment the Secretary of Defense and the members of the Department who have developed this farsighted legislation. We believe that if this legislation is enacted, it not only will help in fulfilling the Government's obligation to the military personnel who have so long served in the armed services, but it will also directly benefit the Government by increasing the number of personnel who will contemplate making the military service a full time career.

There is one feature of this law that should be further clarified. As we pointed out when we appeared before the special subcommittee in 1964, prior to the Dependents Medicare Act of 1956 only military personnel were entitled to medical care. Dependents were added in this legislation on a limited basis and we welcomed this addition, but we believe that it is important to stand by principles and that conse-

quently the law should guarantee medical care as a legal right to military personnel, both active and retired.

We know that this legislation is the result of the hearings held by the Special Subcommittee on Construction of Hospital Facilities, of this committee during the period April to July 1964.

We note that you, Mr. Chairman, as well as Mr. Hardy, Mr. Bray, and Mr. Pirnie also served on that special subcommittee and we were extremely pleased with its outstanding report. We are also heartened that the legislative proposals contained in H.R. 13583 are responsive in a large degree to the recommendations contained in that fine report.

We are confident that the record of these hearings will establish clearly the obligation of the Government to furnish medical and hospital care to our military retirees, their dependents and their survivors. We also are confident that the record will show clearly that the privilege of medical and hospital care in military facilities will continue to exist, on a space available basis, throughout their lifetimes.

Another outstanding feature of this bill is that it would provide, on a share-the-cost basis, hospitalization and medical care to that increasingly large number of retirees and their dependents who live in areas not served by a military medical facility or in those locations in which the military facility cannot care for the retired population in its vicinity. We have certain reservations with respect to the charges and their apportionment, which we will discuss below.

The provisions for care of retired personnel in Veterans' Administration hospitals is also most beneficial, and should be approved.

We feel, however, that this committee can and should take the opportunity that presents itself in revising the military medical care laws to correct an inequity that has existed since the Dependents Medicare Act of 1956 was enacted.

As you recall, it was this act that first gave to the military retiree and his dependents legal entitlement to care in military hospital facilities on a space available basis. Hearings of both the House and Senate Armed Services Committee on that act clearly indicate that it was intended that this legal entitlement should be provided to all personnel drawing military retired pay. Yet, somehow, undoubtedly in executive session without the support of any discussion or argument, there was inserted in the bill a provision which denied medical care privileges to personnel retired under chapter 67, title 10, United States Code, who had less than 8 years of active duty.

This provision has created an inequity which has irked and has caused hardship to a number of retired personnel. We believe that this provision should be struck from the law so that the legislation that you develop here will apply to all persons who are drawing military retired pay.

The 8-year active duty limitation is certainly an arbitrary one which has no basis in logic. For the most part, those with less than 8 years of active duty are the men who served at the height of the great conflicts in our recent history. A man could have served during the entire period of World War I and II or the entire period of World War II and Korea without having completed 8 years of active duty. Therefore, the great bulk of the people who are being excluded are those who gave their active duty service to the country when it was most vitally needed and when that service included the greatest hardships, risks, and dangers.

While we have no cost figures available to us, we feel that, in comparison with the overall costs involved in this legislation, the additional cost would be minor, since medical care would be provided to these individuals and their dependents only from the period of their retirement at age 60 until they reach age 65. After 65, of course, the great bulk of these people would have their civilian medical care financed under the social security system.

In short, this committee now has the opportunity to correct a grave injustice and we respectfully and strongly urge that the committee take the action necessary to restore the privilege of medical care to all personnel retired with pay.

In respect to other parts of H.R. 13583, we believe that the bill will be improved if that part proposed as section 1086(c) of title 10, is amended. The determination of the cost to be borne by the member should be established in law rather than by administrative fiat. Further we believe that 25 percent may be excessive, especially in view of the fact that the individual's share of the cost under the social security program is only 20 percent.

It would seem more simple and equitable if the same charges were made under this section as provided in H.R. 13582 for dependents of active duty personnel. In other words, it is recommended that the language concerning charges as proposed in section 1079(b), title 10, United States Code, in H.R. 13502 be substituted for the language proposed as section 1086(c) in H.R. 13583.

We also believe that the provision authorizing extra beds in military hospital construction to provide for retirees could be more generous and could be strengthened by providing more definite guidelines in establishing these requirements. As we pointed out to the special subcommittee in 1964, and as that subcommittee recognized, these additional beds provide a basis for expansion in the event of emergency mobilization. Also, as the special subcommittee pointed out in its report, unless additional funds are programmed, the new hospitals which would have been constructed in fiscal year 1965, would have had a bed capacity of almost 3,000 beds less than the hospitals they will be replacing. We do not think that this factor of mobilization requirements should be overlooked in the planning and authorization for new hospital construction.

The saturation of the facilities in the Army's Walter Reed Hospital because of the necessity of long treatment for the seriously wounded in Vietnam, a relatively small war, constitutes a convincing demonstration of the wisdom of allowing for substantial mobilization requirements.

Subject to the comments contained above, with particular reference to the elimination of the inequity concerning retirees with less than 8 years of active duty, we commend the Department of Defense for developing this legislation and urgently recommend that these bills, with appropriate amendments, be favorably reported by your subcommittee.

Thank you, Mr. Chairman and members of the committee, for your consideration of our views.

Mr. HÉBERT. The next witness, Mr. Slatinshek.

Mr. SLATINSHEK. We have a representative of the Coast Guard here, Capt. Ernest Burt. Captain Burt does not have a prepared statement but for purposes of the record, he wants to indicate the position of the Coast Guard.

Mr. HÉBERT. Come around, Captain Burt.

Mr. SLATINSHEK. Captain Burt, if you could provide the committee with a simple statement of your position in respect to the legislation?

Captain BURT. All right, sir.

Mr. Chairman, the Coast Guard is pleased to appear in support of the enactment of H.R. 13582, 13583, and 9271.

There is little we can add to the testimony already presented by representatives of the Departments of Defense and Health, Education, and Welfare.

The need of our active and retired personnel and their dependents for the relief which these bills are intended to provide parallels that of the other armed services, except perhaps in the case of H.R. 13582.

Due to the large numbers of small Coast Guard units, located in relatively isolated areas, the dependents of our active duty personnel often are far from Federal facilities.

Because of this the relief afforded by the extension of medicare to the outpatient care in private facilities will benefit dependents of the Coast Guard to a proportionately greater degree than those of the other services.

Insofar as the wording of H.R. 9271 is concerned it should be pointed out that the Coast Guard, by law, is at all times a member of the armed services. It might be well to clarify the wording of H.R. 9271, so as to include a reference to the Secretary of the Department under which the Coast Guard may be operating, so as to avoid any ambiguity in this regard.

Thank you, Mr. Chairman, for the opportunity to appear.

Mr. HÉBERT. Mr. Nedzi?

Mr. NEDZI. I have no questions.

Mr. HÉBERT. Mr. Hagan.

Mr. HAGAN. No questions.

Mr. HÉBERT. Mr. Slatinshek.

Mr. SLATINSHEK. Just one question. Can you provide for the record a breakout of the number of dependents that would be affected in the Coast Guard in connection with this legislation and the number of retired personnel?

Captain BURT. Yes, sir.

Mr. SLATINSHEK. If you would simply submit that for the record.

Captain BURT. All right, sir.

(The material was previously included in HEW statistics.)

Mr. HÉBERT. Any further questions?

Mr. SLATINSHEK. No.

Mr. HÉBERT. Thank you very much, Captain. We appreciate your appearance and we appreciate always the Coast Guard which does a magnificent job in peace and war.

Captain BURT. Thank you, sir.

Mr. HÉBERT. The committee will stand in recess until 10 o'clock Monday morning.

(Whereupon, at 12:28 p.m., the subcommittee was adjourned to reconvene at 10 a.m., Monday, March 28, 1966.)

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
SUBCOMMITTEE No. 2,
Washington, D.C., March 28, 1966.

The subcommittee met, pursuant to adjournment, at 10:15 a.m., in room 2212, Rayburn House Office Building, Washington, D.C., Hon. F. Edward Hébert (chairman of the subcommittee) presiding.

Mr. HÉBERT. The committee will be in order.

Mr. Slatinshek, your first witness, please.

Mr. SLATINSHEK. The first witness scheduled before the committee this morning is Mr. Gettings, representing the National Association for Retarded Children.

There is a copy of Mr. Gettings' statement set out before each of the members of the subcommittee.

Mr. HÉBERT. Mr. Gettings, you may proceed.

**STATEMENT OF MR. ROBERT GETTINGS, NATIONAL ASSOCIATION
FOR RETARDED CHILDREN**

Mr. GETTINGS. Thank you, Mr. Chairman.

Before I start, I would like to express the regret of Colonel Ettenger to be unable to be here this morning to present this testimony. He was called out of town on urgent business.

I appreciate the opportunity to appear before the subcommittee this morning to offer the testimony on behalf of H.R. 9271, on behalf of the National Association for Retarded Children. As the major citizens organization in the country concerned exclusively with the problem of mental retardation, we frequently have been contacted over the years by servicemen attempting to obtain proper care, training, and treatment for their retarded dependents.

The stories of hardship which we have received have made us acutely aware of the plight of many military families with retarded members.

One indication of our concern is this study entitled "The Problems of Armed Forces Personnel With Mentally Retarded Dependents." We have also produced a directory of services for the retarded for armed services personnel.

Earlier in these hearings the Department of Defense has described the staggering financial burden and poignant family tragedy which often faces military families with a retarded dependent. We could point out many other heart-rending cases which have come to our attention over the years but to do so would be merely repetitious. The important point is that this is a serious problem worthy of the diligent attention of this subcommittee.

We support the purpose of H.R. 9271 but recommend that the committee adopt the alternative draft proposed by the Department of Defense since we feel it provides a more comprehensive approach to solving this problem. Representatives of the Department of Health, Education, and Welfare have already explained to this subcommittee the advantage of the draft bill in comparison to H.R. 9271. We will not occupy your time with further explanations of these differences except to point out that the alternatives to residential care outlined in the draft bill are vital if a full range of services needed by all mentally retarded dependents is to be provided.

While lending our general support to the Department of Defense proposal, we would like to suggest two ways in which it could be improved:

(a) Change the definition of persons eligible for services in section 1079(c): While the terms "moderately," "severely," and "profoundly" retarded have been used by the American Association on Mental Deficiency to describe the degrees of mental disability, this terminology does not lend itself to precise, objective definitions and, as yet, has not been universally accepted in the field of mental retardation. Moreover, the purpose of this bill is to assure that the proper type of service is provided to each individual with such mental and physical handicaps; thus, an absolute definition of the degree of disability involved is not essential since the services are not necessarily fixed by this factor. Thus, for example, a moderately retarded mongoloid child without physical disability may be able to live at home with his parents and receive special educational services when a proper program is available. However, should his father be transferred to a new duty station where such a program is not available, the child may have to be placed in a boarding home in order to receive proper training.

If the words "moderately," "severely," and "profoundly" retarded, as contained in the draft bill, are incorporated in the language of the statute which Congress enacts, we feel that difficulties may arise in administering the act due to the lack of precise definitions for these terms. As an alternative, we suggest that the following language be used after the word "title," in section 1079(c), line 4: "who is so seriously mentally retarded or physically handicapped as to be unable to receive proper care, training, and treatment from resources available to him in the locality."

(b) Reduce the maximum and minimum charges to service members for benefits provided under section 1079(c): The maximum and minimum charges for care, training, and treatment contained in section 1079(d) of the draft bill exceed the current charges for institutional care in State-operated facilities in many States; therefore, we feel that these statutory limits should be reduced.

The general policy of the National Association for Retarded Children on the responsibility of parents for the cost of institutional care is that the amount charged the parents should not exceed the cost of maintaining a normal child at home. While, on the surface, a charge of \$25 may appear to conform to this policy, the impact of such a charge on the family of a lower-grade enlisted man must be taken into account. A \$25 deduction from the base pay of an enlisted man in pay grades E-1, E-2, E-3, or E-4 would seriously affect the ability of the family to make ends meet. Deducting \$25 from the base pay of a private E-1 with less than 4 months' service—\$87.90—would have a disastrous effect on the family. Even the family of a serviceman in pay grade E-5 with 2 to 3 years' service—\$194.10 per month—can hardly afford a \$25-a-month deduction without sacrificing family necessities.

Increasingly the States are recognizing that a minimum family income should be established below which charges for institutional care are not assessed. Chart A illustrates the charges to parents with a family income of \$1,000 to \$10,000 in the States of Louisiana, Minnesota, Michigan, and Connecticut. These States were selected

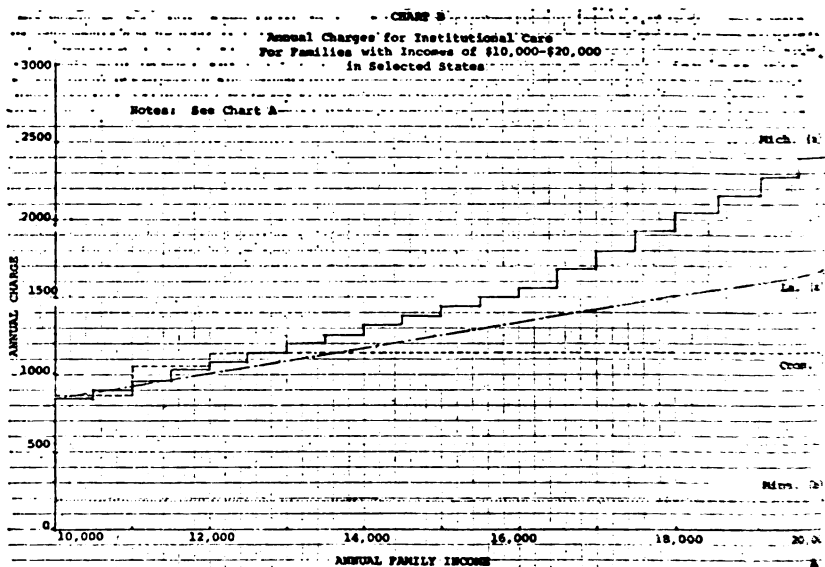

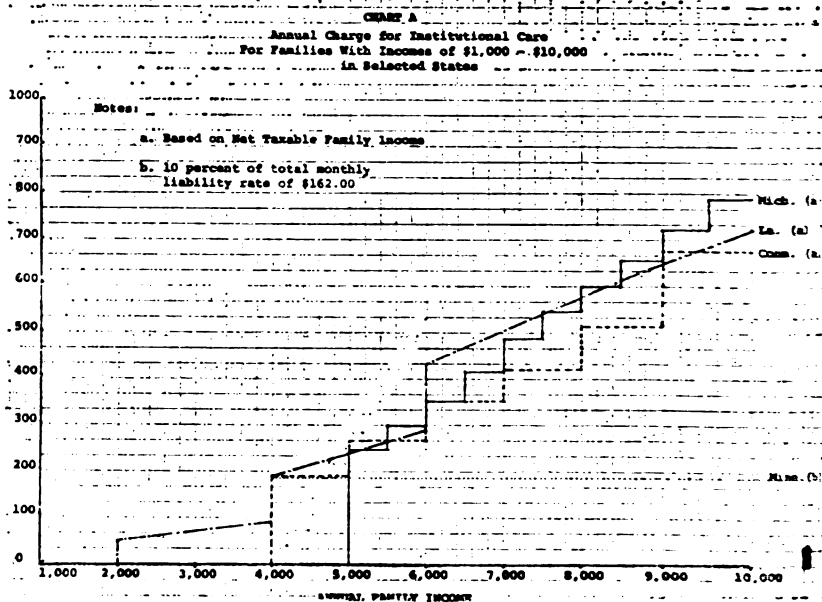

because they have recently revised their fee schedule and, therefore, detailed information was available. Notice that of the four States only one charges families with a total income of less than \$4,000 per year and that the one State which does collect from such families charges only \$4 to \$8 per month. While a few States have laws on the books which would require parents with an annual income below \$4,000 to pay \$25 a month or more, a survey of charges for institutional care conducted by our association in 1963 indicates that in practice collection of such amounts rarely occurs. Thus, in many States a serviceman would be charged more than a civilian resident for care, training, and treatment of a retarded member of his family in a State-operated institution.

We also feel that the maximum charge of \$250 per month is too high. A survey conducted by our association last year indicated that the maximum charge for residential care in State-operated institutions exceeded \$250 per month in only 1 out of 36 States reporting. Chart B illustrates the charges for residential care in State-operated institutions for families with an income of \$10,000 to \$20,000 per annum in Louisiana, Michigan, Minnesota, and Connecticut. Both this survey and graph indicate that service members in the upper pay grades often would be required to pay more—in some case many times more—than a civilian resident of the State.

The purpose of the draft bill is to create an equitable situation for the serviceman with a retarded dependent; such equity is denied to the serviceman if he is required to pay more for residential care than a civilian resident of the State with a comparable family income. We feel that reasonable maximum and minimum monthly charges for care in State operated institutions should be established, based on the net taxable family income of servicemen in the lowest and highest pay grades.

In conclusion, we again would like to stress that, with the exception of the two points discussed above, we wholeheartedly support the draft bill submitted by the Department of Defense and urge that it be accepted as an alternative to H.R. 9271.

(The charts referred to in the statement are as follows:)

Mr. HÉBERT. Thank you very much.

The paper you exhibited, what is that called?

Mr. GETTINGS. "The Problems of Armed Forces Personnel With Mentally Retarded Dependents."

Mr. HÉBERT. Without objection, we will put that in the record at this point.

(The document referred to reads as follows:)

THE PROBLEMS OF ARMED FORCES PERSONNEL WITH MENTALLY RETARDED DEPENDENTS

(Prepared by Helen B. Holodnak, National Association for Retarded Children, Inc., New York, N.Y., April 1964)

INTRODUCTION

NARC has long been concerned with the problem of Armed Forces personnel with mentally retarded dependents and their efforts to secure services for their children. The earliest reference to this problem in the Armed Forces file dates back to May 1953, in which the need for Federal legislation was underscored.

In January 1955, reference was made to preparing a paper or pamphlet entitled "Suggestions to Military Personnel with Retarded Children" because of numerous requests for information and guidance from service families. With the pressure of the increasing workload of a growing organization, there was not time to follow through.

The correspondence from service families increased as the strength of the Armed Forces was built up within the continental United States, and overseas in recent years. A variety of requests for information and assistance were received at NARC headquarters. Many instances of hardship suffered by service families underscored the injustice of the States' requirement of legal residence. Much assistance has been given on a case-to-case basis, but there has been a long-felt need to thoroughly and systematically review the problem involving all branches of the Armed Forces.

The study was planned for a 5-month period and was initiated on July 1, 1963. It was extended for an additional 3 months during which the pamphlet entitled "A Guide for Armed Forces Families With Retarded Children" was prepared.

Upon completion of this report, a draft was submitted to the Department of Defense for review. Numerous comments were received subsequently. These were carefully studied and evaluated, and revisions were made in the report based upon the aforementioned comments.

Existing literature

Various periodicals and material gathered from the resource files of NARC were reviewed and source material was made available by the professional staff on related aspects of the problem. A careful study of current literature on residence laws was undertaken, in particular material prepared by the National Travelers Aid Association which has long spearheaded the movement toward the removal of residence requirement for all persons in need.

The Interstate Compact on Mental Health which was adopted by the Council of State Governments in 1955 provides for reciprocal arrangements under which States making up the compact agree to accept each others' residents on transfer from an institution of another State. At present, only 28 States have adopted the compact, providing reciprocal facilities for mentally ill and mentally deficient patients when residence requirements have been met. One half of the States in our country have varying requirements ranging from 5 years' residence to 1 year. Several States have no definition in terms of years, but require proof of intent or physical presence.

Various legislation relating to education and medical care of dependents was reviewed. Regulations, directives, and publications of the Department of Defense and branches of the Armed Forces were made available to NARC and were studied.

Cooperation with Department of Defense

In the literature, there are no studies reported concerned with the unmet needs of mentally retarded dependents of Armed Forces personnel. NARC has the distinction of being the first voluntary agency to undertake a study of this nature and scope. Excellent and unusual cooperation has been extended to NARC by the Department of Defense facilitating greatly the gathering of data.

Much interest has been evidenced by the Department of Defense and the various branches of the Armed Forces in the study which focused upon the unmet needs of retarded dependents and the implications of the findings for future activities of NARC.

Of primary importance in launching the study was the establishment of liaison within the Department of Defense with the proper governmental and military officials, so that the purposes and goals of the study could be interpreted and understood. On August 15, 1963, a meeting was arranged with Dr. Shirley C. Fisk, Deputy Assistant Secretary (Health and Medical) and other persons¹ representing various departments in the Department of Defense (Manpower).

The President's Panel on Mental Retardation estimated that there are 75,000 mentally retarded children of servicemen who present special problems and require special facilities. NARC's representatives pointed out that the decision to undertake the study was predicated upon requests for assistance from servicemen within the continental United States and abroad over a period of years indicating—

1. Difficulty encountered by military personnel in establishing legal residence and hardship endured in seeking services for the mentally retarded dependents.
2. Lack of adequate medical facilities.
3. Lack of adequate educational facilities.
4. Inadequate methods for disseminating information on mental retardation within the Armed Forces and the community.
5. Difficulty and hardship experienced in endeavoring to obtain residential care facilities.
6. Need to determine what kinds of information should be included in a manual to be prepared for use by NARC units to render more effective service to military families and their mentally retarded dependents.

There was general agreement that legal limitations imposed by Congress and the varying residence requirements of the several States were formidable stumbling blocks creating severe hardship for military families. Current policies limiting services to mentally retarded dependents might be altered affording a more liberal interpretation resulting in improved services, but basically, legislation was required to correct inequities and injustices.

The Department of Defense is very much aware of the service families' plight and would welcome a solution. It was pointed out that NARC was undertaking this study to determine how it can best serve military families with retarded children. When the Department of Defense evaluates its own facilities and resources and determines what services can be rendered to the mentally retarded, then NARC can mobilize its resources to provide for the unmet needs.

Certain information and data are vitally necessary if an adequate picture is to be obtained concerning mentally retarded dependents. These areas are comparable to those which are important for any group of retarded children. Facts were gathered and assembled systematically regarding financial assistance and social services, medical services, educational services, facilities for residential care, in the various branches of the Armed Forces.

QUASI-MILITARY AGENCIES AND THE AMERICAN RED CROSS

Early in 1942 when the Armed Forces were rapidly expanding, it was apparent that it was necessary to take steps to provide assistance to service families when they were in financial distress for which there were no appropriated funds. The Navy Relief Society, established in 1904 as a private organization to render assistance to members of the Navy and Marine Corps and their dependents, had long pioneered in this area. The Army and Air Force established similar private organizations in the early months of 1942, known as the Army Emergency Relief and the Army Air Force Aid Society, respectively. From the standpoint of morale it was felt that members of the Armed Forces would have peace of mind in the knowledge that there was a resource to which their families could turn in times of financial crises and need.

The funds to finance the programs of these agencies are derived from investments which are substantial and contributions made by personnel of the respec-

¹ Representatives Department of Defense, Manpower attending: Shirley C. Fisk, M.D., Deputy Assistant Secretary (Health and Medical) representing Hon. Norman S. Paul, Assistant Secretary (Manpower); Col. S. M. Hogan, Professional Education Division, representing Col. J. A. Bowman, directorate of education programs; Lt. Col. Vernon McKenzie, representing Col. H. E. Griffin, assistant for professional service; Capt. G. D. Williams, USN, directorate for management affairs, representing Brig. Gen. Julian H. Bowman, Deputy Assistant Secretary (military personnel policy); Chaplain John J. Rhea (colonel, USA) Executive Director, Armed Forces Chaplains Board; Col. Stanley W. Dziuban, representing NARC and Northern Virginia Association for Retarded Children.

tive branches of the services. These agencies also receive unsolicited gifts from civilian friends, but are not supported by Government funds. Assistance to service families is given in the form of grants or outright gifts, and non-interest-bearing loans. Originally established for the purpose of providing financial assistance, the programs of these organizations were broadened to encompass a wide range of social and health services including provisions for handicapped children.

The structure of each program varies, but the goals are the same—to maintain morale and to relieve distress of Armed Forces personnel. Each of the organizations has auxiliaries or units at military installations in the continental United States and overseas. Servicemen may apply to the nearest office for assistance.

Army Emergency Relief

The Army Emergency Relief has purchased services for approximately 15 handicapped children during the period December 1961 to August 1963. Of this number, only a handful were mentally retarded. For an occasional child, tuition fees were paid to enable him to obtain special training or education. General Witsell,² the director, stated that hospitalization for chronic or permanent handicaps such as mental retardation is provided for a two-week period to enable the parents to arrange a permanent plan. In general, the program of the AER appears to be rigidly administered and quite limited in scope as compared with the Navy and the Air Force.

Navy Relief Society

The Navy Relief Society also aids members of the Marine Corps and the Coast Guard when it serves as part of the U.S. Navy in time of war. Admiral Jarrett stated that the policy of the Society regarding handicapped children is liberal. There is no financial limit placed upon the amount of funds expended upon a child, and in some instances a considerable sum is spent. Unfortunately, no statistics are kept on the number of retarded children served. When an instance of permanent placement is involved, the Society will help financially until suitable placement is found. Of the quasi-military organizations, the Navy Relief Society is financially by far the wealthiest. It is the oldest and has had more time to build up its assets, and it has received substantial bequests. Provisions are made for special training of handicapped children when it is indicated. The Navy Relief Society is also unique in that it is the only military welfare organization employing trained social workers. Two of the social workers serve as field representatives training volunteers at the various auxiliaries throughout the country. The third social worker serves as case work director, directing the Society's activities in the area of social work. The Society does not support classes in special education although it could well afford to do so. Admiral Jarrett stated that the Society would support a class for mentally retarded children if it were asked to, but it has not been approached. It is interesting to note that the Society also offers some additional services. Nurses are employed to provide visiting nursing care for dependents such as follow up of patients discharged from the hospital, assistance and instruction to mothers of newborn infants, etc. Nurseries are provided where mothers may leave small children while visiting the commissaries or hospitals. The Navy Relief Society has the financial means to provide generously for Navy families and, within the limits of its defined policies, it does so.

Air Force Aid Society

During World War II, the Army Emergency Relief was authorized to provide emergency financial assistance to Army Air Force personnel as well as Army personnel. Although the Army Air Force Aid Society was established in 1942, it did not officially begin operations as the emergency relief organization for the Army Air Force until 1946 when it received one-third of the prorated assets of the Army Emergency Relief. In the following year it adopted its present name—Air Force Aid Society. This organization is unique in that in addition to the usual financial assistance program, it has organized a disabled children's program, known as CHAP. Project CHAP (children have a potential) was initiated in 1961 "to provide guidance and financial assistance to Air Force families who have physically or mentally handicapped children under the age of 21, who need financial assistance to carry out a firm medical and educational program." At every airbase around the world, a CHAP program has been established to help Air Force families with handicapped children with the official sanction of the

² Refer to appendix for title, agency, and address for persons mentioned in the text.

Air Force. It was gratifying to learn that the Air Force Aid Society has kept accurate statistics of the number and types of handicapped children assisted. In the 18-month period, December 1961 to June 1963, a total of 602 children were aided involving an expenditure of approximately \$113,000. Of this number, 115 retarded children (19 percent) were provided various services involving the sum of \$28,343. The retarded group was carefully broken down into four categories:

1. Mentally retarded educable.....	49
2. Mentally retarded trainable.....	48
3. Mentally retarded uneducable.....	11
4. Mongoloid.....	7
Total.....	115

Major General Davidson, director, kindly made these statistics available and stated that the Society is anxious to expand its activities and expenditures for handicapped children. The Air Force Aid Society is also distinguished in that it has financially underwritten a program of special education at various airbases around the world for physically and mentally handicapped children by paying the salaries of the teachers. Financial assistance is also provided to supplement the dependents' medical care program when the individual is faced with medical costs over and above those authorized which cannot be met within his resources. However, the Society does not provide for continual hospitalization or other institutional care because of limited funds. The emphasis in the Air Force aid program is on helping people to help themselves.

Coast Guard Welfare

A word must be said on the provisions made by the U.S. Coast Guard for its personnel. In peacetime, the Coast Guard is under the jurisdiction of the Department of the Treasury, whereas in time of war it is under the jurisdiction of the Navy. Coast Guard Welfare assists personnel with grants and non-interest-bearing loans in times of need when it is on a peacetime basis. Captain A. C. Wagner, executive vice president, was very interested to learn of NARC's Armed Forces Study and of the general activities of NARC. At the present time the Coast Guard Welfare has knowledge of three families who have mentally retarded children. Captain Wagner will send a notice to all welfare directors of the U.S. Coast Guard districts advising them to refer parents of retarded children desiring information and guidance to NARC. Coast Guard Welfare is a very small organization compared to those of the other branches of the Armed Forces, but it endeavors to help to the utmost Coast Guard families in need. Since the Coast Guard only has approximately 30,000 men, Captain Wagner stated that it has a family atmosphere that the other branches could not have, because of their size. He expressed his appreciation for having made known to the Coast Guard Welfare the resources of NARC.

Several of the above programs are not professionally directed nor manned by full-time personnel. This fact limits the effectiveness of such programs in dealing with complex problems and the individuals affected. The military welfare organizations are a vital morale building force and their activities on behalf of service personnel are commendable. With professional direction and staff the programs, for example, of the Army Emergency Relief and the Air Force Aid Society would be materially strengthened resulting in improved services for service personnel and in the more effective utilization of funds.

The American Red Cross

All of the quasi-military agencies described above coordinate their programs with that of the American Red Cross. The military welfare agencies and the Red Cross have agreed on policies and procedures to facilitate mutual cooperation in providing financial assistance to service personnel and their dependents. Although their financial assistance policies appear to be nearly parallel, there are situations in which one agency can assist and the other cannot. The American Red Cross, of course, is empowered by Congress to carry on activities for the benefit of the Armed Forces and their families, both in peace and war. Much of the case work is done by the local Red Cross when service families suffer hardship, when there is financial need or when resources in the community such as residential care for a mentally retarded child must be found.

Areas in which there is a concentration of military installations such as Washington, D.C., have many troubled families seeking services for their mentally retarded children, and because of the relative paucity of facilities in Washington, they rely heavily on the local chapters of the Red Cross to assist them in finding solutions.

Several excellent case summaries have been made available to NARC by the District of Columbia chapter demonstrating severe hardship and complex family problems. The parents of these retarded children gladly gave permission for the chapter to make their case histories available to NARC for two reasons: to express gratitude to the chapter for the help given them and their retarded children, and to assist NARC in making known the plight of service families in the hope that some steps can be taken to relieve distress and hardship. Local community and medical agencies also released case record material through the District of Columbia chapter of the American Red Cross to NARC. Mrs. Eloise Waite, Director of Home Service of the District of Columbia chapter of the American Red Cross has been most cooperative.

The American Red Cross, National Headquarters, the area office in Alexandria, Va., and District of Columbia chapter have extended unusual cooperation in assisting NARC in gathering information and data for the study, and would welcome recommendations or suggestions which would result in improved services to military families with retarded children.

VOLUNTARY AGENCIES

National and international voluntary agencies also provide services to military families. These agencies have been most cooperative and have indicated a deep concern for the hardships service families encounter and endure in seeking services for their retarded children. Expressions of desire to cooperate with NARC or to receive suggestions or recommendations toward improvement of services were the rule; rather than the exception.

One of the first steps taken prior to gathering data in the Armed Forces was to confer with representatives of the National Travelers Aid Association and International Social Service which provide casework services and financial assistance to military families when the areas of difficulty fall outside of the realm of the American Red Cross. Miss Evelyn Jacobs of NTAA and Mrs. Eugenie Hochberg of ISS, a spokesmen for their respective agencies, verified and documented the great financial and personal hardships suffered by service families because of the needs of their retarded children for special services when the requirements for legal residence could not be met.

MEDICAL SERVICES

Joint Directive on Dependents' Medical Care

In April 1962, a Joint Directive on Dependents' Medical Care was reissued by the Department of Defense and the Department of Health, Education, and Welfare. The directive, known as the "medicare" directive, provides information and guidance on the implementation of chapter 55, title 10, United States Code, Medical and Dental Care (formerly the Dependents' Medical Care Act, Public Law 569, 84th Cong.). The term "medicare" in this instance refers to the program of medical care provided for dependents of the personnel in the uniformed services, and is not to be confused with the "medicare" program the late President Kennedy proposed for retired persons receiving benefits under the jurisdiction of the Social Security Administration.

The statutes define very carefully and explicitly what medical services may be furnished to dependents of a member of the uniformed services by uniformed services facilities or civilian medical facilities.

The wives and children of members of the uniformed services serving more than 30 days are eligible for care from civilian sources and in uniformed services facilities. However, service facilities must be used if they are available and capable of providing required care when dependents reside with their sponsors or the head of the family who is in the service. Dependent children who are mentally or physically incapacitated are eligible for care at age 21 and beyond only if the incapacity existed prior to their attaining age 21. In addition, dependent children who are enrolled in a full-time course of instruction at an approved college or university retain their eligibility until reaching age 23. In areas where there is no uniformed service medical facility, or where the service facility is unable to provide the required care, authorization is given to obtain care from civilian sources. In acute emergency requiring immediate treatment, medical care may be obtained from the nearest civilian medical facility in order to preserve life or prevent undue suffering.

Medical services provided

It is important to note that medical care provided dependents, and medical care which is specifically denied dependents, both through Armed Forces medical facilities and through "medicare" are in accordance with congressional authoriza-

tions, budgetary and personnel limitations. Furthermore, the number of dependents of active troops and the number of retired personnel and their dependents who are also eligible for medical care, does not enter into the determination of the number of medical officers in the Army, Navy, and the Air Force. The number of medical officers in each branch of the service is determined solely by a ratio of a given number of medical officers to a given number of active troops.

The primary function of the hospitals and dispensaries of the Army, Navy, and Air Force (uniformed services medical facilities) is to provide medical care for the active troops or personnel. If medical staff, space, and facilities are available, after providing medical services to the Armed Forces, then medical care may be provided to dependents as follows:

1. Diagnosis.
2. Treatment of acute medical conditions, surgical conditions, contagious diseases, acute emergencies of any nature.
3. Immunization.
4. Maternity and infant care.
5. Other unusual and special and authorized care.
6. Drugs and medicinals may be obtained by dependents subject to their availability.

Medical services not provided

Dependents are not provided hospitalization at hospitals and dispensaries of the Armed Forces for the following:

1. Chronic diseases except for acute flareups or complications requiring active or definitive medical or surgical treatment.
2. Nervous and mental disorders, except for diagnostic purposes.
3. Domiciliary care (care normally provided in an institution such as a nursing or convalescence home).
4. Dependents are not provided: Artificial limbs, artificial eyes, hearing aids, orthopedic footwear. Overseas or in remote areas, if these items are not available from private sources, dependents may purchase them from Government stock, if available.
5. Ambulance service, except in an acute emergency.
6. Home calls, except in special cases.
7. Dental care is not provided except for emergency treatment or if required for treatment of a medical or surgical condition. In "remote" areas in the United States, dental care is provided dependents on a "space available" basis. Overseas, dental care is authorized at all uniformed services facilities.
8. Outpatient clinic care may not be obtained from civilian sources except for (a) obstetrical and maternity care; (b) care of an infant born outside a hospital (limited to 10 days after delivery); (c) treatment of bodily injuries; (d) services required of physicians or surgeons immediately before and after hospitalization for an injury or surgery requiring followup care; (e) X-ray, radium, or similar treatment initiated during a period of hospitalization.

Gaps in medical service

Careful examination of the provisions for medical care, and restrictions of medical care reveal serious gaps for adequate diagnosis, evaluation, and treatment of mentally retarded dependents. The entire medical care program for dependents is subject to the availability of staff and space after the needs of active troops and personnel have been met. Obviously, sufficient staff should be provided to insure adequate medical care of both military personnel and dependents. Although diagnosis is one of the services provided by uniformed facilities, with insufficient staff and limitations of space, proper diagnosis and evaluation of the retarded may not be possible. Outpatient clinic services are limited by the same factors, yet a dependent is not eligible for outpatient clinic services in a civilian facility. The serviceman may take his child to any civilian hospital if he is prepared to pay for diagnostic and evaluation services. The Army has several evaluation centers to which retarded children may be referred for diagnostic workup: Walter Reed General Hospital in Washington, D.C., Letterman General Hospital in San Francisco, and Landstuhl General Hospital in Germany. Several of the larger Air Force hospital staffs include a psychiatrist, neurologist, pediatrician, psychologist and social worker, and in essence function as evaluation centers. The Navy does not have any evaluation centers.

Facilities for inpatient care and treatment of the retarded are not provided unless an acute medical problem exists which must be treated. Although cases of chronic disease are not eligible for hospital care, severely retarded children have been accepted and usually retained for a period of 21 days. In unusual instances

where hardship exists, a child has been kept as long as 6 months. There is no provision for residential or institutional care, and service families encounter more than usual difficulty in finding suitable placement for their children.

It was most interesting to learn that although the uniformed services are responsible for the medical care of approximately 150,000 to 200,000 children of school age, child guidance clinics are completely lacking. One child psychiatrist has been assigned to serve all Europe where a substantial number of military personnel is stationed. According to medical officers who are concerned with the administration of professional services, there is a high incidence of emotionally disturbed children in service families, among them children who may or may not be retarded, but because of emotional problems are difficult to assess.

A mentally retarded child who has a multiple handicap, requiring braces, for example, would create added expense, for these would have to be purchased from civilian sources. Fees for special tests and procedures such as psychological testing, speech therapy or psychotherapy for dependents must also be paid by the parents if obtained at civilian facilities. Because of modest incomes, service families cannot afford to pay the high costs of these procedures and therapies if they are not available in military hospitals and dispensaries.

Need for reevaluation of dependents' medical care

The Department of Defense and the medical administrators and staffs of the uniformed services are very aware of the limitations in the dependents' medical care program. The facilities are available, but in order to conduct an adequate program, additional staff and buildings in which to house staff are needed. To render adequate medical services would require changes in the laws broadening the range of medical services for dependents. The medical personnel of the several services are concerned for the welfare of dependents, particularly the mentally retarded, the emotionally disturbed, and the chronically ill. They are more than willing to assume responsibility for the medical care of dependents. As a matter of fact, medical personnel would welcome the opportunity to provide an adequate medical program for those whom they may diagnose, but not treat.

Legislative measures designed to amend or change present laws would alleviate the lot of the retarded child, and this approach should be thoroughly explored. It may also be necessary to consider new legislation. An increase in medical staff in the uniformed services is of primary importance, for without additional staff changes in statutes permitting increased services for retarded children would merely be a change on paper and not in practice. It is difficult to determine the degree of influence or control by Congress and by the various departments and agencies concerned within the Department of Defense upon medical staffing. Appropriate steps should be taken by the Department of Defense to increase its medical strength to insure adequate medical care for dependents of active troops, retired personnel, and their dependents.

EDUCATIONAL SERVICES

Dependents' school program in the United States

The educational program for children of military personnel in the United States is under the jurisdiction of the U.S. Office of Education, through the Assistant Commissioner and Director of the Division of School Assistance in Federally Affected Areas. Children of military personnel generally attend classes in the local school system, and mentally retarded children also attend its classes. When it is deemed by the U.S. Commissioner of Education that the local school system does not provide a suitable education, the Commissioner allocates funds to a military department to allow the commanding officer of a military installation to conduct classes on base. Certain segregated classes in Southern States were deemed to be unsuitable, and the military installations were authorized to conduct classes. Statistics on the number of classes for mentally retarded children were not available. It was stated that data of this kind was not submitted in reports prepared. The number of retarded children of military personnel attending classes in the local schools would be difficult to obtain.

Dependents' school program overseas

The educational facilities for mentally retarded dependents of service families overseas are fragmentary, and relatively little information could be obtained concerning the numbers of children in schools and the number of classes established. In gathering data on this aspect of the study, appointments were arranged with the Office of Dependents' Schools in the Army, Navy, and Air Force. In discussions with representatives of the dependents' schools, much was learned

about the problems of administering global school systems consisting of more than 290 schools, with a school population of approximately 160,000 children.

The Department of Defense has the ultimate authority and responsibility for the administration of the overseas military dependents' school program. At this level, the major concerns of the Department of Defense are policy and budget, and it is greatly removed from the level of the classroom and the teacher. One of the reasons for this state of affairs is due to the fact that the overseas dependents' school grew in a period of 18 years from nothing to a multimillion-dollar educational system. In 1945, the first organized overseas dependents' school was established; there are now about 300 such schools. As one colonel at the Pentagon put it, "It just grew like Topsy." As a matter of fact, the overseas military dependents' school program was established 2 years before the Department of Defense was created, which was in 1947. Each of the branches of service conducts the dependents' school program for children of the personnel.

Department of the Army

The Army has a large program for mentally and physically handicapped children, but the exact number of children enrolled in classes is not known. At the Office for Dependents' Education, very careful and extensive statistics are kept on average daily membership and related data. However, there are no records of how many physically handicapped, blind, cerebral palsied or mentally retarded children attend school overseas. Specific information on the number of these handicapped children was not tabulated since no one expressed the need for it, and the data was not necessary for the computation of the budget. Similar situations were found in the Air Force and the Navy.

Information provided by the NARC International Relations Committee indicates that in Europe there are at least 19 classes: 17 classes for the educable child at the elementary level (Germany, France, and Italy) 1 in Germany for the trainable child 6-18 years of age, and 1 high school class in Germany for the educable youngster age 14-18.

A special study was recently done in Europe concerning what happens to the junior retarded child. This is the child who would have completed the program in the elementary school (if he were normal), and is now old enough to move on to the grade 7-12 school unit. No program as yet has been planned for this child.

Mr. Engel, Deputy Director of the Dependents' Schools for the Army, stated that there are 136 schools under the jurisdiction of the Army of which 25 are high schools. The school population numbers in the neighborhood of 75,000 children.

Department of the Navy

The Navy Dependents' School does not have any special education classes overseas for either mentally retarded or physically handicapped children. Where possible, families with such children are transferred to a city with facilities in special education. The child might also be sent to the best private school in the area for which the Navy would pay the tuition.

Mr. Martin, a civilian employee who is assistant head of the program, stated that "the Navy has been very fortunate in that very few requests for schooling for handicapped children have been received." The Navy has approximately 10,000 children in attendance in 37 schools, of which 12 are high schools.

In the Continental United States the Marine Corps has one school system which provides special education for retarded children. At other Marine Corps installations arrangements are made with the local school districts which provide special education programs.

Department of the Air Force

The Air Force has 120 schools, of which approximately 18 are high schools with an enrollment of 63,000 children. The Air Force has knowledge of 12 classes for retarded children and is aware of a great need for additional classes in Europe where there are 4. The remaining 8 classes are in Japan. Currently, efforts were being made to obtain approval for a class for trainable children in Europe. Major Stafford, assistant chief of the dependents' school program, stated that in Germany where there is a heavy concentration of Air Force personnel, only a small number of retarded children are being afforded the opportunity of attending special classes.

One of the greatest problems in overseas schools is the poor physical facilities in which classes are housed. Old barracks, converted quonset huts, and buildings for which the military no longer have use are made available for classrooms. Many of the rooms are very small and are not large enough for 25 children, which is an important statistic. The teacher-pupil ratio for normal children is 1 to 25.

and salaries for teachers are allocated according to this ratio. If rooms cannot house more than 15 children, then additional teachers must be employed, reducing the amount of funds available for supplies, teaching materials, library books, etc.

Fiscal problems

The two major problems in the conduct of a dependents' school program are inadequate funds to properly run the program and the inflexibility in the use of such funds. The amount allocated by Congress per child in 1963 was \$280. Since the cost of educating a retarded child ranges from 3 to 5 times that of a normal child, it is readily apparent that either normal children will have to be educated at the expense of handicapped children, or handicapped children at the expense of normal children, unless Congress can be persuaded to increase this amount substantially. In Wiesbaden, Germany, the cost of providing a retarded child with an opportunity to attend school is \$701 per year. The cost of tuition in private schools for children in countries like Venezuela where tuition is \$1,000 per year is another item which seriously cuts into the \$280 per capita.

The economic basis of the dependents' school program is unsound, and needs to be thoroughly overhauled. Legislation might be needed to make it mandatory for retarded as well as handicapped children to be provided an education. Mr. Katzenbach, Deputy Assistant Secretary (Education) DOD, is sympathetic to the problem of the retarded and desires to move as quickly as possible toward providing adequate educational opportunities for these children.

SOCIAL SERVICES

Department of the Army

Social services in the armed services are fragmentary and there is no common or consistent pattern among the various services. The Army has the largest department of professionally trained social workers under the direction of Colonel Rooney, Social Service Consultant to the Office of the Surgeon General. Colonel Rooney has a staff of approximately 150 trained social workers and some 300 social work specialists who have been given an intensive 8 week orientation course in social work. The specialists, a substantial number of whom have college backgrounds, assist the trained social workers in the conduct of a social service program. Social workers are assigned to Mental Hygiene Consultation Units and General Army Hospitals.

Mental hygiene consultation services are usually available to dependents but not for treatment since these are minimally staffed. At the general hospitals there are neuropsychiatric units which are staffed by psychiatrists, social workers, and psychologists, so that a more refined evaluation can be provided for dependents, but very limited treatment facilities. Social work services are not available to dependents unless they are seen by physicians who refer cases to social workers when indicated. Unless a dependent gets into the "medical stream," there is no access to social work services.

Department of the Navy

The Navy does not have any social workers, nor does it have a social service or welfare problem. Dependents are referred to the Red Cross Field Director or the Navy Relief Society for assistance with problems.

Department of the Air Force

The Air Force has a staff of social workers who are assigned to neuropsychiatric units of Air Force hospitals which, of course, are also staffed with psychiatrists and psychologists. Additional assistance is provided Air Force families with personal problems through the family services program. This organizational structure is commendable because it provides a department at each base to which families may go with personal and family problems. The Air Force is the only branch of the services which administratively provides a family services officer at each base whose responsibility is to help families with problems. The CHAP program for handicapped children is also conducted in conjunction with the family services program.

Chaplains

Chaplains have an important role in counseling and guiding service families and making referrals to military and community resources. Traditionally, the Chaplain directs the spiritual activities and life of the military. In the Armed Forces, the chaplain counsels personnel on every aspect of their personal lives, and provides psychological counseling and social services when indicated.

FIELD VISITS

It was felt that it would be advantageous to visit a few select military installations to gether firsthand data on services available to service families with retarded children. As the study progressed, opportunities were afforded to visit an Air Force, Army, and Marine Corps installation.

Bolling Air Force Base, Washington, D.C.

The Family Services Center at Bolling Air Force Base was visited to learn how the program is organized and administered at the base level. A conference was arranged with Mrs. Curtis LeMay, Mrs. Joseph Carroll, Mrs. John Ryan (wives of Air Force generals) and Capt. Patricia Doyle, Family Services Officer. The activities of the family services and CHAP programs at more than 200 bases around the world are carried on by service wives who work as volunteers in various aspects of the programs. The various wives clubs (officers, non-commissioned officers, and enlisted personnel wives clubs) raise funds to support these programs.

Mrs. LeMay is the founder and "guiding spirit" of the family services program, which was organized by her approximately 10 years ago with a committee of Air Force wives. Subsequently, a conference was arranged with Mrs. LeMay at her home to obtain detailed information and data on the development of the family services and CHAP programs.

Walson Army Hospital, Fort Dix, N.J.

A trip to Walson Army Hospital provided valuable information concerning the role of the Army social worker in a neuro-psychiatric unit. Major Baxter, Chief Social Worker, and one of his staff, Lieutenant Hoffman, were most cooperative in making available case history materials and data relating to Army families with mentally retarded dependents. Lieutenant Hoffman, who is assigned to work solely with dependents, has been in contact with the Burlington County ARC Unit in New Jersey regarding resources for retarded children. Valuable suggestions were obtained concerning the kinds of information which should be included in a guide for use by social workers in military settings. An opportunity was provided to observe several retarded children in the pediatric ward of the hospital.

Marine Corps, Quantico, Va.

A visit to a class of retarded children at Russell School at the Marine Base in Quantico, Va., was arranged by the Office of the Deputy Assistant Secretary of Defense (Education), Department of Defense. The representative of NARC was accompanied by a representative of the above office and the Office of Dependents' Schooling of the Marine Corps Headquarters. Some 2,000 children are enrolled in 3 elementary schools and 1 high school. A tour of the schools was made with the guidance of Colonel Keene, Chairman of the School Board and Mrs. Dollins, Acting Superintendent of Schools.

The Marine Corps Base at Quantico is the only military installation in the Washington, D.C., area which has a class for mentally retarded children on the installation. The class, which is integrated, has an enrollment of 8 children—4 boys and 4 girls—ranging in age from 6 to 10. Their I.Q.'s fall between 65 and 78, and their grade levels span grades I through IV. An opportunity was provided to observe a part of an arithmetic lesson, and the children who also have a rhythm band played a selection for the visitors with great delight.

NATURE OF FINDINGS

The present study was undertaken by NARC specifically to investigate the nature of the problems experienced by Armed Forces personnel in seeking services for their retarded children, and to identify and delimit gaps in service. It was recognized that an inclusive study of this complex problem in the 5-month period allotted was not possible. In this report, therefore, the emphasis is not upon the range and scope of services and facilities, but rather upon their limitations. The several services and the various departments within the Department of Defense provide many special services to meet the special problems of the retarded. If NARC is to mobilize its resources to provide for the unmet needs of retarded dependents, the gaps in service must be clearly defined and identified as a basis for future planning.

From the data and information gathered certain factors have emerged:

1. There is evidence of a marked lack of communication within the Department of Defense and of the various branches of the services concerning resources avail-

able within the military to service families of retarded children. One of the major problems is the fact that reports are geared to compile data required for budgeting and fiscal matters. In all areas concerned with dependents, the administrative level is concerned with policy and budget, and is greatly removed from the level of the service family, the teacher in the classroom or the social worker in the hospital. Furthermore, the several services in general appear to have little knowledge about the activities of the other services in areas of common concern.

2. The several services do not have a common approach or pattern in dealing with servicemen's families and their retarded dependents. The Air Force is the only branch of the service which has an organized program whose mission is to help families with problems, the family services center at each base. The Army and the Navy have not especially designated any department or staff officer to whom a troubled family may turn. The chaplain, the commanding officer, the psychiatrist in a hospital, the teacher at the base may be the person to whom the troubled family turns for assistance. There are a multiplicity of channels of aid and it is difficult to determine which channel of help applies.

3. The basic and underlying causes for lack of adequate services for retarded dependents are insufficient funds and the inflexibility in the use of funds. Congress has not appropriated sufficient funds for the conduct of an adequate school program for normal, let alone for handicapped children. Limitations on the size of medical and ancillary staff, and lack of funds to build facilities in which to house them have resulted in a limited medical program for all dependents. A range of facilities should be added to provide for a series of special problems.

4. Divided responsibility between the Department of Defense and the Department of Health, Education, and Welfare for the education of dependents in the continental United States has resulted in a poorly administered educational program. At military installations, the branches of the Armed Forces cannot conduct a suitable school program for dependents when requests for additional teachers and classrooms are stymied by cumbersome administrative procedures employed by the U.S. Office of Education in the dispersement of funds set aside by Congress.

5. A study of problem areas indicates that legislative action must be taken to correct inequities and injustice such as in the area of residence laws and availability of medical care. Present laws must be amended and new legislation is required if the retarded dependent is to be provided for adequately.

6. A uniform policy regarding the care and treatment of retarded dependents in the several services is urgently needed. There is a marked difference in attitude and approach toward service families with retarded dependents. The Air Force has evidenced official concern for the welfare of its families and has taken action to provide a measure of relief. The Army and Navy do not have official organized programs such as the family services and CHAP programs of the Air Force. The Army and Navy utilize compassionate assignments and other procedural devices to alleviate the problems of service personnel with retarded dependents.

ASPIRATIONS FOR THE FUTURE

1. The Department of Defense and the several services are very aware of the needs of the serviceman with a retarded child and have taken a number of steps to meet them effectively. Currently, the Department of Defense is in the process of developing a large-scale program designed to provide the services required. NARC's assistance and counsel has been requested in reviewing and evaluating the proposed program which will ultimately become a directive.

2. Through this cooperative effort it is anticipated that NARC's relationship to the Department of Defense and the several services will be strengthened, and that NARC will continue to cooperate with the Department of Defense in areas of common concern.

3. NARC should arrange a conference inviting various voluntary agencies active in the field such as the American Red Cross, the National Travelers Aid Association, and the International Social Service, and quasi-military welfare organizations to explore ways in which more effective services may be rendered to military families with retarded children.

4. NARC will seek to involve the interest of the Congress and the executive branch for the purpose of exploring ways of alleviating hardship and of meeting individual situations faced by servicemen.

