

## THE BLACK VAULT

This document was obtained from The Black Vault, an online database of declassified government documents. This particular record is housed in the MKULTRA/Mind Control Collection, a compilation of more than 20,000 pages declassified by the Central Intelligence Agency (CIA). The entire collection is free to download and online at:

## OUTLINE OF CHECITL H CASES

In a general request for volunteers

volunteered for H experimentation and were originally tested on 21 May

1951. Poth girls were, at this time, nineteen years of age.

On 9 January 1952, in a group of volunteers.

initially tested in the H techniques along with a group of volunteers.

at this time, was twenty years of age.

In each instance, all volunteers on the initial contact were given? a brief discussion of H. were given a very general picture of Security's interest in the work and were given a very cointed leature on the necessary security essential to these operations.

In each instance, after the above explanations had been made, all subjects were tested in the following manner:

- A. Falling back test.
- P. Hand and arm levitation test
- C. General relaxation procedure with explanation.

responded successfully to the falling back and to itation tests but on the relaxation or sleep induction tests were not everly successful. However,

point, regarded as very good natural. The same more or less applied to who did not appear particularly suggestable to the above mentioned tests, but since she had shown interest she was regarded at this point as being a good future subject. For matter or record, in all three cases on the second effort at induction each subject succeeded in obtaining a very deep H state and thereafter and up to the present time, these girls have been exceptionally splendid subjects.

All of these individuals have been given numerous less from simple nost H to very complex activities and have performed in what we believe to be a highly indicative manner.

The writer and have never feltitual we could determine by experimentation what actually could be done with the II technique under field operating conditions with life and death element at stake. However, the writer and do firmly believe that from a physical point of view, a great deal can be determined what individuals can do under H.

All of these outjects have clearly shown that haltucinations.

illusions, and ammedias can be preduced through U. They have done why complicated mechanical acts such as learning to use a capera, open safes, typewrite, set timing mechanisms, fire sum, etc. under U.

naddition, under 4 they have moved all over the brilding, bassed quards, engaged in conversation, taken polygrath tests, written, drawn fully under 8 and have had total amersing for the se activities. Furthermore, in these cases, when work had been expended for a considerable for period of time, 8 commands have been carried on in matters of a few seconds although 8 was not discussed or in any way brought to be attention of the subjects for periods existing over months at a time.

Recently, in view of the Proadened approach to the problem and also

we carried out experiments involving considerable areas in and around Washington. These experiments clearly demonstrated to a certain extent that individuals onser H can move about, travel and act normal over a certain amount of time and space and may possibly have a hearing on more advanced experimentation which this Office wishes to undertake in the future. In this connection, this Office expects a report from our professional H consultant from in the near future. This report should cover the Tohecks on certain very pertinent matters concerning very advanced uses of H. The report should have been in several weeks are but owing to certain personal matters,

Since these subjects have been actively encared in this work for some time, they have, as mentioned above, taken part in a creat many

will be available for all interested parties upon completion.

difficult tent; and experience but topically the efforts of the support were turned toward producing a normal type of activity while under H and also hea could ! be obtained on an individual via the telephone or very subtle methods without the person's immediate associates realizing that H control had been obtained. In all of these cases, these subjects have clearly demonstrated that they can pass from a fully awake state to a deep H controlled state via the telephone, via some very subtle signal that cannot be detected by other persons in the room and without the other individual being able to note the change. It has been snown clearly that physically individuals can be induced into H by telephone. by receiving written matter or by the use of code, signals, or words/that control of those hypnotized can be cassed from one individual to another without great difficulty. It has also been shown by experimentation with these girls that they can act as unwilling couriers for information conposes and that they can be conditioned to a point where they can believe a change in identy on their part even on the polygraph. Whether or not H could be used as a challenge to the polygraph cannot be stated by the Since we are lacking statistical information, but, writer and in certain instances, it has been clearly shown that H can materially affect polygraph readines. Further experimentation along these lines is contemplated.

All of the above will show that certain normal individuals are capable of very deep H and can carry out activities which may be of value from the ARTICHOKE point of view.

Our tests, which now reader in the Landsands with dozens of subjects. while strongly indicative, are not, in our opinion, complex enough or carried out under hemandous conditions to warrant extravagant claims for operational use. They do, however, indicate that II has a potentiality as a weapon either as an information gaining assect or as an operational weapon.
