CHEMICAL MARRADS - UNITED STATES

PSYCHOCHETICAL A HINTS:

perivatives of ergot such as lysergic acid amide, derivatives of marijuana (commatine), mescaline and its derivatives, are being studied as a basis for the synthesis of fendidate psychochemical spents. These substances have in common the ability to produce hellucinations and mental aberrations. The greatest difficulty in this group of agents has been the establishment of suitable acreening techniques. In active contract program to this end is being prosecuted with the

MATURALLY OCCURING TOXING:

This group includes shell fish poison, puffer fish poison and the mushroom poisons from Amenita muscaria. Material is collected from the natural sources, concentrated and purified, Attempts are them made to determine structure. If these compounds turn out to be sufficiently simple synthesis will be attempted. Work on this group of toxins is being done under contract with the substantial fish poison, and with the substantial fish poison, and with the substantial fish poison, and with substantial and at