5. The NARC Governmental Affairs Committee should review current legislation affecting servicemen with mentally retarded dependents. Legal limitations imposed by Congress and the varying residence requirements of the several States create severe hardship for military families. Legislative action is required to

correct inequities and injustice. A coordinated approach by NARC, the Department of Defense, and other interested agencies is recommended.

6. The study demonstrated a marked lack of information on community services and facilities available within the continental United States and abroad to retarded dependents. A guide for Armed Forces families with mentally retarded children has been prepared which will be available in the near future. To enable NARC State and local units to use the pamphlet effectively some guidelines should be drawn up and circulated to the units.

INDIVIDUALS CONTACTED IN THE COURSE OF THE STUDY

- Mrs. Danitsa Adjemovitch, Inter-Country Medical Social Work, consultant, International Social Service, New York, N.Y.
- Maj. Roy Baxter, Chief Social Worker, Department of Neuropsychiatry, Walston Army Hospital, Fort Dix, N.J.
- Lt. Col. Hazel E. Benn, head, Education and Information Section, U.S. Headquarters Marine Corps.
- Lt. Comdr. C. W. Boggs, Patient Affairs and Dependents' Medical Care, Bureau of Medicine and Surgery, Department of the Navy.
- Mr. N. Towar Boggs, executive director, American Red Cross, New Brunswick Chapter, New Brunswick, N.J.
- Col. J. A. Bowman, Directorate for Education Programs (Education), Department of Defense (Manpower).
- Mr. Anthony Cardinale, Dependent Schools Division (Education), Department of Defense (Manpower).
- Mrs. Joseph Carroll, Bolling Air Force Base, Washington, D.C.
- Maj. Paul S. Cox, Dependent Medical Care Liaison, Office of the Surgeon General, Department of the Air Force.
- Mr. James L. Creasy, Division of School Assistance in Federally Affected Areas, Office of Education, Health, Education, and Welfare, Washington, D.C.
- Comdr. N. B. Curtis, Patient Affairs and Dependents' Medical Care, Bureau of Medicine and Surgery, Department of the Navy.
- Maj. Gen. Howard C. Davidson (retired), Director, Air Force Aid Society, National Headquarters, Washington, D.C.
- Mrs. Gladys Dollins, Acting Superintendent, Dependents' Schools, U.S. Marine Corps, Quantico, Va.
- Capt. Patricia Doyle, Family Services Officer, Family Services Center, Bolling Air Force Base, Washington, D.C.
- Col. Stanley W. Dziuban, Northern Virginia Association for Retarded Children, Alexandria, Va.
- Mr. Jene F. Engel, Deputy Director for Dependent Schools, Dependent Schools Unit, Office of the Adjutant General, Department of the Army.
- Shirley C. Fisk, M.D., Deputy Assistant Secretary (Health and Medical), Department of Defense (Manpower).
- Mr. William Fournier, Head, Dependents' Schooling, Education and Information Section, U.S. Headquarters Marine Corps.
- Mr. William Frederick, regional director, the Council of State Governments, New York, N.Y.
- Col. H. E. Griffin, Assistant for Professional Service (Health and Medicine), Department of Defense (Manpower).
- Mr. Rall Grigsby, Assistant Commissioner and Director of School Assistance in Federally Affected Areas, Office of Education, Health, Education, and Welfare, Washington, D.C.
- Miss Cathryn Henna, assistant director, Home Service, American Red Cross, National Headquarters, Washington, D.C.
- Mrs. Eugenie Hochfeld, supervisor, International Social Service, New York, N.Y.
- 2d Lt. James Hoffman, Social Work Officer, Department of Neuropsychiatry, Walston Army Hospital, Fort Dix, N.J.
- Col. S. M. Hogan, Professional Education Division (Education), Department of Defense (Manpower).
- Col. Kenneth Hoge, Deputy Director, Army Emergency Relief, Washington, D.C.
- Col. Frederic J. Hughes, Director Professional Service, Office of the Surgeon General, Department of the Army.
- Mr. Stephen S. Jackson, Special Assistant, Office of the Assistant Secretary, of Defense (Manpower), Department of Defense.
- Miss Ethel W. Jacobs, director of personnel services, National Travelers Aid Association, New York, N.Y.

- Dr. Cecil Jacobson, Human Cytogenetics Laboratory, George Washington University, Washington D.C.
- Vice Adm. H. B. Jarrett (retired), Assistant to Executive Vice President, Navy Relief Society, Washington, D.C.
- Mr. Edward L. Katzenbach, Jr., Deputy Assistant Secretary (Education), Department of Defense (Manpower).
- Col. J. W. Keene, Chairman, School Board, Dependents' Schools, U.S. Marine Corps, Quantico, Va.
- Mrs. Curtis E. LeMay, Fort Myer, Va.
- Dr. Romaine P. Mackie, Special Assistant to the Director, Division of Handicapped Children and Youth, Office of Education, Health, Education, and Welfare, Washington, D.C.
- Mr. Robert Martin, Assistant Head, Navy Dependents' Schooling Branch, Department of the Navy, Bureau of Naval Personnel, Washington, D.C.
- Chaplain Paul C. McCandless (Colonel, U.S. Air Force), Professional Division, Air Force Chaplains, Department of the Air Force.
- Mr. Issac McKee, Field Director, American Red Cross, Brooklyn Army Terminal, Brooklyn, N.Y.
- Lt. Col. Vernon McKenzie Professional Service (Health and Medicine), Department of Defense (Manpower).
- Mr. Malcolm Morrow, Liaison Officer, Office for Dependents' Medical Care, Office of the Surgeon General, Department of the Army.
- Col. Robert E. Nuernberger, Deputy Director, Directorate of Professional Services, Office of the Surgeon General, Department of the Air Force.
- Chaplain John I. Rhea (Colonel, U.S. Army), Executive Director, Armed Forces Chaplains Board, Department of Defense (Manpower).
- Miss Jane Ritter, Education Specialist Curriculum, Dependent Schools Unit, Office of the Adjutant General, Department of the Army, Washington, D.C.
- Lt. Col. William S. Rooney, Social Service Consultant, Office of the Surgeon General, Department of the Army.
- Miss Blanche Rubin, Senior Assistant Director, Home Service, American Red Cross, N.Y. Chapter, New York, N.Y.
- Mr. Herbert H. Rummel, Director of Home Service, American Red Cross, N.Y. Chapter, New York, N.Y.
- Mrs. John D. Ryan, Bolling Air Force Base, Washington, D.C.
- Maj. Arlen Stafford, Assistant Chief, Dependents' School Branch, Directorate of Personnel, Training and Education, Department of the Air Force, Washington, D.C.
- Maj. Gen. Robert P. Taylor, Chairman, Armed Forces Chaplains Board, Department of Defense (Manpower).
- Lt. Col. William J. Tiffany, Jr., Assistant Consultant in Psychiatry and Neurology, Office of the Surgeon General, Department of the Army.
- Mrs. Ruth Turk, Secretary, Interstate Clearing House on Mental Health, the Council of State Governments, Chicago, Ill.
- Mr. Howard Wadey, Secretary-Treasurer of Board of Control, U.S. Coast Guard Welfare, Washington, D.C.
- Capt. Austin C. Wagner, Executive Vice-President, U.S. Coast Guard Welfare, Washington, D.C.
- Mrs. Eloise Waite, Director, Home Service, American Red Cross, District of Columbia Chapter, Washington, D.C.
- Miss Mary Ward, Assistant Director, Home Service, Eastern Area Office, American Red Cross, Alexandria, Va.
- Capt. G. D. Williams (U.S. Navy), Directorate for Management Affairs, Department of Defense (Manpower).
- Dr. Harold M. Williams, specialist, Exceptional Children and Youth, Office of Education, Department of Health, Education, and Welfare, Washington, D.C.
- Mrs. Deborah Wilson, Casework Director, Navy Relief Society, Washington, D.C.
- Maj. Gen. Edward F. Witsell (retired), Director, Army Emergency Relief, Washington, D.C.
- Mr. Ben M. Zeff, Deputy Director for Education Programs, Department of Defense (Manpower).

Mr. HÉBERT. Mr. Lennon.

Mr. LENNON. You suggest as alternative language to section 1079(c), line 4, be used—you make that suggestion in the last sentence of paragraph 2, on page 2, of the statement, "who is so seriously mentally retarded or physically handicapped as to be unable to receive

proper care, training, and treatment from resources available to him in the locality."

That would carry the implication or the suggestion that if he could not receive it at the local level—you are speaking of the necessity of institutional care, then?

Mr. GETTINGS. Well, not necessarily the necessity for institutional care. One of the most encouraging things which we note recently in the care of mentally retarded is that with increasingly severe disability they are able to stay in the community if proper types of day care facilities, or activity programs are available to them, so this may also extend to other types of program—for example, vocational rehabilitation, special education programs, day care programs, all of which may be included in this, or a residential program.

Mr. LENNON. Yes, I understand what you are seeking to do, but I am not sure that the language you suggest as a substitute for this section we just referred to would do it.

You have given the example of a child who may be mentally retarded to some degree because of a birth defect, but who is physically able to remain in the home.

Now, does section 1079(c) of the bill spell out clearly—you are suggesting two different approaches, aren't you—a method by which they can be institutionalized under the criteria in the draft bill, in the original bill, and another method for those children who remain in the home but who receive assistance through this program?

Mr. GETTINGS. Well, we are suggesting a definition which we feel would provide greater flexibility in the way this could be administered, and therefore this would permit a child who needed residential care to get it, but if the child didn't need residential care and needed a local day care facility or a vocational rehabilitation program, he would be able to get this.

In other words, the decision would be up to determination of competent medical, educational, and vocational rehabilitation authorities to determine what the child actually needed after a careful evaluation and diagnosis.

Mr. LENNON. Maybe I am just not clear, and I want to be.

Under the section you refer to, that would be the criteria under which a child and, therefore, the parent could participate in this program. If you use the language that you suggest, then the child and the parents couldn't participate in this program unless they were institutionalized. That is the concern that I have.

Mr. GETTINGS. Oh, I understand. I don't believe this is true at all. I believe you could use the language we suggested here to apply to a child who could benefit from other than an institutional program.

Now, our concern is this, that the same types of facilities are not available in all areas. We realize that some local school districts provide programs of special education through which either a moderately retarded child can benefit, yet other school districts do not, and it may be that in some of our localities these programs just won't be available to the child, and therefore they will have to be provided in some other manner.

Mr. LENNON. I am still not exactly clear on it. The bill amends the existing statute, as indicated on the breakdown sheet, page 10, this backup sheet that we have in explanation of the bill. Perhaps I am mistaken in my view, but I get the impression that if you use your language as you substitute in amending section 1079(c), that

then a child would not be eligible for assistance under this program unless he was institutionalized.

Mr. GETTINGS. That certainly isn't the intent or purpose of our statement. The intent would be that the child would receive the type of care that would fit his own individual situation. If the language we suggest would not have that purpose, we certainly would be open to other improved language.

The basic thing we are trying to point out is these categories of moderately, severely, and profoundly are not precise definitions. At one time we used to base our definition of a retarded child purely on IQ, which is not true any more. It is based on a broader evaluation of the child's ability, and therefore when a child is called moderately retarded, this is a working definition which assists the clinical evaluation people to have some idea of the child's capabilities, but certainly it is not a fixed label you are placing on the child.

If you incorporate these into the statute, you may be freezing something into the statute which will be hard to administer.

Mr. LENNON. What is the working relationship between the National Association for Retarded Children and the American Association on Mental Deficiency?

Mr. GETTINGS. It is a rather close working relationship. We always work rather closely with them. However, the American Association of Mental Deficiency is a professional organization which has been established by the members of the various professions who are interested in serving the mentally retarded, where the National Association for Retarded Children is a voluntary organization which deals with a voluntary action level.

Mr. LENNON. The language in the bill and the Department of Defense draft have used the descriptive language of retardation on mental deficiency of the American Association on Mental Deficiency.

Mr. GETTINGS. We accept the definitions as used by the American Association on Mental Deficiency. We feel we would like to see this language extended and incorporated in the language of everyone in the field of mental retardation which is not necessarily true today. Many educators still use the term "educatable" and "trainable" to categorize the various types of people, retarded children that they are dealing with. Now, we feel that the terms "mildly", "moderately", "severely", and "profoundly" are more open descriptions of the child's ability, and provides for flexibility in treating the child.

Mr. LENNON. That is the language we have in the bill, but you think that is too restrictive.

Mr. GETTINGS. I think it is not precise enough.

Mr. LENNON. Yet it is the language in the preciseness that the American Association on Mental Deficiency uses?

Mr. GETTINGS. This is correct.

Mr. LENNON. But you would go a step further and try to do it by exclusion.

Mr. SLATINSHEK. Mr. Lennon, if I may point out the language of the Department, of course, is a broad cover under which the Secretary would issue regulations which would interpret and implement this program, and it would be my opinion that this language here is, if anything, broader than that offered by the Association, and would lend itself to better implementation and the views of the Association could be picked up in the regulations issued by the Secretary.

Mr. LENNON. That is the point that *I am trying to get to*, Mr. Slatinshek. That is the reason I have *some hesitancy* about the committee adopting the language you suggest, and I know you had a reason for it, but I was thinking in terms that the Secretary could promulgate the rules and regulations, and then it would fit the very purpose that you have suggested, I think to some degree, rather than striking the language that appears in the draft bill and using the language that you have, sir. That is the reason I was exploring it, and I am happy that you injected that thought into the discussion, Mr. Counsel.

Now, I would talk to you a little bit about this overall problem related to the cost. I wonder if the Department of Defense, when it presented its proposal here, did not have in its possession the same information that you bring us now with respect to the varying costs across the country in 36 States as distinguished between the individual citizen and also the serviceman.

Mr. GETTINGS. I have no doubt that they did.

Mr. LENNON. I wonder why they didn't project this as something we ought to take into consideration.

Mr. GETTINGS. I have no idea.

Mr. SLATINSHEK. Mr Lennon, perhaps I can add some light on that.

Mr. LENNON. Yes, I would like to have some light.

Mr. SLATINSHEK. The bill is broader than simply the coverage of public institutions, as a reading of the bill would indicate, it contemplates the possibility that these children be placed in private institutions in which, of course, the charge is exceedingly high and would require a substantial contribution from the member in any event, and this is perhaps the basis for the Department's scaled-down contribution for the member.

Again my personal opinion is I imagine the Department would in no event require of the member a higher contribution than he would be required to pay if he were merely a resident of the State and were not in uniform.

Mr. LENNON. Well, again, Mr Slatinshek, you put your finger on the very point that we were discussing with the witness. Certainly that would be so, that the Department of Defense, the Secretary, would not approve the admission of any serviceman's child in a State institution at a higher level of pay than was required by a civilian who had a child in a State institution.

Mr. GETTINGS. If that is true, we certainly have no objection.

Mr. LENNON. Yet your testimony would indicate that the language of the Department's bill would result in many instances in a serviceman and the Government paying more than the private individual in the State, and we want to avoid that by all means, but again there I think the language of the Department's bill would assure us that. I just can't conceive of any contract being entered into by the Department of Defense with any State mental commission that would require the payment to that State institution, either on the part of the Government or the part of the serviceman, of more than was paid by a full-time resident of that particular state.

Mr. SLATINSHEK. If I may interrupt again, Mr. Lennon, I do believe the Association has a good point here.

Under the language we have here, the minimum would be \$25 in any event, and there is no latitude provided in the statute, which might very well require a change by the Committee to permit a lower

charge in those instances where the member would be paying a lower charge if he were not in the service and were merely a resident of the state.

Mr. LENNON. I have had that point in mind, too. I think the bill ought to be drawn in such a way that the serviceman as an individual, and the Government, together, on its pro rata part should under no circumstances pay more than a private citizen.

Mr. HARDY. If I may ask this, in connection with the charge to the serviceman, do we understand that it was the intent of the Department in this language to require the serviceman to pay the full cost in the State institution where the cost did not exceed these figures set forth in the bill, whereas if an individual had his child in a private institution Uncle Sam would pick up part of the cost?

Mr. LENNON. I would say that was not made clear in the discussion that took place here the other day.

Mr. HÉBERT. I think, Mr. Lennon, Colonel McKenzie is here and could possibly clarify this.

Colonel McKENZIE. It was not the intent of the Department of Defense in drawing this bill to obtain the results that were just described.

Mr. HARDY. Which one? We have had two or three results described.

Colonel McKENZIE. The one which would have the man paying more as a participant in this program than he might have had to pay otherwise.

Mr. HARDY. All right, you have at least cleared up that one, and if you will forgive me—

Mr. LENNON. Yes.

Mr. HARDY. Was it the intent to require, where State institutions were available, the serviceman to pick up the entire tab if his child was in a State institution but to supplement it if the child was in a private institution that charged more?

Colonel McKENZIE. No, sir, it was not. It was contemplated, and this language I believe covers that point, he would pay his share of the cost.

Mr. HARDY. But if he is in a State institution which has rates less than the minimum required under this bill, he would be paying the entire cost as his share, wouldn't he?

Colonel McKENZIE. In such a case, this language would be defective insofar as our intent was concerned.

Mr. LENNON. I have thought about this since the testimony of last week.

The language of the bill says the amount shall be not less than \$25 nor more than \$250.

Now, suppose the child were institutionalized at say \$65 a month, that was the going rate in the State. Under the language of your bill, the individual serviceman would be docked or deducted on a monthly basis at the rate of \$25, and the Federal Government would not then pick up the \$75 that we think it is the intent of the Federal Government to pay.

I think that language is going to have to be changed so that, as you have indicated, it won't be hard and fast. That is what I am thinking about.

Colonel McKENZIE. You are right, Mr. Lennon, it should be changed.

Mr. LENNON. I thank you for clearing that up, because I have been thinking about it since the testimony of last week.

That is all.

Mr. HÉBERT. Mr. Hardy.

Mr. HARDY. The only other thought I had, Mr. Chairman, was in connection with these three words that describe the degree of retardation.

I can appreciate the problem in the lack of preciseness in these words, and I am not at all sure that either approach is the proper approach, either the one you suggest or the language that we now have in the bill.

Personally, I hate to see the thing left to such a wide variety of interpretations that could be changed any time you have a change in the people who are writing the regulations.

Don

Mr. GETTINGS. There are two types of changes that come about. I think we also should keep in mind that mental retardation isn't a topic that we know a great deal about today, and increasingly we hope in the future, with the research program that is being conducted today, to know a great deal more. It seems that the language of the statute should permit a maximum application of our knowledge at the present time.

Mr. HARDY. If you could relate it to the degree of the individual problem rather than the extent of the retardation, I think that is probably what you were trying to do in the language you suggest.

Mr. GETTINGS. We are trying to get a functional definition.

Mr. HARDY. I think the idea is probably a good one, but it would lead to some administrative difficulties, too.

My own thought is we probably ought to take a look at that language and see if we can't improve upon both of them.

Mr. LENNON. This thought has occurred to me, that you know where the preponderant majority of the military installations are located, in the South, Southwest and the West to an appreciable degree, and it is in those areas that you do not have the capital wealth for the financing of your State mental institutions like you do in some places on the eastern seaboard and your metropolitan areas.

Do you have any figures on North Carolina with respect to the cost?

I will rephrase the question and ask you if you know of your own knowledge whether or not the cost to the individual for the institutionalizing of retarded children or those who have to be put in institutions is based on a salary scale or income scale of the parents or step-parents?

Mr. GETTINGS. Let me say this, that increasingly we note this coming about. We have recommended and in the past few years States have gone to this. Louisiana now has a rate based on net taxable income, Michigan does, and so does Connecticut. Several other States have gone to this approach.

So far as North Carolina is concerned, I am not sure. We have a study we did in 1963 which indicated, if you will let me just check here on North Carolina, roughly the statutory annual charge in North Carolina to a parent would be \$700 a year. This is in a State-operated institution, I emphasize.

Mr. LENNON. Is that based irrespective of income of the parents, foster parents, or stepparents?

Mr. GETTINGS. I would have to check to be sure.

Mr. LENNON. The four States you used to illustrate your testimony use as a base the net taxable income?

Mr. GETTINGS. Three of the four States do.

Mr. LENNON. You don't find that generally?

Mr. GETTINGS. No, there are still many that do it on a flat charge basis.

Minnesota, if you will notice, shows on the chart straight across \$16.20 a month per parent regardless of the parent's income.

Mr. LENNON. But institutions of this kind vary in cost even within the boundary of one State where they are staffed with the best psychiatrists and outstanding people in the profession, don't they?

Mr. GETTINGS. Well, one of the things we have been trying to emphasize in our publications on institutional care is that you shouldn't tie the charge to the parents to the cost of providing the actual care, because this is discriminatory toward the parent.

We feel, as I stated in the testimony, that the charge for residential care should not exceed what it would cost the parent to keep a normal child in the home. If you do have it exceed that charge, then you are penalizing the parent for having the retarded child. This is our philosophy on the charges for residential care.

A lot of the States continue to tie the amount that is charged the parents to the cost—

Mr. LENNON. And the ability to pay?

Mr. GETTINGS. Ability to pay and the cost of actually providing those services. If the per diem cost for care in "X" institution within the State goes up \$10 a day, then the cost to the parents goes up an equivalent amount.

Mr. LENNON. But you say that the annual cost on the average in North Carolina—and there are several institutions of this kind—is about \$700 per year to the parent, guardian or foster parent?

Mr. GETTINGS. Right.

Mr. LENNON. If that were true, then the not less than \$25 to be assessed against the serviceman in certain scales would not be an appropriate figure, would it?

Mr. GETTINGS. Well, certainly the figure of \$250 a month wouldn't be appropriate, because \$250 a month would mean \$3,000 a year.

Mr. LENNON. \$700 a year would be about \$56 a month, and \$25 a month of that amount would certainly be more than one-fourth. The philosophy here was for the Federal Government to pay approximately 75 percent of the cost and the serviceman 25, so we come back to what I suggested earlier, that certainly we ought to change the figure of not less than \$25 a month for the man in the lower pay grade.

Mr. GETTINGS. I think if you will look at it, you will see a private E-1 earning not more than \$90 a month. \$25 is an awful cut out of this.

I think another thing you have to take into consideration is the State's ability to collect this amount.

This study we did in 1963 indicates that there is no State that collects from over 50 percent of the parents of retarded children in institutions, and in some States it is as low as 10 percent of the parents that are actually charged, regardless of what the statute says. In other words, the ability to get the money out of the parents is a little

difficult, but in the military it would be a straight deduction from his paycheck, so it would mean 100 percent collection.

Mr. HÉBERT. Without objection, that will be inserted in the record, also.

(The study referred to reads as follows:)

FOREWORD

THE NEED FOR THE SURVEY

The advent of the parent movement in behalf of retarded children and subsequent organization of associations for retarded children at a local, State and National level created an unprecedented increase of citizen interest in the welfare of thousands of mentally retarded individuals living in State-supported residential centers throughout the country. Members of the Committee on Residential Care of the National Association for Retarded Children believed that parents must become generally knowledgeable on the subject of institution care and well informed as to conditions, techniques and trends in the various States if they are to develop into the most effective coworkers with professional people in improving the quality of residential care.

In order to provide the basic information on residential care, this Committee undertook a survey of the residential centers for the retarded throughout the Nation.

PURPOSE OF THE SURVEY

The ultimate goal of the survey is to produce a report which might well be termed an instrument of understanding. Such an instrument should bring about a more intelligent understanding of the complex operations involved in residential centers for the retarded and a better understanding of the current programs, conditions and trends in the various States. In addition, the report should help those who work in this field to understand the specific aspects of institution care which are of importance to parents, and why.

HOW WAS THE SURVEY DEVELOPED AND CARRIED OUT?

This project was initiated and carried out by 16 persons serving as the Committee on Residential Care of the National Association for Retarded Children. Specific aspects of institutional programming were assigned to various persons on the Committee. In 1961, a detailed questionnaire was prepared and submitted to the administrative officers of 111 State-supported institutions for the retarded in 50 States. The questionnaire was preceded by a personal letter to the head of each institution which stated the reason for the project and asked for cooperation in giving the information for his institution. The questionnaires were divided into sections in order that they might be studied and answered by the various staff members responsible for a specific aspect of the total institutional program. Thus, instead of reflecting the opinions and ideas of only one or two persons in each institution, the questionnaires in many cases brought in replies from persons representing all disciplines on the institutional staff, thereby obtaining a broader, more comprehensive view of the total programs.

Of the 111 institutions polled, 99 or 89 percent returned the completed questionnaires. In several cases one or more institutions failed to return certain sections but the majority of those responding answered the entire questionnaire. Each individual Committee member then made a study of the returned questionnaire in his or her specific area of assignment. The data was organized and analyzed, and a report was written on each section by the responsible individual.

In addition to the questionnaires, other resource material was utilized by all committeemen. This material included literature available from various sources pertaining to their specific area of study. The publications "Mental Hospitals," "The American Journal of Mental Deficiency," and numerous other professional journals and articles relating to residential care were used as resource materials. Ideas were also drawn from numerous papers and talks presented by workers in the field of residential care and related areas. In addition, personal visits were made by NARC staff and/or members of the Committee on Residential Care to a majority of the 111 institutions. Conferences were held with administrative officials of the State, as well as with the administrative officials and staff members of the institutions themselves.

REPORTING OF RESULTS

The reports covering the various subjects of the survey will be published in separate parts in a series of volumes. Each report will present the data gathered on each subject, an interpretation of the data, the conclusions which are drawn from the survey, and the recommendations of the Committee on Residential Care on the particular facet of institution care involved.

Part I of the report contained in this volume presents the results of the study of the matter of charges for residential care. This is a matter which has been under continuous study since 1956 when the first NARC study on this subject was begun. Published in 1958, the report "Responsibility for Costs of Maintenance and Training in Public Institutions for the Mentally Retarded" became the first available published compilation of data devoted exclusively to this vital problem.

This part of the overall survey is being published as a separate report because of its importance and somewhat unique nature. Basically this subject represents a reflection of public understanding and public attitude toward this enormous community problem.

JOHN G. FETTINGER,
President, National Association for Retarded Children.

THE SURVEY COMMITTEE

Arthur Avery, Roselle, N.J. (food services).	John L. Holahan, Minneapolis, Minn., administration.
Mrs. G. T. Etheridge, Detroit, Mich. (volunteer services).	Mrs. Hugh Johnston, Northfield, Minn., religious nurture.
Arnold Gangnes, Seattle, Wash., architecture.	Francis P. Kelley, Mansfield, Conn., recreation.
Mrs. J. C. McMeen, Columbia, S.C., pre-admission services.	Philander L. Ries, Baltimore, Md., rehabilitation.
Mrs. Marshall Nelson, Pensacola, Fla., clothing.	Norman F. Smith, Houston, Tex., charges for residential care.
Mrs. Kenneth Razak, Wichita, Kans., vice chairman.	Mrs. George Wise, Aberdeen, Wash., education.
Mrs. Max Murray, Roanoke, Va., chairman.	

I. INTRODUCTION

Many years ago, expenditures for the institution care of the mentally retarded in many States were relatively low, and efforts to collect charges from parents or relatives were weak or even nonexistent. In more recent years the cost of institution care has risen throughout the country, as the States have improved and expanded their institution programs and as the general cost of living has increased. As a result, the matter of who should pay the cost of care has become an important issue.

The various States have demonstrated wide differences of opinion on the matter of reimbursement for care. A few States charge nothing, some charge a modest sum, but the majority seem inclined to continuously raise charges to very high levels. Inasmuch as the problem of mental retardation is the same in all States, these differences of opinion cannot be valid or justified. Some States may be correct in their views but the rest must be in error to some degree. The fact that many States have essentially the same reimbursement legislation or policies for the mentally retarded as for the mentally ill points up a lack of understanding of these widely divergent problems.

Because of the growing importance of institution charges, this matter was included as a major item in the survey and study of residential institutions conducted by the NARC Committee on Residential Care.

II. BACKGROUND AND PREVIOUS INVESTIGATIONS

The matter of the responsibility for charges and the ability to pay them is a very complex matter with many factors to be considered.

On one side stands the retarded child in need of institutional care. He is handicapped through no fault of his own, forever dependent, or at least semi-dependent. His need for expensive institutionalization may be due to his own limitations, those of his family, or those of his community.

On the other side stands the community or the State. Traditionally, the burden for vital services which are too costly for citizens to handle on an individual

basis is accepted by the community through taxes. The community, however, faces the continuous problem of finding funds for the ever-increasing demand for services.

In the middle stands the parent. He is not responsible, either, for the fact that this child is mentally retarded and that institutional care is necessary. His retarded child is only one of his responsibilities. He must also shoulder his responsibilities as a member of his community, his responsibilities to raise and educate his other children, and his responsibility for preparing adequately for his own retirement.

Who will pay the cost of institution care for this child? Who can pay it? If the cost is to be shared, who is to pay how much? Who is to say? How much sacrifice should a family or the other children in the family be expected to make? What is an adequate standard of living? What is "hardship"? Who is to say?

These are some of the questions with which researchers on the subject of institution charges have wrestled in studying the problem of charges (or reimbursement) for care.

The NARC report (1) published in 1958, was based upon a comprehensive survey of the matter of reimbursement in all States. The report stated:

"It is bitter irony to tax parents for the unavoidable misfortune of having a retarded child. We must wonder if it is consistent with American social philosophy to require that parents of mentally retarded children pay taxes to support public education facilities which exclude their children, when there is a price tag on their attempts to obtain equal benefits for their children in public institutions."

The NARC report recommends that "Society should assist in bearing the expenses of this major calamity" and suggests that charges "should not be tied to the per capita costs of institutional programs" but instead "the maximum rate of payment [should] be established in relation to the cost of living of an individual member of family maintained in the community."

The report made many other pertinent recommendations, such as termination of all charges for children over 21 years of age, establishing uniformity and justice in charges, limitation of accumulated liability for charges which a parent is deemed unable to pay.

"The American Journal of Mental Deficiency," published in 1960, a study by Dr. Edward Eagle into the matter of charges for care (2). In this report, the author points out that "there is little uniformity with respect to the magnitude of the maximum legal charges, the percent of parents required to pay the maximum, the procedure for determining the ability to pay, * * * the items included in per capita costs, the amounts of per capita costs, the amount required by various States from parents having the same gross income, etc."

The author concludes that 1 in 30 mentally retarded children " * * * will require full-time care for life. This major calamity is the problem not only of the parents, but of society as well."

A report published by the Virginia Association for Retarded Children (3) analyzed in its first section the hospitalization pattern of the mentally retarded and the mentally ill. Its conclusion said in part:

"All conclusions draw from this study of the institutionalization patterns of the retarded and the mentally ill must point to differences rather than to similarities * * * it is clear that the whole institutionalization pattern, the circumstances and problems involved, the family situations and the medical aspects, are all completely different."

The second part of the Virginia report analyzes the charge systems, using data from references 1, 2 and others, and concludes that the charge systems are unrealistic and inequitable. The report cites "the arbitrary nature of the administration of ability-to-pay," and states the principle that:

"When an institution charge takes more from a family than that family would spend on that child maintained in the home, a hardship has been placed upon the standard of living of that family, upon its children, and upon the ability of the wage earner to educate his other children and to provide adequately for his own retirement."

The work of the NARC Committee on Residential Care, as embodied in the present report, has concentrated on the broader overall characteristics of the charge systems and has drawn from an analysis of these characteristics some definite conclusions and recommendations. These recommendations were embodied in a resolution which was proposed by the Committee and which was passed by the general membership meeting of the NARC at its 1962 annual convention in Chicago. The resolution is included at the end of the report.

III. SOURCES OF DATA

The principal source of the 1960-61 data is the NARC questionnaire which was sent to the appropriate agency in each State. Appendix A contains a copy of the questionnaire, along with additional information on sources, uses, and qualification of the data.

IV. BASIC INFORMATION ON CHARGE SYSTEMS

Basic data

Statutory charges.—The statutory annual charges for 1956 and for 1960-61 are shown in figure 1. The charge for each State in 1956 is indicated by the height of the solid bar, while the increase which occurred by 1960-61 can be read from the height of the cross-hatched bar, using the scales at either side of the figure.

Figure 2 summarizes the 1960-61 data and shows the number of States which charge nothing, low, high, and very high charges.

Per capita cost of care.—The annual per capita costs of care,* or expenditures, in the various States are shown in figure 3 for 1956 and for 1960-61. The height of the solid bar indicates the cost of care in 1956, while the height of the cross-hatched bar indicates the cost of care in 1960-61. For States having several institutions with different per capita costs, averages calculated for the entire State, weighted according to institution population, are shown.

Income distribution in the United States.—The income distribution for U.S. families is shown in figure 4. This figure shows that 3.7 percent (3.7 in 100) of American families earn more than \$15,000 per year, only 14 percent earn more than \$10,000, while nearly half earn less than \$5,000 per year.

Average family income and distribution of income varies from one State to another. Figure 4(b) is a tabulation of values for each of the 50 States.

These data show that there is no large group in this country which can afford to pay large charges over a long period. On the contrary, a very large percentage of families are shown to have incomes so low that they could not reasonably be expected to pay any charges other than for clothing and incidentals.

Trends

Comparison of cost and charges.—The data of figures 1 and 3 have been plotted in figure 5 to show the relationship between maximum statutory charge and per capita cost of care for 1956 and 1960-61. Each State is one point (circle symbol) on these figures. Figure 5(a) shows that in 1956 some States charged the same as cost (points on the dashed line), two States charged slightly more than cost (points above the dashed line), while more than half charged less than cost (points below the dashed line). Also, most of the States with costs greater than \$1,300 per year charged substantially less than cost. The maximum cost of care (expenditures) is shown to be about \$1,700 in 1956.

By 1960-61 (fig. 5(b)), a number of changes have occurred. About 18 States spent more than \$1,700 per year. Only about seven of these States attempted to charge the full cost of care (points on or near the dashed line). The remainder charged substantially less than cost. The five States which spent a great deal more than \$2,000 per year had a maximum statutory charge of less than \$1,000. One of the five had a maximum statutory charge of less than \$500 per year, and one charged nothing.

In the group of States which spent less than \$1,700 per year, the points are generally higher and closer to the dashed line in 1960-61, which indicates a significant general rise in maximum statutory charges.

Thus, figure 5(b) shows that in the upward movement of per capita cost of care, many of the States have pushed maximum statutory charge upward along with expenditures. Some States have shown intention of collecting the full cost of care at levels approaching \$2,000 per year. A few States, however, have divorced statutory charge and cost of care by charging only a fraction of costs at the \$1,500 level and above.

Changes in statutory charges.—Figure 6 compares the maximum statutory charges in 1960-61 with those in 1956. Points on the dashed line indicate charges which were the same during both years. The points above the dashed line indicate increase in charges from 1956 to 1960-61 with the amount of increase equal to the vertical distance between the point and the dashed line.

Clearly, charges have been increased in over two-thirds of the States. The increases in most States are large, and occur for States which had high charges in 1956 as well as for States which had low charges. The level of statutory charges

*Generally defined as the institution budget divided by the total number of patients.

in about one-fourth of the States has reached the cost of maintaining a child in college.

The number of States making no charge is shown to be three in 1960-61, two less than in 1956.

Predicted future increases.—The NARC questionnaire asked: "Do you anticipate a change in present monthly charge?" The left portion of figure 7 shows the answers received. Twenty-four States said "Yes" (and indicated an increase), while 20 States said "No."

On the right portion of the figure, the present charges are plotted for those States which said: "Yes, a change [increase] is expected." Seventeen of the twenty-four States which predict increases are now charging between \$1,000 and \$2,000 per year, with 8 of the 17 already charging more than \$1,500 per year.

The solid black points on figure 7 have another interesting distinction—these points are for States which now collect the full charge from less than 2 percent (2 in 100) of the patients.

Thus, the information on this figure shows that almost half of the States are expecting to increase their maximum statutory charges, although many of these charges are already large, and although many of the States are actually collecting such charges from only a very small percentage of the residents involved.

Basis for maximum statutory charge

It has been suggested by other research reports in this field (such as references 1 and 3) that the maximum rate should not be tied to the per capita cost of the institutional program. Part of the justification for this suggestion is that the per capita costs contain numerous items which represent community services which are tax based and for which there should be no charge.

States which base statutory charge on per capita costs.—Figure 8 compares the number of States which based their maximum statutory charge on per capita costs in 1956 and in 1960-61. This figure shows that the number of States which base their statutory charge on per capita costs rose from 20 in 1956 to 28 in 1960-61. It is clear that more and more States are basing their maximum charge on the per capita cost.

Content of per capita cost.—The questionnaire asked each State to check the items which are included in per capita cost (PCC) from a list of specific items. The following table shows the results for the 28 States which answered this question.

Item	States which include this item in per capita cost ¹
Food and lodging.....	28
Medical care.....	28
Staff salaries.....	28
Formal education program.....	27
Staff training.....	24
Rehabilitation.....	26
Building repair and maintenance.....	24
Building construction (capital outlay).....	1

¹ 28 States replying.

The arguments against including "Formal education program" and "Rehabilitation" in per capita costs are formidable. The parents pay local and State taxes to help provide these services in their communities. In paying a charge based upon per capita costs these parents are required to pay a second time for these services. Twenty-seven out of twenty-eight States answered that they do include education in per capita costs, the exception being Texas, which has legislation specifically forbidding the inclusion of this item.

Although the questionnaire did not probe these areas in detail, police and fire protection are also ordinarily included in per capita costs,* in spite of the fact that these, too, are services normally supplied by the community at no cost. Research is another item, which, according to reference 1, is included in the per capita costs of two-thirds of the States which answered the 1956 NARC questionnaire. Research is an important function which should be sponsored directly by the State and should not be added to the burden of those who are striving to pay the cost of care for institutionalized children.

* See footnote, p. 5925.

Finally, the cost of clothing for indigent institution residents is included in the per capita costs of many States. Parents who are paying part or full charge are therefore sharing the clothing bill for these residents while paying the clothing bill for their own children directly.

Some conclusions for section III

The foregoing information on costs, charges, trends, and income has been presented as the basic information necessary to an understanding of the charge systems. This information shows that maximum statutory charges are rising rapidly, as are per capita costs or expenditures. Many States are attempting to keep charges tied to per capita costs, while others, including some very high cost States, have abandoned this approach and are charging a great deal less than cost. Family income data shows that a large percentage of American families have relatively modest incomes. There appears to be no large income group which can afford very high charges over a long period of time.

It is now appropriate to turn to a detailed study of the actual working of the charge systems, their performance and the impact which they are having upon parents of the mentally retarded. The next section of this report discusses these aspects of the problem in considerable detail.

V. THE PERFORMANCE AND IMPACT OF CHARGE SYSTEMS

Performance

In an examination of the performance of the existing charge systems, it is necessary to use general data covering all States and such specific data as is available from individual States. Where detailed data from an individual State is used, the State is not named. Such data are presented only to illustrate a particular phenomena, and no claim to generalization is made.

The overall performance from the standpoint of the State is shown by one simple item: The amount of money collected by each State, compared to the amount which the charge system intends or pretends to try to collect.

Portion of per capita costs collected.—In figure 9 the total heights of the bars show the cost of care in the various States, repeated from figure 3. The solid black portion of each bar shows the amount of this cost collected, on the average, for the State. The height of this black portion, then, compared to the total height of the bar is a direct measure of the percentage of the total institution budget collected in charges in that State (see the example on fig. 9).

This figure shows that in spite of high and steadily rising charges in many States which make a pretense of attempting to recover the cost of care, only a very small portion of the institution budget is actually recovered in charges. The maximum collected in any State is about 12 percent, and two-thirds of the States reporting collected less than 8 percent. An overall reason for this situation is, of course, found in the data on income distribution in the United States previously presented in figure 4. The fact that the percentage recovered varies greatly from one State to another is an indication that the philosophy or intent of the State or its collection agency also varies greatly from one State to another.

Number of patients paying full, part, or nothing.—The performance of the charge systems, from the standpoint of the institution resident and the parents, is shown in figure 10. This figure shows the percentage of residents paying (or for whom is paid) the full charge (white bar), part charge (cross-hatched bar) or nothing (black bar). It will be noted that only a very small percentage pays the full charge (not over 10 percent for any State, in some States no one). The percentage of residents which pay part of the statutory charge varies from 5 to 60 percent, depending upon the State. The percentage which pays nothing is very large, varying from about 25 percent to more than 96 percent.

Figure 10 appears to support the conclusions drawn previously from the figure showing income distribution in the United States (fig. 4), the conclusion that there is no large income group which can afford large charges for institution care and only a relatively small group which has income sufficient to pay any charges at all.

This figure also illustrates the very great difference of opinion among the various States as to how many can or should pay. The procedures used in the various States for determining how much a particular family should pay is discussed in detail in a later section entitled "Ability to Pay."

History of payments as charges rise.—Figure 11 shows what happened to collections in a high-charge Eastern State when the statutory charge was twice raised to higher levels. The rectangle drawn with a dashed line shows the amount of money which this State would collect if everyone paid the full statutory charge.

This amount thus represents a sort of "target" amount. The cross-hatched areas show, to the same scale, the amount of money actually collected from those who pay full charge and part charge. The percentages and number of institution residents in each category are indicated at the bottom of the figure. This figure shows that in 1956-57 8 percent of the residents paid the full charge of \$450 per year, while 21 percent paid a part payment which averaged \$186 per year. When the statutory charge was raised to \$780 per year in 1959-60, the same 8 percent paid this amount, while 26 percent paid a part payment averaging \$318. When the rate was raised to \$1,200 per year in 1960-61, only 6 percent paid this rate. Thirty-two percent paid a part payment averaging \$373 per year.

It will be noted that the average payment rose substantially each time the statutory rate was increased, although presumably under the ability-to-pay system each person making a partial payment was already paying all that he could. Although some of the increase was undoubtedly due to tightening of the system and to increased collections from "third-party" sources, the evidence is strong that increased statutory charges result in increased pressure on parents all along the line.

The fact that the cross-hatched area showing full payments has become narrower when the charge was raised from \$780 to \$1,200 (156 residents paying versus 224) indicates that the revenue to be derived from full payments will probably not increase substantially in this State if rates are raised still further. The increased efforts at collection and the increased burden carried by this dwindling number of people are not justified by the small increased return to the State.*

Accounts in arrears.—Figure 12 shows the number of institution residents paying various charges and the amount by which these groups are in arrears in one Midwest high-charge State. For example, the top section of the chart shows that 165 residents are paying the full charge. Ninety are paying \$900 to \$1,800, etc. The bottom section of the chart shows the amount of payments in arrears for each group. Fifty residents, or nearly one-third of the 165 who are supposed to be paying the full charge, are in arrears \$3,000 or more, while 25 more are in arrears between \$1,000 and \$3,000. About one-fifth of the 90 which pay \$900 to \$1,800 are in arrears \$3,000 or more. The number of residents in arrears for various amounts can be estimated for each payment group from the chart.

To look at this figure another way, the areas which comprise the top section show, to scale, the amount of money which the State is committed to collect from each group, while the areas which comprise the lower section of the chart show, to the same scale, the amount by which each group is in debt to the State. Clearly, a significant number of parents are in debt for significant amounts of money in this State.

Information from another (Eastern) State indicates that with collections from patients running about \$2,800,000 per year (total of all mental hospitals), accounts in arrears total nearly \$1,900,000. The reasons for these situations are not known; however, the existence of debts of this magnitude would appear to be incompatible with the concept, claimed by most reimbursement legislation or systems, that the amount charged a family shall be that which can be paid "without hardship." It seems likely, although it has not been proven, that similar situations exist in other States.

Ability to pay

The foregoing data have shown that in no State is the full statutory charge paid by more than a very small percentage of the residents (parents). The rest come under some sort of administrative procedure which sets a rate of payment according to their "means" or "ability to pay." Because most parents of institutionalized children come under this administrative procedure, it will be treated in as much detail as is possible with the available data. It should be noted that detailed information which would permit a study of the true nature and inner workings of the ability-to-pay procedures are largely unavailable; consequently, an analytical and inferential approach based upon available data has been used.

Agency which determines ability to pay.—Figure 13 lists the various persons, agencies or authorities which make the ability-to-pay determination and the number of States in which each is used. Six different agencies or categories are seen to be performing this test, including various State agencies, local government, and local courts. The differences in the nature and interests of these agencies suggest that their ability to perform this task might differ considerably, and that their determinations of ability to pay might vary greatly from one State to another

*Nevertheless, the statutory charge in this State was increased 25 percent on the following year.

as a result. That this is indeed the case is amply illustrated by the data which follows.

Example of charge determination in 40 States.—Figure 14 shows the annual charge which would be levied, based upon ability to pay, in 41 States for an identical family. These data were gathered by Dr. Edward Eagle, author of reference 2. The family was described as a family of three with no unusual debts or assets and with a gross income of \$6,000 per year. Nine States said that for this family there would be "no charge" (square symbols on the bottom line), 8 States said that they could specify "no set charge" (square symbols to the right), 12 States gave a firm number or a range of numbers from \$300 to \$980 per year (squares and rectangles), while 11 States gave an amount which the charge would be "less than" (arrow symbols).

Even when allowance is made for the uncertainty of over half of the answers, it is clear that there is a very wide range of charges levied upon this "example family" by the 41 States. Inasmuch as mental retardation and the problems which it produces are quite similar in the various States, it is inconceivable that a charge of nothing in one State and a charge of \$980 in another, for the same income, could both be just and equitable. Consequently, the evidence shown must be taken to mean that ability to pay is not an absolute, measurable, definable quantity, but is rather an arbitrary opinion which varies greatly from one authority to another and from one State to another.

Impact upon the family.—In considering the impact of institution charges upon the family, it should be remembered that the charges may come into the family budget after this budget has been strained for years by extra expenses in connection with the retarded child. Also, the institution charges may continue for many years, perhaps for the lifetime of the parents, or longer.

Figure 15 provides information with which the impact of charges upon a family can be examined in detail. Shown on the right half of this figure is a typical budget for a family with a \$6,000 gross income. This budget, or the way in which the average family in this pay bracket spends its income, was determined by a research project of the U.S. Department of Labor (USDL) (4). This value of income is of particular interest because it is the midrange of incomes from \$5370 to \$6567 which are described by the USDL research as "modest but adequate" levels in various areas of the United States.

Shown on the left half of the figure, with dollars drawn to the same scale, is the institution charge in the range of a typical high-charge State (fig. 14), taken as \$800 per year for this income. Added to this value is an estimate of \$350 for clothing, transportation, and miscellaneous, making a total cost to the family of \$1,150.

To evaluate the impact which institution costs of \$1,150 have upon a \$6,000 income, one need only to attempt to find space for the cross-hatched column at the left in the column at the right. It will be noted that several of the budget items shown are fixed items, such as taxes, insurance, medical, etc. It will be noted also that the budget does not include an allowance for savings, education, or contingencies. It is clear that \$1,150 cannot be taken from this budget without producing a serious decrease in the standard of living of this family.

The foregoing analysis suggests that institution charges which are collected from incomes in and below this "modest but adequate" level bear no relation to "ability to pay," but instead represent a serious and arbitrary decrease in the standard of living for the family. Consequently, one of the strongest recommendations emanating from this study is the recommendation that this level of income be established as the limit below which no charges will be asked for other than clothing and incidentals.

Some quotes from reimbursement statutes.—While no effort was made to collect or analyze legislation from all States, a file of such information was accumulated and examined during the study. The legislation of many States appears to set forth the reimbursement procedures in only general terms, leaving, in effect, the policies, rates, and procedures of reimbursement to the executive agency of the government. The following quotations are each from the statutes of a different State:

"Whenever the parent, guardian, or estate of the child is able to do so, the cost of maintenance in whole or in part shall be borne by them, the amount and payment thereof to be determined and arranged by the Board of Commissioners of State institutions from time-to-time as conditions and circumstances may permit * * *."

"The county welfare boards shall investigate the financial circumstances of each patient and his relatives and shall report them to the Commissioner. The Commissioner shall make such further investigations as he deems necessary and

shall determine * * * what part of the cost of care the patient is able to pay, if any. If, in the opinion of the Commissioner, the patient is unable to pay the full cost of care, he shall make a like determination as to the ability of the relatives to pay the charge provided in section 3 thereof."

"* * * the person legally liable for the support of any such person, shall be liable for the expense of his care, treatment and maintenance in such institution. Such expense shall not exceed the actual per capita cost of maintenance and shall be fixed by the Department of Mental Hygiene and Hospitals * * *. The department may contract with any patient's parent, guardian, trustee, committee, or the person legally liable for his support and maintenance, and in arriving at the amount to be paid, the department shall have due regard for the financial condition and estate of the patient or inmate, his present and future needs and the present and future needs of his lawful dependents, and, whenever deemed necessary to protect him, or his dependents, may agree to accept a monthly sum for his maintenance less than the actual per capita cost of his maintenance."

"In exercising this right of reimbursement the director of mental health may, whenever it is deemed just and expedient to do so, exonerate any person chargeable with such maintenance from the payment thereof in whole or in part, if the director finds that such person is unable to pay or that payment would work an undue hardship on him or on those dependent upon him * * *."

"The department shall develop procedures to determine the ability of a patient or his legally responsible relative to pay all or a part of the costs of the patient's care and shall adopt rules and regulations for the assessment of charges in accordance with the ability to pay * * *."

These samples illustrate the curious situation which prevails in many States with regard to reimbursement legislation. Legislation in these States does not spell out conditions of payment, nor does it give a policy or even define the terms (such as "due regard for the financial condition" or "works an undue hardship") used. Such legislation merely hands the whole affair over to an executive or judicial agency to run as it sees fit. As a result, nearly all of the parents of the institutionalized retarded come under an administrative ruling of a government agency for reimbursement purposes, rather than under the legislative ruling of the governing body.

In recognition of this situation, the NARC questionnaire sought information on the methods used in determining ability to pay.

Curves and charts for determining charges.—The NARC questionnaire asked the question: "Are charts, tables, or scales for determining adjusted charges published and/or available?" Figure 16 shows that 33 States answered "No," while only 9 States said "Yes." A few of the States which answered "No" gave some explanation. Some quotations from these replies are of interest here.

One State wrote: "* * * the system used to determine charges is rather complicated and cannot be determined by a table or scale alone but is made up of many factors involving a total family situation of which the resident is a member."

From another: "* * * the system used to determine charges * * * is based on an individual's ability to pay * * * all factors are considered * * * where charges are strictly on an ability-to-pay basis, without working an undue hardship, you can readily see that such a chart would not be practical or equitable in administering our reimbursement law."

Such well-meaning but vague statements were the only information which some States provided regarding their methods of determining charges under their reimbursement laws.

In denying that any system for determining ability to pay can be set forth in black and white, these statements seem to be saying that ability to pay is more an art than a science. That it is, in fact, neither art nor science but only an arbitrary opinion of the determining person, has been amply illustrated by figure 14 and others.

Further, if the States which deny having charts or tables for release to the public really do not have such, even for internal use, it seems unquestionable that differences in charges determined by different persons in different areas of the same State will be great, perhaps as great as those shown in figure 14.

Other researchers have reached similar conclusions regarding the elusiveness of ability-to-pay procedures. For example, Mernitz states (5):

"Because of its elusive character, application of the ability-to-pay standard is subject to considerable manipulation, not infrequently resulting in unfairness and favoritism. Most statutes imposing private responsibility lack any standard of determination at all other than the bare direction that charges be assessed in accordance with ability to pay."

All nine of the States which acknowledged that charts were available supplied copies. Eight of these have been plotted graphically on figure 17. (Data for the ninth, Colorado, was based upon State income tax blanks and could not be readily plotted.) Data for Kentucky have been added from information compiled by the Mental Health Commission in South Carolina (6). This figure shows the amount of charge asked (left scale) for various amounts of gross income (bottom scale). The step shape which is characteristic of most tables is shown for those States where the steps are large enough to be significant. The rest are plotted as continuous lines.

For ease in reading, the fine solid lines have been added to show 5, 10, 15, 20 percent of gross income, as labeled. The percentage of gross income asked by the various States for various incomes can be readily estimated by the position of the charge curve with respect to these lines.

The great differences among these curves illustrate dramatically the large differences of opinion among the States as to what charges should be. It is astonishing to note that seven of these States levy charges upon families with incomes of less than \$4,000 per year. Taken as a group, these curves show that, for incomes of \$4,000, charges in most of these States are around 5 percent of gross income, or about \$200 per year. For incomes of \$6,000 charges run from about 6 percent to nearly 20 percent of gross income, or from about \$400 to above \$1,000 per year. Above incomes of \$7,000 almost all of these States are charging between 10 and 20 percent of gross income.

The slope of the curves of figure 17 shows the rate at which charge is increased as income rises. The general slopes for all States on the first part of this figure (ignoring the step shape of some) are seen to be quite similar and slightly steeper than the line labeled "30 percent of gross income." This slope means that, for each additional \$100 earned by the parent above about \$5,000 income, these States ask \$30 to \$36 more in institution charges until the maximum charge is reached. The slopes of the curves on the second part of figure 17 are varied, with a few approximating the 10-percent line. This slope means that approximately \$10 is asked in charges for each \$100 in additional gross income earned.

