FRNM Looks Bookish but Speaks Volumes

For months we wondered why Dr. Sally Ann Drucker, Bulletin editor, prowled around the FRNM library, checked through back issues of journals, and muttered to herself.

We now know the reason. In December, Scarecrow Press published *Parapsychological Research with Children: An Annotated Bibliography*, coauthored by Dr. Drucker and Ms. Athena A. Drewes.

The team of Drewes and Drucker began when both were affiliated with Maimonides Medical Center's Division of Parapsychology and Psychophysics. In several experiments, they tested children using m & m candies for "immediate feedback." Through this work, published in the *Journal of the American Society for Psychological Research*, *Research in Parapsychology*, and elsewhere, they realized the need for an annotated bibliography on children's psi.

Their book contains sections on Clairvoyance, Telepathy, Precognition, Psychokinesis, Poltergeists/RSPK, and Reincarnation, with a total of 463 entries. It also includes the full versions of papers from the "Parapsychology and Children" panel presented at the 1990 PA Convention. Drs. Palmer and Kanthamani are other FRNM contributors to the volume, which can be ordered directly from FRNM.

Its arrival follows Ballantine's fall publication of *Parapsychology: The Controversial Science*, by Dr. Richard

Dr. Drucker presents book to Dr. Rao for FRNM library.

Broughton (see Fall 1991 *Bulletin*). His book was recently selected for the Quality Paperback Book Club and our phones continue to ring with requests for Dr. Broughton's media appearances. The first week of February, he appeared daily on Greensboro's WFMY-TV Good Morning Show. Mr. Lee Kinard, the producer/host, had filmed TV documentaries of the Rhines in the 1960s. Dr. Broughton's book can also be ordered directly from FRNM.

International Visitors Put FRNM on Their Maps

by Kathy Dalton

FRNM's international appeal recently brought us visitors from Japan, the Ukraine, and Iceland.

In November, the Japanese Broadcasting Company informally interviewed Dr. Richard Broughton. One of the producers, Ms. Hiroko Haruta, was researching preliminary sites for a program dealing with paradigm shifts, to be filmed later this year. Dr. Broughton, who recently published *Parapsychology: The Controversial Science*, provided Ms. Haruta with information on FRNM's current research and background material on a wide range of parapsychological topics. The producers felt that the field of parapsychology could be viewed as an example of a paradigm shift in science.

In early December, another Japanese film crew visited FRNM, this one eager to demonstrate to Japanese audiences how American scientists conduct parapsychological research, and in particular, how FRNM orients its research program. Ms. Michiyo Yamamoto, a program director with Japan Television Workshop, spent a day at FRNM with her TV crew, filming for a program on precognition to be aired in Japan in late December. Dr. Broughton demonstrated the computerized methods for testing psychokinesis as well as explained and demonstrated the computerized game, "ESPerciser." Dr. Kanthamani described FRNM's ganzfeld procedures and conducted an informal ganzfeld trial that had excellent results. Both Drs. Broughton and Kanthamani were interviewed concerning methodology and research at

other labs in the U.S. and abroad.

Dr. Yuri Petushkov came to us for several days in November from the Ukraine's Biosensory Nontraditional Technologies research center. His staff includes experts in physics, biophysics, neurophysiology, biology, and psychology. They have been studying electromagnetic properties of the brain, working from the assumption that the subject's visualization of a result creates internal electromagnetic changes that can interact with the external environment. He described successful results in changing the molecular structures of copper and blood samples.

In late December, FRNM received a visit from Dr. Erlendur Haraldsson of the University of Iceland in Reykjavik, Iceland, a FRNM researcher from 1969-1970. At our weekly research meeting, Dr. Haraldsson presented an update on his experiments using the Defense Mechanism Test. Dr. Haraldsson's visit gave FRNMites the opportunity to catch up with an old friend and with research taking place at other facilities. We look forward to his next visit.

Membership in the FRNM Association provides discounts on books, a free subscription to the *Journal of Parapsychology* and the *FRNM Bulletin*, and more. Membership dues are only \$50.00 annually. For more information write to FRNM.
