Subj: SI and Il experimentation, 3 March 1954.

On 3 March 195h, SI and H experimentation and research was carried on in Room 20, Building 13, by Messrs. Land and Lising the following subjects: Misses

Routine tests and inductions and straight PII were tried throughout the evening's work. One special slow induction was given to assist Mi who apparently is slow in accepting II control.

The only unusual activity insofar as the work of the evening was concerned was that Miss and Miss while in a sleep state with her eyes open was instructed to try to awaken the two sleepers. His tried by shaking and calling the names of both girls loudly without results and then apparently in exasperation dragged hiss but of the chair and let her fall to the floor in an effort to awaken her. This effort was unsuccessful. This seemed unusual in view of the fact His is very unemotional and while a good subject has not been agressive in any of her work. For matter of record, Miss, and not ammesia of the activity and clearly remembered pulling his from the chair. Also for matter of record, it should be noted that Miss as sleeping on the floor was partially fallen on by his amensined alseep during the entire activity. The session closed at about 8:30.