Criteria for determination of ability to pay.—It is of interest to consider next the criteria for determining ability to pay; i.e., the information upon which the determination is based.

The NARC study¹ lists the results of a rather detailed inquiry into the factors considered by the various States. These data give some insight (for 1956) into the basis or criteria which is stated to be in use.

No effort was made in the present study to repeat this survey, nor to obtain detailed forms used by each State to document financial information on individual families. It is of interest, however, to consider the items on which information was asked by the blank forms sent to parents in one high-charge State. These items are:

Income	Assets
Debts and time payments	Rent or house payment
Food	Utilities
Heat	Taxes
Clothing	Retirement deductions
Insurance	Other (specify)
Transportation	

Entirely missing from the blank forms are such valid and vital budget items as:

Medical expenses	Vacation and recreation
Education and reserve for education	Christmas
Reserve for retirement	Savings and contingencies
Reserve for automobile replacement	Home maintenance
Church and charities	

When questioned on the allowability of items on the latter list, the reimbursement officials in that State agreed that these items were probably allowable, and that the parents should list these items along with the others. In the discussion, it was pointed out that many parents were not including these items because they were not on the forms, and consequently were not giving a true account of their costs and obligations. In spite of this inquiry, however, no change or additions to the original list of items appeared on a reprinted version of the forms later issued in this State.

The above information is but one of numerous examples of the ways in which inequities can be injected into or can creep into the ability-to-pay procedures.

Inasmuch as these procedures are dealing with a family's standard of living and may have a pronounced effect upon the long-term financial life of the family, such inequities should be regarded as a very serious matter.

A number of other questions come to mind in studying the list of items above. To what extent should assets be considered to enter into determination of ability to pay? If a family of modest income owns modest assets, should the family be required to liquidate these assets to pay charges? To what extent can assets be held as reserves for education or retirement? Who is to say? Inasmuch as a family's assets represent a degree of security for the future, should not only the income from these assets, if any, be considered to affect ability to pay?

How much reserve for education and reserve for retirement is allowable? What level of housing should a family enjoy? How much should a family give to church and charities, or spend on vacation and recreation? What is hardship? What is an adequate standard of living? How much sacrifice should a family or the other children in the family be expected to make? Who is to say?

A little reflection along the lines sketched above brings one quickly to the conclusion that those who determine "ability to pay" have much control over the standard of living, education of the children, and the present and future security of the whole family. It is disturbing to note that this very grave responsibility has in many cases been given without appreciable legislative direction, that it is reportedly executed without established charts, tables, or formal methods, and that the results are so inconsistent that they must be considered to be arbitrary opinions which vary greatly (fig. 14) from one authority to another.

The inquiry into personal financial matters.—In general, parents of institutionalized retarded children who cannot afford to pay the full statutory charge are required to reveal the complete, intimate details of their financial status to the agency which determines ability to pay. In States in which the determination is made by the court (fig. 13) these details may be thrown into open court. This practice is unacceptable for a number of obvious reasons and has been, according to a recent study (7), " * * almost universally condemned by both lawyers and psychiatrists."

In some States the parents are turned over to the welfare agency for investigation (fig. 13) and must endure the attendant indignity. In nearly all States, the financial life of the family is under continuous detailed scrutiny by the determining agency, with determinations being made sometimes as often as every 6 months.

In many States the parents who cannot pay the full charge are technically indigent, and in some States they are actually classified in the statute as legally indigent.

Unfortunately, it is not just a small portion of parents who are subjected to these procedures. Only the very small number which voluntarily pay the full charge without submitting to investigation is excepted (fig. 10). The rest, which number from 90 to almost 100 percent of the parents, and which include a very large number of hard-working, responsible citizens, must endure the stigma of being labeled "indigent," the indignity of welfare procedures, and the frustration of surrendering the right of planning the family's financial future. The addition of these burdens to the considerable burdens which the family already carries in having an institutionalized child would seem to indicate a lack of understanding of the basic facts about mental retardation and about the problems which it produces.

A few States have attempted to ease the matter of inquiry into personal financial matters by basing determination of ability to pay solely upon net income as computed on income tax forms. This sort of system is considered to have much merit and its use is suggested in the recommendations which appear at the end of this study.

Payments by "third parties."—An item which has become of increased importance in the area of reimbursement is payments by "third parties"; that is, sources other than the institution resident or the parents. These sources, which include social security, retirement benefits, and the like, can provide significant income in behalf of residents which might not otherwise be able to pay for care. As such, they are important to any reimbursement program, and must be taken into account when modifying or designing a charge system.

The availability of these "third party" payments, however, is sometimes used as an argument for setting the statutory charge as high as possible. Figure 15 shows some interesting information on the relative importance of "third party" sources in full and part payments in one high-charge State. The right portion of the figure shows that two-thirds (66 percent) of the full payments are made solely by relatives, while relatives participated in another 16 percent of the full

payments. Only 18 percent of the full payments are made solely by "third party" sources.

The left portion of the figure shows that nearly half (45 percent) of the part payments are made by "third party" sources, with relatives making the other half of the part payments.

This figure, though limited to one particular State, would seem to indicate that the largest burden of full payments is carried by relatives, and that "third party" sources are of far greater importance in the area of part payments. These part payments are, of course, fixed by the "third party" source itself rather than by the statutory charge. Thus, raising the statutory charge serves principally to lay increased burdens directly upon the relatives, and would affect to a far smaller extent the amounts collected from "third party" sources.

Payments by hospitalization "insurance."—The payment by some hospitalization plans for the care of the institutionalized retarded, though not widespread, is nevertheless a significant item. The availability of such payments raises the question "What is the effect of the existence of hospitalization insurance on ability to pay?"

One high-charge State does not mince words on this matter. Its legislation says:

"If a patient has an insurance contract providing for payment of expenses at a hospital providing services for mental retardation, the other provisions of this division (on determining ability-to-pay) shall be suspended while such insurance is in force and such patient shall be charged the full amount of the average per capita cost for services at the type of institution at which the patient receives care."

In considering the equity of legislation or administrative policy such as this, it should be remembered that hospitalization insurance is bought and paid for by the individual to protect himself from the unforeseen catastrophe of large medical bills. In a State having statute or policy that is quoted above, the following situation is conceivable:

A family with an institutionalized child for whom the statutory rate is \$125 per month has been examined and found "able to pay" \$75 per month. It is then discovered that the family has a hospitalization policy which will pay \$50 per month for a limited time. The State immediately proceeds to collect \$125 per month: \$75 from the parents and \$50 from the insurance company. When the limited time period is over, the hospitalization payments cease and the charge continues at \$75 per month from the parents.

Obviously, in this hypothetical case, the protection which the parent had purchased for his family has been denied him for this hospitalization and converted to the benefit of the State.

Legally, insurance can be looked upon as a contract between an individual and a company. There appears to be considerable question as to whether there is any legal or moral justification for taking into account an insurance contract in determining responsibility or charges, whether the insurance is automobile liability, hospitalization, burial insurance, or whatever.

Some conclusions for section IV

The foregoing information on performance and impact of charge systems has shown that the percentage of parents who pay full charge is very small, in no State more than 10 percent. A larger group pays a part charge, but the largest group, which in most States is between 50 and 90 percent, pays nothing. This situation is a result of the level of family income, as described earlier in the report. As a consequence, the amount of money recovered in charges by the State is very small (in no State more than 12 percent) compared with the total expenditures.

The ability-to-pay procedures, which are used by most States to determine the amount of payment demanded of all parents except the few who voluntarily pay the full charge, have been shown on a nationwide basis to be inconsistent, undefined, and inequitable. These procedures do not deal in measurable quantities but produce determinations which are only arbitrary opinions. Further, charges based upon these procedures are shown by the available data to be widely guilty of invading the basic standard of living of families of modest incomes.

VI. TOWARD A NEW PHILOSOPHY ON CHARGES

Background

The foregoing sections have presented and analyzed the technical aspects of charges for institution care, including the basic statistical data showing status, trends, and performance. In distilling from this material the basis for improved

charge systems, it is essential to add the ingredients of sociological, humanistic, and philosophical considerations. It is beyond the scope of this report to discuss or debate these considerations in any great detail. This section will therefore present only a few additional facts regarding the mentally retarded, their families, and their communities, and will then present the general conclusions and recommendations of the committee.

Differences between the mentally retarded and the mentally ill.—A report on the matter of institution charges would be incomplete without consideration of the confusion which exists regarding the relationship between the mentally retarded and the mentally ill.

In the past these two groups have in many instances been treated alike. In many States, both groups were cared for in the same institution. Although separation in different institutions has now been effected in most States, the institutions for the mentally retarded are often administered by the same agency which administers the hospitals for the mentally ill. The reimbursement laws covering the two groups are often similar, if not identical. Legislation in the various States which sets the statutory maximum charge at the full cost of care often makes no differentiation between the two groups. Indeed, there is evidence that not only the general public, but also legislators and administrative agencies may not, in some cases, clearly understand the differences between these two groups.

The study by the Virginia Association for Retarded Children (3) presents a detailed analysis of this point, based upon the hospital records for one particular State. The results of this analysis showed that the number of patient movements (admissions, discharges, deaths) among the mentally ill was very large and showed that average lengths of stay were 10 months for first admissions, 20 months for readmissions, and 6 years for persons who died in the hospital.

The mentally retarded patients, on the other hand, showed so little movement that average lengths of stay could not be computed directly. A deeper analysis of the data on the mentally retarded showed that most retarded were admitted as children, and that except for those highly defective children who died young, and except for the modest number of youths (most mildly retarded educable) who left after their schooling was completed, a large number of patients stayed in the institution for a very long time—20, 30, 40, years, or a lifetime.

This study concludes that the circumstances of hospitalization, family problems and the medical aspects are all completely different. Generally speaking, the patient coming now to a hospital for the mentally ill, is, except for his period of hospitalization, an independent adult, a competent wage earner, whose stay in the hospital is relatively short. The resident in the institution for the mentally retarded, on the other hand, enters at an early age for a long, perhaps a lifetime stay and is, generally speaking, dependent for life.

It is imperative that these differences be carefully considered when designing a system of charges for institution care.

Attitudes of the parents.—In addition to the formal questionnaires which sought factual data from State agencies concerned with hospital administration and reimbursement, the NARC Committee performing the study asked for background information, parental attitudes, future trends, etc., from State associations for retarded children. Letters containing helpful information were received from a majority of the States.

It is unfortunate that no means exists for readily presenting the composite of opinions which these letters contained. Collectively the letters provided the committee with a fine feel for the grassroots thoughts on the matter of charges for the residential care of the retarded.

Many letters expressed gratitude for the progress in the particular State, and a hope for better understanding of the problems faced by the parents of institutionalized children. Most letters spoke out against the particular symptom of lack of understanding in that State: lien laws, high charges, double taxation, collections in the hands of the wrong agency, inequities in setting charges, the lifetime burden laid on parents. Some mentioned that children with other handicaps (the blind, the deaf, etc.) are treated far differently from the retarded in their State (an item which is discussed in detail in the NARC study (1) and the article by Dr. Eagle (2)). In short, a great many of the items which have been discussed in this report were brought up in these letters as items of grave concern.

One thought which appeared in many letters and which was very much in evidence in the discussions within NARC is the view that most parents expect and desire to participate in the care of their retarded children. They do not ask to be relieved of all responsibility, but expect to share in it, whether through payment of some measure of the costs or through providing for clothing, personal needs, and incidentals. This philosophy runs through this report and is found

firmly embodied in the formal NARC resolution which will be presented later in this section.

Having affirmed their intention to do their part, the parents ask, as they have asked on other subjects in the past, that the community also accept a share of the responsibility, enough to make the burden manageable to the parents.

Attitudes of the community.—The attitude of the community (State), as revealed by the variety of policies on reimbursement described in the previous sections of this report, can be described as widely varying. At one end is the State which charges nothing for the residential care of the retarded. At the other end is the State whose legislation demands collection of the full cost of care, and perhaps prescribes pernicious methods to enforce collection, such as the use of lien laws* to cover the portion of costs which a family is deemed unable to pay.

It is clear from these differences that the community needs to make a new assessment of this matter. This new assessment should be based upon an understanding of the technical and economic information on reimbursement, such as is presented in this report, and upon a familiarity with the growing body of scientific information on mental retardation. It must be based also upon a careful consideration of the sociological and family aspects of the problem, aspects which are only lightly touched upon in this report.

Based upon past experience, there is room for optimism that if the facts of the matter are brought before the community, a demand for improvement in this situation will result.

It should be mentioned that all States face the continuous requirement for obtaining the funds with which to implement their ever-increasing array of services. Consequently, the policies and legislation on reimbursements in many States are very highly revenue oriented. While this need for revenue can be understood, it should not be considered a justification for placing undue financial burdens upon the parents of the institutionalized retarded. Although detailed data are not available upon which to base an analysis, it can be deduced from the data presented previously that modification of reimbursement systems to eliminate hardship and inequities would decrease the revenue to most States by an amount which is very small in terms of the total institution budget.

Conclusions and recommendations from this study

The following are the principal conclusions which have been produced by the NARC survey and study of charges for residential care. Each conclusion is followed by the general recommendation of the committee on the particular point.

1. The maximum statutory charges for institution care of mentally retarded children have increased precipitously in the past 4 to 6 years. These charges now exceed in many States the cost of maintaining a child in college.

Recommendation: That the States recognize that the statutory charges for institution care of mentally retarded children are too large to be borne alone by any appreciable segment of our population, and that the matter of reimbursement be studied and be realized with reality.

2. More and more States are basing their statutory charges on per-capita costs; consequently, further increase in charges are predicted by 25 States, many of them already high-charges States.

Recommendation: That the principle of responsibility of parents for the full cost of care, or per capita cost, be abolished, and that the community willingly assume a portion of the cost of care of all institutionalized retarded.

3. The impact of institution charges actually levied upon parents in many States appears to be very great. There is evidence that significant reductions in standard of living are being produced, particularly among those parents who are in modest income brackets.

Recommendation: That maximum charges to the parents be limited to the cost of rearing a normal child at home, and that no charge for other than clothing and incidentals be made to families whose income is below a modest but adequate level.

4. In their performance, the charge systems of the various States demonstrate that the ability-to-pay determination is a vague and indefinable procedure which invades the private affairs of the family and which produces only arbitrary opinions. In spite of its claims of being based upon "ability" and "no hardship," the procedure is shown by the data to be widely guilty of invading the basic standard of living of families of very modest income.

Recommendation: That a simple sliding scale, for cases in which payment less than the maximum is justified, should be developed based upon net taxable income, and published.

*Not covered in this report. Some information will be found in references 1 and 2.

5. The charge systems throughout the country, in spite of all efforts of the States to collect and all effort of the parents to pay, succeed in collecting only a small percentage of institution costs. The reason is found in the income statistics which show that there is no large income group which can afford to pay large institution charges, and only a modest group which can afford to pay any charges at all.

Recommendation: That the community recognize that the costs of institutionalization are too great to be carried by individuals, and like other major economic problems, must be spread over the collective tax revenues of the community.

The NARC Resolution: A guide for the future

The conclusions and recommendations drawn from the work of the NARC Committee on Residential Care of the Mentally Retarded have been embodied in a resolution which was submitted by the Committee to the NARC annual convention in October 1962. This resolution was passed by the membership in its general meeting. It will be noted that the resolution does not attempt to spell out what charges should be. Rather, it sets forth principles and limitations, which can be used in the design of a charge system for each State. A system designed on these principles will serve the requirements of the State and, at the same time, serve and protect the needs of families in whose hands has been placed one of society's great unsolved problems—a mentally retarded child.

The full text of the resolution follows:

"RESOLUTION

"Whereas mental retardation is a catastrophe which may befall a child in any family, at any economic level, in any community; and

"Whereas in the best interest of the retarded person, his family, or his community it may become necessary that he be placed in an institution; and

"Whereas for a period of 8 years NARC has conducted a comprehensive research and analysis of institution charges in the United States; and

"Whereas the conclusions drawn from this research have shown that great differences exist between the charges assessed parents in the various States, and that these charges result in damaging reductions in the standard of living of many families, particularly those families with modest incomes: Now, therefore, be it

Resolved, That the National Association for Retarded Children recognizes and commends those States which have acknowledged that the cost of care of the mentally retarded is too great to be carried by the parents alone, and which have assumed a substantial share, or all, such costs; and be it further

Resolved, That the National Association for Retarded Children recommends that in those States where payment for institutional care is required, the charge system should embody the following principles, limitations, and procedures:

1. The maximum responsibility of parents for the cost of care of the retarded in public institutions shall be limited to the cost of rearing a normal child at home.

2. Other than provision of clothing and incidentals, no charges for institutional care shall be made for families whose incomes are below those described as "modest but adequate" by the Bureau of Statistics, U.S. Department of Labor.

3. For families with incomes above the minimum level, criteria and procedures for determining charges should be developed, based primarily upon net taxable income.

4. Responsibility of parents for charges shall be reduced or cease if the period of institutional care is very prolonged or when the child reaches age 21.

5. No charges or debt shall accrue for other than the charges set by the procedures outlined above. There shall be a statute of limitations to provide that no charges can be recovered which are past due for more than 5 years.

6. Assets or entitlements of individuals residing in institutions may be applied toward reimbursement to the extent of average per capita cost, with full consideration of his needs upon rehabilitation and release.

APPENDIX A

SOURCES AND USE OF DATA

The principal source of the 1960-61 data is the NARC questionnaire, a copy of which is included at the end of appendix A. This questionnaire, was designed to solicit information normally available to the State agency which administers institutions for the mentally retarded. It was, however, inadvertently sent to the various State institutions along with questionnaires on other subjects. Later it was also sent to the State agencies. Many State institutions provided what information they could on these questionnaires. Most State agencies also answered the questionnaire.

Some disagreement was found between answers from the individual institutions and from the State agency in the same State. Many of the discrepancies can probably be explained by minor differences in method of keeping records and the like, and are not sufficient to materially affect the analysis for which these data were used. In general, the data from the State agency were used. Where no reply was received from the agency, or where the agency data were missing or obviously in error, the institution data were used.

Other sources of data and information were used to cross-check and fill blanks. These sources included legislative research reports (such as that of the U.S. Department of Labor (4), material supplied by State Associations for Retarded Children, and publications (such as that by Mernitz (5). Except as otherwise indicated, the data presented are for 1960-61. Comparisons are made with data from the earlier NARC study (1) of 1956. Sources of data for 1956 include this study as well as that of the Virginia Association for Retarded Children (3).

It is emphasized that the data contained in this report were not compiled to produce an utterly complete statistical report. Rather, the purpose was to produce a working document of respectable accuracy which illustrates the status and trends of charges for residential care, and which highlights the problems and the situations which are of concern to the parent and friends of the mentally retarded. Accordingly, graphical methods of presenting the basic data are used in preference to tabular methods.

SURVEY ON STATE INSTITUTIONS

Part C: COST OF MAINTENANCE AND TRAINING

Name of Institution _____ State _____

1. For purposes of comparison and indication of trends, please give information requested in the following table as accurately as your records permit. Monthly charges and costs are indicated.

- | | | | | |
|---|-------|-------|-------|-------|
| a. Number of patients in residence: | _____ | _____ | _____ | _____ |
| b. Cost of operation (per capita): | _____ | _____ | _____ | _____ |
| c. Maximum statutory charge for care: | _____ | _____ | _____ | _____ |
| d. Amount collected directly from residents (or parents), expressed as percentage of institution budget, regardless of where these revenues are placed or how used: | _____ | _____ | _____ | _____ |
| e. Amount collected from third-party (non-state) sources (social security, retirement, insurance, etc.) expressed as percentage of budget: | _____ | _____ | _____ | _____ |

2. Do you anticipate a change in present monthly charge?
Yes _____ No _____ More _____ Less _____

Please give amount and the year it will take effect:
Amount \$ _____ Year _____

3. Please indicate (regardless to what agency paid):

- | | |
|--|--------|
| x. Percentage of residents (parents) paying full statutory charge: | _____% |
| y. Percentage of residents (parents) paying adjusted partial charge: | _____% |
| z. Percentage of residents (parents) who pay nothing: | _____% |
| Total (x, y, z) | _____% |

MARC SURVEY ON STATE INSTITUTIONS

4. Who or what agency determines adjusted charges? _____
- a. On what basis are adjusted charges determined? _____
- b. What age factors, (resident's) if any, are considered in determining charges? _____
- c. Is an amount less than the statutory maximum accepted without investigation of family circumstances?
Yes _____ No _____ Amount \$ _____ (Monthly).
- d. Are charts, tables or scales for determining adjusted charges published and/or available? Yes _____ No _____. If yes, please attach copy to completed questionnaire.
- e. Do difference between adjusted and statutory maximum charges accrue as debt to parents or guardians? Yes _____ No _____.
5. Is statutory maximum charge based upon per capita cost? Yes ____ No ____
If yes, please check items listed below included in per capita cost:
- | | |
|--|-------|
| Food and lodging | _____ |
| Medical care | _____ |
| Staff salaries | _____ |
| Formal education program | _____ |
| Staff training | _____ |
| Rehabilitation | _____ |
| Building repair and maintenance | _____ |
| Building construction (Capital outlay) | _____ |
6. Statutory charge (maximum) for institutionalized mentally ill in your state: \$ _____

Please mail one copy to MARC, 386 Park Avenue South, New York, New York 10016. Retain second copy for your files.

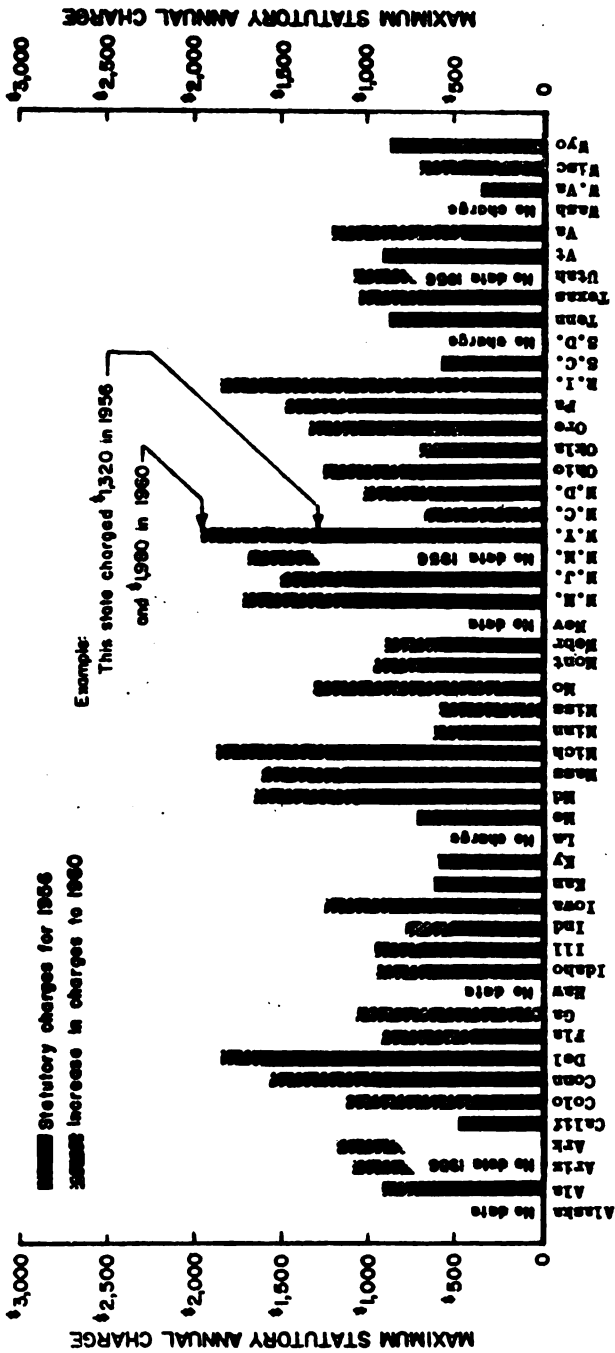

Figure 1 — Maximum statutory annual charges in 1955 and 1960-61. For states with several charge rates, calculated averages are shown.

<u>MAXIMUM STATUTORY CHARGE</u>	<u>NO. OF STATES</u>
None	3
Low (below \$720 per year)	10
High (\$720 to \$1500 per year)	24
Very high (above \$1500 per year)	10
No data or no institution	3

Figure 2. - Number of states having low, high, and very high maximum statutory charges in 1960-61.

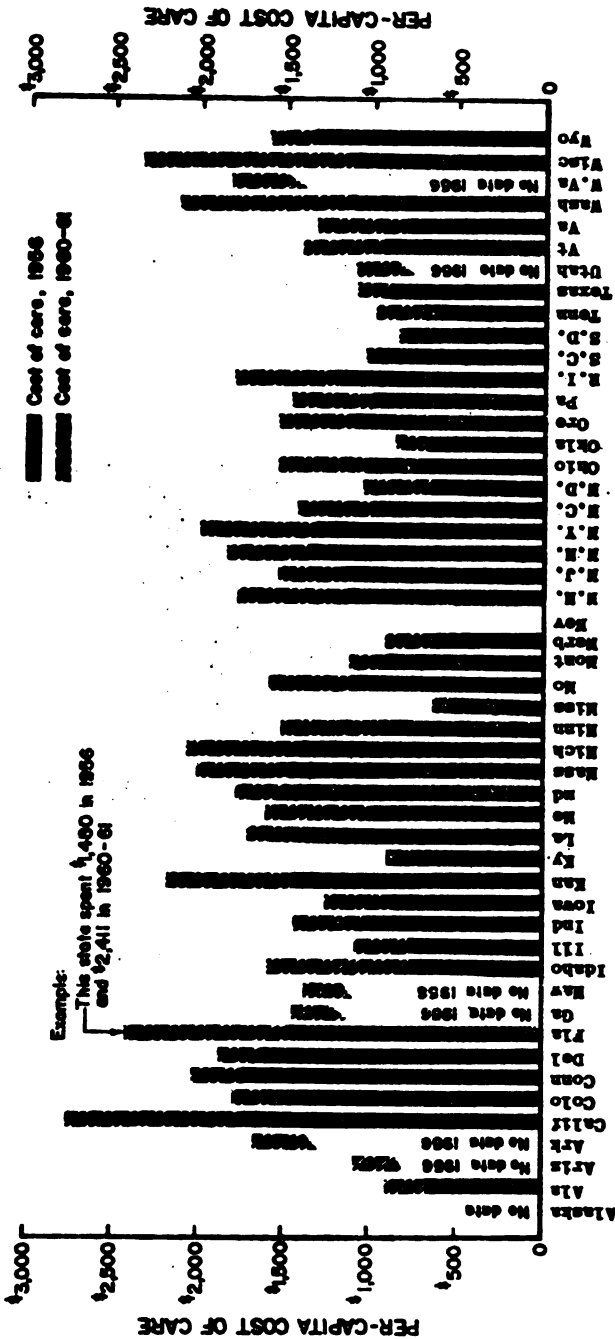

Figure 3.- Per-capita cost of care in 1956 and 1960-61. For states having several institutions with different per-capita expenditures, calculated averages are shown.

Mr. HÉBERT. Mr. Pirnie.

Mr. PIRNIE. Mr. Chairman, I would like to make an observation in regard to the first proposal—that is, the revision of language. I am inclined to view it as an improvement, because it seems as though what you have attempted is to define the problem and not necessarily to make a diagnosis.

Mr. GETTINGS. That is right.

Mr. PIRNIE. I felt that that was the objective of the legislation, to try and deal with the situation, and unless we can improve on the language which you have submitted, I would be inclined to think that it was more appropriate than the language in the bill, because what we are attempting to recognize is that the serviceman has a problem which we believe is worthy of our sharing, and therefore we are not trying to be too technical about the language, but to define the need.

Mr. HÉBERT. I think you are right, Mr. Pirnie. We want to put as many people under the blanket as we can.

Mr. PIRNIE. Yes, providing there is that need.

Mr. HARDY. I think the approach the language takes is a desirable approach, but I would hope we might even be able to improve upon that.

Mr. PIRNIE. I share that thought with Congressman Hardy. I am not saying this is the ultimate, but it is moving in the direction that I would like to see the legislation take.

Mr. HÉBERT. Mr. Slatinshek.

Mr. SLATINSHEK. I have no questions on this but, if you would like, I would like to pursue this question about the contribution.

The members of the subcommittee are concerned with the possibility that the Federal Government might, by the inadvertence in this language, in some instances require the member to pay considerably more than one-quarter of the cost of maintaining his child in either a public or private institution.

My initial reaction to that would be perhaps putting in language that would place a ceiling on the contribution that the member would have to make.

Mr. HARDY. Percentagewise?

Mr. SLATINSHEK. Percentagewise, so that in no event shall his contribution exceed 25 percent of the cost of maintaining the child in a public or private institution.

This, too, of course would be subject to considerable implementation, because we have the problem of the possible availability of not only a public institution but a private institution, and an individual member might desire to have his child in a high cost private institution as opposed to a public institution. In that case necessarily the Department would have to somewhat discourage that by charging a little more, requiring a higher charge from the member.

This again would be in the area of regulations, and it would be unfortunate if we attempted to crank it into the statutory language.

I have no further observation.

Mr. HÉBERT. Thank you very much, sir. We appreciate your appearance and cooperation.

Mr. Slatinshek, call your next witness.

Mr. SLATINSHEK. The committee has invited the appearance of a number of other groups who are affected by the legislation. The committee has been advised that each of them are interested in sub-

mitting a statement for the record, but they are unable to be here today to testify, and these include the Health Insurance Association of America, who are the commercial underwriters for health insurance, the American Medical Association, the American Hospital Association which has submitted a statement for the record, the Blue Cross Plans which is represented here today by Mr. Tollefson, who would be available to the committee if they have questions. However, he, too, and his association do have a statement in preparation which will be submitted late this afternoon. Is that correct, Mr. Tollefson?

Mr. TOLLEFSON. Yes, sir.

Mr. SLATINSHEK. The National Association of Blue Shield Plans has also indicated they will have a statement for the record, as does the National Association of State Mental Health Program Directors.

We have received a statement for the record from the Association of Regular Army Sergeants and also the National Guard Association.

No other organizations have indicated a desire to be heard on this legislation. There are no other witnesses scheduled.

Mr. HÉBERT. In that case, we thank you gentlemen who have appeared—

Mr. HARDY. Mr. Chairman, in connection with these statements, have some of them already been submitted?

Mr. SLATINSHEK. The only ones that have been submitted are the American Hospital Association, the National Guard Association and the Association of Regular Army Sergeants.

Mr. HARDY. I don't know whether this will develop or not, but it has occurred to me in connection with some of these statements there might be some points raised that the committee would consider would require explanation. In such a situation, I think ordinarily we ought to put these statements in the record, but if such a situation should develop, I don't know whether they ought to go in the record unless we have an opportunity to discuss these points.

Mr. HÉBERT. What we will do in this case, Mr. Hardy, is put them in the record—they are submitted for the record—and in executive session we will have the opportunity to discuss them. That is about as far as I think we can go in the situation.

Mr. PIRNIE. Couldn't there possibly be another element involved, Mr. Chairman, that if counsel found them to include matter which had not been brought before the committee in our hearings that we would be advised of that, if there were new subject matter?

Mr. HÉBERT. If there were new subject matter, I think that would be proper.

Mr. HARDY. That wasn't exactly the point I had in mind, though I think that is valid, too. The point I have in mind is we have developed a considerable amount of discussion here this morning on some proposed language changes which I think has been very helpful to the committee and will help us, I believe, come up with a better bill.

It just occurred to me that in the course of examining the statements submitted by these other organizations there might be other points raised which would need clarification, and my thought was this, Mr. Chairman, that certainly if we don't have an opportunity to interrogate the people who present these statements, certainly if there are points developed in connection with them that need clarification, such clarification at least should be procured in writing if we are going to put the statements in the record.

Mr. HÉBERT. I believe this, Mr. Hardy, that after we have them before us, if there is anything else, it is perfectly within the realm of the power of the committee to bring them back and question them.

Mr. HARDY. My only thought was this. I personally would hesitate to give blanket approval to the inclusion of these statements in the record unless we have some assurance that if there are points they raise which need clarification, we will get the clarification either by further testimony or in writing.

Mr. HÉBERT. That is definitely understood, without objection, there will be included in the record at this point statements relative to this legislation.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 28, 1966.

HON. F. EDWARD HÉBERT,
Chairman, Subcommittee No. 2, Armed Services Committee,
Rayburn Building, Washington, D.C.

Dear Mr. CHAIRMAN: I regret that due to the fact that I must leave this afternoon for California I will be unable to appear before your committee to formally testify in support of H.R. 13582, H.R. 13583, and H.R. 9271.

I have read the testimony submitted by Assistant Secretary of Defense for Manpower, the Honorable Thomas D. Morris, and I agree with his statement entirely.

I am sure our committee feels very strongly that dependents of the uniformed services and military retired and their dependents should have their rights spelled out in writing such that they would know where they stand. The expenditures proposed under the subject bills are considerable, but the equitable distribution of the benefits and their need is not arguable.

I support also the provision in the third bill respecting the treatment of dependents afflicted with mental retardation or physical handicap. I know many members of the armed services who over a period of years have expended upwards of \$25,000 for the support of one retarded child. I personally would like to see the Department of Defense assume this responsibility with a minimal charge to the serviceman of \$25 irrespective of rate or rank.

I would appreciate your incorporating these views in your record.

Your many courtesies are appreciated.

Very truly yours,

ROBERT L. LEGGETT, *Member of Congress.*

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 18, 1966.

Re H.R. 9271.

HOUSE COMMITTEE ON ARMED SERVICES,
Rayburn House Office Building
(Attention: Mr. Frank Slatinshek).

DEAR FRANK: It is my understanding that Mr. Hébert's subcommittee will conduct hearings on H.R. 9271 within the next few days.

As you know from my previous conversations with Mr. Hébert and with you, this bill has my unqualified support. Its highly commendable objectives are, of course, well known to Mr. Hébert, to the other members of the subcommittee and to you.

I will be grateful if you will cause this letter to be made part of the record of the hearings.

Sincerely,

CHARLES M. TEAGUE,
Member of Congress.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 24, 1966.

Hon. MENDEL RIVERS,
Chairman, Armed Services Committee,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing to give my full support to H.R. 13582, to amend chapter 55 of title 10, United States Code, to increase health benefits for dependents of members of the uniformed services, and H.R. 13583, to amend chapter 55 of title 10, United States Code, to authorize civilian health benefits program for retired members of the uniformed services and their dependents.

On March 15 of this year, I introduced two companion bills, H.R. 13648 and H.R. 13649, because of my great concern over what I feel is insufficient medical care for retired military personnel and dependents of military personnel.

Beginning in 1960, large numbers of military personnel who began their military careers prior to and during World War II became eligible for retirement by virtue of completing 20 years or more of active military service. The impact of these large-scale military retirements is, I am sure, of great concern in many areas. The need for a long-range solution became more urgent when in September 1962 the Department of Defense announced that, pending the development of an overall solution to the retired problem, no beds or other inpatient facilities for retired members or their dependents would be programed in new military hospital construction.

Enactment of the Dependents' Medical Care Act in 1956 gave specific statutory basis for the "space available" medical care which the military services had been providing as a matter of policy and moral obligation to servicemen who had been advised that this was one of the fringe benefits available to them for remaining in active service. This was one of the methods of enticing men into remaining in service until retirement. We are now told, however, that we have arrived at a period when traditional and promised military benefits will no longer be provided in military medical facilities.

The size of our military retiree population is rapidly increasing and has doubled in the last 4 years and will again double by fiscal year 1971.

In fiscal year 1960, the retired population of 275,000 increased to 475,000 and will go to 840,000 by fiscal year 1971. Retired dependent population now is over 1 million and will be 2.3 million by fiscal year 1971.

The total retired population by 1971 will be over 3 million and over 4 million in 1980.

The limited medical service that is now being provided in certain areas will rapidly diminish. Retirement records reflect that of all service retirees, 22 percent have located in southern California. I know that in my district there is a shortage of personnel, especially as far as the outpatient clinic of March Air Force Base, Calif.

The Los Angeles through Palm Springs area is serviced by the 150 bed facility at March AFB where dependents of retired personnel can be hospitalized. This hospital services a retiree population area equivalent to the entire State of Florida.

The retired population is doubling every $3\frac{1}{2}$ to 4 years. At the old March AFB hospital facility, there was an average daily inpatient load of about 100 inpatients. In the new hospital, there are about 145, a 50-percent increase. In 1964, 29 percent of the average daily patient load were retired families. In 1965 (January through October) 35 percent of the average daily patient load were retired families. The total effort expended by the medical staff at March Air Force Base on retired families is 60 to 75 percent of their efforts.

Our commitment in southeast Asia has taken a large percentage of our medical resources. I believe that the Department of Defense plans to draft some 1,500 physicians. These physicians will not be used to take care of retired personnel. More and more active-duty personnel are being sent overseas while their dependents remain in the area. Care of retired families is continuing but at a decreasing rate. The volume of retired personnel is so large in southern California that if the medical personnel devoted all their time to them, there would still be a shortage of staff, facilities, and funds to do an adequate job.

This is a strong moral obligation on the part of the Government to continue to provide medical care by some means for retired military population, including dependents.

There have been stated and implied promises of medical care following retirement as a standard part of personnel recruitment and retention efforts.

I favor the enactment of legislation which will guarantee retirees and their dependents medical care in civilian facilities if military facilities are not available.

The Secretary of Defense should be given discretionary authority to arrange for such care.

The Government is under a moral obligation to insure that retired military personnel and their dependents receive medical care. A promise was made to them and this promise must be kept.

Your consideration will be greatly appreciated.

Kindest regards,

JOHN V. TUNNEY,
Member of Congress.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 21, 1966.

Hon. L. MENDEL RIVERS,
*Chairman, Committee on Armed Services,
House of Representatives, Washington, D.C.*

DEAR MR. CHAIRMAN: This letter is in support of your bill, H.R. 13583, to amend chapter 55 of title 10, United States Code, to authorize a civilian health benefits program for retired members of the uniformed services and their dependents.

I have received many, many letters from the retired military personnel in my congressional district due to an announcement of curtailment of medical services by the Department of the Air Force, 2796th USAF Dispensary (AFLC), Norton Air Force Base, Calif., dated January 21, 1966, copy of which is attached.

The general thought conveyed in the letters is that the military is not following through in its commitment to provide medical care for this group. I have a heavy concentration of retired personnel in my area and while a number of them are receiving limited medical services, available facilities cannot possibly provide the greater need for services.

I compliment you on filing remedial legislation and sincerely trust the Congress will take favorable action at the earliest moment.

Sincerely,

KEN W. DYAL,
Member of Congress.

DEPARTMENT OF THE AIR FORCE,
2796TH USAF DISPENSARY (AFLC),
Norton Air Force Base, Calif., January 21, 1966.

Subject: Curtailment of medical services.

To: All retired military personnel and their dependents.

1. Just about 6 months ago I sent a letter to each of you about the change in our status from a 60-bed general hospital to a 15-bed military dispensary with limited capabilities and no specialty services. At that time I explained that the time might come when it would be necessary to impose limitations upon the numbers of patients we could provide care for. I also pointed out that under title 10 United States Code (the laws governing the provision of medical care in U.S. military medical facilities) medical care may be provided to retired military personnel and their dependents only when space and facilities remain after all active duty personnel and their dependents have been provided needed medical care.

2. Due to excessive workload for the manning available, other military medical facilities in this area have had to reduce the quantity of care they have provided retired personnel in the past. As a result, larger and larger numbers of retired personnel and their dependents have sought medical care at the Norton AFB medical facility. Most of these have come to us without appointments. This has resulted in an excessive number of "walk-in" patients which has diluted our efforts so that the quality of care provided must inevitably suffer. It has become necessary, therefore, to establish the policy that beginning February 1, 1966, retired personnel and their dependents will be seen only by appointment at this medical facility.

3. At the same time I would like to point out that in April 1966 our manning document will be reduced 34 spaces and we will certainly no longer be able to provide inpatient care for female dependents and very probably no inpatient care at all.

4. During the summer months our professional staff will be reduced by transfers, separations and loss of authorizations to the point that we will very likely be

unable to provide any retired care at all between June 15 and September 1. During this period we may well be able to provide care to active duty military personnel only.

5. Because of the increasing workload and decreasing medical staff with the resulting fact that less medical care will be available at this facility for retired personnel and their dependents, I would strongly urge those of you who can qualify to make application for coverage under the Federal medicare bill which becomes law on July 1, 1966. Application must be made before March 31, 1966, or you may be ineligible for 2 years.

6. We desire to provide medical support to our retired military population and will always make available the maximum services possible. Within the limits of our budget and manning, we shall strive to provide at least needed medication and laboratory studies when we are unable to provide medical care ourselves.

WILLIAM H. BEHRENS, Jr.,
Major, MC, USAF, Commander.

NATIONAL HEADQUARTERS,
AIR FORCE SERGEANTS ASSOCIATION, INC.,
San Antonio, Tex., March 21, 1966.

MR. FRANK M. SLATINSHEK,
Counsel, House Armed Services Committee,
Rayburn House Office Building, Washington, D.C.

DEAR MR. SLATINSHEK: Reference my telephone conversation this date requesting permission to testify before the House Armed Services Committee on the 24th or 25th of March, relative to House bills H.R. 13582, 13583, and 9271, which proposals are to amend chapter 55, of title 10, United States Code, to authorize a civilian health care program for retired members of the uniformed services and their dependents.

Per your suggestion I have attached an item which I respectfully request its being published in the official record. This should adequately provide the council and other members of the House with the feelings of the airmen of the U.S. Air Force.

Thank you.

Yours in "Duty, Honor, and Country,"

BENNY W. MCGHEE,
Executive Director.

**TESTIMONY OF THE EXECUTIVE DIRECTOR, AIR FORCE SERGEANTS ASSOCIATION,
ON A PROPOSED CIVILIAN HEALTH CARE PROGRAM FOR RETIRED MEMBERS
AND THEIR DEPENDENTS**

Mr. Chairman, Members of the House Armed Services Committee, my name is Benny W. McGehee, I am the Executive Director of the Air Force Sergeants Association—an organization comprised of over 17,000 men and women in all enlisted grades of the U.S. Air Force; to include active, retired, Reserve, and Air National Guard personnel.

I am honored with this opportunity to testify on behalf of these enlisted men and women concerning House bills 13582, 13583, and 9271.

The relief now being offered retired military personnel, and their families to "bolster-up" the gradually disappearing medical care is most commendable. It covers medical care which they had been led to believe they had earned while serving their country at very low wages, plus certain fringe benefits of which earned medical care into retirement was considered. We, the military, fully expected this tradition to be carried on.

Although there is doubt that a promise was specifically made to any member of the uniformed services that he was to receive "free" medical services for himself and his dependents after retirement, it was one of the benefits which was considered as "paid for" or as having been earned due to its being a tradition of the military service to furnish medical service to its retired personnel.

This association is very much impressed with the legislative proposal by the Secretary of Defense to provide a "civilian health care program for retired members and their dependents."

This association objects, however, to allowing the Secretary of Defense authority to increase the charges for medical care at any later date as he may deem

appropriate—but instead—recommends that this authority be retained “always” by the Congress.

Realizing the growing retired lists, and the ever mushrooming costs of upkeep of our Nation's military, this association agrees that a fee for medical service “may” be necessary. However, we cannot overemphasize the fact that any charge made should apply only to those persons either entering the service after this proposal becomes law, or apply only to those who have served less than 10 years' service. This would allow the younger personnel to be knowledgeable of the “change of benefits” expected as part of their pay package when the all-important decision must be made, and that is—to reenlist or not; to make the service a career or get out.

In closing I wish to state that the enlisted men of the U.S. Air Force have nothing but praise for the work and efforts of this committee in providing equal representation to the citizens of our Nation, and for this, we must humbly thank you.

ASSOCIATION OF REGULAR ARMY SERGEANTS,
Yorktown, Va., March 23, 1966.

MR. FRANK M. SLATINSHEK,
Committee on Armed Services,
House of Representatives,
Washington, D.C.

DEAR SIR: Enclosed are 15 copies of the testimony of Sfc. Norman A. Davis of the association with whom you spoke earlier this week.

It concerns our feelings about the proposal of the administration on medical care for dependents and retirees.

Since it is not possible to be heard because of the crowded schedule of the hearings, we would appreciate consideration of its content and inclusion for the record.

Sincerely yours,

RICHARD F. IVY,
Sergeant First Class, Executive Director.

STATEMENT OF SFC. NORMAN A. DAVIS, FIRST VICE PRESIDENT AND DIRECTOR
FOR LEGISLATIVE AFFAIRS OF THE ASSOCIATION OF REGULAR ARMY SERGEANTS
ON THE MILITARY RETIREES MEDICAL CARE BILL

I am Sfc. Norman A. Davis, first vice president and director of legislative affairs for the Association of Regular Army Sergeants. Our association is a worldwide complex of career sergeants who enjoy the prestige of being representative of the cross section of Army sergeants who are dedicated to their careers, both on and off duty. The association is a nonprofit, noncommercial, and non-partisan personnel action seeking group, and our statement here is in keeping with our aims of moral leadership, career status, prestige, and assistance to Army sergeants.

Our association has discussed at some length Mr. McNamara's previous proposal on medicare at our eastern conference at Fort Totten, N.Y. in January. All of the members present, products of the Army's recruitment program following World War II, did not desire to participate in any deductible program inasmuch as they felt an entitlement existed. That is, official recruiting literature utilized by the armed services for the past 20 years has promised potential careerists free no-cost medical care for himself and family in his retirement years. Only recently has this promise been removed from such literature. Now, upon retirement these same career servicemen are being told that they will have to pay about 25 percent of the cost of treatment and hospitalization. This, we feel, is clearly a breach of promise. It is difficult for these dedicated servicemen and women and their families to understand how their Government can spend billions on foreign aid and Great Society programs and yet be penny-pinching with its service career veterans. Additionally, they doubt that the percentage will remain at 25-75. With the memory of other broken promises, they expect the percentages of cost to change over the years so that they will be paying more than 25 percent. We feel that there must be no dollar limit assigned to whatever is promised by the Government. Otherwise, the ratio may change in disfavor of the retiree in future years as the Government tightens its belt.

The Association is adamantly opposed to any program that eliminates dental care for active duty dependents and space-available dental care for retirees and dependents. It is our position that there should not be separate provisions for

medical and dental care. One is as important as another, and conversely, as expensive. I am personally aware of a master sergeant now serving in Korea with six children who required dental care in the amount of \$823. This amount represents one-sixth of his yearly income. This sergeant is a veteran of the Normandy invasion, the Korean war and possibly the Vietnam war.

The Association is against the provision that prorates the cost of care for handicapped children on a scale tied to grade. The master sergeant with six children, one of which could be handicapped, is less able to pay for his care than a private first class with one child. We believe the previous percentage charge of 10 percent but no more than \$25 monthly to be more equitable. However, we feel there should not be an additional charge at all.

Under the new provisions, the Secretaries of the service have power to program some beds for retirees in new hospital construction. We feel that the percentage of beds for retired personnel should be fixed as was stated in earlier proposals of 10 percent for regular hospitals and 20 percent for teaching program hospitals.

What an equitable deductible figure is for the plan, we do not propose to solve. On an enlisted grade E-7's retirement salary or mailed-home pay of \$180-\$200, 5 percent might even be too much. Abuse of the program is unlikely if any amount is deducted at all.

Finally, the Association of Regular Army Sergeants does not relinquish its support of the monthly contributory hospitalization plans such as the Navy Hospital Fund provided. Everyone would benefit by the general upgrading of all medical facilities under such a plan, and all personnel would continue to be entitled to care.

Moreover, we believe that servicemen who contribute to their own medical care in retirement will think twice before giving up their medical equity which will aid in needed retention of skilled personnel.

However, the Association of Regular Army Sergeants appreciates this opportunity to comment on the administration's proposal. Thank you gentlemen.

ARMED SERVICES COMMITTEE,
CHAMBER OF COMMERCE, VALLEJO AND SOLAND COUNTY, CALIF.,
Washington, D.C., March 21, 1966.

Chairman L. MENDEL RIVERS,
House Armed Services Committee,
Rayburn Office Building, Washington, D.C.

DEAR CONGRESSMAN RIVERS: I note that the DOD has recommended that the Federal Government help financially with the custodial care of handicapped children of active service people. Words cannot express how strongly I support such a program. This support is based upon my own experience covering 44 years. Perhaps a digest of it will be helpful to your committee.

My spastic son died in 1963 at age 44; hence I no longer have a personal interest in such legislation. My interest lies in what I believe to be the good of the service; and with an understanding of the virtually unsolvable problem faced by some of the parents of handicapped children. I smile when I hear the father of a normal child complaining about the high cost of a 4-year college course for his child. The father of a handicapped child cannot plan for a fixed term, such as 4 years. Additionally—and importantly—he must strive to provide financially for his child after his own death. Institutions for custodial care necessarily are costly.

My spastic son was born July 31, 1919, some 7 years after I had graduated from the Naval Academy. I was 28 years old, and was a wartime temporary lieutenant commander. Note that except for 6 months in 1922 when I reverted to lieutenant I never received less than the pay of a lieutenant commander during the lifetime of my son. I was 42 when I made commander—normal promotion for those days. There are certain to be many fathers of handicapped children serving in lower grades than I was. I know what a problem they must be having.

I was stationed in Los Angeles when his mother died suddenly in 1929. He was 9 years old. He continued as a day pupil at a hospital in Los Angeles, and lived at home with his sister and me. A year later I was ordered to sea and had to break up our home. I am a 1100 officer. My assumption that the hospital would accept him for custodial care proved to be incorrect because "I can get more for even a county patient than you can afford to pay." I had offered to pay \$100 per month. So I placed him in a spastic school in Burbank, Calif. My ship was based at Long Beach close by. Later he was a patient in three different private schools—two in Maryland and one in California—always at my

expense until he died in a cerebral palsy center in Santa Barbara, Calif., where he had been a patient since July 1947.

I made captain in 1939 and rear admiral in May 1942. When I was retired in November 1947 for 50 percent service-connected physical disability I was an O-8; then the highest base pay grade (the same as C.N.O. for retirement pay purposes) getting some \$733 base pay per month with 39½ years naval service.

However, immediately upon retirement from the Navy I entered upon my present employment; which for the first time enabled me to pay my son's tuition at a cerebral palsy hospital free from financial worry.

At the time of his sudden death he was a patient in the best cerebral palsy hospital I know—Hillside House in Santa Barbara, Calif. He had lived there since July 1947. He was happy there. Spastics are normally not happy in a household with normal children. Comparisons are too odious for them to accept. They seem to have a God-given compensation which makes them content when living among their own kind. Nor are normal children likely to be happy with a spastic in the home. Some parents through an understandable pity will favor the sick child too much.

At the time of his death I was paying \$325 per month for his basic tuition. Clothing, doctor bills, haircuts, and other incidentals were not covered by the \$325.

Though it was somewhat trying at times it is a satisfaction to me that always he was cared for by some of the top cerebral palsy doctors in the country.

In closing let me emphasize that many service fathers of handicapped children who will be helped by this bill are junior to lieutenant commander and hence much worse off than I was. They, the military services, and the children, need your help.

I devoutly hope that you will give it. Should you wish to see me at any time you know that I am always at your service. EM-2-9638.

With kindest regards.

Sincerely yours,

MAHLON S. TISDALE,
Vice Admiral, U.S.N. (retired).

[Information Bulletin No. 6-66]

ASSOCIATION OF THE UNITED STATES ARMY
Washington, D.C., March 28, 1966.

STATUS OF AUSA RESOLUTION No. 13, 1964—MEDICAL AND DENTAL CARE

The House Armed Services Committee opened hearings this week on three bills to expand the health benefits programs for dependents of active-duty members of the uniformed services, and for retired members and their dependents. All three bills would become effective July 1, 1967, and all have been endorsed by the Department of Defense.

DEPENDENTS OF ACTIVE DUTY PERSONNEL

H.R. 13582 would authorize for dependents of active-duty personnel health benefits comparable to those provided by the "high option" plan of the Federal employees health benefit program administered by Blue Cross-Blue Shield. The outstanding new feature of this authorization is civilian outpatient care which would cost the patient 20 percent of the charges involved.

All other benefits of H.R. 13582 are already provided for active-duty dependents. These include physical examinations, immunizations, maternity care, care of the newborn, routine dental care outside the United States and in remote areas within the United States where civilian facilities are not available, emergency dental care worldwide, care in civilian hospitals costing \$25 for each admission or \$1.75 a day for the number of hospitalization days, whichever is greater, and care in military medical facilities.

