Subject: SI and H. Experimentation, 16 January 1952

On Wednesday, 16 January 1952, SI and H experiments were carried on in Building 13. Reem 20, with Misses and and and an arrival and an arrival and arrival and arrival and arrival arr

After a general discussion. ran the standard "arm raising" test of and then converted the arm raising test into a general slow relaxation. As heretofore noted, left arm responded to the test while her right arm did not leave the arm of the chair. She, however, did attain a light trance state to such an extent that both arms were completely limp and she was undisturbed by dropping them. The however, was unable to produce a catalepsy in the arm at this time. Furthermore, it was noted upon questioning, after awakening that she did not recall her arm's being dropped.

and was able to produce a very strong hand raising. Thereafter, attempted to produce a complete relaxation by the slow relaxation method using fixation on a watch on this result was not successful althought. It is a fairly relaxed condition. Later during the evening, the explained she could not concentrate and was unable to apply her full mentality to the problem because of an upset stomach and the "grumbling" diverted her attention.

Was awakened by the usual 1-5 method.

then, without trying a "hand reising" test with and using a fixation method, induced we will be able to sleep again when directed. She wakened by the slow 12345 method and shortly thereafter instructed her to go to sleep, which did, reaching a somewhat deeper trance state than before although a state than before although the reawakened by the 12345 method again.

At the conclusion of these tests, a short general discussion followed and work was concluded at approximately 9:00 PM.
