Preface

SCOPE

This manual provides a ready-reference planning guide for loads rigged for airdrop. It illustrates the rigged load and contains dimensional data, weight, and center of balance (CB) for each load. Information is also provided on aircraft, extraction parachutes and reference tables of miscellaneous information on materials used to fabricate and maintain air items and to rig airdrop equipment.

USER INFORMATION

The proponent of this publication is United States Army Training and Doctrine Command (TRADOC). You are encouraged to report any errors or omissions and to suggest ways of making this a better manual.

Army personnel, send your comments on DA Form 2028 (*Recommended Changes to Publications and Blank Forms*) directly to:

Director
Aerial Delivery and Field Services Department
USA Quartermaster Center and School
710 Adams Avenue
Fort Lee, Virginia 23801-1502

Air Force personnel, send your reports on AFTO Form 22 through your respective command Weapons and Tactics to:

Headquarters
Air Mobility Command (AMC/A39T)
402 Scott Drive, Unit 3AI
Scott AFB, Illinois 62225-5302

Air Force personnel in Special Operations Command, send your reports on AFTO Form 22. HQ AMC/A39T will consolidate and forward changes to:

Director
Aerial Delivery and Field Services Department
USA Quartermaster Center and School
710 Adams Avenue
Fort Lee, Virginia 23801-1502

Also send an information copy of AFTO Form 22 to:

WR-ALC/LEET
295 Byron Street
Robins AFB, Georgia 31098-1611

This publication applies to the Active Army, the Army National Guard/Army National Guard of the United States, and the United States Army Reserve unless otherwise stated.

Unless this publication states otherwise, masculine nouns and pronouns do not refer exclusively to the male gender.

Introduction

GENERAL

The information in this manual may be used to compute aircraft requirements and to assist the rigger and loadmaster during joint inspection of airdrop loads. The publication containing the procedure for preparing and rigging each load is indicated with the data for the load.

SPECIAL CONSIDERATIONS

The special considerations applicable to the specific loads are given in the appropriate field manual/technical order.

This page intentionally left blank.

Chapter 1

Reference Tables

GENERAL

1-1. This chapter contains reference tables of miscellaneous information on materials used to fabricate and maintain air items and to rig airdrop equipment. If detailed information, other than that listed in these tables, is required on specific materials, the DOD Index of Specifications and Standards should be consulted.

TEXTILE TERMINOLOGY

1-2. The textile products listed in this chapter are defined as follows:

- **Cord.** Cord is a fibrous, braided, cordage item of any diameter.
- **Tape.** Tape is a narrow fabric, woven or knitted, produced in widths up to and including 8 inches and in weights up to but not including 0.42 ounces per linear yard of 1-inch width.
- **Thread.** Thread is a thin, twisted, smooth strand or filament of vegetable, animal, mineral, or synthetic material, spun out to considerable length, used mainly for hand sewing and machine sewing. The use of thread is determined by a letter or numerical designation which is synonymous.
- **Webbing.** Webbing is a narrow fabric, woven or knitted, produced in widths up to and including 12 inches and in weights of 0.42 ounces or over per linear yard of 1-inch width.

Chapter 2

Rigged Load Reference Data

SECTION I – INTRODUCTION

GENERAL

2-1. This chapter contains illustrations and reference data on completely rigged airdrop platforms.

TYPE V PLATFORM

2-2. Loads rigged on type V platform for low-velocity airdrop are contained in Section II.

COMBAT-EXPENDABLE PLATFORM

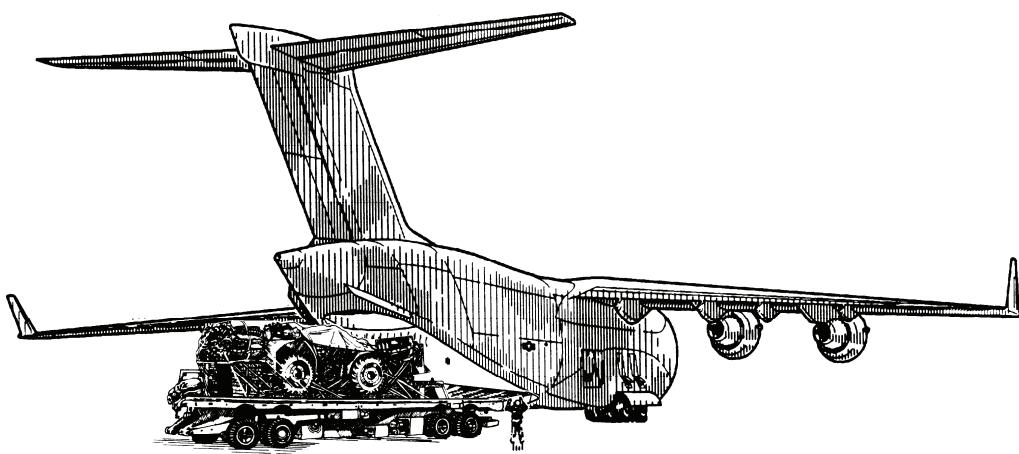

2-3. Loads rigged on combat-expendable platforms for low-velocity airdrop are contained in Section III.

MARITIME CARGO AERIAL DELIVERY SYSTEMS PLATFORM

2-4. Loads rigged on maritime cargo aerial delivery systems platforms for low-velocity airdrop are contained in Section IV.

DUAL ROW AIRDROP SYSTEMS PLATFORM

2-5. Loads rigged on dual row airdrop systems platforms for low-velocity airdrop are contained in Section V.

SECTION II –LOW-VELOCITY AIRDROP ON TYPE V PLATFORM

One Military Utility Vehicle (M-Gator) Rigged on an 8-Foot Platform

Chapter 3

Airlift Capabilities

GENERAL

3-1. This chapter contains information on Air Force aircraft airdrop capabilities.

C-130 HERCULES

3-2. The C-130 has the capability to airdrop a maximum weight of 42,000 pounds using multiple airdrop platforms. The maximum weight of a single airdrop platform weight is limited to 42,000 pounds for E / H model airplanes AF 61-2358 and AF 62-1748 and up. The single maximum platform weight limit for MC-130 E/H airplanes is 35,000 pounds and 25,000 pounds for all other C-130 airplanes prior to AF 62-1784. The C-130 can airdrop loads up to 100 inches high unless otherwise certified in the specific rigging manual. The aircraft has a maximum total space available of 40 feet. The platforms will vary from 8 to 32 feet in length. For planning purposes, allow a minimum of 18 inches between platforms to allow space for the Extraction Force Transfer Coupling (EFTC), three-point link, and attaching the preceding extraction line. With the Extraction Parachute Jettison Device (EPJD) attached, a 30-inch space will have to be maintained for the EFTC, three-point link and the EPJD with extraction line attached. The specific loading manual must be consulted when approaching maximum limits for platform space availability and weights.

C-17 GLOBEMASTER

3-3. The C-17 has the capability to airdrop a combined total weight of 110,000 pounds using multiple airdrop platforms. The C-17 has 64 feet of space available for airdrop use. Two 32 foot platforms may be airdropped if specific guidance is followed. The platforms will vary from 8 to 32 feet in length. For planning purposes, allow a minimum of 18 inches between platforms to allow space for the EFTC, three-point link and attaching the preceding extraction line. With the EPJD attached, a 30 inch space must be maintained for the EFTC, three-point link and the EPJD with extraction line attached. The C-17 can airdrop loads up to 118 inches high measured from the bottom of the platform. The maximum single platform weight is limited to 60,000 pounds. The specific loading manual must be consulted when approaching maximum limits for platform space availability.