Also affecting only dependents of active-duty personnel is the second bill, H.R. 9271. As amended by the Defense Department, the bill proposes a comprehensive program for handicapped children of active duty personnel which would provide:

1. Diagnosis;
2. Inpatient, outpatient, and home treatment;
3. Training, rehabilitation, and special education necessitated by the child's mental or physical handicap, and

4. Institutional care in private nonprofit, public and State institutions and facilities and, when appropriate, transportation to and from such institutions and facilities. No military facilities would be involved.

The costs of such benefits would range from a minimum of \$25 a month paid by the parent in the lowest enlisted pay grade to a maximum of \$250 a month paid by the parent in the highest commissioned pay grade. Active-duty personnel with more than one child incurring expenses under the program in a given month would not be required to pay an amount greater than for one such child.

To overcome the effects of residence requirements imposed by some States in connection with child welfare and crippled children programs, the bill would require such States to waive residence requirements for the children of active duty personnel (and for a period of 1 year following the retirement of such personnel) in order to obtain Federal grants for the State's child welfare and crippled children programs.

RETIREES AND THEIR DEPENDENTS

The third bill, H.R. 13583, proposes a civilian inpatient and outpatient health benefits program for retired members of the uniformed services and their dependents. As is provided in the active duty dependents bill, H.R. 13583 also authorizes the Secretary of Defense to establish by contract a program of benefits which will not exceed those provided under the "high option" plan of the Federal employees health benefits program administered by Blue Cross-Blue Shield. In addition to retired personnel and their dependents, the dependents of personnel who died while on active duty and the dependents of deceased retired personnel are eligible. However, individuals who reach the age of 65 and are entitled to hospital insurance benefits under the Social Security Amendments of 1965 would not be eligible, but could continue to receive available benefits at military facilities.

Approximately 75 percent of the total costs of the benefits proposed in H.R. 13583 would be paid by the Government, and the balance of about 25 percent would be paid by the patient. As long as Government facilities continue to be available, eligible personnel could elect to receive benefits either in Government facilities as they now do on a space available basis, or in civilian facilities. When Government facilities are not available, the benefits would be received at civilian facilities.

In this connection, the bill amends to a limited extent the existing policy for programing accommodations only for active duty personnel and their dependents in future construction of medical facilities. The amending feature provides that facilities for inpatient and outpatient care of retired personnel and their dependents may be programed at the minimum level necessary to meet the teaching and training requirements of the active duty hospital staff members, and where there is a critical shortage of civilian hospital beds for a large concentration of retired personnel.

The bill also authorizes the Secretary of Defense to arrange with the Administrator of Veterans' Affairs for providing care for retired personnel (but not for their dependents) at facilities of the Veterans' Administration. The Administrator would determine what facilities are available for retirees and he would be reimbursed at rates approved by the Bureau of the Budget.

There can be little doubt that the provisions of these three bills are supported by AUSA resolutions concerned with providing adequate medical care for dependents of active duty personnel and eligible retired personnel. The proposed authorization in H.R. 13582 of civilian outpatient care for dependents of active duty personnel would relieve a serious existing deficiency. The optional plan proposed in H.R. 13583 would largely overcome the difficulties encountered in obtaining "space available" treatments. The purpose of the program in H.R. 9271 for handicapped children, as explained by the Defense Department, is to lighten for the serviceman "the heavy and at times unbearable burden of providing continuing care for such children."

However, the AUSA objective as set forth in Resolution No. 13 approved in 1964 and restated in 1965 requests the Defense Department to take action also to provide adequate dental care for departments of active duty and eligible retired personnel. These bills fail to propose any dental care benefits which respond favorably to the request contained in these resolutions.

ARTHUR SYMONS,
Colonel, AUS, Retired, Secretary.

STATEMENT OF THE CHIEF WARRANT AND WARRANT OFFICERS' ASSOCIATION,
U.S. COAST GUARD, BEFORE THE HOUSE COMMITTEE ON ARMED SERVICES

Mr. Chairman and members of the committee, I am Chief Ship's Clerk Lee R. Green, U.S. Coast Guard, president of the Chief Warrant & Warrant Officers' Association, U.S. Coast Guard.

I wish to point out at the outset that I am speaking only on behalf of the association.

Our association is composed of more than 2,100 members holding permanent commissioned warrant or warrant officer status, U.S. Coast Guard. Approximately 45 percent of our membership is on the retired lists.

The preponderance of communications received from retired members dealing with their "retired" status can be broadly grouped into three categories:

- (1) Complaints that retired pay is no longer tied to active duty pay;
- (2) Concern about the lack of adequate medical facilities for themselves and their dependents; and
- (3) Survivors benefits.

All three of the categories mentioned are contingent, one upon the other. However, the No. 2 category regarding inadequate medical facilities is the issue before this committee.

My remarks are made in the interest of warrant officers (W-1 through W-4). Warrant officers, by law, are required to retire upon completion of 30 years service. This is at a time in life when financial burdens are generally greatest. It is also a time when it is difficult, if not impossible, to begin a second career. Restrictions are placed upon warrant officer retirees as to the types of jobs they are allowed to hold (civil service employment requires reduction in retirement pay). They continue to be subject to the Uniform Code of Military Justice, and are subject to recall to active duty. Therefore, the retired status is in fact a continuation of the military career.

The association is aware that the administration has made pay proposals which the administration deems adequate but this association feels such proposals are inadequate for the warrant officer. It is the general consensus that this lack of pay comparability is alleviated by more generous retirement benefits such as early retirement, medical care, commissaries, exchanges, etc. These congruous advantages are somewhat phantom as the availability of medical care, commissaries and exchanges is contingent upon a member living in an area where such facilities are located. A member generally retires at a place where stationed at one time during his active career and Coast Guard units are inherently isolated to the extent that these advantages are not normally available. Where available, they are gradually being eliminated. Frequent moves and low rates of pay throughout their military service deprives a member the opportunity of building "an estate." His estate is the retired pay expected, fringe benefits such as free hospitalization for himself and dependents, adequate commissaries and post exchanges, and the insurance policies he has been able to obtain from the Government at a low cost. At this point the family budget is strained to purchase a home and educate college-age children.

It is important that the quality of our fighting men not be reduced. The head of a military family deserves the assurance that when his military career evolves to retired status his anticipated benefits are preserved.

Some personnel pick their retirement home in a locality where Government medical facilities are available. Now they find some of those facilities either closing or overcrowded to the extent that it is causing them great anxiety. They have reached the stage in life when more frequent utilization of medical facilities is a necessity, yet the free medical care they always thought they could obtain for themselves and their dependents, is now dwindling away. They are faced with the solution of either moving to a more favorable locality or bearing the costs of medical expenses themselves; either of which will cause a heavy financial burden they are unable to bear.

This association recommends that—

- (1) Facilities for inpatient and outpatient care be programed in uniformed services construction projects to provide medical care for active duty and retired personnel and their dependents residing near such facilities, and

- (2) Enact the provisions of the bills presently before this committee to assure medical treatment for active duty and retired personnel and their dependents that do not reside near or if residing near, do not have access to medical facilities of the military.

Thank you very much, Mr. Chairman, for the opportunity of presenting our views on this important subject to the committee.

STATEMENT OF BRIG. GEN. JAMES D. HITTLE, U.S. MARINE CORPS (RETIRED),
DIRECTOR, NATIONAL SECURITY AND FOREIGN AFFAIRS, VETERANS OF FOREIGN
WARS OF THE UNITED STATES

Mr. Chairman, my name is Brig. Gen. James D. Hittle, U.S. Marine Corps (retired), and I am making this statement before your committee in my position as director of national security and foreign affairs, Veterans of Foreign Wars of the United States and on behalf of the 1,300,000 overseas combat veterans who are members of the Veterans of Foreign Wars.

By way of preface to my remarks, Mr. Chairman, I would like to emphasize that this matter of medical facilities for retired members of the armed services and their dependents is of long standing and deep concern to the VFW. The opinions and recommendations in this statement are based upon the unanimously adopted resolutions of our 1965 national convention.

It is indicative of the VFW's interest in medical services for retired personnel and their dependents that provision of such adequate medical services was included among the key goals of the VFW for 1966.

The VFW believes that a very basic fact must be recognized as a starting point for any discussion concerning medical services for military personnel and their dependents: This basic and inescapable fact is that it is the obligation of the Government to provide such medical services. This obligation may not, according to some legal technicians, be a strictly legal one. However, it is a moral obligation. And the VFW submits, Mr. Chairman, the moral obligation is by far the most important. It may be said that there is no legal contract between the serviceman and the Government guaranteeing hospital care for retired personnel and their dependents. However, I can say, Mr. Chairman, upon the basis of my personal experience, and based upon my conversation with officers and enlisted men during their careers, and in a retired status, that it has long been clearly understood by the serviceman that he and his dependents would continue to receive hospital and other medical attention before and after retirement.

This was a recognized and well-understood feature of a military career. It was most certainly one of the important considerations upon which a decision to devote one's life to a military career was based.

To terminate, reduce, or impair the right of the military retiree and his dependents to hospitalization is wrong on many counts.

It is wrong because it is retroactive deprivation of something to which he and his dependents are entitled. It is wrong because it is a violation on the part of the Government of a moral contract. It is at least as important for the Government to fulfill its obligation as it is for the individual. And, the facts are self-evident that the man who reaches retired status has technically and morally discharged the obligation he assumed when entering into a military career.

It is wrong, also, because of its effect upon those contemplating a military career. When the potential career officer and the able young NCO see the breaking of the contract for medical service for retired personnel and dependents, they understandably have reason to reflect further upon the advantages and disadvantages of a military career. As serious and wrong as it is with respect to those who are retired, any default upon hospitalization for retirees and dependents has perhaps an even more serious and definitely more long range effect upon the military services as a whole. This effect cannot help but be damaging if doubts are created in the minds of young officers and NCO's as to the validity—even the trustworthiness—of the Government's obligation to them and their families. Such doubt could be translated into very meaningful and unfortunate terms of less able officers and NCO's deciding upon a military career.

Therefore, Mr. Chairman, the basic observation of the VFW with respect to medical services for military retirees and their dependents is this: It is the clear-cut obligation of the Government to provide such services. Certainly as to the manner in which the services may be provided—whether by U.S. military hospital installations or through a medicare program with civilian hospitals—it is the Government's obligation to provide this medical service, and not at the expense of the retiree concerned.

We should also come to grips with another issue, Mr. Chairman. It has been said that the increasing number of military retirees makes it necessary to change the system of providing medical services for retired personnel and their dependents. This is the equivalent, Mr. Chairman, of saying that the increasing number of military men fulfilling their obligation to the Government justifies the Government in evading its obligation to them. Obviously that would be neither logical or moral.

After all, the relationship between the career serviceman, who eventually becomes a retiree, and the Government is an intensely personal one. There was no suggestion or notice made by the Government to this individual who accepted the obligations of a military career that when more people accepted the same obligations the Government would be released from its obligations to them.

And now, Mr. Chairman, to specific provisions of the legislation now before this committee, I would like to comment with respect to section 2.

This would authorize admission of retired members of the uniformed services for care in hospitals operated by the Veterans' Administration on a reimbursable basis subject to agreement of the Administrator of Veterans Affairs. The Veterans of Foreign Wars of the United States firmly believes that with the increasing incidence of hospitalization of veterans caused by advancing age and the influx of eligibles accorded entitlement to VA hospital treatment by Public Law 89-358, the current capacity of the VA hospital system will prove to be inadequate for veterans now categorically eligible.

Now as to that portion of the legislation pertaining to "contracts for health benefits for certain members, former members, and their dependents":

First, there is a very fundamental issue here of whether or not the Department of Defense, and the retiree's respective military department secretary, are still responsible for military personnel.

The VFW is deeply concerned that the provisions of this portion of the legislation could provide the means by which the military retiree is cast adrift in a bureaucratic wilderness. Throughout large portions of this proposed legislation, the decision of what is to be done about this moral obligation for medical services for the retired military and their dependents is, in many degrees, made the responsibility of the Secretary of Health, Education, and Welfare. In some cases the Secretary of Defense must "consult" with the Secretary of Health, Education, and Welfare with respect to military retirees and their dependents. However, in other sections of the legislation, the determination of medical services for military retirees becomes the joint and dual function of the Secretary of Defense and the Secretary of Health, Education, and Welfare.

Thus, the Secretary of Health, Education, and Welfare would hold a veto as to what the military retiree and his dependents receive in the way of medical services.

It should be obvious, Mr. Chairman, that with all due respect to the Secretary of Health, Education, and Welfare, he and his staff are not as highly qualified either by experience or background, as is the Secretary of Defense in matters pertaining to military personnel, active or retired, and their dependents.

Nor is it reasonable, Mr. Chairman, to expect that those officials who, by the nature of their responsibilities and interests, are concerned primarily with nationwide health programs, would be sympathetic toward the preservation of the retired serviceman's entitlement to medical services for himself and his dependents, a medical service distinct from the general public medical programs.

Thus, this legislation could serve as the springboard, and point of departure, for the eventual complete abrogation of the contractual obligation which the Government has toward the military retiree and his dependents.

It is the opinion of the VFW, Mr. Chairman, that the provision of medical services for military retirees and their dependents is the clear-cut responsibility of the military departments within the Department of Defense. The military retiree most certainly does not deserve to have this responsibility on the part of the Secretary of Defense and military department Secretary shifted in part, or eventually in toto, to a nonmilitary agency of the Government.

This shift in responsibility, or division of the responsibility at the present time, must be recognized as a first step—and a long one—toward merging and submerging the medical care for retirees and their dependents in the mass medical assistance programs. If such is the intent of the proposed legislation, then it should be clearly set forth. At least the military retiree who has served his country loyally should be dealt with frankly—to know what is in store for him. If it is not the intent of the proposed legislation, then such provisions that could set the stage for such an eventuality must be removed and such possibility must be strictly prohibited by the provisions of the legislation.

Next, there is the matter of how much of hospitalization in any private hospital a retired serviceman, or his dependents, should pay.

The VFW believes that the provision of such medical facilities should be based primarily upon medical services provided in adequate amounts in military medical installations.

However, if a medicare program is provided for a military retiree and his dependents, then under no circumstances should the rates for retired persons

and their dependents exceed the rates prescribed for active duty personnel and their dependents.

To have a higher rate for retirees than that which is prescribed for active duty personnel and their dependents would mean placing added financial burdens upon a retiree when his income, through retirement, is less. This would further underline the abrogation of the Government's obligation for providing medical services for the retired serviceman and his dependents.

Also, with respect to rates for a medicare program, it is strongly recommended that whatever rates or standards are to be prescribed should be set forth in legislation. If this is not done, then the retired serviceman and his dependents are placed at the mercy of administrative decisions at some future date. Such rate-making authority could, in effect, eventually destroy even the semblance of the medical services which the retiree is entitled to expect for himself and his dependents.

Also, there is the matter of outpatient treatment. The proposed legislation is, at best, vague on this point. This, to the military retiree and his dependents, as in the case of the active-duty serviceman and his dependents, is a major item of medical care. It is recommended that legislation specifically provide for outpatient care such as treatment in doctors' offices or in clinics. Here again, under no circumstances should the rates paid by retirees and their dependents be higher than those paid by active-duty personnel and their dependents for medicare. The law should state this clearly.

That section of the legislation pertaining to programing beds in military hospitals for retirees and their dependents merits further consideration by this committee. It is noted that the pertinent section of the legislation states that the facilities for care for retirees and their dependents in the construction projects of the uniformed services will be programed only on "case-by-case" basis under joint regulations to be prescribed by the Secretary of Defense and the Secretary of Health, Education, and Welfare.

It is submitted, Mr. Chairman, that when it comes to building military hospitals and carrying out the obligation of the U.S. Government toward military retirees and their dependents, this is a matter that should come under the authority of Congress and the Secretary of Defense. To give the Secretary of Health, Education, and Welfare a joint responsibility in this matter of military hospital facilities is wrong from the standpoint of national defense requirements, orderly governmental procedures, and most certainly from the standpoint of preserving the minimum rights of the retiree who has given the most productive years of his life to the military services.

Furthermore, Mr. Chairman, that portion of the legislation relating to the programing of hospital beds for the retiree and his dependents by the Secretary of the military service concerned warrants further consideration by this committee. It says simply "the Secretary may also consider programing a reasonable number of beds for persons covered in this section in extreme cases," or under certain circumstances.

It is submitted, Mr. Chairman, that in view of the long struggle which this committee has been engaged in with respect to forcing the budget cutters to include dependent facilities in new military hospital construction, it would be reasonable to expect that if providing hospital beds for retirees and their dependents is made a matter of administrative option, then there will be far less beds than if Congress made construction of such facilities mandatory.

Thus, it is recommended that this legislation be amended to reflect the obligation on the part of the Government for providing medical services to the retiree and his dependents by making it mandatory that such facilities for retirees and their dependents, and the dependents of active duty personnel, be included in all future military hospital construction.

Another aspect of the retiree problem is apparently overlooked in this legislation. It pertains to the former serviceman retired for the reason of service-connected disability. This disability is incurred in the course of military service. Certainly there is an inescapable obligation here to provide the medical attention for that retiree. We are unable to find anything in this legislation which reflects the intention, on the part of the Government, to provide such medical service for those disabled in active duty, and retired as a result of that disability. There is, we believe, something legally wrong and morally insensitive if it is intended that the disabled retiree must pay for medical attention under any form of medicare.

And now, Mr. Chairman, a general observation with respect to providing care in military hospitals for retired servicemen.

As this committee is well aware, Mr. Chairman, in dealing with the matter of medical care for retirees, there comes a point where the sharp pencil, the budg-

eteer's ax, and the impersonal flicker of a computer don't provide all the answer where people are concerned. What you are concerned with, and rightfully so, is a matter of deep-seated emotion and laudable sentiment. These are no unusual things in connection with the subject before you, because emotion and sentiment are inescapable attributes of the average person who makes that very fundamental decision to undertake a military career, thus dedicating his useful life to his country.

As anyone who has served for any length of time recognizes, the military life—specifically the service in which a man serves—becomes, in varying degrees, his family and his home. There are a significant number to whom their military service—be it the Army, Navy, Air Force, Marine Corps, or Coast Guard—is the only home they have ever really known. Frequently, you will find these in the senior NCO and warrant ranks. They are persons of highest soldierly virtues. They know and want no other life but that of a military career. His family is his service. His home is his ship or his barracks.

It may well be easy for a cost-cutting budget official to say that hospital facilities are not required for such servicemen after they are retired. But it would not be so easy for anyone who has served with and has come to admire this type—this indispensable type—of fighting man to explain to him that he is not, as he had been led to believe, really entitled to military hospitalization in his old age. It would, indeed, be hard to tell him that although he, throughout his long career, made himself available for every and any duty to which he might be called in defense of his country, hospital construction costs have resulted in medical care not being available to him now.

It is not an easy matter for this kind of serviceman, whose life has been the service, to readjust in illness and ailment to the ways of civilians, as efficient as they might be.

And, it is not empty sentiment, but, rather, a question of justice and morality to urge that this serviceman, to whom the military was his life, his career, his family, and his home, when he stands his last muster, should have the privilege of dying in surroundings in which he served, and among those he knew and trusted.

The VFW, Mr. Chairman, urges and fully supports whatever legislative action is necessary to require the inclusion of rooms and facilities for military retirees and dependents in new military hospital construction.

The Veterans of Foreign Wars, Mr. Chairman, takes this opportunity to express to you and to this committee our appreciation and our admiration for what you are trying to do for the serviceman and his family. The mere fact that you are engaged in such hearings at this time demonstrates that if the just rights of the serviceman, active and retired, and their dependents, are to be assured, that assurance, as have so many similar assurances in history, will result from the action of this committee and the Congress.

ALEXANDRIA, VA., March 29, 1966.

Hon. F. E. HÉBERT,
Chairman, Subcommittee Number 2,
House Armed Service Committee.

DEAR MR. CHAIRMAN: I am grateful for the opportunity to offer some remarks of personal concern and historic application to your committee as you study the matter of extending medicare to dependents of retirees.

Ten years ago as the spokesman for Blue Shield before your predecessor committee, I expressed my conviction that the physicians of this country along with other providers of health services would support such a program as you were then devising. During all the years since then, sitting on the Advisory Committee to the Secretary of Defense, most of that time with my friend and colleague Van Steenwyk of Blue Cross (with whom I had shared many of those early creative moments), I saw the early promise fulfilled.

Under a succession of outstanding executives in the ODMC, uniformed service morale was enhanced as good medical care was given dependents in both civilian and service facilities. The cost was reasonable and the total performance proved that Government and private enterprise could work effectively toward a common objective—better health service. The wisdom of allowing broad administrative option under carefully devised legislation was established.

After 10 eventful years in developing improved methods of distributing health care and paying for it, we are all better able to assist in solving the problems to which your committee now addresses itself. With the options wisely offered

the Defense Department in the administration of the program, what we have learned can be best used.

Once again, and this time with more assurance, I express the belief that not only Blue Shield and Blue Cross but the rest of voluntary health insurance and of course the providers of services will continue the cooperative partnership with Government which will assure the success of your broadened program.

Respectfully yours,

DONALD STUBBS, M.D.

HEALTH INSURANCE ASSOCIATION OF AMERICA,
Washington, D.C., March 28, 1966.

HON. F. EDWARD HÉBERT,
Chairman, Subcommittee No. 2,
House Armed Services Committee,
House of Representatives, Washington, D.C.

DEAR REPRESENTATIVE HÉBERT: On behalf of the American Life Convention, the Health Insurance Association of America and the Life Insurance Association of America I submit the attached statement with regard to H.R. 13582 and H.R. 13583 now pending before your subcommittee. I respectfully request that this statement be made a part of the hearing record.

Very truly yours,

KENNETH D. ALLEN,
Assistant Counsel.

STATEMENT ON H.R. 9271, H.R. 13582, AND H.R. 13583 BY AMERICAN LIFE CONVENTION, HEALTH INSURANCE ASSOCIATION OF AMERICA, LIFE INSURANCE ASSOCIATION OF AMERICA

The American Life Convention, the Health Insurance Association of America and the Life Insurance Association of America, appreciate this opportunity to express our thoughts on the legislative proposals, H.R. 9271, H.R. 13582, and H.R. 13583. These bills are designed to improve health benefits for active duty dependents of members of the uniformed services; provide a health benefits program for retired members and their dependents, and provide resident care for mentally retarded children of members of the Armed Forces.

Member companies of these associations have in force over 90 percent of the voluntary health insurance underwritten by insurance companies in the United States today. Our experience and services have always been available to the Government on proposals of this nature and we believe cooperation between private enterprise and Government are necessary to accomplish the objectives intended by these measures. We feel that Congress representing the Government in an employer status in regard to existing military incentive programs is in the best position to make decisions with respect to the level of benefits for retirees and their dependents as well as active duty dependents. We therefore offer no comment in this regard.

However, if it is determined that there shall be an extension of the program to retirees and their dependents and that there shall be improvement of the present program for active duty dependents, we strongly recommend the method of administration as contemplated by Deputy Secretary of Defense, Cyrus R. Vance, in his letter of March 3, 1966, to the Honorable John W. McCormack, Speaker of the House of Representatives:

"* * * if the proposal is enacted, the retired group will be added to the civilian care segment of the existing dependents' medical care program, effective July 1, 1967, and that the program for retirees would be administered in the same manner and by the same organization that administers the present program, thus taking advantage of the low administrative costs and valuable experience obtained under the present program."

We believe that this approach is administratively sound and in the best interest of the beneficiaries.

The existing competition between the health insurance industry and the Blue Cross Association has provided an incentive to each of them to do their best. Mutual of Omaha, as fiscal agent for hospital charges in some States and for physicians' fees in others, has demonstrated its ability to meet efficiently and with low administrative cost the needs of the existing program. This same efficiency and economy of cost can be expected in the administration of the proposed legislation if adopted.

We suggest that Congress weigh carefully any proposal which would preempt existing health care coverage of retired military personnel. Many of these retirees now have private health coverage paid for in whole or in part by their present employers. Consideration should be given to the ability of these actively employed people to provide for themselves in this or other fashion. Section 1086(d) of H.R. 13583 is specifically designed to meet this problem and we recommend that this be included in any bill the committee may favorably report.

In closing, the experience and services of the insurance industry continue to be available to your subcommittee should you deem further discussion or information necessary.

**STATEMENT BY NATIONAL ASSOCIATION OF BLUE SHIELD PLANS REGARDING
H.R. 13583 PRESENTED BY RUSSELL B. CARSON, M.D., CHAIRMAN OF THE
BOARD**

The National Association of Blue Shield Plans appreciates the invitation extended by Subcommittee No. 2 of the House Committee on Armed Services to state the association's position on H.R. 13583.

In the past, this association has had the privilege of serving in an advisory and coordinating capacity to those of our member plans which have been commissioned to act as fiscal agents for the medical organizations which are prime contractors with the Department of Defense in implementing the program of medical services for dependents of active-duty personnel.

We are confident that our member Blue Shield plans will be interested in participating in the program contemplated in H.R. 13583, if they can serve in a fully responsible role, as they do in the Federal employee health benefit program.

We support the position of the Department of Defense that there is a significant distinction between the dependents of active-duty personnel on the one hand, and retirees from the uniformed services and their dependents on the other, which is the basis on which it is proposed that the beneficiaries of this extended program would be required to contribute toward its costs.

We believe that most serious consideration should be given the proposal to provide medical care protection for the retiree (and dependents) through a mechanism similar to the Federal employee health benefit program.

Through the use of prepayment, costs can be shared equally among the entire insured group; the expense to the Government and the beneficiary will be more stable and predictable than through any other mechanism; and the retiree, as a private citizen, will be protected through the same mechanisms and under the same patterns of protection as the rest of the civilian population.

The present health care program for dependents of personnel on active duty is appropriately designed to serve its original mission (now more important than ever) of maintaining the morale of the armed services. The new program has quite a different mission. Merely to expand the present "medicare" program for servicemen's dependents to cover the retirees and their dependents might damage the mission of the former program.

On the contrary, the purpose of the new program for retirees, who are essentially civilians, will clearly be best served by providing medical care protection according to the prepayment pattern now utilized by the entire civilian population.

The National Association of Blue Shield Plans will be glad to be of any possible service to your committee in its further consideration of this problem.

**BLUE CROSS ASSOCIATION, INC.,
Washington, D.C., March 28, 1966.**

HON. EDWARD HÉBERT,
*Chairman, Subcommittee No. 2, House Armed Services Committee,
Washington, D.C.*

DEAR CONGRESSMAN HÉBERT: This letter is written to express the views of the Blue Cross Association on H.R. 13582, a bill designed to expand certain health benefits for dependents of active members of the uniformed services, and H.R. 13583, a bill which authorizes establishment of a health benefits program for retired members of the uniformed services and their dependents.

The Blue Cross Association which serves the nonprofit Blue Cross plans of the United States and their 61.5 million subscribers in many national matters, has been proud to administer the largest part of the civilian care benefits provided to dependents of active members of the uniformed services, since that program

was established December 7, 1956. This dependents' medical care program was the first of the important series of Federal health benefits arrangements which have provided for care to be rendered in civilian facilities to important segments of the public at Government expense but under private administration. The Federal employee program and the medicare program, about to come into operation, are the other major examples of this Government-private industry joint approach to the prepayment of health care benefits.

Each of these approaches was slightly different in concept or in structure. Under the dependents' medical care program a broad inpatient hospital and medical care program on a full-service basis was established to serve the needs of these people, who are substantially under the protection of the Government during their period of active service, and are generally younger than average in age. The Federal employee program adopted the traditional employer-employee approach to benefits, by purchasing coverage in the marketplace, offering an historic series of choices to employees, and providing for careful Government influence on the selected programs. The medicare program has taken both approaches, using an intermediary administrative agency to handle the institutional aspects of the program provided as social insurance on a payroll tax base, and the "risk" approach for the voluntary medical care portion for which the elderly person pays a flat contribution and the Government essentially accepts the obligation of meeting the balance of whatever the cost is; i.e., the "risk."

We have reviewed H. R. 13582 and H. R. 13583 as well as recommendations from the Secretary of Defense for amending chapter 55 of title X, United States Code. It appears that the intention of the two proposals is essentially twofold: First, to move the scope of benefits available in the dependents' medical care program toward equivalents with the scope of benefits contained in the Federal employee program. And second, to assert as a matter of law the right of retired members of the uniformed services and their dependents to care at approximately the same scope of benefits in military or civilian facilities. We distinguish between "scope of benefits" and "extent of coverage" at this point. All of the groups involved might well have available to them the same scope and type of benefits, but be called upon to pay a different amount or on a different basis for those benefits and therefore have a different extent of coverage for them.

We endorse this basic approach. Expansion of the scope of benefits through H. R. 13582 primarily by making available the services of civilian sources for outpatient hospital and nonhospital medical care is, in our judgment, a wise and beneficial expansion of the dependents' medical care program. Establishment through H. R. 13583 of a program of the same type, plus four additional benefits, administered in the same manner and by the same organization that administers the program for dependents of active servicemen is commendable in our opinion.

However, there are some substantial differences between the retired military population and the active military population and these suggest to us the possibility of borrowing for the retiree program some of the organizational aspects of the Federal employee program as well as its major benefit pattern. In addition to the generally higher age level, the retired military population differs from the active primarily in that more than a third of the "retirees" are retired only from military service but not from the active labor market: they enter new civilian employment and, since most of this third rapidly acquires private health insurance substantially paid for by the employer or through labor-management agreements. While H. R. 13583 seeks to avoid doubling up on top of such benefits by providing that no benefits will be payable except as "secondary" to such private benefits, it is easier to adopt the principle than it is to administer the coordination-of-benefits arrangement necessary to implement it.

We suggest the possibility of an approach along these lines:

For retirees and their dependents aged 65 or more, a program to supplement medicare benefits up to the level of the most widely held Federal employee Government-wide program. Although no premium could be suggested at this time, this would not be an expensive program. The program could provide free choice of civilian or military facility, but not care in other Federal institutions such as Veterans' Administration facilities, and payment would be made by the program to the military facility on a fixed-rate basis. This program could be insured on a risk basis. To the extent that the Federal employee program follows the same pattern, these two programs would be identical in scope of benefits and form of administration.

For retirees and their dependents under age 65 a choice could be provided.

A. Enrollment in a private program at the scope of benefits of the most widely held Federal employee program, essentially as now proposed in H. R. 13583. This program could also be underwritten on a rate basis thus tending to fix the

Government's cost in advance as well as providing added incentive to the insuring agency for effective claims administration. The Government could pay up to 75 percent of the cost, or such other percentage as was desired by the Congress, and this could be done on a premium basis thus making it possible for the retiree to meet his share of the cost by small periodic payments in advance rather than running the risk of incurring a large obligation at the worst possible time—when care is received. This is the concept of prepayment as adopted by the Federal employee program, and by the voluntary medical care portion of medicare.

The retiree who elected this option would tend to be the one not remaining in the private labor market, and thus not likely to have other coverage paid for by law or as a result of employment. The retiree contribution should be large enough to encourage this result.

B. The retiree who did have private coverage paid for by law or as a result of employment could be offered a supplementary program along the lines of, or perhaps identical with, the scope of benefits offered to the 65-plus age group. For the sake of uniformity, this would "carve out" the medicare scope of benefits and would permit administration on a filed claim basis after care had been received, thus simplifying greatly the problem of benefit coordination between the private and the military retiree benefit.

The retiree who while still under age 65 did not choose to enroll in any of these programs would still be assured of access to military facilities on the identical basis as for care of dependents of active members of the uniformed services. If the Secretary of Defense prescribed regulations which required certain military retirees to seek care in military facilities because of residence proximity to military facilities, these retirees would also be included in this unenrolled group. It would be possible to treat them in other ways as similar to the dependents of active members of the uniformed services, also, by institution of a permit system of authorization to obtain emergency care in civilian facilities. Whatever payment was required of actives could also be required of retirees, under this approach. In effect, these members and their dependents would be added to the existing dependents' medical care program, as amended by H.R. 13582 or other legislation from time to time.

We would be happy to work with this committee or Defense Department officials involved in considering these or other alternatives. In substance we continue to support the testimony submitted to this committee on July 2, 1964, in which we said, in part:

"To the greatest possible extent Blue Cross continues to believe it is in the public interest to plan for the health needs of retirees from the uniformed services, many of whom are much younger than normal 'retirees' from business or industry within the context of the civilian community into which they have moved."

Blue Cross has demonstrated its willingness to be of public service in the administration of such benefits during the last decade by accepting responsibility in two-thirds of the States for handling claims as fiscal agent in the original dependents' program and is preparing at this time for major intermediary functions under medicare.

We would appreciate your making this statement a part of the record of the hearings on these bills.

Sincerely,

ANTONE SINGSEN,
Vice President.

AMERICAN HOSPITAL ASSOCIATION,
WASHINGTON SERVICE BUREAU,
Washington, D.C., March 22, 1966.

HON. EDWARD HÉBERT,
Chairman, Subcommittee No. 2,
House Armed Services Committee,
Washington, D.C.

DEAR CONGRESSMAN HÉBERT: This letter is written to you to express the views of the American Hospital Association on H.R. 13582, a bill "to amend chapter 55 of title X, United States Code, to increase health benefits for dependents of members of the uniformed services," and H.R. 13583, a bill "to authorize a civilian health benefits program for retired members of the uniformed services and their dependents."

This association strongly supported the legislation which created the program to provide health benefits for dependents of active duty personnel. We believe the amendments proposed in H.R. 13582 will serve to clarify the benefits to which such dependents will be eligible and will place them in conformity with the benefits which are provided to civilian employees under the high-option contract contracted for by the Civil Service Commission. It appears to us, therefore, that these provisions will in various respects broaden the benefits which can be provided to these dependents. The conformity with the civilian health care program is in itself, we feel, a desirable move.

Also, the bill provides for additional benefits in respect to physical examinations, immunizations, and care of the newborn.

We have continued to follow the program under which active duty dependents are provided care, and we feel this program has been very well administered and has accomplished in every way the purpose intended by the Congress when it passed the original legislation. There is ample evidence, we feel, to indicate that the civilian hospitals of the Nation have bent every effort to cooperate in assuring the success of the program. The detailed administration of the program by the voluntary health insurance field has contributed immeasurably to the program's success.

We wish to take this opportunity to commend most highly the military administrators of the program at the federal level.

One of the provisions of the bill would amend section 1074(b) of title X, United States Code, to permit retirees of the uniformed services to use available facilities and services of the Veterans' Administration. There is, of course, no question involved here as to the right of retirees to use such facilities in connection with a service-connected illness. However, in respect to a non-service-connected illness, such retirees should be in no different position than any other veteran. The amendment creates two classes of veterans; those who enter for non-service-connected treatment as a right, and the rest who must show financial need. We have long been concerned with the development of the veterans' hospital and medical care system. As we look to the future, we believe it is reasonable to expect a greatly increased use of such facilities because of present military activities. The amendment proposed here will serve to further increase the demands upon such facilities and may well lead to overcrowding and pressures for further expansion of the veterans' system. We urge that the Veterans' Administration's system be kept to its primary mission and that no special status be provided for certain veterans in retirement or for the use of such facilities.

Section 1086. Contracts for health benefits for certain members, former members, and their dependents: We understand this section is intended to provide for health services to retirees and their dependents as a matter of right and to, therefore, clarify the existing situation which has caused a good deal of confusion and unequal availability of care to such retirees and their dependents. We note that the language contained here directs the Secretary of Defense to contract for health benefits. The language is identical to that used under section 1079 of the law pertaining to health benefits for dependents of active duty members.

The policy forming bodies of this association in considering the possible development of such a program urged that in the event that the Congress establishes a health program for retired members of the uniformed services and their dependents, the Federal Government utilize fully the mechanism of voluntary health insurance to provide the health services in any program and to provide that any such voluntary health insurance be on an underwriting basis similar to that of the program provided for Federal civil service employees.

There is no assurance under the existing language that the program of benefits will be established on an underwriting basis, and we would urge that the language be amended to so provide.

We note that the bill limits the Government's share of the costs of benefits provided under a plan to 75 percent of the total. We would urge that the Government accomplish this objective by purchasing insurance protection which is underwritten by a plan or carrier and that the Government's participation be applied in the form of a percent of the premium. This approach has the advantage of placing the retired member of the uniformed services and his dependents in

the same position as retired civil service employees and their dependents, it adheres to the insurance principle; and it makes it easier to determine the Federal contribution as well as the payment required of the insured. However, we wish to raise the fundamental question as to the amount of the Government's participation in the program to be offered. The bill purports to authorize a "civilian health benefits program" and to relate the benefits to be provided to the presently existing plan which the Government is assisting in providing to its civilian employees. Under this civilian plan the Government is not providing 75 percent of the premium, and we fail to see the justification of this legislation providing a far greater share of the premium of retired members of the uniformed services and their dependents than the Government is providing for retired civilian employees and their dependents. We would urge that this bill be amended so as to require that the beneficiaries under the legislation contribute toward their coverage in an amount equal to that applicable to civil service retirees and their dependents.

Section 1087. Programing facilities for certain members, former members, and their dependents in construction projects of the uniformed services: We note that the Secretary may, under certain conditions, build new facilities as additions to the facilities of the uniformed services expressly to provide care to retirees and their dependents. The Secretary, in considering the possible addition of hospital beds to uniformed services hospitals, must first consider the ability of facilities available in communities to provide such services. He must also consider indications as to whether the civilian facilities are planning for the additions that would be needed to serve retirees and their dependents.

This association is opposed to the addition of new hospital beds, facilities or personnel in Federal facilities expressly for the care of retirees from the uniformed services and their dependents.

We can see no justification whatever in the Federal Government drafting physicians whose services will be directed toward the care of retirees and their civilian dependents.

We would appreciate your making this statement a part of the record of hearings on these bills.

Sincerely yours,

KENNETH WILLIAMSON,
Associate Director.

STATEMENT OF V. EUGENE MCCRARY, O.D., PRESIDENT OF THE AMERICAN
OPTOMETRIC ASSOCIATION

Mr. Chairman and members of the subcommittee, my name is V. Eugene McCrary. I am an optometrist engaged in private practice in College Park, Md. As president of the American Optometric Association, I am privileged to submit the views of our association concerning the three bills now under consideration: namely, H.R. 9271 to provide resident care for mentally retarded children of members of the Armed Forces; H.R. 13582 to increase health benefits for dependents of members of the uniformed services; and, H.R. 13583 to authorize a civilian health benefits program for retired members of the uniformed services and their dependents.

The American Optometric Association is a voluntary organization with a membership of more than 13,500, composed of optometrists practicing in 1 or more of the 50 States and the District of Columbia. There are approximately 450 optometrists on active duty with the Armed Forces who hold ranks ranging from second lieutenant to colonel in the Army and Air Force and ensign to captain in the Navy.

We believe that all three of these bills, if, as, and when enacted into law, will serve three purposes; first, to make a military career more attractive to men in service; second, to give military retirees health benefits which they deserve by reason of their patriotic service; and third, to provide mentally retarded children of members of the armed services with care comparable to that provided children with similar afflictions whose parents are civilian residents of the United States. We are concerned not only with passage of these bills but particularly with their wording and that the committee report indicate clearly that optometric services on an outpatient basis will be available to the beneficiaries who desire to use them.

There are approximately 17,000 optometrists engaged in active practice in the United States. They provide approximately three-fourths of the vision care

of our civilian population. They are located in many rural areas, frequently in areas where there are no medical practitioners.

The Reader's Digest for March 1966 contained an article concerning mentally retarded children. It estimated that there were over 1 million children whose cause of mental retardation was incorrectly diagnosed. It did not contain an estimate as to how many of these children had defective vision. It did point out three specific cases where after the child's vision problem was discovered and corrected, the child was not considered mentally retarded but was able to take his place with contemporaries who were normal. The article pointed out that most of the errors in diagnoses involved sensory problems and the probabilities are that the greatest number of errors involved the child's ability to see properly.

Vision, which is essential to education as well as to the safety of the individual, is certainly of such importance that it should be included in any health program—not only for children of those on active duty but also for the retirees.

Over 90 percent of the retired personnel of the uniformed services have a vision problem. Most of them had optometric care when they were in the service and would like to continue it. But, in order to do so, they must remain close to a military installation where such services are available. It is our understanding these facilities are already overburdened. It has been estimated that military optometrists provide more than 90 percent of the vision care of the uniformed personnel.

The American Optometric Association believes that the language of the bill should be so specific that there will be no question as to the availability of optometric services regardless of where the retiree and his dependents reside.

Since 1950, optometric services have been available to those who are beneficiaries of the aid to the blind program known as title X of the social security law. Recent amendments to the social security law also included optometric services specifically. By congressional action, optometric services were made available to veterans entitled to outpatient vision care.

The Aid to Health Education and the Medical Libraries Acts likewise provided aid to optometric schools and to optometry students so that we would have more of the professional manpower needed to serve such people as those retired from military service and their dependents.

The need for the best possible vision for people in all walks of life and for all ages is of the greatest importance. Mr. Chairman and members of the committee, we strongly recommend that the language of the bills and the reports clearly indicate that the beneficiaries shall be able to obtain the services of optometrists when they need them.

NATIONAL ASSOCIATION OF STATE MENTAL HEALTH PROGRAM DIRECTORS,
Washington, D.C., March 28, 1966.

Hon. F. EDWARD HÉBERT,
Chairman, Subcommittee No. 2, Committee on Armed Services, Rayburn House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: We regret that because of the shortness of notice we were unable to provide your committee with expert testimony from the States in regard to the Defense Department proposal to have the States care for and treat the mentally retarded dependents of active duty military personnel (H.R. 9271 as amended).

Since this is a matter affecting almost exclusively the States (virtually all public institutional programs for the retarded are under State administration) and since the proposed legislation involves a possible cutoff of HEW grants to the States, we felt it only proper that the States have an opportunity to at least see the Defense Department proposal.

After the States have examined the proposal we will probably want to furnish your committee (and the Senate Armed Services Committee) with a statement.

I can assure you in advance, however, that our members will support with genuine sympathy any practical and workable plan for full and convenient care and treatment of the mentally retarded dependents of the military. This is a problem with which our members have long been concerned, and have long worked with the military toward a solution.

For the information of your committee the members of this association are responsible for the administration of 110 public training schools and hospitals in

51 States and territories, treating 131,277 institutionalized mentally retarded persons.

In addition, there are 55 other State institutions, in 21 States, caring for 29,377 mentally retarded persons (these institutional programs are not represented in this association).

The expenditures by the States for care and treatment of the mentally retarded for the 10-year fiscal period 1953-62 were as follows:

Capital expenditures.....	\$393, 200. 000
Operating expenditures.....	1, 947, 900. 000
Total.....	2, 341, 100, 000

As you will recall, a question was raised Friday with HEW witnesses, about State expenditures, but no answer was furnished you at the time. The foregoing data is provided for your files. Information on State expenditures for mental retardation was furnished by this association to the House Interstate Commerce Committee in 1963 and is contained in House Report 694, 88th Congress, pages 67-69, a copy of which is enclosed.

Respectfully yours,

HARRY C. SCHNIBBE,
Executive Director.

APPENDIX D

Expenditures by States over past 10 years to combat mental illness and retardation—compiled August 1963 (data furnished by mental health departments in each State; table prepared by National Association of State Mental Health Program Directors)

State (time period)	Expenditures on mental illness		Expenditures on retardation		Total expenditures		Total, all mental disorders	Explanatory notes
	Capital	Operating	Capital	Operating	Mental illness	Retardation		
Alabama (see total)							\$82,366,063	No breakdown available.
Alaska: 1968; estimate fiscal year 1968.	(1)	(1)	(1)	(1)	(1)	(1)	12,161,692	
Arizona	(2)						57,822,918	Breakdown not exact because "retardation" statistics reflect only treatment of children and not retarded adults who are treated with mentally ill.
Arkansas: 1959-63 "last 10 years" ("last 10 years" mental illness and retardation not separated).	\$3,337,441	\$49,574,366	\$2,752,315	\$2,188,775	\$52,911,827	\$4,911,001		Includes only hospital expenditures.
California: Fiscal year 1953-54 through fiscal year 1962-63 (estimated).	80,189,812	786,614,216	40,560,281	217,786,068	866,804,028	238,346,349	1,125,150,377	Includes matching funds to clinics under operating costs.
Colorado: Fiscal year 1953-54 through fiscal year 1962-63 (estimated).	19,868,521	102,690,711	6,474,938	24,642,267	122,559,232	31,117,206	163,676,437	Does not include cost of community services for mental illness.
Connecticut: 1953-62	43,192,520	183,835,635	16,420,583	63,963,438	227,028,155	79,393,021	306,421,176	No statistics available prior to 1959-60 fiscal year.
Delaware: "Last 10 years"	3,864,758	21,844,082	1,402,387	8,578,781	25,249,440	9,841,168	35,230,608	Statistics before 1959 not available because of recent statehood of Hawaii.
Florida: Fiscal year 1952-53 through fiscal year 1961-62	34,209,710	102,096,657	11,712,083	31,673,161	136,246,367	43,385,244	179,631,611	
Georgia: Fiscal year 1959-60 through fiscal year 1961-62	772,486	40,225,476	796,961	5,257,083	40,997,962	6,054,044	47,052,006	
Hawaii: Fiscal year 1959-60 through fiscal year 1961-62	754,711	8,872,065	367,376	6,372,257	9,626,796	5,739,633	15,366,429	
Idaho: Fiscal year 1952-63 through fiscal year 1961-62	2,114,196	18,821,754	2,204,045	10,628,090	20,935,950	12,832,135	33,768,085	
Illinois: Fiscal year 1952-53 through fiscal year 1961-62	48,472,357	529,490,559	5,473,306	97,044,975	577,962,916	102,518,262	680,481,198	
Indiana: "Last 10 years"	28,554,044	162,543,774	8,431,585	60,497,905	191,097,818	68,929,490	260,027,308	
Iowa	7,939,973	72,533,428	3,640,294	35,429,816	80,473,401	39,070,110	119,543,511	
Kansas: Fiscal year 1954 to fiscal year 1963.	21,361,320	113,227,061	8,633,052	45,893,476	134,588,401	54,526,528	189,114,929	Mental illness operating expenditure includes State office operating costs of \$2,226,089.

See footnotes at end of table, p. 5987.

Expenditures by States over past 10 years to combat mental illness and retardation—compiled August 1963 (data furnished by mental health departments in each State; table prepared by National Association of State Mental Health Program Directors)—continued

State (time period)	Expenditures on mental illness		Expenditures on retardation		Total expenditures		Total, all mental disorders	Explanatory notes
	Capital	Operating	Capital	Operating	Mental illness	Retardation		
Kentucky: July 1, 1952-June 30, 1962.	\$3,472,568	\$74,567,130	\$1,239,727	\$8,016,749	\$78,039,698	\$9,256,476	\$87,296,174	
Louisiana: Fiscal year 1953-54 through fiscal year 1962-63.	12,500,000	95,200,052	3,500,000	21,658,979	107,700,052	25,158,979	132,859,031

NATIONAL GUARD ASSOCIATION OF THE UNITED STATES,
Washington, D.C., March 25, 1968.

Hon. F. EDWARD HÉBERT,
*Chairman, Subcommittee No. 2, House Armed Services Committee,
 House Office Building, Washington, D.C.*

DEAR MR. CHAIRMAN. We note with great interest the introduction and hearings on H.R. 9271, H.R. 13582, and H.R. 13583 which would expand medicare for retirees of the uniformed services and we firmly endorse the general philosophy enunciated in these important measures.

It is apparent from the interest expressed by committee members in the various provisions of the proposed legislation which would permit arbitrary determinations by the Secretary of Defense, and those relating to the contributions applicable to retirees and their dependents, that these areas will receive the detailed consideration which they warrant.

Our principal interest lies in that part of the legislation which, if not amended, would continue a needless inequity incorporated into the Dependents Medicare Act of 1956. In that act there was inserted a provision denying medicare to retirees under chapter 67 of title 10, United States Code, who performed less than 8 years of active duty (other than for training).

We have long questioned this criteria for medicare benefits which arbitrarily and without apparent sound basis makes a distinction between persons with 8 or more years of active duty and those with a lesser amount. We fail to find any magic in the number "8" as a qualifying factor. Indeed its inclusion in the basic act appears to have been capricious and without reasonable rationale.

Retirees most vitally affected by the fictional 8-year criteria are those who have rendered the longest and most faithful service. Such individuals could have served on active duty in World War II, the Korean conflict and the Berlin crisis without attaining this required 8 years of active duty.

We believe, Mr. Chairman, that the present hearings before your subcommittee present an excellent opportunity to correct this long-standing inequity and we respectfully urge that the 8-year, active-duty criteria be eliminated from the law.

Sincerely,

JAMES F. CANTWELL,
Major General, NJARNG, President.

GENERAL COUNSEL OF THE DEPARTMENT OF COMMERCE,
Washington, D.C., March 31, 1966.

HON. L. MENDEL RIVERS,
*Chairman, Armed Services Committee,
 House of Representatives, Washington, D.C.*

DEAR MR. RIVERS: This letter is in reply to your request for the views of the Department with respect to H.R. 9271, H.R. 13582, and H.R. 13583, bills—

To amend title 10, United States Code, to provide resident care for mentally retarded children of members of the Armed Forces under certain conditions, and for other purposes;

To amend chapter 55 of title 10, United States Code, to increase health benefits for dependents of members of the uniformed services; and

To amend chapter 55 of title 10, United States Code, to authorize a civilian health benefits program for retired members of the uniformed services and their dependents, respectively.

This Department recommends enactment of H.R. 13582, H.R. 13583, and favors the intent of H.R. 9271. However, as submitted, H.R. 9271 does not include dependent children of commissioned officers of the Environmental Science Service Administration. The suggested amendments submitted by the Department of Defense would, if incorporated into the bill, remedy this situation and provide coverage consistent with other health benefits provided in title 10. The Department of Commerce concurs in and strongly supports the recommendations of the Department of Defense regarding this bill.

Enactment of this legislation would not involve the expenditure of any funds by this Department.

We have been advised by the Bureau of the Budget that there would be no objection to the submission of this report from the standpoint of the Administration's program.

Sincerely,

ROBERT E. GILES,
General Counsel.

We thank you gentlemen for your cooperation.

The committee will now go into executive session.

(Whereupon, at 11 a.m., the subcommittee proceeded in executive session.)

UNIDENTIFIED FLYING OBJECTS

HOUSE OF REPRESENTATIVES,
COMMITTEE ON ARMED SERVICES,
Washington, D.C., Tuesday, April 5, 1966.

The committee met, pursuant to call, at 10:35 a.m., the Honorable L. Mendel Rivers (chairman of the committee), presiding.

The CHAIRMAN. Let the committee come to order.

Members of the committee, Secretary Brown and General McConnell are back this morning for the purpose of responding to questions.

At the end of our last hearing I asked that Secretary Brown give us some information with respect to unidentified flying objects. I understand that he is prepared to do that this morning and I also understand that he has with him Dr. J. Allen Hynek, consultant to Project Blue Book, which is the group charged with responsibility with respect to UFO's. Also present this morning is Maj. Hector Quintanilla, Jr., UFO project officer.

I think it would be well to get the UFO business out of the way first. So I will ask Dr. Brown to give us his report at this time.

Mr. Secretary, see if you can shed some light on these highly illuminated objects.

We can't just write them off. There are too many responsible people who are concerned.

Mr. Ford has come out, he has a pretty good size stature in the Congress, and so tell me what you know, Mr. Secretary, and let's see if we can have some answers.

Go ahead, Mr. Secretary.

Secretary BROWN. Mr. Chairman, I have a letter here which is addressed to you, and I signed it. Let me run through it quickly, because it summarizes pretty well what our views are on unidentified flying objects.

Following that, if there are some questions, I can try to answer them, or the Chief, or Dr. Hynek, or Major Quintanilla.

The CHAIRMAN. Why don't we have the doctor come up to the table now, because when we start asking questions we will have him there, and we will just go all over the board.

Sit at the end of the table, Doctor.

Go ahead, sir.

STATEMENT OF HON. HAROLD BROWN, SECRETARY OF AIR FORCE

Secretary BROWN. This is in response of your recent request for information concerning Air Force activities in the area of reported unidentified flying objects.

Within the Department of Defense the Air Force has the responsibility of investigating reports on unidentified flying objects and of

evaluating any possible threat to our national security that such objects might pose. In carrying out this responsibility let me assure you that the Air Force is both objective and thorough in its treatment of all reports of unusual aerial objects over the United States.

Under the name "Project Blue Book," the Air Force carries on a three-phase program. We (1) make an initial investigation of a report received; (2) make a more detailed analysis of reports not explained; and (3) disseminate information on sightings, findings and statistics.

In order to evaluate this subject as thoroughly as possible, the capabilities of the Air Force Scientific Advisory Board have recently been focused upon the subject of UFO's. This Board has just completed a detailed review of this subject and concluded that the UFO phenomena presents no threat to the security of the United States and that the present Air Force program dealing with UFO sightings has been well organized. Recommendations by the Board are presently under study and are expected to lead to even stronger emphasis on the scientific aspects of investigating the sightings that warrant extensive analysis.

Based upon 10,147 reported sightings from 1947 through 1965, a summary of which is attached, I believe it significant that the Air Force has succeeded in identifying 9,501 of these objects. Virtually all of these sightings were derived from subjective human observations and interpretations. The most common of these were astronomical sightings that included such things as bright stars and planets, comets and meteors, and fireballs and auroral streamers.

Other major sources of reported sightings include such objects as satellites, mirages, and spurious radar indications. The remaining 646 reported sightings are those in which the information available does not provide an adequate basis for analysis, or for which the information suggests an hypothesis but the object or phenomenon explaining it cannot be proven to have been here or taken place at the time.

In evaluating these sightings, the Air Force has used carefully selected and highly qualified scientists, engineers, technicians, and consultants. These personnel have utilized the finest Air Force laboratories, test centers, scientific instrumentation, and technical equipment for this purpose.

Although the past 18 years of investigating unidentified flying objects have not identified any threat to our national security, or evidence that the unidentified objects represent developments or principles beyond present-day scientific knowledge, or any evidence of extraterrestrial vehicles, the Air Force will continue to investigate such phenomena with an open mind and with the finest technical equipment available.

I am attaching a special report of the USAF Scientific Advisory Board Ad Hoc Committee To Review Project "Blue Book," the latest edition of Project Blue Book, dated February 1, 1966, and an Air Force statement regarding the UFO sightings at Dexter, Mich., on March 20, 1966, and at Hillsdale, Mich., on March 21, 1966.

I trust that the above information will be of assistance to you. If I can help you further in any way, please do not hesitate to let me know.

(The information referred to is as follows:)

IR FORCE STATEMENT REGARDING THE UFO SIGHTINGS AT DEXTER, MICH., ON MARCH 20, 1966, AND HILLSDALE, MICH., ON MARCH 21, 1966

The investigation of these two sightings was conducted by Dr. J. Allen Hynek, scientific consultant to Project Blue Book; personnel from Selfridge Air Force Base, Mich.; and personnel from the Project Blue Book office at Wright-Patterson Air Force Base, Ohio.

In addition to these two specific cases, there has been a flood of reports from this area both before and after March 20 and 21. The investigating personnel have not had the time to investigate all of these. It has been determined, however, that in Hillsdale, over and above the sincere and honest reporting by the young ladies at Hillsdale College, certain young men have played pranks with ares. It has also been determined that the photographs released yesterday through the press was taken on March 17 just before sunrise near Milan, Mich., and have nothing to do with the cases in question. The photograph clearly shows trails made as a result of a time exposure of the rising crescent moon and the planet Venus.

The majority of observers in both the Dexter and Hillsdale cases have reported only silent glowing lights near the ground—red, yellow, and blue-green. They have not described an object. The only two observers who did describe an object have stated that they were no closer than 500 yards—better than a quarter of a mile away—a distance which does not allow details to be determined. Witnesses have described glowing lights—lights that seem to move but never far from a definite place or lights which suddenly disappeared and popped up at another place. The locale in both cases was a swamp. In both cases, the location of the glow was pinpointed—in Dexter it was seen between two distant groups of people and at Hillsdale it was seen in a swampy depression between the girls and the distant trees. It was in both cases a very localized phenomena. The swampy location is most significant.

A swamp is a place of rotting vegetation and decomposition. Swamps are not a province of astronomers. Yet, the famous Dutch astronomer, Minnaert, in his book, "Light and Colour in the Open Air," describes lights that have been seen in swamps by the astronomer, Bessel, and other excellent observers. The lights resemble tiny flames sometimes seen right on the ground and sometimes rising and floating above it. The flames go out in one place and suddenly appear in another, giving the illusion of motion. The colors are sometimes yellow, sometimes red, and sometimes blue-green. No heat is felt, and the lights do not burn or char the ground. They can appear for hours at a stretch and sometimes for a whole night. Generally, there is no smell and no sound except for the popping sound of little explosions such as when a gas burner ignites.

The rotting vegetation produces marsh gas which can be trapped during the winter by ice. When the spring thaw occurs, the gas may be released in some quantity. The flame, Minnaert says, is a form of chemical luminescence, and its low temperature is one of its peculiar features. Exactly how it occurs is not known and could well be the subject of further investigation.

The glowing lights over the swamps near Dexter and Hillsdale were observed for 2 or 3 hours, and they were red, green, and yellow. They appeared to move sideways and to rise a short distance. No sound was heard except a popping sound.

It seems entirely likely that as the present spring thaw came, the trigases, CH_4 , H_2S , and PH_3 , resulting from decomposition of organic matter, were released. The chemistry book by Sienko and Plane has this to say: "air, Phosphine PH_3 , usually bursts into flame apparently because it is ignited by a spontaneous oxidation of the impure P_2H_4 . The will-of-the-wisp, sometimes observed in marshes, may be due to spontaneous ignition of impure PH_3 , which might be formed by reduction of naturally occurring phosphorus compounds."

It has been pointed out to the investigating personnel by other scientists in this area that in swamps the formation of H_2S and CH_4 from rotting vegetation is common. These could be ignited by the spontaneous burning of PH_3 .

The association of the sightings with swamps in this particular instance is more than coincidence. No group of witnesses observed any craft coming or going away from the swamp. The glow was localized, and Deputy Fitzpatrick described the glow from beyond a rise adjacent to the swamp as visible through the trees. He stated that the light brightened and dimmed such as stage lights—smoothly and slowly—and this description exactly fits the Hillsdale sightings also. The brightening and dimming could have been due to the release of variable quantities of marsh gas.

The disappearance of the lights when people got close with flashlights or other lights would indicate that the glow seemed bright to dark-adapted eyes. The night was dark and there was no moon. The Hillsdale girls kept their eyes averted in order to see the swamp lights.

It appears very likely that the combination of the conditions of this particular winter (an unusually mild one in that area) and the particular weather conditions of that night—it was clear and there was little wind at either location—were such as to have produced this unusual and puzzling display.

SPECIAL REPORT OF THE USAF SCIENTIFIC ADVISORY BOARD AD HOC COMMITTEE TO REVIEW PROJECT BLUE BOOK

I. INTRODUCTION

As requested in a memorandum from Maj. Gen. E. B. LeBailly, Secretary of the Air Force Officer of Information, dated September 28, 1965 (tab A), the Scientific Advisory Board Ad Hoc Committee met on February 3, 1966, to review Project Blue Book. The objectives of the committee are to review the resources and methods of investigation prescribed by Project Blue Book and to advise the Air Force of any improvements that can be made in the program to enhance the Air Force's capability in carrying out its responsibility.

In order to bring themselves up to date, the members of the committee initially reviewed the findings of previous scientific panels charged with looking into the UFO problem. Particular attention was given to the report of the Robertson panel which was rendered in January 1953. The committee next heard briefings from the AFSC Foreign Technology Division, which is the cognizant Air Force agency that collates information on UFO sightings and monitors investigations of individual cases. Finally, the committee reviewed selected case histories of UFO sightings with particular emphasis on those that have not been identified.

II. DISCUSSION

Although about 6 percent (646) of all sightings (10,147) in the years 1947 through 1965 are listed by the Air Force as "Unidentified," it appears to the committee that most of the cases so listed are simply those in which the information available does not provide an adequate basis for analysis. In this connection it is important also to note that no unidentified objects other than those of an astronomical nature have ever been observed during routine astronomical studies, in spite of the large number of observing hours which have been devoted to the sky. As examples of this the Palomar Observatory Sky Atlas contains some 5,000 plates made with large instruments with wide field of view; the Harvard meteor project of 1954-58 provided some 3,300 hours of observation; the Smithsonian visual prairie network provided 2,500 observing hours. Yet a single unidentified object has been reported as appearing on any of these plates or been sighted visually in all these observations.

The committee concluded that in the 19 years since the first UFO was sighted there has been no evidence that unidentified flying objects are a threat to national security. Having arrived at this conclusion the committee then turned its attention to considering how the Air Force should handle the scientific aspect

of the UFO problem. Unavoidably these are also related to Air Force public relations, a subject on which the committee is not expert. Thus the recommendations which follow are made simply from the scientific point of view.

III. CONCLUSIONS AND RECOMMENDATIONS

It is the opinion of the committee that the present Air Force program dealing with UFO sightings has been well organized, although the resources assigned to it (only one officer, a sergeant, and secretary) have been quite limited. In 19 years and more than 10,000 sightings recorded and classified, there appears to be no verified and fully satisfactory evidence of any case that is clearly outside the framework of presently known science and technology. Nevertheless, there is always the possibility that analysis of new sightings may provide some additions to scientific knowledge of value to the Air Force. Moreover, some of the case records which the committee looked that were listed as "identified" were sightings where the evidence collected was too meager or too indefinite to permit positive listing in the identified category. Because of this the committee recommends that the present program be strengthened to provide opportunity for scientific investigation of selected sightings in more detail and depth than has been possible to date.

To accomplish this it is recommended that—

(a) Contracts be negotiated with a few selected universities to provide scientific teams to investigate promptly and in depth certain selected sightings of UFO's. Each team should include at least one psychologist, preferably one interested in clinical psychology, and at least one physical scientist, preferably an astronomer or geophysicist familiar with atmospheric physics. The universities should be chosen to provide good geographical distribution, and should be within convenient distance of a base of the Air Force Systems Command (AFSC).

(b) At each AFSC base an officer skilled in investigation (but not necessarily with scientific training) should be designated to work with the corresponding university team for that geographical section. The local representative of the Air Force Office of Special Investigations (OSI) might be a logical choice for this.

(c) One university or one not-for-profit organization should be selected to coordinate the work of the teams mentioned under (a) above, and also to make certain of very close communication and coordination with the Office of Project Blue Book.

It is thought that perhaps 100 sightings a year might be subjected to this close study, and that possibly an average of 10 man-days might be required per sighting so studied. The information provided by such a program might bring to light new facts of scientific value, and would almost certainly provide a far better basis than we have today for decision on a long-term UFO program.

The scientific reports on these selected sightings, supplementing the present program of the Project Blue Book office, should strengthen the public position of the Air Force on UFO's. It is, therefore, recommended that—

(a) These reports be printed in full and be available on request.

(b) Suitable abstracts or condensed versions be printed and included in, or as supplements to, the published reports of Project Blue Book.

(c) The form of report (as typified by Project Blue Book dated February 1, 1966) be expanded, and anything which might suggest that information is being withheld (such as the wording on page 5 of the above cited reference) be deleted. The form of this report can be of great importance in securing public understanding and should be given detailed study by an appropriate Air Force office.

(d) The reports Project Blue Book should be given wide unsolicited circulation among prominent Members of the Congress and other public persons as a further aid to public understanding of the scientific approach being taken by the Air Force in attacking the UFO problem.

DEPARTMENT OF THE AIR FORCE,
OFFICE OF THE SECRETARY,
Washington, D.C., September 28, 1965.

Memorandum for military director, scientific advisory board
Subject: Unidentified flying objects (UFO's)

In keeping with its air defense role, the Air Force has the responsibility for the investigation of unidentified flying objects reported over the United States.

The name of this project is Blue Book (attachment 1). Procedures for conducting this program are established by Air Force regulation 200-2 (attachment 2).

The Air Force has conducted Project Blue Book since 1948. As of June 1965, a total of 9,267 reports had been investigated by the Air Force. Of the 9,267 reports, 663 cannot be explained.

It has been determined by the Assistant Deputy Chief of Staff/Plans and Operations that Project Blue Book is a worthwhile program which deserves the support of all staff agencies and major commands and that the Air Force should continue to investigate and analyze all UFO reports in order to assure that such objects do not present a threat to our national security. The Assistant Deputy Chief of Staff/Plans and Operations has determined also that the Foreign Technology Division (FTD) at Wright-Patterson Air Force Base should continue to exercise its presently assigned responsibilities concerning UFOs.

To date, the Air Force has found no evidence that any of the UFO reports reflects a threat to our national security. However, many of the reports cannot be explained have come from intelligent and technically well qualified individuals whose integrity cannot be doubted. In addition, the reports received officially by the Air Force include only a fraction of the spectacular reports which are publicized by any private UFO organizations.

Accordingly, it is requested that a working scientific panel composed of both physical and social scientists be organized to review Project Blue Book—its resources, methods, and findings—and to advise the Air Force as to any improvements that should be made in the program in order to carry out the Air Force's assigned responsibility.

Dr. J. Allen Hynek who is the chairman of the Dearborn Observatory at Northwestern University is the scientific consultant to Project Blue Book. He has indicated a willingness to work with such a panel in order to place the problem in its proper perspective.

Dr. Hynek has discussed this problem with Dr. Winston R. Markley, the former Air Force Chief Scientist.

E. B. LeBAILLY,

Major General, USAF, Director of Information

AD HOC COMMITTEE ON UNIDENTIFIED FLYING OBJECTS (UFO's)

AGENDA

Thursday, 3 February 1966

- 0800 Welcoming remarks: Commander or vice commander, FTD.
- 0805 Introduction: Dr. O'Brien, SAB.
- 0810 The Air Force problem: Lieutenant Colonel Spaulding, SAFOL.
- 0830 Briefing on Project Blue Book: Major Quintanilla, FTD.
- 1000 Break.
- 1015 Review of selected case histories: FTD Staff.
- 1145 Lunch.
- 1315 Executive and writing session.

PROJECT BLUE BOOK

The U.S. Air Force has the responsibility under the Department of Defense for the investigation of unidentified flying objects (UFO's). The name of this program, which has been in operation since 1948, is Project Blue Book. It has been identified in the past as Project Sign and Project Grudge.

Air Force interest in unidentified flying objects is related directly to the Air Force responsibility for the air defense of the United States. Procedures for conducting this program are established by Air Force Regulation 200-2.

The objectives of the Project Blue Book are twofold: first, to determine whether UFO's pose a threat to the security of the United States; and, second, to determine whether UFO's exhibit any unique scientific information or advanced technology which could contribute to scientific or technical research. In the course of accomplishing these objectives, Project Blue Book strives to identify and explain all UFO sightings reported to the Air Force.

HOW THE PROGRAM IS CONDUCTED

The program is conducted in three phases. The first phase includes receipt of UFO reports and initial investigation of the reports. The Air Force base nearest the location of a reported sighting is charged with the responsibility of investigating the sighting and forwarding the information to the Project Blue Book Office at Wright-Patterson Air Force Base, Ohio.

If the initial investigation does not reveal a positive identification or explanation, a second phase of more intensive analysis is conducted by the Project Blue Book Office. Each case is objectively and scientifically analyzed and, if necessary, all of the scientific facilities available to the Air Force can be used to assist in arriving at an identification or explanation. All personnel associated with the investigation, analysis, and evaluation efforts of the project view each report with a scientific approach and an open mind.

The third phase of the program is dissemination of information concerning UFO sightings, evaluations, and statistics. This is accomplished by the Secretary of the Air Force, Office of Information.

The Air Force defines an unidentified flying object as any aerial object which the observer is unable to identify.

Reports of unfamiliar objects in the sky are submitted to the Air Force from many sources. These sources include military and civilian pilots, weather observers, amateur astronomers, business and professional men and women, and housewives, etc.

Frequently such objects as missiles, balloons, birds, kites, searchlights, aircraft navigation and anticollision beacons, jet engine exhaust, condensation trails, astronomical bodies and meteorological phenomena are mistakenly reported as unidentified flying objects.

The Air Force groups its evaluations of UFO reports under three general headings: (1) identified, (2) insufficient data, and (3) unidentified.

Identified reports are those for which sufficient specific information has been accumulated and evaluated to permit a positive identification or explanation of the object.

Reports categorized as "Insufficient Data" are those for which one or more elements of information essential for evaluation are missing. Some examples are the omission of the duration of the sighting, date, time, location, position in the sky, weather conditions, and the manner of appearance or disappearance. If the element is missing and there is an indication that the sighting may be of a security, scientific, technical, or public interest value, the Project Blue Book Office conducts an additional investigation and every attempt is made to obtain the information necessary for identification. However, in some instances, essential information cannot be obtained, and no further action can be taken.

The third and by far the smallest group of evaluations is categorized "Unidentified." A sighting is considered unidentified when a report appears to contain all pertinent data necessary to suggest a valid hypothesis concerning cause or explanation of the report but the description of the object or its motion cannot be correlated with any known object or phenomena.

TYPES OF UFO IDENTIFICATIONS AND EVALUATIONS

There are various types of UFO sightings. Most common are reports of astronomical sightings, which include bright stars, planets, comets, fireballs, meteors, auroral streamers, and other celestial bodies. When observed through haze, light fog, moving clouds, or other obscurations or unusual conditions, the planets, including Venus, Jupiter, and Mars have been reported as unidentified flying objects. Stellar mirages are also a source of reports.

Satellites are another major source of UFO reports. An increase in satellites reported as UFO's has come about because of two factors. The first is the increase of interest on the part of the public; the second is the increasing number of satellites in the skies. Positive knowledge of the location of all satellites at all times enables rapid identification of satellite sightings. Keeping track of manmade objects in orbit about the earth is the responsibility of the North American Air Defense Command space detection and tracking system. This sophisticated electronic system gathers complex space traffic data instantly from tracking stations all over the world.

Other space surveillance activities include the use of ballistic tracking and large telescopic cameras. ECHO schedules are prepared by the NASA Goddard Space Flight Center at Greenbelt, Md., and schedules of the south-north Equator crossings are prepared by the Smithsonian Institution at Cambridge, Mass. From the data produced by these agencies, satellites mistakenly reported as UFO's can be quickly identified. Some of these are visible to the naked eye.

Aircraft account for another major source of UFO reports, particularly during adverse weather conditions. When observed at high altitudes and at some distance, aircraft can have appearances ranging from disc to rocket shapes due to the reflection of the sun on their bright surfaces. Vapor or condensation trails from jet aircraft will sometimes appear to glow fiery red or orange when reflecting sunlight. Afterburners from jet aircraft are often reported as UFO's since they can be seen from great distances when the aircraft cannot be seen.

The Project Blue Book Office has direct contact with all elements of the Air Force and the Federal Aviation Agency civil air control centers. All aerial refueling operations and special training flights can be checked immediately. Air traffic of commercial airlines and flights of military aircraft are checked with the nearest control center, enabling an immediate evaluation of aircraft mistakenly reported as UFO's. However, since many local flights are not carried, these flights are probable causes of some reports.

Balloons continue to be reported as UFO's. Several thousand balloons are released each day from military and civilian airports, weather stations, and research activities. There are several types of balloons—weather balloons, rawinsondes, radiosondes, and the large research balloons which have diameters up to 300 feet. At night, balloons carry running lights which cause an unusual appearance when observed. Reflection of the sun on balloons at dawn and sunset sometimes produce strange effects. This usually occurs when the balloon, because of its altitudes, is exposed to the sun. Large balloons can move at speeds of over 100 miles per hour when moving in high altitude jet windstreams. These balloons sometimes appear to be flattened on top. At other times, they appear to be saucer-shaped and to have lights mounted inside the bag itself due to the sun's rays reflecting through the material of the balloon. The Balloon Control Center at Holloman Air Force Base, N. Mex., maintains a plot on all military upper air research balloons.

Another category of UFO evaluations labeled "Other" includes missiles, reflections, mirages, searchlights, birds, kites, spurious radar indications, hoaxes, fireworks, and flares.

Aircraft, satellites, balloons, and the like should not be reported since they do not fall within the definition of an unidentified flying object.

CONCLUSIONS

To date, the firm conclusions of Project Blue Book are: (1) no unidentified flying object reported, investigated, and evaluated by the Air Force has ever

en any indication of threat to our national security; (2) there has been no evidence submitted to or discovered by the Air Force that sightings categorized as unidentified represent technological developments or principles beyond the range of present-day scientific knowledge; and (3) there has been no evidence indicating that sightings categorized as unidentified are extra terrestrial vehicles. The Air Force will continue to investigate all reports of unusual aerial phenomena over the United States. The services of qualified scientists and technicians will continue to be used to investigate and analyze these reports, and periodic reports on the subject will be made.

The former chairman of the House Armed Services Committee, Mr. Carl Vinson, recently commented on the conduct of the UFO program by the Air Force and stated that congressional hearings on this subject are unnecessary.

The Air Force does not deny the possibility that some form of life may exist on other planets in the universe. However, to date, the Air Force has neither received nor discovered any evidence which proves the existence and intraspaceability of extra terrestrial life. The Air Force continues to extend an open invitation to anyone who feels that he possesses any evidence of extra terrestrial vehicles operating within the earth's near space envelope to submit his evidence for analysis. Initial contact for this purpose is through the following address: Project Blue Book Information Office, SAFOI, Washington, D.C.

Anyone observing what he considers to be an unidentified flying object should report it to the nearest Air Force base. Persons submitting a UFO report to the Air Force are free to discuss any aspect of the report with anyone. The Air Force does not seek to limit discussion on such reports and does not withhold or censor any information pertaining to this unclassified program.

NONAVAILABILITY OF MATERIALS

The following items are for internal use only and are not available for distribution to the public. These concern internal management and procedures for forwarding UFO reports to the appropriate agency:

1. Air Force Regulation 200-2.

2. JANAP 146.

The Air Force has no films, photographs, maps, charts, or graphs of unidentified flying objects. Photographs that have been submitted for evaluation in conjunction with UFO reports have been determined to be a misinterpretation of natural or conventional objects. These objects have a positive identification. The Air Force no longer possesses, and thus does not have for distribution, outdated reports on Project Sign, Project Grudge, Blue Book Special Report No. 1, and outdated Project Blue Book press releases. Nonmilitary UFO publications should be requested from the publisher, not the Air Force.

SUGGESTED READING MATERIAL

Books listed below deal with facts and theories about our solar universe, the moon, planets, comets, meteorites, the universe, stars, constellations, and galaxies; telescopes, the computation of time as it relates to astronomy, star maps and charts, and the history of astronomy.

"Sky and Telescope," by Sky Publishing Corp., Harvard College Observatory, Cambridge, Mass. Monthly magazine, 60 cents per copy.

"Weather Elements," by Blair, published Prentice Hall. Has an excellent chapter on often misidentified weather phenomena.

"Planets, Stars, and Space," by Chamberlain, Joseph M., and Nicholson, Thomas D. An illustrated, untechnical explanation of the earth, planets, stars, and the universe. Prepared in cooperation with the American Museum of Natural History.

"Junior Science Book of Stars," by Crosby, Phoebe. An easy to read, exciting story of what scientists know about the stars, planets, the Moon, and the Milky Way.

"Challenge of the Universe," by Hynek, J. Allen and Anderson, Norman. Discusses the nature of the universe; astronomy and cosmology, published by Scholastic Press.

"The Story of the Stars," by Maloney, Terry. An introduction to the universe; our solar system, our galaxy, and other galaxies. Many interesting illustrated analogies help build concepts of size and distance. Includes reference to the Van Allen radiation belts and zodiacal light observation of 1960.

"The World of Flying Saucers," by Menzel and Roy. A scientific examination of the classic UFO reports.

"The Moon, Meteorites, and Comets," Dated 1963, by Middlehurst and Kuiper. Continuous analysis of Soviet moon photos. Chapter on Siberian meteorites and photos or comets computation of various comet orbital photos.

"The Nature of Light and color in the Open Air," by Minnaert, Dover Publications. This is an excellent paperback written in understandable lay language.

"Meteors," by Oliver. Standard text by foremost authority on meteors.

"Photographic History of Mars," 1905-61, by Slipher, E. C., published by Lowell Observatory.

"Anatomy of a Phenomenon," by Valle, Jacques.

"First Man to the Moon," by Von Braun, Wernher.

FIREBALL REPORT

Persons observing a fireball or meteor should report the information to the American Meteor Society. The information desired is contained below.

A very brilliant meteor or fireball is reported to have passed in your vicinity on ---- at the hour of ----. Will you please answer as fully as possible the following questions, which are asked on behalf of the American Meteor Society in order that permanent records of such phenomena may be obtained. When these reports are published each contributor whose report is fairly complete will be mentioned, if possible, and due credit given. It is only by the help of those who can give personal information that data can be secured for the computation of the orbits of meteors. These data are of great scientific value and all reasonable efforts should be made to obtain them. You will be unable probably to answer all questions below, but answer those you can, as they may be of the greatest importance.

- (1) Give your name and address.
- (2) Where were you when you saw the meteor? (If the town is small please give county as well.)
- (3) Give the date, hour, and minute when the meteor appeared; also kind of time used.
- (4) In what direction did it appear (or in what direction was it first seen)? This is not asking in what direction it was going.
- (5) In what direction did it disappear (or in what direction was it last seen)? For questions (4) and (5), simply N, E, S, or W is not accurate enough, unless those were the exact directions. If compass is used, state it; also if magnetic correction has been applied to compass reading.
- (6) At what height did it appear? (Use degrees in answering.)
- (7) At what height did it disappear? (Use degrees in answering.)
- (8) Did it pass directly overhead (i.e., through the zenith)?
- (9) If not, to which side of the zenith did it go, and how far from it? (Use degrees in answering.)
- (10) Did it appear to reach the horizon? What sort of a horizon have you?
- (11) What angle did the path of the meteor make with the horizon and in which direction was it then going?
- (12) If you are familiar with constellations describe the path of the meteor through the sky with reference to stars.
- (13) Did the meteor appear to explode?
- (14) What was the duration of its flight in seconds?
- (15) Describe the train if one was left. If it lasted long enough to show drift, most carefully tell in what direction train drifted. Give sketch, if possible, showing this with regard to horizon.
- (16) What was the duration of the train in seconds?
- (17) Did you hear any sound?
How long after seeing the meteor was it before you heard this sound?
Did you hear an actual explosion?
How long after seeing the explosion was it before you heard it?
- (18) Of what color was the meteor?
- (19) What was the size of the meteor? (Compare it with the moon or with a planet or star.)
- (20) Was more than one body seen before the explosion (if any)?
- (21) What was condition of sky at time?
- (22) Give names and addresses of others who saw the meteor.
- (23) Please mail this reply to: Charles P. Oliver, American Meteor Society, 521 North Wynnewood Avenue, Narberth, Pa., 19072.

The CHAIRMAN. Mr. Secretary, let me ask you this. Should this be an executive session?

Secretary BROWN. No, nothing I have said so far has been classified, and nothing I will say.

The CHAIRMAN. Is there any reason to keep this executive? I think we have a lot of people outside of the door. Let them come in.

Mr. PRICE. In view of the reason you are having it, I see no objection.

The CHAIRMAN. I don't either. Why not open the door?

Mr. BRAY. I would like to make this observation off the record.

(Discussion off the record.)

The CHAIRMAN. We are going to decide what the future is going to be. I am talking about this testimony now. If there is no reason for them not being here, let them in here.

Secretary BROWN. This letter is unclassified. Some of the questions you ask may lead to classified material.

Mr. SCHWEIKER. Are all the files unclassified?

The CHAIRMAN. Let them come in and listen to the testimony. When we get into the questions we will decide.

Open the doors.

Mr. Secretary, we will let you start.

You gentlemen who have come in, the Secretary is explaining a letter he is sending to the committee.

You gentlemen of the press, TV, and radio, whatever you represent, listen. That is the best way to find out.

Go ahead.

(Secretary Brown repeats his statement previously read to the committee.)

The CHAIRMAN. Mr. Secretary, I have before me some pages from Life magazine. I don't know what the date is, but it is recent.

Mr. KELLEHER. Two weeks ago, I think.

The CHAIRMAN. Two weeks ago.

It mentioned 10,000-odd sightings of these mysterious objects. I note it has a picture.

Have you seen this? I will pass it on to you.

Secretary BROWN. Yes, I have seen the picture.

The CHAIRMAN. Here are two pictures. One taken in Oregon in 1950 and the other taken 4 years later in France. They both look very much alike. Actually it looks something like a battleship.

Then here is something on another page here that is alleged to have been seen in Michigan, and it is even sketched here with an antenna and all that goes with it.

Here is my question: Responsible, well-trained people, like pilots—I think some B-52 people, Mr. Kelleher?

Mr. KELLEHER. I don't recall that. I do remember sightings by commercial pilots.

The CHAIRMAN. Certainly commercial pilots have reported all kinds of things.

How do you explain away these clearly defined mysterious things that these responsible people allege having seen.

How do your experts reconcile this?

Secretary BROWN. I will turn this over to my experts in a moment. Mr. Chairman.

However, I should like to say this: We haven't explained all of the reported sightings which we have investigated. We have explained 95 percent of them, but are not sure about the other 5 percent. There are possible explanations for the other 5 percent in most cases. However, since we can't prove that our findings are the correct explanations they are regarded as sightings which have not been completely accounted for.

The CHAIRMAN. Well, now, does anybody, in authority or of stature, allege that these things, whatever they may be, have come from other planets or from somewhere outside of this universe?

Secretary BROWN. To the best of my knowledge, no one in the Air Force, and no one in the executive branch has expressed such a belief. Nor have I ever heard a Member of Congress make such a statement. I know of no one of scientific standing or executive standing, or with a detailed knowledge of this, in our organization who believes that they come from extraterrestrial sources.

The **CHAIRMAN.** But you have found parts of meteors and things of this character that have been continuing to hit the earth forever?

Secretary BROWN. Meteors, of course, are of extraterrestrial origin. I am talking about extraterrestrial flying craft.

The **CHAIRMAN.** Objects that are made for the purpose of coming to earth?

Secretary BROWN. That is right.

The **CHAIRMAN.** That is what I have in mind.

Secretary BROWN. That is right.

The **CHAIRMAN.** So then your testimony, or your answer in response to my letter in effect is that there are things caused by various phenomena, reflection of radar waves, the northern lights, somebody has said marsh gases.

Secretary BROWN. Yes; that is another explanation of some of the phenomena.

The **CHAIRMAN.** As well as meteors?

Secretary BROWN. Yes, sir.

The **CHAIRMAN.** What else?

Secretary BROWN. Some of them turn out to be balloons. Some of them turn out to be aircraft seen under peculiar circumstances, and so on.

And we can explain 95 percent of them this way. This does not imply that a large part of the remaining 5 percent, the unexplained ones, are not also of this character, but we simply have not been able to confirm this because we don't have enough information about these sightings.

It may also be that there are phenomena, the details of which we don't understand, which are natural phenomena, and which account for some of the sightings we have not identified. In certain instances, I think a further scientific explanation is a possibility. Therefore, we will continue to develop this approach.

The **CHAIRMAN.** Now, we have here Dr. Hynek, and Major Quintanilla.

We have these two gentlemen who are authorities on the Blue Book. One is a scientist, the other is the UFO project officer.

Now, we have asked that you gentlemen come. Dr. Hynek, is there anything you would like to say to us?

Dr. HYNEK. Mr. Chairman, the press has recently treated me rather unkindly.

The **CHAIRMAN.** You ought to be chairman of this committee.

Dr. HYNEK. The press has described me as "a puppet of the Air Force," and has stated that I say only what the Air Force tells me to say. I would like to do something which may be a little daring, and read to the committee a statement I have prepared which has certainly not been dictated by the Air Force.

The **CHAIRMAN.** At this point, I want you to turn the loud speaker up.

Now, Doctor, before you give us this, would you give your background for the record?

Dr. HYNEK. Yes, sir. This information is included in my statement.

STATEMENT OF DR. J. ALLEN HYNEK, SCIENTIFIC CONSULTANT TO THE AIR FORCE

Dr. HYNEK. My name is J. Allen Hynek, and I reside at 2623 Ridge Avenue, Evanston, Ill. I am director of the Dearborn Observatory and of the Lindheimer Astronomical Research Center, and Chairman of the Department of Astronomy at Northwestern University. Since 1948 I have acted as a frequent scientific consultant to the Air Force on the problem of the UFO (Unidentified Flying Objects) phenomenon.

The UFO phenomenon might be defined as (1) the persistent reporting by a wide cross section of the public, in this and in other countries, of alleged aerial objects which, to the observer, seem to defy explanation because of their appearance and behavior, and (2) the widespread and growing interest in these matters by segments of the public which, in some cases, has led to the formation of civilian organizations dedicated to the investigation of the said reports, often accompanied by vilification of the Air Force for their handling of the problem, a matter not beneficial to the Air Force image. Such people generally charge either (a) that UFO's are in reality secret devices of the Air Force, whose existence is kept from the public, or (b) that the Air Force knows all about visitors from space and is deliberately withholding information to prevent panic.

A third aspect of the UFO phenomenon has been the association of the terms UFO or "flying saucer" with the idea of visitation of intelligences from outer space, an association which is not warranted either by the data on hand, or by logical inference. It is entirely conceivable that there might be unidentified aerial phenomena about us which have no connection with extraterrestrial visitation.

Thus, the phenomenon should essentially be viewed in its entirety: The fact that the recent sightings in Michigan caused a reaction far out of proportion to the original sightings, the fact that my press conference in Detroit the week before last was the largest in the history of the Detroit Press Club, the fact that I receive many letters from schoolchildren who are writing class reports on UFO's and indeed the fact that I am speaking here before you, are all parts of the UFO phenomenon.

In this context, the kind of activity that the press has reported in Michigan is not unusual. It only happened that the Dexter and Hillsdale incidents, although of little scientific significance, have attracted national interest. Now, similar incidents, and some considerably more intriguing, have been occurring for many years, without such treatment on the part of the news media. While such glamorous attention is quick to wane, the underlying concern about UFO's, fed by a continuous trickle of reports, is indeed growing in the mind and sight of the public.

During this entire period of nearly 20 years I have attempted to remain as openminded on this subject as circumstances permitted, this despite the fact that the whole subject seemed utterly ridiculous, and

many of us firmly believed that, like some fad or craze, it would subside in a matter of months. Yet in the last 5 years, more reports were submitted to the Air Force than in the first 5 years.

Despite the seeming inanity of the subject, I felt that I would be derelict in my scientific responsibility to the Air Force if I did not point out that the whole UFO phenomenon might have aspects to it worthy of scientific attention. What we have here is a signal-to-noise ratio problem: There is indeed a fantastic amount of noise, represented by the many misidentifications of familiar objects seen under unusual or surprising circumstances—balloons, birds, satellites, meteors, aircraft, stars—yet, in all scientific honesty, one is led to ask whether there might not indeed be a signal somewhere in the noise.

As a scientist, I must be mindful of the lessons of the past; all too often it has happened that matters of great value to science were overlooked because the new phenomenon simply did not fit the accepted scientific outlook of the time. Thus, the evidence of fossils for biological evolution was overlooked; X-rays were overlooked, meteorites were overlooked as astronomers steadfastly refused to accept stories of stones which fell from the sky.

Therefore, I have set aside for further study some 20 particularly well-reported UFO cases which, despite the character, technical competence and number of the witnesses, I have not been able to explain. I have done this to illustrate that neither I nor the Air Force hide the fact there are unexplained reports, and to illustrate also that the Air Force does not maintain, contrary to some public opinion, that reporters of UFO's are lacking in intelligence or are objects fit only for ridicule.

For of these reports, 10 are from scientists and highly trained individuals, 5 are from members of the Armed Forces, and members of the police force, and 5 are reports made by reliable American civilians. In my view, the reliability of the observers was above average in all 20 cases. The recent cases in Michigan have not been included in this particular collection since I feel that they are subject to simple, albeit somewhat unusual, explanation.

I cannot prove beyond doubt that this is the case, but these two now famous reports illustrate the method the Air Force has used with great success in finding logical explanations for the great majority of the reports.

We have used as a working hypothesis, when first confronted with a report, that a conventional explanation existed, either as a misidentification or an otherwise well-known object or phenomenon, a hallucination, or a hoax. This has been a very successful and productive hypothesis. One must be aware, however, that complete adherence to one hypothesis may turn out to be a roadblock in the pursuit of research endeavors.

As the saying goes, "If one digs too intently for coal he is apt to miss diamonds." Scientists should never be guilty of poverty of hypotheses. And in dealing with the truly puzzling cases, we have tended either to say that, if an investigation had been pursued long enough, the misidentified object would have been recognized, or that the sighting had no validity to begin with.

The UFO public, on the other hand, is equally prone to poverty of hypotheses: Either UFO's mean utter bilge and nonsense, or they

jump to the far-out conclusion that the earth is host to space visitors. Surely, in scientific fairness, we must examine other hypotheses.

As early as 1952, in a paper written for the journal of the Optical Society of America, I called for scientific attention to the problem, pointing out that "ridicule is not a part of the scientific method and the public should not be taught that it is."

In 1953, I had further recommendations to make, when I wrote a report to the Air Force:

It occurs to me that the public interest in "flying saucers" may be dormant but can be excited with small provocation. I would recommend that: (1) selected "unknowns" continue to be worked upon and due publicity be given them when a satisfactory solution is reached; (2) an announcement be made that the Air Force is interested in the phenomena which cause reports on a scientific basis; (3) use of a small civilian scientific panel to examine a few selected "unknowns."

And this, I repeat, was my recommendation in 1953. In 1965, in my capacity as scientific consultant, I again advised that the reports be studied by a civilian scientific group, in a letter to the Office of the Secretary of the Air Force:

If there be any potential scientific value in the fragmentary UFO reports, as a scientific consultant it is clearly my duty to point this out. I have done so, in the past on a less formal basis, in private conversation with, and informal reports to, Air Force officials—I feel it is my responsibility to point out that enough puzzling sightings have been reported by intelligent and often technically competent people, to warrant closer attention than Project Blue Book can possibly encompass at the present time. * * * If the preliminary survey of the problem should bear me out; namely, that there exists the possibility of new scientific information in the UFO phenomenon, then definitely let the recommendation be made to have the National Academy of Sciences, or some other civilian group of recognized stature, undertake a longer study of the reported phenomena.

I am happy that my appearance before this committee affords me a chance to once again reiterate my recommendations.

Specifically, it is my opinion that the body of data accumulated since 1948 through the Air Force investigations deserves close scrutiny by a civilian panel of physical and social scientists, and that this panel should be asked to examine the UFO problem critically for the express purpose of determining whether a major problem really exists.

I would, of course, be willing to assist such a panel in whatever way I might and would even be willing to take a short leave of absence from my university if it would help place this problem in its proper perspective.

Thank you.

The CHAIRMAN. You say you can't write these reports off. You can't ridicule those who have made them. They are highly responsible people, in various walks of life, that have reported them. And that sometime in the past you recommended that a panel be set up to clear these things, a civilian panel, to obviate the accusation that the Air Force is or has been hiding their reports.

Now, are you saying to us this morning that there should be a panel set up of scientists authorized by the Air Force before whom these things may be brought, and from whom a report could come?

Dr. HYNEK. Yes, sir. I am saying that. This would be the gist of my statement.

However, I have been scooped by Secretary Brown who has mentioned that the Scientific Advisory Board has recommended the same thing.

The CHAIRMAN. What you have recommended is being done now?

Dr. HYNEK. It is about to be done, I believe.

The CHAIRMAN. Is about to be done?

Dr. HYNEK. Yes. I should like to make one comment:

The puzzling thing is that one would think many more people would see these flying objects than do. There should be many more witnesses. We should see a craft, if it actually exists as a tangible thing, and we should see it go from point to point. This doesn't seem to happen. Also, there should be far more radar sightings. During the international geophysical year, I was in charge of the optical satellite tracking program, and you would think with the surveillance that the astronomers placed on the sky, if these objects existed as tangible objects, surely these astronomers would have seen more than they did. It is a dilemma. It is a puzzle, as you say, as to how responsible people can report such objects, and that they are not obvious to scientists.

The CHAIRMAN. And then they see them and they disappear and they don't know where they go, and they land in these remote places where there is no intelligence to procure?

Dr. HYNEK. I would say so, yes, sir.

The CHAIRMAN. We don't know where they go, who they have on board, we see them a few moments, and then they are gone. This is the end of that.

This is what puzzles me. I am not going to ask further questions, because I am not knowledgeable with respect to the varying reports that have been made.

So I will turn it over to some of the experts, and I will start with Mr. Bates.

Mr. BATES. Mr. Chairman, I don't know—if I have to qualify on that basis.

But, Secretary Brown, you indicated no one of scientific knowledge in your organization has concluded these phenomena come from extraterrestrial sources?

Secretary BROWN. That is correct. We know of no phenomena or vehicles, intelligently guided, which have come from extraterrestrial sources. I excluded meteors, which do come from extraterrestrial sources.

Mr. BATES. Is this your conclusion, Doctor?

Dr. HYNEK. This is also my conclusion. I know of no competent scientist today who would argue the sightings which do puzzle intelligent people. Puzzling cases exist, but I know of no competent scientist who would say that there objects come from outer space.

Mr. BATES. Then what you are looking for is an explanation in natural phenomena, thus far you have not determined the factors involved in it?

Dr. HYNEK. Yes.

Mr. BATES. But the interesting thing, of course, is we have so many prominent people in the scientific world here who have taken a position, a rather strong position—I have here a letter from a constituent of mine. He is a project administrator or engineer in the MINUTEMAN program. That is a responsible position, would we say?

General McCONNELL. Yes.

Mr. BATES. On the basis of scientific ability he has been given a rather important position toward the security of this country; is that correct?

Secretary BROWN. I would like to know who he is and what his responsibilities are before I comment on this, Mr. Bates. Certainly, from the information contained in the letter that you quote, he appears to occupy a position of some responsibility.

Mr. BATES. It does seem to be. And as I read the letter which he has written to me, it is certainly written by a well-educated person. And of course, we here all kinds of comments on the other side of the issue now, with this Lunar II excursion around the moon, people say I suppose the people up there are making the same kind of reports as the doctor has just made to us. They are making these kinds of statements.

Doctor, to be more specific, the paper which I have—Mr. Chairman. I would like to get unanimous consent to insert in the record the information which has been provided to me.

The CHAIRMAN. Without objection.

(The letter to Congressman Bates is as follows:)

WENHAM, MASS., April 1, 1966.

CONGRESS OF THE UNITED STATES,
House of Representatives,
Washington, D.C.

(Attention, Speaker John W. McCormack).

DEAR SIR: My name is Raymond E. Fowler. I am employed as a project administrative engineer in the Minuteman Program Office for Sylvania Electric Products, Waltham, Mass. I am presently serving as chairman of a Technical Investigating Subcommittee for the National Investigations Committee on Aerial Phenomena, Wash., D.C.

The reasons for my writing are twofold, firstly—I have been asked by NICAP to submit to you our subcommittee's complete file covering our investigation of the Exeter, New Hampshire UFO sighting witnessed at close range by local citizens and police officers on September 3, 1965. I am sure that you are aware of this sighting as it gained nationwide publicity recently through NICAP-backed articles in the Saturday Review and Look magazines. Secondly, I do want to put myself on record as supporting the claims and views of NICAP and others which indicate that congressional hearings on the matter of UFO's are long overdue.

I feel that the American people are capable of understanding the problems and implications that will arise if the true facts about UFO's are made known officially. The USAF public information program and policy, as directed by the Pentagon, of underrating the significance of UFO's and not releasing true, pertinent facts about UFO's, is not only a disservice to the American people now but in the long run could prove to have been a foolish policy to follow. After years of study, I am certain that there is more than ample high-quality observational evidence from highly trained and reliable witnesses to indicate that there are machinelike solid objects under intelligent control operating in our atmosphere. The aerodynamic performance and characteristics of the true UFO rule out manmade or natural phenomena. Such observational evidence has been well supported in many instances by reliable instruments such as cameras, radar, geiger-counters, variometers, electrical interference, physical indentations in soil and scorched areas at landing sites, etc.

I am reasonably sure that if qualified civilian scientists and investigators are able to come to this conclusion, that the USAF, supported by the tremendous facilities at its disposal, have come to the same conclusion long ago. However, present official policy deliberately attempts to discredit the validity of UFO's and a wealth of data and facts are not being released to the public.

I trust that you will examine the attached UFO report and related correspondence in detail. Sightings such as the Exeter, N.H., sighting have and are occurring throughout the world at night and in the daytime. It is high time that the real facts about UFO's are released. A public information program should

be inaugurated that presents facts. I am urging you to support a full congressional open inquiry on the UFO problem.

Sincerely,

RAYMOND E. FOWLER,
Chairman NICAP Massachusetts Subcommittee.

(The attachments to the previous letter are as follows:)

[Excerpt from Manchester (N.H.) Union Leader, Sept. 6, 1965]

POLICE, CIVILIANS SIGHT UFO IN EXETER AREA

EXETER.—At least five people here, including two police officers, have reported seeing a flying saucer in this area.

The incidents occurred early Friday morning. According to those who saw the unidentified flying object, it was about the size of a house and had a red glow around it, and moved silently through the night.

When Exeter police investigated a parked car on the Exeter-Hampton bypass at about 12:30 investigating officer Eugene Bertrand, who approach the car and found two women in a state of near shock. They told that they had been chased along Route 101 all the way from Epping, about 12 miles, by flying object which glowed with a brilliant halo of red. According to the women, the "thing" followed their car until they stopped.

As the one woman told their story one of them sighted the object once more, about 2 miles away, which Bertrand thought was a star low on the horizon.

REPORTS CHASE

At 12 a.m., Norman J. Muscarello, 18, of 205½ Front Street, Exeter, came into the police station with a hair-raising report of having been chased by a flying object as he was hitchhiking toward Exeter on Route 150 in Kensington.

Muscarello told Desk Officer Reginald Toland that as he walked along the highway, a large, brilliant object began making passes on an adjacent field and house and along the highway. Not knowing what it was and being understandably shaken, he crouched in a ditch along the road as the object, so brilliantly red that its shape could not be determined in the glow, made what seemed to him to be searching passes at him.

Shortly thereafter the "thing" disappeared silently, as quickly as it had appeared. Muscarello then hitched a ride to the police station and related what he had seen.

Although Muscarello's story was extraordinary, Patrolman Bertrand drove him back to the scene of the incident in the police cruiser. When they arrived, nothing was there.

POLICE SEE UFO

Officer Bertrand suggested that they walk into the field where the flying object was last seen, and they were joined there by Exeter Patrolman David Hunt, who also drove to the scene. Bertrand was talking reassuringly when Muscarello shouted "Look, there it is, rising up from behind those trees." The officers spun around and looked.

From behind a stand of trees in the black of the night, a huge blinding glow of brilliant red light surrounding it, the object rose, not fast but waveringly.

It traveled slowly and yawed slightly from side to side. They were stunned by the blinding red light as it moved toward them across the field. The object seemed to be coming toward them and Bertrand made a move toward his police service revolver but thought better of it. Then the three men ran to the police cruisers. When questioned on the size of the object, Officer Bertrand estimated it to be "about the size of a house."

Usually, when incidents such as this are reported, the sightings take place over a period of a few seconds, but in this instance, the men observed the object for 15 or 20 minutes at what appeared to be a relatively short distance.

One of the most amazing points which Officer Bertrand made while being interviewed was the complete absence of sound as the flying object hovered over

a nearby farm building, casting a brilliant glow over the dwelling, while the farm animals in the barn caused a tremendous commotion. Horses whinnied and kicked the walls of their stalls. Then the object disappeared rapidly in the distance.

ANOTHER SIGHTING

Officer Eugene Bertrand's report on the trio's sighting of the strange object was made to Officer Toland, desk man at the Exeter police station, at 2:55 a.m.

Then at 3:30 p.m. Officer Hunt reported from his cruiser that he had sighted the UFO, while he was at the intersection of the Route 101 bypass in Exeter and Route 87 to Newfields from Exeter.

Topping the strange activities, Exeter police reported that a telephone call from an unidentified pay station in Hampton had been made by a hysterical man, but that the line had gone dead before the call could be completed or the pay phone station identified. The man had dialed the operator and cried "Get me the police" and said he had been chased by a flying saucer.

Hampton police were notified, but nothing was determined about the point from which the call was made, what had frightened the man—or why the call was abruptly broken off.

NATIONAL INVESTIGATIONS COMMITTEE ON AERIAL PHENOMENA, *Washington, D.C., September 15, 1965.*

RAYMOND FOWLER,
Wenham, Mass.

DEAR RAY: Your excellent report on the September 3 New Hampshire sightings has been received. You certainly are to be commended for a prompt and thorough investigation. The information is most interesting and will be of great value. We are very fortunate to have people of your ability donating their services to us.

Mr. John Fuller of Saturday Review may be getting in touch with you about these sightings. He is doing a straightforward column (he writes "Trade Winds") on the recent wave of sightings, and has long had a sincere interest in the subject. We are cooperating fully, and I have given him a lot of specific information.

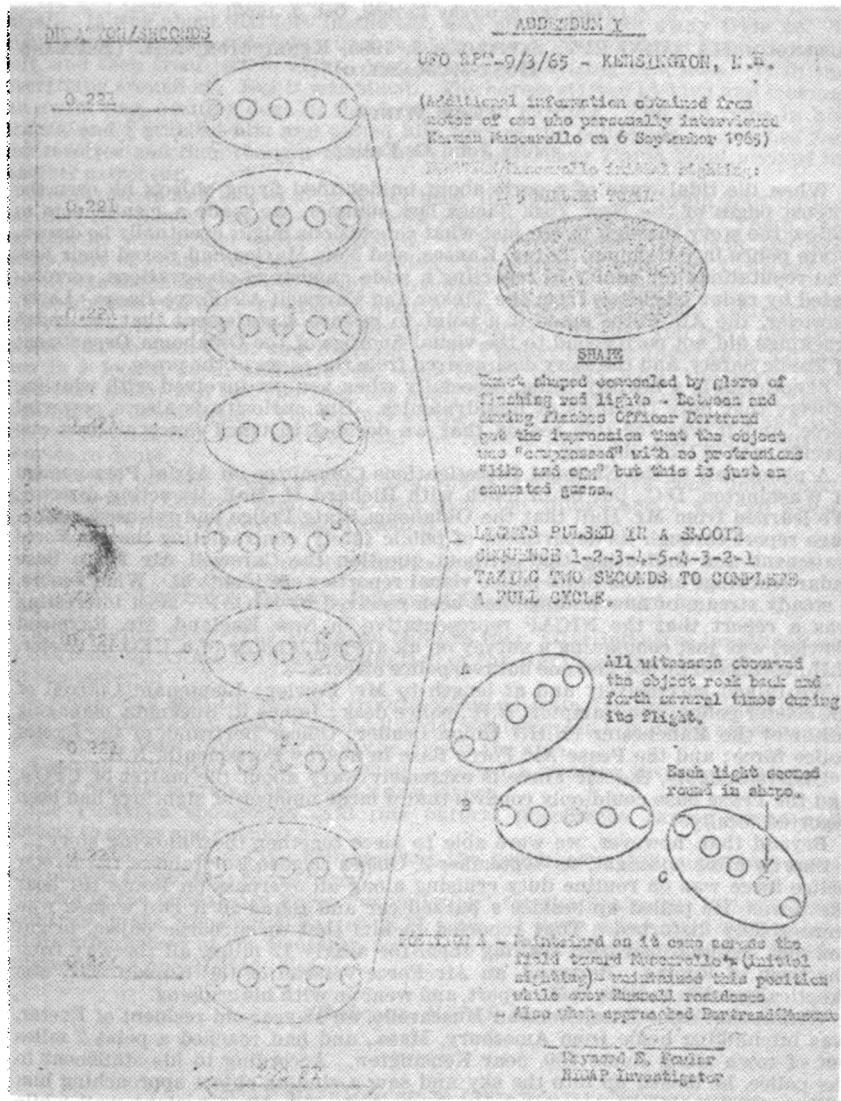

Our New York No. 2 Subcommittee in Chautauqua County (western New York.) and an intelligent young member have been investigating a landing report near Buffalo (Cherry Creek) August 19. It appears to be a solid case, and caused several E-M effects.

On the same night as the New Hampshire sightings, two police officers near Angleton, Tex. (Between Houston and gulf coast) saw a reddish UFO on the ground in a field, started to investigate until the object moved toward them—whereupon they fled in panic. Sounds very similar to New Hampshire, but we may not be able to get much details.

Thanks again for your hard work on our behalf.

Sincerely,

DICK HALL

**ADDENDUM II**

(UFO Report, September 3, 1965, Kensington, N.H. (Bertrand-Hunt-Muscarello))

Subject: Weather, September 3, 1965, a.m.

To: NICAP, Washington, D.C.

From: Raymond E. Fowler, chairman: NICAP Massachusetts Investigating Subcommittee.

U.S. Weather Forecast: Skies: Clear. Wind direction: Northwest, Wind velocity: 5 miles per hour. Temperature: Lower fifties.

Respectfully submitted.

RAYMOND E. FOWLER,
NICAP Investigator.

[From the Saturday Review, Oct. 2, 1965]

ADDENDUM IIA (UFO RPT, SEPTEMBER 3, 1965, KENSINGTON, N.H. (BERTRAND HUNT-MUSCARELLO))

TRADE WINDS

(By John G. Fuller)

When the tidal wave of reports about unidentified flying objects hit even the august pages of the New York Times last summer, we made a mental note to follow the story through to see just what conclusions might eventually be drawn. State police in Oklahoma, Texas, Kansas, and New Mexico had risked their jobs and reputations for sanity in reporting a wide number of observations, corroborated by radar trackings from the Tinker and Carswell Air Force Bases. Later, however, the Air Force made it a point to release a statement that the radar trackings did not correspond to the visual findings of the Oklahoma Department of Public Safety, and the story disappeared from the pages of the press.

Skepticism is a healthy thing, especially when you get involved with whirling saucers that defy the laws of aerodynamics. But curiosity is also a powerful force, and it was for this reason that we decided to track down at least one specific case of UFO chasing.

A phone call to the National Investigations Committee on Aerial Phenomena in Washington, D.C., put us in touch with Richard H. Hall, its acting director. We learned from Mr. Hall that the Oklahoma State Police had released a nine-page report through its department of public safety, contradicting the Air Force statement and indicating that without question the Carswell Air Force Base radar trackings and the State police visual reports were identical. What's more, a steady stream of new findings had been received by NICAP. Most interesting was a report that the NICAP representative in New England, Mr. Raymond Fowler, was just completing a survey on an alleged landing of a UFO in Exeter, N.H., witnessed by not just one but two police officers.

We talked successively and at length to Mr. Fowler; Lieutenant Cottrell of the Exeter police; the Hampton, N.H., police desk; James R. Bucknam, managing editor of the Manchester (N.H.) Union Leader; Officer Bertrand, of the Exeter police force; and the Pease Air Force Base in nearby Portsmouth, N.H.

Understandably, the Air Force is extremely wary about the matter of UFO's and the Pease base could only confirm that a large number of sightings had been reported locally.

Beyond that, however, we were able to piece together the following story:

Shortly after midnight, on September 3, Officer Eugene Bertrand of the Exeter police force was on routine duty cruising along an overpass on Route 101 near the town. He pulled up besides a parked car and found in it two women who were visibly disturbed. They reported to him that an airborne object, bright red and flashing, had been trailing them for nearly 12 miles, all the way from the town of Epping. Bertrand, an Air Force veteran of the Korean war, was skeptical, made a routine radio report, and went on with his cruising.

Within that same hour, Norman Muscarello, an 18-year-old resident of Exeter, was hitchhiking home from Amesbury, Mass., and had reached a point 2 miles out of town along Route 150, near Kensington. According to his statement to the police, he looked up into the sky and saw a similar object approaching him with a yawing, kitelike motion. He threw himself against a stone wall while the object hovered over a nearby farmhouse, lighting up the entire area. He finally made a run for the farmhouse as the object sailed out of sight. Unable to make sense of his hysterical story, the farmer took no further action and the boy hitchhiked into town. Here he reported the story to the police, even though he was in a state bordering on shock.

It was now about 2 a.m., Officer Bertrand was called on his car radio and instructed to take the boy back to the farm area to investigate.

"I was sure that these women and this kid had seen a helicopter, or something like that," Officer Bertrand told us. "But we went out to the spot, and I parked the cruiser. It was a clear night. No wind. No fog. We walked about a hundred yards out on the field, near a barn where a lot of horses were kept. Then, the kid yelled, 'There it is!'"

"He was right. It was coming up over a row of trees. There was no noise at all. It was about 100 feet in the air, and about 200 feet away from us. I could see five bright red lights in a straight row. They dimmed from right to left, and then from left to right—just like an advertising sign does. It lit up everything around us. But it was silent. The horses started kicking and making an awful fuss, and the dogs in the farm started barking. The kid froze in his tracks, and I grabbed him and pulled him toward the police car. I reached for my revolver and then thought better of it. Then Officer David Hunt arrived in another patrol car.

"We sat there and looked at it for at least 10 minutes. My brain kept telling me that this doesn't happen—but it was, right in front of my eyes. There was no tail, no wings, and again no sound. It hovered there, still about 100 feet away, sort of floated and wobbled. I don't know what it was. All I can say is that it was there, and three of us saw it together."

Nobody else can tell you exactly what it was, either. Lieutenant Cottrell will tell you that the whole story is on the police blotter, and that you can't find two better officers than Hunt and Bertrand. "If I didn't believe these guys, I'd put 'em in a locked room and give 'em some blocks to play with," he says. The Hampton police will tell you that too many reliable people have reported these sightings to doubt them. The editors at the Manchester Union Leader and the Exeter News-Letter will tell you that the reports are from too many reliable sources to doubt.

Moreover, officials suspect other local UFO landings have gone unreported. As Lieutenant Cottrell said, "If I had seen that thing—and I was all alone, nobody else would have ever heard about it."

[From the Haverhill Gazette, Oct. 27, 1965]

PENTAGON DOESN'T BELIEVE UFO EXETER SIGHTINGS

WASHINGTON, D.C.—The Pentagon believes that, after intensive investigation, it has come up with a natural explanation of the UFO sightings in Exeter, N.H., on September 3.

A spokesman said the several reports stemmed from "multiple objects in the area," by which they mean a high-altitude Strategic Air Command exercise out of Westover, Mass., was going on at the time in the area.

A second important factor was what is called a weather inversion wherein a layer of cold air is trapped between warm layers.

The Pentagon spokesman said this natural phenomena causes "stars and planets to dance and twinkle."

The spokesman said "We believe what the people saw that night was stars and planets in unusual formations."

(This is the official Air Force "explanation" for the September 3, 1965, UFO sightings in the Kensington-Exeter, N.H. area. I have asked the USAF public information officer at the Pentagon for a copy of their official evaluation for the subcommittee and NICAP files.)

RAYMOND E. FOWLER,
Chairman, NICAP Massachusetts Subcommittee.

NICAP MASSACHUSETTS INVESTIGATING SUBCOMMITTEE, Wenham, Mass.

Subject: Addendum IV, UFO report, September 3, 1965 (Kensington, N.H.)
(Bertraund-Hunt-Muscarello).

Date: October 10, 1965.

From: Raymond E. Fowler, chairman, NICAP Massachusetts Subcommittee.

To: NICAP.

This newsclip identifying UFO reports in the southern New Hampshire area is misleading. At the time of the September 3, 1965 UFO sighting I checked with the manager of "Sky-Lite Aerial Advertising Co." and its aircraft was not flying on this night. On October 9 I went over the advertising plane's flight paths between August and October 8. The plane was not even airborne between August 21 and September 10.

¹ See later USAF letter in file which reverses their position.

Joseph Rodina also informed me that his aircraft rarely flies into southern New Hampshire and when it does it is usually in the Salem and Manchester area, miles away from the Exeter area. He told me that he had told the Amesbury News that perhaps some UFO's reported in New Hampshire could have been his aircraft. Unfortunately, this newspaper used his statement to explain the sightings in the Seabrook area which borders Kensington, N.H.

The "Sky-Lite" aircraft* does not carry red flashing lights. It carries a rectangular sign carrying white flashing lights. It was not airborne during the southeast New Hampshire UFO flap. I have notified the Amesbury News of the true facts and have asked them to set the record straight. I am issuing this addendum to avoid further confusion.

RAYMOND E. FOWLER,
Chairman, NICAP Massachusetts Subcommittee

[From the Amesbury (Mass.) News, Oct. 6, 1965]

UFO IDENTIFIED AS AD GIMMICK

The unidentified flying object spotted in this area by many residents has finally been identified.

It's a flying billboard which contains 500 high-intensity lights that spell out an advertising message.

The electronic billboard is towed by a specially rigged light aircraft owned by Sky-Lite Aerial Advertising Agency of Boston and piloted by Daniel C. Vale of Londonderry, N.H.

Recently the rig has been flown over the Amesbury, Seabrook, and southern New Hampshire area carrying the advertising message, "Put a Tiger in Your Tank—See Your Esso Dealer."

However, when spotted from an angle not directly below the aircraft, it gives the appearance of a flying saucer, quite like the "UFO's" described by the area residents.

A spokesman for the firm said the sign is 10 feet wide and 40 feet long. "The plane can turn on a dime, and when it turns, it gives the appearance of being stationary," the spokesman said.

Earlier flights of the night-flying billboard south of Boston also prompted a flash to UFO reports before the "secret" was discovered.

UFO SUMMARY SHEET

UFO reports—Sept. 3, 1966

Number	Witness—Name and address	Age	Location of UFO sighting	Time a.d.t.
1.....	Unidentified woman motorist.....	(1)	Route 10L, Epping to Exeter, N.H.	—12:30 a.m.

(1) Not available.

BACKGROUND

I received news of the sighting through newspaper clippings and from a friend whose niece is a policewoman for the Exeter, N.H., Police Department. I arrived at the Exeter police station at 6:40 a.m., on September 11, and interviewed Officer

*NOTE.—This aircraft flies out of Beverly Airport, Beverly, Mass. Usually the aircraft flies along the coast to Boston and back. It rarely is airborne after 11 p.m.

Hunt who filled out and signed an eight-page UFO questionnaire and later gave permission to use his name in connection with the report. I proceeded to the residence of Norman Muscarello and discovered that he was out of State until September 14. Arrangements have been made for a personal interview upon his return. I then drove out to the sighting area of sightings two and three, and interviewed residents in the general area. Next, I went to the home of Officer Bertrand and drove him back to the area of sighting two and three where he filled out a UFO questionnaire, signed it and gave NICAP permission to use his name in connection with his sighting. While at the sighting area he gave me a detailed description of the sightings and related information. I interviewed others in the area who had related information and arrived back home at 2:45 p.m. My brother, Richard A. Fowler, and I returned to the area and took photographs. We walked several miles along some powerlines near the sighting area examining this area for any signs of a UFO landing. We feel that the UFO might have been attracted to the area by these powerlines. We found nothing.

SIGHTING ACCOUNT NO. 1

At approximately 12:30 a.m., e.d.t., Officer Bertrand came upon one woman (not two as reported by newspapers) parked in an automobile on route 101 just outside Exeter. When asked if she needed help she said excitedly that she had been chased along Route 101 between Epping and Exeter for 12 miles by a flying object which was encircled with a brilliant red glow. She stated that the object dived at her moving automobile several times. When Bertrand asked where the object was, she pointed to what he thought was a bright star on the horizon. He dismissed the incident and after watching the light source for a few minutes to reassure the woman he proceeded on in the cruiser. He dismissed the incident and did not attach enough importance to the woman's account to warrant obtaining her name.

SIGHTING ACCOUNT NO. 2 (MORE DETAILS FORTHCOMING PENDING
PERSONAL INTERVIEW)

At approximately 1 a.m., e.d.t., Norman Muscarello was walking along Route 150 in Kensington, N.H., about 2 miles from Exeter. He had been visiting in Amesbury, Mass., and had been thumbing rides home to Exeter. As he approached the Clyde Russell residence he was alarmed to see an object carrying at least four extremely bright red pulsating lights emerge from nearby woods and maneuver over the field adjoining the road which belongs to Carl Dining. It moved over the Clyde Russell home and hovered there. The house was only 20 to 30 feet from where Muscarello stood and the object appeared to be just a matter of several feet from the roof. Frightened thoroughly he crouched down beside the stone wall which runs along the field. Several times it seemed to move closer to him. Its lights were so bright that the Russell home was bathed with a red glow. The size of the object seemed to be much larger than the Russell home and Muscarello later told the police it was 80 to 90 feet long. The object was completely silent. Then it moved back over the Carl Dining field and disappeared over the trees. Muscarello pounded on the door of the Clyde Russell home shouting that he had seen a "flying saucer." The Russells woke up but refused to answer the door thinking that the boy was drunk or something. Muscarello finally gave up and started down the road toward Exeter. He flagged down a passing automobile and received a ride to the Exeter police station.

(The above account is based upon information received from Officers Hunt and Bertrand. I hope to receive more detailed information from Norman Muscarello personally as soon as he returns from Rhode Island.)

SIGHTING ACCOUNT NO. 3

Muscarello reported the incident to Desk Officer Reginald Towland at about 1:45 a.m., e.d.t. He was white with fear and hardly able to talk. A radio call was made to Officer Bertrand asking him to return to the station, pick up Muscarello and investigate at the scene of the sighting which he did. Upon arriving at the Carl Dining field the object was nowhere to be seen. After waiting and looking from the cruiser for several minutes, Bertrand radioed headquarters that there was nothing there and that the boy must have been imagining things. It was then suggested that he examine the field before

returning, so Bertrand and Muscarello advanced into the field. As the police officer played his flashlight beam back and forth over the field, Muscarello sighted the object rising slowly from behind some nearby trees and shouted. Bertrand swung around and saw a large dark object carrying a straight row of four extraordinarily bright red pulsating lights coming into the field at tree top level. It swung around toward them just clearing a 60- to 70-foot tree and seemingly only 100 feet away from them. Instinctively Officer Bertrand drew his service revolver. (He stated that Muscarello said that he shouted "I'll shoot it!") but thinking this unwise replaced it and yelled to Muscarello to take cover in the cruiser. He told me that he was afraid that they both would be burned by the blinding lights closing in on them. They ran to the cruiser where Bertrand immediately put in a radio call to headquarters for assistance. Officer Hunt arrived within minutes and the trio observed the object move away over and below the tree line.

Data (sighting No. 3)—Based on signed questionnaires and interviews with Officers Bertrand and Hunt.

There is confusion concerning the exact times of the sighting. The police stated that the newspaper account stated that Muscarello arrived at the station at 12 a.m. is incorrect and that it was probably close to 2 a.m., e.d.t. I have arbitrarily assigned the time as being 1:45 a.m., e.d.t., after taking everything into consideration. Muscarello's mother also thought it was closer to 2 a.m. Perhaps after my interview with Muscarello, I will be able to pinpoint the time more exactly. Based upon the 1:45 a.m. time and the fact that when the trio returned to headquarters and reported the sighting No. 3 to Desk Officer Towland at exactly 2:55 a.m., I figure that sighting No. 3 took place approximately between 2:25 and 2:40 a.m.

Sighting No. 3 took place over the field of Carl Dining in Kensington, N.H., on Route 150 about 3 miles south of Exeter, N.H. The duration of the observation was about 10 minutes by Officer Bertrand and Norman Muscarello and about 5 minutes by Officer Hunt when he joined the pair at the field. There was no trace of daylight at the sighting time. The weather was dry and cool with a slight breeze. Observing conditions were excellent. The moon had set at 11:35 p.m., e.d.t., and the sky was studded with stars. The exact shape of the object could not be seen by either police officer although Bertrand told me that it seemed compressed as if it were round or egg-shaped with definitely no protrusions like wings, rudder or stabilizer. I hope to obtain more details from Muscarello concerning the shape, size, and so forth of the object.

The object carried at least four extremely brilliant pulsating red lights which appeared to flash in a steady sequence. They were arranged in a fixed straight line position. Officer Bertrand said that they were brighter than any light he had ever seen and at close range he found that he could not look directly at them. He had the impression that he and Muscarello might have been burned if they did not run from the object as it approached them. He compared their brightness to that of automobile headlights shining directly in one's face at less than several yards away. The manner in which they pulsated gave Bertrand the distinct impression that this was an intelligently constructed vehicle and definitely not some natural phenomenon. The lights were definitely seen to be part of a large dark solid object. The reflection off the object's body caused a halo effect around it. Both officers had eyeglasses on when viewing the object. Neither officer would give an estimate of how large the object itself was although Bertrand was quoted to have said that it was as "big as a house." Bertrand told me that it was very large but the lights obscured it preventing him from seeing enough of it to know how large. When Officer Hunt arrived the object had moved off so what he thinks he only saw two of the lights. I was, however, able to obtain a statement from Bertrand concerning the apparent size of the object. He stated that when the object was at its closest that it was almost the apparent size of a "grapefruit" held at arm's length. When he first sighted it the size seemed to be that of a "baseball" held at arm's length. He estimated that it was 200 yards away when he first spotted it after Muscarello shouted. He said that at its closest approach it just cleared a nearby 60- to 70-foot tree. He said the object was very close and that it appeared to be about 100 feet away. While viewing it from the cruiser it maneuvered over the field at about 500 yards away before moving out over the tree line. As it moved the object seemed to tilt back and forth from side to side.

The sighting area was open countryside with farms, fields, and woods. The object was first seen in the northeast and last seen in the north moving in an east

to west flight pattern in a straight line with an elevation of about 10° above the tree-line. Both officers had read a little an UFO's. Neither would venture an opinion as to what the object was but Officer Bertrand stated that it was definitely not an airplane or helicopter and that in his opinion that it was an intelligently constructed and operated vehicle. No sound was heard by the witnesses, even at close range but apparently the animals in the nearby barn of Carl Dining could hear or sense something that frightened them as during sighting No. 2 and No. 3 they whinnied and kicked their stalls. The dog which belonged to people across the road was barking furiously. No interference was noticed on the police radio nor were the lights and ignition of the cruiser affected. Neither officer would estimate the object's speed but stated it was very slow. No scorched marks or indentations were found in the field. Both officers agreed that their signed statements and names could be used by NICAP in connection with the report.

SIGHTING ACCOUNT NO. 4

At 3:30 a.m. e.d.t., Officer Hunt sighted what appeared to be the same object hovering in the distance while at the Route 85-100 bypass in Exeter. He radioed Officer Bertrand who told him it was probably a star. Shortly after this he looked for it again but it had disappeared. Since there was little detail in this sighting I did not bother to probe for details.

SIGHTING ACCOUNT NO. 5

To add to the excitement the police and others told me that an unidentified hysterical man tried to call the police during these early morning hours to report a UFO. He dialed the operator from a pay station in Hampton, N.H., and excitedly asked the operator to connect him with the police as he had been chased by a "flying saucer." Before the call could be put through to the police, the telephone connection went dead. Neither the man or the particular Hampton pay station could be traced.

MILITARY INVESTIGATION

Officer Bertrand informed me that soon after they made their report of sighting No. 3 to Desk Officer Towland they notified Pease AFB, Portsmouth, N.H., of the sighting by phone. Later Pease AFB phoned back and arranged for the police officers to be interviewed. At around 9 a.m. that same morning, a USAF major and lieutenant in uniforms arrived, questioned them and drove both Bertrand and Hunt out to the Carl Dining field where they had sighted the UFO. They asked more questions and returned with the police officers to the station. The USAF officers asked the police to try to keep the sighting from the press so as to avoid alarming the local people. The police told the USAF officers that it was too late for this as several reporters already had the story. (One had driven from Manchester on a motorcycle complete with black jacket, helmet, and goggles. I heard privately that he gave the police quite a start when he came into the station looking like a man from outer space.)

Bertrand told me that most of the questions asked were the same as I had asked. The USAF team were particularly interested in the size and shape of the object. One question that stuck in Bertrand's mind was that they wanted to know if the chickens on the Carl Russell residence next to the field were awakened and alarmed during the sighting. (Apparently they were not disturbed as they were not heard during the sighting although they may have and just were not heard as the chicken house is probably 300-400 yards, at least from where Muscarello and Bertrand were standing in the field.)

Three interesting items told to the police were that (1) that a USAF check had revealed no aircraft in the area during the time sighting No. 3 occurred; (2) that Pease AFB had been receiving other UFO reports in the New Hampshire area almost nightly during the previous week; (3) they mentioned a sighting which took place in late July concerning an automobile coming upon a UFO hovering over the road in front of them. I have the details and hope to look into it.

After returning Officers Bertrand and Hunt to headquarters, both the major and lieutenant returned to the sighting area and questioned residents living near the field. Mrs. Muscarello told me that two USAF officers had questioned her son at length and that a U.S. Navy officer also came to the house and asked several questions about the sighting.

INTERESTING SIDELIGHTS

1. Mr. and Mrs. Chase of Kensington who live a few miles down Route 150 told me that:

(a) An Air Force officer had gone around to all the stores selling newspapers in Exeter and purchased all copies of the Manchester, N.H., Union Leader newspaper which carried a detailed account of these sightings and a posed photo of Herman Muscarello and Officers Bertrand, Hunt, and Towland. The police had not heard of this and I did not check further.

(a) Mrs. Chase, a nurse, was on duty at the Exeter Hospital during the sightings and told me that the Hampton, N.H., police phoned the hospital to see if a man was brought into the hospital suffering a heart attack or shock. This was in relation to the hysterical man who tried to reach the police by phone about being chased by a UFO. Reference sighting No. 5.

(c) Mrs. Chase also told me that a friend of hers, a Mrs. Parker Blodgett, works as a correspondent for the "Haverhill (Mass.) Gazette" newspaper and was asked by the USAF not to publish UFO reports. (However, she did, as I have a copy of her article dated September 7, 1965.)

2. A Mrs. St. Laurente of Kingston Road, Kensington, N.H., told a church minister friend of mine that her brother, who usually cuts the hay on the Carl Dining field, refuses to do so because he has heard that the hay has been contaminated by radiation.

3. The police told me that for the past few weeks previous to the sightings they have received reports from people, some of them personal friends, of their whole house suddenly being momentarily illuminated by a bright reddish glow after they had gone to bed. No objects were seen.

4. Mr. and Mrs. DeMarco, N. Hampton Road (Route 88), Hampton, N.H., observed a star-like object blinking red which alternately hovered and moved in the western sky between 9 and 9:30 p.m. on September 5, 1965. Since Venus had set and Mr. DeMarco was a former USAF control tower operator who assured me that it was not an aircraft, I thought the report was worth mentioning.

5. A Mr. Rice, who owns a CB radio told me that he was talking over his radio with a Portsmouth, N.H., police cruiser on September 7, 1965, about 8:00 p.m. e.d.t. The officer told him that he was out investigating a UFO report and asked Mr. Rice to give him a call if he spotted it. He said the UFO was supposed to be over the Hampton Falls area near where Mr. Rice lives on Route 88. No UFO was seen by Mr. Rice. The cruiser used call letters KMA-8616 and used both channel No. 2 and No. 6.

6. Since the UFO sighting at the Carl Dining field, many cars pull up and watch for the object at night. Mr. Dining had to rope off the entrance to his field and post it as people were littering his property.

7. Mrs. Muscarello thinks the USAF Lieutenant's name was Brant.

8. On my first two visits to the Carl Dining field on the morning of September 11, 1965, I saw a low-flying C-119 Flying Boxcar pass over the area on both occasions.

9. Other civilian UFO Investigators were given the brushoff by the police. I was very fortunate to have received such a good response from them.

EVALUATION

Characters of witnesses

Muscarello: Comes from twice-broken home—has had problems with police and is well-known by them—usually a cool, calm boy. Until my personal interview with him I can say no more.

Bertrand and Hunt: Credible witnesses, good observers with a keen desire to relate only facts—I could not even persuade them to guess at estimates of the object's real size and speed.

The sightings

Sighting No. 1: There is enough similarity between the unidentified woman's report and the detailed sightings No. 2 and No. 3 to warrant its probable authenticity. The chances of a similar report occurring the same morning, unless it were authentic, is astronomical. It is possible that the object she pointed out to Officer Bertrand was Jupiter and not the object that had chased her.

Sightings No. 2 and No. 3: The credibility of the witnessing police officers coupled with the sightings of Muscarello; the many typical UFO characteristics

exhibited by the object; the other correlated UFO reports and the military's interest and actions concerning the UFO reports, rate these as first-class UFO sightings by this investigator.

Sighting No. 4: Insufficient information but interesting.

Sighting No. 5: Again, the chances are astronomical that several people entirely independent of one another should report that they were "chased by a flying saucer" in the same general area. It is possible concerning sighting No. 5 that someone could have been monitoring the police radio conversations about the UFO reports and decided to play a little joke but this seems unlikely. Not many people, other than responsible law enforcement officers are up tuning the police radio and at these wee hours of the morning. Thus, the report is probably genuine. Why the unidentified man did not or could not complete his call to the police will have to remain on open question unless he steps forward and relates what happened.

I was able to talk to many people during my investigation. The great majority did not appear to be frightened about the incident. This is contrary to what the USAF team thought would occur if the story got in the newspapers. Instead of fear, I found a tremendous curiosity on the part of people to know more about UFO's. Strangely enough many openly voiced the interplanetary origin theory without any encouragement from me. Several years ago very few people other than those who have read widely about UFO's would talk like this. Slowly but surely over the years the public has been becoming UFO-conscious: Reports like this one coupled with wide publication will help much in informing the public-at-large of the reality and problem of UFO's.

U. O DATA SHEET

Page one

This questionnaire has been prepared so that you can give as much information as possible concerning the "Unidentified Flying Object" that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes. Your name will not be used in connection with any statements, conclusions, or publications without your permission. Thank you very much for your cooperation in this matter.

Investigator: National Investigation Committee on Aerial Phenomena
 Raymond E. Fowler
 13 Friend Court
 Wrentham, Massachusetts

*Time he reported sighting
 to Dark Officer: 1225 AM
 WAS SIGHTING TIME*

1. When did you see the object?
3 9 1965
 DAY MONTH YEAR

2. Time of day: 2 55
 HOUR MINUTES
 (Circle One): A.M. or P.M.

3. Time zone: (Circle One): a Eastern (Circle One): a Daylight Saving Time
 b. Central
 c. Mountain
 d. Pacific
 e. Other _____
 b. Standard Time

4. Where were you when you saw the object?
KENSINGTON RFD KENSINGTON N.H.
 Nearest Postal Address City or Town State or Country

Additional remarks: _____

5. Estimate how long you saw the object. 10
 HOURS MINUTES SECONDS

5.1 Circle one of the following to indicate how certain you are of your answer to Question 5.

- a. Certain
b. Fairly certain
 c. Not very sure
 d. Just a guess

6. What was the condition of the sky?
 (Circle One): a. Bright daylight d. Just a trace of daylight
 b. Dull daylight e. 30 trace of daylight
 c. Bright twilight f. Don't remember

7. If you saw the object during DAYLIGHT, TWILIGHT, or DAWN, where was the SUN located as you looked at the object?

- N/A a. In front of you c. To your right e. Overhead
 b. In back of you d. To your left f. Don't remember

8. If you saw the object at NIGHT, TWILIGHT, or DAWN, what did you notice concerning the STARS and MOON?

8.1 STARS (circle one): a. None
b. A few
c. Many
d. Don't remember

8.2 MOON (circle one):
a. Bright moonlight
b. Dull moonlight
c. No moonlight - dark
d. Don't remember

9. Was the object brighter than the background of the sky?

(Circle one): a. YES b. NO c. DON'T REMEMBER

10. If it was BRIGHTER THAN the sky background, was the brightness like that of an automobile headlight appearing to be? (CIRCLE ONE BELOW):

a. A mile or more away? (a distant car)
b. Several blocks away?
c. A block away?
d. Several yards away?
e. Other? BRIGHTER THAN HEADLIGHT AT
CLOSE RANGE

11. Did the object: (Circle One for each question)

a. Appear to stand still at any time?	YES	<u>NO</u>	DON'T KNOW
b. Suddenly speed up and rush away at any time?	YES	<u>NO</u>	DON'T KNOW
c. Break up into parts or explode?	YES	<u>NO</u>	DON'T KNOW
d. Give off smoke?	YES	<u>NO</u>	DON'T KNOW
e. Change brightness?	<u>YES</u>	<u>NO</u>	DON'T KNOW
f. Change shape?	<u>YES</u>	<u>NO</u>	DON'T KNOW
g. Flicker, throb, or pulsate?	<u>YES</u>	<u>NO</u>	DON'T KNOW

12. Did the object move behind something at any time, particularly a cloud?

(Circle One): YES NO DON'T KNOW If you answered yes, then tell what it moved behind: _____

13. Did the object move in front of something at any time, particularly a cloud?

YES NO DON'T KNOW (Circle One)
If you answered yes, then tell what it moved in front of: _____

14. Did the object appear (Circle One): SOLID TRANSPARENT? DON'T KNOW

15. Did you observe the object through any of the following?

a. Eyeglasses	<u>YES</u>	NO	d. Window glass	YES	NO	g. Other	_____
b. Sun glasses	YES	NO	e. Binoculars	YES	NO	_____	_____
c. Windshield	YES	NO	f. Telescope	YES	NO	_____	_____

16. Tell in a few words the following things about the object.

a. SOUND ALONE

b. COLOR RED

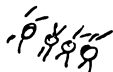

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapour trails. Place an arrow beside the drawing to show the direction the object was moving.

← WEST — EAST →

RED LIGHTS
FLASHING

← WEST — EAST →

RED LIGHTS
FLASHING

18. The edges of the object were:

(Circle One): a. Fuzzy or blurred

b. Like a bright star

c. Sharply outlined

e. Other LIGHTS WERE

SO BRIGHT THEY

CREATED A HAZE

19. If there was MORE THAN ONE object, then how many were there?

Draw a picture of how they were arranged, and put an arrow to show the direction that they were travelling.

N/A

20. Draw a picture that will show the motion that the object or objects made. Place a "A" at the beginning of the path; a "B" at the end of the path; and, show a y direction in direction during the course.

21. IF POSSIBLE, try to guess or estimate what the real size of the object was in its longest dimension. N/A Feet.

22. How large did the object or objects appear as compared with one of the following objects "held" in the hand at about arm's length?

(Circle One): a. Head of a pin
b. Pea
c. Dime
d. Nickel
2 - Quarter
f. Half-dollar

g. Silver dollar
1 - Baseball
h. Grapefruit or like fruit H
i. Basketball
k. Other _____

- 22.1 CIRCLE ONE of the following to indicate how certain you are of your answer to Question 22.

While over field when hit seen
a. Certain
While over tree
b. Fairly certain
boundary field
1 - 200 yards #

c. Not very sure
d. Uncertain

~~2 - 500 yards #~~
2 - 500 yards #

23. How did the object or objects disappear from view? _____

DROPPED BELOW TREE LINE

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type MATERIAL would you make it? How LARGE would it be, and what SHAPE would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

N/A

25. Where were you located when you saw the object? (Circle One):

- a. Inside a building
- b. In a car
- ☒ c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One):

- a. In the business section of city?
- b. In the residential section of a city?
- ☒ c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____

27. What were you doing at the time you saw the object, and how did you happen to notice it?

Went To ASSIST 18 year old boy

28. If you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One):

- a. North c. East e. South g. West
- b. Northeast d. Southeast f. Southwest h. Northwest

28.2 How fast were you moving? _____ miles per hour

28.3 Did you stop at any time while observing object?

(Circle One): YES NO

29. What direction were you looking when you FIRST SAW the object? (Circle One):

- a. North c. East e. South g. West
- ☒ b. Northeast d. Southeast f. Southwest h. Northwest

30. What direction were you looking when you LAST SAW the object? (Circle One):

- ☒ a. North c. East e. South g. West
- b. Northeast d. Southeast f. Southwest h. Northwest

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation):

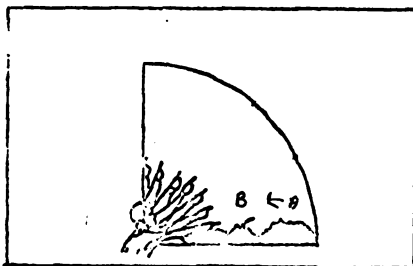

31.1 When it first appeared:

- a. From true North _____ degrees
- b. From horizon _____ degrees

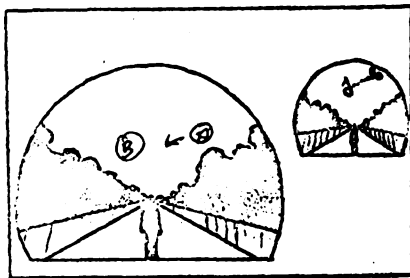

31.2 When it disappeared:

- a. From true North _____ degrees
- b. From horizon _____ degrees

32. In the following sketch, imagine that you are at the point shown. Place a "A" on the curved line to show how high the object was above the horizon (skyline) when you FIRST saw it. Place a "B" on the ~~the~~ curved line to show how high the object was above the horizon (skyline) when you LAST saw it.

33. In the following larger sketch place a "A" at the position the object was when you FIRST saw it, and a "B" at its position when you LAST saw it. (Refer to smaller sketch as an example of "how" to complete the larger sketch.)

- 33.1 Were there any KNOWN aircraft in the sky during your sighting?

(Circle One): YES ☒ NO

If you answered YES, was it following or attempting to intercept the Unidentified Flying Object? (Circle One): YES ☒ NO

If you answered YES, please circle TYPE of aircraft:

COMMERCIAL PRIVATE? JET? PROPELLER?

How many engines did the aircraft have? _____

Page 7

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS(Circle One)

- ☒ a. Clear sky
☐ b. Hazy
☐ c. Scattered clouds
☐ d. Thick or heavy clouds
☐ e. Don't remember

34.2 WIND(Circle One)

- ☐ a. No wind
☒ b. Slight breeze
☐ c. Strong wind
☐ d. Don't remember

34.3 WEATHER(Circle One)

- ☒ a. Dry
☐ b. Fog, mist, or light rain
☐ c. Moderate or heavy rain
☐ d. Snow
☐ e. Don't remember

34.4 TEMPERATURE(Circle One)

- ☐ a. Cold
☒ b. Cool
☐ c. Warm
☐ d. Hot
☐ e. Don't remember

35. Where did you report to some official that you had seen the object?

Official or Organization Name(s)

Day

Month

Year

DESK OFFICER EXETER P.D.3965OFFICER TOLAND

36. Have you read literature pertaining to Unidentified Flying Objects?

(Circle One) ☒ YES NO

If YES, how much? (Circle One) A LITTLE?

MODERATELY? EXTENSIVELY?

37. Was anyone else with you at the time you saw the object?

(Circle One)

☒ YES

NO

37.1 If you answered YES, did they see the object too?

(Circle One)

☒ YES

NO

37.2 Please list their names and addresses if you circled YES:

(Attach separate sheet for above)

38. Was this the first time that you had seen an object(s) like this?

(Circle One)

☒ YES

NO

38.1 If you answered NO, then when, where, and under what circumstances did you see the other one(s)?

39. In your opinion, what do YOU think the object(s) was and what might have caused it?

Do NOT Know

40. Do you think you can estimate the speed of the object? Page 8
 (Circle One) YES ☒ NO
 If you answered YES, then what speed would you estimate? _____

41. Do you think you can estimate how far away from you the object was?
 (Circle One) YES ☒ NO
 If you answered YES, then how far away would you say it was? 100 feet

42. Did the Object(s) cause any interference with the operation of:
 (Circle where applicable) RADIO? TV? LIGHTS? OTHER? NONE
 If you underlined a y of above, explain the interference below

43. Was a photo taken of the Object(s)? (Circle One) YES ☒ NO
 X Would you be willing to submit a copy? (Circle One) YES ☒ NO
 N/A X If you circled YES, please send copy indicating monetary reimbursement

U F O DATA SHEET

Page one

This questionnaire has been prepared so that you can give as much information as possible concerning the "Unidentified Flying Object" that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes. Your name will not be used in connection with any statements, conclusions, or publications without your permission. Thank you very much for your cooperation in this matter.

Investigator: National Investigation Committee on Aerial Phenomena

Raymond E. Fowler

13 Friend Court

Wenham, Massachusetts

*Time he reported sighting
to Desk Officer - TIME OF SIGHTING*
3:25 AM

1. When did you see the object?

3 9 1965
DAY MONTH YEAR

2. Time of day:

2 55
HOUR MINUTES

(Circle One): A.M. or P.M.

3. Time zone: (Circle One):

- ☒ a. Eastern
b. Central
c. Mountain
d. Pacific
e. Other _____

(Circle One): ☒ a. Daylight Saving Time
b. Standard Time

4. Where were you when you saw the object?

Kensington RFD Kensington N.H.
Nearest Postal Address City or Town State or Country

Additional remarks: _____

5. Estimate how long you saw the object.

HOURS 5-8 MINUTES SECONDS

5.1 Circle one of the following to indicate how certain you are of your answer to Question 5.

- a. Certain
☒ b. Fairly certain
c. Not very sure
d. Just a guess

6. What was the condition of the sky?

- (Circle One): a. Bright daylight d. Just a trace of daylight
b. Dull daylight ☒ e. No trace of daylight
c. Bright twilight f. Don't remember

7. If you saw the object during DAYLIGHT, TWILIGHT, or DAWN, where was the SUN located as you looked at the object?

- a. In front of you c. To your right e. Overhead
b. In back of you d. To your left f. Don't remember

8. If you saw the object at NIGHT, TWILIGHT, or DAWN, what did you notice concerning the STARS and MOON?

- 8.1 STARS (circle one): a. None
b. A few
c. Many
d. Don't remember

- 8.2 MOON (circle one):
a. Bright moonlight
b. Dull moonlight
c. No moonlight - dark
d. Don't remember

9. Was the object brighter than the background of the sky?

- (Circle one): a. YES b. NO c. DON'T REMEMBER

10. If it was BRIGHTER THAN the sky background, was the brightness like that of an automobile headlight appearing to be? (CIRCLE ONE BELOW):

- a. A mile or more away? (a distant car)
b. Several blocks away?
c. A block away?
d. Several yards away?
e. Other? Brighter than headlights at close range

11. Did the object: (Circle One for each question.)

- | | | | |
|---|------------|-----------|------------|
| a. Appear to stand still at any time? | YES | <u>NO</u> | DON'T KNOW |
| b. Suddenly speed up and rush away at any time? | YES | <u>NO</u> | DON'T KNOW |
| c. Break up into parts or explode? | YES | <u>NO</u> | DON'T KNOW |
| d. Give off smoke? | YES | <u>NO</u> | DON'T KNOW |
| e. Change brightness? | <u>YES</u> | NO | DON'T KNOW |
| f. Change shape? | YES | <u>NO</u> | DON'T KNOW |
| g. Flicker, throb, or pulsate? | <u>YES</u> | NO | DON'T KNOW |

12. Did the object move behind something at any time, particularly a cloud?

- (Circle One): YES NO DON'T KNOW If you answered yes, then tell what it moved behind: _____

13. Did the object move in front of something at any time, particularly a cloud?

- YES NO DON'T KNOW (Circle One)
If you answered yes, then tell what it moved in front of: _____

14. Did the object appear (Circle One): SOLID TRANSPARENT? DON'T KNOW

15. Did you observe the object through any of the following?

- | | | | | | | | |
|----------------|------------|----|-----------------|-----|----|----------|-------|
| a. eyeglasses | <u>YES</u> | NO | d. Window glass | YES | NO | g. Other | _____ |
| b. Sun glasses | YES | NO | e. Binoculars | YES | NO | | _____ |
| c. Windshield | YES | NO | f. Telescope | YES | NO | | _____ |

16. Tell in a few words the following things about the object.

a. SOUND None

b. COLOR Red

17. Draw a picture that will show the shape of the object or objects. Label and include in your sketch any details of the object that you saw such as wings, protrusions, etc., and especially exhaust trails or vapour trails. Place an arrow beside the drawing to show the direction the object was moving.

- WEST -

- EAST -

(Two or three
Red Lights Flashing
in sequence)

True line

18. The edges of the object were:

(Circle One): a. Fuzzy or blurred

b. Like a bright star

c. Sharply outlined

(e.) Other Lights were so

bright they created a
Halo effect.

19. If there was MORE THAN ONE object, then how many were there?

Draw a picture of how they were arranged, and put an arrow to show the direction that they were travelling.

Two or three red flashing
lights moving on Horizon East to West
at about 60° angles
to each other.

20. Draw a picture that will show the motion that the object or objects made. Place a "A" at the beginning of the path; a "B" at the end of the path; and, show any changes in direction during the course. No change in direction

on Angle.

(B)

(A)

21. IF POSSIBLE, try to guess or estimate what the real size of the object was in its longest dimension... N/A Feet.

22. How large did the object or objects appear as compared with one of the following objects "held" in the hand at about arm's length?

(Circle One): a. Head of a pin

b. Pea

c. Dime

d. Nickel

☒ e. Quarter

f. Half-dollar

g. Silver dollar

h. Baseball

i. Grapefruit

j. Basketball

k. Other _____

- 22.1 CIRCLE ONEs of the following to indicate how certain you are of your answer to question 22.

a. Certain

b. Fairly certain

☒ c. Not very sure

d. Uncertain

Comparison based on probable distance of $2\frac{1}{2}$ miles

23. How did the object or objects disappear from view? Dropped below
low base of horizon line.

24. In order that you can give as clear a picture as possible of what you saw, we would like for you to imagine that you could construct the object that you saw. Of what type MATERIAL would you make it? How LARGE would it be, and what SHAPE would it have? Describe in your own words a common object or objects which when placed up in the sky would give the same appearance as the object which you saw.

N/A

25. Where were you located when you saw the object? (Circle One):

- a. Inside a building
- b. In a car
- ☒ c. Outdoors
- d. In an airplane
- e. At sea
- f. Other _____

26. Were you (Circle One):

- a. In the business section of city?
- b. In the residential section of a city?
- ☒ c. In open countryside?
- d. Flying near an airfield?
- e. Flying over a city?
- f. Flying over open country?
- g. Other _____

27. What were you doing at the time you saw the object, and how did you happen to notice it?

Called to crew to assist other
inviser.

28. If you were MOVING IN AN AUTOMOBILE or other vehicle at the time, then complete the following questions:

28.1 What direction were you moving? (Circle One):

- a. North c. East e. South g. West
- b. Northeast d. Southeast f. Southwest h. Northwest

28.2 How fast were you moving? _____ miles per hour

28.3 Did you stop at any time while observing object?

(Circle One): YES NO

29. What direction were you looking when you FIRST SAW the object? (Circle One):

- a. North c. East e. South g. West
- ☒ b. Northeast d. Southeast f. Southwest h. Northwest

30. What direction were you looking when you LAST SAW the object? (Circle One):

- ☒ a. North c. East e. South g. West
- b. Northeast d. Southeast f. Southwest h. Northwest

31. If you are familiar with bearing terms (angular direction), try to estimate the number of degrees the object was from true North and also the number of degrees it was upward from the horizon (elevation).

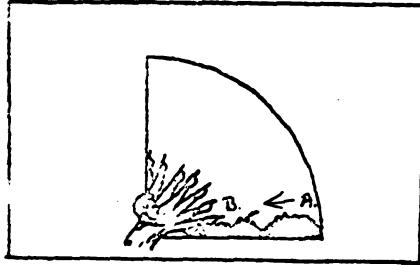

31.1 When it first appeared:

- a. From true North _____ degrees
- b. From horizon _____ degrees

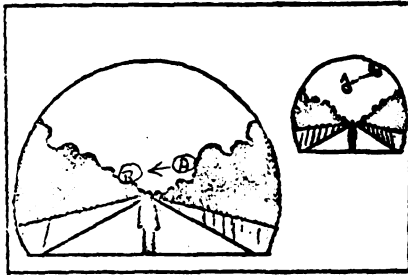

31.2 When it disappeared:

- a. From true North _____ degrees
- b. From horizon _____ degrees

32. In the following sketch, imagine that you are at the point shown. Place a "A" on the curved line to show how high the object was above the horizon. (skyline) when you FIRST saw it. Place a "B" on the same curved line to show how high the object was above the horizon. (skyline) when you LAST saw it.

33. In the following larger sketch place a "A" at the position the object was when you FIRST saw it, and a "B" at its position when you LAST saw it. (Refer to smaller sketch as an example of "how" to complete the larger sketch.)

- 33.1 Were there any KNOWN aircraft in the sky during your sighting?

(Circle One):

YES

NO

If you answered YES, was it following or attempting to intercept the Unidentified Flying Object? (Circle One): YES NO

If you answered YES, please circle TYPE of aircraft:

MILITARY?

COMMERCIAL?

PRIVATE?

OTHER?

PROPELLER?

How many engines did the aircraft have? _____

34. What were the weather conditions at the time you saw the object?

34.1 CLOUDS (Circle One)

- ☒ a. Clear sky
☐ b. Hazy
☐ c. Scattered clouds
☐ d. Thick or heavy clouds
☐ e. Don't remember

34.2 WIND (Circle One)

- ☐ a. No wind
☒ b. Slight breeze
☐ c. Strong wind
☐ d. Don't remember

34.3 WEATHER (Circle One)

- ☒ a. Dry
☐ b. Fog, mist, or light rain
☐ c. Moderate or heavy rain
☐ d. Snow
☐ e. Don't remember

34.4 TEMPERATURE (Circle One)

- ☐ a. Cold
☒ b. Cool
☐ c. Warm
☐ d. Hot
☐ e. Don't remember

35. Who did you report to some official that you had seen the object?

Official or Organization Name(s)

Day

36. Have you read literature pertaining to Unidentified Flying Objects?

(Circle One)

☒ YES

NO

If YES, how much? (Circle One)

☒ A LITTLE?

☐ MODERATELY? ☐ EXTENSIVELY?

37. Was anyone else with you at the time you saw the object?

(Circle One)

☒ YES

NO

37.1 If you answered YES, did they see the object too?

(Circle One)

☒ YES

NO

37.2 Please list their names and addresses if you circled YES:

(Attach separate sheet for above)

38. Was this the first time that you had seen an object(s) like this?

(Circle One)

☒ YES

NO

38.1 If you answered NO, then when, where, and under what circumstances did you see the other one(s)?

—

—

39. In your opinion, what do YOU think the object(s) was and what might have caused it? Do not know

40. Do you think you can estimate the speed of the object? Page 8
 (Circle One) YES NO
 If you answered YES, then what speed would you estimate? _____ MPH

41. Do you think you can estimate how far away from you the object was?
 (Circle One) YES NO
 If you answered YES, then how far away would you say it was? 9000 feet
at closest. Saw at about 2-3 miles on Horizon

42. Did the Object(s) cause any interference with the operation of:
 (Circle where applicable) RADIO? TV? LIGHTS? OTHER? NONE
 N/A If you underlined a y of above, explain the interference below:

43. Was a photo taken of the Object(s)? (Circle One) YES NO
 N/A Would you be willing to submit a copy? (Circle One) YES NO
 If you circled YES, please send copy indicating monetary reimbursement:

44. Do you belong to a y Organization which investigates Unidentified Flying Objects? (Circle One) YES NO If YES, list them below:

45. May we publish your report if you name is kept confidential? YES NO
 May we publish your report and use your name? YES NO
changed to YES (Circle One)

47. Please give the following information about yourself:

WENHAM, MASS., October 29, 1965.

MASTON M. JACKS,
Major, U.S. Air Force, Chief, Pictorial Branch,
Public Information Division, Office of Information.

SAF-OIPB

DEPARTMENT OF THE AIR FORCE,
Office of the Secretary, U.S. Air Force, Washington, D.C.

DEAR MAJOR JACKS: This is a formal inquiry concerning the official U.S. Air Force evaluation of the detailed UFO report submitted to AFSC-FTD/Project Blue Book last month. My investigation and subsequent report took place shortly after the official U.S. Air Force investigating team from Pease AFB made their investigation.

The UFO sighting took place between the Clyde Russell and Carl Dining properties along Route 150 in Kensington, N.H., on September 3, 1965, in the early hours of the morning. The witnesses were Norman Muscarello and Officers Bertrand and Hunt of the Exeter, N.H., police force.

In 1964 I customarily received correspondence from your office in response to UFO reports submitted to the U.S. Air Force for evaluation. This was appreciated. I have submitted many reports since but have not received any response. This is understandable due to the many reports received by the U.S. Air Force and I do not expect such a service on your part normally, but, I did spend a great deal of time and thought on the Kensington, N.H., report and would appreciate your sending the official U.S. Air Force evaluation of the same as soon as possible. I understand the evaluation has been made.

Thank you for your cooperation in this matter. I look forward to hearing from your office soon.

Sincerely,

RAYMOND E. FOWLER.

DEPARTMENT OF THE AIR FORCE,
Washington, January 25, 1966.

DEAR MR. FOWLER: This is in reply to your request for information on the Exeter, N.H., UFO sightings.

The initial investigation from Pease Air Force Base was submitted to our office on September 15, 1965, and contained statements from the principal witnesses. This data indicated that a refueling operation might have been the cause of the sighting. Refueling area "Fur Trapper" and refueling area "Down Date" are controlled through Loring Air Force Base and located over the area of the sighting. A call was made to the controller of this refueling area, and we were informed that they were closed from 03/0500Z to 03/600Z for an 8th Air Force operation, "Big Blast." A call was placed to the 99th Bomb Wing at Westover Air Force Base for information on this operation.

The initial impression was that aircraft from an 8th Air Force operation, "Big Blast," was the cause of the lights observed during this incident. Information received from the 8th Air Force indicates that 10 B-47 aircraft from Pease Air Force Base involved in Operation Big Blast "Coco" were in the traffic pattern over Exeter, N.H., between 03/444Z and 03/535Z. A copy of this letter is enclosed. Since this information conflicted with the time of the sighting and eliminated these aircraft as a possible evaluation of this incident, a letter was forwarded to Mr. Eugene Bertrand and Mr. Dave Hunt of the Exeter Police Department requesting clarification of the time of the sighting. A copy of our letter to these gentlemen and a copy of their reply is attached.

The early sightings by two unnamed women and Mr. Muscarello are attributed to aircraft from operation Big Blast "Coco." The subsequent observation by Officers Bertrand and Hunt occurring after 2 a.m. are regarded as unidentified.

Sincerely,

JOHN P. SPAULDING,
Lieutenant Colonel, U.S. Air Force, Chief, Civil Branch, Community Relations Division, Office of Information

DECEMBER 2, 1965.

HECTOR QUINTANILLA, JR.,
Major, U.S. Air Force,
Chief, Project Blue Book,
Wright Patterson AFB, Dayton, Ohio.

DEAR SIR: We were very glad to get your letter during the third week in November, because as you might imagine we have been the subject of considerable ridicule since the Pentagon released its "final evaluation" of our sighting

of September 3, 1965. In other words, both Patrolman Hunt and myself saw this object at close range, checked it out with each other, confirmed and re-confirmed the fact that this was not any kind of conventional aircraft, that it was at an altitude of not more than a couple of hundred feet, and went to considerable trouble to confirm that the weather was clear, there was no wind, a chance of weather inversion, and that what we were seeing was no illusion of military or civilian craft. We entered this in a complete official police report as a supplement to the blotter of the morning of September 3 (not September 2, as your letter indicates). Since our job depends on accuracy and an ability to tell the difference between fact and fiction, we were naturally disturbed by the Pentagon report which attributed the sighting to "multiple high-altitude objects" in the area and "weather inversion." What is a little difficult to understand is the fact that your letter (undated) arrived considerably after the Pentagon release. Since your letter says that you are still in the process of making a final evaluation, it seems that there is an inconsistency here. Ordinarily, this wouldn't be too important except for the fact that in a situation like this we are naturally very reluctant to be considered irresponsible in our official report to the police station.

Since one of us (Patrolman Bertrand) was in the Air Force for 4 years engaged in refueling operations with all kinds of military aircraft, it was impossible to mistake what we saw for any kind of military operation, regardless of altitude. It was also definitely not a helicopter or balloon. Immediately after the object disappeared, we did see what probably was a B-47 at high altitude but it bore no relation at all to the object we saw.

Another fact is that the time of our observation was nearly an hour after 2 a.m., which would eliminate the 8th Air Force operation, Big Blast, since as you say this took place between midnight and 2 a.m. Norman Muscarella, who first reported this object before we went to the sight saw it somewhere in the vicinity of 2 a.m., but nearly an hour had passed before he got into the police station, and we went out to the location with him.

We would both appreciate it very much if you would help us eliminate the possible conclusion that some people have made in that we might have (a) made up the story, or (b) were incompetent observers. Anything you could do along this line would be very much appreciated, and I'm sure you can understand the position we're in.

We appreciate the problems the Air Force must have with a lot of irresponsible reports on this subject, and don't want to cause you any unnecessary trouble. On the other hand, we think you probably understand our position.

Thanks very much for your interest.

Sincerely,

EUGENE BERTRAND, *Patrolman*.
DAVID HUNT, *Patrolman*.

DEPARTMENT OF THE AIR FORCE,
HEADQUARTERS, 8TH AIR FORCE (SAC),
Westover Air Force Base, Mass., November 24, 1965.

Memorandum : DOOTO.

Subject : UFO sighting.

To : AFSC (TDEW/UFO.)

1. In reply to your letter, same subject, November 18, 1965, and telephone conversation between Specialist Master Sergeant Heffley, 8th Air Force, and Sergeant Moody, Headquarters, AFSC, on November 19, 1965, the following information is furnished.

2. Big Blast "Coco," a SAC/NORAD training mission, was flown on September 2-3, 1965. By 03/0430Z, the operational portion of the mission was complete, and participating aircraft were en route to their home stations.

3. Ten B-47 aircraft from Pease AFB were involved in Big Blast "Coco" and were estimated to arrive at their initial approach fix (Pease TACAN 320° radial, 10 DME fix), between 03/0444Z and 03/0635Z. The town of Exeter is within the traffic pattern utilized by air traffic control in the recovery of these aircraft at Pease AFB, N.H. During their approach the recovering aircraft would have been displaying standard position lights, anticollision lights, and possibly over wing and landing lights.

For the commander.

WILLIAM A. MCGILPIN, Jr.,
Lieutenant Colonel, U.S. Air Force.,
Directorate of Operations.

Mr. EUGENE F. BERTRAND, Jr.,
 Mr. DAVID R. HUNT,
Exeter Police Department, Exeter, N.H.

GENTLEMEN: The sighting of various unidentified objects by you and Mr. Norman Mascarello was investigated by officials from Pease Air Force Base, N.H., and their report has been forwarded to our office at Wright-Patterson Air Force Base. This sighting at Exeter, N.H., on the night of September 2 has been given considerable publicity through various news releases and in magazine articles similar to that from the Saturday Review of October 2, 1965. A portion of this article is attached for your information. This information was released by the National Investigations Committee on Aerial Phenomena, a private organization which has no connection with the Government. As a result of these articles, the Air Force has received inquiry as to the cause of this report.

Our investigation and evaluation of this sighting indicates a possible association with an 8th Air Force operation, "Big Blast." In addition to aircraft from this operation, there were five B-47 type aircraft flying in the area during this period. Before a final evaluation of your sighting can be made, it is essential for us to know if either of you witnessed any aircraft in the area during this time period either independently or in connection with the objects observed. Since there were many aircraft in the area, at that time, and there were no reports of unidentified objects from personnel engaged in this air operation, we might then assume that the objects observed between midnight and 2 a.m. might be associated with this military air operation. If, however, these aircraft were noted by either of you, then this would tend to eliminate this air operation as a plausible explanation for the objects observed.

Sincerely,

HECTOR QUINTANILLA, Jr.,
Major, USAF, Chief, Project Blue Book.

NOVEMBER 16, 1965.

Memo: TDEW/UFO.
 Subject: UFO sighting.
 To: Hq 8th Air Force.

1. A report of an unidentified flying object was submitted to our office at Wright-Patterson Air Force Base by the 817 Combat Support Group, Pease Air Force Base. This report was submitted to Wright-Patterson Air Force Base in accordance with AFR 200-2. Evaluation of information submitted indicates that the observation may be associated with the military operation, Big Blast. The location of the observation was the New Hampshire area, in and around the town of Exeter. Time of the reported UFO was the night of August 2-3, 1965, and specifically 03/0500 to 0600 Zebra. This UFO report has received considerable publicity in newspaper and magazine articles, and the Air Force has received numerous queries regarding the cause of this sighting.

2. We would like to know the specific types of aircraft used in this operation and possible location of these aircraft at the time of the report.

For the commander.

ERIC T. DE JONCKMERE,
*Colonel, U.S. Air Force,
 Deputy for Technology and Subsystems.*

NICAP MASSACHUSETTS INVESTIGATING SUBCOMMITTEE.
Wenham, Mass., February 10, 1966.

DEPARTMENT OF THE AIR FORCE,
*Office of the Secretary,
 U.S. Air Force,
 Washington, D.C.*

(Attention: John P. Spaulding, lieutenant colonel, U.S. Air Force, Chief, Civil Branch, Community Relations Division, Office of Information).

DEAR COLONEL SPAULDING: Thank you for your correspondence of January 25, 1966, in response to my letter of November 24, 1965, regarding my inquiry concerning the September 3, 1965, UFO sightings in Exeter, N.H. I appreciate your letter and the attached backup information concerning which I would make the following comments.

The UFO sighted by Norman Muscarello was identical to the UFO sighted later by Muscarello Bertrand, and Hunt. Norman observed the UFO at close range during his initial sighting. There is no question in my mind that the same or similar object was involved in both of these particular sightings. The number of pulsating lights, the yawing motion, the same location, etc., make this so very apparent. Since I did not interview the "unnamed women" I am not certain of the details of their sighting but according to Officer Bertrand, the object they described was very similar to the UFO they sighted later. I might add that another witness, a male motorist, also sighted a similar object. He tried to phone the police from a pay station at nearby Hampton, N.H., but was cut off. Later he reported the incident to U.S. Air Force authorities at Pease AFB. The chances are astronomical that six people, entirely independent of each other, should report the identical description of a UFO within the span of several hours in the same general area. I am aware of the many UFO sightings in New Hampshire especially in September. It may be more than coincidence that many of these sightings were near powerlines.

Although I do not agree completely with the way Washington is handling the UFO problem I am sympathetic with the official attitude. I have enough faith in the Government to realize that although official releases on UFO's would indicate that UFO's present no problem regarding national security and that the U.S. Air Force treats the subject lightly, the converse is true, that is, that a full-scale military and scientific research program is being carried out on UFO's because they are a threat to our national security. It is because of this belief that I will continue to send the better UFO reports our subcommittee investigates to Project Bluebook and will continue to urge the public to report all UFO sightings to the nearest Air Force base at my lectures, personal contacts, etc. I might add that I encourage reporting such UFO's to NICAP concurrently with any report to the U.S. Air Force.

It is heartening to see that the U.S. Air Force regards the UFO sighted by Officers Bertrand and Hunt as an unknown. I am sure this will help a little in reducing the ridicule they experienced because of the U.S. Air Force initial explanation of their sightings. I feel certain that if it were not for the fact that their sighting is being carried nationally in the pages of Saturday Review, Look, etc.; and if they had not personally complained publicly and to your office, that their sighting would have been lumped into the same category as the UFO Muscarello and the other sighted. However, my rambling on will not make a bit of difference to present official policy and in a real sense I am wasting your time in even replying as I'm sure your office is very busy but I felt that I would express my feelings on the subject at hand just for the record.

Thanks so much again. I look forward to the time that Government policy will become more relaxed on the UFO subject and in the meantime will continue my meager research and efforts in this field for NICAP and the U.S. Air Force.

Sincerely,

RAYMOND E. FOWLER

Chairman, NICAP Massachusetts Subcommittee.

Mr. BATES. In reference to the so-called sighting in New Hampshire. Doctor, you are familiar with that case?

Dr. HYNEK. Yes, sir; I am familiar with the case.

Mr. BATES. You have examined it?

Dr. HYNEK. No, I have not been there to examine it. Much of my information is based upon the rather excellent account that Mr. John Fuller has given of it in Look magazine. I cannot vouch for the authenticity of his statements, but I have talked with Mr. Fuller, and he apparently has tried to do a very thorough job in talking with people in New Hampshire.

Mr. BATES. Are you familiar with Mr. Raymond E. Fowler?

Dr. HYNEK. I have had some correspondence with him, but I have never met him.

Mr. BATES. Is this Portsmouth case one of the 5 percent that have not been identified, or within the 95 percent on which you have reached a decision?

Dr. HYNEK. It is, I believe, to the best of my knowledge, listed as unidentified.

Mr. BATES. This one is still unidentified?

Dr. HYNEK. Yes, sir.

The CHAIRMAN. In other words, you make no bones about it, you cannot explain it?

Dr. HYNEK. That is correct.

The CHAIRMAN. Yes.

Mr. BATES. I wonder if you would give us some idea of these 20 cases that you have cited, and tell us a little something about the nature of these cases, and what the problems are, generally?

Dr. HYNEK. Well, I do not have the case files with me. I should be happy to prepare them for submission. But in broad description, they vary quite a bit. They are either daytime sightings or nighttime sightings. I will describe one, which may not be necessarily typical. But it is an example of a sighting that puzzled some very solid citizens. These individuals happened to be—and I will withhold names, of course—two students of anthropology at the University of Wisconsin. They were with two other people in a car, returning home one evening from shopping, about 9 p.m. In the distance they saw what they first took to be rotating blinker lights on a police car, and they thought there had been an accident down the road some place. They then decided that this couldn't be the case because the lights were a little too high. This illustrates the sort of thing we refer to as escalation of explanation.

When someone writes in or calls in that they have seen a space ship patrolling the earth, and this is not a fact, this is an interpretation of a fact, usually, what they have actually seen was a light, I am much more interested in the sincere individuals who report something, who say "I thought at first it was this, then I decided it couldn't be that, it had to be something else." In this escalation hypothesis, the incident I have described, these people said it could not have been blinker lights on a police car because they were too high. The next hypothesis was that it was an aircraft about to crash. As the object came closer all they could see were four huge red lights and an even larger brighter single white light. As it came closer to the car—the little 12-year-old girl in the back seat, became so frightened that she just tumbled over and hid her eyes.

I questioned these people for some 2 hours. They were very intelligent people and were truly puzzled. They did not for a moment think they were being visited by a vehicle from outer space. They were just puzzled. They simply wanted an explanation of what they had seen.

The object apparently extended upward at an angle of about 30 degrees, so that part of it could be seen above the telephone wires and part below. It hovered around the car for awhile. The man drove into a farmer's driveway, turned his lights out and listened, but could hear no noise. He backed out and as the object began to move away, he gave chase but could not catch up with it.

This was a case of four intelligent people seeing this strange object and reporting it. But no one else did. Why not? Was this some sort of a strange psychic projection, or something these people were particularly prone to? Why did this take place in an area which was

not overly populated but certainly not completely sparse. Why would they be the only four people to see this? This is a problem we are faced with on many reported sightings. Therefore, I find it most difficult to ascribe a physical tangibility that there was an actual craft here. I would rather seek some other scientific explanation.

Mr. BATES. With respect to your response on that particular case. In the New Hampshire situation, two women apparently saw this object which they said was the size of a house. They reported it at the police station. And then the officer came out. He saw it when he got there. So there is someone who did see it in addition to the people who reported it originally.

Dr. HYNEK. Yes.

Mr. BATES. You have no decision with respect to the New Hampshire case?

Dr. HYNEK. I would not offer or venture any conclusion to something I had not personally investigated.

Mr. BATES. This particular case has been referred to a study group, the New Hampshire case, or has it not, or is it a dead issue?

Dr. HYNEK. No case in the Air Force files that is unidentified is a dead issue.

Mr. BATES. Is it just in limbo now, or is somebody still looking into it?

Dr. HYNEK. I would say at the moment, considering the recent reported sightings in Michigan, that it is in limbo.

Mr. BATES. Do you expect to investigate this further? Would this be one that you would prefer to the panel?

Dr. HYNEK. Yes, sir. I think this is one they should take a look at.

The CHAIRMAN. Do you think they should be examined further?

Dr. HYNEK. I am sorry, sir?

The CHAIRMAN. Do you think this panel, about whom the Secretary has spoken, should go into this further and make a report?

Dr. HYNEK. Yes, sir; I do.

The CHAIRMAN. There are five such cases, or four, of some unexplained phenomena; is this a fact?

Dr. HYNEK. Yes, sir; there are at least that many.

The CHAIRMAN. Mr. Secretary, do you plan to have this board look into these?

Secretary BROWN. We will continue our investigations of all of these, Mr. Chairman.

I have this recommendation to establish a civilian panel from the Scientific Advisory Board, and I believe I may act favorably on it, but I want to explore further the nature of such a panel, and the ground rules, before I go ahead with it. I don't want to have a group of people come in for just 1 day and make a shallow investigation. They have to be prepared to look into a situation thoroughly if they are to do any good.

The CHAIRMAN. If you cannot explain these things, and you are our source of beginnings, how on earth could a subcommittee of this committee explain them?

Dr. HYNEK. Are you looking to me for an answer?

The CHAIRMAN. If I conducted a hearing on this it would go on and on, and on, if I let it, I would imagine.

Dr. HYNEK. Well, sir, scientists have a somewhat different way of working. They gather data quietly without fanfare, without the press looking over their shoulder. They may work for several years.

The CHAIRMAN. What would you suggest that I do, Doctor, as chairman of this committee?

Dr. HYNEK. You are in a totally different category, sir.

The CHAIRMAN. Thank you.

Since this thing began in Michigan, we have two members of the Michigan delegation, and I am going to start off with Mr. Nedzi and ask him if he has any questions.

Mr. NEDZI. Mr. Chairman, you are very kind. I don't have any questions directly pertaining to Michigan, although I have recently been advised my district is about 150 miles from the sightings. The sightings are moving eastward toward my district. [Laughter.]

One question, Doctor, as to these statistics. Are they statistics only from the United States, the investigations made by you and the Air Force?

Dr. HYNEK. Yes, sir. The Air Force would have no jurisdiction over cases in other countries. But there are, I understand, reports from other countries, also.

Mr. NEDZI. Is any effort made to coordinate information with some of the sightings that are made abroad?

Dr. HYNEK. No, sir. Up to now we have made no concerted effort to do this.

Mr. NEDZI. Do you think it might be a good idea to do it?

Dr. HYNEK. Well, I think we should attend to the situation here in the United States first. Then, if our efforts are successful and if we strike scientific paydirt and find something of value, then perhaps the other step you suggest would be advisable.

Mr. NEDZI. Do you know whether any studies are going on overseas, with respect to UFO's?

Dr. HYNEK. I know of no formal studies. Actually, the rest of the world seems to be guided by, and shows a tremendous respect for, the U.S. Air Force, and they feel, I understand, that the Air Force has done a fine job.

Mr. NEDZI. Perhaps the question should be directed to the Air Force, but it seemed to me there should be some kind of exchange of ideas among the scientists who might be interested in it in other countries where these sightings have taken place. It might contribute toward an exposé of the problem.

Let me clarify for the record, I do not believe in flying saucers, but I think it is important to have some kind of evidence that can be presented to the people so that they don't let the thing get more out of hand than I think it already is.

Secretary BROWN. That is what we have been trying to do, Mr. Nedzi. I do not think we have any ideas of a scientific nature to exchange with anyone else yet, nor do they have such information to exchange with us, and the difficulty in going to an international program is that it won't broaden our knowledge of basic data very much. On the other hand, it may degrade the quality of the data, because we have a hard enough time getting details in this country. A few well-authenticated but unexplained cases are worth much more than a

number of unexplained cases where the data is not sufficiently precise to be helpful in an analysis.

Mr. NEDZI. My final question, Doctor, would be whether—and I think you touched upon this—whether there has been ever any evidence in any of these unexplained sightings that would indicate that there is some kind of extraterrestrial intelligence involved?

Dr. HYNEK. I believe I have covered that. I have not seen any evidence to confirm this, nor have I know any competent scientist who has, or who believes that any kind of extraterrestrial intelligence is involved. However, the possibility should be kept open as a possible hypothesis. I don't think we should ever close our minds to it. But certainly there is no real evidence of intelligent behavior of hardware. If we had received periodic visits by controlled space vehicles since 1947, or earlier, it is likely they would have had some kind of trouble at some time and dropped something off the coast of Spain or some place, and we have not come across any positive proof like that.

Mr. NEDZI. Mr. Chairman, until the sightings get a little closer to my district, I have no further questions.

The CHAIRMAN. I recognize Mr. Chamberlain, then I go to Governor Stafford and Mr. Hébert, because I want to get as close to the districts as I can.

I want to put in the record Mr. Ford's letter, and the response by Secretary Brown.

What else, Mr. Blandford, ought to go in the record?

Mr. BLANDFORD. That is all that ought to be in at this time.

The CHAIRMAN. Without objection, we will put all of these in the record. I want to shed as much light on these illuminated objects as we can.

(The material above referred to is as follows:)

CONGRESS OF THE UNITED STATES,
OFFICE OF THE MINORITY LEADER,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 28, 1966.

Representative L. MENDEL RIVERS,
Chairman, Armed Services Committee,
U.S. House of Representatives,
Washington, D.C.

DEAR CHAIRMAN RIVERS: No doubt you have noted the recent flurry of newspaper stories about unidentified flying objects (UFO's). I have taken special interest in these accounts because many of the latest reported sightings have been in my home State of Michigan.

The Air Force sent a consultant, Astrophysicist Dr. J. Allen Hynek of Northwestern University, to Michigan to investigate the various reports; and he dismissed all of them as the product of college student pranks or swamp gas or an impression created by the rising crescent moon and the planet Venus. I do not agree that all of these reports can be or should be so easily explained away.

Because I think there may be substance to some of these reports and because I believe the American people are entitled to a more thorough explanation than has been given them by the Air Force to date, I am proposing that either the Science and Astronautics Committee or the Armed Services Committee of the House schedule hearings on the subject of UFO's and invite testimony from both the executive branch of the Government and some of the persons who claim to have seen UFO's.

I enclose material which I think will be helpful to you in assessing the advisability of an investigation of UFO's.

May I first call to your attention a column by Roscoe Drummond, published last Sunday in which Mr. Drummond says, "Maybe all of these reported sightings are whimsical, imaginary or unreal; but we need a more credible and detached appraisal of the evidence than we are getting."

Mr. Drummond goes on to state, "We need to get all the data drawn together in one place and examined far more objectively than anyone has done so far. A stable public opinion will come from a trustworthy look at the evidence, not from belittling it.

"The time has come for the President or Congress to name an objective and respected panel to investigate, appraise, and report on all present and future evidence about what is going on."

I agree fully with Mr. Drummond's statements. I also suggest you scan the enclosed series of six articles by Bulkley Griffin of the Griffin-Larrabee News Bureau here. In the last of his articles, published last January, Mr. Griffin says, "A main conclusion can be briefly stated. It is that the Air Force is misleading the public by its continuing campaign to produce and maintain belief that all sightings can be explained away as misidentification of familiar objects, such as balloons, stars, and aircraft."

I have just today received a number of telegrams urging a congressional investigation of UFO's. One is from retired Air Force Col. Harold R. Brown, Ardmore, Tenn., who says, "I have seen UFO. Will be available to testify."

Another, from Mrs. Ethyle M. Davis, Eugene, Oreg., reads, "9 out of 10 people want truth of UFO's. Press your investigation to the fullest."

Ronald Collier of Los Angeles, who identifies himself as "a scientist from MIT," urges that you "do everything in your power to make Air Force Project Blue Book (the Air Force name for its study and verdicts on UFO reports) known to the people." Are we to assume that everyone who says he has seen UFO's is an unreliable witness?

A UPI story out of Ann Arbor, Mich., dated March 21, 1966, states that "at least 40 persons, including 12 policemen, said today that they saw a strange flying object guarded by 4 sister ships land in a swamp near here Sunday night."

Matt Surrell of Station WJR, Detroit, cites an eye witness account of a recent UFO sighting by Emile Grenier of Ann Arbor, an aeronautical engineer employed by Ford Motor Co. He points out that an aeronautical engineer can hardly be considered an untrustworthy witness.

In the firm belief that the American public deserves a better explanation than that thus far given by the Air Force, I strongly recommend that there be a committee investigation of the UFO phenomena.

I think we owe it to the people to establish credibility regarding UFO's and to produce the greatest possible enlightenment on this subject.

Kindest personal regards.

Sincerely,

GERALD R. FORD, *Member of Congress.*

Enclosures.

DON'T SNEER AT UFO'S

(By Roscoe Drummond)

You can't dismiss the possibility that some of the unidentified flying objects, which so many people have sighted in so many places, are real.

There are, of course, UFO buffs who seem to want to believe everything and discount logical explanations. But Air Force officials assigned to check up on these sightings seem so bored and skeptical that many people have the impression that they think the public would panic if all the facts were brought out into the open.

Let's not leave the search for more knowledge to those who tend to accept everything uncritically or to those who tend to dismiss every UFO as ridiculous.

The time has come for the President or Congress to name an objective and respected panel to investigate, appraise and report on all present and future evidence about what is going on.

Last week, more than 100 persons (some of them trained observers) reported seeing "flying saucers" in seven States, from Maine to Texas to Colorado.

Last year, project Blue Book, the small Air Force unit created to keep tabs on these things, received 886 reports of UFO sightings.

During the last 2 years, the National Investigations Committee on Aerial Phenomena, a private group headed by a retired Naval Academy Marine Corps pilot, received 3,000 such reports.

During the past 10 years, the NICAP received some 8,000 reports and says that 1,500 of them "seem pretty substantial and unexplained."

The Air Force totals 10,147 UFO reports and states that 646 of them remain unexplained by provable natural phenomena.

Maybe all of these reported sightings are whimsical, imaginary or unreal. But we need a more credible and detached appraisal of the evidence than we are getting.

Maybe there is no intelligent life on other planets. Many scientists think other planets could not sustain such life. But we don't really know.

One fact about the UFO's gives me pause. There have been no really solid reports of creatures being seen getting off landed saucers. To venture from one planet to another involves great intellectual curiosity and I would think it almost impossible for someone from outer space, once here, to stifle that curiosity to the extent of not trying to make personal contact with Earth people.

Conceivably, we have been seeing only preliminary unmanned orbitings of the Earth precisely controlled at great distances. But we don't know.

We need to get all the data drawn together in one place and examined far more objectively than anyone has done so far. A stable public opinion will come from a trustworthy look at the evidence, not from belittling it.

[From the Washington Evening Star, Mar. 25, 1966]

DEPUTY SHERIFF "SHOOTS" A UFO OVER MICHIGAN

ANN ARBOR, MICH.—A Michigan deputy sheriff said an unidentified flying object sighted over southern Michigan last week was trapped—on film—and still another UFO was reported yesterday.

Deputy Sheriff David Fitzpatrick of Washtenaw (Ann Arbor) County took the photographs with a tiny camera roughly the size of a man's two forefingers held together.

Prints were delayed because the tiny film had to be sent to Forest Hills, N.Y. for development.

The new sighting of an unidentified flying object near Holland, Mich., came from both Mr. and Mrs. Robert Nichols, who live across Michigan's southern Lower Peninsula near Saugatuck. They said it flew across a highway ahead of them, no more than 150 to 200 feet high.

Nichols, 24, said the object appeared about half the size of an automobile and was "a round circle glowing red on the inside and white on the outside."

Nichols' description fits roughly that given by several of more than a score who have reported sightings in the Ann Arbor area in the last 10 days.

Fitzpatrick, however, said the two objects he photographed gave off a brilliant yellow-white light in graceful swoops which he and Sheriff's Sgt. N. E. Schneider observed from about 4 a.m. to 7 a.m., March 16.

The photographs show two distinct streaks of light in the sky high above street lights leading into Milan. No details of the objects are visible in the photographs blow up to 8 by 10 inches from the tiny film.

Dr. J. Allen Hynek, a Northwestern University astrophysicist, was sent here by the Air Force to investigate recent reports.

He has scheduled a news conference in Detroit today to discuss his probe.

Meanwhile, reports of unidentified flying objects moved south into Ohio today. A farmer who lives near Upper Sandusky in northwestern Ohio told sheriff's deputies that an object shaped "like a top" or a "Christmas tree upside down" hovered over a wooded area on his property early today.

Deputies were called to the farm three times, but the farmer said the object, with lights on its outer edges, disappeared each time before they arrived.

PHOTO ADDS NEW WRINKLE TO SAUCERS

(By Douglas Bradford)

While Air Force officials prowled through the countryside for some sign of the strange night visitors that have been zipping through southeastern Michigan skies, a Monroe area boy came up with what he said was a picture of one.

Paul Richwine, 16, who lives in Woodland Beach, 3 miles north of Monroe, produced a piece of film with a blob on it that he says his camera "saw" when he pointed it at a "flying saucer" over his home Friday night.

Detroit News photographers say the blob could be due to a wrinkle in the film. But Paul and his mother, Mrs. Mariannice Richwine, insist that they saw the strange glowing objects cavorting in the sky and that the dark area on the picture represents one of them.

The object in the picture doesn't seem to have much material substance.

Neither Paul nor his mother can account for the fact that the thing they saw was bright and shiny with flashing colored lights while the camera recorded a dark smear.

Paul said his Argus F-100 was on time exposure at f. 2.8 and was loaded with fast film when he took the picture at about 11:30 p.m., Friday.

The News photographers conceded that the darkness in the picture "might" be the indication of something moving quite swiftly on a time exposure, or the blob could be a water spot on the negative or a wrinkle in the film.

Mrs. Richwine said the object's appearance was preceded by four glowing shapes about 10:30 p.m., Friday. She saw them from her front window, she said.

[From the Grand Rapids (Mich.) Press, Mar. 22, 1966]

STATE FLYING OBJECT REPORTS BRING PLEA FOR FEDERAL SIFT

ANN ARBOR.—A Michigan Congressman planned Tuesday to ask the Defense Department to investigate reports of unidentified flying objects sighted near Ann Arbor.

U.S. Representative Weston Vivian, Democrat, of Michigan, left for Washington, D.C., Monday after conferring with Sheriff Douglas J. Harvey, of Washtenaw County. Harvey said Vivian also planned to talk with the U.S. Air Force.

Three times within a week, residents of the nearby community of Dexter have reported sighting objects flying in the night sky.

"I didn't believe those reports," said Harvey. "But with so many trained police personnel and reliable citizens having seen them, I must believe something is in the Washtenaw County skies."

And Tuesday, the Hillsdale County civil defense director and 87 college coeds said they watched an eerie, hovering flying object settle in a swampy hollow near a school dormitory Monday night.

William VanHorn, 41, the county civil defense director for 10 years, said he watched the unidentified object through binoculars for 3 hours.

The Air Force announced it was calling in Dr. H. Allen Hynek, chairman of the Dearborn Observatory at Northwestern University, Evanston, Ill., and scientific consultant to the Air Force's UFO study program, to investigate the rash of sightings.

Hynek will work from Selfridge Air Force Base near Mount Clements, the Air Force said.

In Hillsdale, VanHorn said he joined the 87 Hillsdale College coeds and their housemother to watch the object. He said it emitted wavering orange, red * * *.

[From the New York Times, Mar. 22, 1966]

FORTY IN MICHIGAN SAY A MYSTERIOUS CRAFT HOVERED IN SWAMP

ANN ARBOR, MICH., March 21.—At least 40 persons, including 12 policemen, said today that they saw a strange flying object guarded by four sister ships land in a swamp near here Sunday night.

Descriptions of the unidentified flying objects tallied closely. A patrolman, Robert Hunawill, said he and other residents of the area saw similar craft before dawn last Monday and Wednesday.

In Washington, the Air Force said it knew nothing of the reports. The Air Force's Michigan headquarters in Battle Creek would not comment.

Two persons who slogged through the 300-acre swamp today and looked for traces of the craft found nothing but marsh grass, quicksand, and muck.

However, the two persons who reportedly were closest to the object, Frank Mannor, 47 years old, and his son, Ronald, 19, said it did not appear to touch the ground but sat on a base of fog.

Frederick E. Davids, State police commissioner, who is also head of civil defense for Michigan, opened an investigation.

"I used to discount these reports too, but now I'm not so sure," he said.

Mr. Mannor and his son said they had run to within 500 yards of the object. Mr. Mannor said the craft was shaped like a football and was about the length of a car with a grayish yellow hue and a pitted surface like coral rock.

"It had a blue light on one end and a white light on the other," he said.

"They were pulsating and each of them looked like they had a little halo around it," he said.

Other witnesses saw only the lights, but their descriptions, including those of policemen, agreed closely.

Stanley McFadden, Washtenaw County sheriff's deputy, said he and Deputy David Fitzpatrick watched the object fly over their car about the same time the Mannors reported it had taken off.

Officer Hunawill said four other unidentified flying objects had hovered in a quarter circle over the object in the swamp.

[From the Washington Post, Mar. 23, 1966]

FIRST UFO'S OF SEASON ARE SIGHTED

Spring's first flying saucers have sprouted right alongside the forsythia. Scores of people in Michigan have reported strange flying objects since the weekend, and a former fighter pilot says he saw several over his Bethesda home Saturday night.

The Air Force, which has investigated more than 10,000 such reports since 1947, sent Northwestern University's Dr. H. Allen Hynek, its top scientific adviser on unidentified flying objects (UFO's), to look into the Michigan reports.

The latest was Monday night at Hillsdale College, where a county civil defense director, a former reporter and assistant dean, and 87 coeds say they watched a glowing object zipping around campus for 4 hours.

This report coincided with one near Ann Arbor, where about 50 persons—including 12 policemen—said they saw an eerie object cruise over a swamp Sunday night while four sister ships hovered overhead.

In Bethesda, retired Air Force Col. Howard T. Wright, of 5119 Newport Avenue, said he and five other persons saw several objects outside his home and they were "definitely not in my imagination, nor were they satellites or airplanes."

[From the New York Times, Mar. 23, 1966]

EIGHTY-SEVEN MICHIGAN COEDS AND OFFICIAL SIGHT MYSTERIOUS OBJECT

HILLSDALE, MICH., March 22 (UPI).—A civil defense director, an assistant dean and 87 coeds reported a glowing object fly past a college dormitory and hover in a swamp for hours.

Their description of the object seen here last night tallied closely with that of one seen by more than 50 persons, including 12 policemen, near Ann Arbor, Mich., the previous night.

The Air Force dispatched its top scientific adviser on unidentified flying objects to begin an investigation.

The witnesses said they watched from the second floor of a Hillsdale College dormitory as the object wobbled, wavered, glowed, and once flew right at a dormitory window before stopping suddenly.

Mrs. Kelly Hearn, for 7 years a newspaper reporter before becoming assistant dean of women, assistant professor of English and housemother of the dormitory, had the coeds take notes as they watched the object for 4 hours.

They and William Van Horn, 41, Hillsdale County civil defense director, said the object dimmed its lights when police cars approached, brightened again when they went away, and dodged an airport beacon light.

Barbara Kohn, 21, of New Castle, Pa., and Cynthia Poffenberger, 18, of Cleveland were the first to see the object. They described its shape as roughly

hat of a football. This was roughly the same description given by a man and his son who reported that they saw an eerie object land in a swamp Sunday night 45 miles northeast of here near Ann Arbor.

The Air Force announced it was bringing in Dr. H. Allen Hynek, chairman of Dearborn Observatory at Northwestern University, Evanston, Ill., and scientific consultant to the Air Force's Project Blue Book program to track down the reports of unidentified flying objects.

Dr. Hynek set up his headquarters at Selfridge Air Force Base, Mount Clemens, Mich., near the southern Michigan section where the objects have been reported several times lately.

"It was definitely some kind of vehicle," Mr. Van Horn said. "Through the glasses [binoculars] it was either round or long."

The object's shape was briefly outlined by lightning as it veered over and near the dormitory before retreating into the swamp, Miss Kohn said. It stayed here for 4 hours before vanishing, witnesses said.

[From the Washington Post, Mar. 29, 1966]

TRUTH ABOUT FLYING OBJECTS HIDDEN BY AIR FORCE, FAITHFUL SAY

(By Howard Simons, Washington Post Staff Writer)

Firm believers that unidentified flying objects are for real and from a far-off super-civilization met the press yesterday amid a torrent of reports about new objects being sighted everywhere in the United States.

The believers repeatedly charged the Air Force with deliberately hiding the truth, which if it were known "would bring forth one of the greatest stories of the century."

The believers also "fully backed" Representative Gerald Ford, Republican, of Michigan, who wants a congressional investigation of unidentified objects which have lately plagued his home State.

But most of all, the believers want to be believed and loved.

"We want the Air Force merely to end its secrecy on sightings and stop ridiculing competent witnesses," said retired Marine Corps Maj. Donald E. Keyhoe, a UFO skeptic until his conversion.

Keyhoe now is director of the National Investigations Committee on Aerial Phenomena, an organization whose major aims are to evaluate all UFO sightings; get the Air Force to own up to the truth and to expose UFO charlatans who keep seeing "little green men."

Keyhoe and his colleagues, including scientists, engineers, military personnel, and pilots, scorn the thought of "little green men."

Had a visitor from afar ever set foot on the earth? the serious students of UFO's were asked.

There was only one case suggesting so, said committee staff member and former Newsman Donald Berliner. It happened in April 1964 near Socorro, N. Mex., where police officers saw two small suited occupants get out of a UFO.

"They were small and suited," noted a reporter. "How could you be sure they were not green?"

"We have no reason to believe they were green," wryly quipped Berliner.

The committee's case for believing that UFO's are for real was put to the press by Keyhoe. It amounted to an argument that thousands of competent persons—including radar controllers, qualified pilots, and missile trackers—had sighted objects; roughly 100,000 persons in all.

The Air Force, which has been investigating UFO reports since 1948, has steadfastly maintained there is no evidence any flying object has come from somewhere else in the universe.

Keyhoe's view, shared by the committee's board of governors, is radically different. The committee concludes, Keyhoe said yesterday, that "these things are real and must be extraterrestrial because they are so superior to anything we have."

According to Keyhoe, UFO's have been observing the earth for 200 years. He gave two reasons, essentially, for why no contact has been made with whoever it is that pilots the UFO's.

One reason is that the Air Force has orders to scare the UFO's away.

A second reason is that until humans demonstrated the atomic bomb and space flight the UFO people regarded earth as too primitive a society to bother with other than for surveillance purposes.

[From the Portland (Maine) Evening Express, Jan. 17, 1966]

THOSE "FLYING SAUCERS"—AIR FORCE EXPLAININGS-AWAY OF UFO'S DEEPEN MYSTERY

(Editor's note: This is the first of a series about UFO's (unidentified flying objects) by Bulkley S. Griffin, executive editor of the Evening Express Washington Bureau. He wrote the stories after visiting the UFO office of the U.S. Air Force.)

WASHINGTON, D.C.—The Air Force handling of the unidentified flying objects (UFO's) continues to be something of a mystery. Its persistent endeavors to explain all the UFO sightings as misidentification of ordinary objects, such as stars and balloons, has become so conspicuous as to raise questionings in the minds of a growing number of citizens. Some of these explanations seem to run counter to both logic and commonsense. Running along with these explainings-away is an apparent Air Force lack of enthusiasm—especially at high levels—to do a thorough job of investigating sightings.

Headquarters of the Air Force investigation and conclusions on unidentified flying objects—they call the enterprise Project Blue Book—is at Wright-Patterson Air Force Base near Dayton, Ohio. In charge of Project Blue Book is Maj. Hector Quintanilla.

Recently this writer has made two more visits to Wright-Patterson to study the files of Project Blue Book and to talk with Major Quintanilla, the architect of the military's final public verdicts on the UFO's.

A multitude of UFO sightings in the last dozen months has kept the Air Force busy trying to explain-away and has rendered the public more conscious and curious than ever about these strange, usually lighted, objects in the sky. The Air Force and the burdened Project Blue Book have often resorted to the expedient of lumping a number of sightings together—not naming any particular one—and furnishing a generalized catchall explanation.

This is what it did respecting an extraordinary number of sightings in the Southwest around the beginning of last August. The very number of the UFO's and of the sightings of them shook some public confidence thereabouts in both the Air Force's knowledge of the subject and in the good faith of its explainings-away.

Extracts from dispatches sent out at that time by the two national wire services will refresh memories and provide a good idea of the magnitude of the UFO performance. On Tuesday, August 3, the New York Times and other newspapers carried an Associated Press dispatch from Oklahoma City, dated August 2. It began:

"Authorities in Texas, New Mexico, Oklahoma, and Kansas were deluged last night and early today (August 2) by reports of unidentified objects seen flying in the sky.

"The Sedgwick County sheriff's office at Wichita, Kans., said the Weather Bureau had tracked several of them at altitudes of 8,000 to 9,000 feet.

"The Oklahoma Highway Patrol said that Tinker Air Force Base here (Oklahoma City) had tracked four of the unidentified flying objects on its radar screen at one time, estimating their altitude at about 22,000 feet. A Tinker spokesman refused to confirm or deny the reports of radar observations."

"Reports poured in" from 21 cities and towns, continued the Associated Press dispatch. The 21 are named: 7 are listed in Texas, 3 in New Mexico, 5 in Oklahoma, and 6 in Kansas.

The United Press International, in a dispatch in the evening of August 2 named eight States. "Reports of sightings by eye poured in from Kansas, Texas, Oklahoma, New Mexico, Colorado, South Dakota, Nebraska, and Wyoming. Oklahomans probably saw the most."

In a dispatch from Oklahoma City dated August 4, the United Press International declared that "thousands of persons across the Nation's midlands and Southwest again last night reported seeing mysterious flashing, winking, and sparkling phenomena that sped and sometimes zigzagged across the skies.

"The Air Force contends most of the sightings were probably stars or planets. It was the fourth consecutive night of UFO sightings. A lot of people took issue with the Air Force's claim that they were stars or planets."

It can be mentioned in passing that radar does not pick up stars or planets. In one United Press International dispatch it is stated that "Oklahomans probably saw the most" of these sightings. The Oklahoma sightings therefore provide

an illuminating example of how the Air Force deals with the public in such a situation.

By good fortune, one does not have to rely mainly on newspaper reports, sometimes meager, or upon the Air Force statements. The Department of Public Safety of the State of Oklahoma has sent to the office of Congressman John Jarman, Democrat, of the Oklahoma City congressional district, and to the National Investigations Committee on Aerial Phenomena (NICAP) in Washington a summary of the teletype reports sent into the Oklahoma Highway Patrol Communications Network Center, July 31–August 5, from the various highway patrol headquarters over the State.

This valuable document, which was not observed in the files of Project Blue Book, will be utilized in one or more following articles dealing with the curious behavior of the Air Force touching the UFO's and the public.

THOSE FLYING SAUCERS—HIGHWAY PATROL REPORT FIRES CONTROVERSY OVER UFO'S

(Editor's note: This is the second of a series about UFO's (unidentified flying objects) by Bulkley S. Griffin, executive editor of the Evening Express Washington Bureau. He wrote the stories after visiting the UFO office of the U.S. Air Force.)

(By Bulkley Griffin)

WASHINGTON, D.C.—Research into the matter of the unidentified flying objects (UFO's), the U.S. Air Force, and the public, receives substantial help from a report furnished by the Oklahoma Department of Public Safety. This summarizes the messages dealing with UFO sightings that passed over the Oklahoma Highway Patrol network in the period July 31–August 5.

A survey of this information reveals the large number of sightings and the much larger number of witnesses of those sightings, and lists some radar sightings by the Air Force. It compares with a generalized attention to those sightings by the Air Force and Project Blue Book, the latter the name for the Air Force investigation of UFO's.

At 3:30 p.m. August 2, Project Blue Book issued a statement assuming to explain the avalanche of UFO sightings that had hit the Southwest—but probably had hit Oklahoma the heaviest—starting July 31.

Therefore, this article will seek to hit the high points of the sightings reported on the Oklahoma Highway Patrol network beginning with July 31, up to the issuance of the Project Blue Book explanation.

The first report on the teletype came the early morning of July 31. A Wynnewood, Okla., police officer, Louis Sikes, reported a UFO. The radar at Tinker Air Force Base located the object. A little later, continued the highway patrol report, "Caswell Air Force Base (Fort Worth, Tex.) aimed their radar at the same location and came up with the same fix as Tinker." Both Tinker and Caswell followed the object, which once disappeared and then reappeared, for some time. Later that day an Associated Press dispatch from Oklahoma City stated flatly that Tinker and Caswell both had the UFO on radar.

The next night saw the UFO reports crowding the highway patrol teletype. Some quotations of messages will be given.

At 9:19 p.m. the highway patrol tower sent out this message: "Since 8 p.m. the tower has received in the neighborhood of 25 to 30 visual sightings, many by police officers and highway patrol troopers of various unidentified flying objects from the Purcell area north through the Norman area to Chandler and back through Meeker and Shawnee.

"Three Shawnee officers and their captain have four of the objects in sight at this time, also another has cropped up from the south of Tecumseh and is apparently going to fly directly over Shawnee.

"The sightings vary from one to four of the objects at various times starting in a reddish color and varying to a white and blue luster.

"Shawnee reports the objects seem to be flying four to a formation in a diamond-type formation. Cushing has reported four of the objects. Oklahoma Highway Patrol Units 30 and 40 have also made visual sightings. Reports have

come from (three) individuals." Names of two civilians are given; third was a police officer from Tulsa, not named.

"Tinker Air Force Base has had from one to four of them on radar at a time, and they advise they are flying very high, at approximately 22,000 feet, which seems to coincide with the visual sightings, all of which are 'very high flying objects.'"

Other reports came in the night of August 1. The sheriff's office at Chandler reported two UFO's. Two individuals—names given—spotted a UFO between Norman and Purcell. "Tinker AFB looking at it—or attempting to do so at this time with radar—Wichita Falls, Tex., also notified to look." Another UFO was seen near Forgan, and sighter's name and address given.

"Although there were numerous other reports from other sources which did not reach the patrol, those above were all of the reports which moved on the highway patrol wire on August 1," it is stated in the summary from the department of public safety. On August 2, the teletype carried its first UFO report of that day at 2 p.m. regarding a sighting at 12:50 p.m. near Oushing. Other reports followed through the afternoon and night.

All this from just one State's highway patrol teletype.

At 3:30 p.m. on August 2, Maj. Hector Quintanilla, in charge of Project Blue Book, issued the following statement:

"Initial study of the reports thus far received by the Air Force indicates that the observations were astronomical in nature. The objects most likely observed were the planet Jupiter and the stars Rigel, Capella, Betelgeux, or Al-debaran, which are clearly visible in the eastern sky. The time of reported sightings, the azimuth and elevation of the reported sightings supports this conclusion. In addition, on August 1 and 2 the temperature distribution and varying wind speeds observed over the Great Plains, from northern Texas to Wyoming were favorable for the phenomenon, known as scintillation. Some of the reports were the aquarid meteor showers which occur between July 26 to August 6. The meteors approach from the southeast and streak swiftly across the sky trailing sparks. There has been no confirmation that any of the sightings reported were tracked on radar.

This official statement presents two characteristics typical of Air Force treatment of UFO reports. First, no specific sighting is mentioned, and just about every conceivable reason for seeking to explain away the multitude of sightings over eight States is included.

Second, no radar sighting is admitted. This is despite the highway patrol's report of Tinker and Carswell Air Force Bases having a fix on a July 31 object, and Tinker having a fix on up to four objects the night of August 1-2; and despite national wire services reports of these radar sightings and of a Wichita weather station radar sighting of several UFO's.

Radar does not pick up stars and planets, as has been stated. Further corroboration of visual sightings by a radar sighting—as the Oklahoma Highway Patrol indicated on one occasion the night of August 1—would strengthen the argument that some UFO's are real and unknown.

But that August 2 statement from Project Blue Book was immediately attacked from a different angle by Director Robert Riser of the Oklahoma Science and Art Foundation Planetarium in Oklahoma City. To quote a UPI dispatch:

"That (Project Blue Book statement) is as far from the truth as you can get," Riser said. "Somebody has made a mistake. These stars and planets are one the opposite side of the earth from Oklahoma City at this time of year."

Major Quintanilla, recently asked about the comment of Director Riser pointed out the UFO reports were coming in from several States, and said his August 2 announcement referred to Wyoming where the stars in question were visible. He added the statement applied to Oklahoma between 1 and 4 in the morning.

[From the Portland (Maine) Evening Express, Jan. 19, 1966]

THOSE "FLYING SAUCERS"—NEW HAMPSHIRE SIGHTING ONE OF MOST FRIGHTENING

(Editor's Note: This is the third of a series about UFO's (unidentified flying objects) by Bulkley S. Griffin, executive editor of the Evening Express, Washington bureau.)

WASHINGTON, D.C.—One of the more impressive sightings of an unidentified flying object (UFO) occurred near Exeter, N.H., last September. As narrated it was an extended closeup observation of a lighted object that was noiseless and

close to the ground. Several persons apparently observed it, three of them, including two policemen, at one time.

The conclusion of Project Blue Book—the name of the Air Force UFO probe that announces the final verdicts on sightings—that the New Hampshire watchers saw low-flying airplanes, is of a piece with many other Air Force attempted explanations away. It doesn't make sense.

The New Hampshire sighting is of significance on another ground. It involves the reported effect of a UFO in disturbing and exciting animals.

The sequence of events near Exeter began at 1 o'clock in the morning of last September 3 when Exeter Police Officer Eugene P. Bertrand, Jr., 30, cruising in his police car, came upon an auto drawn up by the side of the road and in it an hysterical woman, who according to the officer's report to the investigative officer from Pease Air Force Base, N.H., "stated she was too upset to drive." She stated a light had been following her and had stopped over her car." The officer stayed with her about 15 minutes, sought to reassure her, saw nothing, and departed for the police station.

There he found Norman J. Muscarello, 18, of Exeter who had come to the station to tell of his experience while a few miles out of Exeter. He said something big with dazzling, flashing red lights had appeared moving just above the treetops. It had moved rather slowly toward him. He had jumped into the ditch for safety. Then the thing had disappeared.

Officer Bertrand took Muscarello with him in his patrol car and they returned to the field where Muscarello had had his alarming experience. They both got out of the car and walked into the field, Bertrand having a flashlight. At this point Officer Bertrand's report to an examining officer at Pease AFB can be taken up.

"When we had gone about 50 feet a group of five bright red lights came from behind a group of trees near us. They were extremely bright and flashed one at a time.

"At one time they came so close I fell to the ground and started to draw my gun. The lights were so bright I was unable to make out any form.

"There was no sound or vibration but the farm animals were upset in the area and making a lot of noise. When the lights started coming near us again Muscarello and I ran for the car. * * *

"I radioed Patrolman David Hunt who arrived in a few minutes. He also observed the lights which were still over the field at an estimated altitude of 100 feet and finally disappeared in the distance at the same altitude. The lights were always in line at about 60° angle. When the object moved the lower lights were always forward of the others."

In this case the Air Force, which generally appears to hang back from much investigating of UFO reports, did do some investigating. It interviewed the sighters and neighbors.

The Pease AFB officer, who headed this local military probe and who, by the way, was a command pilot, made this finding:

"At this time have been unable to arrive at a probable cause of this sighting. The three observers seem to be stable, reliable persons, especially the two patrolmen. I viewed the area of the sighting and found nothing in the area that could be the probable cause. Pease AFB had five B-47 aircraft flying in the area during this period but do not believe they had any connection with this sighting."

However, Project Blue Book lists low-flying airplanes as probably responsible for this Exeter sighting. Maj. Hector Quintanilla, in charge of Blue Book, states that the 8th Air Force SAC (Strategic Air Command) group at Westover Air Force Base, Mass., was conducting a low-level operation, called Big Blast, at the time. He said he believes the Exeter "people were looking at low-level aircraft."

The effect of a UFO on animals had been reported in a New York State case about 2 weeks before the Exeter event. An investigating officer from the Niagara Falls Air Force Base, commenting on the sighting of a low-down UFO near Cherry Creek, N.Y., on August 19, said:

"Preliminary analysis reveals object not explainable in conventional terms. Object caused reduction in farm cows' milk from 2½ cans to 1 can. Disturbed bull in field. Caused dog to bark." This sighting, by the way, is one of the very few that Project Blue Book has marked "Unidentified."

The Exeter UFO produced a fairly familiar charge; namely that the Air Force sought to suppress news of the sighting. In this instance the charge came from Raymond Fowler, of Wenham, Mass., head of a local area NICAP

group, who went to the scene to investigate for NICAP. The latter stands for National Investigations Committee on Aerial Phenomena, the unofficial but responsible Washington organization. The Fowler charges are in the files of Blue Book and of NICAP.

Fowler talked with witnesses and others and said he was told that Peace AFB officers had asked the police and a local newspaper correspondent not to mention the sightings. The request was put to the police on the ground people would be alarmed if told the facts, it is stated.

Major Quintanilla, informed of this charge, said that "I would not allow any suppression of news." However, it is an impression in Washington that officers a good deal higher than Major Quintanilla would not exert themselves to prevent news suppression of UFO sightings.

The Haverhill (Mass.) Gazette wrote an editorial on this UFO in the neighborhood, in which it said: "So many have reported seeing it (the Exeter UFO) and their descriptions jibe so closely that, unless they have banded together in one large hoax, their stories must be given credence."

[From the Portland (Maine) Evening Express, Jan. 20, 1966]

THOSE "FLYING SAUCERS"—AIR FORCE BRUSHES OFF FLOOD OF SIGHTINGS IN SOUTHWEST

(Editor's note: This is the fourth of a series about UFO's (unidentified flying objects) by Bulkley S. Griffin, executive editor of the Evening Express, Washington bureau.)

WASHINGTON, D.C.—A good 2 weeks after the flood of unidentified flying object (UFO) sightings last August over Oklahoma and other Southwestern States, Tinker Air Force Base, Oklahoma City, produced its formal survey and judgment. It sent this several-page explanation of sightings in its wide area to Project Blue Book, the Air Force office in charge of the UFO investigations and conclusions.

This report is a good example of Air Force anti-UFO propaganda. Except for mention of one specific sighting—which was decreed to be a weather balloon—the report is generalized, pulling out all the stops on the possibilities of citizens making mistakes and including a statement from the official of a planetarium in Oklahoma City whose text was that "the average person is uneducated as to what the sky normally looks like."

Interviews with military experts are given which mention unusually bright stars at this time of year, a haze that reflects things from the ground, the frequency of weather balloons and so on.

An impressive but superficial case is made for weather balloons as fooling people into thinking they are seeing a UFO. The number released daily in the Oklahoma area is considerable.

But the fact is that the citizens thereabouts have lived with these balloons day after day and year after year and by now must be fairly well acquainted with what they look like and how they act. They are also pretty well acquainted with stars, which at the moment may be supplanting balloons as the favorite explanation put forth by Project Blue Book.

The Tinker AFB report did not need to avoid mention of particular sightings. The Oklahoma Highway Patrol teletype reported a number of sightings well worth investigation and these teletype UFO reports were relayed to all major newspapers, wire services and TV and radio stations across the State of Oklahoma, also to the weather wire teletype system. They were available to sincere Air Force investigators.

The failure to interview witnesses could be termed negative Air Force propaganda. The highway patrol messages named close to a dozen civilian witnesses usually with addresses, and the number of highway patrol officers that had sightings must have totaled two dozen and more. Yet the formal August 20 report from Tinker shows interviews with but two civilians and two police officers.

Maj. Hector Quintanilla, in command of Project Blue Book, says the Air Force seeks interviews with persons who call up and whose names they learn. "We are not interested in persons who go to the newspapers or to radio and TV stations," he said. The wisdom of this exclusion is of course wide open to question—assuming that the Air Force is seeking information.

But Tinker AFB itself must have received dozens of calls during the heavy sighting period of July 31 through August 5. This much is indicated by a sentence sent out over the highway patrol network the night of August 2. "The security officer at Tinker Field reports he has been swamped with calls the past hour from people reporting UFO's." This report refers to just 1 hour of the several-day sighting period.

Chances are, it is said, that the Air Force handling of the UFO problem may be allowed to drag along by an apathetic public. Yet one may speculate on what an honest and energetic investigation might do. For one thing, it would investigate some of the sightings reported by the Oklahoma highway patrol.

For instance, take this report that moved with many others, over the teletype August 4. "Twenty-five people at a church in Cushing, Okla., all watched several UFO's. Sometimes they would stay stationary, then would move at a high rate of speed. Were moving south for a while, then stopped and stood still for some time, then were joined by two and moved to the west at high speeds, then turned and traveled east for a while, then stopped completely and stood still, then went east and suddenly disappeared from sight. The first ones were orange lights, the ones that joined them had red and green lights like airplanes. PD (police department) Cushing also observed the same things."

Or the "approximately 30 calls" to the Shawnee Police Department reporting 4 or 5 lighted objects traveling northwest which "make no conventional noise such as an aircraft does but rather make a humming noise." Or what did the five citizens of Norman, Okla., see looking at a white globe 30-40 feet in diameter through a "tripod-mounted 160-power telescope."

The evidence is convincing that the Air Force—for reasons it doesn't announce—is not really trying to discover what the UFO's are. Or, if the Air Force already knows, it is painstakingly keeping its information from the public. Chief blame for this lack of action must rest on the Government.

But another culprit, the scientific community, must bear blame according to an August article by Robert C. Cowen, natural science editor of the Christian Science Monitor. He wrote in part:

"The main reason there has been no scientific study of the (UFO) puzzle is social pressure within the scientific community. It has not been due to lack of opportunity to gather data.

"Many scientists feel the whole subject is 'kooky.' They dismiss it with ridicule. It can be personally embarrassing, even detrimental to a scientist's career, to try to take the saucer problem seriously."

It is time to investigate; scientific knowledge of some sort resides in the UFO phenomenon, said the writer.

[From the Portland (Maine) Evening Express, Jan. 21, 1966]

THOSE "FLYING SAUCERS"—WHAT SHERIFFS SAW WASN'T STAR, UFO PROBER ADMITS

(Editor's note: This is the fifth of a series about UFO's (unidentified flying objects) by Bulkley S. Griffin, executive editor of the Evening Express, Washington bureau)

WASHINGTON, D.C.—The case of the two Texas deputy sheriffs whose patrol car was allegedly followed by an unidentified flying object (UFO) so that they hit 110 miles an hour in rushing away, is worth mentioning for its own sake in any study of the Air Force-UFO confrontation.

The case also illustrates the possibility of a more realistic trend in Project Blue Book—which is the name of the Air Force's investigation of UFO's.

Project Blue Book first listed the Texas sighting as, "Refraction of Star Antares distorted due to inversion." This verdict was a highly improbable one from the start, as will be seen from the testimony of the two deputy sheriffs. Recently, Maj. Hector Quintanilla, in command of Project Blue Book, stated he has withdrawn this conclusion after talking over the phone with Deputy Sheriff McCoy. The star verdict didn't seem to fit. So Blue Book now records the sighting as one of the very few unexplained ones on its rolls.

Another recent case of reconsideration of a verdict occurred in the instance of the four lighted objects seen together by many observers the night of August 1-2, according to the teletype reports of the Oklahoma Highway Patrol. The latter

said Tinker AFB had picked them up. But Blue Book had this sighting listed as "Astro (Antares)." Radar does not pick up stars, as previously noted.

Recently, however, as this writer was discussing this sighting at the headquarters of Project Blue Book and pointed out that a Tinker AFB radar squadron sergeant had referred to two stationary objects and two moving in the formation, Project Blue Book proposed that the two stationary objects were stars—the brightest of them Antares—and the two alleged to be moving could be airplanes.

The two cases, one in Oklahoma and one in Texas, suggest to some observers that Project Blue Book, while vigorously trying to explain away has of late occasionally sought to throw a little more credibility into its investigations and conclusions.

But to get to the two Texas deputy sheriffs, who, as it came about, were followed by a UFO the same night—September 3—on which at least one person in the Exeter, N.H., case reported being followed.

Chief Deputy Sheriff Billy F. McCoy and Deputy Sheriff Robert W. Goode were on routine patrol near Damon, Tex.—which is around 40 miles southeast of Houston—when they saw a bright purple light, which soon produced a smaller blue light, on the horizon about 5 miles away. One of the officers studied the lights through binoculars. They had slowed down off the edge of the highway when the lights started rapidly toward them.

The testimony of Chief Deputy Sheriff McCoy, as given to an investigating officer from Ellington AFB, Tex., continues:

"The object came up to the pasture next the highway about 150 feet off the highway and about 100 feet high. The bulk of the object was plainly visible and appeared to be triangular shaped with a bright purple light on the left and the smaller, less bright, blue light on the right end. The bulk of the object appeared to be dark gray in color with no other distinguishing features. It appeared to be about 200 feet wide and 40-50 feet thick in the middle tapering off toward both ends. There was no noise or any trail.

"The bright purple light illuminated the ground directly underneath it and the area in front of it, including the highway and the interior of our patrol car. The tall grass under the object did not appear to be disturbed.

"There was a bright moon out and it cast a shadow of the object on the ground immediately below it in the grass. Deputy Sheriff Goode was in the driver's seat with his left arm lying in the open window. Although he was wearing a long-sleeved shirt and a coat, he later said that he felt the heat apparently emanating from the object."

The officers rushed away toward Damon "as fast as we could go" traveling "at speeds up to 110 miles an hour," said McCoy. Arrived in Damon, they discussed the matter. "We were both scared but still wanted to find out what it was." So they returned to the scene and saw the UFO on the horizon acting exactly as it had before. "We decided to leave the area because we figured that the object would start coming toward us again," stated McCoy.

The report to Blue Book of the investigating officer from Ellington Air Force Base believes the two deputy sheriffs definitely saw "some unusual object." This report reads in part:

"After talking with both officers involved in the sighting there is no doubt in my mind that they definitely saw some unusual object or phenomenon. However, my investigation failed to uncover any facts that permitted me, with my meager knowledge of such things, to arrive at any explanation for the unusual sighting.

"Both officers appeared to be intelligent, mature, levelheaded persons capable of sound judgment and reasoning. Chief Deputy Sheriff McCoy hold a responsible position in the department requiring the supervision over 42 personnel. Both officers have been subjected to considerable friendly ridicule from their contemporaries and the local townspeople; but have continued to profess the facts of their sighting * * *."

[From the Portland (Maine) Evening Express, Jan. 22, 1966]

THOSE "FLYING SAUCERS"—EVIDENCE INDICATES AIR FORCE MISLEADING PUBLIC ON UFO's

(By Bulkley Griffin (last of six articles))

WASHINGTON, D.C.—This is the final one of half a dozen articles on the unidentified flying objects (UFO's), the U.S. Air Force, which has the official job

of investigating the sightings, and the public. The conclusions reached have been assisted by two more examinations of the files of Project Blue Book, the Air Force name for its study and its verdicts on UFO reports.

A main conclusion can be briefly stated. It is that the Air Force is misleading the public by its continuing campaign to produce and maintain belief that all sightings can be explained away as misidentifications of familiar objects, such as balloons, stars, and aircraft.

The logical assumption, backed by much circumstantial evidence, is that the Air Force is deliberately misleading the public.

In this campaign the Air Force, backed by normal public respect for the military and for authoritative statements, and also assisted by the natural human disinclination to think uncommonly or to be laughed at, has been largely successful.

However, the Air Force success in having the public believe what it wants it to believe respecting UFO's is steadily and conspicuously lessening. More and more skepticism is being voiced in newspapers and by citizens.

Another chief conclusion is this: no energetic and thorough effort to investigate the unidentified flying object phenomenon is being made by the Air Force or ever has been made by it. And this charge holds true respect any other Government agency and respecting what has been termed the Nation's scientific community.

Reasons for the persevering Air Force performance are unknown to the public. In the speculation one of the following three reasons is commonly advanced: the Air Force fears national panic if the truth about the UFO's were told; the Air Force feels it is stuck with its story; or the Air Force is silenced by the Central Intelligence Agency.

The first alleged reason, however uncomplimentary to the intelligence of our citizens, is one that has been heard at the Capitol off and on for approaching 20 years. Some speculate it may be the reason the Air Force has given to the chairmen of the two congressional space committees in its understood endeavor to hold off a congressional investigation of the UFO subject.

What is the truth about the UFO's? It is quite possible that no one on this earth knows.

A veteran New England congressional leader, who was in a position to know, told this writer that the Air Force didn't know what they are. Officials of the Central Intelligence Agency ought to know if anyone does, yet a former head of the CIA, Adm. R. H. Hillenkootter, affirmed half a dozen years ago that he did not believe in the Air Force explainings-away; but he did not indicate he thought he thought he knows the truth of the matter.

An increasing number of good observers hold that a sizable minority of the sightings—many sightings presumably are misidentifications—represent something new and unknown. A large number of these observers, who include veteran pilots, radar operators, air traffic controllers, teachers, astronomers, and other experts, hold that the unknown UFO's are extraterrestrial.

To all this Air Force officials can and do respond that not a single tangible bit of evidence of any such UFO has been found. This is a mighty strong argument, the strongest argument of the so-called explainers-away.

Yet to an augmenting number of competent observers the evidence grows stronger that some of the UFO's are real and really unknown. So very many impressive sightings can't be explained away, it is said.

"From the United States, from Argentina, Uruguay, Portugal, France, Antarctica, and Australia (from four continents) have come the rash of reports of sightings of unidentified flying objects (UFO's). The sightings have been the most numerous since 1957." So summarized a United Press International dispatch last August.

First and last, few presumably will challenge a conclusion that the mystery and the problem of the unidentified flying object remain with this world.

And as for the Air Force, with its intensive campaign to explain away every UFO sighting, it might listen to the recent advice of a veteran astronomer, Dr. I. M. Levitt, director of the Fels Planetarium, Franklin Institute, Philadelphia, said:

"It would be well if our Project Blue Book officials were simply to indicate that sightings in a minority of cases cannot be explained. It would clear the air of a great deal of misunderstanding and mistrust of this group by the intelligent laymen and observers who have seen objects in the sky."

DEPARTMENT OF THE AIR FORCE
Washington, January 18, 1966

HON. L. MENDEL RIVERS,
Chairman, Committee on Armed Services,
House of Representatives.

DEAR MR. CHAIRMAN: Recently you requested information in behalf of Mr. John R. Gray about unidentified flying objects (UFO).

The Air Force does not withhold or censor information on UFO's. The results of all Air Force investigations are available to bona fide news representatives and scientific researchers. Press releases are issued as warranted and an annual report (copy attached) on the project is available to the public. There has never been an order issued by the Secretary of the Air Force to suppress or withhold such information.

The three conclusions set forth in Mr. Gray's letter are, in fact, the conclusions which were reached as a result of a panel of scientific consultants that met at the request of the Government to study the problem in 1953. For your information, the U.S. Air Force Scientific Advisory Board has been asked to evaluate the UFO program. An ad hoc committee has been appointed and will convene sometime in February. The results will be available shortly after the meeting.

As a result of investigating over 10,000 reports since 1947, we cannot associate disruption of running engines, radios, and headlights, or malfunction of aircraft instruments, or heat sensations with UFO activity. Nor can we attribute them to aircraft operations. There are many plausible explanations for effects such as car radio static when passing powerlines, overheated car engines, drop in power and voltage in the electrical system, malfunction of equipment, and imagination or panic of an observer. Weather conditions such as temperature inversions can cause known natural or conventional objects to appear to hover, move around, and change colors. Satellites and balloons make no noise while in flight. Balloons can also hover and suddenly accelerate depending on the wind conditions.

The foregoing information also explains our third conclusion. There has never been a top-secret document, entitled "Estimate of the Situation," which concluded that UFO's are interplanetary in nature.

As of December 31, 1965, the Air Force has received 10,060 reports since 1947 of which 645 are unidentified and cannot be explained. It is our opinion that all reports could be explained if more detailed objective data had been available. However, because of the fact that analyses of UFO sightings depend primarily on the personal impressions and interpretations of the observer rather than on accurate scientific data or facts obtained under controlled conditions, positive identification of all sightings is improbable. Information on any UFO report is available to private citizens upon request.

Photographs received in conjunction with UFO reports are evaluated by photo analysis personnel. The objects in such photographs have been evaluated as known natural or conventional objects which have been misinterpreted by the observer. Such photographs are returned to the owner after analysis.

Our Project Blue Book office is located at Wright-Patterson AFB, Ohio, where all UFO records are kept. All objects which have been picked up or tracked on radar have been identified as flocks of birds, weather phenomena, or reflections from ground targets. Radar scope photography is classified only if it reveals classified defense information.

The joint Army-Navy-Air Force publication 146 deals with UFO's only as a catchall class of sightings that does not fall into a recognized category such as ships, submarines, aircraft, or guided missiles. The purpose of the publication is to provide uniform instructions for the peacetime reporting of what is judged to be vital intelligence sightings. Any person who violates the provisions of the publication may be liable to prosecution thereunder. The purpose of this is to emphasize the necessity for handling of such information within official channels only.

The article appearing in the December 24, 1959, issue of TIG Brief, entitled "UFO's Serious Business," has been misinterpreted. The purpose of this article was simply to improve the quality of reports and investigative procedures. It also contained guidelines for effective reporting and the equipment necessary for investigations. We have no knowledge of any research projects such as those stated by Mr. Gray, nor do we have any information about the Santiago Chile, incident.

All UFO reports which are submitted to the Air Force are regarded as earnest reports from people who have seen an aerial object which they could not identify. The purpose of our program is to evaluate such reports and to inform the observer of the cause of his sighting.

The National Investigations Committee on Aerial Phenomena is a private organization which is in no way affiliated with our Government.

It is a pleasure to again be of service to you.

Sincerely,

DWIGHT W. COVELL,
Colonel, USAF,
Congressional Inquiry Division, Office of Legislative Liaison.

JANUARY 11, 1966.

HON. L. MENDEL RIVERS,
House of Representatives,
Washington, D.C.

MY DEAR SIR: Thank you for the very prompt reply (Jan. 6, 1966) to my letter of December 29, regarding UFO's. You stated that you may check out my comments with the proper authorities. Knowing in advance essentially what reactions you will receive from these authorities, be they Air Force, Department of Defense, or Congressional Inquiry Division officials, I strongly and respectfully request you withhold acceptance of their statements until you contact Maj. Donald Keyhoe (USMC, retired) or Mr. Richard Hall. These gentlemen, as you are undoubtedly aware, are director and associate director, respectively, of NICAP and can be reached at North 7-9434.

This course of action is most desirable for the ultimate best interest of the American people as it permits both sides of this controversy to be impartially weighed.

NICAP, in the 9 years since its inception, has amassed sufficient factual information, documentation, and evidence to refute any or all Air Force claims. The organization asks only that it be given the opportunity to present this information in open hearings in order to attain its immediate goal of getting to the people the truth about the UFO's, as can be ascertained and officially confirmed; and the best hope of achieving this end is through congressional action.

Respectfully yours,

JOHN R. GRAY,
Huntington Beach, Calif.

DECEMBER 29, 1965.

HON. L. MENDEL RIVERS,
U.S. House of Representatives,
The House Office Building,
Washington, D.C.

MY DEAR SIR: As chairman of the House Armed Services Committee, you may be the proper person in the House, to whom I should address this correspondence pertaining to a subject, the scientific aspect of which promises far-reaching implications. A considerable amount of genuine scientific research by private individuals in this field is being thwarted, in part, by a policy of an agency of the U.S. Government through the employment of ridicule and the withholding of pertinent information. It is a field that has been the subject of suppression since 1947 and particularly since 1953 by order of the Secretary of the Air Force.

The subject, of which I write, is that of unidentified flying objects (UFO's) and the Air Force censorship in the handling of legitimate sightings and reports. The publicized conclusions, in part, of the Air Force's Project Blue Book are:

(1) No unidentified flying object reported, investigated, and evaluated by the Air Force has ever given any indication of threat to our national security;

(2) There has been no evidence submitted to or disclosed by the Air Force that sightings categorized as unidentified represent technological developments or principles beyond the range of present day scientific knowledge; and

(3) There has been no evidence indicating that sightings categorized as unidentified are extra terrestrial vehicles.

Other than the close encounters with UFO's reported by airline and military pilots, an element of truth can be conceded in conclusion (1). However, the vailidity of number (2) must be disputed. Do we possess any aircraft that can:

1. On close proximity to ground vehicles disrupt the running engines, headlights, and radios of those vehicles?

2. On close proximity to conventional aircrafts cause their gyro compasses and direction finders to momentarily malfunction?
3. On close proximity to conventional aircrafts or ground vehicles cause intense heat sensation experienced by their occupants?
4. Hover at any one point at any given time and suddenly accelerate horizontally or vertically out of sight in a matter of 5 to 10 seconds?
5. Execute an abrupt 90° or 180° change of direction while in flight?
6. Make no discernible sound while in flight?
7. Glow brilliantly and change colors?

Such behavior and characteristics have been witnessed by reliable persons and documented enumerable times and are very familiar to the Air Force; in addition to being definitely beyond the scope of our present technology. If conclusion (3) had included the word "proof" instead of "evidence," the probability of truth could also be conceded here. As it stands, the statement is likewise false for the same reasons as the arguments listed against conclusion (2). Since our present state of technology does not permit satisfactory explanations to such behaviors of these objects, what other assumption can a scientific mind make than that their origin is extra terrestrial? It may be recalled that the Air Technical Intelligence Center (ATIC) at Wright-Patterson AFB, Dayton, Ohio, in July-August of 1948 concluded in their top secret document estimate of the situation that UFO's were interplanetary. While top Air Force officials will vehemently deny that such a document ever existed, proof that it does exist and is accessible for examination by interested Members of Congress—but not from the Air Force.

While the Air Force does not publicly admit to the existence of the wealth of documented evidence that has been accumulated since before the appearance of the first airplane, it does admit to possessing at least 663 "unknowns" on the books. Sightings classified as "unknowns" are those well documented by official and unofficial sources but remain unsolved and "unexplainable." Private citizens inquiring into the nature of these unknowns will be told that such is classified information (AFR 200-2 paragraphs 9 and 19). It should be noted in this respect, that Vice President Humphrey and Senator Birch Bayh were misinformed by the Air Force through the Congressional Inquiry Division to the effect that all of the 663 "unknown" cases were solved. The letter to Senator Bayh was signed by Col. Frederick H. Fahringer.

Dealings with the Air Force concerning information of UFO's have proved to be a one-way proposition—all in and none out. Is it little wonder that only about 10 percent of the citizenry dare risk disparagement for submitting reports that are truly unexplainable? The "lending" of photographic evidence of a sighting by a witness to the Air Force is tantamount to forfeiture. Infrequently, an Air Force "slip-up" occurs in his favor.

The Air Force maintains that there is no censorship of UFO's. Anyone following this subject knows differently. Strong feelings were expressed by three of my acquaintances, all departed in recent years from service in that branch, in verifying that censorship does indeed exist. Two were radar technicians, one of whom was stationed at White Sands in 1949 while the other was assigned to the 776th Radar Squadron at Point Arena, Calif. in 1961-62. The third was a member of Project Blue Book in Alaska during 1961-62.

The Joint Chiefs of Staff regulation JANAP 146, section III, title 18, United States Code 793, threatens imposition of penalties of 1 to 10 years imprisonment and/or up to \$10,000 fine upon any Air Force pilot who reveals an official UFO report. Such harsh punishment would certainly be indicative of the seriousness with which the Air Force regards the UFO's; and all the while the publicized line is "they don't exist." The official position was subsequently revealed when on December 24, 1959, an Air Force Inspector General brief was issued stating that: "UFO's are Serious Business" and instructing all investigating officers to be equipped with geiger counters. The degree of seriousness can also be realized when one considers the lengths to which six agencies of the Federal Government are extending themselves in research to uncover the suspected secret of these objects—that of gravity control, or antigravity power. Forty-six such projects of research of varying degrees are currently being subsidized including 33 under Air Force supervision.

While it is understandable that information pertaining to these projects does not necessarily fall into the sphere of the public's "right to know," there is no apparent reason or justification for the continuation of this "blackout" policy regarding UFO's. It matters not whether this policy was instigated by the Air Force or its superior, but it does matter when individual research in this field is

stified; and it matters when the American people are denied the right to know what kind of powers they may be up against. Persistence in this dogmatic attitude will only tend to deteriorate public morale if not the public trust in the Air Force when irrefutable proof of the existence of these objects manifests itself.

Those behind this official "blackout" should be displaying real responsibility to all of us by desisting from the practices of ridiculing sincere witnesses and belittling sightings that defy explanations and at least extend public acknowledgement of some credence to the evidence that abounds. Instituting a policy of dealing honestly, for a change, with the people would prepare the way to a minimum of possible panic (assuming this to be the basic reason for the censorship) upon arrival of that "moment of proof." (Please, excuse the pun.) Consider the contrast of the disrespect shown Americans to the consideration extended the citizens of Argentina and Chile. For example, on August 3, 1965, the radio and TV stations of Santiago, Chile, alerted the populous to view the three luminous discs hovering over the city for some 25 minutes before moving slowly away.

With the hope that we may yet receive such courtesy instead of treatment as children, I respectfully urge that you consider the undertaking of a hearing into this despicable situation. Until this condition is brought out into the open, much of the news media will continue to refrain from giving the UFO's serious consideration they so justly deserve.

All statements made in this letter can be substantiated by the National Investigations Committee on Aerial Phenomena (NICAP) located at 1536 Connecticut Avenue NW., Washington, D.C. Documented evidence and authentication required to support the assertion that a censorship does in fact exist will be put at the disposal of your committee by NICAP upon request.

Respectfully yours,

JOHN R. GRAY, *Huntington Beach, Calif.*

[From Life magazine, Apr. 1, 1966]

A WELL-WITNESSED "INVASION"—BY SOMETHING

FROM AUSTRALIA TO MICHIGAN, A FLURRY OF EEBIE UFO SIGHTINGS

Call them what you will: flying saucers, unidentified flying objects (UFO's), optical illusions, or the first symptoms of the silly season. They are back again—and seen by more people than ever before. Some are greenish and iridescent, like the mystery thing that swooped down over Perth, Australia, several weeks ago. Others are football shaped and aglow with pulsating lights. Last week the manifestations seemed almost to have reached the proportions of an invasion. Near Ann Arbor, Mich., 52 witnesses, including a dozen policemen, saw 5 strange objects hovering over a swamp. The next day a glowing thing floated over a small college in Hillsdale, Mich. and was sighted by 87 students, an assistant dean and the local civil defense director. Whatever the explanation of the peculiar phenomena—seen and described similarly by so many—something surely was in the air.

"IT WASN'T NO HULLABILLUSION," SAID THE FARMER, AND 52 AGREED

(By Paul O'Neill)

DEXTER TOWNSHIP, MICH.—Frank Mannor has never believed in flying saucers. Hasn't any need of them. Wishes he'd never seen one. Frank should have been born in the day of Dan'l Boone. Since he wasn't, he's on the unemployment. Still, he's a happy man. Or was.

He is a husky, grizzled fellow of 47 who has 10 children, a well of water with an outside pump, a solidly build privy, a TV set and a battered refrigerator with the coil on top. Four disembodied automobiles rest beside his white, tumble-down, two-story farmhouse in the open country 12 miles northwest of Ann Arbor. They provide parts for his good car. He has an ancient schoolbus for hunting expeditions. He also has six dogs. The dogs started it all. When they began "barkin' and bellerin'" at 8 o'clock that Sunday night, Frank ran outside—even though he was wearing his suit pants—and looked east into swampland from the rise of ground on which the house is built. He saw lights and a faint red glow "like cigarets being smoked."

Frank called his 19-year-old son, Ronnie. Suit pants or not, they started down toward whatever it was. "I thought a meteor had hit, that maybe we could pick up pieces of it," Frank said.

It never for a minute occurred to him that the United States hadn't had a good, mysterious flying saucer manifestation for a coon's age, that it was probably time for a new visitation from the mysterious little men from outer space and that they had decided to use southern Michigan in general and his swamp in particular for the dangdest display of flashing lights and whizzing half-seen objects since Frank Perkins fired a .22 rifle at a New York crow—and his fireworks factory—back in 1951.

Frank Mannor soon realized that he and his son were stalking some kind of thing. The ground between his house and the swamp is hummocky, rolling, but the night was clear and moonlit and the glow ahead was plain. "Just like we were hunting deer," Frank said to Ronnie, "Don't talk, we'll sneak up on it."

They jumped a creek, climbed a rise, and there it was, a few hundred yards ahead in the marsh. The thing seemed as long as an automobile, and wore a green light on one end and a white light on the other. Its back was humped and looked grayish- or bluish-brown and was "quilted" or rough "like coral rock." It seemed to be sitting perhaps 8 feet off the ground in a patch of mist. "Like a man in a boat on a misty lake in the morning—you can see the man but can't quite make out the boat."

Suddenly it turned blood red. "Look at that horrible thing, Dad," blurted Ronnie—and the lights instantly went out. Both began running toward it. "I was a-puffin'," said Mannor. "But when we got there it was gone. I hunted for 4 hours but there was no sign or smell of it. I'm glad I didn't have a gun. I'd a shot it and I might have harmed someone."

Back at the house, meantime, Mannor's wife Leona—a woman who wears shapeless slacks and a flannel shirt with the tail out—decided to call the nearby Dexter village police. "We've got an object out here," she said formally, "that looks like what they call a flying saucer. It's got lights on it down in the swamp."

Since the Mannors are on an eight-party line Leona told a great many other people, too, and the word spread like lightning—or the glow from a flying saucer. Cops and deputy sheriffs were soon tumbling out of cars and thrashing off toward the marsh, and the road beyond the house was jammed solid with the cars of gawkers. Most of them were rewarded for their effort. Dexter Police Chief Robert Taylor and Patrolman Nolan Lee saw the red glow as they stumbled around in the dark; so did Washtenaw County Deputy Sheriffs Stanley McFadden and David Fitzpatrick. All reported, like Mannor, that the light eventually vanished. But unlike their host, who said, "I never seen it take off," the cops felt it had zipped away over Mannor's house making a sound like "an ambulance."

"I seen it," said McFadden, "but I still don't believe it."

Dexter Patrolman Robert Hunawill saw a "strange, lighted object" appear over his patrol car as he waited in the road for those who had set out for the swamp. It had red and white lights "which at times had a bluish tinge" and made continuing sweeps over the swamp at a height of 1,000 feet and then, as being joined by three other "objects," flew away. Chief Taylor's 16-year-old son Robert saw one lighted thing at 10:30. It flashed red and white and hurried off to the west.

Ann Arbor, though sharply divided between scoffers and believers the next day still seemed to feel a unanimous civic pride in the fact that the Air Force had taken cognizance of its lurid phenomenon by dispatching Astronomer J. Allen Hynek, director of Northwestern University's Dearborn Observatory, to watch the tales of the elect and, no doubt, send a message of gravity and import to the Pentagon. They were even more heartened to hear that Hynek did not instantly announce that Mannor and his fellow bushwhackers had simply seen the University of Michigan's dish-shaped Peach Mountain radio telescope, which stands against the sky beyond the area in which they saw the glowing thing. Hynek, a bearded man who has investigated a hundred other "sightings" for the Air Force in the last two decades, was sure Mannor was too accustomed to the telescope to ever mistake it for anything else.

"I believe the people who made these sightings are entirely honest and sincere," he said. "But I am not willing to guess what they saw." He hedged when asked if he thought the thing might conceivably have been a new "test vehicle" of some sort. "I think I know much more of what is going on than . . . " he began, but then halted and said, "so I don't think I should say anything . . . I'm sure there is some natural explanation for all of this."

Back by Frank Mannor's house the road jammed up with the cars of the expectant; one man scraped away at a violin for an hour in the hope of summoning creatures from outer space and another blinked a light in what he described as a "pi code"—which he believed to be the key to interplanetary understanding. Many came to scoff. Mannor grew more indignant by the hour.

"People are trying to make a fanatic out of me," he complained. "They was still tramping around here at 3 o'clock this morning and look at them now. They say, 'How much money are you going to make off this?' That's crazy. I don't want no money. I didn't want no publicity in the first place. I don't want none now. I'm just a simple fellow. But I seen what I seen and nobody's going to tell me different. That wasn't no old foxfire or hullaballusion. It was an object. Maybe it'll come back if all these people would stay away and we could get a picture and have verification of it. Anybody wants to give me a lie-detector test I'll take it."

Leona, his wife, was more succinct: "We ain't Martians—they act like you're not human or something because you seen it. I'm about to get a gun and shoot some of these smart alecks if they don't stay to hell away."

10,147 FLYING SAUCER SIGHTINGS

(Ever since the Old Testament prophet Ezekiel recorded an encounter with a fiery flying wheel, people have been seeing saucerlike things in the sky. In the following report Life Correspondent Bill Wise tells of the Air Force's efforts to make sense of all.)

DAYTON, OHIO.—There have been 10,147 reported UFO sightings since a private pilot named Kenneth Arnold claimed he saw a set of rapidly moving "things" in the air near Mount Rainier, Wash., on June 24, 1947. Arnold's widely publicized report set off the first of the modern epidemics of saucer sighting, and the Air Force has been in the saucer business ever since. Its "Project Bluebook" occupies a single room on the second floor of a windowless red concrete building here at Wright-Patterson Air Force Base. Its functions: (1) to try to find an explanation for all reported sightings of unidentified flying objects, (2) to discover whether the UFO's pose any security threat, and (3) to determine if UFO's exhibit any advanced technology which the United States could put to use.

To assist Project Bluebook, there is an UFO officer stationed at every Air Force base in the country; the officer at the base nearest a reported sighting is responsible for initiating the investigation. According to Maj. Hector Quintanella, Jr., a physicist who heads Project Bluebook, most UFO sightings have a rational and usually very simple explanation. The most common reports stem from bright stars, planets and meteorites, particularly when viewed through broken clouds or haze.

Others turn out to be satellites—few people realize that there are now more than 30 of these in orbit that are visible to the naked eye. Thousands of balloons—some as large as 300 feet in diameter, some carrying running lights—are released daily at airports, weather stations and research centers, and these lead to a great many "saucer" reports. Conventional aircraft are another major source—reflecting sun by day or providing the glow of running lights or jet afterburners or the flash of photo recon strobe lights at night.

All satellites and most weather balloons and aircraft are being carefully tracked and logged by military or civilian agencies, and Project Bluebook routinely checks sightings against these records. Unreported local flights by private aircraft pose the most frequent problem in this detective work.

Strange blips on radar screens have occasionally unsettled personnel at tracking stations—e.g., two "objects" that appeared on the scopes at Patuxent Naval Air Station (Md.) last December seemingly approaching the base at an estimated 4,800 miles an hour before making a tight turn and disappearing. But these can generally be traced to pulsating "bugs" within a receiving set or to interference from other neighboring electronic gear. Wright-Patterson experts have been able to account for every errant radar blip reported to date.

There is no question that our Air Force and those of other countries employ assorted airborne hardware as tactical and training devices. Many of these are, of course, seen as flying saucers and it is obvious that for security reasons the Air Force is reluctant to talk about them.

"I have looked at the records of nearly every UFO case back to 1947," says Major Quintanella, "and my feeling is that the vast majority have involved simple misinterpretation of natural phenomena."

Of the sightings so far checked out, less than 2 percent of the total are listed on Project Blue Book's file as unidentified. The Air Force officially concludes that none of these has given any indication of posing a threat to national safety, or offering new technological data, or of originating from some extraterrestrial source. However, some of these files remain officially open and the investigations on them continue.

Dr. J. Allen Hynek, director of Dearborn Observatory at Northwestern University, who is heading up the Ann Arbor investigation for the Air Force, is an old hand at checking on flying saucers for Blue Book. Dr. Hynek notes that sighting reports usually do not originate with persons who believe in outerspace visitations. "Believers" don't need sightings to convince them, and are irritated by the embarrassment and skepticism with which most UFO spotters, like Frank Mannon, report what they believe they have seen.

"It is easy to dismiss the cases of birds, balloons, and the like," says Dr. Hynek, "but when good solid citizens report something puzzling, I believe we have an obligation to do as good a job as we can. I regard our 'Unidentifieds' as a sort of blot on the escutcheon. Somehow we scientists should be able to come up with answers for these things."

Major Quintanella, although certain that no evidence turned up to date has even hinted at spacecraft of unearthly origin, agrees that it is impossible to prove that flying saucers do not exist. In any event, the Air Force is not about to give up chasing UFO's.

"We are spending millions to develop our own rocket boosters to get our spacecraft to the moon and beyond," says the major, smiling. "Imagine what a great help it would be to get our hands on a ship from another planet and examine its powerplant."

The CHAIRMAN. What I want to ask you is, why do they always see them in the nighttime?

Dr. HYNEK. There are a number of reports from the daytime although it is true there are many more night sightings.

The CHAIRMAN. Then there is another thing, if anybody wanted to spy on this country why would they go to this expense, when you can go to any newsstand and get all the information you want, and if that doesn't help you get a roadmap, and if that doesn't help you, hire a Hertz car.

Dr. HYNEK. Maybe they don't know this.

The CHAIRMAN. If the Martians don't know this by this time they will never know it.

Spying on this country is so simple, I cannot understand why the Russians or anybody wants to put something up in the air to spy on this country, when they have got so many avenues we don't police.

Dr. HYNEK. No comment on that, Mr. Chairman.

The CHAIRMAN. Well, you ought to comment on it.

Dr. Chamberlain, we will hear from you.

Dr. CHAMBERLAIN. Thank you, Mr. Chairman. I really have no questions, but I will say the sightings in Michigan were near my area, but not within it. I am pleased to hear your recommendation and to have the Secretary's statement that he intends to implement it.

I am further comforted to know he is giving it further thought and he is going to, at such time as your recommendation is implemented, we are going to have a panel that will consider these things in depth, not just in town for a day, with a cursory look, and disposing of it, because I feel we have other scientific achievements and advances, and that there is going to be a growing importance of surveillance of this phenomena.

I would say, further, the people in our area are concerned about this. There has been considerable responsible editorial comment in our newspapers. It should not be "poo-pooed," as you say.

I am pleased to have your statement.

And, Mr. Chairman, I thank you for having this hearing, and these people in to put some attention on this matter. Thank you.

The CHAIRMAN. Thank you.

Governor Stafford. Governor Stafford, you are from Vermont, how close is this to your district?

Mr. STAFFORD. Thank you, Mr. Chairman. I was going to comment on that.

Mr. Bates has pointed out there have been UFO sightings in New Hampshire, Vermont not to be outdone last week has had sightings there, also, some within 16 miles of my hometown.

The CHAIRMAN. That is getting awfully close.

Mr. STAFFORD. Yes, sir.

Since our States of Vermont and New Hampshire are known as the twin States, Mr. Chairman, this may be simply a case of bad navigation on the part of the UFO's, although some of us think it may be if they are extraterrestrial they are simply looking for a warmer climate than New Hampshire possesses. But in any event, in seriousness, the people in Vermont are very much concerned over the sightings that have occurred in our State, and reputable people have seen phenomenon which they cannot understand.

I would simply hope that the Secretary of the Air Force and the doctor could assure me that if these sightings have not already been evaluated, that in the course of investigation and deliberations they will be.

The CHAIRMAN. I hope if you come in contact with any of them you don't have to tell them where South Carolina is.

Mr. Hébert is next.

Mr. HÉBERT. Thank you, Mr. Chairman.

While these objects have not been seen in my district, I just want to prepare myself, because after next election day I might have seen some of them.

Doctor, have you conferred with Mr. Ray Walston on this subject matter?

Dr. HYNEK. No, sir.

Mr. HÉBERT. Does that ring a bell with you, Mr. Ray Walston?

Dr. HYNEK. No, sir.

Mr. HÉBERT. It does not ring a bell? He is the most authoritative man in the country on space. He appears in every home every Sunday night, he is "My Favorite Martian."

Dr. HYNEK. Oh. [Laughter.]

Mr. HÉBERT. He has an antenna out of his head, too.

Dr. HYNEK. I think I have been talking to the wrong people.

Mr. HÉBERT. He can shed a lot of light on the subject. I just wanted to direct your attention to that.

That is all, Mr. Chairman.

The CHAIRMAN. Dr. Hall, you are next after Mr. Price.

Mr. PRICE. Doctor, if in fact they exist and are from outer space, don't we have a tracking system that now does a real competent job tracking every satellite in outer space so we know every one that is launched somewhere else, and as they circle in outer space we have a record of each of these, do we not?

Dr. HYNEK. It is my understanding that we do. This is the point I made earlier.

Mr. PRICE. If they did travel in outer space there would be a record somewhere of their travels in outer space?

Dr. HYNEK. I would certainly think so, and this, of course, is I think one of the most potent arguments against extraterrestrial visitation by intelligences, unless they were so superintelligent they knew how to evade completely our surveillances. I think this would be pretty difficult.

Mr. PRICE. As they left their normal orbit they could be tracked and followed?

Dr. HYNEK. Yes, sir.

Mr. PRICE. As they left the orbit?

Dr. HYNEK. To the best of my understanding, they certainly could be.

The CHAIRMAN. Dr. Hall.

Mr. HALL. Mr. Chairman, I just wanted to thank the Secretary and his distinguished guests for this, and say for some time we have even had space conventions down in the Ozarks, in the last 13 years, and it would seem obvious to me in view of the report today those who take trips by the use of hallucinatory drugs are almost synonymous with the number of space sightings we have had reported here today, namely, in the order of 10,000. To me it indicates a decrease in the mores and the fiber of those who would subject themselves to hallucinatory influences in the first place.

Thank you.

The CHAIRMAN. Mr. Stratton?

Mr. STRATTON. You mentioned something from Life magazine, Mr. Chairman. There were two pictures in Life magazine I think we would like an explanation of. One of them was a red object which was clearly visible in the photograph. The other were two lights. I think, taken in Sidney Harbor, one at one position and one at another, and then there was the third photograph. I wonder if the Doctor could give us what the explanation is of these?

Dr. HYNEK. Well, sir, unless one has the original negative, there is very little photoanalysis that can be done. It is said a picture is worth a thousand words, but I think in this case it is the other way around, because generally it has been our experience, and I think Major Quintanilla will bear me out, that when we do have hoaxes they very frequently are accompanied by photographs.

Mr. STRATTON. I appreciate it is possible to doctor up negatives.

Let me put it the other way around. Have these three incidents which are reported photographically in Life magazine been examined by you, and, if so, what are your findings with regard to them?

Dr. HYNEK. No, sir; they have not been examined by me, because I do not have the original negatives.

Mr. STRATTON. Are these incidents listed in the list that you have compiled, and which the Secretary has told us 95 percent are explainable?

Dr. HYNEK. No, sir. These particular pictures are not in my list since I don't know enough about them.

Mr. STRATTON. Doctor, I would suggest since these have had very prominent circulation, in a magazine of some prominence in the country, that we ought to examine these particular things and determine whether they are hoaxes or not. If anything is disturbing the Amer-

can people, I would assume a picture of this kind would be disturbing in just the same way that Life's story of what happened to some dogs up in Baltimore has now resulted in legislation being recommended to the House.

You have no explanation or haven't looked into the series of photographs that appear on pages 26 and 27 of Life magazine, and pages 24 and 25?

Dr. HYNEK. I just learned of the Life article last week.

Mr. STRATTON. Is that correct, Doctor?

Dr. HYNEK. That is correct, I have not examined the photographs and information published by Life.

Mr. STRATTON. Has anybody examined them in the Air Force?

Major QUINTANILLA. Mr. Stratton, we have asked for the negatives of those pictures, but the citizens will not turn the negatives over to the Air Force. You cannot force them to turn them over to the Air Force.

Mr. STRATTON. They turned them over to Life magazine, haven't they?

Major QUINTANILLA. You will have to ask them; I don't know.

Mr. STRATTON. What has Life got?

Major QUINTANILLA. I don't know, sir.

Mr. STRATTON. How can you have examined this without finding out what Life has?

Major QUINTANILLA. What is that, sir?

Mr. STRATTON. How can you have examined these particular instances without finding out what Life has?

Major QUINTANILLA. The Air Force has not investigated these instances, sir, and the photographs have not been examined because the negatives have never been turned over to the Air Force.

Mr. STRATTON. You have not been in touch with Life magazine to find out what they have?

Major QUINTANILLA. No, sir; we have not.

Mr. STRATTON. Don't you think it might be well to undertake to make an effort to find out whether Life has the negatives, for example, or whether they have been in touch with the individuals concerned?

Major QUINTANILLA. Yes, sir.

Mr. STRATTON. Well, I think, Mr. Secretary, as I just said, I am very much impressed with the doctor's statement, and with yours, but this kind of thing in Life magazine makes it appear that there is something there, and you say that you have examined these things, and there is nothing there, and I think that you ought to have examined this so that we can have an explanation of these particular phenomena.

The CHAIRMAN. Let me say something.

We cannot ask the Secretary to look into every magazine that is published, or every periodical that comes out of everybody's printing press. Now, it seems to me like Life magazine is not exempted or excluded, if they are as interested as they appear to be in this magazine, that comes to my office free, and which I seldom look into—that is my responsibility, I have other things to do—it looks to me like these people who give such great dissemination to these things would be interested in seeing what the DOD has, without imposing on the Secretary of Defense the responsibility of tracking down everything that comes out of everybody's camera. I do not know why we should im-

pose on the Secretary the requirement to track down Life magazine and say give me your negatives, give me your reasons. Is this what you want?

Mr. STRATTON. Mr. Chairman, it was my understanding we were asking this question because many people had been somewhat concerned by these reports in recent days, including the distinguished minority leader in the House.

The CHAIRMAN. Yes.

Mr. STRATTON. And it does seem to me when a national magazine that has as much influence as Life has, prints some photographic—what purports to be photographic—pieces of evidence of these objects, we ought to if we are going to allay the concern of these people who have started this investigation by our committee in the first place, that we ought to have an answer to it.

The CHAIRMAN. I think so, too, but I don't think we should criticize the Secretary for not having done it.

Mr. Secretary, here is what I am going to request you do. You get in touch with Life magazine and request them to furnish you with this information that Mr. Stratton has brought to your attention, or any other magazine, and report back to this committee.

Secretary BROWN. We will be glad to do so.

The CHAIRMAN. I am sure Life magazine would be eager to do this. Mr. Stratton, I think you are wise in suggesting it, but what I didn't want to do is to unwittingly criticize the Secretary for not having done it.

Now, Mr. Secretary, will you do it?

Secretary BROWN. We will do it, Mr. Chairman, and we will I think continue to follow our ground rules—

The CHAIRMAN. You get those negatives if you can and turn them over to the doctor, and I want a report on it.

Mr. STRATTON. Mr. Chairman, I have one more question. May I say I wouldn't dream of criticizing the Secretary, he and I are good friends, and he knows I am only trying to be helpful.

The CHAIRMAN. Of course, and I know he cherishes your friendship, and so do I.

Mr. STRATTON. The other item that has really led to all this concern today are these sightings in Michigan. The Secretary has given us a report, but I have only had a chance to skim over it. The doctor here a moment ago commented with respect to these people in Wisconsin that only two or three people in the area had seen the phenomenon, and wasn't it surprising that a lot of people who must have been around didn't see it.

If I understand the newspaper accounts correctly, the thing that is unique about the Michigan sightings is that a lot of people in the area saw it, and the girls in the dormitory apparently sat around for hours watching it, and people came and went, and all saw whatever it was.

Now, I wonder if you could give us in a nutshell what the explanation of this is? Marsh gas is what I understand is the explanation.

Could you tell us, doctor, in a few words the gist of what you discovered out there that you have reported here?

Dr. HYNEK. I will be happy to. I conducted a detailed inquiry into the two reported sightings at Dexter and Hillsdale, Mich. Of the 50 to 60 people who reported having seen one or the other of these I talked with about 32 persons.

The CHAIRMAN. How many, doctor?

Dr. HYNEK. With about 32 people. I talked with some of these briefly, but spoke with at least 15 persons in considerable detail.

These two sightings, although separated by some 65 miles, were a localized phenomenon. They were in the swamp area. No individual that I talked to, and no group of persons, could agree that they has seen anything either enter or leave the swamp. There were several isolated reports by people who said that yes, they saw a bright light come, but they could not get any general support or concurrence on this, from the others. Witnesses did agree that they saw a glow, and red, yellow, and green lights in the swamp area in both cases. So I said to myself, "What is common in swamps?" And I researched this question with the aid of several professors at the University of Michigan. They have been very helpful to me in this, since an astronomer doesn't know about swamps; he usually has his eyes a little higher than that. They informed me, and I later found in several books, that marsh gas, resulting from the spontaneous igniting in air of such gases as CH_4 , methane, H_2S , PH_3 , phosphine, and particularly important, P_2H_4 , an impurity in phosphine, is a common occurrence and produces what appears to be glowing lights of different colors. Since then I have had several letters from people saying "What are they getting all excited about in Michigan, I have seen these things since I have been a kid on the farm." As these gases are ignited, they can produce red, yellow, and green glows. There is nothing mysterious about these colors.

The lighting goes out here, and goes on here, thus giving the impression of motion. The light was moving smoothly, they said, not following the train which was bumpy, and they also rose some distance and came down. They were reportedly observed for a period of $2\frac{1}{2}$ to 3 hours.

In a book, "Light and Color in the Open Air," it is pointed out that swamp lights, commonly known as will-o'-the-wisp, fox light, and so forth, can be observed for several hours, sometimes all night.

And the conditions were just right for it in Michigan. In both cases, the winds were reasonably calm. Had there been high winds, it is unlikely these glows would have taken place.

Furthermore, Michigan had experienced an unusually mild winter. They tell me there wasn't much snow. However, the swamp had been covered by ice.

Now, in a swamp rotting vegetation produces these marsh gases. When a thaw comes, it seems entirely logical to me, that these gases would bubble up, and be spontaneously ignited, and you would see these things. To me it is a logical explanation. I said in my press release I couldn't prove it in a court of law but it seems to me to be a very logical explanation.

The CHAIRMAN. Now, Mr. Ichord.

Then I will come over to the other side.

Mr. ICHORD. Let me first differentiate, Mr. Chairman, my position from the chairman, and Mrs. Rivers, and also Mr. Nedzi.

I am neither a believer nor a disbeliever. I am from Missouri, and I have got to be shown.

The CHAIRMAN. You got right ahead.

Mr. ICHORD. I would like to ask, along the line Mr. Stratton was inquiring, how close was the Life magazine article to April Fool's Day?

Mr. Chairman, one of the members of the committee staff has handed me a question that I think should be in the record.

Doctor, are you familiar with the NICAP, the National Investigations Committee on Aerial Phenomenon?

Dr. HYNEK. I would think anyone who has been looking into UFO's for the past many years as I have couldn't help be acquainted with their work.

Mr. ICHORD. What is the makeup of this committee?

Dr. HYNEK. It is called a committee, but it is a rather large group of civilians over the country, as I understand it, who volunteer to investigate the cases.

Mr. ICHORD. It has no official standing, then?

Dr. HYNEK. No official governmental standing; no, sir.

Mr. ICHORD. This committee does not always agree with your explanation of the various sightings?

Dr. HYNEK. I believe that is correct.

Mr. ICHORD. How many, Doctor, of the 10,000-plus cases, have there been photographs allegedly taken of UFO's?

Dr. HYNEK. In a very few cases. This is another thing which bothers me.

Mr. ICHORD. Can you give an idea of how many?

Dr. HYNEK. How many?

Major, would you venture a guess?

Major QUINTANILLA. I don't know.

Dr. HYNEK. I would say only about 1 percent, or less, of the cases reported have included photographs.

Mr. ICHORD. Then I take it you can't tell me how many of these photograph cases have not been explained by you, since you can't tell me how many photographs have been taken?

Dr. HYNEK. This is right. But the point is that you cannot make a scientific analysis of a photograph unless you have the negative.

As the major has pointed out, time and again when we request the negatives, they are not forthcoming.

Sometimes other groups get them.

Mr. ICHORD. Thank you, Mr. Chairman.

The CHAIRMAN. Now, Mr. Clancy.

Mr. CLANCY. Mr. Chairman, just one short question for the doctor. Have any of the 5 percent of the unexplained cases been observed on radar screens?

Secretary BROWN. I don't know the answer to that one.

Major QUINTANILLA. No, sir.

Mr. CLANCY. What percentage of the reported incidents have been reported on radar screens?

Major QUINTANILLA. About 1.5 percent, sir.

Mr. CLANCY. That is all.

The CHAIRMAN. Mr. Schweiker, we are finishing up now.

Mr. SCHWEIKER. Yes, sir, Mr. Chairman.

First I would like to request the Beaver County photograph be included in the Air Force investigation, the one that appeared in Look magazine, and was verified by the Beaver County Times. I hope that will be included.

The CHAIRMAN. We will get an Air Force report on that, too.

Mr. SCHWEIKER. Do I understand that you said none of the unexplained objects have been sighted on radar?

Major QUINTANILLA. No, sir; I said 1.5 percent.

Mr. SCHWEIKER. No, the first question he asked you was, have any of the unexplained objects been sighted on radar. I thought you said "No" to that just a couple of minutes ago.

Major QUINTANILLA. That is correct. We have no radar cases which are unexplained.

Mr. SCHWEIKER. All right.

Let's go back to the story Mr. Bates was talking about, Exeter, N.H., the one Mr. Fuller has written about in several magazines.

I understand this is an unexplained sighting on your part, is that correct?

Major QUINTANILLA. That is correct, sir.

Mr. SCHWEIKER. He specifically says in his story—and I quote his words now—

Confidential comments made to me by the Coast Guardsmen and military in the area support the laymen's testimony and confirm the reports of radar sightings and scrambling by jet fighters from Pease Air Force Base.

Major QUINTANILLA. No, sir; that is not correct. We have no radar information on that sighting. No jet fighters were scrambled.

Mr. SCHWEIKER. Let me ask you this: In the Pease Air Force Base, you had an investigation by Major Griffin, and a Lieutenant Brant, is that correct?

Major QUINTANILLA. Sir?

Mr. SCHWEIKER. In the situation at Exeter, N.H., did you have a report filed to you folks by Major Griffin and Lieutenant Brant?

Major QUINTANILLA. Yes, sir; we did.

Mr. SCHWEIKER. Could we have copies of their raw report?

Major QUINTANILLA. Yes, sir; you may.

Mr. SCHWEIKER. What were their conclusions?

Major QUINTANILLA. They couldn't explain it.

Secretary BROWN. They sent them over to us.

Mr. SCHWEIKER. They made no mention of planes scrambling from Pease Air Force Base?

Major QUINTANILLA. There were aircraft in the area on regularly scheduled missions, but they were not scrambled for the purpose of observing the reported UFO's.

Secretary BROWN. Two of my staff have pointed out to me, Mr. Schweiker, that Pease AFB has no fighters; it is a SAC bomber base, and is not a fighter base.

The CHAIRMAN. Are there any other questions, Mr. Schweiker?

Mr. SCHWEIKER. Yes, sir.

I would like to ask the doctor:

You said to have some bona fide sightings we need a lot of people and a point-to-point situation and some other things. Doesn't the Exeter, N.H. sighting, at least as reported—I want to point out that in this sighting there were several policemen, including the chief of police and several news people who all reported the same phenomena, 60 people. Doesn't that meet your criteria; a lot of people saw it, it was a point-to-point situation, at least this observer says there were

radar sights. This apparently seems to be in disagreement at the present time.

Wouldn't that be a classification of what you said we don't have?

Dr. HYNEK. No, sir. I said there were several cases where we had a lot of witnesses. It does not have to be a point-to-point situation. When an airliner leaves New York for San Francisco, it is seen over Ohio, Nebraska, and so forth. These sightings were confined to a relatively narrow area. I want to know what happened to these objects. Why weren't they seen over Fort Wayne, Ind.?

Mr. SCHWEIKER. The fact one officer reports he went to the scene after someone else sighted it, and returned back to the same point, there it was, according to the police officer's testimony.

Dr. HYNEK. Yes, sir, but it was in the same area. We don't know what it was. I would like to know what it was.

Mr. SCHWEIKER. One of the other witnesses in this story—and all I have to go on is what the reporter's writing says, they did, in fact see it go from point to point, while they were watching it.

Dr. HYNEK. Within a relatively narrow area. But I don't recollect whether they saw it leave for distant points. One of the things that seems to be so odd about this particular case is that we did not find horizontal trajectories over any length, as you would expect from a craft.

Mr. SCHWEIKER. Is the Beaver County sighting unexplained or is that explainable, this photograph I referred to?

Major QUINTANILLA. Is this Mr. Lucci's photo?

Mr. SCHWEIKER. Yes, sir.

Major QUINTANILLA. We have asked Mr. Lucci to submit the negative for photo analysis, but he has refused to do so.

Dr. HYNEK. It needs a double exposure, as we can judge from the print.

Major QUINTANILLA. We asked the gentleman to submit the negative for analysis and he refuses to do so.

Mr. SCHWEIKER. On what basis?

Major QUINTANILLA. I don't know, sir. We requested the negative.

Mr. SCHWEIKER. He submitted it to the Beaver Times. They published it. Maybe these people are a little skeptical about turning over negatives without some assurance.

I think we ought to look into that a little bit, because the newspaper claims they saw the negatives, examined by their photographic experts and they are authentic.

Major QUINTANILLA. I have a copy of our letter in my files asking Mr. Lucci to submit the negative for analysis, and he declined to do so. That is all I can say.

Mr. SCHWEIKER. Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Mr. Schweiker.

We will go to Mr. Leggett.

Mr. LEGGETT. Mr. Chairman, Mr. Wilson and I want to go on record at this time that we do not believe; we are intelligent people.

Mr. BATES. Which Wilson?

The CHAIRMAN. We are going to adjourn, and we are going to meet again at 2:30. If there is no reason to hold Dr. Hynek and Major Quintanilla, we will let them be excused. Some people say whenever you all have gone we are going to get down here in executive session.

and you, Dr. Brown, are going to tell us—here is what I meant to tell you—and this is far from the truth.

I know of nothing else to ask him. I think we have explored everything.

Mr. Stratton, have you had any afterthoughts?

Mr. STRATTON. Just one question.

Was there not a sighting, back it seems to me in 1947, when an object was observed on radar, either at National Airport or Bolling, both coming in and going out? It seems to me there was also a visual sighting that went along with that.

Do you—Major Quintanilla, I don't know how long you have been following this, but is this in your records at all?

Major QUINTANILLA. I am sure that if the sighting was reported to the Air Force it is on record, but I am not aware of this particular one, sir.

Mr. STRATTON. It seems to me both the radar and the reported visual sighting were relatively in agreement. I just wondered if you were familiar with it?

The CHAIRMAN. Thank you, Mr. Stratton.

Are there any other questions from any other member of the committee?

Mr. ICHORD. We will be back here at 2:30?

The CHAIRMAN. The committee will reconvene at 2:30 for the purpose of taking up 412.

Dr. Brown, we have no more requirement for the major and Dr. Hynek, and the resumption of the hearing this afternoon will be in executive session.

It will have to do with 412. We will take up where we left off.

Dr. Brown, if you and General McConnell will be back at 2:30, we will meet. We don't plan to have a meeting Thursday, because I think a lot of members will have gone, if we finish on Wednesday. But we do want to meet this afternoon, and tomorrow, and maybe tomorrow afternoon.

Then I think we may be able to finish with Dr. Brown before the recess.

At 2:30, Dr. Brown. And I want to thank you, Dr. Brown, for producing this information.

(Whereupon, at 11:55 a.m. the committee was adjourned to reconvene at 2:30 p.m. of the same day.)
